Its position after Appomattox is probably unique in political history: unique in that within 5 years from the time it came to power it had completed its program. It would be a mistake to assert that the Republican Party of 1860 or 1864 had but one plank in its platform, but it is no mistake to say that it had only one that was important. The others were window dressing. By 1865 it had carried out the reform that gave it its birth and its original strength. As a reformer it had completed its mission and should have been ready to die, but the Republican Party was not ready to die—as what party is? It was confronted with the necessity of finding another plank, evolving another program that would justify its existence and assure its growth. Fortunately its unlimited power and prestige at this juncture were matched by an unequaled opportunity, and that opportunity was seized with the unerring instinct which comes when the cards of success are falling right.

The whole Nation lay at the feet of the Republican Party for development and exploitation. The South was no longer a rival or even an obstructionist and the West was a fallow field with untouched and all but limitless resources. The Nation was founded on agriculture, the farm, and the plantation, but this old force was not the thing to build a program on. The South had tried that. The new force—with all its dynamic future before it—was the one for the new party to champion. The new force consisted of wheels, pulleys, belts, blades, gears, driven by water, steam, and electricity in the fabrication and distribution of goods and commodities. The North had made a considerable start in the development of technology before the Civil War, and in the war it had knocked out completely any competition that the South might have developed. It was in supreme command of the dynamic power generated by the industrial revolution.

The Republican Party, in complete political control of the North, the South, and the West, was free to choose what it would go in for. It chose well. It embraced the new and most dynamic force, not the old agriculture which was mature and comparatively static, but rather that combination known as business, meaning manufacturing, transportation, and distribution. Here was an alliance of a sectional economic power with a coterminous political power, a partnership for great achievement.

The program followed by the Republican Party was designed, whether wittingly or not, to foster with loving care the economic power and smooth the way for its eager and powerful partner to seize the material resources of the Nation and concentrate control in the North, and thus to make both economics and politics sectional. The policy of the Republican Party was to make the North prosperous, and as long as the North prospered, the North would give its allegiance to the party and keep it in control. "The party of prosperity" was a good slogan to soothe a whole Nation, but those inside knew that the real policy was Republican prosperity.

The assets of the party after the Civil War were staggering in their immensity, so enormous that they could not help but bring relative prosperity to all sections. The business interests had in hand the technology and skill to manufacture unlimited quantities of goods, enough for the entire Nation. What business needed was protection from competition domestic and foreign, and a system of transportation that would assure distribution. Government, in control of the Republican Party, could protect against domestic competition by granting patents and against foreign competition by levying tariffs. Patents cannot be considered a party measure, but as luck would have it, they turned the chief benefits to the North where patentable articles were being devised and used. The Republican Party made the protective tariff a broad plank in all its platforms, and throughout the Republican era the curve of the tariff was constantly upward, higher and higher. This tariff funneled the wealth of the Nation into the Republican section and built up a surplus in the National Treasury which was also dispensed for Republican and northern benefit.

Business needed railroads, in order to transport the goods it manufactured to all parts of the Nation, but the task of building them into the West was too great for business to undertake on its own hook. It did not need to. It called on Government to finance the venture. The road to the Pacific—across the plains—was projected before the Civil War but was not built because the two sections could not agree on a route. The South wanted it; the North wanted it. Neither would yield, and so nothing was done. In 1862, with the South out of the Union, the Republican Congress authorized the building of the Union Pacific from the West into the northern region. From 1862 until building ceased, the whole railroad system was designed to feed into the northern section. And much of the building was done at Government expense.

The Government had in its possession after the Civil War two enormous tangible assets which the Republican Party disposed of largely to its own benefit. The first asset and the larger one was the public lands comprising approximately one-half the continental area of the United States. Until 1862 the policy had been to sell the public lands to individuals, but in that year of fateful and far-reaching Republican legislation the Homestead Act was passed and the lands were given away. It was not difficult to convince any recipient of a homestead ranging from 160 to 640 acres that the Republican Party was beneficent and worthy of support. Though small areas were given to individuals, much larger ones were given to corporations. The railroads received western lands equal to the area of France. This lavish distribution of the greatest relief fund in history to individuals and corporations took nothing away from the popularity of the Republican Party, but it relieved the Government of its landed estate and national resources and prepared the way for another and less popular form of relief.

The second asset in the hands of the Government during this era was cash in the Treasury, cash accumulated from the tariff imposed by the Republican Party for the benefit of the infant industries of business. The question was not one of how this surplus cash could be returned to all the people, but rather how it could be placed safely in the hands of the chosen section and in the hands of good loyal Republicans. The solution was easy, the answer almost obvious. Give it to the Union soldiers of the Civil War in the form of pensions. Thus would it reward loyalty and strengthen business—and the Republican Party. The pension rolls were set up during the war and increased constantly until 1923, nearly 60 years after the war ended. Here was a safety valve that would relieve the Treasury of its surplus.

In any attempt to account for the deterioration of the Republican Party the declining influence of these pensions cannot be ignored. Not only did the receipt of a pension check each month hold the members of the GAR to the Republican Party, but it likewise held all his kith and kin, especially those on whom he might other-

wise have been dependent, and friends whom he might influence. That this pension money, gathered from the pockets of the entire Nation, flowed mainly into the pockets of one small section, the records in Washington will abundantly prove. Of each $100 paid in pensions, about $85 went North and $15 was distributed to scattered Republicans in the South and West. Here was one of the most dependable blocs of votes that any party could hope to have.

It should not be difficult, then, to understand the loyalty of business to its political partner. Business had never known such opportunities, and nowhere in the world had it made more of the possibilities that lay before it. An increasing population in an expanding frontier lapped up all the commodities that could be produced and each year called for more. The resources were so great that there was something for all, enough to hide many inequalities. The Republican Party rode this dynamic wave and won election after election. A part of its advantage was the fact that its position was positive; it was doing things, and much was being done in its name. The opposition had to content itself with blocking, interfering, and protesting. What could you do with a party that had emancipated the slave, saved the Union, given everybody a bounty in land or tariff, assured businessmen of prosperity and poor men of a full dinner pail?

The answer, as the opposition found out, was nothing—nothing but wait. The waiting was long. The South, sitting disconsolately outside the warmth of the charmed circle, sans tariff, sans pensions, was always in protest, but could be ignored. In the seventies and eighties the farmers of the West—though Republican by inheritance—raised their voices against monopolies more than against the party that had fostered them. The Populists got nowhere. But the campaign of 1896—foreshadowing that of 1932—gave the Republicans a great scare and caused them to adopt, under the leadership of the able Mark Hanna, tactics as effective as they were reprehensible in order to win. This should have been a warning.

Despite the party's splendid record of achievement, keen observers might have detected by the turn of the century the deterioration that had set in, a deterioration in position. No party can live on its memories or expect to live on gratitude for past favors. By 1900 people were a little tired of hearing that Lincoln, the only great President the party has produced, had freed the slaves. By then the Union was so well saved that even the bloody shirt no longer evoked patriotic emotions. These things lay far in the past. The giving away of the public domain lay largely in the past too, and some were saying that the policy had been carried too far. The pensioners were dying rapidly, and the political loyalty of the GAR was becoming less important. The one vital force left to the Republican Party was business.

Between the close of the Civil War and the eclipse of the Republican Party in 1932, business made spectacular progress. As everyone knows, it got very big and more powerful than any other factor in American life. We emphasize this in books and politics by the use of capitals: Big Business. It has already been pointed out that business was the principal ally of the Republican Party, the only one that survived the passage of years and retained its vitality. Its crystallized around the corporations which the Republicans got the Supreme Court to define as individuals in order to override the will of the States and other protestants. The party did everything that could be done to clear the track and give cannon-ball right-of-way to the business special. The Republican boast, so effective in many campaigns, of being the party of business was sound and true.

This alliance between business and the dominant political party made an unbeatable combination as long as they could deliver prosperity and keep the factory wheels turning and the people employed. With the passage of time, subtle changes began to take place in the relationship between the two partners and also within the domain of each partner.

In the beginning both partners were young, each with its special vigor, but of the two the political partner was dominant. It was the Republican Party that had the political power to grant the land to the railroads, to give a tariff bonus to manufacturers, and to grant pensions to the GAR. In the process of doing this it transferred the Government's wealth—which theoretically belongs to all the people—into the hands of the party section, party members, and party supporters, that is, into the hands of business. The result was that business grew very powerful and became dominant. In the beginning the party had political power and economic assets; in the end it had only political power, the assets having been transferred. Therefore when it needed economic assets it became a supplicant before a power it had formerly controlled and helped to make.

Time brought changes in business and these changes compelled the Republican Party to make two hard choices, neither of which was politically wise. Shortly after the Civil War the original numerous small businesses began to merge into fewer bigger businesses, forming trusts and approaching monopolies in one field after another. In the struggle that ensued the Republican Party had to choose its destiny: would it champion the cause of small business or would it go where the power and money were, with big business? It is doubtful whether, given the background, the Republican Party could have made any choice but the one it did. The choice in favor of big business was natural, logical, and under the circumstances inevitable, for, as a matter of fact, the men who were operating big business were by that time the prime movers of the Republican Party. They were on the board of directors of the corporation and of the party.

Another division in business compelled the Republican Party to make a second choice. With the rise of the great industries, there was a sharp division between the owners or managers and the employees who did the work; there was capital on the one hand and labor on the other. The Republican Party could not champion the cause of both. Its whole history of opposition in greater or less degree to the demands of organized labor indicates its decision in favor of capital.

The important thing to notice in both these decisions is that the Republican Party threw its support to the minority as against the majority. There were more small businesses than big businesses, and there were far more laborers than there were managements or managers. Slowly but surely the Republican Party was narrowing the base of popular support upon which any party in a free democratic country must in the long run depend.

After it ran out of homesteads, the Republican Party had no place at all for the farmer. It may have given him lip service, but it never could accept the poignant plea of 1896 that the farmer too was a businessman. He was something else, a farmer. Even if it had granted him the status of a businessman, the party would have classed him as a small-business man, and his interests would still have been made secondary to those of big business. Throughout it compelled him to buy in a protected market and permitted him to sell in a free market with all the world as his competitor. For the farmer's mule or cow or cotton or tobacco there was neither tariff nor patent.

It is difficult to explain the long record of loyalty of middle western farmers to the Republican Party, why they clung to it for three-quarters of a century to the detriment of their own welfare. The most reasonable explanation is that they inherited their Republicanism. The fact that their fathers received free homesteads and pensions brought them into the party and a loyal inertia held them there for a very long time—but not forever. They woke up at last to the fact that the party had done nothing for them lately.

Thus the Republican Party successively turned its back on one great segment of society after another, on the farmer, on small business, on labor. The party quit the people long before the people quit it. Finding big business a jealous god, it gave it complete and undivided devotion, sacrificing its Lincolnian idealism and its early patriotic fervor for the downtrodden man, and thus cutting from under itself the foundation on which popular support could with any reason stand. It is not surprising that the Republican Party eventually went down in defeat known to no other major party in history; the surprising fact, the one that needs explanation, is that its defeat was so long delayed. The explanation of the delay must be sought in the unbroken success of business.

The party was never really defeated in the sense that it lost prestige, until its main partner—and we might almost say its only one—collapsed. Since business near the end was the only ally of strength the party had, the condition for the continued dominance of the party hinged on the ability of business to provide prosperity. It was business that had to make and distribute the goods, maintain employment and provide hope for the future. As long as business did this, the voters went along voting the Republicans into power with only an occasional interlude by protesters and reformers.

The union of business and the Republican Party was never more felicitous than in the years following World War I. It is quite true that one President was not quite up to the standard expected, but the two that followed were well-nigh perfect. President Hoover, the engineer and humanitarian, was the ideal man for the party of business. And business was so good during the early part of his administration that the Republicans promised to make prosperity permanent and to put two cars in every garage. It would be hard to beat a party that does either.

Then it happened, overnight. The bottom fell out, not of the Republican Party, but of business. From 1929 to 1933 the administration—representing the Republican Party—moved around in a daze, completely stunned by the disaster that had come to its partner and main support. Though there was some vague talk about turning a corner, the Republicans were never able to make the turn. Their policy had been to let business take its course, and it was perhaps too much to expect a sudden reversal of a time-honored and well-established system.

In the next election the Republican Party had nothing on which to base a campaign. Born on a platform of one plank, slavery, it died on a platform of one plank because that plank, business, had decomposed and fallen from under it. It began as a sectional party, carrying only Northern States; it died as a sectional party carrying six States, all of them in the region of its original strength. Four years later it carried Maine and Vermont. Gone from it were the farmers of the Middle West, gone the votes of the laboring men, now jobless, around the silent factories of the industrial North. Gone also the tradition of invincibility and the belief that the Republican Party alone knew the magic formula of prosperity and success.

The collapse of business in 1929 and of the Republican Party in 1932 gave the opposition the first opportunity it had had since long before the Civil War to seize the initiative and launch a constructive program. It is true that in a period of 72 years, from 1860 to 1932, the Democrats won 4 elections, serving 16 years to 56 for the Republicans. But none of these victories gave the Democrats a broad initiative. They were due in Cleveland's case to protests against Republican rule, and in Wilson's case to disaffection in the Republican Party and to war. The foundation under the Republicans in each case remained strong and sound, and as soon as the reformers had failed in their reforms, control slipped back into safe Republican hands. The party still stood for the constructive force, the development of business, and not for the complainers, obstructionists, and amorphous dissident elements which have always been a plague to the out party.

The entry of the Democratic Party in 1932 was a triumphant entry such as it had not known before. Not only had the opposition been defeated, but its old sources of strength lay in complete ruins about it. The task was to build from the ground up on another principle. Twice before the Democrats had had the ball but had not known what to do with it. This time they had the ball and, as it turned out, they knew how to keep it and what to do with it.

What the Democrats did after 1932 was to launch a bold program much greater than but comparable to the one undertaken by Lincoln. And that program was based on an entirely new principle. The forces of government were directed, not to the restoration of business alone, but toward the rehabilitation of the suffering and destitute of the entire Nation. It was in the words of Roosevelt himself a "crusade to restore America to its own people." That was a long-range program. In the short range it would give bread to the hungry, clothes to the naked, fuel to the freezing, jobs to the jobless, security to the aged, and insurance to the bank'rs; and, having no public domain to give away and no other Government assets, it would pay for all this by taking money away from those who had it, mainly from Republicans and big business, and giving it to those who needed it. It was the taking and not the giving that stirred the bitterness and acrimony, just as Lincoln's taking away property in slaves had stirred it three-quarters of a century earlier.

In this analysis we are not concerned with the merits of the program, its constitutionality, or its rightness or wrongness. We are concerned with its political effectiveness, with the broad appeal it had for the majority and its seemingly utter disregard for the powerful minority. This program gave the Democrats an initiative based on a new principle which for the time being the Republican Party cannot possibly take from it and remain the Republican Party. The Republican Party for the first time in its history is now definitely on the outside. It can only complain, criticize, claim it can do the job better and more efficiently. It has as yet nothing constructive to offer, and under present conditions it seems doubtful whether it can find anything to offer that its members would accept or the American voters would take at face value. The Republican Party worked out to the last grain its vein of success and for the present it is through. It carried to a logical conclusion the policy of taking from the many—either the Government or the people—and giving to the few, taking from the three sections and giving to the favored one. Here was a principle that was good as long as it lasted, but it was not an eternal principle. Senator LODGE refers to archaic concepts of the party, but I would like to suggest to him that the great principle of the party is archaic and that therefore practically everything about it is now out of date. The old place may be tidied up a bit, but it will still be a Victorian palace with its gingerbread and gewgaws showing.

By way of being specific let us examine some of the cherished details of the establishment—relics of a dead past—that have no place save in a political antique shop. The first of these is the front porch. Now in its day that was quite an institution. It was a comfortable place for the Presidential candidate who was sure of election to reside in dignity while the opposition beat its brains out trying to gain the attention of spellbound voters. It was a good place from which to make no mistakes, commit no errors. The front porch is one antique that the Republicans will have to give up until they get a house to go with it.

Another outworn formula has to do with the off-year elections. This formula held that if in the rare Democratic innings the Republicans gained control of Congress in the off-year election, that was a sure sign that the Democratic President was on his way out, come next election. In 1946 the Congress became Republican and it was taken for granted that the formula would work. The White House was as good as won.

So eager was the Eightieth Congress to please its favored constitutents that it jumped the gun and began the work of destroying the principle which the Democrats had adopted and practiced for 16 years. The result was that this Congress frightened the farmers, resolved labor's doubts, and lost the election of 1948. The formula did not work.

In the last election we did not hear much about the full-dinner pail and sound money, the first a bauble for the workingman and the second a booby trap for small-business men. For 3 years the workingman looked into the pail and found it always empty. And as for sound money, the Republican Party ran out of money of any kind as did most of the voters. It appears that the dinner pail has been lost now and sound money, if not forgotten, is never mentioned.

It is customary for losers to quarrel among themselves in trying to apportion the blame for their defeat. According to news reports this jowering is going on now in the party high command. It seems that Mr. Dewey, who would have been so great if he had won, is taking the brunt of the attack. It may be pointed out that Mr. Dewey's whole campaign was in the very last Republican tradition. He conducted himself with the utmost propriety, said very little, and might even have remained on the front porch so far as results go. He was careful not to be specific or forthright but to depend on his supporters to make the commitments. He could not be expected to go over to the left of the Democrats, and his own party would not have followed him had he done so. His position was to the right of Mr. Truman's, and Mr. Truman's position was anchored firmly in the middle of the new principle of government. Actually Mr. Dewey had no principle. He was simply trying to get the voters to shoulder Mr. Truman out of his position, and the stubborn voters flatly refused to do it.

Nor can the Republicans find an alibi for their last defeat in the personality of the opposition. The two candidates were just about a hoss and a hoss in personality, though the man from New York is a little slicker than the man from Missouri. Certainly Mr. Truman's personality is not such as to give the opposition an inferiority complex. The people voted on the issues and not on the men.

President Truman's victory was so spectacular as to obscure important aspects of the last election. Had Mr. Truman been elected on personality, he might have found himself faced with a Republican Congress and with Republican governors in control of a majority of the States. The inarticulate but interested voters admired his courage and the desperate fight he made with practically nobody in his corner, but they did not vote for him through sympathy. They had simply had enough of the other party as it exhibited its program in the Eightieth Congress to know that they wanted no more of it. Wanting a modern Government that will deal with modern problems and not an antiquity, they went to the polls and swept the little champ back to the White House, and with him they sent Democrats to Congress and into the governors' offices across the Nation.

Of course we need two parties to debate the issues of the Nation. It seems from our own political history that the debate swings around a principle. One party thinks the principle is right and the other is equally convinced that it is in great part wrong. The party that originates the principle and establishes it, does so in a national crisis. If the Nation comes out of the crisis, the principle is accepted and the people go on supporting it for a long time, say until it runs into a crisis. This is what happened to the Republican Party after the Civil War; it is what happened to the Democratic Party in the great depression. During the time of trust and confidence in the principle, the party that originated it and put it into effect has a tremendous advantage, such an advantage that it may get away with almost anything. As long as the principle being acted upon works, it is almost impossible to dislodge the party that discovered it. This the Republicans need to bear in mind. They are going to have thin pickings until the present principle of developing a social state has failed. They are going to beat their brains out trying to get the attention of voters. They are going to quarrel, divide, complain, and criticize.

Their plight is like that of the man who had spent his life preparing for the future. It was his obsession. He awoke one morning on his birthday and began to appraise himself, his age which was considerable, his hair which had grown thin, his muscles a little flabby now, and his bones which seemed to have sand grains in the joints. After some contemplation, he struck his hand to his head and exclaimed, "Heavens! This is my future!" And so it may be for a considerable period with the Republican Party.

This Is Your Congress

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. ELLIOTT. Mr. Speaker, the Congress of the United States is closer to the people today than ever before. Each year hundreds of thousands of people visit the Capitol and observe Congress at work. High school students throughout the country read and study about all phases of Government, including the Congress. The newspapers and magazines, the radio and television bring Congress increasingly closer to the people.

Senior Scholastic, a magazine with a large circulation among high school students, devoted a special section of its February 1, 1950 issue to the Congress, under the title of "Congress at Work." The articles in Congress at Work are factual and instructive. They were collected, edited, and for the most part written by Mr. Herbert L. Marx, Jr., associate editor of Scholastic Magazine.

I include as a part of my remarks the article "This Is Your Congress":

THIS IS YOUR CONGRESS

Under the dome of the Capitol in Washington, D. C., beats the heart of America.

Here our Congress—our Senators and Representatives—speak for America. They decide and shape our country's future. They do so for us and in behalf of us, as our chosen representatives.

No matter where you live—the Pacific coast, the prairies of the Middle West, the Cotton Belt of the South, the villages or industrial towns of New England—you have your spokesman in Congress.

If you feel he does not speak your mind, it is your privilege and duty not to support him in the next election. This is a basic principle of a representative democracy.

Our Congress is no youngster as national parliaments go. It is now more than 160 years old. But it is showing no signs of age. It is still as youthful and vigorous as any legislative body in the democratic world.

The present Congress is the eighty-first in number. The First Congress, which assembled after the Constitution was ratified, served from 1789 to 1791. The Second Congress served from 1791 to 1793, and so on for every 2-year period.

The Congress that met in January 1950 is the second session of the Eighty-first Congress.

The President has the right to summon Congress for a special session. This is usually done in the event of a national emergency or crisis, as in September 1939, following the outbreak of war in Europe.

However, the last special session of Congress, called by President Truman in the summer of 1948, was for the purpose of enacting bills dealing with our national economy.

A Congress lasts for 2 years because all Members of the House of Representatives and one-third of the Senate are elected every 2 years. All unfinished legislation "dies" at the end of each 2-year Congress.

The Congress which meets on January 3 after the regular general election every other November is called the new Congress although many of its Members may have served in the old Congress.

Let us now go inside the Capitol. We notice that there are two wings on the building. These include the Chambers of the House and the Senate. According to tradition, they may not be used for any purpose except for congressional sessions.

The next thing you notice is the surprisingly small attendance most of the time in both the House and Senate Chambers. This often baffles visitors. Where are our national legislators? The answer is there is much more to Congress' work than meets the eye of a visitor to the House or Senate Chamber.

Actually, almost 90 percent of the work of Congress is done not in the House and Senate Chambers but in congressional committee rooms. These congressional committees have been called, and with justification, our little legislatures. As former President Woodrow Wilson once remarked, "Congress in its committee rooms is Congress at work."

What is the difference between the two Houses of Congress? Let's start with the Senate.

In Roman times, the Senate meant a council of old men. Its members were regarded as persons of high rank and wisdom.

The same attitude is retained to a large extent in our Nation today. The United States Senate, called the upper House, was intended to serve as a check on the sometimes hasty actions of the lower House (the House of Representatives). George Washington explained that "the Senate is the saucer in which the House tea is cooled."

Senators were not even elected directly by the voters of each State until the seventeenth amendment to the Constitution was adopted in 1913. Before that Senators were chosen by the State legislatures.

The United States Senate consists of 96 Members—2 from each State, regardless of the population or size of the State. Thus Nevada (with a population of only 174,000) and New York (with a population of more than 14,000,000) have the same number of Senators.

A Senator is elected for a term of 6 years. One-third of the Senators are elected every 2 years. Thus the Senate has been a continuing body since 1789, because it never changes its entire membership at any one time.

Article I, section 3, of the Constitution says, "No person shall be a Senator who shall not have attained the age of 30 years, and been 9 years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State for which he shall be chosen."

The Vice President of the United States is automatically the President of the Senate. He may vote in the Senate only in case of a tie. In other words, only when the Senate is evenly divided on some issue may the Vice President cast a vote to break the tie.

In addition, the Senate elects a President pro tempore (for the time), to preside when the Vice President is absent.

Now let us cross to the southern wing of the Capitol, to the House of Representatives. This "lower House" consists of 435 Representatives apportioned among the 48 States according to population.

All Representatives are elected every 2 years for terms of 2 years. A Representative (according to art. I, sec. 2, of the Constitution) must be 25 years of age; a citizen of the United States for 7 years; and a resident of the State in which he is elected. He is customarily a resident of the district from which he is elected, but this is not required by the Constitution.

Critics of this custom say it forces a Representative to ignore national interests and concentrate on local problems in order to get reelected. They add that it also has a tendency to make the Representative take orders from the local political bosses, because defeat in his own district may mean the end of his career in Congress. In Britain, a candidate for Parliament is free both by law and custom to run for election in any district selected for him by his party.

On the other hand supporters of this custom contend that the Representative should be a resident of the district he represents so that he will be more familiar with the needs of the voters who elected him. It is also pointed out that this tradition keeps us as close as possible to pure democracy, in which every citizen has a direct voice in the conduct of his government.

States entitled to only one Member in the House have a Representative at Large, elected by the entire State. At certain times other States have Representatives at Large, too.

Under changes made by Congress in recent years the total number of Representatives is fixed at 435. The quotas among the 48 States are reapportioned every 10 years, following the regular census of population. The next reapportionment will take place after the 1950 census.

However, each State, no matter how small its population, is entitled to at least one Representative. On the average a Representative is elected by a district inhabited by a little more than 300,000 people. But this is not always true. Nevada's one Representative is elected to represent its population of only 174,000. Thus election districts differ in size of population.

They also differ in area. For example, one of New York City's heavily populated districts, which is only three square miles in area, contains as many people as the 28 counties which make up one of the districts in Texas.

POWER OF THE SPEAKER

The Presiding Officer of the House is the Speaker. He is elected every 2 years by the House.

The Speaker is entitled to all the privileges of an ordinary Member, but usually votes only in case of a tie. He presides over sessions of the House or appoints a Speaker pro tempore to replace him. He announces the order of business, and sees to it that Members stick to that order.

When the House meets as a Committee of the Whole (which includes all Members), the Speaker appoints the Chairman. The Speaker also picks the chairmen of temporary committees. He may give the floor to Representatives in any order he wishes, and directs his party lieutenants to guide the debate as he sees fit.

Because the Speaker has the power to control debate on the floor of the House, and to push bills favored by his party, he is the most influential Member of the House, if not of the entire Congress.

OUTSIDE THE 48 STATES

The organized Territories of Alaska and Hawaii are each entitled to a Delegate in the House of Representatives. Puerto Rico, as a dependency, is represented in the House by a Resident Commissioner.

These three men have all but one of the privileges accorded Representatives. They receive the same salary and have the same rights to speak on the floor of the House and to serve on House committees. The one vital exception is that they have no vote in Congress.

There are 870,000 American citizens who have no Representatives or Senators of their own in Congress. These people are the residents of the District of Columbia. Washingtonians may not vote in Presidential elections, either. The District of Columbia, seat of all branches of our Federal Government, has always been treated as an exception to the rule of representative government.

How Taft-Hartley Costs Every Worker Cents Per Hour

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. O'SULLIVAN. Mr. Speaker, I wish to call your attention to a very timely article which appears on pages 29, 30, and 31 in the February 1950 issue of the magazine published by the International Union of the United Automobile, Aircraft, and Agricultural Implement Workers of America (UAW–CIO). I feel that this magazine article more adequately explains the position of labor with reference to the Taft-Hartley law than any other article which I have read upon the subject. It is written in common, everyday, understandable language, which the average voter, I am sure, will appreciate.

This article is as follows:

HOW TAFT-HARTLEY COSTS EVERY WORKER CENTS PER HOUR

THE PROPAGANDA PROGRAM

June 23, 1947, the Taft-Hartley Act was enacted into law over the veto of the President of the United States.

Bought and paid for

The law was passed as the climax to a supercharged propaganda campaign in which the National Association of Manufacturers, according to Senator AIKEN of Vermont, spent $2,000,000 for advertisements on the Taft-Hartley Act alone.

Altogether, Senator AIKEN estimated the corporations spent $100,000,000 on propaganda to procure the passage of the law.

Newspapers and radios repeated over and over again (this was what the $100,000,000 paid for) that the public was demanding the Taft-Hartley law.

Public-opinion polls were fixed to give the impression the people wanted Taft-Hartley.

Bought and paid for surveys pretended to show the workers in the plant wanted the Taft-Hartley law.

With the possible exception of the artificial clamor produced to secure the repeal of the OPA, the propaganda campaign on behalf of the Taft-Hartley law was the noisiest, the most deafening ever purchased through the collective efforts of monopolies and corporations in the history of mankind.

The vote on Taft-Hartley

After Taft-Hartley was passed, the law itself provided for elections which were, in effect, a test of some of the claims made by the corporations.

The union-shop elections, for example, were a fair test of whether or not workers did or did not believe in the "right not to belong to a union."

Actually, in 35,120 elections, 3,200,000 persons out of 3,400,000 voted in favor of the union shop. That is about 19 to 1.

Every honest poll shows the country opposes Taft-Hartley Act. Union-shop vote is 19 to 1 for the union. Truman was elected.

Galluping Ropes, Inc., polls on any anti-labor subject.

The November 1948, national election was decided largely on the issue of Taft-Hartley. Fred Hartley, a sponsor of the bill, did not run again, but his seat was won by Peter Wallace Rodino, the son of a UAW member, who campaigned on a specific promise to vote for repeal of the Taft-Hartley law.

Nationally, the reelection of President Truman was an approval by a majority of the voters of his stand for repeal of the Taft-Hartley law.

Wherever people had a chance to be counted, they stood up to be counted in majorities opposed to Taft-Hartley.

The people, the radios, the newspapers, and the magazines who said they were for Taft-Hartley turned out to be obliging gremlins who lived in the minds of the propagandists hired by the National Association of Manufacturers.

ADDING UP THE COST OF TAFT-HARTLEY

Is Taft-Hartley a slave-labor law?

Taft-Hartley has been called a slave-labor law.

Some people have said slave labor was too strong. Where, they ask, are some of the workers who have been enslaved under Taft-Hartley?

Under the Taft-Hartley law, people who go on strike for better wages, or hours, or working conditions may be discharged by their employer.

The employer may hire other workers to replace them.

Then the scabs may petition for a collective-bargaining election.

If the scabs vote nonunion, the employer may get a Taft-Hartley injunction forbidding the people on strike from picketing.

How to destroy job security under Taft-Hartley:

Employer forces a strike--hires scabs.

In NLRB election only scabs vote.

Injunction forbids workers to strike.

Seniority abolished; wage cut follows.

If they persist in picketing, they may be sent to jail.

The Taft-Hartley thus provides companies with a 1-2-3 formula for taking away your union protection.

Being a free worker depends in part on your freedom to enjoy the working conditions your union has won for you.

In the printing trades these working conditions have been won over a period of 75 years and are part of the union's conditions of employment.

Under Taft-Hartley, the National Labor Relations Board and the courts have ruled that the union's insistence on these established working conditions is a refusal to bargain by the union and an unfair labor practice.

To defend its working conditions the Typographical Union has spent more than $15,000,000 in the last 2 years. Taft-Hartley has cost union printers millions of dollars in assessments.

Just as important, the fight to defend working conditions from the Taft-Hartley attack has made it impossible to give full time to bargaining for better wages. There is no way to estimate how much printers have lost because they failed to win wage increases they might have otherwise gotten.

This is the cost of Taft-Hartley to the printers' union—more than $15,000,000.

One of the major purposes of the Taft-Hartley law was to destroy the United Mine Workers and to outlaw the industry-wide contracts which provide basic union standards for all mine workers.

Partly as the result of the Taft-Hartley injunction procedure, the hard-won pensions of the miners are not being paid today. The health and welfare program is providing enormous bounties to the lawyers in the courts, but no health or welfare to the miners. For the first time in many years the miners are working in violation of their own no-contract-no-work principle.

Taft-Hartley means wage cuts

Obviously these penalties provided in the Taft-Hartley law could be applied against you.

But there is another, more insidious, way the Taft-Hartley injures wage earners.

As everyone knows, there is a persistent movement by the companies from union-standard communities to unorganized, low-wage areas.

Companies that don't run away are subjected to unfair competition from low-wage runaway companies.

Workers with standard wages are losing out in competition for jobs to runaway non-union shops.

The Taft-Hartley, by permitting employers to ask for representation elections, by facilitating sweetheart agreements between phony unions and the company, and by preventing workers from organizing boycotts of sweatshop employers, actually manufactures the antiunion acid which is corroding the wage and working-condition standards of all workers.

Even unorganized workers have a tremendous stake in the repeal of the Taft-Hartley. For unorganized workers benefit from the wage-increase patterns won by union workers.

GM office workers, for example, get wage increases after the UAW wins increases for the production workers. If the production workers are prevented by Taft-Hartley from winning improvements, the office workers stand still or go back.

THE SECRET AUTHORS OF TAFT-HARTLEY

Double-standard legislation

The Taft-Hartley law is special-interest legislation.

Despite its name, the Taft-Hartley law was not written by Senator ROBERT TAFT or ex-Congressman Fred Hartley. Senator TAFT himself has admitted that clauses got into the bill that he regards as a mistake. (P. 1916, Senate hearings on S. 249, pt. 4.)

Who wrote the law

Here are quotations from the CONGRESSIONAL RECORD of April 16, 1947:

Representative O'TOOLE: "It was written, sentence by sentence, paragraph by paragraph, and page by page, by the National Association of Manufacturers."

Representative POWELL: "This bill was written on the fifth floor of the Old House Office Building, written by over a score of corporation lawyers, paid, not by the Government of the United States, not even by small business, but by big business, monopoly business."

From the CONGRESSIONAL RECORD, April 15, 1947:

Representative KLEIN: "The new House labor bill was not written with the help of the Democratic members of the committee. In fact, they were not consulted and no full committee meetings were held to discuss it. The bill was actually written with the help of several industry representatives from the National Association of Manufacturers and the United States Chamber of Commerce. Some of the most valuable assistance came from William Ingles, who reports a $24,000 annual salary as a lobbyist."

Representative BUCHANAN: "The program of labor legislation drafted by the National Association of Manufacturers last December and published in full-page advertisements in the New York Times and scores of other papers on January 8 of this year is embodied in its entirety in the proposed bill. * * * Sections of this NAM program are written into the bill word for word."

PLUSH JUSTICE FOR THE BOSS—IRON TALONS FOR WAGE EARNERS

Taft-Hartley is exactly the kind of law you would expect once you are told who wrote the law. Imagine, for example, how a labor law would read if it were written by the lawyer for your company. That is the kind of law Taft-Hartley is—a law with double-standard justice. One standard of justice for employers—easy, gentle, courteous, apologetic. Another standard of justice applies to workers—tough, aggressive, punitive, bristling with penalties and jail sentences.

Here are examples:

Plush justice for the employer: Taft-Hartley provides that nothing an employer says or prints can be used against him in a Taft-Hartley hearing (unless his expression contains threat of reprisal or force or promise of benefit). Under cover of a free speech, an employer is given a blanket license of irresponsibility for anything he says.

The iron talon for the worker: In any court hearing, criminal or civil, involving you, anything you say can be quoted against you, provided it is relevant under court rules.

Plush justice for the employer: If an employer is shut down because of a strike, he can call on another employer to help him out by taking over his work (and requiring the workers of the second employer to scab).

The iron talon for the workers: But workers who are locked out by an employer may not ask brother union members in another shop to help them out by refusing to scab.

Plush justice for the employer: A voluntary association of employers may engage in politics in any way it chooses (and the American Medical Association may assess its members $25 each to go into politics).

The iron talon for workers: But the workers in a voluntary association (a union) may not spend one cent to support candidates in Federal elections.

Plush justice for the employer: Any employer can use the NLRB and put it to work for his purposes, whether he files financial statements, is a Communist, a Fascist, or a criminal violator of the antimonopoly laws.

The iron talon for workers: But no group of workers can use the National Labor Relations Board until their union officers file affidavits swearing they are not Communists, along with a copy of the union's financial statement (plus other things).

Plush justice for employers: The NLRB may ask for injunctions against employers only when it chooses to. The courts cannot issue these injunctions until after a court hearing is held.

Iron talon for workers: But the NLRB must apply for an injunction against workers and their union in some situations, and these injunctions can be issued without any hearing for the workers involved.

Plush justice for employers: Certain employers' charges of unfair labor practices against workers and their unions must get priority under Taft-Hartley.

Iron talon for workers: But a worker's charge of an unfair labor practice against an employer gets no priority. Certain day-old complaints by an employer must take precedence over a worker's complaint that has been on the books for 2 years.

Plush justice for the employer: Workers may not require employers, through their unions, to employ more workers than they need.

Iron talon for workers: Nothing prevents an employer (except the union) from speeding workers up and giving them more work than they can do without hardship.

Formosa Could Be Saved—If

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of February 19, 1950. It should be instructive to note that Walter Bosshard, a seasoned observer in the Far East, believes that despite all the unfavorable factors in the Formosa picture—and I do not believe some of them are quite as bad as he portrays them—we should extend effective assistance to the defenders of the island. The prospects of success are still good, and the stakes are so great as to justify the effort.

FORMOSA COULD BE SAVED—IF

(By Walter Bosshard)

TAIPEH, FORMOSA.—"With a minimum of foreign aid," said an American officer to me on my arrival in Taiwan, or Formosa, "this island could be saved, if * * *"

The same day, the English edition of China News published an article under the headline, "Save Taiwan—Save China." It was an emotional appeal to eradicate inefficiency and corruption in government offices. It continued:

"We have been the victims of international power politics and intrigues. We have been petted. We have been idolized and we have been double-crossed. The Nationalists having lost practically all of the mainland; Taiwan is the last ditch to hold. This is the last chance left for the freedom-loving Chinese people to save themselves. We cannot and we must not fail. There is only the sea left for our retreat. There is only one way open for us—to live or to die."

Chinese and foreigners alike fully approved this remarkably frank statement, adding, however, "if only * * *," followed by a number of reservations which are constantly made, whether people are discussing the political, military, or economic aspects and prospects of Taiwan.

TWO MAJOR CLIQUES

To start with the biggest problem, there is dissension among the ranking officials which makes any concerted action very difficult. This conflict has its roots in the history of the Kuomintang when individual members or entire groups who ventured to disagree with Chiang Kai-shek were severely censured, if not punished. Several of the smaller factions disappeared or joined the Communists, but suspicion and open conflict continues between the two major cliques, despite the danger knocking at the very gates of this island.

In this fight, the reactionary C-C clique, led by the two Chen brothers, Chen Li-fu and Chen Kuo-fu, seems to have the upper hand. The Kwangsi clique, with Acting President Li Tsung-jen, now in the United States, and Gen. Pai Chung-hsi as prominent members, is fast losing ground.

The C-C clique is the watchdog in Chiang Kai-shek's headquarters. He remains chairman of the Kuomintang, but otherwise holds no official position in the government. He is still considered the strong man in this last bastion of Nationalist China, however, pulling the wires from his sumptuous retreat in the hills above Taipeh. He will not tolerate any man in a responsible position who has not been approved by his inner circle, a sort of private supercabinet.

According to the Chinese Constitution, Gen. Li Tsung-jen is the actual head of the National Government. When he left for the United States in December, he delegated his power to the Prime Minister, 70-year-old Gen. Yen Hsi-shan, who has frequently been at loggerheads with Chiang but is now too old and weak to make a determined stand against the constant pressure brought upon him by the generalissimo and the powerful C-C clique.

Yen Hsi-shan takes his orders from Chiang Kai-shek and his ministers rubber-stamp the decisions of Chiang's private cabinet. If General Li should ever return to this island, his only choice would be either to fall in line with the inner circle or be ousted through all sorts of intrigues and accusations already in the offing.

YOUNG MEN DISCOURAGED

Thus it is not surprising to see numerous politicians and defeated generals, who escaped with their loads of gold bars to Formosa, seeking favors with the powerful group and getting lucrative appointments, while any outsider, however meritorious his achievements, is cold-shouldered as long as he refuses to join this mutual admiration society.

There is a number of younger, very able officers in Taiwan, ardently patriotic and willing to fight, but getting discouraged by the prevailing favoritism. The tragedy of the present situation is that the ruling class consists of tired, worn-out members of the old Kuomintang, who continue to think in terms of "face-saving" and are unable to inspire any confidence or enthusiasm among the young generation.

The return of Madame Chiang Kai-shek from the United States will further aggravate the tension. She has never been known as a peacemaker, and her overbearing likes and dislikes will hardly encourage amity outside her own circle.

There is also disunity among the native population. Different groups are clamoring for a share in the island administration. None, however, represents the majority of the Formosan people, and it is even questionable whether popular opinion has yet crystallized on what is the best political future for Formosa.

The native inhabitants are generally anti-Communist. But they are also strongly antagonistic toward the Nationalist administration, whose past excesses and exploitations are difficult to forget. And the presence of the refugee government on the island stirs fears of an early Communist invasion.

The newly appointed governer of Taiwan, Dr. K. C. Wu, former mayor of Shanghai and one of the ablest administrators in China, is trying by justice and fair play to bring the different parties together and to create a common front. The lack of trained and able native leaders whom he can trust makes it difficult for him to combat the creeping defeatism, which centers around the argument that any resistance is useless if no immediate help can be expected from the United States.

A WILLING ARMY

There is one bright spot in this rather gloomy picture. The new army, trained by Gen. Sun Li-jen at Fengshan in the southern part of Taiwan, is exceptionally good. Despite many handicaps, this general and his very able staff of partly American-trained officers has built up a defense force which not only is ready to fight, but which knows the stakes.

Its equipment, however, is not too good. Most of the material supplied earlier by the United States was lost in the fighting on the mainland and is now in Communist hands. There is an urgent need for transport vehicles for the mechanized army, for spare parts and ammunition for the artillery, and also for smaller weapons.

It is a surprising fact that there is no over-all command for the coordination of the army, navy, and air force. Each of these branches has its own program and works independently of the other two. Each is under direct orders of the Ministry of National Defense, which takes orders from Chiang.

An inborn mistrust prevents him from appointing any officer to the over-all command. He wants to keep all the power in his own hands. In spite of the disastrous results of his past strategy and policy, he subbornly considers himself the only man in China capable of defeating the Communists.

Under such circumstances, is it possible to save Formosa and would it be wise to extend any more help to the Nationalist government? The answer to both questions is, in my opinion, yes. As my American officer friend said, with comparatively little help the present defense forces can be made strong enough to prevent a Communist invasion, provided, of course, that Russia did not actively take part in any such operation.

ECA HAS SHOWN HOW

Should any material help be given to the Nationalist Army, it would need strict supervision to prevent further abuse. That such control can be made effective has been demonstrated in Formosa by the ECA and JCRR. If a similar pattern were followed on military aid, the morale of the defense forces and the native population alike would be tremendously encouraged, so that Formosa could well become the turning point in the battle against communism in the Far East.

It would be the best solution, of course, if Chiang Kai-shek and his entourage could be persuaded to let other, better-equipped men decide the future strategy. This being beyond any hope of realization, the only course is a clear-cut policy with no loopholes for compromise.

Formosa well defended would inspire the oppossed people on the mainland. It would encourage the nations of southeast Asia to join forces against their common enemy. And it would dispel that feeling of fear and weakness which now paralyzes life in this part of the world.

Yes, Formosa is well worth saving despite the many if's. But time is running short, and the Red typhoon may devastate this beautiful island before statesmen and ambassadors, now discussing the problem from many angles, can make up their minds.

Biography of Susan B. Anthony

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mrs. SMITH of Maine. Mr. President, last Wednesday was the anniversary of the birthday of Susan B. Anthony, one of the great women in American history. I think it fitting to remember her, and I ask unanimous consent that a short biography of her be printed in the Appendix of the RECORD.

There being no objection, the biography was ordered to be printed in the RECORD, as follows:

Susan B. Anthony—one of the great women of our country—stands in the doorway of the house where she made her home for 40 years. This brick house was one of the early ones built in the Bush and King Tract. After the death of Daniel Anthony his wife, Lucy Read Anthony, bought the house in 1866 and lived here with her two daughters until her death April 3, 1880, in her eighty-seventh year. Then Mary became the owner and every year when she paid her taxes she added to her bill—"Paid under protest," since she believed that taxation without representation was tyranny.

THE HOUSE A MEMORIAL

Through voluntary gifts the house was bought December 31, 1945. It has been restored in keeping with the time in which Miss Anthony lived. Furniture, books, pictures, and many objects have been returned. There is a great deal of source material here about the woman suffrage movement. Mrs. Carrie Chapman Catt, who was one of Miss Anthony's able, younger assistants and who followed Miss Anthony and Anna Howard Shaw as president of the National American Woman Suffrage Association, sent her valuable collection of framed photos of noted women who believed in rights for women. By bequest there came also her mahogany desk on which she drafted her strategic plans for the nineteenth amendment. The house is a unique center which commemorates Miss Anthony and also "the mightiest woman's crusade the world has ever known, led by as great generals as ever headed armies and finished fights for victory."

INCIDENTS CONNECTED WITH THE HOUSE

November 1, 1872, the two sisters went out with some other women and registered for voting. Then on November 5 they voted—thus testing the right of women to vote under the Constitution. Miss Anthony was arrested here by the United States deputy marshal for voting illegally. She was tried at Canandaigua and fined $100 which she told the judge she would never pay.

In 1894 when New York had a constitutional convention Miss Anthony started a great campaign to secure an amendment allowing women to vote in the State. This house became the headquarters and many worked here all summer, sending out literature and petitions. Miss Anthony at the age of 74 went forth every week to speak in the 60 counties.

Here plans were made to persuade the University of Rochester to open its doors to women. Mrs. Elizabeth Cady Stanton was present at one evening meeting and answered every objection. Miss Anthony was the leading person in raising the necessary fund.

Miss Anthony and her sister were very hospitable and many workers for woman suffrage and many noted people were their guests. Some of the meetings of her suffrage board were held here.

Here with the help of Miss Anthony who recognized the need of recording women's history, Ida Husted Harper wrote the Life and Work of Susan B. Anthony and volume IV of the History of Woman Suffrage.

LIFE OF MISS ANTHONY

She was born at Adams, Mass., February 15, 1820, and passed on at 17 Madison Street, March 13, 1906, in her eighty-sixth year. In her early youth she taught school. She was teaching in Canajoharie, N. Y., at the time of the first woman's rights convention in Seneca Falls, N. Y., July 19 and 20, 1848, and also when the adjourned convention was held in Rochester August 2, 1843. Her interest at the time was in organizing Daughters of Temperance, and it was not until 1851, after she had met and talked with Elizabeth Cady Stanton, that she saw the need for woman suffrage and joined her in a life-long crusade for the rights of women. Soon Miss Anthony became the driving force of the woman's rights movement, assuming the responsibility of its conventions and of building up a strong woman's rights organization. On May 15, 1869, she organized the National Woman Suffrage Association with Mrs. Stanton as president.

HER WORK

Susan B. Anthony gave 55 years of devotion with singleness of purpose and unbelievable persistence for the enfranchisement of women. Through her efforts and that of Elizabeth Cady Stanton, woman suffrage was debated on the floor of Senate in 1866 and a resolution was introduced in 1868 in both Houses of Congress providing that citizenship be the basis of suffrage. In the "Life of Miss Anthony" she says: "I have addressed the committees of every Congress since 1869, and our New York Legislature scores of times." Senator Sargent introduced in the Senate the first woman suffrage amendment in 1876. This amendment was reintroduced year after year through the tireless efforts of Miss Anthony. It was finally adopted in 1920, 14 years after her death.

Because she believed that the movement for woman's rights and woman suffrage should be world-wide, she organized in Washington, D. C., in 1888, the International Council of Women.

In 1890, the National Woman Suffrage Association and the American Woman Suffrage Association united, forming the National American Woman Suffrage Association, with Mrs. Stanton as its first president. Miss Anthony succeeded her in 1891 and for 9 years until 1900, she served as its president.

Her interests were wide and in addition to directing State and National campaigns for woman suffrage and attending hearings, she never lost an opportunity to speak, write and work for the advancement of women in education, in the professions, in business, and to win for them full civil rights. Her scrapbooks kept for 50 years are now in the Rare Books Section of the Congressional Library. They give a record of her life work.

HONORS

The nineteenth amendment which became the law of the land August 26, 1920, was the goal to which Susan B. Anthony dedicated and devoted her life. A commemorative 3-cent stamp bearing her profile was issued August 26, 1936, on the sixteenth anniversary of the nineteenth amendment.

The governors of many States issue proclamations, commemorating her birthday—February 15—and calling attention to her and her work.

In the Capitol at Washington is the Woman's Monument by Adelaide Johnson. Rising out of an 8-ton base of Italian marble are the heads and shoulders of Mrs. Stanton, Mrs. Mott, and Miss Anthony—who were known as the Great Triumvirate in the work for woman suffrage. In the Metropolitan Museum of Art in New York City was the bust of Miss Anthony by Adelaide Johnson. It has been loaned to the Anthony House. There is a bronze tablet to Miss Anthony along the grand staircase of the capitol at Albany.

Rochester memorials: Anthony Hall of the Women's College of the University of Rochester; Anthony Room in Cutler Union of College for Women; bronze tablet to the sisters in the Unitarian Church which they attended; bronze tablet in chapter house of Irondequoit Chapter, Daughters of the American Revolution, of which she was a life member; tree in Genesee Park—near Dr. Moore's monument—dedicated by department of parks, 1935; School No. 27 is called the Susan B. Anthony School; exhibits in Rochester Museum and in Rochester Historical Society headquarters; Susan B. Anthony House.

California memorials: Susan B. Anthony Memorial Collection in Los Angeles Public Library; Susan B. Anthony Tree in Sequoia National Park; Susan B. Anthony Day in public schools; mementos of Miss Anthony in Mission Inn, Riverside, Calif.; Susan B. Anthony Memorial Committee.

TRIBUTE

At Miss Anthony's funeral Mrs. Catt gave this tribute: "This woman for a large part of half a century was the chief inspiration, counselor, and guide of our movement. There were women associated with her from time to time, women of wonderful intellect, of superb power, of grand character, yet she was clearly the greatest of them all, the greatest woman of our century, perhaps the greatest of all time. We shall never see her like again."

Sound Money

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. DAVIS of Georgia. Mr. Speaker, on February 16, 1950, the East Atlanta Post, No. 159, the American Legion, Atlanta, Ga., adopted a resolution regarding the gold standard.

Under leave previously granted, I insert this resolution herewith:

SOUND MONEY

Whereas we are fighting a global war of terrific intensity, but it will be easier to win the war of arms than to overcome the forces of financial evil which will not even hesitate to throw the entire world into economic chaos before they will willingly relinquish the power to manipulate and control money; and

Whereas formally silver and gold were used as money by weight being the unit of value in ancient transactions. Abraham gave, in weight; 400 shekels of silver for the cave of Machpelah. He was rich in flocks and herds and also silver and gold. David, King of Israel, paid 50 shekels of silver for a threshing floor; and later, 600 shekles of gold for the entire field in which the threshing floor was located; and

Whereas silver and gold were thus used as a medium of exchange, having an inherent value by weight and thus representing the value of goods, services and property in all business transactions. Nebuchadnezzar, King of Babylon, in the first great economic conference (of which we have record) there he instituted gold as the standard of value, pronouncing the death sentence for anyone

who would refuse to abide by the ruling (Daniel 3: 1–6); and

Whereas by setting up gold alone as money there was instituted a rigid, inflexible monetary system, placing those in charge of gold to manipulate price levels and bring about periods of depression, thus they continually dominate the purchasing power of money, the price level, regardless of the actual value of things purchased: Therefore be it

Resolved, That East Atlanta Post, 159, the American Legion, Department of Georgia, memorialize the Executive Department of the National American Legion to petition the United States Congress to take steps necessary to assume its constitutional authority to coin money and regulate its value. Making gold and silver to function together making standard its value, like lineal measure which does not vary in length—the yardstick; and a standard of weight that is constant—the pound; as well as the measure of, capacity the gallon thus creating a ratio between demand and supply, further

Resolved, That a copy of this resolution be furnished our Representatives in Washington, D. C.

Unanimously adopted by East Atlanta Post, 159, the American Legion, Department of Georgia, February 16, 1950.

R. L. HARDEGREE,

W. B. JONES,
Service Officer.

Beware of a Loafer's Paradise

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by James P. Lynch from the Exeter (N. H.) News-Letter of February 16, 1950, commenting on a Lincoln Day address by Harold E. Stassen, now president of the University of Pennsylvania:

BEWARE OF A LOAFER'S PARADISE

(By James P. Lynch)

Considerable advice on how to redeem the Republican defeat of 1948 has been given but we believe the greatest contribution to the Republican cause was made the other evening by a man who played a prominent part in the last presidential race.

Cautioning the people of America to beware of the establishment of a loafer's paradise, Harold E. Stassen, president of the University of Pennsylvania and former Governor of the State of Minnesota, declared: "Let us always have in mind that every attempt in the history of the world to establish a loafer's paradise has wound up in a dictator's hell-hole.

Typical of the fighting spirit of this great Republican leader, the speech was a sincere plea to Republicans throughout the Nation to step forward and meet the challenge of the exceptional task that confronts the party of the Great Emancipator.

This phrase "Beware of a loafer's paradise" should definitely be adopted as the fighting words of the Republican Party. It is much more defining, much more critical of the wasteful administration in Washington than the present ammunition of words.

Stassen paid tribute to Abraham Lincoln as one of those few men in all history who deeply understood the nature of man and one who had the unshakable courage to act in accordance with his convictions.

In his opening remarks the university prexy stated: "Lincoln believed he knew that man was meant to be free, and in moving addresses he declared that this Nation could not endure permanently half-slave and half-free.

"Standing fast upon this principle, Lincoln welded together a powerful and victorious political party, he took the leadership of the Nation and brought it through the hour of grim trial as one undivided United States of America."

Unlike some other orators that we heard during Lincoln Day dinners, Stassen did not dwell on the historic events of Lincoln which we are all so familiar with. He chose to discuss the more important issues of the day which we believe is the way Lincoln would prefer.

He pointed out that through the vigilance of the Republican Party and through some key decisions by the Supreme Court, the people of this country, thus far, in the main, have retained our economic freedom.

He stressed how we are being challenged by a new set of proposals that are weakening our independent structure. The advocates of these ideas have adopted the slogan, "Let the Government do it."

The methods of this school of thought, as the majority of us realize, call for nationalization, Government ownership, blanket controls, price fixing, heavy taxes, governmental distribution of goods, and governmental operation of all or a major part of the economy.

Cautioning the people against following such a course, Stassen declared: "If a man becomes subservient to the men in authority in his government for what he may eat and what he may wear, for where he may work, and what he may earn, for what he may produce and how he shall profit, for what he may build and where he may live, then he cannot truly be free in what he may say or write, or how he may worship, or how he may live."

"A man must either have complete freedom or he will not for long be truly free at all. A man cannot permanently be half a slave and half a freeman."

These are really threats to the future freedom of America although many probably are willing to accept them as a new trend. The Republican Party certainly can alter the direction of this freedom-losing road if it is willing to take a firm and definite position, not in words but in action. Republican Party leaders must make certain that those who are willing to participate in the give-away programs should be exposed and defeated at the polls. This includes the Truman Republicans. If the Republican Party is willing to take such clear-cut action the people will rally around such a fighting program.

Stassen's advice against increasing the power and bigness of Government is quite sound. Government is like a fire. If it is kept within bounds and under the control of the people, then it contributes to the welfare of all. But, and that word is very big, if it gets out of its place, gets too big and out of control, it destroys the happiness and even the lives of the people.

As the university president pointed out: One of the lessons of America's unparalleled progress is that Government's principal role is to protect men and to prevent crushing burdens from being laid upon them, to leave them free—truly free and completely free.

Stassen's suggestions certainly demonstrate that the Republicans made a drastic mistake in not appreciating his capabilities as the presidential nominee in the last campaign. We feel certain that if the people had been given the opportunity to select the candidate acceptance of the me-too nominee would not have been.

The former chief executive of Minnesota has not lost any of his political stature, in fact he has become increasingly strong. The people realize that he talks with them and not down to them. They know he wants to work with them and not be their caretaker. They see in men of his caliber a great Republican Party.

Stassen called for the adoption of the following basic objectives: "Let us rebuild the Republican Party as a dynamic, fighting party with the issue of the true freedom of man as our central rallying point.

"Let us make it clear that if people are looking for a political party that will promise to everyone ever larger hand-outs from the Public Treasury, they should look elsewhere, that we hold that the Public Treasury is in reality the people's pockets and that we will not seek to win votes by false promises nor by leading the country down that road that inevitably ends in a cheapened dollar and ultimate misery and suffering for all when resources are drained.

"Let us make it clear that if the people want a political party that will take over and politically dominate the medical professions in exchange for promises which the experience of Britain show cannot be fulfilled, they should look elsewhere.

"Let us make it clear that if they want a political party that will try to delude them into thinking that someone else is going to pay the tax burdens, they should look elsewhere.

"Let us make it clear we seek to build a political party that is frank and forthright with the people—a party that promises above all that it will not weaken or destroy any of the freedom of the people, that it will seek ever to maintain an incentive for every man and woman to use his hands and brains and capital in worth-while and productive accomplishment and service, and that it will steadfastly refuse to maintain or to operate any system of governmental hand-out, to provide soft cushions for loafers and chiselers or dishonest 5-percenters.

"Let us also declare with deep sincerity that man cannot truly be free if discrimination against him because of his race or religion or ancestry shuts doors to him of education or of employment or of shelter or of justice. Thus we shall make clear that having adopted this great principle, our party cannot contemplate and shall not consummate a fusion with those forces in our country affiliated by name with the opposition party who seek to join with us partially to protect economic freedom for themselves, but even more to deny freedom to others in their midst."

The humanitarian approach offered by Stassen makes certain that we should provide for the aged, infirm, or unemployed, but there is no room for the loafer. It also called for the curbing of the dictators within the unions. He emphasized that it is necessary to have a sound, strong union, directed by the freely made decisions of its own members. His plan denounced monopolies and called for real competitive production and distribution.

The Republican Party would do well to follow the advice given by this great statesman. It would lead to the road of victory for the GOP—a mighty important road, especially after being off it for so many years.

Taking From All of Us To Give to Some of Us

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, the coal strike, the scarcity of coal, the resulting unemployment and

suffering should bring home to us the fact long known, but consistently ignored by too many, that all of us are being penalized through higher costs for the benefit of first one group, then another.

Coal miners, steel workers, motor employees have from time to time received increases in wages, special benefits given them through contracts requiring primarily the employer, ultimately the consumer, to pay for those benefits.

Periodically, organized labor asks for an increase in wages or, like the miners, an increase in the tax levied upon production, for the benefit of that particular group.

Each time a group receives an increase in wages or payments for unemployment, sickness or pensions, obtains a shorter work week, or a subsidy, the cost falls upon everyone.

Everyone who thinks knows this to be true; that it cannot forever continue without giving us uncontrollable inflation.

To date, no effective action has been taken.

To bring home to the average citizen the procedure followed and to emphasize the danger in such a procedure, by permission granted, I am reprinting a leaflet put out by the Committee for Constitutional Government, Inc., 205 East Forty-second Street, New York 17, New York, entitled "Exploitation by the Privileged Versus Equality Before the Law." It reads as follows:

EXPLOITATION BY THE PRIVILEGED VERSUS EQUALITY BEFORE THE LAW—WHICH DO YOU FAVOR?

Being a good American, you will probably answer without hesitation, "Equality before the law." But wait a minute. Is this your real attitude, or is equality before the law merely a shibboleth? Are you consistent? Do you advocate equal economic rights for everyone, all the time, or only for some people in special cases? Do you always object to exploitation?

Before you answer these questions definitely, it may be wise to consider certain specific instances.

You have a good job and a steady income. Suppose that you move to a new locality and start buying groceries from Mr. Brown who has a store near your home. If you continue to patronize him for a month, do you feel that you thereafter have a right to quit buying from him if you find that you can get equally good groceries cheaper elsewhere? You will probably say, "Of course."

IS BROWN'S CLAIM VALID?

But suppose that you discover that Mr. Brown has a wife and seven children to support, and that his net annual income is far smaller than yours. He insists that, under such circumstances, he has a right to compel you to patronize his store indefinitely. He also says that it is your duty to provide him and his family with adequate insurance against sickness and death, and to arrange to give him an old-age pension when he retires.

You will probably say that you never heard of such a preposterous proposition. Why should the fact that you have bought some groceries from Mr. Brown obligate you to support him and his family? Aren't you free to stop trading with him any day you please? What are his family's affairs to you? When you paid for your groceries you had fulfilled all of your obligations to him—and that's that.

Next, let us suppose that the grocers in the neighborhood discover that too many stores have opened there and that none of them are making decent profits. Is it legitimate for them to get together and agree to double all the prices charged for their goods? Under such circumstances, do you have a right to buy groceries from some store in the next town, and bring them home with you?

HOW WOULD YOU ANSWER?

You will probably say that it is not only your right—it is your duty to oppose any such high-handed attempt to rob you. The grocers ought to be prosecuted under the Sherman Act.

Now, let us go further and assume that all the grocers in the whole region unite in an association, and then inform you that, hereafter, you will have the option of either buying groceries from members of the association, or going without groceries and starving. They also warn you grimly that, if you order groceries from anyone else—for example from a mail order house—it will be your own fault if your car is wrecked, your house burned, or you are beaten up.

However, they tell you that they intend to be very reasonable about the whole matter, and that, if you and the other customers will appoint a committee to represent you, they will be willing to discuss calmly the question of whether grocery prices are to be trebled or merely doubled.

You will doubtless say that any group of merchants making such outrageous demands would promptly be sent to prison for long terms, and that they would richly deserve such punishment.

APPLY IT IMPARTIALLY

Now, we come to the vital issue. Is your antipathy for persons making such demands confined to merchants, or does it apply equally to all other persons guilty of the same offense? At first thought, you will say that your sentiment is general—you will see no reason for discriminating in favor of or against any particular class. But will you stick to this point of view when this test is applied to a specific case? Let us consider that of Mr. Green.

Unlike Mr. Brown, who sells groceries, Mr. Green sells his services as a coal miner. He also has a wife and seven children. For some months, he has been selling his services to Mr. Smith who owns a small coal mine. Mr. Green belongs to the United Mine Workers. He insists that, since Mr. Smith has been purchasing his services for several months, it is now Mr. Smith's duty to continue indefinitely to buy his services, and under no circumstances to patronize Mr. Black—a "scab" who is ready to sell as good or better services at a lower rate.

Do you still stick to your guns and say that Mine Owner Smith, as an American citizen, must have freedom to buy where he can buy cheapest; or do you feel that Mr. Green has a vested interest in his job?

YOUR OBLIGATIONS PILE UP

Mr. Green also insists that it is the duty of Customer Smith to see that Mr. Green and his family receive adequate care in case of accident or sickness, and that Mr. Smith provide Mr. Green with an old-age pension when the latter retires. Do you still consider this demand preposterous? Do you still hold that, when Smith pays for Green's services to date, Green has no right to ask Smith for anything additional?

Mr. Green says further that the United Mine Workers' demand that Mr. Smith buy coal-mining services solely from union members, at double prewar rates of pay, or else stop buying such services from anyone, and that, if he does buy services from others, he alone is to blame if his car is wrecked, his plant is burned, and he is beaten up. However, Mr. Green generously informs Mr. Smith that he may join with other coal-mine owners and appoint a committee to bargain with Mr. Green and his colleagues as to whether pay for coal mining shall be two and one-half times or only double prewar rates.

If Mr. Smith and his fellow mine owners are unreasonable and refuse to discuss the proposed rates of pay, they are free to close the mines and let coal users shut down their plants and allow their homes to remain unheated.

Incidentally, of course, at the time that Mr. Green is making this demand for the coal miners, Mr. White is making a similar demand for the trainmen, and Mr. Blue is joining in for the telephone operators. Mr. White and Mr. Blue state bluntly that, if their people cannot market their services at greatly advanced rates, the Nation can go without transportation.

IT'S COLLECTIVE BARGAINING

Are you still ready to denounce such demands as outrageous, and urge that those making them be sent to prison for long terms? Before you so decide, remember that Mr. Green, Mr. White, and Mr. Blue are merely talking about collective bargaining—an institution which most reformers insist marks a great social advance. Remember also that, even under the Taft-Hartley law, the "slave labor act," industry-wide collective bargaining is permitted. Remember further that no coal miners, no railway workers, no telephone employees, have been sent to prison for making the just-mentioned demands on their employers.

"But," you will say, "the point overlooked is that Mr. Brown is selling commodities—groceries—while Mr. Green and Mr. White and Mr. Blue are selling personal services." However, is this difference real or merely fancied? Is it not true that Mr. Brown, like Mr. Green, Mr. White, and Mr. Blue, is engaged in selling his own services? Of course, grocers must pass along to you the costs to them of the goods at wholesale, clerk hire, rent, etc. But what they net is mostly pay for their own efforts in supervising the buying and selling of their merchandise.

YOU ARE BEING EXPLOITED

There seems, then, to be no escape from the fact that, if you wish to be logical, you must condemn equally Mr. Brown, Mr. Green, Mr. White, and Mr. Blue for engaging in most reprehensible conspiracies to injure their customers and the public in general. All alike are trying to exploit those who do not belong to their organization. If Mr. Brown ought to be sent to prison, so ought the others.

The only logical way to avoid this conclusion is to assume that members of labor unions are a privileged class who are entitled to plunder the underprivileged nonunionists. This is, indeed, the purport of such statutes as the Clayton Act, the Norris-LaGuardia Act, and the Wagner Act. If, after thinking matters over, you feel that, after all, most of us voters are so dumb that we deserve to be exploited, and that it is only fair to give to those keen enough to organize unions the special privilege of exploiting the rest of us, you will urge that the status quo be maintained. If, however, you should happen to decide in favor of equality before the law for all of us, you will demand the repeal of the just-mentioned statutes. It's up to you. What are you going to do about the whole matter?

The Spiritual Base of American Foreign Policy

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. McCORMACK. Mr. Speaker, Under permission to extend my remarks, I include a thinking, a penetrating, and a powerful address made by the Honorable John E. Peurifoy, Deputy Under Secretary of State, before the International Christian Leadership, Inc., in Washington, D. C., on February 3, 1950:

I welcome the opportunity to talk with you tonight. As members of the Christian fellowship groups, you are primarily concerned with the advance of spiritual values. I believe that the most certain legacy that we, as fathers, can leave our children is one of the spirit. Our hope for future generations of Americans must be based on bequeathing them an inheritance of spiritual and moral leadership. The enduring thing we can pass on to them is a living tradition.

The great nations of this world, those that have exerted most marked influence for good on the history of man, are those nations whose leaders were men of vision with great spiritual qualities. The dictators, the tyrants have their brief innings, fall, and are remembered only for the evil they worked. The work of moral leadership lives on. Ancient Greece, constricted in size and arid in soil, gave the standards of truth, beauty, and liberty as we know them today. From tiny Palestine came a philosophy which has influenced the moral code of the Christian world for nearly 2,000 years. The might and wealth of greater nations have vanished but the vision of the prophets of Judah and the teachings of Christ are a potent influence in the world today.

Our United States, the richest country in the world in physical wealth and material resources, must be great in spiritual leadership if we are to play our great role in the destiny of nations. We must have a living spiritual philosophy to fight the material forces of communism. Communism is a philosophy of materialism and refuses to acknowledge the existence of God. Even more, communism is an avowed nonrecognition of God. Mark how many thousands of priests and churchmen have been arrested in Communist-dominated countries. The Communist action against the clergy in Czechoslovakia is the most recent example of their campaign against the spiritual leaders of a society.

This is evidence of Communist recognition and Communist fear of the strength and durability of spiritual leadership and their acknowledgment that the churches are spiritual strongholds that stand against efforts to enslave mankind.

In taking control of a nation, the Communists have followed a consistent pattern. Their first move is the seizure of governmental powers. Their next move is always the same, either to liquidate the spiritual leaders or to make these leaders subject to them. Once these two steps have been accomplished, a Communist minority as small as 2 percent can control a country.

We must face this fact at the outset. The forces of communism are on the march. We must recognize that this is not alone a fight between the Catholic Church and communism, but a fight between communism and all faiths—Catholics, Jews, and Protestants.

In this battle, the various religious faiths have at hand effective weapons, and the major weapon in the religious arsenal is that of the Christian principle. The moral force of that weapon is immeasurable.

The programs that the United States has launched since 1945, and the projects in which we have participated, individually and collectively, conform to the Christian ideal. As far as America is concerned, the elements of these principles have long been an integral part of this democracy. It is only to be expected that we should project them into our dealings with other nations.

Since VJ-day, American policy in dealing with other nations has involved a number of important steps. We took a leading role in UNRRA and contributed substantial amounts of food, clothing, and other necessities to peoples made destitute by the war. Subsequently, we provided huge quantities of food, materials, and equipment to stricken nations in western Europe to help them get back on their feet. This was under the Marshall plan and I call to your attention that much of these goods and equipment were grants-in-aid. In other words, they were gifts from the American people.

Of course, we did these things partly out of self-interest. We were aware that American welfare depended on the welfare of our neighbors.

Some of our programs have been in effect long enough to show what strength, resolution, and moral force can accomplish.

A freely elected Greek Government is still in office, and with a determined assist from us, has routed the forces of Communist guerrillas which threatened its survival. Internal conditions, in the economic sphere, have improved considerably. With our aid, the Turkish Government fended off a threat of encroachment and is measurably more solidly established. An American mediator, as an official of the United Nations with the power of that organization behind him, succeeded in resolving a dispute between the Arab states and the Israeli which had flared into open conflict.

The United Nations, in which we take an active part, must be given a large share of the credit for the establishment of the free nations of Indonesia and of the Republic of South Korea. The Marshall plan has been, and is still, instrumental in an inspiring revival of the economies of the states of western Europe. Conditions in those nations, in comparison with the state of affairs that obtained immediately after the war, are enormously better. Food is far more abundant than it was—although some shortages still persist. In most nations the rate of production, which is economic lifeblood, is moving steadily upward and has passed the 1938 levels.

Furthermore, the North Atlantic Treaty and the mutual defense assistance program have done much to allay the fears of invasion and have provided a sense of security that is essential to political stability and to further economic recovery.

This is only a partial and certainly a cursory review of what has been achieved. Even as such, I submit that it is an impressive record.

In western Europe and in the Middle East, and even in certain segments of the Far East where it seemed to be making sweeping progress, communism has received a series of set-backs from which I hope it may never recover. This I am sure provides a practical and convincing answer to the question about the power of Christian principles intelligently applied.

Nonofficial organizations, such as the Christian fellowship groups, can be of real service in turning back the tide of communism. They can help in extending the application of the Christian principles we have been discussing. Earlier I pointed out that the spiritual leaders of a society are regarded by the Communists as major threats to Communist power.

It is conceivable that vigorous promotion of human rights will compel the Communist leaders to alter their course and to deal with the rest of the world in a more Christian manner. They might be forced to live up to their international commitments and so begin to cooperate with free nations in establishing a world system of law and reason.

Of this you can be sure: news of each gain in human rights will penetrate the iron curtain. The fact that men outside the curtain are successfully working out the pattern of living together in which the individual is free of oppression, can come and go as he pleases, and is guaranteed certain basic rights—which are enforced by law—will make itself felt among the masses of Russia. It may take a generation but once that fact gains acceptance, we can look for a more tractable Soviet policy. We can expect a Soviet Government which will discharge its obligations to other nations.

When that happens we will have established the basis for an enduring peace—an achievement to which you may justly claim a considerable contribution. You will have helped to assure an increase of spiritual values in the world of tomorrow.

Basing-Point System: Its Catastrophic Effects on Growth of Various Regions of the Country as Attested to by Leading Economists—Excerpts From Statements by Dr. Walter A. Adams, Dr. Fritz Machlup, and Dr. Vernon A. Mund

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. PATMAN. Mr. Speaker, one of the most important aspects of the basing-point system is its effect upon the growth of the various regions of this country. This question has been examined at some length by economists appearing before the House Small Business Committee. Under permission to revise and extend my remarks, I would like to include a few excerpts from the testimony of Dr. Walter A. Adams, professor of economics, Michigan State College; Dr. Fritz Machlup, professor of political economy, Johns Hopkins University; and Dr. Vernon A. Mund, professor of economics, University of Washington, bearing on this point. These excerpts make it abundantly clear that, in view of the experts who have carefully studied the basing-point problem, the restoration of the basing-point system will have exceedingly injurious effects upon the regional development.

EXCERPT FROM STATEMENT OF WALTER ADAMS, PROFESSOR OF ECONOMICS, MICHIGAN STATE COLLEGE, EAST LANSING, MICH., BEFORE THE HOUSE SMALL BUSINESS COMMITTEE, JULY 5, 1949

The fourth objection to the basing-point system (and to the pricing system which this bill would authorize) is that it results in an uneconomic location of both producers and consumers. As far as producers are

concerned, they experience no particular pressure to respond to changing locational factors. They tend to maintain their investment in locationally anachronistic areas, because "under the umbrella of a controlled-price system the test of profitable plant location ceases to be essentially a matter of cost of production and distribution. * * * Plants thereby may be established at uneconomic points in terms of production costs."

Why, it may be asked, should Detroit have only 5 percent of the Nation's steel capacity, when Detroit industries consume more than 15 percent of the total steel output? This question becomes especially embarrassing when it is considered that Detroit has a more favorable location in respect to scrap, iron ore, and a substantial portion of the market than Pittsburgh, for example. It is indeed strange that Pittsburgh, with the decreasing locational pull of coal resources and the increasing locational attraction of steel markets,[1] should be able to retain 40 percent of national steel capacity, when the industries in that area consume only about half that amount, thus necessitating an exportation of the rest. This anomalous situation can be attributed largely to the basing-point system which tends to neutralize geographic advantages and disadvantages between steel producers by allowing every steel mill to compete on a substantially equal footing for any piece of business anywhere in the country, a criticism which applies (although to a lesser degree) to any system of pricing involving freight absorption.

In addition to this uneconomic location of producing plants, the basing-point system tends to encourage the location of steel-consuming plants in areas which, under other pricing systems, would not have been selected. The reason for this is that, under the basing-point system, the lowest price for steel is not necessarily obtained by locating close to a steel mill, but rather by locating in the proximity of a basing point. Thus a steel consumer who, under f. o. b. mill system, might have located in Detroit would instead establish his plant at Pittsburgh or Chicago or some other basing point, in spite of the fact that the latter location results in higher social costs.

Such distortion in the location of both producing and consuming plants tends to favor a geographical concentration of industry, a phenomenon which might prove very hazardous for national security in case another total war materialized. Aside from economic considerations, it would seem unwise public policy to encourage a pricing system which tends to stimulate a geographical concentration of industry by allowing freight absorption. Instead, our interest in national defense should constitute a compelling reason for advocating such pricing systems as will favor a progressive locational diversification and decentralization of industrial establishments.

Finally, we should recognize that, in spite of the official opposition to the f. o. b. mill system emanating from steel circles, some companies are in no danger of loss as a result of the basing-point system's abandonment. Bethlehem Steel, for example, is favorably situated for the eastern seaboard and export market; Inland Steel has the vast Chicago market at its plant gate; National Steel operates in steel-starved Detroit; Republic Steel is favorably situated in Cleveland. That these companies have not, to date, suffered adversity under the f. o. b. mill system is best seen in their recent profit figures. Other companies, to be sure—notably United States Steel—with substantial capacity in the less advantageous Pittsburgh-Youngstown area are not so fortunate. They will have to look for new markets when steel demand slackens. With systematic freight absorption illegal, United States Steel and others like it will eventually have to move part of their capacity to better locations, that is, closer to markets and scrap sources. Such moves are entirely in accord with sound economic development and should not be discouraged by a reimposition of basing-point pricing.

[1] D. Lynch, The Concentration of Economic Power, New York, Columbia University Press, 1946, p. 191.

EXCERPT FROM STATEMENT OF DR. FRITZ MACHLUP, PROFESSOR OF POLITICAL ECONOMY, THE JOHNS HOPKINS UNIVERSITY, SUBMITTED TO HOUSE SMALL BUSINESS COMMITTEE, JULY 6, 1949

The basing-point system of pricing enables each member of an industry to calculate the exact prices that he may expect every one of his cooperating competitors to quote for the product delivered to any of the 60,000 or more destinations in the United States. The system thus permits the competitors to eliminate price competition and without prior consultation to quote to any one buyer exactly identical prices despite the different freight costs from the various production places to the destination. One of the great advantages of the basing-point system to the industries in which it is employed is that it permits price fixing, without traceable communication among the cooperators and, hence, with less direct evidence of conspiracy than can possibly be discovered in other forms of combinations in restraint of competition. If the cooperators are careful, they can maintain such a price-fixing scheme indefinitely without being caught unless the very adherence to the system is accepted as prima facie evidence of collusion. Section 1 of S. 1008 in its present form immunizes the inherently collusive practice unless the existence of the combination, conspiracy, or collusive agreement is proved.

An advantage of the basing-point system to the largest corporations in the industries in which it is employed is that it permits those firms to dominate and oppress the smaller firms in the industry without leaving any direct evidence of the oppressiveness of the discriminatory policy. These large corporations can restrict the operations and prevent the growth of the small businesses by using the discriminatory pricing practice of the basing-point system and professing that they are merely "meeting the equally low price of a competitor." The oppressive effects are discernible only by subtle methods of economic analysis. It is uncertain whether the results of such an analysis would be admitted as the "substantial and probative evidence" which is required by section 4 of S. 1008.

The collusive-monopolistic and oppressive-discriminatory nature of the basing-point system was exposed in chapters 4 and 5 of my book, The Basing-Point System (published in March 1949 by the Blakiston Co., of Philadelphia). This book incorporates the results of years of painstaking and impartial study of the established facts in several court cases as well as to the economic analyses presented by opponents and defenders of the controversial pricing system. The contentions denying the monopolistic and discriminatory nature of the basing-point system proved to be absolutely untenable and sometimes deliberate falsehoods. The case against the basing-point system and against similar "freight-equalization systems," as they are sometimes called, proved to be so strong that a condemnation of these systems in the strongest terms became inescapable.

The 1948 decision of the Supreme Court in the Cement case, holding that the basing-point system was illegal under existing law, was a late but incontrovertible recognition of the monopolistic effects of the system. In a thorough analysis of the economic consequences of the operation of the basing-point system—in chapters 6 and 7 of my book—I came to the conclusions that "the system—

"(1) reduces the degree of competition in the sale of the products concerned;

"(2) causes wastes in transportation by encouraging shipments over unnecessarily long distances and by unnecessarily expensive means;

"(3) raises the level, reduces the flexibility, and distorts the structure of prices;

"(4) facilitates the increase or maintenance of concentration of control in the industry;

"(5) reduces the utilization of productive capacity in the industry;

"(6) severs the price connection between expansion of capacity and growth of demand;

"(7) distorts the location of productive capacity in the industry by retarding its decentralization; and

"(8) distorts the location of fabricating industries by fostering undue centralization."

EXCERPT FROM STATEMENT OF DR. VERNON A. MUND, PROFESSOR OF ECONOMICS, UNIVERSITY OF WASHINGTON, SEATTLE, SUBMITTED TO HOUSE SMALL-BUSINESS COMMITTEE, JULY 5, 1949

From a public point of view, various economists have pointed out, the practice of sporadic discrimination is an undesirable method of competition (1) because it forces some customers to pay excessive local prices, and (2) because it subjects small competitors in distant areas to the fear and hazard of anarchic price cutting. The large producer may honestly not intend to kill off a distant competitor, but the fact remains that no seller likes to see a competitor grow bigger and more powerful if he can prevent it. Thus, sporadic discrimination, used by a dominant firm to meet competition, may be exercised to hold prices at an unremunerative level at distant points, so that rival sellers fail to grow, wither on the vine, or eventually drop out of production. Since the discrimination is exercised in accordance with no principle except that of meeting competition, a small producer can never be sure about the prices which he is likely to find in his area. The resulting uncertainty and the fear of retaliation thereupon frequently become important factors in inducing the small firm to follow the leader in a policy of cooperative, systematic price discrimination.

Basing-point and zone-delivered pricing systems force buyers to purchase two commodities—the manufactured goods and freight—on terms and conditions determined solely by the producers. In charging phantom or fictitious freight, a mill forces a buyer to purchase transportation service which he doesn't want and which he doesn't get. This gives a particular mill net prices higher than the base price by the amount of the fictitious freight. On the other hand, in the case of absorbed freight, the railroad is paid the actual freight cost, and the mill secures net prices which are lower than the base price of the amount of the absorbed freight.

Buyers (fabricators) located at or near a nonbase mill do not want to pay phantom freight, for such a charge places them at a competitive disadvantage with fabricators located at or near a base bill. Likewise, buyers located near a base mill which is engaged in freight absorption, find that they are denied the advantage of their location and are forced to pay high local prices which help to defray the delivery cost to other buyers.

The Pacific Northwest is now producing approximately 50 percent of the total aluminum ingot production in the United States. However, we are doing very little in manufacture of finished aluminum products. The situation has led many to question the advantages of the aluminum industry to the region in view of the fact that it is a heavy power consumer, but a relatively small employer. The question is frequently asked why with all of our aluminum production we

don't have more fabricating facilities. The fact is that insofar as basic commodities—such as aluminum—are produced locally and sold freight allowed, with an average freight item included, local prices are high, as high as elsewhere in the country, and fabricators find no cost advantage in locating in the Pacific Northwest.

Welfare State

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. O'SULLIVAN. Mr. Speaker, I wish to call your attention to a splendid article which appears on pages 3 and 4 of the February 1950 issue of the Progressive, a magazine published monthly by The Progressive, Inc., 408 West Gorham Street, Madison 3, Wis.

This article presents the most readable break-down of what President Truman's $42,000,000,000 1950–51 budget request is to be spent for and dispels many of the wild claims of some people and silences many of the untrue claims and spurious arguments heretofore made by persons against this present-day budget request.

The article which I refer to is as follows:

The President's 1950–51 budget, second highest in the Nation's peacetime history, drew howls of protest from the conservative press and politicians. The $42,000,000,000 budget, and its $5,000,000,000 deficit, were blasted as "the bankrupting cost of the welfare state" and as "laying the bricks on the socialist road to economic ruin."

Analysis of the budget shows how weirdly inaccurate such charges are. Nearly three-quarters of the budget's forty-two billions—72.4 percent, to be exact—is earmarked for war, whether for past wars, the present cold war, or preparation for future wars.

Item-by-item break-down of the recommended expenditures reveals that of every dollar of expenditure provided in the budget:

Thirty-one and nine-tenths cents will go directly for national defense.

Thirteen and two-tenths cents will pay interest on the national debt, most of it incurred in the two World Wars.

Fourteen and three-tenths cents will be disbursed in the form of veterans' benefits.

Eleven and one-tenth cents will be paid in international security grants to foreign nations.

One and nine-tenths cents are earmarked for atomic-energy development.

The total of these war and defense appropriations is 72.4 cents out of every dollar of Federal spending.

Conversely, the total of all Government activities which could be classified as welfare or social-service programs comes to 18.8 cents, of which aid to the aged, the blind, and the otherwise handicapped comes to 3.6 cents; other social welfare and health services, 2.8 cents; purchase of housing mortgages, 2.3 cents; housing and slum clearance, 1 cent; aid to agriculture, 3.6 cents; rural electrification and rural housing, 1.6 cents; and subsidies to business, 3.9 cents.

Significantly, the last item is the largest but, of course, provokes the least outcry. These subsidies go to newspapers and magazines, the merchant marine, and air lines, all privately owned and operated for private profit.

We shall be watching with great interest when the economy bloc goes into action. We have no doubt that there is waste in the Federal establishment, and that sound economies can be made without disturbing vital functions of the Government. But we're convinced that any genuine effort at economy must be made with the understanding that the budget finances a warfare state, not a welfare state."

A Fact We Sometimes Forget

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. MULTER. Mr. Speaker, religion is on the defensive in many parts of the world today. This is a time which calls for utmost cooperation among the great faiths of the world in spreading religious tolerance of our fellow men. Better understanding among the people of all groups would, in these days of moral crisis, contribute most effectively toward better relationship in the political and socio-economic spheres which have so rent the world asunder.

One of the most constructive methods toward interfaith understanding is the annual observance of Brotherhood Week, which occurs this year during the week of February 19–26. In connection with that observance, I am placing in the RECORD an editorial written by the Rev. Richard Ginder, editor of the publication the Priest, as follows:

BROTHERHOOD WEEK, FEBRUARY 19–26, 1950

It will come as a distinct surprise to many a Christian when, on the last day, he confronts, as his judge, a young man, exceedingly handsome, and with a face that is unmistakably Jewish. It's only natural, especially in these latter centuries, to identify Christianity with the non-Jewish element in the world, that to say a man is a Christian is practically, by that very word, to spot him as a Gentile, or a non-Jew.

We tend to forget that when the Wise Men came to Jerusalem they inquired, "Where is He that is born King of the Jews?" And Herod sent them to Bethlehem, the ancient city of David, where they found Jesus.

And when the Messiah began His public life, He surrounded Himself with 12 Jews—the Apostles. It was a Jew, St. Paul, who first carried the Gospel to the Gentiles. It is through him that the rest of us have been made sharers in God's revelation.

That Blessed Virgin Mary, who was His mother and to whom Christianity has had such a tender devotion throughout the ages, was a Jewess, the daughter of St. Anne and St. Joachim.

Catholics venerate a Jew, St. Peter, as their first pope, and another Jew as his successor.

It was the children of Abraham who, through generation after generation, handed down God's truth in a world that else would have lost it. Moses, David, Solomon, Isaiah—Jews, all of them—were God's instruments in penning the most sublime pages of our literature. They were His people, chosen above all others, to preserve orthodox dogma, the concept of an invisible Creator of all things. It was their mission to school the world in a religion of sacrifice and atonement, to sensitize the human conscience and educate it to ideas of justice, truth, and purity.

And they fulfilled their mission admirably. They had their lapses, it's true, but always somehow they managed to get back on the track. So that when Our Lord did come, finally, He could speak to a people that understood His language, a people well versed in things of the altar.

Protestant or Catholic, our spiritual ancestry is Jewish. It is a fact we should never forget.

REV. RICHARD GINDER,
Editor, the Priest.

Torture in Lithuania

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include an article, by Mr. Lawrence R. Goldberg, appearing in the January 8, 1950, edition of the Boston Sunday Post, which graphically describes the terrible conditions in Lithuania today as the result of Soviet tyranny. It is a poignant reminder that the tremendous sacrifices in two World Wars will have been in vain if Lithuania, and the other small democratic nations, are not liberated from ruthless imperialism. Let us hope that the new phase of our foreign policy will include a stern demand that Russia relinquish her strangle-hold upon Lithuania and permit a peace loving people to rule themselves as they have a right to do under God's law as well as international law.

The article by Mr. Goldberg follows:

BARE TORTURE IN LITHUANIA—UNDERGROUND LEADERS SEND GRAPHIC STORY AND PICTURES TO SHOW WHAT REDS ARE DOING

(By Lawrence R. Goldberg)

A series of photographs brought to the United States from the underground resistance movement in Lithuania—accompanied by sworn-to facts and figures—poignantly depict what is going on behind the iron curtain enveloping that country.

They show conditions there under Soviet rule growing steadily worse in all phases of life—moral, social, political, economical, cultural, and military—and pose a dramatic plea to the free part of the world for aid.

"Our nation is being crucified," writes one of the underground leaders in a letter accompanying the photographs. "Our blood-stained hands reach out to you. It is our own blood. It flows in streams. Our burning homesteads light up the sky, nothing but blood and suffering everywhere. The summer sun does not dry up the blood, nor do winter colds congeal it. This blood is only washed away by the tears of our mothers, wives, sweethearts, and children as they embrace us."

COLD FURY

"As we look around at the devastation of our homes; as we see the hideous crimes of violence; we forget our exhaustion and a calm, cold fury gives up strength to fight on.

"The bodies of our men, robbed, bared, and mutilated lie in piles in town market places for weeks; by such display our oppressors attempt to intimidate us. Our people are spied on through the windows to discover any sorrow on the part of families for

their dead. Occasionally a mother, a sweetheart or a sister breaks down and embraces the corpse of her beloved. Then hundreds of Russians, like a pack of bloodthirsty wolves, pounce upon the relatives—new victims for Siberia."

TERRIBLE TRAGEDY

"There is no place, no school, nor factory job for the relatives of the fallen. There is not a single village nor a home which has not experienced the terrible tragedy of reprisal.

"We shall fight for our homeland to the last. Our lives we shall sell dearly on our own ancestral soil rather than waste away in Siberia. Our bodies will fertilize our beloved soil and succeeding generations will be imbued with a greater love for this—our motherland. We pass into eternity with a mouthful of the sacred soil.

"During the past 3 years of fighting we have lost hundreds of thousands of lives—some fallen in battle in the homeland, others suffering in Siberia. But the 3,000,000 of us keep on fighting against the 200,000,000 strong occupants armed with most modern weapons. And we shall win.

SPRING WILL COME

"Spring will come. Nothing can change the tide of our Nemunas, father of our rivers. All praise to our gallant priests—there were 1,000 here in 1945, 600 have died or are in Siberia or are with us in the forests. All praise to our students. Born free men in a free homeland, they refuse to become enslaved. Some 16-year-olds, with fettered hands and feet, defiantly march to die in Siberia—with heads held high. Inhuman torture has brought about no instance of betrayal; he who has tasted freedom will never become a slave.

"The occupants fear us. The doors are never left unbarred. Our people have produced few traitors—our oppressors bear foreign names. Our own striking squads eventually take care of those few who betray our people.

"We are not cruel, but we are dealing with rapacious beasts. Not one Russian died without first being warned to leave our soil. But when they victimize our people without any conscience—we simply defend ourselves.

"For 3 years we have listened to ravings regarding the paradise which would follow the 5-year plan. Yet the situation gets worse every month. Selling our last overcoat, we buy food for our children. We work long hours to earn one-tenth of what is needed to fight hunger."

SCANT FOOD

"Our children no longer know what sugar, butter or meat look like. After a hard day's work we must go to the agitpunkt to listen to what Stalin had said regarding life after 5 years. We go home at night with clubs in hand lest militiamen or soldiers should attack and disrobe us. A great many lives have been lost because of a well-worn overcoat.

"The silhouette of an approaching human figure causes us to make a wide detour. The militia check our papers at night—in other words, we are robbed by the representatives of law and order. If one complains, he is accused of being a counter-revolutionary by drunken militiamen.

"There is very little electricity. Fences, window sills, and partitions were burned for fuel. Roofs are holed. Only 10 percent of our production remains in the country, the rest is moved to Russia—to the paradise where father and teacher Stalin feeds everyone with milk and honey, where orange factories are producing in three shifts."

5-YEAR PLAN

"The Communists now tell us that our beautiful structures erected in 1935 and earlier were built by the working people as part of the 5-year plan. Should one evince the slightest doubt, he is exiled to Siberia for 10 or 15 years. Lavishly furnished shops for Communists sell at black market prices.

"These are not for us: our 1 month's earnings are not enough to buy 1 day's needed supplies. Officially, we are all equal, but Communists live extravagantly in sumptuous apartments while in the grace of their masters. They eat in separate restaurants and buy in special stores. Those who earn their bread in sweat are hungry and ragged.

"Under armed guard we are forced to march in the demonstrations of joy. The bayonet troops prod us to hail when passing the reviewing stand. Nevertheless, our heads sag or turn away. * * *

"We are very much surprised at the timidity of the Vatican broadcasts. Why be afraid? We are not afraid to die for our faith, for our homeland and for civilization. Fear not to lift your voice in loud protest. Harbor no fears for us—nothing could possibly be worse. We are dying, but in dying we want to know that there are people in the free part of the world who do not fear to raise their voice in behalf of the oppressed. Do not be afraid to drop the atomic bomb which our oppressors fear so greatly. We are prepared to pay this price for freedom."

LATEST STATISTICS

Latest available statistics divide the country's 3,250,000 population as follows:

	Percent
Lithuanians	80.60
Jews	7.15
Germans	4.10
Poles	3.04
Russians	2.35
Latvians	0.69
Whiteruthenes	0.21
Others	1.86

Before the Russians came this population distribution by religion was:

	Percent
Roman Catholics	80.48
Protestants	9.54
Israelites	7.26
Greek Orthodox	2.54
Other Christians	0.09
Other non-Christians	0.09

The following show what has happened to Catholics since June 1940, when the Soviets occupied the country:

	1940	1948
Archbishops and bishops	14	1
Clergy	1,646	400
Monastic order members	1,586	0
Churches	1,202	60
Parishioners	2,776,422	0
Theological seminaries	4	0
Catholic faculty in universities	1	0
State assistance	L1,383,278	0
Church taxation	0	0
Divinity students	470	0
Killed or exiled clergymen (percent)	0	75
Catholic press 1935:		
Number	52	0
Circulation	7,030,200	0
Religious-philosophy books	209	0
Sodality-fraternity members	800,000	0

RELIGIOUS PERSECUTION

The underground data does not disclose clandestine cathechetic instruction by clergymen and laymen, and the secret religious press. Religious books and articles bring highest prices in the black market. All of the Catholic scientific, educational, social, athletic, labor, economic, publishing and charitable institutions, academies, schools, libraries, kindergartens, associations, sodalities, et cetera, have been closed and their property confiscated by the Russians.

No religious literature—no catechism, missals, discourses, etc.—is printed; no paper is alloted by the government—and all printing places are state-operated. No priests are permitted to enter hospitals, schools, barracks, and prisons to administer the sacraments. The priests enter jails only as prisoners.

Since 1947, the Russians have attacked the church from another angle—clamoring against the Vatican and demanding creation of a "national Catholic Church."

Priests are repeatedly summoned and urged to break with "the fascist Vatican"—or be imprisoned for "espionage" and contact with "the Vatican intelligence." In several parishes pastors have been arrested and apostate priests installed, without the Bishop's blessing. Bishop's representatives were barred. Local Communist officials became ardent and regular "church-goers"—but no one else goes there.

SEARCHING PARTIES

Persons exhibiting religious icons and crucifixes in their homes come under persecution. Religious pictures and statuettes found in homes by armed searching parties infuriate the Russians and their stooges. Religious objects are smashed, bayoneted, spat upon, and trampled.

The "boss" of the country is a satrap of the Kremlin—comrade Shcherbakov, titled All-Union Communists party's Bolshevik Plenipotentiary for Lithuania.

Of the so-called "Luthuanian Units," only one survives—the 16th Infantry Division stationed in Vilnius. The enlisted and non-commissioned officers personnel is roughly 80 percent Lithuanian, but the officer cadres are predominantly Russian on all levels. Orders are given in Russian. Colonel Motieka is the divisional commander, and political "General" Macijauskas is deputy commanding officer. All other mobilized Lithuanians are dispersed throughout Russian units.

MAJOR NAVAL BASE

Klaipeda (Memel) is converted into a major submarine and naval base.

During the first half of 1948, regular Soviet army forces (exclusive of the navy and spy units) stationed in Lithuania numbered about 80,000 men of infantry, artillery, aviation, armored, and tank units. The artillery is concentrated along the seacoast.

Preparations for war are in evidence everywhere. New airfields are constructed, old fields are expanded and modernized. Armored units, air squadrons, and artillery are constantly in transit. Closely guarded military trains travel by night. The populace is kept in a state of nervous war tension.

Mobilization exercises are periodically staged. Speakers addressing mass meetings denounce American and British "imperialists" and "warmongering aggressors." War morale permeates the administrative apparatus, the party and army circles. Workers are urged to strain every effort for the "defense of the Soviet motherland" and to increase the output.

The United States and Rearming of the Arabs

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. MULTER. Mr. Speaker, from all sides reports have been coming in about the current rearmament program of the Arab countries. Fears have been expressed by various well-informed people in this country and abroad that the British rearmament of the Arabs will

lead to a general armaments race in the Near East and to an inevitable renewal of warfare in that part of the world which will result in the most dire consequences: Instead of peace, we shall witness bloodshed; instead of economic development and upbuilding of underdeveloped areas, we shall have widespread destruction; instead of security and tranquillity for the people of the Near East and the safeguarding of American interests and American policy, the entire region will be thrown into chaos.

This very day a delegation of responsible Jewish leaders in the United States submitted a memorandum on the subject of rearmament of the Arab states to the Department of State. This delegation was headed by Mr. Louis Lipsky, chairman of the American-Zionist Council which comprises all Zionist groups and organizations in this country. In addition to Mr. Lipsky, the delegation included Mrs. Moses P. Epstein, Dr. Pinchus Churgin, Mr. Louis Segal, Mr. Elihu David Stone, of Boston, and Rabbi Jerome Unger, executive director of the council.

In their memorandum, the delegation presented the facts and urged our Government to use its great influence to avert the dangers to the peace of Palestine involved in the situation which is being created, and to request Great Britain to discontinue the shipment of arms to the Arab countries. I think the overwhelming majority of Members of this House will desire to read the memorandum in order to get acquainted with the facts.

Mr. Speaker, now is the time to forestall bloodshed and to put an end to plans for revenge and for a second round against Israel. Tomorrow may be too late. Here is ample warning that a dangerous situation is developing in the Near East which is reaching explosive stages. It will be a very sad day for the world if we suddenly discover that we failed to heed this warning.

The full text of the memorandum submitted by the American Zionist Council to the Department of State, as well as the statement by Mr. Lipsky following the conference at the Department of State, are as follows:

THE REARMAMENT OF THE ARAB STATES—MEMORANDUM SUBMITTED TO THE UNITED STATES DEPARTMENT OF STATE BY THE AMERICAN ZIONIST COUNCIL, FEBRUARY 20, 1950

1. We have the honor to address you, on behalf of the American Zionist Council, to express to you the deep concern felt by American Zionist bodies over American policy with respect to the rearmament of Egypt and other Arab states. We refer, in particular, to your recent letter to Congressman JACOB K. JAVITS.

2. It is a matter of public knowledge that the Jews of Israel have engaged in the most difficult resettlement program in the history of our times. They have absorbed into the economic life of Israel in a period of 19 months 354,169 Jews who have made their way to the homeland under great difficulties from many lands of persecution. The Jews of the United States have been active partners in this work of reconstruction and rehabilitation. They have given of their means with unparalleled generosity to enable the struggling state to integrate the returning settlers in the economic and cultural life of the community.

3. The threat to the peace of Israel implicit in the rearming of the Arab states has evoked apprehension and uneasiness on the part of all American Jews, as well as large segments of American public opinion on the whole. We are greatly concerned lest the constructive work of the State of Israel and its program of absorbing the tens of thousands of refugees may have to be curtailed and the community forced by the growing menace of a renewal of warfare to take up the heavy task of preparing to defend their lives and the communities they have established. We are greatly disturbed lest the hard-won truce with a number of Arab states may be broken by the incitements of the forces of aggression who are being stimulated by the fact that their governments are assembling large quantities of formidable destructive weapons available for immediate use.

4. It has been a source of pride to us that the Government of the United States played a memorable role in the United Nations in the rise of the people of Israel to independence and statehood, that our Government was the first to recognize the State of Israel and that it has cooperated with the new state in the solution of many of the problems confronting it.

5. Moreover the Government of the United States participated constructively in the deliberations at the United Nations to end the conflict in the Near East and actively supported those steps which led to the signing of armistice agreements between Israel and her four Arab neighbors.

6. It is our sincere belief that our Government maintains the policy of continuing helpfulness to the State of Israel, and, indeed, to all the states of the Near East, but we are constrained to admit our inability to reconcile your recent letter with that policy.

7. It will be recalled that when the Security Council voted to lift the arms embargo on August 4, 1949, there was widespread concern lest an armament race develop in the Near East. Israel's representative to the Security Council, Mr. Aubrey S. Eban, expressed doubt that the newly won peace could survive the strains of that competition and urged a moral directive by the Security Council to exert influence on the arms-supplying states in order to insulate the Near East against the worst dangers of an armaments race.

8. Members of the Security Council shared Mr. Eban's apprehension and there was general agreement that care and restraint must be exercised in the Near East to prevent large-scale rearmament. Thus, Sir Terrence Shone, the representative of the United Kingdom, declared that any supplies of arms which his Government might send would be for the internal security and defense requirements of the States concerned. But he said the United Kingdom was opposed to the Middle Eastern states acquiring war material in excess of their legitimate defense requirements, and, he said, "We believe the states themselves would not wish to exceed such limitations." Dr. Ralph Bunche, the former acting mediator, observed that in the absence of a firm injunction, coupled with observation machinery, "the burden really seems to rest upon the states in a position to ship arms."

9. And, as you note in your letter to Congressman JAVITS, former Senator Austin, on behalf of the United States, told the Council that export of arms to the area should be "strictly limited to such arms as are within the scope of legitimate security requirements."

10. Events since the lifting of the arms embargo challenge the assurances that were given during the Security Council's deliberations. The Arab countries are now acquiring heavy arms which far exceed those necessary for the purpose of maintaining internal law and order by the governments concerned in the legitimate exercise of constituted authority and for the purpose of providing for reasonable requirements of self-defense.

11. The facts are well known. The 1949–50 budget approved by the Egyptian parliament was fixed at 87,457,280 Egyptian pounds (before devaluation), and of this fully one-third—the extraordinary sum of 62,000,000 Egyptian pounds—was allocated for rearmament. Since that time, newspaper dispatches have fully reported Egypt's purchase of jet planes and heavy bombers, destroyers, frigates and corvettes, hundreds of heavy tanks and heavy artillery of all calibers. In addition, there have been authoritative reports of the establishment of armored formations both by Egypt and Syria, the establishment of an arms industry in Egypt, and the acquisition of hundreds of armored cars by Egypt, Syria, and Hashemite Jordan.

12. Manifestly, equipment of such range and striking power is intended for purposes other than internal order and security. While it is conceded that there may be internal unrest in Egypt—the inevitable consequence of poverty—the people are unarmed and jet planes, tanks, and destroyers are not needed to subdue them. Economic unrest is not quieted by the diversion of a huge proportion of a country's substance to the nonproductive weapons of war.

13. In our judgment, there is every ground for fear that these arms will eventually be used for a renewal of Egypt's aggression against Israel, if not immediately, within the foreseeable future. Apart from this, we hold the view that this huge-scale armament program prejudices the prospect of a peace settlement between Israel and Egypt.

14. It has been the hope of all friends of both the Jewish and Arab peoples that Israel and the Arab states would soon find it possible to transform their armistice agreements into final and lasting peace treaties. It is the conviction of most observers—based on the successful negotiations of the armistice accords—that such treaties can be consummated if Israel and the Arab states can engage in direct negotiations.

15. But it is clear that such negotiations will be retarded rather than accelerated if the balance is upset in the Near East, if one side is rearmed and if the interests of the people are diverted to military channels. In Egypt and in every other Arab state, there are war parties which are eager for a second round in which they hope to recoup their losses and remove the stigma, and exculpate themselves from the responsibility of their last defeat. They oppose a peace settlement. To put arms into the hands of their governments strengthens their intransigeance. They have announced their intentions, repeatedly, in the press, on the radio, and on the public platform. Now they are being given the tools to turn their words into missiles. They have no other identifiable enemy in sight. What basis is there for the belief that the second round which they so eagerly advocate is not, in fact, in preparation? What guaranty is there in the circumstances of the Near East's endemic political instability that these forces may not succeed to power and make use of the weapons in accord with their avowed program?

16. If it is not the purpose of the Arab countries to use these arms for a second assault against Israel, then one must ask why are they being rearmed at such fantastic cost? Is it the belief of the proponents of this rearmament program that the Arab states can be regarded as worthy and reliable allies of the democratic countries in the event of another world conflict?

17. Past experience answers these questions. In the Second World War, Egypt remained a nonbelligerent, and although the country was invaded by General Rommel's forces, the Egyptian army remained passive and the defense of Egypt was left to the British army, including thousands of recruits from the Jewish population of Palestine. It is an ironic commentary that British arms are now going to Egypt and may be used against those who were the sole allies of the democratic forces in the Near East in the last war.

18. In Iraq in 1941, Nazi forces seized control of the government and were finally eliminated only after a show-down with the British army. Palestine Jews took part in that action and they were active also to remove Nazi influence from Syria and Lebanon. Throughout the entire war, the Arab world remained aloof from democracy's banner, while many of its leaders, like the former Mufti of Jerusalem, were actively on the side of the Axis and made their headquarters in Berlin.

19. Can the democratic forces regard Egypt or Iraq, or any other Arab country, as a shield of substance in the light of the past record, and particularly in the light of Arab weakness in the war in Palestine? Although their forces and their arms far exceeded those of the nascent state of Israel, they were quickly overwhelmed in battle. Does this type of alliance fit into the mosaic of democracy's defense?

20. Quite apart from our natural feeling of sympathy for our Jewish kinsmen in Israel, we deem it our duty as Americans vitally concerned about American policy in the Near East and American defenses throughout the world to express the strongest misgivings on the military support of a dubious ally. The fact that it is Britain which is extending this generous aid should not obscure the fact of indirect American participation, for it is surplus American Army equipment that is being used in many cases, and it is the United States which is today providing arms for these same countries which divert their stocks to the Near East.

21. The paramount need of the entire Near East is the development of resources to lift standards of living for millions of depressed people. In the context of this urgent need, the extravagant expenditure of interest, energy, and funds on armament and mobilization is a disservice to humanity.

22. This view was eloquently put forth by the representative of the United States, Mr. Austin, in the Security Council debate on the armistice agreement. He said:

23. "It is essential that the resources of that area be used for peaceful purposes, for economic development, for the resettlement of refugees, and for the achievement of higher standards of living for the populations of the area. It would be tragic and wholly wrong if the resources of the area were to be dissipated in an unproductive arms race."

24. In this connection, one thinks of the obligation of the Arab states to their Arab brethren who, victims of Arab aggression against Israel, were forced to leave Palestine and who today are homeless refugees. If the Arab governments were disposed to expend their funds for resettlement projects, as Senator Austin suggested, they would make a constructive contribution, not only toward the regeneration of a people for whose misery they are primarily responsible, but in the development of their own underdeveloped countries.

25. Precise figures on the cost of resettling the Arab refugees are not available; but in a recent survey published by the Royal Institute of International Affairs, it was suggested that the cost of resettling an estimated 713,000 dould be £56,327,000 (before devaluation). The Chatham House experts estimate an average of £79 for settling a refugee on the land in the Near East. It is startling to reflect that Egypt's budget for armaments in 1 year actually exceeds the total estimated cost of resettling all the Arab refugees. No one would dare to compare the moral validity of two projects like refugee resettlement and military armament. Nor would one debate which enterprise more effectively promotes the cause of internal order and security as well as the stability of democratic institutions in the Near East.

26. For its part, relieved of the threat of a renewal of hostilities, the Government of Israel would be enabled to continue its dedication to the resettlement of Jewish refugees who have come to Israel after a decade of wandering and helplessness—an undertaking to which the American Jewish community has proudly contributed substantial sums. It would be a sad day if the Government of Israel were compelled to reduce or halt its resettlement program because it felt obliged to spend large sums for armaments to keep pace with its neighbors.

27. The people of the Near East must have peace. It is for the Governments of the United States, United Kingdom, and other great powers to use their best efforts to ensure peace and tranquillity in the Near East so that its peoples may work together to raise the living standards of the entire area. To plunge these people into an armaments race is to serve the cause of their impoverishment, debasement, and destruction.

28. We respectfully urge our Government to reconsider the problem in the light of the facts herein set forth. We ask that it use its great influence to avert the dangers to the peace of Palestine involved in the situation which is being created; and that the United Kingdom be requested to discontinue the shipment of arms to the Arab states.

Respectfully submitted.

AMERICAN ZIONIST COUNCIL.

(Representing: Hadassah, Women's Zionist Organization of America, Hashomer Hatzair, Labor Zionist Organization of America—Poale Zion, Mizrachi Organization of America, United Zionist Labor Party (Achdut Avodah—Poale Zion), Zionist Organization of America, Zionists-Revisionists of America.)

STATEMENT BY MR. LOUIS LIPSKY, CHAIRMAN, AMERICAN ZIONIST COUNCIL

We repeat that we regret the position taken by the State Department. We are convinced that American public opinion will not share the complacency of Mr. Acheson toward the rearming of the Arab states. The danger we refer to is not far off; it is right around the corner. The state of Israel is now engaged in negotiating for peace agreements to take the place of the armistice arrangements with the Arab states. Sending them large quantities of arms at this time inevitably disturbs all talks of peace with them. It is like handing a revolver to a potential assailant, who has once been disarmed. It is no rational defense of the act to say that the supplier of the deadly weapon will wait to see what he will do with it, and is prepared to take action if necessary. We will be too late then. British assurances as to the kind and quantity of arms she is sending to the Arab states cannot be taken seriously in the light of past performances.

We solemnly declare that the approval of England's sending of new planes and heavy artillery and submarines to any Arab state at this time is a direct encouragement of Arab aggression. We deplore that the state of Israel will have to use a larger part of its hard-pressed budget not for the restoration and rehabilitation of the tens of thousands of new settlers, but for the mobilization and equipment of its armed forces.

Biweekly Broadcasts by Hon. Francis J. Myers, of Pennsylvania

---

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD certain biweekly broadcasts which I made over certain radio stations in Pennsylvania in the month of February 1950.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

TEXT OF TRANSCRIPTION BY HON. FRANCIS J. MYERS, OF PENNSYLVANIA, OVER PENNSYLVANIA RADIO STATIONS, WEEK END OF FEBRUARY 3–5, INCLUSIVE

(No. 19 in biweekly series)

As this second session of the Eighty-first Congress rounds out its first month, I think we could characterize our accomplishments most accurately by saying that the largest part of our efforts have gone into what we might term "spade work"—in other words, we've spent most of our time on those preliminaries that are necessary to get legislation in final shape for passage.

When the first session ended the middle of last October, we had managed, by and large, to clean up most of the major legislation then on the calendars of the Senate and the House, and as a result, our initial task when we returned early last month was primarily directed at completing committee work on a number of bills which we hadn't found time to finish during the last session.

As I explained in my last radio report 2 weeks ago, when I talked about the steps necessary to pass a law, some of you may recall that each Member of the Senate serves on two of the 15 legislative committees. Now actually, the situation is somewhat more complicated than it would first appear, because, as I also explained at that time, the legislative committees are, in turn, broken down into a number of subcommittees which consider specific bills. So, while it's true that each Member of the Senate is assigned to only two legislative committees, the practical effect of this is that we serve on six or eight subcommittees.

In my particular case, there are several other complications as well, because in addition to my legislative assignments on the Finance Committee and the Senate Committee on Interstate and Foreign Commerce, I am also a Member of the Joint Senate-House Committee on the Economic Report, a committee established to advise the Congress in matters of national economic importance. Over and above this, I am one of the 8 Democratic members of the majority policy committee, which meets for an hour or so each Tuesday to schedule the sequence of legislation in the Senate, and I also serve on the majority steering committee, which meets periodically to consider such matters as assigning Senators to membership on various legislative committees. And finally, I have other duties and obligations as the majority whip.

Now my purpose in explaining this to you is to point out that every Member of the Senate frequently finds himself confronted with the difficulty of having two or three committee or subcommittee meetings going on at the same time. Up to now none of

tm has worked out a suitable means for being in several different places at once. About the best that we are able to do when we are confronted with three simultaneous meetings is to select one of them, attend that meeting, and then somehow, in the next day or so, manage to get our hands on the written transcription of what took place in the two meetings we missed.

This obviously isn't an altogether satisfactory solution, because frequently, in reading over the transcriptions of the committee meetings we missed, we think of questions we would have asked the various witnesses had we been present to do so.

I think I can illustrate this pretty well by an example. The Senate Finance Committee opened its hearing on the new social-security amendments shortly after the middle of January. Now those hearings are of tremendous importance for a number of reasons. For one, the social-security bill, in the form in which it passed the House of Representatives late last year, contains more than 200 pages. This alone is some measure of the tremendous complexity and comprehensiveness of that legislation. It is perfectly understandable that the Senate intends to examine every aspect of that bill with great care. Furthermore, hundreds of people, most of them expert in particular phases of the bill, have asked to testify in opposition or support of certain provisions. These people should be heard, and the committee intends to hear them.

I have wanted to attend every one of those hearings, but it has been simply impossible for me to do so. As a general rule, the Finance Committee has scheduled hearings all day long, 6 days a week, and I have been present whenever it has been possible for me to do so. I think this may also be said of the other 12 Senators who serve on the Finance Committee, because they, too, are keenly aware that virtually every American will feel the impact of the changes the Congress will make in our social-security laws this year.

I won't take time now to develop any of the details of the social-security bill for you, but at the present time, I am preparing a News Letter which summarizes the major social-security proposals that are now being considered by the Senate. In all honesty, I think every American should know the basic provisions of the social-security law, whether he is presently paying social-security premiums or not, and if you are not already receiving my News Letter regularly, I invite you to write for a copy of the one which describes the social-security proposals. I believe you will find it helpful in understanding the provisions of the bill now before the Senate Finance Committee.

If you'd like a copy, address me, Senator FRANCIS J. MYERS, Senate Office Building, Washington, D. C.

At the start of this broadcast, I remarked that we had been busy at our "spade work," and the social-security bill is only one example of this. The Senate Banking and Currency Committee spent almost the entire month of January putting finishing touches on the middle-income housing bill, in order that we could get it ready for Senate action.

The Senate Judiciary Committee completed its work on the displaced-persons bill January 24, just 1 day ahead of the schedule ordered by the Senate last fall when the DP bill was returned to committee for further consideration. I might add, in connection with the DP bill, that I believe the Senate itself will wish to make a number of changes in the committee bill before it is ultimately passed. The newspapers, when the DP bill was first reported from the committee, noted that a number of liberalizing changes had been included in the committee bill, but later editorial comments on the bill have changed quite a bit as editors have had an opportunity to study the measure further. I certainly go along with many of the papers in criticizing the shortcomings of the Senate bill as it now stands, and I believe that the DP bill, as it passed the House last year, is much fairer and far more nearly in line with what I would regard as a decent and suitable law.

A couple of weeks ago there was a bit of spade work going on over in the House of Representatives. I refer in these terms to what happened because the issue there did not result in legislation, and merely represented a struggle for power. I have in mind, of course, the fight over the so-called discharge rule. The whole issue in that fight in the House boiled down to deciding whether the 12 members of the House Rules Committee had the exclusive power to block the passage of legislation. The majority of the Rules Committee contended that it had such authority. When we consider for a moment that there are 435 Members in the United States House of Representatives, it is hard to go along with the argument that 12 men should be permitted to speak for all of them.

The background of the Rules Committee fight developed more or less in this fashion: The House has never been troubled with filibusters, simply because it has long been recognized that if 435 Representatives were permitted to talk without limit, the result would be pandemonium and absolutely no legislative accomplishment whatsoever. As a consequence, the House operates under the strictest kind of rules to limit floor debate in order that it may get its work done. Naturally, this means that legislation can't be talked to death in the House as it can be in the Senate through the tactic of filibustering.

Thus, minority groups who have opposed passage of certain classes of legislation have been forced to resort to other strategems which would accomplish the same result as the filibuster. Until the Eighty-first Congress, the blocking tactic of these House minorities has been accomplished through the operation of the House Rules Committee, a body, as I've already indicated, composed of 12 members. These 12 men had the sole power of deciding what measures the House would consider. Needless to say, if 7 of the 12 Rules Committee members objected personally to a bill, they could kill it completely by refusing to report it out to the House for a vote. Bill after bill has been killed in this fashion.

Early in 1949, Democratic Congressman HERMAN EBERHARTER, of Pittsburgh, came up with an idea which made it possible for a majority of the House to bypass the Rules Committee when it sought to bottle up a bill. The technique Mr. EBERHARTER suggested was cumbersome, it is true, but for the first time the House had found a way for the majority to express its will in those cases where a stubborn handful of Representatives refused to go along with the measure supported by an overwhelming number of our people.

So, early in the Eighty-first Congress, the House adopted the Eberharter proposal, and without question, the Eberharter discharge plan broke the power of the House Rules Committee. Early in this present session of Congress, the Rules Committee of the House sought to regain its old dictatorial powers, and for several weeks the battle raged. The move by the Rules Committee to get back in the saddle was vigorously attacked by everyone who believes in the democratic process, because, as I've said, the opinions of 7 men, or for that matter, 12 men, cannot substitute for the full expression of the 435 men and women who represent the American people in the House of Representatives. For some days the fate of the Eberharter rule hung in balance. No one was really sure of what the outcome would be.

Finally, on Friday, January 20, 1950, the matter came to a vote in the House. The outcome represented a smashing victory for the democratic process. The House voted 236 to 183 to reject the Rules Committee's demands that its old power be restored. The Eberharter discharge rule remains in force, and henceforth, the House will have the unqualified opportunity to consider every issue on its merits and bring it to a vote in a democratic fashion.

I notice that my time is about to run out, but I want to mention one other extremely important bit of spade work that is going on in both Houses. The Congress has adopted this year a new method for handling the appropriation of funds for the Federal budget. In the past, we have considered the budget in a series of packages, that is to say, that we have drawn up separate appropriation bills for particular agencies and functions. For example, we'd have one bill for our military budget, another bill for flood control and rivers and harbors, and an agriculture appropriation bill—all told, a dozen or more separate measures, which taken together, furnished the total moneys which the Government spent in any one year.

This year we are seeking to wrap the budget up in a single appropriation bill, and as a result, largely of recommendations made by the Hoover Commission, a number of changes have been made in the form in which the President's budget was submitted to the Congress. The one-package approach to the budget was adopted because it was felt that by handling the matter in this fashion the Congress would have a better perspective of the whole budget picture. The old system of considering each appropriation measure separately was criticized on the grounds that not enough attention was devoted to the over-all budget picture. The Appropriations Committees of both the House and the Senate have worked steadily for almost a month on their budget hearings, and remarkable progress has been made thus far. If the balance of the appropriation job is completed as speedily as work has progressed this month, we should be able to avoid completely the kind of log jam that developed last year in the Senate when we were faced with the task of handling billions of dollars' worth of legislation in the tired and harassed closing weeks of the session. This year we should be able to take on the budget in an orderly fashion and give it the time and studied consideration it deserves.

Thank you for joining me. I hope you will listen in again when I return to the air in 2 weeks.

TEXT OF TRANSCRIPTION BY HON. FRANCIS J. MYERS, OF PENNSYLVANIA, OVER PENNSYLVANIA RADIO STATIONS, WEEK END OF FEBRUARY 17–19, INCLUSIVE

(No. 20 in biweekly series)

When President Truman announced 2 weeks or so ago that America would go forward with the development of the hydrogen superbomb, there was a reluctant, though overwhelming, public endorsement of the decision.

This is certainly understandable. Such a decision as this is a dreadful one to have to make. I believe America had no other choice than to make the decision that was made. I believe the American people overwhelmingly agree that in the light of the world conditions existing at this moment, we cannot risk the security of the free, democratic nations by failing now to follow where science is leading us. I say this because it is impossible for me to believe that America could remain free if the Russians had the hydrogen bomb, and we did not.

It is this single reason—that is, that the Russians might some day have the hydrogen bomb—which has compelled us to make this decision.

I want to make it clear, however, that there is much more behind the story of the atom than this fact alone. I intend on this broadcast to point out some of the historic landmarks of the Atomic age in an effort to indicate where we stand now, and what I regard as our prospects for the future.

On August 6, 1945, a shocked world learned for the first time that a single bomb had virtually obliterated a city in which almost a third of a million people lived. That bomb, as all of us know, was dropped from an American Air Force B–29 on the city of Hiroshima in Japan. The bomb killed 67,000 people. Four days later a bomb composed of an element—plutonium—previously unknown to science, was dropped on the city of Nagasaki. In less than a week the war with Japan was ended.

President Truman, in announcing that the atomic bomb had been used, said that this had been done to save the lives of hundreds of thousands who would otherwise have been lost in the conquest of the Japanese homeland. The grave decision to use the bomb at that time was not lightly made. It was done in recognition of the fact that at Guadalcanal, Saipan, and Guam, in the Philippines, at Iwo Jima, and in Okinawa the Japanese had resisted to the last man. Even when fully possessed with this knowledge, the decision to use the atomic bomb was not one easily made. We could not justify such an act by the cold thought that the Germans or the Japanese would have used the bomb on us if they had got it first. The American decision rested on a most careful weighing of all the inhumanities that are the consequence of war.

From the day that the first atomic explosion occurred to this day, it has been the unqualified policy of the Government of the United States to bring the atom under a workable system of international control. The American people have not been alone in insisting that the atom should forever be removed from the arsenal of war. Peace-loving people the world over are fearfully aware that the atom, if misused, is capable of destroying man and his civilization.

In stopping to consider the atomic developments which have occurred since the end of World War II in 1945, I think we must consider first the condition of the world as it emerged from the war. The United Nations Organization had been born at San Francisco in the spring of 1945. Those who dreamed of lasting world peace in those days had great expectations for the UN.

Twenty-five years earlier it had been hoped that the League of Nations would provide for a framework of world government in which war would forever be impossible. America, following a policy of isolation, had not joined the League of Nations, and it was commonly said that the League failed because America had refused to participate in it.

With the UN, it was hoped things would be different. The victorious wartime Allies had all agreed to join this adventure in world cooperation to promote lasting peace. The Russians were there, the British were there, the French were there, the Americans were there, and for that matter, there were at the start, all of the nations which had not participated with the Axis in the Second World War. It was planned that the defeated Axis nations would ultimately join the United Nations after they had established democratic governments of their own.

The year 1945 was a year of enthusiasm and hope for the future of a world at peace. The world had survived the worst war in history, and that war had ended in a thunderous climax brought about by the explosions which ushered in the atomic age. People all over the world believed that we had seen enough of war, that the atom had introduced a new and compelling reason for never going to war again, and people believed that the United Nations would provide us with the necessary machinery with which to construct a world that would remain at peace.

For the next few years, though they didn't know it at the time, those who dreamed of peace were in for some bitter disappointments.

The atomic bomb, of course, had been developed in America. Through our intelligence sources we knew that the Germans had been working on a similar project throughout the war, but finally the production of the first atomic bombs had actually taken place in America. The Government of the United States was clearly aware of the huge responsibility that placed upon us.

Very shortly after the close of World War II, a group of distinguished Americans drawn from public and private life, were asked by the President to work out a method for harnessing the atom. No group of men has ever been assigned a more important job, and they undertook it with all the seriousness that it deserved.

The primary responsibility for doing the job was assigned to Mr. Dean Acheson, who at that time was Under Secretary of State. Mr. Acheson called upon David E. Lilienthal, then Director of the vast Tennessee Valley Authority, to act as chairman of a committee which was to work out the basic proposals for international control of the atom. There were four other members of the Lilienthal committee—Dr. J. Robert Oppenheimer, certainly one of the outstanding scientists of our time—and three great industrialists—Mr. Chester Barnard, then president of the New Jersey Bell Telephone Co., Mr. Charles Thomas of the Monsanto Chemical Co., and Mr. Harry Winne of the General Electric Co.

The Lilienthal committee was given the unlimited authority to learn everything there was to know about the atom. For weeks members of the committee sat day and night listening and learning as the top atomic scientists explained to them, chapter and verse, the theory and the application of atomic energy. This was their first job, and the committee stayed with it until every member understood every point. Thereafter they visited all of the laboratories and all of the plants in which the giant atomic program was being conducted. They looked into every step—the research programs and the production itself, starting with the crude, raw materials, and finally with the bomb itself.

Everywhere the committee went it sought after, and listened to, the many proposals advanced for international control of the atom. By this time each of the five committee members had some ideas of his own as to what should be done to make control effective.

The big task still lay ahead, that of working out the details of the proposals which they later recommended. Mr. Lilienthal and the members of the committee decided from the first that they would stay with each controversy that arose between them until a way had been worked out upon which all five men could agree completely. In this way there was no unfinished business left aside to the last. If a particular dispute became serious among them, they would frequently get on a train or plane and revisit the plants in which that particular phase of the work was being conducted. Thus, they acquired additional facts and were able to iron out every disagreement.

The finished report of the Lilienthal committee was submitted with the unanimous approval of all five members. That report today is an outstanding monument to clear-headed thinking and statesmanship.

The report proposed an International Atomic Authority. This authority would conduct all of the research. It would control all the raw-material sources of the explosive elements. It would own and operate all of the facilities for producing atomic materials. And because this Authority would be operated by all of the 2,000,000,000 people on earth, the Authority would possess the power to inspect every part of the world to guarantee that no nation could develop atomic weapons in secret.

The Acheson-Lilienthal report became the basis of the proposal submitted to the United Nations by that great American, Bernard M. Baruch, in the fall of 1946.

Nineteen hundred and forty-six, you will remember, was the year that the Russian delegate on the Security Council began throwing around the Russian veto whenever he was outnumbered on a proposal that did not meet with the fancy of the Kremlin. Along in that time the Russian delegates introduced the now-familiar practice of walking out on the UN every time they felt their feathers were ruffled. They weren't willing to give an inch. Proposal after proposal that came before the UN was submitted, not once, but many times, and in different forms in an effort to obtain Soviet cooperation. And the Soviets sat, unwilling to budge, insisting on doing things their way, or not at all. They made countless impossible demands. The true intentions of the Communists to dominate the world were daily becoming more clear.

The Soviet delegates, and the delegates from the satellites they controlled, rejected the Baruch proposal. They did so on the ground that they would not permit unlimited inspection, saying they were willing to take the inspectors to their atomic plants, show them what they had, and that thereafter, the International Atomic Authority would have to take their word that there were no other projects elsewhere in Russia, or otherwise under their control. This counter demand would have made adequate inspection impossible, and the Russians knew it.

In the 3 years and a half that have elapsed since the Baruch proposal, a special committee of the General Assembly of the UN has stayed busy trying to work out the dilemma, thus far without success. In the meanwhile Russia has developed and exploded an atomic bomb of her own, and America has moved steadily forward in her own developments in the atomic field, producing more bombs, and more efficient bombs. Now that it appears practically possible to do so, America is going ahead with plans for the superbomb, which it is expected may be a thousand times more devastating than its uranium and plutonium parents. There's where we stand * * * busy at work on more efficient means of destruction, while efforts for international control appear to be stalemated.

Since the announcement of the superbomb, a number of new proposals have been put forward. One Senator has suggested that a giant fund could be established in the United Nations that could be put to work for economic development of the entire world, if every nation of the world would agree to international control of the atom along the general lines of the Baruch proposal. This fund, he went on to explain, could be created by having each nation contribute to the UN two-thirds of what it now spends for armaments.

Another Senator has suggested a new move for world disarmament.

Secretary of State Acheson and President Truman have stated that it is their intention to stick by the Baruch plan, because it represents, as they see it, the only effective way that the atom may be harnessed and put to work for man's use instead of for his destruction.

We cannot let fear immobilize us. Many world problems which troubled us a year, or 2, or 3 years ago, no longer bother us today. Solutions to them were found through con-

structive thinking. For the moment there are a number of suggestions for solving the atomic problem, and there will be more. We must examine and reexamine all the possibilities of every one of these. We must bend every energy to this problem upon which the fate of mankind depends. I am convinced that the 2,000,000,000 people on earth have sufficient intelligence to find a workable answer. By ridding ourselves of fear, by continuing to think constructively, by a continued willingness to cooperate, and by promoting world understanding, we will succeed. The need is compelling and the will is there.

Should Utah-Idaho Potato Grower Be Farm Support "Whipping Boy"?

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Should Utah-Idaho Potato Grower Be Farm Support 'Whipping Boy'?" published in the Deseret (Utah) News of February 15, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHOULD UTAH-IDAHO POTATO GROWER BE FARM SUPPORT "WHIPPING BOY"?

Isn't it about time somebody said something on behalf of the Utah-Idaho potato grower, who is being made out a villain's accomplice by all the criticism of the Federal potato-support program?

Certainly, there is plenty wrong with a program that costs the taxpayers $50,000,000 for a foodstuff that has to be dumped or burned. Constructive criticism of such a program is welcome and deserved. But the innuendo that the growers of either Utah or Idaho are responsible for this great economic waste, or are opposing proper correction, is hereby resented on our own, and on their behalf.

Potato growers in this section have taken drastic acreage reduction whenever and wherever they have been requested. So far as they are concerned, all this talk of producers blocking acreage curtailment to eliminate the surplus is just so much idle chatter.

There is an earnest question, too, as to just how much this section is contributing to the 50,000,000 bushel tuber surplus. Idaho State agricultural department reports indicate that very few Idaho potatoes have been sold to the Government, and so far as we can learn, the same situation exists in Utah where potato production is not a very big item. Even now the best grade of Idaho russet potatoes are bringing around $3 per 100 pounds, compared with a Government support price of $2.05. Of course, the situation in Maine might be something else again, but that is not our particular problem.

It does seem unfair, also, to make the potato grower the whipping boy for the whole support program. While they are talking about potatoes, they shouldn't forget that eggs and poultry, cotton, wheat and other grains, milk, and butter are not in too greatly different positions. The Government holds vast surpluses of all these products. For instance, the Government now holds about 2,700,000,000 surplus eggs, for which it paid $100,000,000. Despite the fact that it doesn't know what it is going to do with them, it already has agreed to buy more. And, unfortunately, if egg support is not continued for a time at least, there will be a great many poultrymen who will be broke or badly bent.

But why make the potato grower the whipping boy? There are no growers, in this region, at least, who have been taking the taxpayers for a $50,000 to $500,000 support ride. Nor are they making a killing on spuds at present prices. Just figure it out for yourself. One substantial Idaho russet grower comes up with these figures on the cost of growing and sacking 100 pounds of marketable tubers—seed, 40 cents; sack, 21 cents; picking up off the ground, 12 cents; loading on truck and hauling from field to warehouse, 5 cents; sorting, 30 cents; inspection and miscellaneous, 10 cents. That adds up to $1.18 in just harvest and preparation labor costs. It leaves only 87 cents of the $2.05 support price to take care of the 25-percent culls and rotten potatoes, and for all the other costs of plowing, planting, irrigating, and growing, with all the taxes, water assessments, fertilizer, and general overhead thrown in. "In a nutshell," said our informant, "it boils down to this: If you are a good grower with an efficient spud operation, and have some good luck with the weather, you can make a little money; otherwise not."

So perhaps we had all better think twice before villainizing the Utah-Idaho potato grower for a shocking situation that is being dramatized, partly, no doubt, by Brannan to aid the Brannan consumer subsidy program.

Control of Imports and Exports of Agricultural Commodities

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report from the solicitor of the Department of Agriculture dealing with the authority of the President, the Secretary of Agriculture, and other officials of the executive branch to control imports and exports of agricultural commodities.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SOLICITOR,
Washington, D. C., December 20, 1949.

In accordance with your request of December 1, 1949, there is transmitted herewith a list of the authorities which can be invoked by the President, the Secretary of Agriculture, or other executive branch official to control imports and exports of agricultural commodities.

Title III of the Second War Powers Act, as amended and extended (50 U. S. C., 1946 ed. and Supp. II, sec. 633, and Public Law 155, 81st Cong.) authorizes the President to impose import controls with respect to fats and oils and rice and rice products. Such authority is exercised by the Secretary of Agriculture under delegation from the President.

The Export Control Act of 1949 (Public Law 11, 71st Cong.) authorizes the President, for the purposes of protecting the domestic economy and national security and carrying out the foreign policy and the international responsibilities of the United States, to prohibit or curtail the exportation of any articles, materials, or supplies, except under such regulations as may be prescribed. The President has delegated this authority to the Secretary of Commerce. The act provides that such authority shall not be exercised with respect to any agricultural commodity during any period for which the Secretary of Agriculture makes certain determinations concerning the supply of such commodity, subject to certain exceptions.

Section 22 of the Agricultural Adjustment Act (of 1933), as amended (7 U. S. C., 1946 ed., Supp. II, 624) authorizes the President to impose restrictions on the importation of articles when they threaten programs undertaken by the Department of Agriculture with respect to any agricultural commodity or product thereof. However, such action may not be enforced in contravention of any treaty or other international agreement to which the United States is a party.

Section 402 of the Federal Property and Administrative Services Act of 1949 (Public Law 152, 81st Cong.) authorizes the Secretary of Agriculture to determine whether agricultural commodities which are sold abroad by executive agencies of the Government as excess property may be imported into the United States.

The International Wheat Agreement Act of 1949 (Public Law 421, 81st Cong.) authorizes the President to impose such controls on the importation and exportation of wheat and wheat flour as may be necessary to implement the International Wheat Agreement.

Section 350 of the Tariff Act of 1930, as amended (19 U. S. C. 1946 ed. 1351 and Public Law 307, 81st Cong.) authorizes the President to modify and impose import restrictions as required or appropriate to carry out any foreign-trade agreement entered into under the act. The Secretary of Agriculture has advisory functions under the act.

The Federal Insecticide, Fungicide, and Rodenticide Act (7 U. S. C. 1946 ed. supp. II, 135–135k), for the purpose of preventing the importation and exportation of adulterated and misbranded products and for related purposes, restricts the importation and exportation of insecticides, fungicides, rodenticides, herbicides, and certain devices and authorizes the Secretary of Agriculture to issue regulations to carry out the act.

The Federal Seed Act, as amended (7 U. S. C. 1946 ed. 1551–1610) restricts the importation of seeds for the purpose of preventing the importation of adulterated or misbranded seeds and authorizes the Secretary of Agriculture to make regulations to carry out the act.

The Plant Quarantine Act, as amended (7 U. S. C. 1946 ed. and supp. II, 151–167), for the purpose of preventing the introduction of insect pests and plant diseases, restricts the importation of nursery stock and authorizes the Secretary of Agriculture to apply such restrictions to other plants and plant products, to prohibit importation of nursery stock and other plants and plant products, and to make regulations to carry out the act.

The act of January 31, 1942 (7 U. S. C. 1946 ed. 149) authorizes the Secretary of Agriculture to regulate the entry into the United States from Mexico of vehicles and freight and other materials and to require cleaning and disinfection thereof to prevent the introduction of insect pests and plant diseases.

The Meat Inspection Act, as amended and extended (21 U. S. C., 1946 ed. and Supp. II, 71–98), for the purposes of assuring that exported meats are wholesome and fit for human use and exported animals are free from disease, requires Federal inspection for cattle, sheep, swine, goats, and horses, and the meats and meat-food products thereof,

which are exported, and authorizes the Secretary of Agriculture to make regulations to carry out the act. The Secretary of Agriculture is authorized to apply, under such regulations as he may prescribe, the inspection and certification provisions of this act to dairy products for export. He may also extend inspection pursuant to this act to reindeer.

The Tariff Act of 1930, § 306 (19 U. S. C., 1946 ed. 1306) authorizes the Secretary of Agriculture to determine the countries where certain animal diseases exist, and after publication of his determination the importation of certain animals and meats from such countries is prohibited. The section prohibits importation of meats unfit for human food. It also authorizes the Secretary of Agriculture to make regulations to carry out the section.

The Tariff Act of 1930, § 201, paragraph 1606, as amended (19 U. S. C., 1946 ed. and Supp. II, 1201, par. 1606) authorizes the Secretary of Agriculture to prescribe regulations for determining the purity of breeding of animals offered for duty-free importation.

The act of March 3, 1891, as amended (46 U. S. C., 1946 ed. 466a–b) authorizes the Secretary of Agriculture to prescribe, by regulation, accommodations for exported animals.

The act of August 30, 1890, as amended (21 U. S. C., 1946 ed. 101–105), for the purpose of preventing the spread of animal diseases, authorizes the President to suspend the importation of all or any class of animals when necessary to protect animals in the United States, and authorizes the Secretary of Agriculture to designate ports through which certain kinds of animals must be imported, to quarantine and inspect such imported animals, and to prescribe regulations and take other actions relating to imported and exported animals.

The act of May 29, 1884, as amended, and the act of February 2, 1903, as amended (21 U. S. C. 1946 ed. and Supp. II, 111–122) authorize the Secretary of Agriculture to make regulations and take measures to prevent the introduction of contagious diseases of animals into the United States, to seize, quarantine, and dispose of certain materials and products coming into this country from infected foreign countries, and to make regulations and take measures concerning the exportation of livestock and live poultry to prevent the spread of animal diseases.

The United States Grain Standards Act, as amended (7 U. S. C. 1946 ed. 71–87) generally requires that grain which is shipped in foreign commerce and is sold by grade be officially inspected and graded and the grade by which it is sold be a grade fixed in the official standards which the Secretary of Agriculture is authorized to establish. The Secretary is authorized to issue regulations to carry out the act.

The Naval Stores Act (7 U. S. C. 1946 ed. 91–99) establishes certain standards for spirits of turpentine and rosin, authorizes the Secretary of Agriculture to establish further standards, and requires the use of such standards for such naval stores when sold in foreign commerce. The Secretary is authorized to issue regulations to carry out the act.

The Virus-Serum-Toxin Act (21 U. S. C. 1946 ed. 151–158) prohibits the importation of any virus, serum, toxin, or analogous product without a permit from the Secretary of Agriculture who is authorized to make regulations to carry out the act.

The Sugar Act of 1948 (7 U. S. C. 1946 ed. Supp. II, 1100–1160) authorizes the Secretary of Agriculture to fix quotas for importation of sugar from foreign countries.

The Agricultural Marketing Agreement Act of 1937, as amended (7 U. S. C. 1946 ed. and Supp. II, 601–671) authorizes handlers of certain agricultural commodities to enter into marketing agreements with the Secretary of Agriculture, and the Secretary to issue orders, limiting the amount of such agricultural commodities that may be purchased, handled, or shipped in foreign commerce, for the purpose of stabilizing farmers' purchasing power.

The Anti-Hog-Cholera Serum and Hog-Cholera Virus Act (7 U. S. C. 1946 ed. 851–855), to insure the maintenance of an adequate supply of serum and virus and for related objectives, authorizes handlers of anti-hog-cholera serum and hog-cholera virus to enter agreements with the Secretary of Agriculture, and the Secretary to issue orders, imposing restrictions on the handling of such serum and virus for or in foreign commerce.

The Tobacco Seed and Plant Exportation Act (7 U. S. C. 1946 ed. 516–517) authorizes the Secretary of Agriculture to issue permits for exportation of tobacco seeds and plants for experimental purposes only and prohibits exportation of such seeds and plants without a permit.

The Tobacco Inspection Act (7 U. S. C. 1946 ed. 511–511a–511q) authorizes the Secretary of Agriculture to establish standards for tobacco and generally requires inspection according to such standards of all tobacco sold at auction at previously designated markets where tobacco moves in foreign commerce. The Secretary is authorized to make regulations to carry out the act.

The Export Apple and Pear Act (7 U. S. C. 1946 ed. 581–589) authorizes the Secretary of Agriculture to prescribe certain requirements which apples and pears for export must meet and to issue certificates showing that such commodities comply with such requirements and with the standards of the country of destination, and to make regulations to carry out the act.

The Process or Renovated Butter Act (26 U. S. C. 1946 ed. 2320–2322, 2324–2327) imposes inspection and other requirements for process or renovated butter prepared for shipment to foreign countries. The Secretary of Agriculture is authorized to make regulations to carry out certain provisions of the act. The Commissioner of Internal Revenue may make certain other regulations, as authorized.

The Honeybee Act (7 U. S. C. 1946 ed. 281–282) authorizes the Secretary of Agriculture to determine the countries in which no honeybee diseases exist and from which honeybees may be imported for experimental or scientific purposes under regulations of the Secretaries of Agriculture and the Treasury.

The United States Cotton Standards Act (7 U. S. C. 1946 ed. 51–65) authorizes the Secretary of Agriculture to establish standards for cotton and generally prohibits the use of unofficial standards in connection with transactions in cotton in foreign commerce. The Secretary is authorized to issue regulations to carry out the act.

Under the act of April 12, 1926 (16 U. S. C., 1946 ed. 616), timber lawfully cut on any national forest or on the public lands in Alaska may be exported from the State or Territory where grown if, in the judgment of the Secretary, the supply of timber for local use will not be endangered. The regulation under this act is found in 36 CFR 221.3 and permits the free movement from the national forests except those in Alaska where the prior approval of the regional forester is required.

Many of the statutes listed contain other provisions than those mentioned in the list, but reference has been made only to those provisions which appear relevant to your inquiry. Pursuant to the telephone conversation of December 14, 1949, between your office and Associate Solicitor C. W. Bucy, the list of authorities is limited to those authorities in the administration of which this Department participates. The list is limited, moreover, to those authorities which provide for the exercise of control over the importation or exportation of agricultural commodities. It does not include those statutes such as the Packers and Stockyards Act, as amended (7 U. S. C., 1946 ed. 181–231), which merely provide for regulation of trade practices with respect to foreign commerce, since we understand from your request that you are not interested in this type of authorities. If you do desire information concerning such trade-practice authorities or further information on the authorities listed, we shall be pleased to furnish it to you at your request.

Sincerely yours,

W. CARROLL HUNTER,
Solicitor.

S. 1008

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mrs. DOUGLAS. Mr. Speaker, on February 9, 1950, at the request of Senator ESTES KEFAUVER, of Tennessee, Dr. George Stocking, head of the department of economics at Vanderbilt University, appeared before a group of Senators and Congressmen interested in basing-point legislation. He discussed explicitly the effects the basing-point system, if reimposed as the result of the passage of S. 1008, would have on the future growth and development of the South. He showed rather clearly that these effects would be extremely harmful.

A number of us from the West were interested to know whether or not a reimposition of the basing-point system would have similar adverse effects upon the West. In order to obtain an authoritative view on this matter, I requested Dr. Vernon Mund, professor of economics at the University of Washington in Seattle, to prepare a statement describing the effects of basing-point pricing upon the future growth and expansion of the West.

Under permission to extend my remarks, Mr. Speaker, I wish to include the statement prepared by Dr. Mund:

The purpose of this analysis is to explain the injurious effects of S. 1008 on the West, the South, and the entire Nation. Upon the basis of the national interest—rather than of the narrow, selfish, commercial interests of variously located organized producer groups—it is submitted that the principles of S. 1008 should not be enacted into law.

Significant reasons (a) for continuing the legal ban on systematic freight absorption whenever the effect is substantially to lessen competition and (b) for giving all needed legislative support to the Staley, Corn Products, Cement, Rigid Steel Conduit, Malt, Milk Can, Crepe Paper, Pittsburgh-Plus, and Standard Oil of Indiana decisions are as follows:

1. To give buyers and fabricating industries (a) the advantage of their location by eliminating an overcharge for freight and (b) the privilege of arranging for the purchase of their own transportation: Basing-point and zone-delivered pricing systems force buyers to purchase two commodities—the manufactured goods and freight—on terms and conditions determined solely by the producers. In charging phantom or fictitious freight, a mill forces a buyer to purchase transportation service which he does not want and which he does not get. This gives a particular mill net prices higher than the base price by the amount of the fictitious

freight. On the other hand, in the case of absorbed freight, the railroad is paid the actual freight cost, and the mill secures net prices which are lower than the base price by the amount of the absorbed freight.

Buyers (fabricators) located at or near a nonbase mill do not want to pay phantom freight, for such a charge places them at a competitive disadvantage with fabricators located at or near a base mill. Likewise, buyers located near a base mill which is engaging in freight absorption find that they are denied the advantage of their location and are forced to pay high local prices which help to defray the delivery costs of other buyers.

Sellers using zone-delivered pricing systems typically include in their prices the freight costs which are charged for less-than-carload shipments. A fabricating mill, however, frequently is in a position to make up a consolidated shipment of supplies (such as paint, copper products, aluminum sheets, and pneumatic machinery) and secure a lower carload rate. It is denied this opportunity under the zone-delivered pricing systems. Under basing-point systems, moreover, buyers are typically charged the rail freight even though cheaper forms of transportation are available (or actually used).

2. To prohibit the device of local price cutting by which dominant firms injure geographically separate independents: The principal objective which Congress had in mind in drafting section 2 of the Clayton Act was to prohibit geographic price discrimination which substantially lessens competition. The term "substantially" apparently was inserted on the ground that the law is not concerned with trifles. According to the House committee, section 2 of the Clayton Act "is expressly designed with the view of correcting and forbidding a common and widespread unfair trade practice whereby certain great corporations and also certain smaller concerns which seek to secure a monopoly in trade and commerce by aping the methods of the great corporations, have heretofore endeavored to destroy competition and render unprofitable the business of competitors by selling their goods, wares, and merchandise at a less price in the particular communities where their rivals are engaged in business than at other places throughout the country."[1]

Various lawyers and some Congressmen now appear to be reluctant to curb local price discrimination, thinking that the action of a seller in cutting prices in one area while maintaining them elsewhere is a wholesome act of competition or a meeting of competition. This view contains economic error. The making of discriminatory lower prices is only a limited kind of competition which experience has shown works always to the advantage of the larger and financially stronger concerns. It is not the kind of competition found in real market or contemplated by the antitrust laws.[2]

The practice of geographic price discrimination is an undesirable method of competition (1) because it forces some customers to pay excessive local prices and (2) because it subjects small competitors in distant areas to the fear and hazard of anarchic price cutting. A large producer may honestly not intend to kill a distant competitor, but the fact remains that no seller likes to see a competitor grow bigger and more powerful if he can prevent it. Geographic price discrimination, used by a dominant firm to match or undercut prices in a distant area may be exercised to hold prices in that area at an unremunerative level, so that rival sellers fail to grow, wither on the vine, or eventually drop out of production. Since the discrimination is exercised in accordance with no principle except that of meeting competition, a small producer can never be sure about the prices which he is likely to find in his area. He is not free, moreover, to expand and develop upon the basis of his productive efficiency.

When a small business firm is getting established in a particular area, it frequently finds that it must offer its goods at prices somewhat below those of a large rival. Its prestige and reputation are not firmly established, and some inducement must be offered to secure customers. If a large distant mill is permitted to meet the local prices by reducing its mill net prices on sales in that area, the small rival has little opportunity of ever developing his business.[3] A prohibition of geographic price discrimination would do much to enable small business firms to develop in the local areas in which they have a freight advantage. A decentralization of industry would tend to develop, and the efforts of local firms to extend their sales areas would also exert a constant pressure on distant rivals to reduce their base prices.

3. To promote a decentralization of industry: Industrial pricing systems which employ eastern base prices (such as Pittsburgh or East St. Louis) plus rail freight make for high-cost prices in the West and South and discourage the development of local fabricating industries. Local fabricators which to develop, moreover, are unable to ship their products eastward to any appreciable extent in competition with fabricators situated near an eastern basing point, for the delivered costs of their basic supplies are higher.

Insofar as basic commodities (such as aluminum) are produced in the West and South and sold freight allowed, local prices are high, as high as elsewhere in the country, and fabricators find no cost advantage in building plants near the sources of supply. The sale of fabricated products (such as copper wire, sheets, and tubing) by eastern mills at zone-delivered prices (by including an average freight item) also serves to discourage the development of distant fabricators, for the established mills, in effect, are able to dump into the distant areas by absorbing some or all of the freight, at the expense of their nearby customers.

4. To provide locally separate mills with a genuine motive to reduce their base prices: The requirement of f. o. b. mill pricing will undoubtedly result in a reduction in prices at locally separate mills, for a given seller cannot get distant business by quoting a high base price plus freight. Locally separate mills will thus be given a genuine motive to reduce their mill prices, even though local competition is lacking. Consumers living adjacent to a producer will also get the advantage of their location, as they do under conditions of effective price competition. With the collective use of basing-point and zone-delivered pricing systems, sellers do not have a motive, a competitive pressure or compulsion, to reduce prices to all buyers in order to provide a selling outlet for their capacity.

A principal reason that some businessmen in the Pacific Northwest support S. 1008 grows out of the fact that the governing base price for a number of steel products used in our area is Sparrows Point, Md. Our delivered price is this base plus water freight to Seattle. Steel mills in Chicago (prior to the cement decision) matched this delivered price in Seattle instead of charging Chicago plus rail freight, for the latter combination would be higher. This practice involved freight absorption (systematic) by the Chicago mills. Now, insofar as the Chicago mills do not absorb freight on sales to Seattle, they quote a higher delivered price or they do not enter our area. Thus, some Pacific Northwest buyers believe that the ban on systematic freight absorption denies them the benefit of competition.

Like all error, this view contains an element of truth. With the use of systematic freight absorption, some Seattle buyers may have the advantage of sales competition as identical prices. With rare exceptions, however, they never enjoy price competition under the basing-point plan. The Chicago and Sparrows Point mills have identical base prices, and the basing-point practice is to charge the base and freight which gives the lowest combination price. This is price matching, not price competition. The type of competition upon which American industry must stand or fall is price competition. Price competition, moreover, is the type of competition called for by the antitrust laws.

At present, some Chicago and Pittsburgh mills appear to be content to quote a high delivered price in the West (their identical base prices plus rail freight) and forego some or all of this business, for they can sell all they can produce in their nearby areas. Sooner or later, however, the Chicago and Pittsburgh mills may eagerly want to sell in the West and South, in order to expand their sales volume. To do so—with the present ban on systematic freight absorption—they will have to cut local base prices in Chicago and Pittsburgh. This would be real competition and just what the Nation needs. Fabricators and consumers in the Middle West would thereupon be benefited by the desire of the Chicago and Pittsburgh mills to ship westward and southward. First-hand producers in the West and South would also be encouraged to build new mills, for they would know that the eastern mills could not dump into their areas while making up their freight absorptions on sales in the East.

A ban on systematic or sporadic freight absorption which substantially lessens competition, it may be noted, does not preclude the quotation of uniform, national retail prices. Some manufacturers, for example, provide for a national, uniform retail price—such as $8.80 for a pair of Regal shoes—and at the same time quote f. o. b. factory prices, uniform to all dealers. This method of pricing results in a slightly lower mark-up for dealers at distant destination points. The ban on injurious price discrimination, moreover, would not necessarily preclude the charging of local, zone-delivered prices for newspapers, milk, groceries, and other consumer merchandise. In the absence of established freight stations, published tariffs, or significant freight differentials, it would be possible for an administrative agency to accept local, zone-delivered prices based upon an average delivery cost. The resulting discrimination would be a trifle. A legal maxim developed in ancient Rome declares that "the law does not concern itself with trifles."

THE POLICY OF CONGRESS TOWARD DISCRIMINATORY DELIVERED PRICES

The Clayton Act, as amended, and the recent court cases on price discrimination provide rules with respect to monopoly and unfair competition which have a high degree

[1] Committee on the Judiciary, Antitrust Legislation, 63d Cong., 2d sess., H. Rept. No. 627, May 6, 1914, pp. 8–9. For recent data on the use of geographic price discrimination to injure small business, see *U. S.* v. *N. Y. Great A & P Tea Co.* ((Criminal case) 67 F. Supp. 626, 666–667, 1946.)

[2] See also the statement by Senator Hoar, CONGRESSIONAL RECORD, April 8, 1890, p. 3152.

[3] In 1948 a midwestern manufacturer of vegetable oils wrote to a Senate committee investigating basing point delivered price systems, stating "We have long felt that the practice of many of the larger companies in quoting delivered prices and absorbing the freight was a serious threat to our business, as they have been making deliveries of competitive products from remote parts of the country to customers in our area at prices we have been unable to meet." Senate Trade Policies Committee, release No. 15, November 7, 1948, page 2.

of clarity and certainty. In the great majority of cases the problem is not that the law is uncertain, but rather that it requires a significant change to be made in present-day pricing methods—namely, the creation of fair-price competition analogous to that found in open markets.

What course should Congress now take? The recommendation made by the Temporary National Economic Committee in 1941, under the able leadership of Senator O'MAHONEY, provides a sound approach upon which the preservation of the American competitive system will depend. According to the TNEC—

"We therefore recommend that the Congress enact legislation declaring such pricing systems to be illegal.

"Because such systems have resulted in uneconomic and often wasteful location of plant equipment it is recognized by this committee that the abolition of basing-point systems should provide for a brief period of time for industries to divest themselves of this monopolistic practice.

"The committee is not impressed with the argument that a legislative outlawing of basing-point systems will cause disturbances in the rearrangement of business through a restoration of competitive conditions in industries now employing basing-point systems. Such disturbances may be costly to those who have been practicing monopoly. But the long-term gain to the public interest by a restoration of competition in many important industries is clearly more advantageous." [1]

Mr. Speaker, in view of the very complex nature of this whole matter and also in view of the fact that no regular hearings on this particular bill were ever held by either the House or Senate Judiciary Committees, I believe that every Senator and Congressman, particularly those from the South and West, should study the effects of this proposed legislation on their home States and districts.

In making their statements on the South and the West, Dr. Stocking and Dr. Mund have rendered us a great service in outlining the probable consequences of this legislation. These two men, I might add, are generally considered to be among the Nation's leading authorities in the field of antitrust law and basing-point pricing.

Keep Flood Control Under the United States Engineers

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. WHITTINGTON. Mr. Speaker, under leave granted me to extend my remarks in the RECORD to include therein an editorial from the Vicksburg Evening Post, Thursday, February 9, 1950, one of the leading newspapers of the State of Mississippi and the lower Mississippi Valley, I include the following:

[1] Final report and recommendations of the Temporary National Economic Committee, 77th Cong., 1st sess., S. Doc. No. 35, 1941, p. 33.

KEEP FLOOD CONTROL UNDER THE UNITED STATES ENGINEERS

Under a recommendation made by the Hoover Commission on Reorganization of Federal Departments, there is a grave possibility that the civil activities of the United States Engineers will be transferred to the Department of the Interior. This possibility should bring the people of the Mississippi Valley and particularly the people of Vicksburg into united action to keep flood control under the Corps of Engineers.

The record of the United States Engineers in the combat of floods and in their prevention is a record of magnificent accomplishment, a record of devotion to duty, a record of outstanding engineering feats, a record which has given new hope and security to the people along the great river. Under the administration of the Engineers there has never been one instance of scandal or graft, though there have been projects which in total reached into billions of dollars. The Engineers have the know-how and they have the efficiency and precision to put into action this know-how. They have lived with the river—they are a part of the river, and it would be next to criminal to take away from this wonderful Corps of Engineers, their greatest avenue for peacetime service.

The people of the Mississippi Valley have a great stake in this proposed change. The Mississippi Valley has the greatest confidence in the Engineers. The lives and property of the people of the Mississippi Valley have been safe in the custody of the Engineers through their flood-control work. The Mississippi Valley people will thoroughly resent a change from an efficient, smooth-working organization. And good business practice dictates no change where such an outstanding job is being done.

There are some who think no exceptions should be made in the Hoover reorganization plans, feeling that the former President has performed a great service to the country in his study and recommendations. While we believe Mr. Hoover has made some very beneficial suggestions, which we think should be adopted, we cannot follow him in his suggestion to transfer flood control to the Department of the Interior. First of all, and most important, it would place flood control in politics. Political expediency or just plain politics have never been a part of United States Engineer operations, but under the Department of the Interior one can readily understand how politics could be injected. Behind the great river, our people want none of this. The lives and property of the people of the valley are sacred and should be held thus, as they have been held these many years by the Engineers. Secondly, we believe flood-control work by the Engineers is the greatest training facility for combat engineers. The record of the men who fought the big Mississippi, is proof of that. Some of the greatest Engineer officers of the last war were men who carried on their peacetime activities on the Mississippi River. Many top-flight commanders of our armies in the war were men who were here in the Vicksburg district office at one time or another. Many of the techniques used by the Engineers in the late war, were developed in work on the river. Many technical features of the engineer work in the war were initiated here at our United States Waterways Experiment Station. Why should we take away from the corps this opportunity for training?

We cannot adequately express our deep appreciation for the work of the Corps of Engineers. And we admit to great apprehension that the guardians of the great river might be relieved of their present assignment. We call upon Senators EASTLAND and STENNIS and our entire delegation in the House of Representatives to spearhead the fight to keep flood-control activities with the Corps of Engineers. And we call upon all of the States along the river to join in this protest. There is little time to lose in the matter. We must not be content to sit back—we must go into action at once. And the fight is ours, not that of the Engineers. Regulations prevent them from taking a stand in the matter.

We trust our people will realize the seriousness of the matter. A change in flood control would affect every man, woman, and child in the Mississippi Valley. We cannot afford to jeopardize our lives and fortunes. We must keep flood control under the United States Engineers.

Summary of Report Introduced at Request of Representative Porter Hardy, of Virginia, Written by James Baylor Blackford, School of Geography, University of Virginia, Before Joint Senate-House Committee on Economic Report, January 27, 1950—A Virginia Location for a Steel Mill

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. PATMAN. Mr. Speaker, in a study introduced at the request of Representative PORTER HARDY, of Virginia, James Baylor Blackford, School of Geography, University of Virginia, pointed out that steel interests were planning to spend much over a billion dollars on erection of taconite beneficiating plants to enrich Lake Superior low-grade iron ore as the high-grade ore there is fast becoming depleted. He pointed out that the cost of the erection of a steel plant in Virginia would be a fraction of that amount and that steel products would cost the consumers much less if steel were produced where the high-grade ores from Venezuela, Brazil, and Labrador would meet the coal and limestone at the nearest deep water point which would be in the vicinity of Tidewater, Va. He pointed out that the end of the basing-point system and the need for dispersion of strategic plants for defense purposes made it imperative that steel plants be scattered out. The study told of the shortage of adequate water resources throughout the heavily industrialized sections of the country did not apply to parts of Virginia where the necessary 50 to 100 million gallons of water per day required for operations of a steel mill could be found.

The study brought out the fact that there was a shortage of job opportunities for men there and Virginia was losing its high school and college graduates to other States whose steel mills attracted other industries which paid better wages. Ships now carrying coal to South America could pick up iron ore from Brazil or Venezuela all 12 months of the year. For cheaper steel prices and a less vulnerability from concentration the Blackford study recommended a plant be erected in Virginia where there was adequate supply of labor and water supply and where the raw materials could be brought together most cheaply.

Let's Keep the Record Straight

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend, heretofore granted, I am inserting an article by George Sokolsky, which appeared in the Washington Times-Herald on February 6, 1950:

THESE DAYS
(By George Sokolsky)

Oh! that my son should never write a book!

Franklin D. Roosevelt might have spoken these words. For now that the foreign policy of the United States, which he had conducted from 1933 to 1945, has proved such a failure, Elliott Roosevelt's book, As He Saw It, comes to plague the record.

On page 249 of that book, Elliott Roosevelt, discussing the Cairo Conference attended by Roosevelt, Churchill, and Chiang Kai-shek, says:

"At Cairo, Franklin Roosevelt wrung a promise from the feudal warlord who happened also to be the de facto war leader of China. The promise was that before the cessation of hostilities a truly representative government of China's national unity would be formed, and that under the aegis of this new and more democratic government there would then * * * as promptly as possible * * * be held national elections."

1. Chiang Kai-shek was not a feudal warlord; he was then head of the state—as much head of the state of China as Roosevelt was of the United States. Each was in his position in accordance with the basic law of his country.

2. Chiang Kai-shek was not a de facto anything. He had been at the head of the Government of China, under one title or another, since 1927. His government had been recognized by every other government involved in Chinese affairs. So far as the United States is concerned, such recognition was complete (de jure, the diplomats call it), the two countries having exchanged ambassadors for nearly two decades.

3. It is utter nonsense to speak of a national election prior to the cessation of hostilities. Much of China was then in the hands of the Japanese. How could an election be held until the country was freed from the Japanese?

In a word, Elliott's statement is nonsense and if that is what his father told him, it is evidence that his father had no understanding of the situation.

Now, let us proceed, Elliott Roosevelt continues to say: "* * * True, it was a conditional promise. Chiang's conditions were two: First, that father should obtain from the Soviet Government full assurance that Manchuria would be returned to Chinese sovereignty and full assurance that the future Chinese boundary would be respected, this commitment to include an understanding that the Soviets would not interfere in China's internal political problems; second, that the United States should back the Chinese in their postwar refusal of extraterritorial rights to the British in Hong Kong, Canton, and Shanghai * * *."

(Extraterritoriality had long been abolished in Shanghai and Canton and never existed in Hong Kong.)

Let's get at dates. The Cairo Conference was held a few days prior to the Tehran Conference in 1943. Chiang, who had flown from Chungking to Cairo, with his wife, wanted to attend the Tehran Conference. Stalin objected.

Obviously it was a bit surprising to discover that the fourth ally, Stalin, refused to attend the Cairo Conference, and objected to the presence of Chiang Kai-shek at Tehran.

This is what was agreed to at Cairo:

"It is their purpose that Japan shall be stripped of all the islands in the Pacific which she has seized or occupied since the beginning of the First World War in 1914, and that all the territories that Japan has stolen from the Chinese, such as Manchuria, Formosa, and the Pescadores, shall be restored to the Republic of China."

But at Tehran a few days later, this agreement was nullified. Chiang was not notified of the nullification. In the official pronouncement on Tehran, nothing was said on the subject. This pious wish was expressed:

"From these friendly conferences we look with confidence to the day when all peoples of the world may live free lives untouched by tyranny and according to their varying desires and their own consciences."

Yet at Tehran, in December 1943, the double-cross was in. At Yalta, in February 1945, it was implemented by an agreement. Elliott Roosevelt seems shocked in his book that the December 1943 platitudes did not work out and blames the State Department.

But it was his father, Franklin D. Roosevelt, who personally attended the Cairo, Tehran, and Yalta Conferences, and who personally affixed his signature to all the documents, as did Winston Churchill.

At Yalta Roosevelt was advised by Alger Hiss.

Russian Canned Crab Is Now Flooding American Market

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. MACK of Washington. Mr. Speaker, on last Thursday 15,000 cases of Russian canned crab, valued at half a million dollars, were unloaded in Seattle. This crab was caught by Russian fishermen, in Russian waters, and canned by Russian cannery workers.

This was the first shipment since the war of Russian crab meat into the United States. If these shipments continued, and there is every reason to believe they will continue under our present free-trade policies, our Pacific coast canned-crab industry soon will be knocked into a cocked hat. Our American crab fishermen cannot compete with the low wages and low living standards of the Russians.

It is interesting to note that prior to Pearl Harbor, December 7, 1941, 85 percent of all canned crab sold on the American market was imported from Japan and only 15 percent of it supplied by our American fishermen.

Pearl Harbor blew the Japanese out of the American market. Americans then built thousands of crab-fishing boats and scores of crab canneries, investing millions in developing a prosperous crab-fishing industry in this country.

The Russians, under our treaties with them, have now largely taken over the fisheries previously operated by the Japanese. Last week's Russian crab import seems to indicate that Russia now has opened a drive to take over the American crab market and thereby drive our American crab-fishing fleet from the seas and to force our American crab fishermen and crab-cannery workers into unemployment.

We are today spending billions to prevent Russia from engulfing Europe. At the same time we pursue a policy of admitting Russian canned crab into United States markets in order that the Russians may be made more prosperous. The two policies are absurdly inconsistent.

The State Department ought to take immediate steps to stop further imports of these Russian crabs into the United States. If we do not, our Pacific coast fishing industry and its thousands of workers will be irreparably injured.

New England Tragedy

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Carroll County Independent, published in Center Ossipee, N. H., of February 10, 1950:

NEW ENGLAND TRAGEDY

The closing down of the Waltham Watch plant is tragic. Nothing can be done to cushion or to soften the blow to that community in particular and to New England in general. Some 1,200 people were involved when the final notices were given.

When a shoe plant, a textile mill, or a canning factory folds up through any one of a number of causes, the help can sometimes find places in similar plants. Many hardships are involved, but quite often work can be found for which the freshly unemployed man or woman is trained.

But when a watch factory closes, there are just no other watch factories to which the help may migrate. There are such plants in this country, but they simply cannot absorb all the help. Anyone who works in a watch plant has a very high degree of manual skill and should be able to adapt himself to other precision work. But the retraining process may be long and costly.

Much more is involved than the closing of a factory and the throwing out of work of about a thousand people. Looking at our national economy as a whole, the opening or the closing of one such a plant means very little.

But from the viewpoint of national security, the loss is absolutely irreparable. In time of war there is a tremendous demand for chronometers for the Navy, for absolutely accurate watches for pilots, airplane navigators and for Army officers.

In the manufacture and assembly of certain types of bomb and shell fuses, airplane navigation instruments and optical equipment, extremely high standards of precision are demanded.

A watch plant is a great center of know-how, skill and teaching ability to help meet such demands.

During the last war we amazed both ourselves and the world in our ability to teach people to do precision work in mass production. But certain skills cannot be taught in an intensive learning course.

They come only the hard way, by years of both schooling and bench work.

Oftentimes it is a question of finding the highly skilled man who knows how to make the tool, to make the tool, that makes the final tool with which the semiskilled worker does his precision work. Often it is a question of finding an old shop foreman who knows both theory and actual practice and who carries in his head information that is just not found in any shop manual or text book.

When a plant such as Waltham Watch closes down the precision machinery either depreciates, is lost, sold or stolen. The great pool of irreplaceable skill is broken up and can never be replaced or reorganized.

If we as a Nation can afford to subsidize the growing of potatoes, cotton and tobacco, if we can engage in economic and social experiments of highly debatable value, we can most certainly afford to subsidize factories that may easily be of vital importance to our national safety a few short years from now.

Today's Dollar Tomorrow

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I want to include one of the most thoughtful and factual statements I have yet seen regarding the necessity for instituting some semblance of fiscal sanity in our national and international affairs. Because of its value, I have secured permission from Mr. Frank Lilly to print his address on this subject.

TODAY'S DOLLAR TOMORROW

(Address by Frank Lilly at the Spokane Valley Kiwanis Club, February 6, 1950)

Today's dollar, like the old gray mare, is not what it used to be.

The 75 cents that I paid for a good shirt, according to the diary which I kept while a student at the University of Missouri, would not today buy the shirt tail of the same quality shirt. The $2,50 that I paid for shoes would today barely pay for the rubber heels, soles, and shoelaces of similar shoes. The $15 that I paid for a good suit would today pay for little more than one leg of a pair of pants of the same quality suit. The $1.50 a week that I paid for board at the Union Boarding Club would not today buy a good meal at a first-class hotel. Today I pay the barber $1 for trying to find some hair to cut as compared with the 25 cents I paid at that time for a real haircut. The 5-cent loaf of bread of that day has become a 16-cent loaf and the 5-cent Saturday Evening Post of that day is now 15 cents.

When I recently received payment on a small loan made in 1933, my elation over the unexpected reimbursement passed quickly when I realized that I was actually receiving back in today's dollars only about 35 cents of the value of each of the dollars that I had loaned.

In this connection, my attention was recently called to the fact that even if one now has a third more funds on deposit in the bank than he had in 1945, he will still actually have about 5 percent less in purchasing value than he had 5 years ago. In other words, the figures on your $20 bill and the figures in your bankbook do not mean what they say; their true meaning lies only in terms of what their value is in purchasing power.

YESTERDAY'S DOLLAR GOLD BACKED

The value of the dollar was relatively stable from the time of resumption of specie payment in 1879 up to 1934 because the dollar of that period was a different kind of dollar than we have had for the last 15 years. It was either a gold dollar or a gold-backed dollar, and I shall refer to that type of dollar as "yesterday's dollar." You will recall in this connection that the old gold certificates, national bank notes, and the Federal Reserve notes were redeemable in gold coin.

Yesterday's dollar was money; today's dollar is merely paper currency, with the exception of silver certificates and silver dollars. It is important to distinguish between currency and money. Currency performs only two of the functions of money, namely; it serves (1) as a medium of exchange and (2) as a measure of value. Money's most important and necessary function, especially from the standpoint of the man who is earning and saving his money, is as a storage of value. This "storage of value" is best provided by gold and/or silver.

From the banker's standpoint, interest is the most important consideration and as long as he can get interest on currency, notes, or what-not, he places little or no emphasis upon "storage of value." The Government's chief objective seems to be spending, and it, therefore, overlooks the "storage of value" which is of so much importance to the man who is endeavoring to establish a competence through savings.

TODAY'S DOLLARS MOSTLY NOTES

Nearly two-thirds of today's paper currency is in the form of Federal Reserve notes. Now a note is a promise to pay, and you will find on the Federal Reserve note the provisions that it "is redeemable in lawful money at the United States Treasury or at any Federal Reserve bank." If you should send a $10 Federal Reserve note to the United States Treasury with a request that it be redeemed in lawful money, you would probably receive two $5 United States notes which you would find are also "redeemable in lawful money." And that would be as far as you could go unless you demanded silver dollars or a silver certificate which calls for payment in silver dollars that actually contain only about 70 cents worth of silver on the basis of the price of 90½ cents an ounce that the United States Treasury pays the miner for his silver.

The silver dollar in China, by the way, will buy three times as much as our paper dollar, because, in every nation, people have more confidence in hard money than in paper. Although lack of confidence in paper currency may not be an important factor in the lower value of today's dollar, no one could succesfully contend that redeemability in gold would not inspire greater confidence in its value.

The contention that our currency is backed by gold in the vaults at Fort Knox is, at best, an academic distinction and not a practical fact. Cream in the icebox that the waitress will not serve you is not cream in your coffee.

The best evidence that gold is of major importance in a monetary system lies in the fact that our Government seized and nationalized gold in order to keep it from flowing out of the country and into the hands of foreign governments and their citizens. Incidentally, it was the devalued English pound which resulted from Great Britain's abandonment of the gold standard in September 1931 that precipitated the flow of gold out of this country and, in January 1934, resulted in our Government's raising the price of gold to $35 an ounce. If we had not then increased the price of gold to offset the devaluation of foreign currencies, we would, in time, have lost this all-important gold.

GOLD GOING ABROAD AGAIN

This Nation is today again faced with the same situation as in 1933 and 1934, except that this time it is on a greater scale, as a result of Great Britain's recent devaluation of the pound sterling which was followed by devaluation in over 40 other countries. For the first time in 15 years, gold is now flowing out of this country and we will soon be forced either to increase the price of gold or we will continue to lose our gold in ever-increasing quantities. In other words, the price of gold in terms of foreign currencies is now higher than in the United States in every other country except Switzerland (whose money is 100 percent gold backed) and it goes without saying, that other nations, including our own, will send their gold to whatever place they can get the best value for it in goods.

NOT ENOUGH GOLD

There is still a rather general impression that we have a large amount of gold, and it is true that we have the greater part of the world's gold—more than any other nation. But in relation to our national debt, the amount is only about 11 percent as compared with nearly 50 percent in 1940; and in relation to our total money supply, including bank deposits, our gold holdings are only about 12 percent of the total. Actually, therefore, we now have less gold in proportion to our national debt and our monetary supply than we had before our money was converted into irredeemable currency, and our gold holdings are far smaller than they should be for the safety of our money and Government bonds.

In this connection, it is of interest to note that during the 124 years from 1784 to 1910 the entire cost of the United States Government was $8,000,000,000 (and this includes the entire cost of the War of 1812, the Mexican War, the Civil War, the Spanish-American War, and the Panama Canal). Since 1910, the cost has reached $360,000,000,000 and the expense involved in running our Federal Government is now close to $45,000,000,000 a year. On the basis of $35 an ounce for gold, it would take more gold than there is in the entire world to meet the expenses of our Federal Government for 1 year.

DEBT-BASED DOLLARS DANGEROUS

The importance of maintaining the current value of today's dollar, and increasing its value, if possible, cannot be overestimated. If the value of today's dollar should continue to decline as it has during the past 15 years, insurance policies, annuities, pensions, and savings of every kind will be practically destroyed.

This has happened in other countries—take France as one of several examples that could be cited—and it can happen here unless we put our financial house in order and establish a sound monetary system. A nation cannot, any more than an individual, get out of debt by going further into debt. A currency that is based upon debt cannot endure.

In emphasizing the foregoing danger, I am not questioning the intent of our Government officials, for the matter does not involve a question of intent but of fact. Lenin is quoted as having said that Germany would arm itself out of existence, Great Britain expand itself out of existence, and the United States lend itself out of existence. The first has happened; the second, practically so; and the third could happen. The fact that a large amount of the loans have been made to ourselves does not alter the situation, for debts are debts—they must sometime either be paid or repudiated.

NO BUSINESS CAN BE BETTER THAN MONETARY SYSTEM

No business or bank, no insurance system, can be any better than the monetary system of the nation in which it operates. No plan for old-age security can work unless the nation has a monetary system with which to maintain a sound and stable value for its money. Calling paper currency money does not make it money, nor does good intent put value into paper currency.

It is too much to hope that tomorrow's dollar will again have the value of yesterday's dollar, because we have probably gone too far down the road of debt and inflation. I do believe, however, that we can restore to tomorrow's dollar some of the value that yesterday's dollar had.

TOMORROW'S DOLLAR VALUE CAN BE INCREASED

There are two ways in which the value of tomorrow's dollar can be increased. One way would be to bring about a lowering of prices, which involves a decrease in labor and material costs. This may sound like heresy to many people, but even the laborer and supplier should prefer lower wages and prices to continued debt and an inflation that could end in repudiation.

The other way to meet the situation is to utilize the power that is inherent in gold. Incidentally, we are not doing this when we sterlize gold and render it inactive by withdrawing it from use and burying it in underground vaults as we have done in this country. There is neither life nor growth in sterility and stagnant inactivity.

HIGHER GOLD VALUE ABROAD

A legal recognition of the higher value for gold which now prevails in every country in the world except the United States, and even indirectly here (in "natural gold"), is merely facing the facts of the situation. To establish a higher price for gold and permit citizen ownership of it would not involve more inflation and a further decrease in the value of today's dollar, but would merely be a realistic adjustment to the current value of today's dollar.

Everyone knows that the price of practically everything except gold has increased since 1934. It follows, therefore, that the price of gold must be increased correspondingly; otherwise, the price of all other things must soon be decreased proportionately.

An increase in the price of gold is a proven method of meeting financial crises that has been used a number of times in the past. Great Britain, for example, has, in one way or another, increased the price of gold seven times in the last six centuries.

GOLD BEST CURE AND PROTECTION

It is not by chance that, from the beginning of history, gold has been the only sure cure for inflation and the best protection against deflation. Time and time again nations have tried to get along without gold in their monetary systems, but such attempts have invariably failed and in every instance, when these nations have returned to a gold standard, gold has been given a higher monetary value than it had before.

British Foreign Secretary Ernest Bevin acknowledged the major importance of gold when in a speech to the British Trade Union he said, "If you find another gold mine (district) in the world it would assist you, it would be a great advantage."

DEVALUATION MADE TO GET GOLD

Great Britain's recent devaluation of its currency was, by the way, made not just for the purpose of getting dollars as is so generally believed in this country, but primarily for the purpose of getting gold because, in many instances, Great Britain can use other currencies to better advantage than she can dollars; and with gold she can obtain all currencies, including dollars. There is no gainsaying the fact that there is not a nation in the world, including Russia, that would not prefer to be on a gold standard, for an ample supply of gold is a big advantage in world trade. Why, then, should the United States, like an ostrich, bury its head in the sands of paper currency?

MONEY LIFEBLOOD OF COMMERCE

Because money is the lifeblood of commerce, and because commerce is an essential phase of modern civilization, the monetary blood stream must be kept pure and vital. You can pump several things into the human blood stream and the substitute will function for a little while, but the individual will not live long unless he gets real blood—either by transfusion or the creative forces of his own body.

Fortunately, this country is in a position to obtain the gold and silver needed to maintain the monetary blood for a healthy economic body, both from the mines in its own body and also by transfusion, so to speak, from abroad. As matters stand, however, efforts to produce gold from our own mines are being discouraged by forcing our producers to sell only to the Government, and at a lower price than they could obtain in foreign countries. Also, due to our failure to recognize in trade a higher value for gold, we are not obtaining the gold we were formerly getting through trade with foreign countries—exports are declining and imports that take our gold abroad are increasing.

Governments have ever been slow to act. It is freely admitted in well-informed financial circles that the disastrous depression of the early thirties could probably have been avoided, or at least ameliorated, if our Government had taken quicker action in raising the price of gold. There are, I think, good grounds for believing that this fact is now well recognized by a large number of Congressmen and other Government officials, and that constructive action can reasonably be expected within the near future.

GOLD BEST FOR PROFITS

Meanwhile, is there anything an individual can do to protect himself against a possible further decrease in the value of the dollar and/or profit by or through the situation? If, as has been said, one can best judge the future by what has happened in the past, gold and stocks in gold-mining companies offer the best protection and the largest profit possibilities.

Consider what happened in France during the last decade when the price level increased seventeen-fold, so that it now takes 17 francs to buy what 1 franc bought in 1939. During this period of currency management, the French investor could put his money into government bonds, food and services, industrial stock equities, real estate, stocks of gold-mining companies, and gold itself, the last-named being a privilege now denied to citizens of the United States.

The man who put his francs in government bonds suffered a loss, both in the franc value of his investment and its buying power. Those who converted into food and services showed a 98 percent loss in real value. The equity investor lost 40 percent, although stock prices advanced ten-fold. Those who bought farm lands realized a big increase in franc value but in real value they gained less than 20 percent. However, those who bought stocks of gold-mining companies and/or gold itself, wound up with a tremendous increase in franc value and a real net of over 50 percent.

British citizens who purchased stocks of gold-mining companies before the recent devaluation of the pound saw their stocks advance over 300 percent within a few days following the devaluation of the pound by 30½ percent. Sir Stafford Cripps had repeatedly declared that he would not devalue but he did.

In our own country, those who purchased stocks of the leading gold producers in the thirties during the depression realized enormous profits in market appreciation which, without exception, have more than offset the decrease in the purchasing power of today's dollar.

INDIVIDUAL INITIATIVE AND ACTION NECESSARY

There has in recent years been a general tendency to leave everything up to the Government, but this leads to socialism and communism. Individual initiative and action are necessary if this Nation is to maintain and preserve a free enterprise system.

Unless the decline in the value of the dollar is at least stopped, people will find that what they have saved and are saving to live on tomorrow when their productive days are over will have little value; the security they have been attempting to provide will have vanished.

A return to the hard-money system as it was set forth in the United States Constitution is a primary need—other necessary reforms can then be established on a firm and lasting foundation.

Inflation of paper currencies throughout Europe set the stage for World War II, a shooting war; conflict over paper currencies in the Berlin area has been the real issue in the cold war; devaluation of the paper currencies of Great Britain and its some 30-odd satellite nations has precipitated a gold war. This we must win. We can do so by (1) recognizing the world-wide higher value of gold which these devaluations involve and, (2) reestablishing our monetary system on realistic and honest monetary values for both gold and silver. Quick action should be taken; delay is dangerous.

In the meantime, every individual owes it to himself to endeavor to protect himself and his loved ones against a decreasing dollar value by putting his today's dollars at work in equities of companies whose assets are in natural resources, for these will roll along with, or even move a little faster than, the spiraling inflation which has so greatly reduced the value of the dollars that he has been saving for tomorrow.

Fifty-second Anniversary of the Passing of Frances Willard

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. BRYSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I delivered in Statuary Hall on Friday, February 17, 1950, under the auspices of the Woman's Christian Temperance Union of the District of Columbia, observing the fifty-second anniversary of the passing of Frances Willard:

Madam President, officers, members of the Woman's Christian Temperance Union, and friends, on this fifty-second anniversary of the passing of Frances Willard, it is quite appropriate that we hold this observance here in Statuary Hall, this hallowed Chamber of our Nation's Capitol, at the feet of the statue of one of history's most remarkable and influential women. As evidence of the unusual and outstanding character and service of Frances Willard, her statue is the only one representing our women in this chamber. All around us are impressive figures of stalwart sons, brave soldiers, great statesmen, leaders in industry, education, business, and politics. In their midst stands this statue of imperishable granite of a frail little woman. Since the dawn of history women have contributed more than their share in

the advancement of Christian civilization. Someone has said that God could not be everywhere all the time so he gave us our saintly mothers.

We have just observed the birthday of President Lincoln who, like other great leaders, attributed his finer qualities to his mother. Mr. Lincoln said, "Whatever I am I owe to my mother."

Frances Elizabeth Caroline Willard was the daughter of teacher parents. Education, next to religion, played the most important part in their ideals in life. Circumstances made it necessary for the Willard family to leave their native State of New York, and journey westward through Ohio, Illinois, and Wisconsin.

Early in life Miss Willard displayed talents of leadership and for many years taught in schools and colleges. Her record as an educator is outstanding but is overshadowed by her work in the cause of temperance.

Although considered by some as an impractical dreamer, Miss Willard fought hard for political enfranchisement of women. She was a pioneer in the contention for equal opportunities, equal pay, equal rights, equal responsibilities in the home, in the professions, in industry, and affairs of state, for women. She insisted upon provisions for vocational guidance for girls, upon education for citizenship, upon physical education, and sports. She advocated the 8-hour day, a minimum-wage law, and many other ideals which in her day were considered the ravings of an impractical dreamer.

When those of us who still fight for temperance and decency become discouraged, we are heartened to learn of the untiring efforts for a better world in which to live as sought by Miss Willard.

She believed that intoxicating beverage was God's worst enemy and the devil's best friend. As we contemplate the example of this good woman, we shamefully confess the fact that so many still clamor for booze even if there is no bread. The selfish, greedy attitude of those who transform food into strong drink has so recently been revealed by their opposition to any restrictions in the use of grain for the distillation of liquor. In like manner, the selfish, wicked influences vigorously oppose any restriction of advertising the falsehood that alcoholic beverages are good and wholesome food. They would teach the children that drinking is the proper thing to do.

By reason of her devotion and zeal in the cause of temperance, our subject advanced from a subordinate position to that of president of the World's Women's Christian Temperance Union.

This guiding genius of the national temperance cause early recognized the importance of the printed page. She wrote six books, and edited the Union Signal. She believed in temperance education, and promoted this cause for schools, colleges, and churches. She agitated for legislation, and participated in securing constitutional prohibition amendments in various States.

Not only was Miss Willard interested in the cause of temperance and justice in our own country but her theater of operation covered the entire world.

A half century has gone since this saintly woman was called to her reward. In spite of the present chaotic plight of this troubled world and in spite of the destructive wars through which we have passed, her marvelous influence is still with us.

This is not the only statue or memorial to Frances Willard. Throughout the world there are hospitals, educational institutions, and other agencies of mercy and culture bespeaking the fine qualities of this good woman. In Willard Hall at Northwestern University on a marble bust of Miss Willard are chiseled these lines from the pen of the poet Whittier:

"She knew the power of banded ill,
But felt that love was stronger still,
And organized for doing good
The world's united womanhood."

Soon after the passing of Miss Willard, the great State of Illinois placed this marble statue of her likeness here. The Congress paused that day to mark the eventful occasion. Many impressive eulogies were delivered. Inscribed on the pedestal of this statue here are these words from the lips of Miss Willard:

"Ah, it is our women who have given the costliest hostages to fortune. Out into the battle of life they have sent their best beloved with fearful odds against them. Oh, by the dangers they have dared, by the hours of patient watching over beds where helpless children lay, by the incense of 10,000 prayers wafted from their gentle lips to heaven, I charge you give them power to protect along life's treacherous highway those whom they have loved."

Our Nation, our churches, our people do well to remember the life and service of so noble, so self-giving, so loving a soul.

She was a brave true soldier, a great commander, and finally and best of all, a kind and gentle woman who loved her fellow beings with such an unstinted devotion that she has been christened the mother of all mothers.

When called by that Master with whom she walked so closely all through life, she answered with tones of utmost content: "How beautiful it is to be with God."

May the memory of this good woman, who did so much for the cause of humanity, be forever preserved, perpetuated, and transmitted to the generations yet unborn.

Presentation of Bust of Abraham Lincoln by Eloy Alfaro International Foundation

---

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. DOYLE. Mr. Speaker, on Sunday afternoon, February 12, 1950, I had the pleasure, at the Ford Theater in the very room where Abraham Lincoln was shot, of presiding at a memorial service in memory of the birthday of that great American who became a citizen of the ages. This annual memorial program is conducted under the joint auspices of the Lincoln Group, of Washington, D. C., and of the National Park Service.

One of the features of the program was the gift of a bust of Abraham Lincoln to the Lincoln Museum at 511 Tenth Street by the Eloy Alfaro International Foundation. The Eloy Alfaro International Foundation is devoted to perpetuate the memory of Eloy Alfaro, martyred ex-President of Ecuador, and to encourage the propagation of the liberal ideals and principles for which this great South American patriot and statesman fought for more than half a century. Its headquarters are located in the city of Panama, but its membership extends throughout the North and South American Continents.

The memorandum given to me as chairman for the basis of my remarks about the bust of Abraham Lincoln being presented by the foundation was as follows:

That the people of many nations have paid tribute to the memory of Abraham Lincoln is not surprising. His contribution was not to the welfare of his countrymen, alone, but to all humankind. That he should be revered by the common people and the oppressed is easily understood. But Lincoln did more than that. He inspired the chiefs of other nations to look upon their own downtrodden peoples with compassion and the effects of his humanitarianism were widespread, offering new hope and opportunity for the people of many lands.

This afternoon, Dr. Emeterio S. Santovena of Habana, Cuba, author of the best work on Abraham Lincoln ever written in the Spanish language, has sent a bust of Abraham Lincoln to this museum to be presented in the name of the Eloy Alfaro International Foundation of which he is President. This is being done as a token of respect for the memory of Abraham Lincoln and gratitude for the blessings which he helped to bring to the peoples of all of the American nations.

Eloy Alfaro was born in Ecuador in 1842. As a young man, he followed closely the career of Abraham Lincoln and was deeply moved by Lincoln's championship of the rights and dignity of the common people and his principles of freedom and democracy. When he became President of Ecuador, he devoted his efforts to free the native Indians, who had been held in virtual slavery by tyrannical dicators, from exploitation and inhuman treatment. The measures which he adopted in bettering the conditions of the masses in Ecuador and his humanitarianism have had so widespread an influence that he is commonly called the Abraham Lincoln of South America. Like Lincoln, he too had many enemies. But he was willing to sacrifice his great personal wealth, banishment from his native land, and finally his life to further the ideals of democracy. Again, like Abraham Lincoln, he met death at the hand of a cowardly assassin.

But his death was not in vain. Today he is not only heralded as the father of Ecuadoran democracy and the apostle of Pan-Americanism, but he has gained the accolade of history. In almost every South and Central American Republic his name is synonymous with freedom and his memory has been perpetuated by many monuments and memorial institutions.

I now have the honor to present Mrs. Karna Wilgus, whose husband, A. Curtis Wilgus, is professor of Latin-American history at George Washington University, a founder of the Eloy Alfaro International Foundation and of the Inter-American center of Florida. Mrs. Wilgus will present the bust of Abraham Lincoln to the United States, in the name of the Foundation.

Mr. Speaker, and, then, in a most gracious manner, Mrs. Wilgus presented the magnificent bronze bust to the Museum within the walls of which we hold these annual memorials to the memory of President Lincoln.

I also had the pleasure of introducing to the audience Mr. Colon Eloy Alfaro, youngest son of the martyred Ecuadorian president—and himself a great Ecuadoran patriot and friend of the United States. "Captain" Alfaro, as his friends like to call him, has served his country both as Ambassador to the United States and Ambassador to the Pan-American Union. He is a graduate of West Point

and the father of three sons who also have graduated from the United States Military Academy.

A further memorandum handed me by the distinguished son of this martyred President of Ecuador said, and I quote:

[From the Star and Herald, Panama City, of September 10, 1949]

To perpetuate the memory of Eloy Alfaro, martyred ex-President of Ecuador, a movement has been started which will be devoted to the task of encouraging the study and propagation of the liberal ideals and principles for which this Ecuadoran statesman and leader fought during more than a half century of his existence.

The headquarters or seat of this organization to be known as the Eloy Alfaro International Foundation will be established in the city of Panama, because it was in this city that Eloy Alfaro, in the early nineties organized his liberating action to free his country from the backwardness in which it was held by a reactionary conservative regime and to bless his fellow countrymen with progress of liberalism.

Writing in Informacion, of Habana, Cuba, Dr. Emeterio S. Santovenia, president of the Eloy Alfaro International Foundation, explains the aims and purposes of the organization in an extensive article which is translated as follows:

"With its permanent headquarters established in the city of Panama; with Sic Itur ad astra as its motto: and, by the will of citizens of North, Central, and South America, there exists today the Eloy Alfaro International Foundation.

"This denomination is very expressive both because of the ecumenical meaning of the high purpose it covers and, also, because of the significance of the name of the great Ecuadoran patrician.

"The selection of Panama as the headquarters of the FIEA obeys the scope of fundemental facts in the life of him who presented the complete delineations of a liberator of the people.

"The motto Sic Itur ad astra, is closely related to the trajectory of the extraordinary existence of Eloy Alfaro: It can well be said, on appraising his progress forward and upward, that it is thus that the stars are reached.

"The FIEA, has neither political nor lucrative purposes. Its finality is to tribute the memory of Eloy Alfaro and make available all knowledge of his life and his works as a statesman and liberator. What Alfaro undertook and did throughout half a century, constitute the essential, transformation norms of men and people.

"Against ignorance, backwardness, and despotism in Ecuador he fought ceaselessly. For the realization of the maximum ideals of a common welfare he sacrificed his belongings and his prosperity, his peace and tranquility, and the immediate happiness of his family.

"To the yearnings for improvement and dignity of his country he added those redeeming undertakings which had achieved success in other far regions of America.

"The magnificent lessons from so many noble undertakings are worthy of being transmitted from generation to generation for the honor and benefits of an entire community of nations.

"The statutes of the FIEA, includes the bestowal of a high decoration by its Council of Dignitaries. The FIEA's Cross exists to reward eminent services. These must have been rendered in two ways: (a) To the memory of the patrician, (b) to the ideals and causes for which he struggled, suffered, and sacrificed his life.

"There is thus a close relation between the greatness of the remarkable transformer and the virtuous aptitude of the believers in the value of historic continuity.

"The FIEA can confer a medal. This is particularly destined as a means to recognize journalistic, scholastic, and analogous merit resulting from activities devoted to exalting the virtues of Eloy Alfaro. This medal will serve as an ostensible bond between the past, the glorious past, represented by Alfaro and the present, the promising present, administered by those who understand and can develop the principles of which he was a champion.

"The details of the FIEA's Cross are also symbolic. The extremes of the jewel represent the singular points of human fraternity and the 5th of June, 1895, the date which marks the beginning of the great social and political transformation in Ecuador launched by Alfaro. The circular figure superimposed on the points, signifies the wheel of progress. Its red color is that of Ecuadoran liberalism; the blue, red, and gold are the colors of the present flag of the country of Alfaro; the colors of the ribbon specially devised to serve as the collar of the Cross are also the colors of the Ecuadoran flag; corresponding to each point of the star, the crown of unity. In the background, sustaining the Cross are the laurel and olive branches symbolic of victory and peace. The motto Sic Itur ad astra, is the inscription which accompanies the bust of the great fighter in the center of the beautiful jewel.

"The FIEA, gathers and encourages the permanent political and moral values of America. Eloy Alfaro is the most outstanding Ecuadoran in the Western Hemisphere. The action and thought which he placed at the service of his country were instrument and agency of the highest aspirations of half the globe. He worked for a broad land and for a long time when he strove to raise the social level of the Indian, to spread education among his countrymen, to banish the exploitation of man by man, to act for the defense of liberty regardless of frontiers, to create American public law, and to free the flesh and the spirit from its chains."

Mr. Speaker, and, then the beautiful booklet, published about Eloy Alfaro, as president of Ecuador, in part, said:

Eloy Alfaro, soldier, patriot, statesman, and martyr, the centenary of whose birth was celebrated on June 25, 1942, was a citizen not only of his native Ecuador, he was a citizen of America. The personal integrity, the unwavering defense of the principles of truth, justice, and friendship among nations, the self-control and self-sacrifice that marked his 70 years of unflagging service to his country and to America extended his sphere beyond the confines of his own country, awakened unbounded admiration in distant lands, and brought him unsought but richly deserved fame and honor in far places as well as at home. He was a rebel, a conspirator, but his rebellion and conspiracy were directed against hatred, injustice, discord, and tyranny. He was the leader of a generation fired with the hope and desire for political action for the welfare of their country.

Born in Montecristi in the Province of Manabi, Ecuador, on June 25, 1842, Eloy Alfaro was the son of Manuel Alfaro, a native of Rioja, Spain, and of Dona Natividad Delgado. His childhood and youth were spent under the parental roof in an atmosphere that inspired in him the love of liberty, the sense of honor, the diligence, and the clear-sightedness that were to be his guide throughout his life.

In all the history of Pan American relations there is no name more distinguished, yet lesser known to North Americans, than that of Ecuador's greatest contemporary hero, Gen. Eloy Alfaro.

The student of inter-American affairs is cognizant of Alfaro's contributions toward hemispheric cooperation. The amateur in American relations has yet to know his greatness. This pamphlet is presented as a humble contribution to these latter.

In the writer's mind, two important phases of General Alfaro's life stand out above all others. A study of his thoughts, as expressed in his writings and his acts, clearly demonstrates the steadfastness of purpose which kept before Alfaro the wide and far-seeing aim of inter-American unity in action. During those years he held the supreme power in Ecuador he accomplished miracles in social changes for his fellow countrymen. Yet, and observe from his acts, he never once lost an opportunity to advance the cause of the Americas as an entity. While yet a loyal Ecuadoran, thinking of the welfare of his people and their advancement, he saw always before him the ultimate goal of inter-American unity of action and thought—Pan Americanism.

The other salient feature in this great American's life is found in his ability to translate his thoughts and ideals into solid concrete facts. Through the strength of his character and the fame of his name, he was able to preserve peace in Central America when war seemed the only solution to a boundary dispute involving three of the nations which had once formed the Republic of Central America. His ideal of Pan Americanism was put to the test and found not lacking.

Again, when the people of Cuba were the object of as cruel a despotic terror as any land has seen, and when political forces both in the Americas and abroad were using the struggle of those gallant Americans as a means to an ignoble end, Alfaro's ideal gave him the strength of character to intervene publicly on behalf of his fellow Americans. No other American of like standing found within himself the moral courage to do this.

Following in the footsteps of every great American from Bolivar to Blaine, General Alfaro was inspired to call the American nations to a hemispheric conference at Mexico City. The reader shall see that this conference, as measured by the usual standards, was as stated by Ignacio Mariscal, Secretary of State of Mexico, a failure analogous to that of the Congress of Panama, notwithstanding the powerful influences of the liberator (Simón Bolivar), yet it is significant that the Central American countries which had seen Pan Americanism at work found merit in the general's call, and were represented at the conference.

Mr. Speaker, upon the adjournment of the very largely attended meeting, and before leaving the hall, hundreds of those in attendance went forward to more closely observe the bust and to personally meet Mrs. Wilgus who had presented it on behalf of the foundation, and also to meet the distinguished son of this former President of Ecuador, Capt. Colon Eloy Alfaro.

"They Reap Every One His Corn in the Field; and They Gather the Vintage of the Wicked"

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. KLEIN. Mr. Speaker, there has come to my desk an article from Aufbau—Reconstruction, an American weekly printed in German and English, written by Manfred George, the editor, which does an excellent job of rationalizing the difficult position maintained by

those of us who believe that the United States was engaged in a crusade for justice and democracy in World War II, and that the Nazi leaders cannot be quickly forgiver for their crimes against humanity.

This article attempts to discuss dispassionately, and as a moral issue, the case of Kirsten Flagstad, and, by obvious analogy, similar cases such as those of Wilhelm Furtwaengler and Walter Gieseking. Mr. George comes to the conclusion that basically these are problems involving the honor of the United States.

As you can readily imagine, I have been severely criticized for almost everything I have done in public office; most people in public life have that experience. In particular, I have been accused of inconsistency, because on the one hand, I was, at least in part, responsible for the expulsion of Walter Gieseking, and I have opposed the entrance into the United States of others who were conspicuous for their adherence to nazism, yet hardly culpable to the point of being called war criminals; on the other hand, I have tended to intervene in behalf of minor and harmless people who were, almost by accident, members of the Nazi Party for varying periods.

Mr. George supplies the moral content of my position, and it is with pleasure that I insert his article in the RECORD under leave:

THE FLAGSTAD CASE

(By Manfred George)

This article deals with timely ethics and politics. The fact that a Wagnerian soprano by the name of Kirsten Flagstad may again appear at the Metropolitan Opera House in New York does not interest us from an artistic point of view. Kirsten Flagstad is a first-rate singer. We have no way of judging whether or not Miss Helen Traubel is on a par with her presumptive successor as far as box-office appeal and artistic qualifications go; some critics who apply only the highest standards, are inclined to give preference to Mme. Flagstad. This, however, does not concern us here. What concerns us are the moral aspects of the matter; this case is but one in the lengthy discussion about art and politics which, in themselves, are meaningless unless coordinated with human beings and humanity.

Here are the facts: Mme. Kirsten Flagstad's husband, Henry Johansen, made a fortune by treacherous collaboration with the Nazis and the Norwegian quisling regime. Disregarding the pleas of her loyal countrymen in the United States, disregarding the requests of the Norwegian Legation here, Mme. Flagstad returned to occupied Norway. In contrast to other artists of Allied nationality, she never helped the war effort in any way. Fate punished her husband for his treachery: he died in a prison hospital shortly before he was to go on trial. In view of the incriminating evidence, the Norwegian Government confiscated his property—which was also Mme. Flagstad's property.

After the war, Mme. Flagstad was not permitted to make concert or operatic appearances in Norway, Copenhagen, and Stockholm. An attempt of hers to sing in Stockholm resulted in a public scandal. As far as the United States is concerned, the Americans of Scandinavian descent made it impossible for her to tour the Middle West as she had planned. In San Francisco, however, she enjoyed a carefully prepared triumph. If she is now to appear at the Metropolitan Opera House, she will be able to laugh at the fools who attempted to oppose her reappearance.

What is the real issue behind the matter? The issue is not to perpetuate the concept of the enemy as it was held during World War II. Hate and enmity can never be constructive. We can understand those who say with conscious indifference: "We don't care about the past. Kirsten Flagstad is a great singer. This is the only thing which matters."

Yet they have not thought it over completely. True enough, one cannot pin down for years on end the countless little and not so little enemies who made life hard for us during the war and who are responsible for the death of many an American soldier. Relations between peoples change from one day to the other; one canrot sit down with a notebook and keep track of millions of insignificant Nazi fellow travelers in Allied countries. It is impossible, and in many instances where decisive changes have taken place, it is also unjust. But this attitude cannot apply to internationally known celebrities.

This is where we have to draw the line between forgiveness and recollection. A great name means great responsibility, because those who bear it are a symbol as well as an example. The Americans of Scandinavian descent doubtlessly have forgiven many a traitor among their former nationals. There is a deep meaning in their reluctance to forgive Kirsten Flagstad, an attitude, incidentally, which is shared by the Norwegian Government. Knut Hamsun, who definitely was a great writer, has not been forgiven either.

Anyone who has identified himself with our enemies to such an extent—in a way which, although it might be called passive, speaks for itself very actively—has forfeited the right to appear in this country, even if he or she is as great a singer as Mme. Flagstad, except for the exclusive benefit of wounded war veterans.

To those who say: "We don't care about these things; we cannot afford to forego such outstanding art," may we reply that there is no art outstanding enough to justify an insult to our national honor.

We realize that these lines will not achieve anything. Who are we to compete with the mighty ones who organized Kirsten Flagstad's triumph over decency and ethics? We are doing our duty anyway. And although, with Beethoven's Choral Symphony, we would like to embrace all the world—diesen kuss der ganzen welt—our friendship for all the world compels us to see to it that this kiss is not turned into a kiss of Judas.

The Columbia River

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I include articles 14, 15, and 16 in the series on the Columbia River region by Mr. Leon Starmont:

[From the Spokane (Wash.) Spokesman-Review of February 4, 1950]

LET'S EXPLORE THE BASIN

(Art. 14)

(By Leon Starmont)

About $460,000,000 of the $2,250,000,000 asked in the comprehensive plan for Columbia Basin development is intended for use in Idaho. That includes half of the $334,000,000 Hells Canyon Dam on Snake River, and all the $31,070,000 cost of Albeni Falls Dam on the Pend Oreille, which is just above the Washington line.

The biggest single item entirely in Idaho was slashed by the Budget Bureau, as forecast in article 12 of this series. It called for $253,234,000 to irrigate 192,000 acres, develop 180,000 kilowatts and store 1,225,000 acre-feet in Payette and Boise Rivers east of Boise. Parts of the Mountain Home project were retained, however.

HOME OF EARLY IRRIGATION

This part of Idaho saw the first large-scale irrigation in the Northwest. A right was granted in 1865 for diversion from Boise River for irrigation of a tract now included in the Boise city limits.

Age of the settlement, and the varied nature of early projects, create a problem not faced elsewhere. With the Weiser and Owyhee, six different rivers, including the Snake, flow through the region. The irrigable area extends roughly from Mountain Home, Idaho, to the Oregon side of the Snake above Huntington.

Contiguous areas are divided into numerous districts and Federal projects, and much of the ground can be served with almost equal efficiency from more than one source.

The Owyhee now irrigates about 150,000 acres in three States, the Bruneau 21,000 acres in two States, the Boise 340,000 acres, the Payette 160,000 acres, and the Weiser some 40,000 acres, the last three items being all in Idaho. These streams provide more than 700,000 irrigated acres.

MANY OTHERS AUTHORIZED

Now authorized and under construction in this area, which the Bureau of Reclamation at Boise calls the Middle Snake, are Payette division of the Boise project, for 52,760 new acres, and the Anderson ranch dam, to be completed in 1951, which will send supplemental water to 300,000 acres. The dam will generate 27,000 kilowatts.

Also nearing completion is the Owyhee project, extending into Oregon, to add 103,000 acres. These plus the new project would total about 1,060,000 acres.

Above this area is the upper Snake country, extending into Wyoming. It now has more than 1,500,000 acres irrigated, or about three times the area now qualified in central Washington's Big Bend.

The Minidoka project, nearing completion, will add 318,700 acres of new land. The Minidoka and Palisades projects, the latter somewhat delayed, will add supplemental water to 1,350,000 acres where the present supply is insufficient.

The total is approximately 3,000,000 acres for Idaho, southern Idaho, exclusive of the Salmon, Clearwater, and Lost River drainage systems, but including portions of Wyoming, Nevada, and Oregon which are tied to it economically.

TWO ITEMS ATTACKED

Strong efforts have been made to have two of the Idaho items, the two largest, deleted from the list of 93 projects for immediate authorization.

One is Hells Canyon, which is a power project with no irrigation angle. The contention is that a series of low dams with locks on Snake River, between Lewiston and Weiser, would develop approximately the same amount of power at a much earlier date, and would make up-river navigation possible. The principal loss would be the proposed storage capacity of 3,880,000 acre-feet.

It got by the Budget Bureau, however, with removal of $120,000,000 for transmission facilities, which the message said might better be constructed by another Federal agency.

Efforts to change budget recommendations and to add items may still be made in Congress.

The Bureau of Reclamation "blue book," which covers all future projects, specifies 17 possible power development, totaling 1,695,-

000 kilowatts, and 32 irrigation schemes, to cover more than 1,000,000 acres. They would in time bring the region's irrigation acreage to 4,500,000, and its power, including the items now being debated, to nearly 3,250,000 kilowatts.

That is roughly half the irrigable acreage and one-tenth of the power potential of the entire basin.

WOULD BAR BONNEVILLE

Most of the open debate in southern Idaho centers around proposals for a large Bonneville power administration transmission line through the State.

Idaho Power Co. serves the territory now. Its recent expansion has exceeded that of any other private member of the Northwest power pool. Many chambers of commerce and State commercial organizations have backed its position that no BPA line is needed, that left to its own devices, and its own financing, Idaho Power will deliver all the energy needed in the region, including much of eastern Oregon.

Presently installed capacity on the Snake and its tributaries above Weiser is approximately 350,000 kilowatts. Some of the installations would be reduced in capacity by diversion of water for other purposes. For that reason figures from different sources disagree.

Summarizing, it appears that:

1. Idaho lags behind the downriver States in power development, but much of the opposition to projects in the original Army-Interior agreement comes from within the State. This applies also to Albeni Falls Dam on Pend Oreille River, which got by the budget without change.

2. Idaho is far ahead of the downriver States in irrigation acreage, and there is no indication that either Oregon or Washington will ever catch up.

[From the Spokane (Wash.) Spokesman-Review of February 5, 1950]

LET'S EXPLORE THE BASIN

(Art. 15)

(By Leon Starmont)

Ten water-short States are making eyes at Columbia River. California's plea has been most publicized. The others interested and potentially benefitted are Nevada, Utah, Arizona, New Mexico, Colorado, Nebraska, Kansas, Oklahoma and Texas.

They would not all get water directly by ditch along the Wasatch and the Continental Divide. Only California would receive water through the suggested big pipe taking off below Bonneville Dam.

What Interior Department planners really are studying is a mammoth project for water-sharing by displacement. It would work somewhat as does the existing Northwest power pool, by which an emergency in Seattle can be met by juice poured into the Utah Power and Light lines by a copper company plant at Bingham Canyon, Utah—or somewhere else.

INTERCONNECT SEVEN VALLEYS

Participants in this great interconnected system of water diversion gates would be:

1. Columbia river, which enters the Pacific between Oregon and Washington at Astoria.

2. California's Central Valley project, whose Sacramento and San Joaquin rivers reach salt water at San Francisco bay.

3. Colorado River, which rises in Wyoming and Colorado and flows into the Gulf of California between the Mexican States of Baja California and Sonora.

4. The Salt Lake Basin and adjacent Nevada areas which have no direct outlet to the sea.

5. Rio Grande, which rises in Colorado, and below El Paso forms the boundary between Texas and several Mexican States.

6. Arkansas River, which rises in central Colorado and flows into the Mississippi south of Memphis, Tenn.

7. Platte River, which starts just over a hill from the Arkansas, with another branch out of Wyoming, and enters the Missouri south of Omaha, Neb.

ONE TUNNEL BUILT

Already built and delivering Colorado River water to the Platte is the Alva B. Adams tunnel of the Colorado-Big Thompson project. If you wondered several months back why Bureau of Reclamation officials held an all-western conference at Grand Lake, Colo., that's the reason.

Grand Lake is where the 13-mile tunnel starts under Rocky Mountain National Park to deliver 550 second feet of water to Big Thompson River above the town of Estes Park. This water serves farmers all the way to Julesberg, on the Nebraska State line.

The man in the street is likely to ask: "If California needs water so badly, and the Colorado flows past its eastern border, why do they divert Colorado River water for irrigation as far east as Nebraska?"

And his wife may chip in: "If Colorado water is diverted to Nebraska, why talk about taking water out of Snake River, in Idaho or Wyoming, for delivery to the Colorado?

The answer, says, the Bureau of Reclamation, is "exchange."

That's where the similarity to the Northwest power grid comes in. The principal difference is that the power grid was organized by private companies, and the water grid is being planned by engineers of a Federal bureau, acting under authority contained, or at least implied, in an act of Congress.

These studies, started last year, are to be completed in 1952. They are being handled in a special division at Salt Lake City, entitled "United Western Investigation." S. P. McCasland is engineer in charge. Assisting the planning office are four regional offices of the Bureau at Salt Lake City, Boise, Boulder City, Nev., and Sacramento.

The present task is estimating the water that may be available in the Columbia and its tributaries, also the Klamath and other streams of northern California, after all the needs of the Pacific Northwest have been reserved.

Investigations now going on, McCasland explains, form a preliminary reconnaissance to ascertain the justification for a more detailed investigation.

The reconnaissance was initiated because of the badly unbalanced distribution of supply and demand throughout the West. McCasland points out, for example, that the entire supply afforded by the Colorado River is estimated at less than 5 percent of the water which now flows to the ocean in north coastal streams.

In keeping with congressional policy, all States affected by the study will be invited to review the Bureau's reconnaissance report and make comments on it. These comments, together with those of other Federal agencies, will be transmitted to Congress.

A summary is being made of all the lands that might ever be irrigated under future conditions, McCasland said. A similar estimate is being made for industrial, municipal, and all other foreseeable water uses which might arise. Considered as available for export are only the waters which would remain after a supply had been reserved for present and potential local demands.

VARIOUS MEANS SUGGESTED

The study also will include making costs estimates of the various ways in which any surplus water in the Northwest might be transported to the areas where it would be used, and such costs will be compared with the benefits.

Investigation will be made of the means by which the plan could compensate for any disadvantage to existing or future power production. Exploration will be made of the possibility of using steam power for such means.

McCasland said that municipal, industrial, and agricultural use for water in large areas, particularly in the southwestern United States, is growing at a rate which will in the near future exceed the supply. As local surface supplies are fully exploited and ground-water reserves exhausted, expansion or even maintenance of the accomplished development will depend upon imported water.

The feasibility of exchange which might permit greater upstream utilization of the Colorado and of other rivers is an important phase of the study. An example is a possible multiple exchange of water whereby imported water would replace or expand present uses in southern California, thereby releasing some Colorado River water now used in that area.

[From the Spokane (Wash.) Spokesman-Review of February 6, 1950]

LET'S EXPLORE THE BASIN

(Art. 16)

(By Leon Starmont)

Backers of irrigation from Chief Joseph Dam at Bridgeport, Wash., are not at all discouraged by failure of the Budget Bureau and President Truman to include in the pending Columbia Basin legislation the $17,920,000 item which appears in the Army-Interior deferred list.

The bill does set up the so-called basin account, into which Chief Joseph's power revenues would be paid, and provides that a subsidy from the interest component may be applied to future new irrigation projects only by specific authorization. This is a complex situation, on which experts decline to express opinions until they have had a chance to study the budget letter as printed in Friday's CONGRESSIONAL RECORD.

STUDIES STILL GOING ON

The Bureau of Reclamation has not yet finished the studies necessary, either for the Greater Wenatchee project or the proposed Douglas-Okanogan project. Much more land than first thought possible may yet be irrigated both by gravity and pumping from the pool behind Chief Joseph Dam.

Meanwhile, preparations are being made to step up construction of the Okanogan River bridge and preparation of housing facilities at Bridgeport and the dam site as soon as weather conditions permit.

Col. E. C. Itschner, district engineer at Seattle for the Corps of Engineers, recently gave assurances that the preliminary designs, as now approved, permit later installation of irrigation works. He also revealed that a working model of Chief Joseph Dam has been built and is now being used in the Army's hydraulic laboratory at Bonneville Dam, which it built and still operates at the lower end of Columbia Gorge.

A complete account of Chief Joseph and Brewster, with 18 photographs and 2 maps, was published in the Spokesman-Review's Inland Empire magazine on January 8.

LONG CONSIDERED AS SITE

Foster Creek dam site is one of those recommended in the first "308" report of the Army engineers, undertaken as a result of congressional direction in 1927, and finished 5 years later. It was mentioned, however, in many earlier reconnaissances, including that of Lt. Thomas W. Symons prepared in 1881.

It was also mentioned in the Federal Power Commission's report on uses of the upper Columbia River, undertaken by a commission appointed in 1921, which made its report in 1923. At that time the site, known as Foster Creek, was being considered as a possible location of a pumping project for some of the land now about to be irrigated from the Grand Coulee Reservoir.

It is interesting to note also that the 1881 report by Lieutenant Symons mentions the course of Foster Creek, entering the Columbia from the south of Bridgeport, as the only route that might be followed by a railroad designed to cross the Columbia to connect Spokane Falls, W. T., with the Okanogan country.

BUILDER A CHELAN RESIDENT

Colonel Itschner, under whose office the dam is to be built, is a property owner and legal resident of the Lake Chelan area, and expects to make that part of the State his home when his Army service is concluded.

Describing the model installed at Bonneville, he said:

"Extensive model studies were conducted to determine how well the contemplated design would function and how it could be improved.

"The over-all model was constructed to one-eightieth scale, and was in itself quite a project.

"Every detail of the river for some distance above and over a mile below the dam was reproduced carefully, and the major parts of the dam were duplicated in plastic.

"For instance, the spillway section of the dam was about 20 feet wide. By finding where the flaws lie, we have been able to experiment with corrective measures in order to improve the theoretical design. Splendid results have been obtained, and the savings in construction costs have amounted to many times the cost of the model."

UNIQUE PROBLEMS

There are many problems connected with the design and construction of a project such as Chief Joseph. One of these, somewhat unique, arises from the nature of the various deposits on the north bank of the river at the dam site.

A porous gravel formation, generally about 100 feet thick, through which water flows at a rather high rate, 100 miles a year, lies on the bedrock. On top of the gravel and extending almost to the ground surface is a dense watertight formation of glacial till about 150 feet thick.

To prevent excessive leakage of water from the reservoir, something had to be done to prevent flow through the lower stratum of gravel.

Two alternate solutions were considered.

The first was to place a watertight blanket of glacial till, consisting of nothing but soil thoroughly compacted, on the bank above the dam.

The second was to tunnel back one-half mile through the top of the gravel stratum, and to excavate from this tunnel down to rock; then to fill the holes with concrete to form a continuous wall 5 feet thick resting on rock, extending up into the impervious layer, and back so far that water would be greatly retarded in seeping around it.

Since the soil blanket probably will be satisfactory, and it can be placed for considerably less cost than the cut-off wall, Colonel Itschner elected to use the blanket.

Resolution Creating a Commission To Establish an Alternate Capitol of the United States

REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. HOLIFIELD. Mr. Speaker, the heart of Washington, D. C., can be destroyed and a large percentage of its inhabitants killed or injured by one atomic bomb strategically exploded by an enemy power.

In that eventuality the nerve center of our Nation would be paralyzed.

Within the square miles of destruction accredited to one atomic bomb—not a hydrogen bomb—the White House, the defense establishments, the legislative offices and chambers, the Supreme Court, and the central offices of practically every vital department of Government are presently concentrated.

I have just introduced a joint resolution for the establishment of an alternate Capitol of the United States.

I have taken this step after sober consideration of the need for such action. My decision that an alternate Capitol should be established came as the result of an accumulation of knowledge during my service for the past 4 years on the Joint Committee on Atomic Energy. That knowledge imposes on me, as a matter of conscience, this proposal in the hope that a thorough study will be made of the subject. The continuity of Government functions in a period of national emergency created by atomic or hydrogen bomb disaster must be guaranteed. Such guaranty does not exist at the present time. It is the duty of Congress to proceed to reevaluate the importance of this facet of our national security in the light of present potential danger. Congress should make this study now, while there is time to make security plans with calmness and without any semblance of hysteria.

Joint resolution creating a commission to investigate the measures which can be taken to insure the continuous operation of the Government of the United States in the event of attack by a foreign power

Whereas the development of atomic weapons has reached the point where large cities and their inhabitants could be destroyed by a single explosion; and

Whereas an atomic explosion in or near the city of Washington could paralyze the functioning of the executive, legislative, and judicial branches of the Government of the United States; and

Whereas it is appropriate that timely measures be taken to protect the people of the United States, and to insure the continuity of their Government in the event of an atomic attack by a foreign power: Now therefore be it

Resolved, etc., That there is hereby created a commission to be composed of seven members, as follows:

(1) One appointed from the Senate by the President of the Senate;

(2) One appointed from the House of Representatives by the Speaker of the House;

(3) One appointed from the Supreme Court of the United States by the Chief Justice of the United States;

(4) Three appointed by the President of the United States, one from the National Security Council, one from the National Security Resources Board, and one from the Atomic Energy Commission; and

(5) The Secretary of Defense, who shall serve as chairman of the Commission.

SEC. 2. (a) The Commission shall investigate and study the feasibility of establishing an alternate seat for the Government of the United States, to be used in the event of attack by a foreign power. The Commission shall consider particularly (1) possible sites for such alternate seat of government which would be secure against attack by a foreign power, (2) the buildings which would have to be constructed on or under any such site, and the facilities which would be required in connection therewith, to insure the efficient and continuous operation of the Government, and (3) the extent to which duplicate copies of documents and records would have to be made available at any such site to ensure the efficient and continuous operation of the Government.

(b) The Commission shall also investigate and study the various procedures which might be followed in selecting the successor or any President, Vice President, or Member of Congress who becomes unable to perform his duties as the result of attack by a foreign power.

SEC. 3. The Commission shall report its findings and recommendations to the President and to the Congress, together with such proposals for amendments to the Constitution of the United States as may be required by such findings and recommendations, on or before January 31, 1951.

SEC. 4. The Commission, or any member designated by the Commission, may, in carrying out the purpose of this resolution, hold such hearings and sit and act at such times and places, and take such testimony, as the Commission or such member may deem advisable. Any member of the Commission may administer oaths or affirmations to witnesses appearing before the Commission or before such member.

SEC. 5. The Commission may, without regard to the civil-service laws or the Classification Act of 1949, appoint and fix the compensation of such experts, consultants, technicians, and clerical and stenographic assistants as it deems necessary to carry out the purposes of this resolution.

SEC. 6. Each department and agency of the United States shall, upon request made by the Chairman of the Commission, furnish to the Commission such services, information, facilities, and personnel as may be necessary to carry out the purposes of this resolution.

SEC. 7. Each member of the Commission shall be reimbursed for travel, subsistence, and other necessary expenses incurred by him in carrying out the functions of the Commission.

SEC. 8. There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this resolution.

Economy and Our National Defense

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. KENNEDY. Mr. Speaker, the article by Joseph and Stewart Alsop in the Washington Post of February 20 gives us clear warning of the effect that economies are having in our defense structure.

Important economies should be made in other sections of our appropriations, because upon the degree of strength in our armed services rests our survival.

MATTER OF FACT

(By Joseph and Stewart Alsop)

JOHNSON AND THE CHIEFS

The hardest question to answer about Louis A. Johnson's concealed disarmament program is why the Joint Chiefs of Staff have stood for it so long. The answer would seem to fall into several parts. The first part is the new atmosphere of blended favoritism that now pervades the Defense Department.

A pretty good symbol of the favoritism is to be found in the Secretary of Defense's

outer office. Brig. Gen. Louis Renfrow, a plump relic of Johnson's American Legion machine, now presides there as his patron's special assistant. For a far from brilliant reserve officer serving as Johnson's appointments secretary, Renfrow has received remarkably high promotion. But that is not all. He was once a dentist. He is also drawing $100 a month supplementary pay under a rule designed to attract young dentists into the services.

The sum is not large. The arrangement is at least technically legal. But the symbol remains: the crony gets his perquisites while Johnson's economies bite deep into the sinew of American strength.

As for the intimidation, there is plenty of evidence concerning the Secretary of Defense's special methods of getting his way. One authenticated incident involved one of the two or three ablest senior officers in the Army, whose unpopularity with Johnson may probably be traced to his serious approach to defense problems.

Mere threats would of course not frighten the Joint Chiefs themselves. Yet it must be remembered that Bradley and Collins, Vandenberg and Sherman were all trained in an earlier period, as members of the defense services of a country that had no defense.

This prewar psychology has quite visibly survived, for example, in Gen. J. Lawton Collins, who is fond of repeating that his ground forces are in better shape than ever. It is true, and has been recorded in this space, that the Army alone has maintained its fighting units under the impact of Johnsonian economy. It is also true that these fighting units are in a fine state of training.

At least in his public statements, this seems to satisfy General Collins, yet he is making do with Second World War weapons which are in many cases obsolescent or actually obsolete. He has no tank force worth speaking of. He has in prospect only the smallest trickle of the new antitank weapons. Above all, because of Air Force economies, he cannot count on the slightest effective close air support, without which modern armies literally cannot take the field.

Finally, the Joint Chiefs must be well aware that in this matter of defense economy, the Secretary of Defense only differs from the President in wishing to go further and faster. The President made the original decision, in 1948, to forget the requirements of a serious defense, and to sacrifice defense planning to budgetary convenience.

Meanwhile, however, Soviet strength has grown visibly, and the world situation has worsened appallingly. Meanwhile, the defense planning of the Atlantic Pact nations, which is under the personal charge of the incorruptible General Omar Bradley, has begun to show how enormous are the gaps in our security. Meanwhile, Congress has been waking up, as is shown by Senator MILLARD TYDINGS' fine speech last week.

Thus far, Secretary Johnson has been able to count upon the Joint Chiefs' acquiesence, and to take advantage of it. But that acquiescence may not endure forever.

The Brannan Plan

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. BIEMILLER. Mr. Speaker, there has been a lot of confused talk here in Washington about the Brannan plan. I have ample proof every day that the farmers are not confused about it. They understand it and they want it. And so do the consumers. Both groups realize that it would be the best way to keep the farmer solvent, cut food prices, and eliminate the terrible waste which is a by-product of our present plan.

Under leave, I insert in the RECORD a column written by Miles McMillin in the Capital Times, of Madison, Wis., reporting on sentiment on this vital program:

Democratic candidates for Congress in 1950 campaign will undoubtedly take a firm stand for the Brannan farm plan. But where will Republicans stand?

So far most of the Wisconsin Republicans in Congress have been doing a soft-shoe dance all around the question. Not long ago Representative Frank Keefe was put on the spot at a university forum when he was asked to state his position. He first tried to talk around the question, but when pressed for an answer he spoke favorably of the production-payment provisions of the plan, then launched into a denunciation of it and finally wound up by saying that he hadn't made up his mind.

Senator JOSEPH MCCARTHY, however, seems to have set the pitch for the GOP delegation from this State. He spent some time the other day in the Senate heckling Senator LANGER, North Dakota Republican who is an ardent supporter of the Brannan plan. MCCARTHY opened his remarks by saying: "I very heartily disagree with the Senator [LANGER] that the enactment of the Brannan plan will be of any benefit either to the farmer or the consumer."

MCCARTHY may change his tune when he finds that a lot of Wisconsin farmers, particularly those who have had an opportunity to hear the plan explained, don't share his views. There doesn't seem to be any doubt that the dairy farmers of this State are safe leaning more and more toward the Brannan plan because of the recognition it gives to perishables.

Farm Bureau people in Wisconsin will tell you that the intransigent opposition of the American Farm Bureau Federation to the plan has caused local Farm Bureau leaders a great deal of embarrassment. The opposition of the national leadership is not being followed by the rank-and-file member in this State, and the local Farm Bureau leaders know it.

A significant meeting was held down in Crawford County the other night at which the Brannan plan was debated. Crawford is a strong farm-bureau county, and the local there sponsored the debate. More than 300 farmers attended.

Herman Brandt, a farm-bureau man who owns a large farm outside of Oshkosh, spoke for the Brannan proposal, and another farm-bureau member opposed it. Ballots were passed around among the farmers who attended.

The farmers were asked to indicate on the ballots whether they were members of the farm bureau. They were asked to indicate their views on the plan before the meeting started and after. The results of the poll are quite significant.

Of the farm-bureau members who voted, 45 were for the Brannan plan before the meeting and 61 voted in favor of it after the discussion. Thirty-six were against it before the meeting and forty-six against after the meeting. Fifty-eight were neutral or undecided before and thirty-two after. This indicates that of 26 farmers who were undecided before they heard the plan explained, 16 voted for it and 10 against it.

Of the nonfarm-bureau members who voted, 30 were for the plan before the meeting and 42 after. Nine were against it before the meeting and sixteen after. Thirty-four were undecided before and fifteen after. The discussion convinced 12 of the soundness of the plan as against 7 who decided against it.

Equally as significant as the poll was the attitude of some of the farm-bureau members in the audience toward the national farm bureau. The speaker who was present to uphold the position of the national organization heard farm-bureau members stand up and quote recent Capital Times articles showing the tie-up of the national organization with big business.

It was obvious from the meeting, which lasted past 11 o'clock, the Brannan plan is certainly going to be one of the biggest and hottest issues in the 1950 campaign. Republican Congressmen are going to have a hard time ducking it.

What Can Be Done To Bring About Peace and Dispel the Clouds of War?

REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. BURDICK. Mr. Speaker, in my own mind I can see danger ahead for the security of the United States, and being of this opinion I ought not sit here and do nothing about it. We are today further from peace than we have been at any time since the actual fighting in World War II ended.

The United Nations organization was a good gesture, but nothing has been done by that organization and nothing can be done to stop a war between the United States and Russia if both countries pursue the course followed for 5 years.

I am certain the people of the United States and Russia do not want any war, and the question is: Are the people of the United States and the people of Russia powerless to prevent such a disaster? Is the fate of both countries tied up with what action the leaders take?

At the present moment both countries are feverishly arming and in five short years we find the United States and Russia, allies in the late war, hating each other and arming themselves to the teeth. I think nothing can be gained by not talking frankly. Russia is mortally afraid the United States will, with others, seek to subjugate the Russian country and we are mortally afraid that Russia seeks world dominion and will eventually destroy our system of government. When two such powerful nations are afraid of each other, naturally they arm; naturally they get ready to defend themselves.

And so the armament race is on and it will drain the substance of the people of both countries to keep it up, and if history repeats itself there will be a war to justify this unprecedented preparation. We were the first to have the atomic bomb, and we thought that would protect us, but since science cannot be bottled up, since minds still function, there is no monopoly on ideas and brain power. We must admit that, because Russia has the atom bomb. We are building a much

more powerful bomb, one that will destroy millions in 1 day. Instead of keeping that to ourselves, we publish what we are doing in the newspapers, evidently to scare out Russia. Evidence comes right back to us that we have no monopoly on that devastating bomb and there is little doubt but what the Russians have it now.

The threats of what each country has done and can do is not going to settle anything. In this state of mind we will not be bluffed and neither will the Russians. These new destructive weapons will only increase the possibility of war and will not prevent war.

Our North Atlantic Pact was another mistake and I so expressed myself on the floor of Congress. That only added proof to Russia that there was a movement being formed to crush Russia. It did not contribute to peace and the only effect was to foment war.

We financed the Marshall plan which we boldly stated was for the purpose of stopping the spread of communism. There was nothing said about facism or any other isms detrimental to the welfare of the people of the world. Russia has not invaded any country for any purpose since the fighting stopped. Their ideas of government may have spread, but we have not money or resources enough in the United States to stop the spread of any idea.

We here in the United States quite overlook the fact that a great change is taking place all over the world. The day of exploitation is doomed and many countries that have lived on exploitation will be doomed. Does Great Britain, for instance, housed on an island two-thirds the size of North Dakota and one-fifth the size of Texas, expect to continue to maintain 47,000,000 people? She has succeeded because she was the manufacturing center of the world. She brought in raw materials from India and Africa and other points all over the globe and manufactured in England. These great fields of exploitation like India and Africa are fast disappearing. England used to buy a great deal of raw materials from us, but today we manufacture our own merchandise. Factories in America are moving to the fields of production too, and even New England will feel the loss in this new adventure of moving manufacturing plants to the places where the raw materials are produced.

It will make no difference whether there is a Socialist government in England or a conservative one. It will make no difference how much money we give away to England; it is becoming apparent that this British Empire will crumble and people will have to move out of England and settle elsewhere.

Our pouring of money into these foreign countries does not have the effect of bringing peace, but, rather the opposite effect.

What specific things should be done to stop this armament race between Russia and the United States? No other countries seem to be involved—or if they are, their ability to fight with effect has been pretty well reduced in the last two wars. President Truman in October 1948—or a short time before—proposed sending some new envoys to Russia to talk matters over. I think for one, he suggested Chief Justice Vinson. Our would-be leaders on foreign affairs blew up and the Secretary of State threatened to resign if that were done. Others said this move would offend the United Nations. In face of this bluster, the President did not take action. The United Nations have sputtered for 5 years and have not accomplished peace, our State Department has failed and all the representatives we have sent to Europe have accomplished very little that makes for peace, but have recommended action that in my opinion will prevent a peaceful solution of our differences with Russia. Do not the American people think it is time to send some other representatives? Send those who have not already created so much prejudice that they would be worthless in a mutual discussion with the Russians.

The President should again try to discuss matters with Russia and his so-called advisers should let him alone. They have all had their day in court and have not brought about peace.

Regardless of what the Russians do or how they may respond to the President's move for a discussion of peace, we should put our cards on the table and express a desire for a discussion and send representatives who have not lambasted the Russians from Dan to Beersheba. If we do that, it is more likely that Russia will keep the Vishinsky's, the Molotov's, and the Gromyko's out of such a discussion. In the hands of the United States and Russia rests the fate of the world, the fate of civilization, and I do not think either country wants to be a contributor to this complete destruction. If the United States and Russia can understand together what course to take, never mind other countries, never mind the United Nations, never mind the Atlantic Pact, but get right in and determine that this world shall not be destroyed and that there is room enough in it for both the Russian theory of government and the theory of free enterprise and individual freedom, which is our philosophy of government. It can be a peace with honor to the United States, a peace with honor to Russia, and a peace with honor to all countries and all peoples. These destructive bombs can be laid aside and an agreement reached to use this new scientific knowledge for peaceful progress and not for the extermination of all living things on this earth.

We do not have any monopoly on this destructive agency; neither has Russia, and neither side can be threatened. But neither side should use such a weapon, and if we can have this common understanding with Russia, we can go a step further and ask each other, "Why have any war at all?"

Above all we must convince the Russians that we seek no territory that belongs to Russia; we seek no new territories anywhere; all we want is peace in the world. That is the only aim of the President, as everyone knows, but our approach to the greatly desired end has bogged down by the action we have taken in Europe and Asia.

A new approach must be tried, even if it fails, and if the President again wants to try some new representatives to accomplish this purpose, he should not be harassed with threats of resignations or potshots from Congress.

Workers in Rubber Footwear Industry Imperiled by Proposed Tariff Reductions

---

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. GOODWIN. Mr. Speaker, evidence accumulates that organized labor is becoming more and more alarmed at the tendency of the administration to overlook the threat to industrial workers in the failure of our Government to stop the flow into this country of foreign products manufactured at a cost with which we cannot compete without lowering our standard of living. The peril to the century-old Massachusetts rubber footwear industry and to the 20,000 men and women workers in the industry is well shown in the following letter and statement which I have received today from the president of a local located in my district:

RUBBER WORKERS F. L. UNION,
LOCAL NO. 22763,
Malden, Mass., February 16, 1950.

Mr. ANGIER L. GOODWIN,
House of Representatives,
Washington, D. C.

DEAR MR. GOODWIN: I am writing to you in my capacity as president of Rubber Workers F. L. Union, American Federation of Labor, Local No. 22763, and also in behalf of those rubber workers in our plant who are not union members.

We are authoritatively informed that a still further reduction in the tariff on waterproof and canvas rubber footwear is contemplated. Rubber footwear coming from Japan with its oriental standard of living and from Czechoslovakia with its nationalized industry which is within the Soviet orbit are produced with a labor cost with which we Americans cannot compete.

The threat, represented by tariff reduction, to an old New England industry concentrated chiefly in Massachusetts imperils not only our standard of living but our jobs as well.

I am enclosing a paper which sets forth the facts of the case.

I hope that you will use your influence to protect our jobs and our standard of living.

Sincerely,

FRANCIS MULCAHY,
President.

FEBRUARY 14, 1950.

Members of the rubber-footwear industry are greatly concerned and disturbed over the possibility that the administration may put into effect further tariff reductions on imports of waterproof and canvas rubber footwear. This concern is based upon information which is considered authoritative.

Any further reductions in the tariffs on these items would produce an effect upon the American rubber-footwear industry little short of disastrous. It would be impossible for the domestic industry to produce articles which could compete in price with the prod-

ucts of the nationalized industry of Czechoslovakia or with those of Japan with its debased oriental standard of living. These are the countries of origin of the rubber footwear which would be sold here.

The rubber-footwear industry is an American enterprise about 100 years old, and at one time it supplied most of the world. But since the early thirties the American industry has been confined to the domestic market because of its inability to meet foreign low-wage competition. This domestic market the American industry is amply equipped to supply.

At present imports from these countries are priced at from 20 to 40 percent under the usual American prices. One must understand that the presence of even a small amount of low-priced goods in an industry as seasonable as rubber footwear can be a most upsetting influence on the market.

In the decade of the thirties, the threat to the American industry by the influx of rubber-footwear imports was so great that both President Hoover and President Roosevelt issued proclamations making duties on these products applicable on the American selling-price basis. That is to say, the rates of duty which were 25 percent on waterproof and 35 percent on canvas remained unchanged, but they applied to the domestic selling price of American-made footwear similar to the imported articles rather than to the selling price of the foreign product. In 1937, when the Czechoslovakian trade treaty was under consideration, this policy was sustained by President Roosevelt. In 1947, at the reciprocal-trade conference in Geneva, the American delegation granted concessions to Czechoslovakia on waterproof-rubber footwear which, in effect, cut the American duty in half, which means that the duty on Czechoslovakian footwear was reduced to 12½ percent.

This industry is one in which the labor cost in proportion to the total cost of the product is very high, namely, 47 percent. An attack upon the price structure becomes therefore an attack upon the wage structure of the American worker in this field and is also a direct threat to his job.

The industry at present is doing a business of about $62,000,000 annually, and it employs more than 20,000 men and women. These may not be, in relation to the total annual income, and to the vast army of employed workers in this country, imposing figures. However, this is of vital importance to New England and especially Massachusetts. Over 75 percent of this industry is located in southern New England, a small area already hard pressed economically, struggling to maintain its position in the American scene. A very substantial portion of this 75 percent, much more than half, is located in Massachusetts. This becomes, therefore, a matter of vital significance for this area, and some particular communities in it would suffer extreme hardship were this industry to become blighted.

Here is an example of how this thing works out with respect to a canvas oxford coming from Japan at an invoice price when landed here of $0.49. This shoe can be compared to an American canvas shoe that sells at $1.80. Now the tariff at the present rate of 35 percent of the American selling price is $0.62, which makes the total price of this shoe $1.11. The American shoe, you remember is $1.80. Now, with the tariff reduced by 50 percent, it would become 17½ percent of the American selling price. This is $0.31, making a total price of the Japanese shoe $0.80. With the tariff remaining at 35 percent but applied to the Japanese price, the tariff becomes $0.17 which makes the price of the Japanese shoe $0.66.

Precisely the same situation prevails in the field of waterproof footwear which comes from Czechoslovakia and on which the tariff rate is 25 percent.

These are the facts, a vital New England industry with a long history is faced with a situation which would make sheer survival difficult and certainly make any prosperity impossible.

Fallacy of Sea Water

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. POULSON. Mr. Speaker, during recent months the Nation suddenly has become aware of a painful fact—that we cannot be sure forever of getting enough water for our growing cities, industries, farms, and other water-consuming needs.

The West has been up against the problem for generations. Congress has approved projects that would help provide better distribution of what scant supplies we have out in the area that has become known as the reclamation States. During the past couple of years, the East has started to realize—in painful fashion, as evident from stories about shaveless and bathless days in New York, as indicated by burned up lawns and family gardens in New England communities last summer.

Whenever some of the people from California have pointed that water is essential to growth, remarks have been made that it can be obtained from the sea. There are suggestions about dropping dry ice on clouds or firing chemicals into the sky to bring about precipitation. Many sincere suggestions have been made about changing the course of rivers—killing two birds with one stone by ending flood damage while at the same time supplying areas without enough water.

Science has proved that rivers can be changed, clouds can be made to drop rain or snow, and salt water can be turned into fresh. Yet, I have not seen any explanation of who would pay the terrific costs involved in applying these methods to solve New York's present water shortage—that has been on the front page for several weeks. If the Federal Government is going to subsidize all the rainmakers and water distillers, to take care of New England and the Middle West in summer, California and Arizona the year round, we are going to have to get ready for a wallop at our pocketbooks.

But, Mr. Speaker, I want to warn my colleagues that this is no simple problem. It is going to cost large amounts of money to perfect methods of distilling salt water and making it available at reasonable cost. Perhaps when the scientists have found out how to use atomic energy for peaceful means the cost will be much less. So far, though, they have not cleared that hurdle.

Everybody admits the problem is complex from a scientific standpoint. The financial difficulties have been clearly stated in a recent letter to the Los Angeles Times from Samuel B. Morris, general manager of the Los Angeles department of water and power. His department serves a large part of a fast-growing metropolis and is always on the alert to meet future demands. Mr. Morris says it will take a dozen Hoover Dam power plants to provide enough electric energy to run the stills and other apparatus required to provide Los Angeles with water from the ocean. If oil is used, the requirement is 40,000,000 barrels, which cannot be spared according to experts who say the United States is running out of petroleum and could not fight another war with its own supplies.

The problem is pointed up by the letter which follows:

[From the Los Angeles Times of February 6, 1950]

COST OF FRESH WATER FROM SEA

Recent letters from Times readers indicate a great interest in the subject of producing fresh water from sea water.

It is encouraging to see such evidence of community thinking on the very serious problem of water supply and we of the Los Angeles City Department of Water and Power appreciate the spirit that prompts the readers' comments.

However, we believe it is our duty to point out the matter of high cost entailed in the best known present methods of converting sea water. An authoritative article in Engineering and Science Monthly, published by the California Institute of Technology Alumni Association, shows that costs are almost prohibitive.

For example, water produced by a vapor-compression or thermal-compression distillation unit would be 13 to 17 times the present cost of Colorado River water. It would require 40,000,000 barrels of Diesel oil per year to provide the 1,000,000 acre-feet we expect ultimately to use from the Colorado River source of supply.

The electrolytic process is even more expensive. It would take 12 power plants as large as the Hoover Dam plant to generate power needed to furnish the equal of our full share of Colorado River water.

This statement is not intended to discourage research, but to show the great cost problems that will have to be overcome. In our enthusiasm for scientific progress we must not overlook the practical fact that our share of Colorado River water will enable cities in the southern California area to serve at least 5,000,000 persons, with a corresponding increase in industrial and commercial activity, in addition to the millions served by local and Sierra supplies.

The Colorado River supply is under attack now by Arizona, through legislation pending in Congress. If we are successful in defending the Colorado River water that is legally ours, and for the delivery of which we have constructed works, we will have added time in which to search for a sea water conversion process that is within the ability of our homeowners and our industries to pay.

Present known methods are completely out of reach financially.

The department of water and power always has endeavored to furnish water (and electric) service to its citizen owners at low rates. I therefore feel strongly that it is my obligation to bring this practical money matter to the attention of Times readers and the public generally.

SAMUEL B. MORRIS,
General Manager and Chief Engineer.
LOS ANGELES.

The Columbia Basin

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I wish to include articles 11, 12, and 13 in the series by Mr. Leon Starmont, entitled "Let's Explore the Basin." Today's episodes indicate some of the problems in settling the huge Columbia Basin project.

[From the Spokane (Wash.) Spokesman-Review of February 1, 1950]

LET'S EXPLORE THE BASIN

(Art. 11)

(By Leon Starmont)

Spokane will get a taste of the Big Bend highway fight next Monday, when a victorious Warden group will lay before the Columbia Basin committee of the chamber of commerce the case for the easternmost north-south highway, preferred by a 32-to-11 vote at Monday's Ephrata session.

Meanwhile, the Columbia Basin Commission will study a plan submitted by James H. Dodson, Grant County engineer, at Ephrata, for a series of county primary roads and arterials to be financed by the State or Federal Governments, construction of which can parallel settlement of the newly irrigated lands as now projected for the next 5 years. The Ephrata gathering of 125 persons proposed that State funds be distributed on county roads until settlement is complete, causing State highway construction to be deferred until later years.

WAHLUKE SLOPE BARRED

James E. Travis, assistant manager of the Hanford plutonium works for the Atomic Energy Commission, said the AEC would have to turn down all of three proposals advanced by the Yakima Chamber of Commerce for an east-west highway through the Wahluke Slope. More than 200,000 acres have been withdrawn for security purposes, of which 165,000 acres are classed as irrigable.

Turned down were:

1. A right-of-way for the Yakima-Connell cut-off via either the Wahluke ferry or a bridge to be constructed there.

2. Guarded gates at the east and west ends of the routes, that could be closed in case of danger from the plutonium plant.

3. A convoy system that would permit highway travel in groups with AEC guards preceding and following the cars so nobody could stop.

No objection would be raised to a new State road from Priest Rapids via Beverly, Smyrna, Corfu, and Othello, little longer than the Wahluke route, said Travis.

SKIRMISHING REGRETTABLE

Jack Rogers, chairman of the State Columbia Basin commission, and W. A. Bugge, State director of highways, agreed the bitterness exhibited by delegations favoring specific highways was regrettable, but that in a free country every man and group is entitled to speak its piece.

Most of those present refrained from voting on the question of the Warden route over the Othello route, 6 miles west, for a north-south State highway through the basin.

The Warden route already exists as a county highway, while the plan proposed by the county engineer would provide an east-west county highway along Crab Creek from Beverly and connecting at the county line with an extension into Othello. This is the same route suggested by the AEC executive for a State highway connecting Yakima with the Lind area.

A delegation interested in the easterly north-south route, scheduled for next Monday's luncheon of the Columbia Basin committee here, will be headed by Al Wedmer, president of the Warden Chamber of Commerce, and Fred Radach, chairman of its road committee.

DODSON'S PLAN IN DETAIL

County Engineer Dodson submitted several alternate plans, but sentiment at Ephrata apparently favored his No. 1, which covers some roads in Adams and Franklin Counties as well as Grant

Dodson presented a map with the land to be irrigated by 1952 in orange, the 1953 tracts in green, the 1954 in pink, and the 1955 in yellow.

For 1951 construction he proposes a road straight north from Moses Lake to Stratford, crossing the Northern Pacific branch at Gloyd. The distance is 20 miles. He also plans 27 miles of county arterials in the area east of the main road and below the east low canal. He also plans about 32 miles of highway in the second largest of the first-year irrigation blocks, generally southeast of Quincy and south of the State highway.

For 1952 construction he plans some north-south feeders in the Quincy and Winchester areas, north of the State highway, and about 18 miles of arterials south of U S 10 and east of Potholes Reservoir, surrounding on three sides the Barkan dunes.

Dodson's third-year road-building program would call for new roads in the Warden area, extending into Adams County, and some additional construction south and west of Quincy and southeast of Trinidad.

That would leave for the fourth year an extensive area west of Warden and another lying generally east and southeast of Burke, between U S 10 and the almost forgotten Lowgap, where a tunnel is to pierce a low spot in the Frenchman hills for ultimate irrigation of their south slope north of Crab Creek.

Dodson figures that 25 percent of the roads will be arterial and will cost $15,000 per mile to construct. The other 75 percent can be constructed at $8,000 per mile or a total cost of $12,300,000.

Grant County's share of new roads is 870 miles, to cost $8,500,000.

SEVEN YEARS TO FINISH

The total cost of $12,300,000 for Grant, Adams, and Franklin Counties, over 7 years, Dodson said, will mean an expenditure of $1,850,000 per year.

"The counties do not have the money. It will have to come from some outside source in the form of a grant, loan, or bond issue," he added.

PARKER FOR 1950 START

H. A. Parker, supervising engineer for the irrigation project, made it quite clear that if the roads are not built in time for the settlers, the Bureau might as well slow up in its efforts to get water on the land. He said work could be started this spring on roads leading to the farm units that will receive water in 1952.

"It can be done in 1951, after the legislature meets, but it will be a big job," Parker said.

By a resolution presented by the Quincy Chamber of Commerce, the Governor was asked to declare an emergency for roads in the Columbia Basin, and State funds allocated for building new State highways in the area, would be used for county roads.

Jack Rogers, chairman of the Columbia Basin Commission, and presiding officer at the meeting, pointed out that the law would have to be changed to reallocate State road funds. He thought this would be hard to do.

"An adequate system of highways must be provided," Rogers declared. "It is the State's responsibility."

[From the Spokane (Wash.) Spokesman-Review of February 2, 1950]

LET'S EXPLORE THE BASIN

(Art. 12)

(By Leon Starmont)

Spring'll be along soon, but deep snow and clogged roads have halted work at most Columbia Basin construction points. So, while waiting for chinooks and snow plows, let's take a quick look at current basin projects in Oregon. Montana and southern Idaho, finishing Sunday with the present status of interbasin shifts such as moving Columbia River water to California.

Oregon, of course, shares Bonneville and McNary Dams with Washington and will share the major dams also proposed at The Dalles and John Day River's mouth, to provide 980,000 and 1,105,000 kilowatts respectively in their power installations, and to irrigate 286,000 and 380,000 acres.

ALSO SHARES HELLS CANYON

Another major project, Hells Canyon Dam on Snake River, to generate 900,000 kilowatts, will have its east end in Idaho and its west end in Oregon.

These dams are all included in the list of 93 projects placed before Congress and the Buget Bureau, with request for authorization, by the Army's Corps of Engineers and the Interior Department's Bureau of Reclamation.

Omitting, for the time being, the other 312 projects slated for ultimate development, the must list for Oregon alone includes four Bureau projects to irrigate 22,000 acres, and nine Army power projects to develop 323,000 kilowatts. Largest of the power projects asked is Meridian Dam, on the Middle Fork of the Willamette, 115,000 kilowatts.

The figures mean little unless coupled with data on projects already authorized or already constructed.

Also in the Willamette, under construction, is Detroit Dam, on the North Santiam, which with added facilities will develop 84,000 kilowatts and store 432,000 acre-feet of water for downstream use.

And on the Willamette's Coast Fork, south of Eugene, Dorena Dam is going up. Its principal purpose is storage, plus flood control.

Also authorized are three major storage projects—Sweet Home on the South Santiam, 315,000 acre-feet; Lookout Point on the Middle Fork, 600,000 acre-feet, and Quartz Creek on the McKenzie, 785,000 acre-feet, with 128,000 kilowatts of power.

STANDS BY ITSELF

Willamette River, rising in the Calapooyas and running northward between the Cascades and the Coast range, generally has more of a flood than an irrigation problem.

Yet the Army engineers, who have done cost of the planning there, figure on watering 514,000 acres, or roughly as much as is now left, with the Wahluke and wheatland withdrawals, in the Big Bend project in central Washington.

More than any other tributary of the Columbia, the Willamette stands self-sufficient by itself. There are 34 power sites in the valley, according to the latest information on the comprehensive plan. The Army plans ultimate power development at three of the seven sites originally marked for flood-control storage only.

There are already 24 power plants operating in Willamette, with 135,000 kilowatts capacity. It is the most thickly settled of the Columbia's valleys.

While these waters, entering the Columbia below Portland, play no part in inland empire irrigation projects, they nevertheless contribute to the Northwest power pool.

SCARCE IN REST OF OREGON

There are enough votes in the valley to make sure that the middle Columbia, upper

Columbia, and Snake are not going to permit upstream projects to outstrip the first-settled section of Oregon.

Insiders say a fight is already being made to eliminate one central Oregon bureau project, the Crooked River part of the Deschutes irrigation set-up, from the comprehensive plan now before the Budget Bureau in Washington. It would irrigate about 10,000 new acres northeast of Bend and send supplemental water to 10,000 more. Its cost is estimated at $5,278,000.

This would leave only the 4,000-acre Bully Creek extension of the Vale project, and the 4,500-acre western Dalles project, for eastern and northern Oregon. The power projects in the present list, outside the major dams, are all in the Willamette Valley. Largest, aside from Meridian, is the Green Peter, in the middle Santiam, 81,000 kilowatts and 322,000 acre-feet storage.

FLOOD-CONTROL ESTIMATES

The budget request calls for some $130,000,000 for minor lower Columbia and Willamette Valley projects, including $20,000,000 for a fishery plan and most of the rest for channel improvements, levees, snag clearing, and betterments to navigation.

Bank protection is proposed at 66 locations, levee modification at 28.

For comparison, there is $15,227,000 asked for upper-stream flood control, including projects at Bonners Ferry and Clark Fork, Idaho; Missoula and St. Regis, Mont., and the Okanogan, Wenatchee, Yakima, Entiat, Methow, Crab Creek, and Wilson Creek, Walla Walla, Touchet, and Mill Creek channels in Washington.

The total cost of the 93 projects, as indicated earlier, is $2,250,000,000, at current price levels. With efforts going on to remove some of the Oregon and Idaho projects, observers indicated addition of any central Washington irrigation item would face an uphill fight.

[From the Spokane (Wash.) Spokesman-Review of February 3, 1950]

LET'S EXPLORE THE BASIN

(Art. 13)

(By Leon Starmont)

Montana has only one major power project and two minor irrigation projects among the 93 for which authorization is asked in the comprehensive plan of the Army engineers and Bureau of Reclamation, now before the Budget Bureau at Washington, D. C.

Montana's share of the $2,252,664,000 program is $248,200,000, or a little more than 10 percent. That doesn't mean much for most of Montana is in the Missouri rather than the Columbia Basin. The Missouri "comprehensive" involves $6,125,000,000 or almost three times the Columbia. That is one fact emphasized by those who believe the Pacific Northwest should stick to the custom of going to Congress every session for appropriations.

LIBBY DAM AT JENNINGS

Libby dam, on Kootenay River at Jennings, is the one big project left in the current Montana picture. Glacier View Dam on the Flathead having been eliminated because of the protests of sportsmen and dude ranchers, backed up by the National Park Service and the Department of the Interior.

Hungry Horse, on the Flathead's south fork, a Bureau of Reclamation project, is already under construction. It will regulate water for Montana Power Co. plants at Polson and Thompson Falls, and for all the other plants down the Pend Oreille and Columbia, including Grand Coulee, Chief Joseph, McNary, and Bonneville.

Libby Dam will cost $239,077,000, develop 588,000 kilowatts, and store 4,250,000 acre-feet for the dams down the Kootenay. It is second only to Grand Coulee (9,700,000 acre-feet) among the projects now built or authorized, or for which authorization is sought. It will back water far into British Columbia, which will receive compensating benefits. Another Kootenay River dam at Katka has been deferred.

BITTERROOT IRRIGATION

A Bitterroot Valley project in the comprehensive plan will cost $8,979,000, store 88,700 acre-feet above Missoula, irrigate 1,700 new acres, and supplement the water supply of 48,300 acres now irrigated.

There is also a 1,200-acre addition to the Missoula irrigation district, at a cost of only $184,000.

Channel improvements are also proposed on Libby and Flower Creeks in the Kootenay drainage. Marked for later development, but not present authorization, are reservoirs on Yaak and Moyie rivers to store 435,000 and 322,000 acre-feet, respectively, the outlet of the latter being in Idaho. Also scheduled for later consideration is a 25,000-kilowatt power project on Yaak River.

On the tributaries of the Pend Oreille a much more extensive power development is contemplated, much of which has been delayed by objections of several localities to valley flooding.

In Montana, 23 potential power projects in the Pend Oreille Basin, not including those already developed, total 1,797,000 kilowatts. To others down river in Idaho total 175,000 kilowatts.

FLATHEAD IRRIGATION

In the Flathead, major tributary of the Pend Oreille, about 85,000 acres are now irrigated. This is to be much enlarged by projects in which the Indian Service has a hand. Because of the more complex picture caused by Indian projects and private ventures, estimates of irrigable land in the Flathead lack the exactness now charted for other Columbia Basin areas.

Irrigation development in the lower Flathead and Little Bitterroot Valleys was initiated by the Reclamation Service in 1907 and was turned over to the Office of Indian Affairs for completion and operation in 1924. All of the irrigated land is within the Flathead Indian Reservation, much of which was opened to non-Indian settlers under the act of April 23, 1904, and virtually all of the irrigated area is within the Flathead Indian project.

The Flathead Indian project, with a designated ultimate area of 138,195 acres, is made up of three units or divisions: Mission Valley, 111,660 acres; Camas, 13,170 acres, and Jocko, 13,365 acres. Of the ultimate project area, nearly 107,000 acres are now under constructed works.

NON-INDIAN DISTRICTS

The non-Indian lands of the project have been organized into three irrigation districts under Montana law and each has entered into a repayment contract with the United States. The district lands aggregate 99,405 acres. Indian-owned lands within the project total about 28,500 acres, and the remaining 10,290 acres of the ultimate project area are State and county lands.

The Camas division, in the valley of Little Bitterroot River, is irrigated by gravity diversion from that stream, supplemented by storage. The water supply currently available is inadequate for the 13,170 acres of the designated ultimate area of the division with the result that not more than 5,000 to 10,000 acres are usually irrigated each year.

The Mission Valley division is irrigated by gravity diversions from tributaries of Flathead River, supplemented by storage and by pumping from Flathead Lake.

The Jocko division is supplied by gravity diversions from Jocko River and Finley Creek. Both the Mission Valley and Jocko divisions occasionally experience moderate water shortages.

Storage for the entire project is provided in 14 reservoirs with a combined capacity of 142,725 acre-feet. The Flathead River pumping lift is approximately 330 feet.

The Cost of Mr. Johnson

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. HALE. Mr. Speaker, under leave to extend my remarks, I want to call the attention of the House to an article entitled "The Cost of Mr. Johnson" written by Joseph and Stewart Alsop and appearing in the Washington Post for Friday last.

Secretary Johnson is very boastful about the preparedness of our armed forces and emits from time to time utterances that are alarmingly jingoistic. I am very much afraid that the estimate of the situation by the Alsop brothers is entirely correct.

The article follows:

THE COST OF MR. JOHNSON

(By Joseph and Stewart Alsop)

There should be no mistake about it. Behind the false front of Louis A. Johnson's defense "economies," there lurks something even more unpleasant than petty domestic politics. There lurks, in fact, the specter of our eventual defeat in the world struggle with the Soviet Union.

The reason why this is so can be very simply stated. The Soviet Union is in midphase of a program of rearmament considerably surpassing Adolf Hitler's. Meanwhile, because of Louis Johnson's policies, the United States, the leader of the Western World, is patently failing to give solid strength to the western confederation against Soviet aggression. This is happening in several different ways, and on several different levels.

It is obvious, for example, that the divided and mutually suspicious nations of the Atlantic Pact can never organize efficient defense unless this country takes the lead in the hard, day-to-day planning. Almost all the regional defense groupings in Europe wish us to do so. The biggest and infinitely the most important grouping, the western union, has actually asked for an American officer to replace Field Marshal Montgomery in command at Fontainebleau.

Both the British Field Marshal, who would be supplanted, and General de Lattre de Tassigny, who rearely agrees with Montgomery, are at least in accord on this point. Western union can accomplish little without an American to serve as umpire. Yet "my Joint Chiefs of Staff," as Johnson sometimes calls the JCS, have refused to take part in the European planning process in this responsibility-creating manner. Atlantic Pact planning has thus been limited to the vague and cloudy top-level.

The motive is plain. If we assumed serious responsibility for western defense planning, we should immediately be pressed to make western defense a real thing. Johnson's economy policy forbids this sort of effort. The military-aid program for Europe has some psychological value, but on balance the Atlantic Pact is degenerating into

a mask for weakness. Here again we are being misled by Johnson, as his annual report discloses.

Despite the power of the Red army, despite the Soviet atomic bomb, a serious defense of the west can be organized, at reasonable cost, by our allies and ourselves. It is not being organized simply because we are not making our necessary contribution, and because this, in turn, demoralizes the European effort. The plainest case in point is that of Europe's air defense.

The Soviet heavy bomber force is relatively small, and comprises only obsolescent aircraft of B–29 type. These aircraft can be rather easily stopped by a modern air defense, combining first-rate fighters and the powerful antiaircraft guided missiles that are now proven. Thus an effective European air defense, which would neutralize the Soviet atomic bomb, is now entirely possible.

However, the western Europeans lack the resources to build this sort of air defense themselves. Meanwhile our own fighter groups, already shockingly reduced, are being further weakened by the low aircraft replacement rate that is one of Johnson's major economies. Our guided-missile programs are also being held back to their inexpensive early phase. In short, the job is not being done. The growing Soviet atomic stockpile will therefore be available to terrify the Europeans into submission

The truth is that the strength of the United States must be the very backbone of the strength of the west. That backbone is being chipped away at, if not broken, by Johnson. Previous reports have disclosed the progressive, still continuing impairment of our capability to guard the sea lanes across the oceans. Yet who can expect determined European resistance to Soviet aggression if the Atlantic sea lanes are even temporarily interrupted?

Equally, it has been shown that we may not be able to press home strategic air attacks against Russia's vital centers in 2 or 3 years' time. Yet a promise to destroy the Soviet vital centers, very shortly after the outbreak of any war was the chief contribution of our representatives to the Atlantic Pact staff talks. If our allies see that we probably cannot keep our major promise, who can suppose that the western confederation would hold together? Indeed, certain signs of disintegration are already appearing.

These are the reasons why the specter of defeat now looms before us. It does not so much matter as yet that this continent is also totally devoid of air defense, and that Alaska, the natural Soviet bridgehead, is quite unguarded. In the new era of intercontinental struggle it is unlikely that we shall suffer the first attack. The Kremlin's first goal will be control of the Eurasiatic land mass and the decisive isolation of the United States.

Because of Soviet rearmament and American disarmament, the Kremlin already has this goal in sight. Because our allies will feel deserted by us, the western confederation will most probably crumble under Soviet menaces, whenever Soviet rearmament is complete. In that event, we shall experience the equivalent of a gigantic defeat in war, without, perhaps, a shot being fired.

Let no one suppose, either, that after our expulsion from Europe and Asia, the situation can be restored by warfare between continents, carried on by us alone. It is unthinkable that we should try to force our way back across the oceans behind a barrage of guided missles carrying hydrogen bombs, germs to produce pandemics, and the like. If these events we are inviting are allowed to come to pass, we shall have only two alternatives.

One alternative will be to surrender in our turn. The other will be to abandon all that is good in our society, and to transform this continent into one vast, bristling, wholly militarized, permanently alerted armed camp. Such is quite possibly the cost of Mr. Johnson's policy.

The Federal Deficit

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. POULSON. Mr. Speaker, under unanimous consent, I insert an article by David Lawrence, published in the Washington Evening Star of February 17, in the RECORD:

TRUMAN FINDS HIMSELF ON DEFENSIVE OVER BIG FEDERAL DEFICIT—JACKSON DINNER SPEECH INDICATES HE REALIZES EXTENT OF VULNERABILITY

(By David Lawrence)

President Truman seems to have found himself on the defensive in the political arena. His speech at the Jackson-Jefferson dinner reveals for the first time that, while the leader of the Democratic Party doesn't like to admit it, he realizes how vulnerable his administration is on the big Federal deficit.

The President implied that it would be easy to dispose of the new cry of "socialism" by a simple denial that any Democrats are Socialists. He pointed to the prosperous-looking diners, intimating that those who pay $100 a plate for dinner aren't believers in socialism but rather the exponents of a firm faith in the strength of free enterprise.

What the President omitted to mention was that the diners were, for the most part, job holders on the big Federal pay roll or persons directly or indirectly benefiting by the largess of the Democratic administration.

REPUBLICAN "SCARE WORDS"

Mr. Truman revealed that he felt somewhat the sting of the recent Republican platform with its "liberty or socialism" slogan, which he referred to as "scare words." He went back to 1933, as all Democratic stump speakers do nowadays, to remind his hearers about the unemployment of those days and the reconstruction job done by the New Deal in the thirties. Unfortunately, the unemployment figures have just reached a new postwar high and the deficit is the largest in any peacetime year.

Mr. Truman devoted a large part of his speech to explanations as to why expenses couldn't be cut and accused the economizers of being willing to weaken the security as well as the domestic economy of the Nation. The group in Congress which is demanding economy includes many Democrats. So, in that sense, Mr. Truman was perhaps more nonpartisan than he realizes.

The speech undoubtedly will be regarded as a keynote. It will, unless circumstances change before the autumn elections, furnish the main line of political campaigning.

Mr. Truman's words, which were directed at the status of the deficit, sound as if he knows already the attack that is coming from the Republicans. He says:

"At the present time, they are spreading the mistaken idea that we can save money by going backward. They advocate slashing our expenditures for peace and for our domestic programs. These people are blind to the problems that confront us."

WORKING TO BALANCE BUDGET

"It is true that our present expenditures are large. But the Democratic administration is working toward a balance in the Federal budget. I wish we could balance the budget immediately by the simple expedient of cutting expenses. But that is out of the question."

Mr. Truman then repeats the old wheeze about 70 percent of the expenses being for past wars and for peace in the future. He says: "I would like to cut expenditures further, and I intend to do so at every opportunity."

But the answer to this is that the administration has recommended increases in spending nearly every year since the war and, notwithstanding a severe decline in receipts due to a business recession, the expenses for this year and next are scheduled at a high level.

The Republicans have a real chance to influence the whole course of Government policy by fighting it out on the economy issue, showing the proposed cuts that the Hoover Commission recommended and economy proposals that Democrats like Senator BYRD, of Virginia, have offered.

Maybe the Republicans hope to blend the word "socialism" with something akin to communism, but isms are rather abstract things to understand, whereas a government running in the red by billions is something everybody can understand. Much more descriptive than a welfare state or a socialistic state is the bankrupt state which develops when political spending becomes a habit.

How Far Dare We Let the Government Go?

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Democrat of January 19, 1950:

HOW FAR DARE WE LET THE GOVERNMENT GO?

Arkansas Representative BOYD TACKETT has taken a hot shot at the Federal Interior Department and its Southwestern Power Administration. His target is a loan asked of the Rural Electrification Administration by six big rural electric co-ops in Missouri, Oklahoma, Arkansas, and Texas, to build steam generating facilities and transmission lines.

Mr. TACKETT charged that the SPA would have control over the co-ops, under its contracts with them, and is using this method as a back door to an expansion which goes beyond the authority given it by Congress.

He said the SPA is thus seeking to use the good name of Mr. Claude Wickard and the fine rural-electrification program to foster a grandiose scheme of dominating electric power in the Southwest. He declared that the REA's funds should go to provide more electric service to farm people, and not to advance what he charges is the Interior Department's aim of socializing electric power in the United States.

Mr. TACKETT has introduced a bill to require congressional approval of REA loans for electric facilities which would be used by any other group or agency—like the SPA. Senator THOMAS of Oklahoma has introduced a similar bill in the upper House.

This is another case which brings home to Arkansas the menacing growth of Federal authority. If we countenance it, and support it when we think we have something to gain, how can we, without hypocrisy, denounce the extension of that authority to serve the interests of other groups elsewhere?

You will recall that the TVA, as urged by President Roosevelt, was to be primarily for flood control and navigation work. The power generated was to be a yardstick of costs for regulating private utilities.

But look at the yardstick now. The Federal Government will soon be producing 15 to 20 percent of the Nation's power—with many other huge projects being pushed. If the Government takes up the distributing of this power, building stand-by steam plants and lines competing with private lines, what will happen to private enterprise in this field?

Let the Government sell the power generated at its flood and navigation dams to private concerns. It has ample authority to regulate them. If we help to cripple, maybe kill, one private enterprise, be sure that others will be the next victims.

Vigilance and Effective Opposition Can Save the Medical Profession From Socialistic Control

REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. JONAS. Mr. Speaker, it is my candid opinion that the apathy which has prevailed for the past number of weeks in pushing a program relating to the welfare state and socialistic legislation, is only the lull before the storm.

The proponents of legislation dealing with such a program may be sitting out and awaiting the February 23 election in England. If they succeed in duping the people into voting them back into office, such occurrence may have certain repercussions in our own country. The success of the Socialists in England may be hailed by certain segments of society in this country as a great victory for the welfare state. That may prompt the present administration to make socialized medicine and public-health insurance the first order of business on the welfare program.

To date, all polls, investigations and personal surveys indicate that the medical profession is decidedly opposed to socialized medicine; but what is more encouraging, the people of America are evidencing their mistrust in the plan and their dislike for it. Decided opposition has cropped up, and is presently manifesting itself in terms of protests from many individuals and organizations who are not affiliated with the medical profession or interested in activities that are incidental thereto.

Aggressive opposition to the plan should not be relaxed for a single minute.

A recent poll, published in the Washington Post, discloses that throughout the Nation people who understand the administration's over-all socialized medical plan and compulsory health-insurance plan, were opposed to it in the ratio of 3 to 2.

Only 54 percent of the adults questioned were able to present arguments for or against the Truman proposal—the opening wedge for his welfare state, which is bound to lead us down the road to socialism just as surely as it did in England.

The principal argument which the proponents of the plan rely on is that it would provide medical aid to those sick and indigent who are not financially able to meet the cost, all of which, they maintain, is tantamount to assisting the impoverished and thereby improving the Nation's health.

The argument interposed against the compulsory medical plan deals chiefly with prohibitive costs—the encroachment upon the private rights now enjoyed by the individual practitioner by Government functionaries, and the inescapable fact that it would lower the standards now prevailing in the practice of medicine and mitigate against the patient in need of medical care and attention.

One person in three, or 30 percent, could give the correct answers when asked how the plan would be paid for; saying "pay-roll deductions," "taxes," or "like social security." When informed that both pay-roll deductions and additional taxes were necessary to meet the bill for the national health program to be administered and controlled by the Government, 10 percent voted in favor; 17 percent, against; while 3 percent reserved decision.

It is my contention that the information broadcast by the administration has not only been confusing—with an idea of creating an aura around its head—but that the tabulations dealing with costs, method of operation, and just how far the plan would apply to individuals who are nonwage earners, Government employees, or those on public-assistance rolls have been distorted deliberately. Under the proposed plan more people would be omitted than under the social-security plan, now being administered by the Government. Nonprofit health plans and that of commercial insurance would be destroyed, and medical attention would be geared to quantity—not quality.

Unless an educational program is undertaken by the medical profession, supported by States, counties, cities, and communities, our people will discover—just as did the people of England—that governmental control will reach not only every life in America, but deeper into every purse, and that Federal control means the kind of compulsion which Americans like no better than Englishmen.

We are gradually being drawn into a socialistic pattern. The insidiousness with which it is done works on the same principle as creeping paralysis. A popular definition of socialism is that it is a disease which fastens itself upon a weakened society. The depression years from 1921, war, and the loss of export trade, which meant England's lifeblood, are all partially to blame for the British allowing themselves to be insinuated into statism, with welfare and security as the bait.

Many well meaning and thinking Americans contend that we are being victimized by similar tactics.

At the time the National Health Service was foisted upon the British there were few, if any, private plans available for medical insurance which was within the means of the average wage earner or heads of families.

That is not true in this country, where numerous forms of insurance, such as Blue Cross plans, Blue Shield, commercial insurance, and so forth, are within the reach of 70 percent to 80 percent of our population. The rapid growth and development of the various methods of voluntary health protection during the past decade is a clear indication that the American people prefer to pay for their medical, surgical, hospital, and all types of incidentals thereto as they see fit, and to whom they choose.

During 1948, the number covered against loss of income increased by more than 2,000,000, while the number covered against the cost of hospital and surgical care increased by approximately 8,000,000.

I quote from a survey made by the survey committee of the Health Insurance Council, in which you will see that the total number of persons covered, for hospital benefits is 60,995,000; for surgery, 34,060,000; and for medical coverage apart from surgery, 12,895,000. These figures show an increase of 93 percent in the past 10 years, without the cooperation of the Government for its employees.

The following statistical tables reflect the progress of health protection through private enterprise:

Number of persons protected

Type of protection	Dec. 31, 1948	Dec. 31, 1947	Increase in 1948 (number)	Percent
Loss of income	33,410,000	31,224,000	2,186,000	7
Hospital expense	60,995,000	52,584,000	8,411,000	16
Surgical expense	34,060,000	26,247,000	7,813,000	30
Medical expense	12,895,000	8,898,000	3,997,000	45

Comparisons over a longer period are not available in every case, but the following figures serve to illustrate the growth in protection during the past decade:

Number of individuals covered at end of indicated year

Coverage	1938	1943	1948	Increase during last 5 years	Increase during last 10 years
Hospital expense: Group insurance and Blue Cross plans combined	3,200,000	19,400,000	47,200,000	27,800,000	44,000,000
Surgical expense: Group insurance and plans sponsored by medical societies or affiliated with Blue Cross	100,000	5,900,000	24,400,000	18,500,000	24,300,000
Medical expense: Group insurance and plans sponsored by medical societies or affiliated with Blue Cross	----------	800,000	7,500,000	6,700,000	7,500,000

It will be noted that these comparisons are noted only to show the rapid rate of growth. Because of the inadequacy of statistical sources prior to 1947, the preceding table omits the very impressive record of coverage provided through individual insurance policies, consumer-sponsored prepayment plans and other important methods of voluntary protection.

SUMMARY OF SURVEY

1. Insurance against loss of income due to disability

A. Insurance companies and fraternal societies	20,640,000
B. Paid sick leave:	
In private industry	4,500,000
In civilian Government service	2,750,000
C. Employee mutual benefit associations	1,460,000
D. Union plans and other employer-employee methods	2,000,000
Grand total	33,410,000

2. Hospital, surgical, and medical coverage

	Hospital	Surgical	Medical
A. Insurance companies and fraternal societies: [1]			
Personal	$13,689,000	$11,203,000	$2,442,000
Dependents	12,295,000	8,425,000	902,000
Total	25,984,000	19,628,000	3,344,000
B. Blue Cross plans sponsored by medical societies: [1]			
Personal	13,636,000	4,774,000	2,711,000
Dependents	17,610,000	5,833,000	3,001,000
Total	31,246,000	10,608,000	5,712,000
C. Other organizations: [1]			
1. Bituminous coal industry:			
Personal	230,000	269,000	269,000
Dependents	300,000	350,000	350,000
2. Consumer sponsored	1,600,000	1,600,000	1,600,000
3. Industrial, excluding coal mining	1,260,000	1,220,000	1,215,000
4. Private group clinics	275,000	285,000	305,000
5. University health plans	100,000	100,000	100,000
	3,765,000	3,824,000	3,839,000
Grand total	60,995,000	34,060,000	12,895,000

[1] This does not include individuals covered solely by Government under compulsory plans.

With these figures in mind, let us look at England, which more nearly resembles the administration's prospective plans than any other. Their experiment in socialized medicine—instead of being the blessing they anticipated—has proven to be a tragedy. That Britain sorely needed more medical care is not open to challenge. On the other hand the indisputable fact is that she has not obtained it. What actually took place was that care made available was spread so thin that it is now inadequate for everyone.

In England, the National Health Service, which came into being on July 5, 1948, has cost twice the original estimate—and for many of their patients seeking examinations or medication in one form or another, it has meant endless hours of waiting; overcrowded conditions; and in most instances, indefinite appointments for hospitalization; and that those seeking medical attention must "queue" up in a fashion resembling a depression bread line.

Mr. Aneurin Bevan, Minister of Health, said in a press conference at the end of the service's first fiscal year—October 6, 1949, that—"the total cost of the service was not to be regarded as an additional burden on the community—but in the main as a vast transfer from the private to the public purse."

The public purse, as everyone knows, is fed by individual contributions made from private purses—in England, just as it is here. Those contributions are measured only by one yardstick—taxes. The British felt the bite and the decreased efficiency in their medical service, and they do not like it. We, too, will feel the bite of taxes, and deplore the inferiority of professional service and care, in the field of medicine, if we are gullible enough to accept in full the administration's socialized medical plan.

Payments from the national insurance fund—pay-roll deductions—to the National Health Service in England, were $112,000,000. The cost to the end of the first year was $840,000,000. The balance of $738,000,000 was paid by additional local and national taxation. This meant more taxes for overburdened industries, and yet another load added to a people who were already the heaviest taxed in the world.

The service as administered by the Socialists has become a vast, calloused, inhumane, and cold-blooded machine, which only adds sorrow to the suffering, and deepens their misery. This system has conclusively demonstrated, in addition to its unworkability—that it leads to a rationing of doctors; the destruction of initiative and professional independence. It has redounded to the benefit of only 2,000 out of some 18,000 who "joined" the National Health Service, by their own admission.

According to the pattern followed in England under state medicine, the pharmacist is circumscribed by his share of red tape comparable to the rationing days in the United States.

The preparation and sale of prescriptions is not managed in terms of convenience—or choice; but governed by zoning areas measured in distances of miles. For instance, if a patient lives 1 mile or less he gets his drugs from the store nearest the doctor. If he lives 2 miles or more from a store he gets his drugs from his doctor, who is supplied by the government. If he lives between a mile and 2 miles it is optional whether drugs are supplied by his doctor or not.

This makes the druggist subject to the personal likes or dislikes of the zone physician. The natural consequences are that the druggist stands to lose both financially and in patronage. Clearly, under such a system it is quite impossible to build up good will.

As an example of the meagerness of the entire service we might point to their slogan, which is, "security from the cradle to the grave"—yet the evaluation of this security is $16 for the cradle, and $80 for a Christian burial.

The United States has always been known to have the highest medical standards in the world, and the lowest mortality rates. Supporting this proof is the difference in the medical facilities for care and hospitalization in England, as weighed against ours.

I quote from The National Health Service of Great Britain, page 8, by Willard C. Rappleye, M. D., published by the Josiah Macy, Jr., Foundation, New York:

> On the appointed day (July 5, 1948) 3,426 hospitals, convalescent homes, and clinics passed from the control of their own boards to that of governmental agencies, which had been created during the tooling-up period, a transaction of major dimensions.

No other country in the world has a network of hospital facilities that are comparable with ours. This network represents $45 per capita or $108 per employed person. In terms of assets each bed represents an investment of $4,598.

The Federal Government owns only 372 hospitals which have a capacity of 185,000 beds for the armed forces, United States Public Health, Veterans' Administration, Indian Affairs, Penal, and Narcotic.

State, county, city and city-county operate 1,528 hospitals, with bed capacities as follows: State, 648,386; county, 101,327; city, 73,797; city-county, 11,159.

Total governmental, including Federal, amounts to 1,900 hospitals, with 1,019,767-bed capacity and 15,757 bassinets.

In the nongovernmental classification, there are 4,435 hospitals which fall into the following categories:

Church, 1,068; nonprofit organizations, 2,016, with a total bed capacity of 352,972, and a bassinet capacity of 62,635, according to a table published by the American Medical Association, May 7, 1949. This classification is rather confusing since the Catholic Welfare Council lists 725 hospitals in the United States, which are run by 184 different religious orders or units. The Protestant Hospital Association, lists more than 550 hospitals which are directly connected with Protestant churches, with a possibility that there are 500 more interdenominationals, which are directly or indirectly connected with church groups.

To permit the Government to take these over, as President Truman proposes, would, in the instance of those of the Catholic faith, regiment 184 orders which are dedicated to the care of the indigent and ill. Those of the Protestant faith provide facilities of the same nature and would be similarly affected. That also can be said of the great Jewish hospitals in the country. Aside from the humanitarian aspect of a hospital, religious, fraternal, and racial contacts not infrequently come into play in the conduct of the institutions.

I personally believe it not out of place to assume that removing or interfering with impressions and the comfort derived from the respective faiths they cling to, would deny to the sick the unimpeded opportunity to give full expression to their spiritual beliefs, and by indirection would interfere with individual religious commitments.

In addition, there are 973 individual and partnership-owned hospitals, which have a bed capacity of 27,567, and a bassinet capacity of 5,668. Those run by

corporations or on an unrestricted profit basis total 378, with a bed capacity of 23,214 beds and 3,536 bassinets.

In 1946, the last figure available showed 436 unregistered—either AMA or AHA—hospitals with a bed capacity of 16,172—or an average of 50 beds per unit. These hospitals are usually owned by group doctors and surgeons, who have pooled together to supply the needs of their communities and their patients in rural or local areas. There is no reason to believe that this number has not increased since the lifting of building restrictions due to wartime priorities.

I would like to point out here that there are more than 10,000 bills and resolutions presented—all on problems relating to public health, during the first session of the Eighty-first Congress. Some of these are duplicates, but 291 bills are now pending, along with a large number in the Senate.

The Hill-Burton building plan, Hospital and Construction Act, which became Public Law 725 in the Seventy-ninth Congress, and was amended by laws 830 and 380 in the Eightieth and Eighty-first Congresses, reached an early stage of operation in 1948, with its matching of Federal, State, and local funds; while leaving control in the communities and localities in which the hospitals are built as needed, and according to the requirements of the population seeking benefits from this plan. There are 1,019 projects. Of this number 662 have been finally approved. More than 139 general hospitals, health centers, clinics, and laboratories have already been completed.

A great many hospitals are also being built without Hill-Burton plan funds which will help round out the country's hospital facilities. The Hill-Burton program was painstakingly planned to produce a balance of facilities for all communities.

When the FSA propaganda campaign began setting forth the great need for the compulsory health-insurance program in 1948, it is significant to note that despite all the danger signals—we had the lowest death rate ever recorded in our history. Specific attention was called to the fact in the FSA statements that 1,241,185 citizens per day were receiving hospital care—but there were factors involved which offset the alarm. The first of the following is, of course, the most important. The last, is the obvious reasons for Nos. 2 and 3.

First. Admissions went down.

Second. Percentage of occupancy went up.

Third. Daily census went up.

Fourth. Length of stay went up.

It is also important to note that 1948 brought a sharp downward trend in admissions after many years in which this figure climbed steadily. And, lest the figure for the number of the population daily hospitalized startle you—let me emphatically point out that while there might have been 1,241,185 citizens in hospital beds—99 percent of our population were ambulatory and active.

It is my contention that it is not only dangerous to allow bureaucratic laymen to dabble in the sciences of which they know nothing—but that it would disorganize and impede the splendid progress the medical profession has made in this country. Under free enterprise and competition, commercial, philanthropic, and religious organizations are being constantly urged forward by the pressure of public demand for expanding research and scientific exploitation in the medical arts.

Assuming the Government becomes the sole overlord in the management and operation of hospital and health services, it is quite probable that the advantages gained in the medical profession would be slowed down and unnecessarily impaired. This would tend to restrict a profession that constitutes one of the most vital segments of our democracy.

The foundation of our country was laid—and depends upon the sense of personal responsibility which exists in the hearts of its citizens. Compulsory insurance—this opening wedge of statism, with the same promises of welfare and security which duped the people of Britain should be militantly opposed. Why? Because it would abrogate not only the responsibility of the individual—but do great and irrevocable harm to the inhabitants of the community and the state as well.

Let us keep in mind the many facets of the issue when we are again called upon to face this cunning internal revolution—this insidious approach to the eventual completion of the plans for a welfare state, as was so aptly presented in the February 4 issue of Collier's article, Mr. Welfare State Himself, which clearly outlines the plans afoot, as well as the ambitions of the satellites who head up the FSA. In the February 11 issue, Collier's presents the story of Dr. Ralph Jocelyn Gampell, The Doctor Who Brushed off "Utopia."

We are in the danger zone, make no mistake about that, when our United States Supreme Court has ruled: "The State has a perfect right to control and administer whatever it subsidizes."

With the obvious draw-backs provoked by socialized-medicine experiments, with their attendant deteriorations of standards, there is no excuse for our allowing the lives of our ill and indigent to be turned into nightmares of neglect—offering them additional distress and indifferent and stereotyped attention.

I quote Mr. Truman:

> I depend upon our peculiar genius for combining governmental and voluntary activity to expand and maintain our hospital system.

Candidly speaking, this is being done to a limited extent, with the aid of such acts as Voluntary Health Insurance Act (S. 1456); the National Health Insurance Act (S. 1581), and the National Health and Public Health Act (S. 1679) in conjunction with the Hill-Burton legislation and others, which is designed to aid the individual communities to fulfill their needs—whether it be for assistance in building hospitals, or in the interest of educating and training specialized personnel to staff them, or providing needed equipment.

In all of these, particular emphasis has been directed to giving special consideration to rural, local, or sparsely populated areas where the greatest needs are for more available doctors, and proper equipment for treatment and diagnosis.

Legislation to amend the Public Health Service Act of 1946, and known as H. R. 5940, is now pending in the House, and was drafted with a view of lessening the tension related to some of the apparent grievances with which the medical profession has to contend. In this bill provision is made because of the shortage of physicians, optometrists, dentists, dental-hygienists, nurses, and other health personnel, including hospital administrators, for the education and training of such personnel, and the expanding of facilities and opportunities through Government aid and financial grants.

Practical nurses are also included in the vocational-education section of the bill. They are to be trained for subacute, convalescent, and chronic patients under the direction of a licensed physician or a registered professional nurse.

H. R. 5940, and others which have preceded it, nor the legislation which may follow, may not prove to be a complete cure-all or panacea tending to alleviate the conditions with which we are confronted. However, it must be conceded that there are not now enough doctors and nurses to meet the ever-present demand for such personnel. The legislation herein noted is designed to improve upon the present situation and to make immediately available opportunities and facilities for those who wish to have a share in protecting and guarding the health of the people of our country.

Basically, the bill proposes not to regiment personnel or socialize medicine. The fundamental objective of Federal aid as contemplated, and through legislation outlined in H. R. 5940, is to financially aid students who aspire to become doctors, dentists, nurses, and so forth.

The legislation also has for its objective that of providing funds for building health centers and modern hospitals and providing means for securing proper and modern equipment to operate them.

In the final analysis, the bill places the management as well as the allocation of funds not exclusively in the hands of inexperienced or untrained Government appointees, but the management and supervision of what H. R. 5940 hopes to accomplish, is with conditions attached delegated to the United States Surgeon General and his council.

Bills like H. R. 5940 are worthy of study and consideration. If they are intended to prevent regimentation of personnel and institutions or the administration thereof, and restrict interference with the curriculum of medical schools in general, we are on safe ground—provided that there is no radical deviation from maintaining the present high professional standards, ethics, and scholastic requirements.

Continuing forward in the science of medicine, under those circumstances, may show a swift, steady, and healthy growth, without destroying anything that has made it what it is today. The objective which transcends all others involved in this timely subject is that we will not relinquish in any degree our basic probity nor the trust and confidence which has obtained through practical and traditional achievements

and experience in the great profession of medicine.

The connotation of the word "compulsory" itself instinctively stirs up in the consciences of men and women accustomed to independent thinking an impulse toward rebellion.

Laws which are venal and obnoxious of their very nature have always been frowned upon and treated as incompatible with the fundamental principles of liberty and justice.

Therefore, it may be assumed that the medical profession, and any or all activities that are kindred or incidental thereto, will not readily lend themselves to the enactment of any legislation which is inherently destructive in character, and objectively despotic, and is obviously partial to a socialistic philosophy.

Controlled and socialized medicine unquestionably requires additional revenue, that can only be secured through one source; that is, higher and more taxes. In place of helping the poor and the needy, is it not logical to assume that such a course would exact from them contributions they could ill afford? It is axiomatic that the moneys they part with must be withheld from expending them for other needs or comforts.

Would not then the whole plan mitigate against the poor man in that he has to skimp and save and forego buying clothing, food, and those commodities which constitute his daily sustenance in order to get the tax load off his back?

All of which might militate against improved conditions in public health in place of contributing to the objective of advancing sciences where it is sought to prolong life in place of lessening the opportunities to live.

Economy and Self-Reliance

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. SANBORN. Mr. Speaker, under permission to extend my remarks in the RECORD, I am inserting a letter I received from an Idaho housewife, Mrs. Lester M. Johnson. Her letter is well stated, to the point, and constructive. I believe it should be made available to others.

DEAR MR. SANBORN: May I express the hope that, as Representative from Idaho, you will take a leading role in directing the country back into the path of economy and self-reliance?

My husband is a veteran, a member of the Reserves, and in the moderate-income group, yet we feel very strongly that any favors done to any of these groups will, in the end, cost us far more, as taxpayers, than the price we would have to pay for them if we were able to save and achieve them for ourselves.

We believe that people should be encouraged to provide for their own medical care, housing, retirement, etc., except in cases of extreme poverty. I am also in favor of the Taft-Hartley law as a very necessary control over the labor monopolies and feel that it might have been invoked more often.

I should like to see CVA shelved—at least until sincere public demand from this area and a surplus of Government funds make it more advisable to consider it. The present Government hardly has a record for efficiency, honesty, or plain common sense that would lead anyone to want to confide any greater powers to it.

I feel that the thinking voters of the country would prefer a little belt-tightening to the present hopeless spiral of increasing taxes, national debt, and expensive projects. You can hardly expect us to welcome a tax increase if we believe that, instead of paying for past and present debts, it will go into some crack-brained scheme for a Government-owned Utopia.

We can still "cut our coats to fit our cloth"—why can't the Government do the same?

MRS. LESTER M. JOHNSON.

BOISE, IDAHO.

Cooperation, Not Competition, Will Pay

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by C. F. Byrns from the Southwest American:

COOPERATION, NOT COMPETITION, WILL PAY

(By C. F. Byrns)

A good way to cut Federal Government expenses is to use private enterprises instead of competing with them. That is exactly what will happen in Arkansas, Oklahoma, and other States in this area if pending contracts governing Federal electric power sale are approved by the Interior Department.

Douglas Wright, director of the Southwestern Power Administration, is responsible for the sale and distribution of electric power generated at federally owned dams on the Red, White, and other streams in this section of America. Lately, he negotiated contracts with the Oklahoma Gas & Electric Co. and Public Service Co. of Oklahoma for distribution of Federal power through the privately owned electric utilities. Similar negotiations are under way with other power companies in the same area, including Arkansas Power & Light Co., Southwestern Gas & Electric Co., Gulf States Utilities Co., Arkansas-Missouri Power Co., and Missouri Utilities Co.

This week, Wright told the House committee considering his budget requests that he will cut $5,000,000 off the expense for the year beginning next July 1 if these contracts for finally approved. The reason is this: He is asking for $5,000,000 in that 1 year, with more to follow, for construction by the Federal Government with Federal money of facilities for distribution of Federal power. Those facilities will not be needed if the contracts are approved for distribution by the private companies.

The proposed contracts make the best possible use of the electric power being generated and planned in the Southwest.

They provide a way to use the hydro power for peaking purposes—that is, for carrying the excess load of demand at the peak hours, while steam plants owned by the private companies carry the normal around-the-clock demand.

Everybody in the power business, both Federal and private, recognizes that peaking power is the most profitable use of hydroelectric energy in this part of the Nation. The stream flows in this area are widely variant. Continuous power from hydro plants requires continuous flows of the streams in large quantities. We do not have that. But we do have many opportunities for developing hydro power as an incident to flood control, silt control, navigation, and other water uses. That power should be put to use in the public interest, on the most economical basis possible.

Under the proposed contracts with the private companies, Federal power will be sold to them at the Federal power plants and at existing interchange points between federally owned and private lines. The private companies will deliver power for the Federal Government to customers now on their lines or hereafter put under contract for use of Federal power.

This arrangement removes the necessity for spending large sums of public money to build power plants.

No Government Will Work in a Land Where Everyone Tries To Work the Government

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. PLUMLEY. Mr. Speaker, it is a very great pleasure for me to take advantage of the opportunity afforded for permission to extend my remarks to include a statement recently made by the Honorable W. Arthur Simpson, commissioner of social welfare of the State of Vermont.

He has reduced to six paragraphs all worth while which has been said in volumes. Every Member of Congress ought to cut this extension out of the RECORD and carry it with him or else learn it as he would the Ten Commandments. It is the complete and perfect answer to all those who insist that this is a good Government to live in so long as they may live off it. With these people, unfortunately, every State is filled to overflowing today.

He well says that security is not the product of political power. He might well also have said you cannot legislate to make men honest, tolerant, or civic-minded.

This comprehensive yet compact statement of the issue which confronts the American people of today should have wide distribution and greater comprehension:

If this Nation is to survive we must learn that security is not the product of political power.

Government can wave no magic wands, issue no decrees, make no laws which will provide things for a people who do not produce.

The only riches which enable us to eat and drink, to clothe, shelter, and educate ourselves and our families, to provide a measure of security in old age and to enable us to aid the less fortunate are the riches that are created through the skills of men in industry and business or grown through the efforts of men on farms.

The moral basis of society is being destroyed by the incessant scramble for higher wages, higher profits, higher pensions, more leisure and rigid prices for agriculture.

It is easy to forget how to plow when everyone wants to be a harvester.

No government will work in a land where everyone tries to work the government. When you take away the incentive to produce and the penalty for loafing, you are on the slippery road to ruin. We can take out of our economic system only what we put into it.

W. ARTHUR SIMPSON.

Rural Electric Co-Ops in Arkansas

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by C. F. Byrns from the Southwest American for February 14, 1950:

OFF THE RECORD

(By C. F. Byrns)

Representatives BOYD TACKETT and JIM TRIMBLE have lately disagreed in House speeches on a proposed plan for rural electric co-ops in Arkansas to build a steam-generating plant and electric transmission lines and lease them to the Southwestern Power Administration for a long period. Gordon Brown, Associated Press Washington writer, said in a Sunday column their disagreement is holding up REA approval of the local asked by the Arkansas co-ops.

A disagreement between these two men which reaches the point of House speeches is rare enough to provoke interest. Both are ardent supporters of rural electric cooperatives. Both are accustomed to speaking their frank opinions. I imagine a good many people in the Fourth and Third Congressional Districts would like to know what the disagreement is about. I wanted to know, too, so I asked each of them to tell me.

After reading the speeches of both of them on the floor, it is clear to me that both are strong for the rural electric co-ops, as they always have been. They have a different view of the effect of a proposed contract between the rural co-ops and the Southwestern Power Administration.

This proposed contract would provide for the newly formed group of Arkansas electric co-ops to borrow money from the Rural Electrification Administration to build a large steam plant to generate electricity and transmission lines to distribute its product, and then lease it to the Southwestern Power Administration for operation. The contract with the SPA is the point at issue between the two western Arkansas Congressmen.

Representative TACKETT interprets it to mean that SPA would own the steam plants and transmission lines built with REA money at the end of the proposed contract period. He points out that Congress has refused to appropriate money at SPA's request to build steam plants and transmission lines. He urges that SPA is trying to do indirectly what Congress has refused it permission to do directly. In addition, he charges SPA is using the good name of the rural electric co-ops and the REA to accomplish its purpose of building duplicate facilities to compete with privately owned electric utilities in the area. He believes the contract would give SPA eventual control of the policies of the rural electric co-ops.

Representative TRIMBLE does not agree with Representative TACKETT's interpretation of the contract nor his conclusions as to its effect. Representative TRIMBLE says the proposed steam plant and transmission lines would remain the property of the rural electric co-ops and would not pass to SPA at any time. Neither, in his opinion, would SPA be able to dominate the policies of the rural co-ops. Representative TRIMBLE points that the rural electric co-ops are private enterprises, owned by their members, buying electric energy wherever they can get it at the best price, from either privately operated utilities or the SPA which sells power from Federal power projects in the Southwest. He thinks the proposed contract with SPA is a proper exercise of the co-ops' right to make the best arrangement possible for purchase of power. He sees no danger of SPA domination of the co-ops operations.

Representative TACKETT has introduced a bill to require congressional approval of any REA loan to build any facility to be leased to any other agency for operation. Representative TRIMBLE thinks such a bill would be a serious restriction on the freedom of the co-ops to manage their affairs efficiently.

The two Congressmen agree on their support of the co-ops. They disagree up to now on the meaning of the proposed contract. Everybody concerned will likely have a clearer idea of what it's all about as a result of the controversy.

Resolution of Council of Lithuanian Societies

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. FALLON. Mr. Speaker, on behalf of my many American Lithuanian friends, I include a resolution passed on the occasion of the banquet held under the auspices of the Council of Lithuanian Societies in commemoration of the Thirty-second Anniversary of the Declaration of Independence by the people of Lithuania, held at the Lithuanian Hall on the sixteenth day of February 1950, in Baltimore, Md.:

"Whereas by overwhelming military forces Soviet Russia occupied Lithuania in 1940 and now arbitrarily deprives Lithuania, Latvia, and Estonia of their independent political life; and

"Whereas since the said occupation of Lithuania, the Union of Soviet Socialist Republics pursues a ruthless policy of planned liquidation, deportation, and dispersion of the Lithuanian people in order to destroy the Lithuanian national entity, and

"Whereas the crime of genocide, which the Union of Soviet Socialist Republics is perpetrating upon the defenseless Lithuanian nation violates all principles of human rights and has been outlawed by the convention of the United Nations General Assembly; and

"Whereas the afore-stated genocide pact will be presented for action before the United States Senate: Therefore be it

"*Resolved*, That our representatives at the United Nations request that steps be taken by the General Assembly to impel the withdrawal of all Russian organizations from Lithuania; and be it further

"*Resolved*, That the United States Government enter into no peace settlement without the restoration of the freedom and independence of Lithuania and similar nations; and be it further

"*Resolved*, That we urge our esteemed members of the United States Senate to ratify the genocide convention."

The foregoing resolutions were adopted by unanimous vote at the Thirty-second Anniversary of the Republic of Lithuania Day, under the sponsorship of the Council of Lithuanian Societies held this sixteenth day of February 1950, in the Lithuanian Hall, Baltimore, Md.

ANTHONY J. MICEIKO,
President.
MARTIN RAILA,
Secretary.

Truman and the Press—Once-Humble President Tells Off Reporters at Heated Conference

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. POULSON. Mr. Speaker, under leave to extend my remarks, I include the article by Doris Fleeson, published in the Washington Evening Star of February 17. The article speaks for itself, and would apply to a President of either party after he becomes power hungry:

(By Doris Fleeson)

"Pray for me," the new President of the United States begged Mrs. Eleanor Roosevelt on April 12, 1945.

February 16, 1950, the same President of the United States told the Washington press corps in so many words that the king can do no wrong.

Harry Truman's brush with the press is an amusing story. The President is a very human and transparent man with a touchy temper. Reporters tend to be creative and imaginative, else they would not be reporters, and while they are usually congenial as individuals, they can be hard to handle collectively.

But superseding questions of public interest stem from the unprecedented press conference yesterday where a cocky President baited the press and the press stood its ground.

What is eating the President?

Does the secrecy which is the order of the day regarding paths to peace hide some dreadful revelation that is still to come?

Or it is that power has tended to corrupt the once humble man who closed his first message to Congress April 15, 1945, with a prayer for "an understanding heart * * * for who is able to judge this Thy so great people? I ask only to be a good and faithful servant of my Lord and my people."

NOT BATTLING OWNERS

It is important to the understanding of why Washington asks these questions to realize that President Truman this time was not battling and belittling newspaper owners. Many of them, perhaps a majority of the most important ones, prefer the Republican Party.

President Roosevelt, this being so, skillfully created the illusion of a deathless feud between himself and newspapers in which reporters secretly sided with him but were helpless to interfere. President Truman has retouched this pretty picture along the same lines. At this two hundredth press conference recently he said he liked the conferences and reporters as distinct from their bosses.

But the President first robbed, then sought to bulldoze: (1) His real friends among the rank and file with whom he was more popular than any President since T. R.; (2) by-line writers who can take Harry Truman or leave him alone but who support his aims and keep them in perspective before the public.

What the President did was to break a White House rule by giving an exclusive interview to Arthur Krock, head of the Washington Bureau of the New York Times. Like everything Mr. Krock writes, it was a lucid, beautifully written story, and it explored the state of the President's mind with respect to our present cruel dilemmas.

Mr. Krock concluded it with a bread-and-butter letter in the form of a tribute to the President which is one of the very good notices that the Democratic Party, the Fair Deal or New Deal, or the last two Presidents have got under his signature in years. What Mr. Krock's favorite statesman, Senator BYRD, of Virginia, said when he read it is, unfortunately, not on record.

GREAT JOURNALISTIC FEAT

It was a great journalistic feat and reporters who are not still too speechless with rage are begging Mr. Krock for lessons on how to batter a man so gracefully that he will beg you to accept the Kohinoor diamond.

When the story broke Wednesday irate reporters pounded Charles Ross, the President's press secretary, regarding it. Mr. Ross, who never permits a syllable of news to pass his lips until it has first been printed in the World Almanac, fended them off as best he could. At the same time, puzzled Democratic politicians were asking how come.

At this point versions vary. Some reporters profess to know that Mr. Krock had the idea of synthesizing what he had heard the President say at social gatherings, that Mr. Ross helped fix up the interview, that the President saw Mr. Krock Monday and approved it.

A politician who saw the President is authority for the statement that the President did not authorize the interview as printed, that he had consented to have his views expressed socially printed without direct attribution but that calling it an interview and the Q. and A. form employed were unfair to him.

In any case, the President was spoiling for a fight when the press entered the oval study the next morning.

It is not permitted to quote him directly—it's a White House rule—which is a pity because only the abruptness of the Q. and A. conveys the President's attitude fully.

ALL IN DEAD EARNEST

The scene would have had its comic side for a disinterested observer. But the angry, emotional participants were in dead earnest.

The President had the advantage of respect for the presidency. Mad as they were, the reporters sensed their peril and their voices fairly throbbed with objectivity.

The first to take the gloves off, the President said yes; he had authorized the interview. Then he pitched in.

The reporters, he said, seemed to be in kind of a disgruntled mood. The President is his own free agent, he continued, he will see whom he pleases, when he pleases, and say what he pleases to anybody he pleases, and he is not censored by reporters or anybody else. He said he had tried his best to be polite and courteous but he didn't like the reporters' attitude that morning, so they should just cool off.

Being the aggrieved party, the reporters who are allergic to being lectured, too, paused for breath and one of their elder statesmen, Earl Godwin, radio commentator, sought to pour oil on the troubled waters. Every bureau chief and reporter in Washington considered the story a reflection on them, he said soothingly.

The President replied that it was nothing of the kind. He said he didn't intend for anybody to edit his actions, he was a free agent.

After some skirmishing in which the President again exclaimed that he was a free agent, the question was put whether or not interviews would now go by favor with the no-interview rule discarded.

WILL DO AS HE PLEASES

The President replied that there was a custom and that they would continue that custom and that he would do as he pleased in regard to interviews.

Asked if this somewhat contradictory statement were his answer, he said it was. He added impatiently that he would like to answer some questions that had a bearing on the present situation.

"Some of us think our business is very important, sir," a reporter said.

The President replied that sometimes he was not so sure.

A really ominous pause ensued. Some reporters weighed giving the signal for the end of a press interview—"Thank you, Mr. President." How many then would have walked out is a question. Probably the President would have retaliated by ending the press conferences for good.

But other questioning began, none of it very fruitful.

The President remains the President. He has lost personal ground, however, that he cannot regain.

PREVIOUS EXCLUSIVE RECALLED

Many people are convinced he means to run again. The operations of his temperament are such that incidents like these will make him want to do just that. It is probable, for example, that he really didn't intend to put the rest of the press in the hole, exactly as he told his political visitors, but that when he got pounded he could not refrain from telling them where to go. That is Mr. Truman.

Mr. Krock also got an exclusive interview with President Roosevelt on the Supreme Court packing plan. Mr. Roosevelt always claimed he was betrayed by Mr. Krock; nobody who knew him well took that seriously. Mr. Roosevelt thought a New York Times interview would help him, so he connived at it but bruited his alibi about.

Mr. Truman has no such guile in his makeup. He probably did not realize that such a storm would ensue or that his pals would turn on him. And Mr. Krock is a very plausible reporter. If this is the situation, Mr. Ross is the one to blame.

It is probably good for the Washington reporters to have "put not your trust in princes" driven home to them again. In this city reporters have social standing, they are sought after and catered to. Many Democrats now in power are singularly beguiling people. But reporters need to write on their hearts Lord Acton's dictum, "Power tends to corrupt and absolute power corrupts absolutely."

Use of Rural Electrification Funds

EXTENSION OF REMARKS

OF

HON. BOYD TACKETT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Texarkana Gazette for January 26, 1950:

TACKETT ON GUARD

Congressmen these days must be eternally alert to prevent an ever-expanding bureaucracy from usurping the powers of Congress and pushing forward projects which not only have not been approved by the Congress but have been disapproved by that body.

A case in point is the program dreamed up by the Southwestern Power Administration to use rural electrification funds to build a $4,825,000 steam-generating plant and $4,740,000 to build transmission lines.

Congressman BOYD TACKETT of the Fourth Arkansas Congressional District caught on to the scheme in short order and is doing everything in his power to block it.

TACKETT charged that the arrangement was a scheme to gobble up electric coooperatives and eventually to federalize electric power. In doing so, he said, the SPA has, in effect, gone deliberately contrary to a refusal by Congress to give it such funds.

Congressman TACKETT deserves the commendation of his constituents for bringing this matter to the attention of the Nation. He has introduced a bill which would effectively curb such schemes.

Jeffersonianism Is South's Need

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. POULSON. Mr. Speaker, being a friend of Mr. Charles Coburn, distinguished actor and movie star, I take pleasure in asking that his article, Jeffersonianism Is South's Need, and also the editorial on this subject by the Savannah Morning News, be inserted in the RECORD. Mr. Coburn, in addition to being a great actor, is also a realist and is deeply concerned about the welfare of his country.

The matter referred to is as follows:

JEFFERSONIANISM IS SOUTH'S NEED

(By Charles Coburn)

We often hear the expression, "I am a Jeffersonian Democrat." Why not say, "I am a Jeffersonian Republican." The original name of Jefferson's Party was the Republican Party. And, according to the Encyclopedia Britannica, "the day of its birth has been definitely fixed as May 13, 1792, that being the date of a letter from Jefferson to Washington in which is made the first authoritative claim of a name for the party of which Jefferson had become the recognized head. Actually, the seeds were sown in the Constitutional Convention of 1787 when the first battles were fought between those who wanted a strong centralized Federal Government, and those who wanted the least possible Federal Government consistent with national security. In the debates of that convention can be located the democratic germ plasm, the ultimate growth of which, under Jefferson's genius, was the establishment of a party whose theory aimed at direct popular control over the Government; which championed the rights of the masses and was really democratic in theory and in fact; which was based on the fundamental belief that the people are capable of governing themselves * * * equal rights for all, special privilege for none, and stood mili-

tantly for religious liberty, free speech, and a free press."

Later Jefferson's party became known as the Republican-Democrats, and it wasn't until after Andrew Jackson's election in 1827 that the party name really changed from Republican to Democratic.

Therefore, it would seem to me that an intelligent political point of view would be one that is influenced only by the principles of a party, regardless of its name.

Thus we find that Jefferson's Republican principles grew out of the anti-Fascist principles, and the principles of the original Democratic Party grew out of the Jeffersonian Republican Party. So, while the principles remained the same, the name of the party changed three times. Those principles were strongly for States' rights, and for a government to serve the people and to protect them in the pursuit of happiness which included the principles of free enterprise, free speech, free press, and freedom of religion.

The Republican Party of today embraces all of the foregoing political principles of Jefferson. Now let us look at the picture from the other side. The present Democratic Party, after the election of Franklin D. Roosevelt, and now, of Harry S. Truman, has completely abandoned the democratic principles of Jefferson, through the centralization of governmental power in Washington—by gradually robbing the individual States of local self-government; by impoverishing the individual citizen through abusive use of the power to tax; by a fantastic increase in the number of Government employees; by unnecessarily spending more and more money for the purpose of drawing more and more votes to its political banner; by shackling our system of free enterprise; and strongly advocating the principles of socialism under the alluring titles of "welfare state," "planned economy," "socialized medicine," and "security for all."

If this Government continues at its present rate of taxation and spending, in a very short while the United States will be in a worse position economically than is England today, for in a helpless world we will have no one to help us, and that is exactly what Stalin wants.

If you believe in the political principles of Thomas Jefferson, but because of a prejudice against the name "Republican" you vote to keep the present Democratic administration in power, then you are subscribing to principles contrary to Jefferson's; you are a traitor to your own political belief; and you are as guilty of establishing a dictatorship as if you believed in a dictatorship.

A SOUTHERNER SPEAKS OUT

In his article on this page today entitled "Jeffersonianism Is the South's Need," Charles Coburn, the distinguished actor, advances some thoughts regarding the Republican Party as differentiated from the New Deal Party which the Morning News believes it would be well for all voters in this region to consider seriously and carefully.

Mr. Coburn, an internationally known figure in the movie and stage world, is a native of Macon, Ga., and spent his boyhood and youth in Savannah. Starting as an usher in the old Savannah Theater he has risen to fame in the amusement world and is considered one of America's outstanding actors. Throughout his career he has been an ardent supporter of the finest traditions of the Old and the New South. He has adhered to the customs and manners of this region and has been a loyal adherent of the principles for which the hosts of Lee and Jackson fought during the fateful days of 1861 and 1865.

He has been one who views the political scene in the South realistically. He believes in the two-party system as being the only means by which the States of this region can ever hope to establish their rightful place in the national political sun. He is a conservative who recognizes the solemn truth that the Government cannot continue its wild orgy of spending beyond its income without running into disaster.

His article on this page today sketches the evolution of the Democratic Party as Mr. Jefferson conceived it, first as the Republican-Democratic Party and then as the Democratic Party. Mr. Coburn emphasizes the historical truth that Mr. Jefferson's Republican principles grew out of the anti-Federalist principles and that the principles of the original Democratic Party grew cut of the Jeffersonian-Republican Party. "Those principles," he points out, "were strongly for States' rights and for a government to serve the people and to protect them in the pursuit of happiness which included the principles of free enterprise, free speech, free press, and freedom of religion."

The Morning News believes it is important for our leaders to consider what this distinguished son of the South has to say, because we believe he puts a finger on the real truth as to what southerners should do in the future if they wish to vote intelligently in national elections. Our men and women for too many years have been disposed to follow blindly the idea that because their fathers and grandfathers supported the so-called Democratic Party they should support what today is the New Deal party.

The Roosevelt New Deal and the Truman Fair Deal, as Mr. Coburn convincingly points out, have completely abandoned the democratic principles of Jefferson through the centralization of governmental power in Washington. To which he adds that these two regimes have robbed the individual States of local government, brought about a fantastic increase of the Government employees, abused the power to tax, and challenged our system of free enterprise.

Mr. Coburn thus bespeaks the argument that The Morning News, for many months, has advanced that southerners should cease their ill-advised loyalty to the New Deal and Fair Deal and return to the kind of republicanism and democracy for which Thomas Jefferson stood. The challenge is obvious. It is summed up in Mr. Coburn's stern view that if this Government continues its present rate of taxation and spending, in a very short while the United States will be in a worse position economically than is England today. For, in a helpless world we will have no one to help us, and that is exactly what Stalin wants.

The actor's arguments, in the opinion of this newspaper, are sound and convincing and, therefore, are among the most challenging we have seen for a long time. It should be remembered that they come, not from a citizen of the North who knows nothing about the traditions, customs, and manners of the South, but from a man who was born and bred here, one who loves the South and all it has stood for in the past, one who is as anxious as any southerner alive to see this section become an important political segment of these United States of America.

Taxpayers Carry Bogus GI Schools

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from New Orleans States of February 15, 1950:

TAXPAYERS CARRY BOGUS GI SCHOOLS

Probably hundreds of thousands of GI's, possibly several millions of them, dipped into the education and job-training program without any appreciable benefit to themselves outside of the money collected, but with tremendous cost to taxpayers. Abuses of the Bill of Rights benefits have been enormous because Congress in drafting the legislation left the doors wide open for slick promoters to organize weird schemes having the color of legality but little else.

The large-scale hatching of gyp schools to milk the Government and bilk the vets was described in a series of articles printed in this newspaper several weeks ago. They were written by Benjamin Fine, education editor of the New York Times. The majority of the schools was asserted to have been organized to reap the fat fees Uncle Sam paid, in good faith, to school and train his fighting men. Irregularities and inadequacies in 1,237 of these institutions were reported to the Veterans' Administration.

President Truman now presents a catalog of abuses to Congress and asks remedial action. The vocational and trade schools having real merit and offering sound instruction and training are not to be confused with the gyps that are clearly substandard and offer merely makeshift training. The VA admits that enough poor-quality training is in evidence to warrant serious concern.

The annual cost of GI education and job training is still running about $2,500,000,000 nearly 5 years after the end of the war. Huge gobs of this money are wasted. Representative TABER says a billion could be lapped off the annual outlay without harm to a sound GI program. Here is a compelling invitation for Congress to get economy-minded.

Farm-Support Program

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. POULSON. Mr. Speaker, I am asking permission to insert in the RECORD a letter which I consider to be a fine analysis of the farm problem, especially as it looks to us who are from the city. Mr. Blank, as you will note in the letter, has had considerable experience along this line. I certainly concur in his sentiments.

The letter follows:

MARTIN H. BLANK & ASSOCIATES,
Los Angeles, Calif., February 2, 1950.

Congressman NORRIS POULSON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN POULSON: My purpose in writing to you is to convey my thoughts in regard to farm-support programs, not only as a taxpayer and consumer but as an experienced agricultural economist. I am not only experienced in paying taxes for farm-support programs, paying food bills for six members of our household, but I have made a successful living from services rendered to clients in the marketing of agricultural products over the past 17 years. Many years ago, I worked in Washington as a junior economic expert for the Federal Farm Board. Therefore, I feel properly qualified to discuss the matter of legislation covering farm-support programs.

I have no quarrel with the basic concept of Government supports and assistance to our farmers and to our agricultural industries. I realize that in a great democracy, such as our own, a free play of economic forces can prove disastrous to our farmers and undermine the basic stability of our country. I further recognize we were obligated to our farmers to assist them in adjusting from peak war-production levels. However, we have already given this assistance and discharged this obligation. What is disturbing to me is the fact that our farm-support legislation is rapidly veering away from the original point of justification and of economic soundness. Too often, it appears, support levels for various agricultural commodities are established in response to the pressure of groups only interested in getting a larger share of the Government's purse.

In considering the basis for aiding agriculture, we seem to have lost sight of the fact that farming is a mode of living, as well as a means of livelihood. The life of a farmer has always had certain advantages to offset its disadvantages, compared to working and living in a city. We have now reached a point where we consider farming purely on a dollars-and-cents basis, in comparison with the income received from industrial enterprises.

Agricultural production has always responded to prices, except when hindered by such uncontrollable factors as the weather. It is difficult to accept as necessary the high support level of prices being established for agricultural products, in view of the output of agricultural commodities during the last few years. On the basis of Government support prices, much new agricultural land has been developed, and production has been increased for only one reason—the operations have been highly profitable on the basis of the returns received with the aid of Government supports.

As a taxpayer, I do not believe it is my obligation to help keep millions of individual farmers in a highly profitable position. I do believe it is my obligation to help prevent disastrous conditions from arising among our farmers. I am now convinced the farm-support legislation, generally, has been carried to a point where my Government is obligating me to provide a level of profits for one group of our population, beyond anything warranted by sound democratic procedure.

I have often wondered how long taxpayers can be expected to support the production of cotton in amounts so far in excess of the quantity which can be marketed domestically and in foreign countries on any reasonable price basis. Is it sound, in a democracy, to take the position that, because some citizens choose to continually produce a certain commodity, or engage in a certain enterprise beyond the needs of the country, the taxpayers should be obligated to provide enough income to absorb the production from such citizens? I can only come to the conclusion that any programs that thrust such an obligation upon the taxpayer will eventually bring dissension and ruin to our country.

I have mentioned cotton, specifically, in my previous remarks. However, my conclusions apply to any of our agricultural industries which are continuously producing commodities far in excess of the quantities that can be marketed soundly in domestic and foreign channels. An examination of the statistical data on stocks, production, consumption, and export requirements of a large number of our agricultural products will quickly show that Government-support programs have been a stimulus to the building up of surpluses far in excess of normal reserve requirement.

In conclusion, I urge you to keep the following factors in mind in your deliberations on farm-support legislation:

1. The use of public funds to assist any group of citizens should be limited to amounts necessary to maintain stability.

2. In judging necessary support levels, consideration should be given to recent records of production in relation to farmers' returns.

3. Support programs which result in the necessity of the Government constantly making hand-outs to agriculture because of excessive production cannot be justified.

4. Support programs increase the consumer's cost of living both in direct taxes and in the higher levels paid for food commodities.

5. Unduly high-support prices will, eventually harm all agriculture by creating disastrous surpluses and maintaining marginal production, while, at the same time, curtailing consumption.

Thank you for any consideration you may choose to give to the opinions and remarks expressed above.

Very truly yours,

MARTIN H. BLANK.

Volunteer Fire Companies

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. BOLTON of Maryland. Mr. Speaker, I recently introduced two bills for the relief of the volunteer fire companies throughout the United States.

H. R. 6954 would exempt all fire fighting equipment purchased by volunteer fire companies from the 5-percent excise tax. The other bill, H. R. 6955, provides that contributions and gifts to volunteer fire companies shall be deductible for income-tax purposes.

Everyone knows that these splendid groups of men are organized in the communities where they cannot afford a paid fire-fighting force. They are ready day or night, in fair weather or foul, to speed to the homes of their neighbors to fight fires. They are dependent upon contributions for the barest necessities in the way of fire-fighting equipment. They are the unsung heroes of thousands of rural counties throughout the United States today. It seems to me little enough for us to exempt from excise tax equipment they have such a difficult time buying, and I believe that if the average citizen could deduct from his or her income tax any contributions made to volunteer fire companies, these men would not have such a difficult time getting the equipment they need, and our volunteer companies would be able to purchase more adequate equipment.

I should like to say that I am very proud of the volunteer fire companies in my district. They own the most modern type of fire-fighting equipment and the personnel is composed of the most outstanding citizens in the community in which they are located. I know of no group who are more worthy of our help, a group of men who are willing to serve any time, and some even give their lives, to protect the property of their neighbors. Some of these companies even furnish free ambulance service in the communities in which they serve. I bespeak the approval of the Ways and Means Committee on H. R. 6954 and H. R. 6955 and will appreciate the support of the House membership when these bills are presented to the House for a vote, which I hope may be in the near future.

Waltham Watch Co.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an editorial appearing in the Boston Post of February 4, 1950, and one appearing in the Boston Traveler of the same date relating to the action of the RFC in failing to take action to assure the continuance of the Waltham Watch Co., of Waltham, Mass.

Of the $6,000,000 heretofore advanced to this company by the RFC, $2,000,000 was set aside or "frozen" to buy new machinery and equipment over a period of from 3 to 4 years. At the most, $500,000, and probably considerably less could be used this year to purchase new machinery and equipment. The final proposition made to the members of the RFC board was that $1,500,000 of this $2,000,000 be released so that it could be used as new working capital. If adopted, this would not have increased the original overall commitment of the RFC.

This suggestion was made at a time when the reorganized company was in the best shape possible to operate with fine prospects of success.

I think it most unfortunate that the members of the RFC board rejected this proposition.

We must bear in mind that we only have in the United States three American watch companies, of which Waltham Watch is one.

We must bear also in mind that in case of emergency or war—particularly as shown by World War II—that an American watch industry is a very important part of our national defense.

It is my opinion every effort should be made to keep this company a going concern. It is vitally important for many reasons, and in particular from the angle of national defense.

I hope the Reconstruction Finance Corporation will reconsider its previous action and take steps to extend reasonable and justifiable loan assistance to this company.

It seems to me that the RFC has the responsibility, if necessary, to negotiate with any interested person or persons to keep this company and its plant in existence as a part of the already small but very important American watch industry, to keep it in operation by American interests for the benefit of our country in case of another emergency.

If the present law relating to the powers of the RFC does not permit national defense to be considered as a factor in the making of a loan, it is my opinion that the RFC should either propose such legislation or cooperate in its enactment.

Our colleague the gentleman from Massachusetts [Mr. DONOHUE] has introduced such a bill. It could be the basis of consideration by the RFC and the Committee on Banking and Currency.

In any event, if the important plant of this company—as well as its employees—is to be preserved, action of an effective nature must be taken immediately.

The officials of the RFC have the burden of preserving this company in the interest of our national defense. Every effort should be made by them to ascertain from the Department of Defense and from the Munitions Board the value of this company as a part of our national defense, the Munitions Board having already recognized its importance, and between them some kind of proper action should be taken to assure the continuance of this company. If this is done the future prospects of this company will be good. It can, with the use of sound judgment on the part of our officials, and with good management, be made a proper risk for the loan already made by the RFC, and for the release of the $1,500,000 of the $2,000,000 of the original loan that was frozen for the purchase of new machinery and equipment.

The matter referred to follows:

[From the Boston Post of February 4, 1950]

THE WATCH COMPANY CLOSING

The news that the Waltham Watch Co. closed its doors yesterday afternoon, perhaps for all time, comes as a numbing shock, not only to the city in which it is located, but to all New England. Certainly it is the worst industrial set-back this section has had to take in a decade or more, not only in the number of employees that must lose jobs—well over the 1,000 mark—but in the prestige of a plant that had become world famed for its product.

The very suddenness of the closing cannot help but leave the impression that a bad blunder has been committed in allowing this fine 100-year-old concern to go by the boards so casually. There had been no inkling of the action, except for a stray rumor or two within the plant, yet yesterday workers were told not to return, the management moved to put the company into bankruptcy, and the Reconstruction Finance Corporation took over physical possession, to dispose of the assets as it sees fit.

Not a great amount of money was involved, as Government loans go. The refusal of the RFC to allow $1,500,000 of the last $2,000,000 of a loan already approved to be used by the company as working capital was the final straw that precipitated the shut-down. This money, in the original $6,000,000 loan, had been earmarked for new machinery. It seems hard to believe that the company, regarded as meriting a loan of $6,000,000 a few months ago, had its outlook so drastically altered since then that it now must be cut off needing only a quarter of that sum.

For the fact remains that the company had been doing well of late. Its new 1950 line of watches had been nicely received by the trade. Orders had been coming in at a good pace and the short-handed personnel had found it hard keeping up with the work at hand. In view of these facts, this is a tragic time indeed to have the roof fall in on such a promising start.

Aside from the cold profit-and-loss angle, it is a crime to deny a helping hand at this critical period to one of the last firms in the Nation employing precision workers so badly needed in our defense set-up. Why, you can't set off an A-bomb or an H-bomb unless you have precision workers to make fuses, as one of the former trustees of the company has so aptly pointed out. It doesn't make sense to give the boot to some of the most experienced and best precision men in the country at just the moment we are embarking on our great H-bomb project.

These workers showed their value during the war, when their services were badly needed. Now they find themselves out of jobs because the Government allows Swiss imports to flood our watch market and harms loyal citizens who have proved their worth and patriotism. This dosn't look much like gratitude.

We appreciate the fact that our representatives in Congress and influential State officials did all they could to prevent this closing. Their efforts were in vain, yet they must not give up now, as long as there is a possibility that the RFC may reconsider its decision. When we look at all the millions it has thrown away needlessly, on loans that have no vital bearing on our defense, as the precision trade has, we find it hard to believe that it will continue its adamant attitude when presented the full facts in the right light.

[From the Boston Traveler of February 4, 1950]

THE WALTHAM DEBACLE

From beginning to end, the sorry story of the Waltham failure should serve as a glaring object lesson on how not to manage something.

Waltham Watch had a proud old tradition. But through the years it did not modernize, nor did it maintain the quality of its product. The inevitable result was that Waltham lost its markets. When that happens only two courses are—or should be—possible. One is to fold up; the other is to reorganize thoroughly both as to management and machinery.

Unfortunately a third, faltering middle course was followed in Waltham Watch. The Reconstruction Finance Corporation was called in last fall and put up a loan which hauled Waltham off the rocks but didn't provide enough to really float it. The money was used to pay old debts and set the ship in order, but there wasn't enough to put in a new engine and speed it up. Without a real engineering overhaul, Waltham just couldn't get back in the race. So although we really can't blame the RFC this time for not putting the money up, we can blame it for doing a half job last fall.

And we have no patience whatever for the brutal abruptness with which notice of this second failure was sprung upon the world. Almost overnight the 1,200 workers were given terminal notice. In this day and age that seems a shockingly callous procedure. Why, for instance, couldn't the RFC have bestirred itself to see whether another business group would take over the factory space, or whether some other product could have been made profitably, using part of the equipment available? If Waltham failure was inevitable, wouldn't it have been possible nonetheless to carry on for another 30 or 60 days until terminal notices could have been accompanied by news of a new project?

There are two other suggestions which seem to us worth considering. Should not liquidating companies when financially able to do so be required to pay a high terminal wage to enable employees to look around without being immediately forced on relief? Secondly, why shouldn't State and Federal employment agencies expand training facilities so that workers who suddenly found themselves stranded might have a means of adapting themselves to a new trade? Both of those proposals would cushion the rank-and-filer against a disaster which was certainly none of his making.

We are profoundly sorry for all concerned with the Waltham fiasco. We only hope that something can be done to salvage the working force before serious economic depression assails the city of Waltham.

Fred Othman's Column

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. POTTER. Mr. Speaker, last week Mr. Fred Othman, who in my mind is one of the most clever columnists in Washington, clearly demonstrated in his column titled "Don't Jump Yet, James!" how Government agencies can work at cross purposes with John Q. Public squeezed in the middle.

Mr. Othman's article of February 16, which appeared in the Washington Daily News, is quoted below:

DON'T JUMP YET, JAMES!

(By Fred Othman)

The man with 1950's toughest problem so far seems to be James B. Bender, the Somerset, Pa., shoe manufacturer, whose Government insists that he raise his own salary—and which says also that if he does he's going to be in serious trouble.

This sorry tale comes from Bender himself. His facts I have checked with appropriate governmental sources, which agree, red-eared, that he is in trouble. Pending passage of still another law by Congress to get him out of the soup, they agree (off the record, of course) that his best bet simply is to drown himself.

In the hope that he does not find such a drastic solution necessary and that maybe somewhere there is a Federal lawyer who can find him a way out alive, I'm reporting his predicament here in full.

Bender, his father, brother, four uncles and 57 stockholders organized the Bender Shoe Co., in July 1948, to manufacture good, solid shoes for small boys. The elder Bender became president and treasurer; his son, James, became secretary and superintendent.

They decided that until such time as the corporation got into the black they, as the only salaried officers, would pay themselves $60 a week apiece. But they needed more working capital.

So they applied to the Reconstruction Finance Corporation for a $40,000 5-year loan. This was granted. It tied up the company's funds, the personal assets of father and son, and froze their salaries until either the firm shows a profit or pays off the entire loan.

This, young Bender reported regretfully, is unlikely to be soon. But everybody was happy making shoes. Until day before yesterday, that is.

At 10 o'clock that fateful morning a brisk young man dropped into the Bender Shoe Co., identified himself as a representative of the Labor Department and wanted to look over the pay roll to see whether it adhered to the wages and hours bill. He noticed that the superintendent earned only $60 a week.

"You've got to pay him $75," he said.

"He's me," replied young Bender, sounding a little flustered.

"Well, he's responsible for purchasing and * * *."

"Me," interrupted Bender.

"And that makes him an administrative employee," the man said.

Bender learned that as a company officer he was required to pay all administrative employees; namely, himself, a minimum of $75 a week. Ah, well, if he had to, he had to.

"Oh, no, you don't," said the RFC. "You raise your own salary and you violate the loan agreement; under the law we will be forced to foreclose."

"Hm-m-m-m," Bender said to himself. He drew up a list of questions which he wanted answered: "(1) Are the consequences of defying the RFC more serious than disregarding orders from the Labor Department? (2) How do I go about suing myself for back wages? (3) What is the proper method of running a factory without making purchases? (4) Are the marines giving out billets to Reserve officers for immediate active duty in Pago Pago?"

There you are, lawgivers. You answer Shoemaker Bender. And kindly don't tell him to go jump.

Lincoln Was a Republican

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered at a Lincoln Day banquet on February 13, 1950, at Defiance, Ohio:

Mr. Chairman, I have had the good fortune of passing through your beautiful city several times, and I also have enjoyed the privilege of knowing a number of the residents of your county, and I feel proud of the opportunity to meet with you today.

When your Congressman, Mr. CLEVENGER, invited me to come to visit with you, I felt that I could not refuse to come because he has, ever since his coming to Washington been one of the stalwart Republican Members in the Ohio delegation and has never failed to cooperate with me and others in any program that we had for the advancement of our party and of the country generally.

In my somewhat extended service in Congress, I have had occasion to observe the work of many Congressmen. I have often thought that the best Congressman for his district and for the country is not the one who talks the most or the loudest. I think that the best characteristic of a good Congressman is that he should be a man of good judgment. A man may be ever so brilliant and highly educated but if he is flighty and uncertain in his judgments he would not be well qualified to consider the very difficult and important matters which confront the Congress nearly every day.

To be successful, a Congressman must be a man of good character. He must be able to say "yes," and "no," and to stand by his decisions. A man of unstable character will soon be discovered and his colleagues will treat him accordingly. And again a man to be a good Congressman must be industrious. If he is not industrious he will never get his work done. The work of a Congressman is oftentimes very exacting and demands upon him are great. Of course, if he is a man of poor judgment and poor character, people will not depend upon him and consequently will not communicate with him very frequently. But, on the other hand if he has the qualifications of a good Congressman the people of his district will have confidence in him and will communicate with him frequently with the result that his mail will be heavy and his tasks will be numerous.

And again a Congressman should represent the interests of his district. Sometimes we hear it said that a Congressman looks after his own district and does not have the interest of the country at heart. Under our theory of Government a Congressman is expected to represent the interests of his district. If he comes from a cotton district he should look after the best interests of the cotton industry. If he comes from a big city district he should look after the interests of his constituents. If he should come from an agricultural district, such as your district, he should know the problems of agriculture and the problems of rural life and should stand up for the interests of rural people.

When Mr. CLEVENGER first went to Congress I was the Ohio Representative of the Committee on Committees which had to do with the placing of the Members on the various committees. It was not long until Mr. CLEVENGER was placed on the Agriculture Committee which is one of the top committees of Congress. Agriculture is the biggest industry in the country. More people are employed in tilling the soil and making their living from the soil than are employed in any other industry. Mr. CLEVENGER conducted his work on the Agriculture Committee in such a way as to make him a recognized leader on questions of agriculture. The Agriculture Committee is the food committee of Congress. Frequently alert members of this committee have done much for the relief of the people by demanding strict adherence to the law. This was demonstrated conspicuously by Mr. CLEVENGER and Mr. ANDERSEN when they forced the removal of sugar rationing with the result that the people immediately got sufficient sugar.

A Congressman cannot be well posted on all subjects. He learns the subjects that have been assigned to him and then he seeks the opinion of other Congressmen who are recognized authorities on different subjects. Mr. CLEVENGER'S work on the Agriculture Committee convinced the leaders in Congress that he was a man who could be depended upon and he was promoted to a place on the Committee on Appropriations. His Scotch blood had manifested itself early in that he always voted against extravagance and it was thought that he would be a safe man to look after the spending of the finances of the Government. He has been a member of the Committee on Appropriations now for several years and his work has been very satisfactory. For the last 17 years I have been a member of the Ways and Means Committee of the House of Representatives.

As you know this committee has the responsibility of raising the money to meet the expenses of government. This is not an easy task especially in these days of extravagance. Before Mr. Roosevelt came into power we were spending only about $6,000,000,000 a year to run the Government. Under the management of Roosevelt and Truman, $6,000,000,000 will not pay the interest on the national debt for a year. I hope to have more to say about this matter later.

All over the land these days, we Republicans are celebrating Lincoln's birthday. We have a perfect right to do this because he and Washington are generally considered the two greatest Americans of all time. And again we Republicans are entitled to carry on these celebrations because Abraham Lincoln in 1856 laid the foundations of the Republican Party. When the Whig Party went out of existence, Lincoln and those who believed as he did established a new party. This party was truly and surely established for the preservation of liberty and freedom both personally and nationally. In those days the motto was "liberty and union now and forever, one and inseparable." Thousands of Lincoln Day banquets are being carried on all over the United States. This great movement for this year was started in Washington last Monday. By way of encouragement I want to say to you that I have seen and participated in many political rallies, but the rally in Washington last Monday night was the most enthusiastic and most promising that I have ever seen. It was really beyond description. From the standpoint of crowds we had secured the largest auditorium in Washington which seats about 12,000 people. Every seat was taken and that part of the auditorium given over to parades was filled by three or four thousand people who sat on the floor and three or four thousand people were turned away. That audience was made up altogether of grown people and there was no foolishness about it in any way. Those who took part in the program were outstanding men and women including Senators, Congressmen, governors, and the highest officials in the Republican ranks.

Every shade of Republicanism was given recognition. Every section of the country was recognized; all races and creeds were recognized and the meeting was a gigantic success in every respect. It was spontaneous, and no pressuring or duress was applied by anyone to get a crowd.

Washington has long been known as a very poor place to have enthusiastic political meetings because it is the seat of the Government and political strife naturally is more tense here than anywhere else, but in spite of this, the Republicans put on the most successful rally that was ever put on in Washington and they did this for only $1 a ticket. I think this will shame those who have been putting on the $100 dinners. It is a well-known fact that many persons who attend these $100 banquets consider that that is the price they are paying for the Government job which they hold, or for their opportunity to claim that they are on friendly terms with the White House and with those who have favors to dispense.

H. G. Wells, one of the world's greatest historians, on one occasion named the six men whom he thought were the world's greatest. He named Jesus as the greatest, and in this list he included the name of Lincoln. His reason for choosing Lincoln was that he thought Lincoln typified the great movement for liberty, freedom, and justice which the Pilgrim fathers and their followers had established on this North American Continent. He considered that America was the symbol of human liberty and that Lincoln was its greatest expositor.

It was Lincoln who said in his Gettysburg Address that we were then engaged in a great conflict which would determine whether our Nation should continue or should perish from the earth. In other words Lincoln saved America. All over the world where people strive for human freedom they revere and respect the name of Lincoln. I once heard a great world traveler say that he had visited the homes of humble people in all parts of the world and in many, many places he had seen the picture of Lincoln, which of course indicated that human liberty was their great hope.

Lincoln was not only a great person but his writings were very extensive and are widely read in all parts of the world today. Who will ever forget his "with malice toward none; with charity for all" and his timely words that we cannot live "half slave and half free."

How applicable are his words in these days of political and economic unrest. He said, "You cannot help men permanently by doing for them what they could and should do for themselves. You cannot bring about prosperity by discouraging thrift; you can-

not strengthen the weak by weakening the strong; you cannot help strong men by tearing down big men; you cannot help the wage earner by pulling down the wage payer; you cannot further the brotherhood of man by encouraging class hatred; you cannot help the poor by destroying the rich; you cannot establish sound security on borrowed money; you cannot keep out of trouble by spending more than you earn."

Lincoln was seldom in error in his conclusions. His prophecies generally came true. In only one instance in his writings have I found that he missed his guess. Progress in the manufacturing of destructive implements of warfare has come faster than he had been able to foresee. He was not as imaginative as his contemporary Alfred Tennyson was when he wrote—

"Heard the Heavens filled with shouting
And there rained a ghastly dew
From the Nations' airy navies,
Grappling in the central blue."

The quotation with reference to whom Lincoln missed his guess was as follows:

"At what point shall we expect the approach of danger. By what means shall we fortify against it. Shall we expect some trans-Atlantic military giant to step the ocean and crush us at a blow. Never. All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth—our own excepted—in their military chest, with a Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years."

How glad we would be if the conditions at present were what Lincoln thought they would be. Let us hope that we will be able by peace agreement to prevent a test of this prophecy made by Lincoln.

Now, my friends, no Republican speech would be complete today without some reference being made to the conditions in Washington. I am afraid that nobody can tell anybody else just what is going on except that in a general way the conditions in Washington are terribly confused.

I think it would be a fair statement to say that the chaotic conditions in Washington are the result of the maladministration of Franklin D. Roosevelt. I think that when the impartial historians write the history of America they will be forced to say that Mr. Roosevelt is directly responsible for the plight in which we find ourselves. With perfidy and deceit he sowed the seeds of distrust and destruction and we are now reaping the harvest. Woodrow Wilson refused to recognize Russia because she was a Communist state; Mr. Harding also refused. Mr. Coolidge did the same thing. Mr. Hoover also took the same position. It was Franklin D. Roosevelt, the so-called great humanitarian, who loved most all of the rest of the world apparently better than he did America, who gave recognition to the unchristian, unholy, arrogant, tyrannical, and in many instances inhuman Russia. It was he who opened the doors to the crooks, commies, and criminals of all the world to come to this country, strictly in violation of our laws and distinctly contrary to every principle of government and decency that typifies America. In order to guarantee that this class of people would have free movement in our country, he had as his right hand advisers such men as Alger Hiss and many others that I could name. In addition to flooding our country with the scum of the earth he elevated to high positions many people, both men and women, who could not pass the ordinary test of Americanism. He permitted the Government itself, especially the State Department, to be honeycombed with men whom he must have known were anti-American in their philosophies and in their sympathies. Many of these are holding high positions in the Government today. A sample of the inefficiency of the Roosevelt and Truman administrations is shown by the recent arrest of this man Fuchs whose very countenance would indicate his instability of character. It is a terrific travesty on justice to have permitted this man with such a background of communistic associations to roam at will in the factories where we were carrying on scientific research work which was supposed to be of the highest military value and to be secret from everybody.

Mr. Truman with his Pendergast training has never been courageous enough to clean out these nests of slimy spies and traitors, but on the other hand, a few months ago dismissed the whole subject with a wave of his hand and with the statement that it was all simply a "red herring." He was either very inept and ignorant for not knowing what was going on or else he purposely held back the facts which are now shocking the whole civilized world. The Hiss case and the Fuchs case have shown to the world that the United States has the poorest defense against espionage and foreign intrigue of any country in the world. A year ago we boasted proudly that we had the atom bomb and that nobdy could take it away from us. We used it as a balance of power on many occasions. At last we woke up and found that Russia, which we look upon as benighted nation of barbarians, had our secret. Only a month ago we Americans heard of the hydrogen bomb which is a thousand times more destructive than the atom bomb. Today we hear that Russia also has this secret.

I should like to give you an illustration of Mr. Roosevelt's inclinations to admit these foreigners. It developed when he was trying to have passed a bill designated as the fourth-Presidential-powers bill. This was a bill that sought to give to the President the arbitrary power to admit any persons into the United States that he wished. The bill would also give him power to move people now in the country from place to place as he might see fit. I am proud of the fact that it was largely due to my efforts that that bill was defeated in the Ways and Means Committee. In connection with it there is a long story which I will not have time to delineate at this time. Suffice it to say that the fact and the information by which I was able to defeat this terrible proposal was given to me by someone in one of the branches of the Government who did not want to openly oppose the President but whose patriotism was such that he felt it his duty to let me know what the real condition was.

Ladies and gentlemen, I think I should also talk to you briefly about some of the economic conditions in the country. As you know, Mr. Truman has in peacetimes spent more money than all of the rest of the Presidents who served in peacetimes. He ran behind last year $5,500,000,000 and he will run behind again next year at least that much. At no time since Roosevelt came into power has the Government lived within its means except during the 2 years when the Republicans had control of the Eightieth Congress. The President is still demanding an increase in taxes and is still refusing to reduce excise taxes as should be done. He knows that Mr. Roosevelt was able to elect and elect by spending and spending.

He proposes to do the same thing. The country is clamoring for a reduction of excise taxes on many commodities. These taxes were put on as war taxes and should have been taken off a long time ago. If the Republican Party had been elected to power in Congress in 1948 we would have reduced these taxes last year. Mr. Truman has recommended the reduction of a few excise taxes this year because he knows that will be a popular thing to do. He is not in favor of a general reduction because he will not have the money to spend and spend so that his party can elect and elect. How long can we continue to spend $15,000,000 a day more than we take in? How long can we continue to pay $17,000,000 a day for interest on the national debt and still continue to run the debt up at the rate of $15,000,000 a day.

Ladies and gentleman, I say with all of the emphasis at my command that the greatest need in America today is the election of a Republican President.

What is the duty of we Republicans in Ohio? It means more to be a Republican in Ohio than to be a Republican in any other State. Ohio Republicans have more responsibility than Republicans in any other State. Let me prove this to you in a very factual and convincing way. As I have already stated, the Republican Party started with Abraham Lincoln. From Abraham Lincoln down to Franklin D. Roosevelt there were only two Democrat Presidents. These were Grover Cleveland and Woodrow Wilson. During all of that time every President that was elected through the grueling contest of a national convention in that time, came from Ohio except Herbert Hoover. You may think that I am wrong but let me explain, Chester A. Arthur, Theodore Roosevelt, and Calvin Coolidge all came into the Presidency by virtue of their having been Vice Presidents. So I repeat that all of the Presidents elected from Lincoln to Roosevelt who went through the grueling vicissitudes of a national convention for his first election to the Presidency came from Ohio, except Mr. Hoover. Ohio is the mother of Presidents and from all indications old lady Ohio may give birth to another President if we can elect Senator Taft by a big majority next November.

Now my friends in summation, let me say that the country is in a bad way. Just a few days ago I heard two very prominent men discussing how long our country will last. One fixed the date at 15 years and another doubted that we would last that long. I definitely disagree with them both because I firmly believe that we will survive the storm. We must do so and the best way to do this is to strive to elect a Republican Congress in 1950 and a Republican President in 1952 and thereby clean out from the Government all the Reds and pinkos and again put the Nation on a basis of liberty and justice for all.

Prosperity by Lowering Taxes

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following broadcast by Robert Montgomery on excise-tax repeal:

This is about a country that has increased the prosperity of its citizens by an unusual plan that would shock most of our politicians. This country brought prosperity by lowering its taxes.

Some distant, small country? Not at all. This is our friendly, sturdy, next-door neighbor, Canada. A country very much like our own—great farm lands—mines—growing industries.

As they used to say in the Navy, Now hear this.

Since the end of the war, Canada has five times reduced its taxes. By these five reductions Canada has cut its citizen's tax bill almost in half.

While making these sweeping reductions, Canada also balanced her budget.

After the last drastic tax cuts, unemployment in Canada dropped to less than 2 percent. At a time when the jobless in our country, where there has been no tax reductions, rose to triple that percentage.

Sounds like a miracle, doesn't it? But it isn't. It's just proof of what can be done through ability and imagination.

Ability, on the part of Canadian leaders, to realize that the prosperity of a country does not lie in the money taken out of the pockets of its citizens, but in how much money is left in their pockets.

Canadian Finance Minister Douglas Abbott is one economist I can understand.

Taxes, he said, should cause as little harm and irritation as possible. Amen. He said he wanted his people, the taxpayers, to have more money to spend, so that they would be able to buy more of the goods raised by the farmers, made by the manufacturers. Makes a great amount of sense to me.

But stop a minute and recall what another leader said recently about taxes. Just the reverse as I remember it. I quote now from President Truman. He argued:

"Events of the last few years have proved that our economy can grow and prosper * * * at the same time that individuals and businesses are paying taxes high by prewar standards."

But what about our budget? It's not balanced.

What about our deficit spending—to the tune of some five billion?

Is that a prosperous economy?

Canada is putting her money back to work. She's on a mounting spiral of increased national income. Less taxes; more money to spend. More spending; more production.

The more I found out about what our good neighbor is doing the more I wondered if anybody in Washington was thinking along these lines. So I made a few phone calls. I had two particularly interesting conversations.

One was with Senator PAT MCCARRAN, Democrat, from Nevada, chairman of the Senate Judiciary Committee, and a high-ranking member of the Appropriations Committee. I thought you might like to hear what he had to say so we made a recording. Here he is now. Come in, Senator MCCARRAN.

"Well, Mr. Montgomery, I am certainly for any sound program for reducing all taxes, income and excise. Since before World War II, the Federal budget has been pyramiding and the burden on the American taxpayer has been increasing to the point where this burden can no longer be borne. As more services are performed for the people, a greater share of the people's income goes for taxes and they are less able to perform these services for themselves. If the economy is to grow, it must be encouraged, and what better way than to leave the people enough money so they will be able to buy the goods they make.

"The figures you mention, Mr. Montgomery, indicate that the Canadian people have prospered as a result of the sweeping tax-reduction program."

Thank you very much, Senator.

Now, what about those excise-tax cuts we've been hearing about? Cuts already made by Canada. What's Congress going to do about them? Let's hear a word from Representative JOSEPH W. MARTIN, Republican, House minority leader, as recorded during my talk with him. Come in, Congressman MARTIN.

"Bob, I believe Canada is on the right track. The history of previous tax reductions is that every tax cut is followed by an increase in revenues. However, our immediate problem is the elimination of the wartime "discouragement" taxes—the taxes that discourage you from buying, from traveling, from telephoning, and actually take your jobs away. Those taxes were enumerated in the American Weekly articles.

"The wartime taxes should be repealed now. There is a feeling throughout the country that long overdue action to reduce these excessive rates is coming in this session of Congress. Consequently, buyers are adopting a "wait and see" attitude. We must not wait for tax revision 6 months hence."

Thank you. I hope we don't have to wait much longer. President Truman has talked of a trillion-dollar national income by the year 2000. I'll swap my share of the Truman trillions for sound, honest tax cuts tomorrow morning.

A $50,000,000,000 Bubble

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, here we have further evidence that our American foreign policy is the American dollar. We are trying to buy our way all over the world and without appreciable success.

Mr. Henry Hazlitt, writing in Newsweek for February 20, 1950, calls the turn on Senator MCMAHON's proposal of last week. He suggests that it is a wholly absurd proposition and millions of Americans agree. At this point I include a copy of Mr. Hazlitt's article:

FIFTY BILLIONS FOR TRIBUTE?

(By Henry Hazlitt)

Senator BRIEN MCMAHON's proposal that our Government contribute $50,000,000,000 over 5 years for a global Marshall plan is the culmination, the reductio ad absurdum, of the befuddlement on foreign economic policy in which Washington has wandered for the last 5 years.

Senator MCMAHON's proposal is, to put it baldly, a proposal to pay unparalleled tribute. No other word fits. "Tribute" is defined in the dictionary as "a stated sum * * * paid by one sovereign or state to another in acknowledgment of submission or as the price of peace, security, protection, or the like."

When we were small and considered weak, our minister Charles Pinckney, on being told by Talleyrand that a gift to the directory might avert war with France, made his famous reply: "Millions for defense, sir, but not 1 cent for tribute." Yet today Senator MCMAHON, at a time when we are by far the strongest Nation in the world, proposes that we pay up to $50,000,000,000 as the price of Stalin's promise to stop threatening us with atomic or hydrogen bombs.

This mere proposal, by the chairman of the Joint Committee on Atomic Energy, is certain to be taken by the leaders behind the iron curtain as a sign of fear and weakness. The leaders of the iron-curtain countries have already found that they can with impunity plant spies in our midst, blockade us at Berlin, beat or imprison our envoys, and insult and vilify us every day. What further move may they not be encouraged to take by this timorous offer of ransom? Even Secretary Acheson's emphatic rejection cannot fully offset this blow to our prestige.

The McMahon proposal obviously lacks sense. Would we make ourselves safer by pouring billions of our dollars into Russia, by reducing our economic and military strength to increase hers, by intensifying the problems of our free-enterprise system to mitigate the problems of her Communist system? And if for 4 years Stalin has unswervingly refused to call off the atomic-bomb race, even when we were far ahead of him, and even at the risk of the annihilation of millions of Russians and of his own regime, does it make sense to suppose that he will reverse his stand now for a mere monetary bribe?

It is time we asked ourselves frankly, in fact, whether an atom-bomb agreement might not actually be more dangerous than the present known lack of agreement, by binding us and not the leaders of Russia. These are the same leaders who have broken promise after promise, who believe that the end justifies any means, who live by systematic perfidy. The proposals for international inspection of the vast depths of a totalitarian Russia are not realistic. Even if our inspectors finally did catch up with a plant in Russia that had been working on the bomb—after we had poured in our $50,000,000,000 to help finance it—what recourse then?

But the real point of this article is economic. Senator MCMAHON himself calls his proposal a "global Marshall plan," and casually drops point 4 inside it. It is a super-give-away program. It is not only politically preposterous, but it rests on the same fundamentally false economic assumptions as the Marshall plan and point 4. It wrongly assumes that the American capital thrown into such schemes is a net addition to the world's capital. It is in fact a mere diversion of such capital. And it is a diversion, in the main, from productive private enterprises into far less productive collectivist projects.

Such schemes do not encourage private lending abroad; they discourage such lending. They do not speed up recovery and development of world resources; they retard that recovery and development. For as long as foreign countries can get easy money, seized from our taxpayers, out of the United States Government, they will neither give the assurances nor make the economic reforms that they would have to make to attract private investment.

It is time we called a halt to the give-away mania.

Two From St. Louis

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. BOLLING. Mr. Speaker, it gives me real pleasure to include under unanimous consent an editorial from the St. Louis Post-Dispatch of Tuesday, February 14, 1950, which gives well-deserved recognition to two of my distinguished colleagues from Missouri:

TWO FROM ST. LOUIS

A perfect attendance record may not be the supreme test of a Representative's devotion to duty. There are times when he may be of much greater service at a congressional committee meeting than by being on the floor to answer a relatively unimportant roll call.

Still, it was something of an achievement to have been on hand each of the 121 times during the 1949 session that the House of Representatives was asked to vote "yea" or

"nay." Only 16 of the 435 Members managed to achieve this record. And two of the 16 were from St. Louis.

For this, a bow to Representative JOHN B. SULLIVAN and Representative FRANK M. KARSTEN.

Bountiful Future

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Wednesday, January 4), 1950

Mr. WILEY. Mr. President, I am sure that all my colleagues agree that our Nation has a magnificent future provided we take certain actions to maintain this as a land of opportunity. Yes; one of the conditions for achieving an ever higher standard of living for our people is an equitable system of taxation which will encourage rather than penalize private enterprise and will promote the widest possible production and consumption of consumer items.

In this connection, Mr. President, there was carried in Sunday's issue of the American Weekly, the national periodical published by the Hearst newspapers and distributed throughout the Nation among many independent journals also, a very fine article by Mr. David Camelon.

This article analyzes the future of our American people, the prospects for an even more prosperous America in which the infants of today will enjoy even greater blessings some day than we do now.

The article emphasizes the importance of a sound system of taxation, a system for which I personally have fought, for example, by trying to overhaul the obsolete excise tax structure and repeal many nuisance tax burdens. I ask unanimous consent that the text of Mr. Camelon's article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOUNTIFUL FUTURE

(By David Camelon)

"What chance have my babies got?" The nice young mother was worried and confused.

She'd heard calamity howlers say America is through. Its natural resources are exhausted. Opportunity is dead. The courage that made America has vanished—and there is no future.

"I don't really believe it," she said. "But I want so much for my babies—and sometimes I'm scared."

You don't have to be, mother. The calamity howlers are wrong.

The future belongs to your babies—and to you. The coming century is theirs—and it can be the finest, richest century America has ever known. Our country is not exhausted—we are only beginning to realize its possibilities.

You can take the word of such outstanding men as Dr. Harold G. Moulton, president of the Brookings Institution, and one of the world's leading economists, for that.

There are some "ifs," of course. There are some things you'll have to fight against—such things as repressive taxes. But you're a good fighter. Baby's future is in your hands.

First, what is this America you brought your baby into?

It has put more money into the hands of more people than any other country in the world—and it is progressively giving more and more to those the Communists like to call the masses or the little people.

Dr. Moulton gives the facts in his latest book, Controlling Factors in Economic Development, published by the Brookings Institution.

Twenty years ago, only about 10,000,000 families—28 percent of all the families in America—had incomes in the $2,000–$5,000 range. But by 1946, half of all the families in the country—23,000,000—were in this group.

Twenty years ago, the families in the $2,000–$5,000 range got only one-third of the total individual income. But by 1946 more than half of America's income—55 percent—went to families in that group.

The picture is even more striking if you lump together all of the moderate-income groups—those families whose incomes ranged from $2,000 to $7,500 a year. In 1929, they received only $38,000,000,000—but in 1946, they shared $111,000,000,000—65 percent of America's income.

Does that look as though America were dying—as though opportunity were dead?

Every year there are fewer really poor people in our country. In 1929, Dr. Moulton's figures show, 65 percent of the families in America had incomes of less than $2,000. By 1946 only 40 percent were in that group, and the number is going down all the time.

It's folks like you, mother—folks in the great American middle class—who are getting a constantly greater chunk of our country's wealth. Meanwhile, the people in the higher brackets are getting less. Those earning more than $7,500 received 30 percent of the country's income in 1929. In 1946 they got only 20 percent.

Dr. Moulton describes what's happening in this way:

"Prior to 1929, and especially in the decade of the twenties, the distribution of income in the United States was becoming increasingly concentrated. Since 1929, the situation has been strikingly reversed."

Meanwhile, figures provided by Dr. Moulton showed that, despite the inflated dollar, wages were rising far more swiftly than prices. By 1946, hourly wage rates were seven times as high as they had been in 1900—while wholesale prices were only two and one-half times as high.

That meant that more people could buy more things. And those who talked of America being through, Dr. Moulton said, didn't see the big market that existed in the unfulfilled desires of the existing population—desires that could increasingly be attained as incomes rose.

So that part of it is all right, mother. Never before has a baby been born with such a good chance to earn a comfortable income.

But the calamity howlers say our country is running down. They used to contend, for instance, that our population was leveling off—they went so far, Dr. Moulton said, as to predict that America's population would become stationary by 1980—with births balancing deaths.

You made them look silly on that prediction, mother—you and all the other mothers of America. In the last 10 years, Dr. Moulton said, the records show an astounding and progressive increase in births.

During the depressed thirties, births ranged from 2,074,042 in 1932 to 2,286,962 in 1938. The insecurity of the depression years kept the birth rate down.

It was to be expected, Dr. Moulton continued, that the rate would increase during the war—as it did. In 1940 there were 2,400,000 births, and the wartime peak was reached in 1943, when 2,900,000 were born. There were 2,700,000 babies born in 1945.

But the amazing thing, Dr. Moulton said, is the way babies kept increasing after the war. From 1946 through 1949, births averaged 3,600,000 a year. There were 30,000,000 babies born in America from 1940 to 1950. Subtracting deaths during those years, that meant our population increased by 18,000,000.

That completely confounded the gloomy experts. The more optimistic had predicted a population of 141,000,000 by 1950. The fact is that the population reached 150,000,000 last October.

That doesn't sound like a dying country, does it?

Those youngsters—your babies and the others—will be grown up in the 1960's and the early seventies. They'll be getting jobs, marrying, establishing their own homes. They'll want automobiles, and refrigerators, and all the other things that go with homes.

They'll form a new market in the sixties and seventies—a market that will help keep America going.

What is responsible for that sharp increase in births?

You've got the answer to that, mother—you know it far better than the economists. In part it's undoubtedly your own courage, your own confidence in your country and yourself.

Girls are marrying earlier. It used to be assumed at girls' colleges, Dr. Moulton said, that only 20 percent of a graduating class would be married in the first year after leaving school.

Now, however, large numbers of girls—and young men—are married before they graduate. The figures show, too, that they want larger families. Higher incomes, and the fact that there are jobs for all, encourage them.

But whatever the reason, you mothers were smarter than the gloomy experts. Your instincts told you America was sound—and you were right.

But what good is all this—what good is higher incomes, and increasing markets, if America can't support those new babies? You've heard that America's natural resources are exhausted—that there isn't enough left to go around. You've heard that we'll have to lower our standard of living.

Mother—that just isn't true.

Dr. Moulton looked ahead for 100 years, and asked:

"So far as natural resources and productive capacity are concerned, might the United States a century hence support a population double that of the present day on a plane of living eight times as high as that now prevailing?"

The answer was "Yes."

"There can be little doubt," he wrote, "that the onward sweep of science and technology as a whole is such that in one way or another scientific advancement as applied to the processes of production could yield results of (this) magnitude."

Dr. Moulton did not predict that we would have twice the present population, with a standard of living eight times as high, in another 100 years. What he said was that we can have it—and that American resources can support it.

How so?

He found that five things go to make up the basic parts of a high standard of living: Food and nutrition, for which, in 1946, we spent $55,000,000,000; shelter and home maintenance, for which we spent $31,000,000,000; attire and personal care, $24,000,000,000; education and health, $12,500,000,000; and recreation and travel, $21,500,000,000.

First, then, could we feed 300,000,000 people—with a higher standard of living?

Yes. Dr. Moulton estimates that we would need to triple our present food supply to do it. But by bringing new land under cultivation through reclaiming swampland and irrigating deserts; by controlling soil erosion to protect existing land; and through the use of scientific discoveries to increase the crop yield, we can feed your children, and their children's children.

America need not go hungry.

Can we shelter 300,000,000 people?

Yes. Dr. Moulton estimates that we'd need eight times the amount of building materials we're now using, and he continues:

"Residential construction materials are entirely adequate. They are of many kinds, of which the most important are wood, brick and tile, cement, stone, cinders, glass, aluminum and steel. In the case of stone, brick, glass, cement and cinders raw materials are virtually unlimited."

Systematic reforestation can preserve our supply of wood. Plastics and other synthetic materials will be used increasingly. Steel and other metals, he found, will not be exhausted.

"It seems clear," he said, "that there is no danger of running short of materials."

Our needs for attire and personal care, he estimated, would be increased 20 times. But there, he found, the supply of natural—and synthetic—materials is virtually inexhaustible.

The fields of education and health, he said, make little demand on material resources. America can meet the requirements.

The largest rate of increase, he found, would be in recreation and travel; which make heavy drafts on mineral resources. You've heard, perhaps, that we're coming to the end of our iron ore—that the great Mesabi ranges in Minnesota hold only 40 years' supply of high grade ore at the rate of wartime consumption.

But Dr. Moulton showed that newly discovered Canadian ores, modern methods of using low grade ores, and the use of substitute metals for many purposes, assure adequate supplies for hundreds of years.

Coal is virtually unlimited. The sources of electric power are superabundant. And the potential supplies of natural and synthetic oils, he found are adequate. "Abundant supplies of oil and gasoline seem assured," he continued, "for many generations to come." So great is the progress in making synthetic oils, he continued, that much of our reserve of natural petroleum may be left in the ground.

Yes, mother, your babies have a future—a great one. What can you do to make sure that they achieve it?

Protection and conservation of our natural resources is necessary. You can help fight for that.

We've got to produce more—every one of us. For if you double the population, and raise the standard of living you far more than double the things people want to buy. We can't sell—or use—things we don't make. We can help achieve that.

Too high taxes can injure your babies' chances. Beyond a certain point, Dr. Moulton said, taxes "dull incentives, and may destroy the principal source of funds for new enterprises." He explained:

"To state the matter in extreme terms, there can scarcely be any question that the private enterprise system would function more vigorously with a tax system that absorbs, say 10 to 15 percent of the national income rather than under one that absorbs 25 or 30 percent."

You can fight for lower taxes.

But most of all, you can face the future with confidence—for yourself and your babies.

America is not exhausted. The future is alive and strong.

Tribute to Hon. Alexander Wiley, of Wisconsin, From the Northwest Republican

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Wednesday, January 4), 1950

Mr. KNOWLAND. Mr. President, I was glad to note in the January 1950 issue of the newspaper the Northwest Republican, a very fine and well-deserved tribute to our colleague, the senior Senator from Wisconsin [Mr. WILEY]. This independent Republican newspaper, published monthly for Iowa, Minnesota, Nebraska, North and South Dakota, and Wisconsin, has presented some deeply interesting facts regarding Senator WILEY's outstanding record of service in Washington. I ask unanimous consent that the text of this tribute be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEWS LETTER

November 1950 will see many crucial battles for positions in the United States Senate. Upon the outcome of those battles will, in large part, depend the future of the American economy—of the free-enterprise system and of our constitutional Republic. When the voters go to the polls in Ohio, in Indiana, in Missouri, in Wisconsin, in Iowa, in Colorado, as well as elsewhere in our country, they will have a vital opportunity to reelect Republicans of integrity and achievement now in the Senate.

In this connection, the Northwest Republican invites the attention of all Wisconsin voters to the outstanding qualifications of their senior Senator, ALEXANDER WILEY.

Few Senators in recent American history have won for themselves so warm a niche in the hearts of their countrymen, and in particular, in the hearts of their constituents as has ALEX WILEY. Possessed of a broad background in farming, law, business, fraternal organizations, public service, he has brought to the Senate folksy, human qualities of friendship, good nature, and humility as well as the statesmanship necessary for so high a position.

WILEY'S SENIORITY IS CRUCIAL

Wisconsin voters should bear in mind that Senator WILEY stands among the third highest ranking Republicans of the entire United States Senate. He is the first Wisconsinite in history ever to serve as chairman of the influential Senate Judiciary Committee and is now its highest ranking Republican. He is second highest ranking Republican of the powerful Foreign Relations Committee which will in considerable measure help shape the future peace of the world. Senator WILEY has won these positions by virtue, in part, of his continuous, unbroken record in the Senate. Wisconsin voters note the fact that, at long last, they have in Senator WILEY a man representing Wisconsin who has the necessary seniority to do an effective job for Senators from other States who have no seniority and who rank them, in contrast to freshman low in the party councils, thus being relatively unable to help shape national policy.

PUBLICATIONS APPLAUD WILEY

Ample commendations of Senator WILEY can be found in many of the magazines and newspapers of State and Nation. The Northwest Republican is privileged at this time to devote space in listing some of the fine expressions of commendation of him. In so doing, we feel that we are helping to inform the citizens of Wisconsin of the outstanding caliber of their devoted public servant.

Read what a newspaper columnist close to the Washington scene and writing in the Alexandria (Va.) Gazette said about the Senator:

"Senator WILEY conceives more original ideas than anyone I know in Congress."

Here is what a Washington, D. C., newspaper said about him:

"He works hard. As chairman of the important Judiciary Committee, which handles a third of all Senate legislation, he personally reported out 205 bills last session, more than any other man in the House or Senate."

A Young Republican newspaper commented:

"Senator ALEXANDER WILEY has compiled one of the most enviable records of service and achievement for State and Nation * * * an energetic campaigner—he presents the strongest possible Republican opponent (in 1950 Wisconsin race) * * * Senator WILEY deserves bipartisan support on the basis of his middle-of-the-road record of conservative, but forward-looking achievement."

That is what the Reserve Officer magazine said last year about him:

"Senator ALEXANDER WILEY has scored a long list of legislative firsts in his career in the United States Senate, including his warnings long before the advent of World War II, of the danger of an attack on Pearl Harbor, the potential danger of critical shortages of wartime materials, the dangers of overcentralization of government and industry. His pioneering suggestion for a permanent liaison group between the Senate Foreign Relations Committee and the Department of State was acclaimed during the war by the Christian Science Monitor as 'The most important, constructive, and forward-looking suggestion on behalf of the future peace which has come from Congress since the United States formally entered the war.'"

WILEY'S FIGHT AGAINST DEMO BLACKJACK

A long list of commendations in the Wisconsin press could be added to this summary. Most recently, many Badger newspapers applauded Senator WILEY's blast against Democratic finance headquarters in Milwaukee for its "outrageous tactics in seeking to blackjack humble service employees into making financial contributions to the Democratic Party."

Wherever there has been an issue of importance to Wisconsin—to Badger white-collar workers, farmers, merchants, housewives—WILEY has been in the front lines battling for Badger interests. What could be more important to the leading dairy State of the Nation than a Senator who won this commendation from the world-famous magazine, Hoard's Dairyman:

"Although burdened with many pressing administrative responsibilities, Senator WILEY * * * has been one of the United States Senate's most vigorous defenders of the dairy farmer. His work in the Eightieth Congress last year was primarily responsible for the failure of (antidairy) legislation to pass prior to adjournment."

Since Wisconsin is half-industrial and half-agricultural, the Senator has devoted equal yeoman work to the problems of Wisconsin business, in particular to the needs of the little fellow. WILEY has been among the Senate's hardest battlers for tax relief, balancing the budget, Federal economy, and

application of business horse-sense to Government.

The Northwest Republican is proud to point out these facts to the people of Wisconsin and the Nation as its contribution to continuation in high office of a real Republican statesman and a fine human being—ALEX WILEY.

Displaced Persons Legislation

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Wednesday, January 4), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Minority Report," from the New York Times of February 19, 1950, with respect to the displaced persons bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MINORITY REPORT

The impressive minority report on the Senate Judiciary Committee's displaced persons bill is very nearly a majority report. Of the committee's 13 members, 3 have signed the minority report, 2 more said they "now subscribe" to it, and another 2 stated that they favor "further liberalization" of the committee draft. With so much support from among the Judiciary Committee's own members, it should not be too hard to convince the rest of the Senate next week that the DP bill, as it emerged from committee with Senator MCCARRAN'S blessing, needs drastic overhauling.

The way to do this is indicated in the minority report, which bears the signatures of Senators KILGORE, GRAHAM and FERGUSON. They propose revising the bill generally along the lines of the measure passed by the House of Representatives last June, which is now all but unrecognizable as a result of Mr. MCCARRAN'S hacking and mangling job in committee. The exposé of Mr. MCCARRAN'S efforts to defeat the original purpose of the law by opening its provisions to the 8,000,000 German expellees, or Volksdeutsche, who, however sad their plight, are not DP's in the internationally accepted use of the word. To confuse the issue by mingling German expellees with DP's would, as the report points out, bring about hopeless complications in the administrative machinery of the entire program and leave the DP question unsolved.

The minority report rightly attacks the restrictions in present legislation requiring that 40 percent of the DP's be from Baltic countries and that 30 percent be agricultural laborers. The agricultural provision has forced the DP Commission to cut shipments down from 16,000 to less than 6,000 a month and to hold back some 10,000 otherwise eligible DP's until the 30-percent quota can be filled.

The minority statement repeats the observation made in the recent report submitted by Representative WALTER of the House Judiciary Committee that the DP Commission has performed its function "in a diligent and satisfactory manner." This comment is particularly noteworthy in view of the loose and unwarranted charges that Mr. MCCARRAN has been in the habit of flinging around whenever the word "DP" is mentioned. But by this time the Senate doubtless knows how to evaluate Mr. MCCARRAN'S rash and reckless words.

William P. Rogers

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Wednesday, January 4), 1950

Mr. O'CONOR. Mr. President, an editorial in the Washington Post of this morning pays tribute to the manner in which the Senate investigating committee and its retiring chief counsel, William P. Rogers, have conducted the investigations which have engaged the committee's attention.

As a member of the investigating committee who feels, as does the Washington Post, that Mr. Rogers has performed his difficult duties with tact and with due care for the rights of all who appeared before the committee, I ask unanimous consent that the editorial be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MODERN INVESTIGATOR

The investigator who knows how to bring to light all the facts about scandal, corruption, or wastefulness in Government without unfairly maligning any individual is rare enough to deserve a special type of recognition. Such a man is William P. Rogers, who has resigned as chief counsel for the Senate investigation committee. Following the tradition of the Truman committee, which it succeeded, this investigative arm of the Senate has given us a good demonstration of the restraint, judgment, and persistence that constitute the investigative art. The appointment of Francis D. Flanagan, former assistant counsel, to the head of the investigative staff is a further tribute to the quality of the work the staff has done under Mr. Rogers' direction.

The departing counsel has served the committee under both Republican and Democratic chairmen. Apparently the change in the chairmanship when the Eighty-first Congress assembled made no appreciable difference because the committee's investigations were being conducted on a level above partisanship. Conscious of the necessity of respecting the rights of citizens, the committee formally adopted rules of fair procedure to guide its activities. Witnesses were given a right to be accompanied by counsel, to defend themselves against accusations and to cross-examine other witnesses through questions submitted to the chairman. Investigations were undertaken only with unanimous approval of the subcommittee or majority approval in the full committee, and reports had to have the unanimous approval of the subcommittee.

The care exercised by Mr. Rogers to avoid smearing any citizen unfairly was well illustrated last August when he stopped a witness after he had brought Major General Vaughan's name into the deep-freeze scandal. There was not a trace of whitewash in this action, as the committee subsequently gave us the full story of the five-percenters and their friends. The chief investigator was simply taking precautions against the careless listing of names until the background facts could be carefully checked by his staff. That this method is effective against corruptionists (as well as protective in the case of innocent citizens) is indicated by the part Mr. Rogers played in exposing such scandals as those involving Maj. Gen. Bennett Meyers, Representative Andrew May and the Garsons. Probably far more important are the changes brought about in governmental machinery as a result of the committee's efforts to prevent the development of fraud and waste in the future. Mr. Rogers has helped to set standards that should long be a potent influence in investigations on the Hill.

Why Not Investigate OHE, FHA, and VA?

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. CUNNINGHAM. Mr. Speaker, under leave granted to extend my remarks, I include a letter recently received from Mr. David P. Weaver, Des Moines, Iowa, relative to houses bought by 100 GI's in the Franklin Park project at Des Moines, Iowa:

DES MOINES, IOWA, *February 16, 1950.*

DEAR SIR: Please read this letter. It is an urgent appeal for justice long overdue. It is mimeographed only because of necessity and is being sent to every Member of the Congress—both the House and Senate—and to the President as well, and to many newspapers and news writers and commentators throughout the country. It is because of desperation that such action as this is being taken.

I need help from some red-blooded, honest Americans who will not hold still and let a group of veterans be sold down the river, almost a hundred veterans who have been defrauded in the purchase of their home—homes that were built under a veteran's priority and to specifications that were given to our Government in order to obtain that priority.

Over 100 homes built and sold in violation of a law of the United States in a housing program known as Franklin Park, in Des Moines, Iowa, built in 1946 and 1947.

Housing Expediter Tighe Woods knows of this scandal, and so does the Federal Bureau of Investigation. The Attorney General of the United States knows of it, as well as the Veterans' Administration—and none of them will do anything about it.

The Housing Expediter ordered an investigation made of Franklin Park and the result was that he placed a claim against the contractor in the amount of from $50,000 to $60,000, but for some mysterious reason it has been shelved. The Franklin Park Co., headed by one Samuel Rosoff, of the Rosoff Construction Co., New York, N. Y., built these homes, and it is common knowledge that for political reasons Mr. Rosoff has been able to bring about enough pressure to cause this scandal to die a natural death. Five percenter Tighe Woods, and also the members of his Chicago office, won't even talk about this matter with we victims, and we are pushed aside wherever we turn for assistance. Our last dealing with his office was in August 1949, when he sent a Mr. Evans, of the OHE Chicago office, to Des Moines, along with a couple other men from the Washington OHE office, and at that time they gathered here in a Des Moines hotel room with some of us who had filed claims with the OHE. Mr. Evans and his cohorts brought us greetings from Mr. Tighe Woods in the form of a settlement offer, one being an offer to pay us $14 for an omitted row of concrete blocks which was left out of our basement foundation by the contractor, and another offer of something like $10 for the

felt composition left off of the roof, and then they offered us another few dollars because of the contractor's failure to give us a dry basement. And the fact that our basement is substandard in height makes no difference as far as they were concerned even though the Federal priority granted to the builder called for a full 7-foot basement—and this in spite of the fact that the OHE claim against the builder asked $500 damages for that alone. That is the solution Tighe Woods offered a few of us veterans who gathered in a Des Moines hotel room with his henchmen. Not all of these veteran home buyers were invited to that meeting—just those whom he thought were the hell raisers asking justice.

How did they arrive at the ridiculous figure of $14 for an omitted course of concrete blocks? They told us that the FHA gave them that figure. The total settlement offered us was around $40, and naturally we turned it down and because of it we are being persecuted. All of this happened after the OHE had placed a claim against the contractor for something like $60,000 for his omissions and deficiencies in our home at the time of construction. Certainly we won't sign a release for $40, who would?

We paid almost $10,000 for our homes but with the "shenanegan" pulled on us regarding trees, curb, and gutter, to be paid for by us over and above the purchase price, these homes are costing us nearly $11,000, and get this, gentlemen, the priority granted for the building of these homes placed a maximum selling price on them at $10,000 including curb, gutter, and paving. With the interest piled on top of all of this, and over a 20-year period, we will be paying nearly $16,000 for these homes.

One hundred families here in Franklin Park have been treated miserably by the representatives of several Government agencies involved in this deal, all of them covering up for the contractor because of his political connections. The Iowa Federal Housing Administration flagrantly double-crossed these veterans with the false report they turned into Franklin Richards, Commissioner of FHA in Washington (ask me for the proof, I have it), and the office of the Iowa Chief of the Loan Guaranty Division of the Veterans' Administration here in Des Moines is no less a violator and party to this fraud.

Where is the justice of the Department of Justice; they know of this mess? Where is the integrity of the office of Tighe Woods and his expediters, and why hasn't he turned this case over to the Justice Department for prosecution? Why don't the sleuths of the Federal Bureau of Investigation give their report if they have one—the Omaha office does. How can Tighe Woods and his gang place a claim against the contractor for almost $60,000 and then decide these veterans in Franklin Park don't even have a case, if that's what it is?

Our local newspapers, the Des Moines Register and Tribune, have printed many thousand words of this case in many stories over many months' time, and the record is clear that somewhere along the line these veterans have been washed out of the picture because of a mere handful of shameful politicians.

We carried the flag when you needed us, and it looks as though you may need us again in this troubled world, but how are we going to cope that with the vicious and flagrant violation that is allowed to exist in the buying of our $10,000 dream house purchased when we came back from the wars? How can false reports be turned in by Government agencies to conceal this swindle, and why did the office of the chief of the loan guaranty division of the VA here in Des Moines minimize the fact that there is forged paper in this case when he was told about it? They won't give us these answers, nor will they tell us what happened to the progress of this case which has now covered 2 years. I believe, gentlemen, that they will talk with you about the matter if you ask them.

Iowa's Lilienthal investigator, Senator BOURKE HICKENLOOPER, knows all about this Franklin Park case but apparently his hands are tied also, at least that is what he has led his constituents to believe. Even the American Legion and the AMVETS ran for shelter because of the pressure they ran into, and their promise of assistance melted away with the heat of their burning inability to right this vast wrong. Only the Veterans of Foreign Wars stood their ground and they to this day are being fought off by 5-percenter Tighe Woods whom you all have heard gloat over the success he has had in getting refunds for cheated and defrauded veterans.

You men in Washington, and elsewhere, can come to our aid, and my earnest plea is that you do so. Let's have a little investigation at the OHE, FHA, and VA, and find out who shelved this Franklin Park fraud and why.

For 2 years now we have tried in vain to get justice, and for 2 years men in high places in Government have kept the facts buried. May I ask that some of you true Americans come to the front for us?

Sincerely yours,

DAVID P. WEAVER.

Brazen Illegality Seen in Interior-REA Plan

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ray Tucker, from the Shreveport (La.) Times of February 18, 1950:

BRAZEN ILLEGALITY SEEN IN INTERIOR-REA PLAN

(By Ray Tucker)

WASHINGTON, February 16.—Resorting to strategy that has been assailed as a brazen defiance of the law and expressed will of Congress, public-power officials in the Department of Interior and Rural Electrification Administration have concocted a scheme that will eventually bring a vast section of the Nation's electric generating plants and transmission lines under Federal control.

The device, which represents a greater bid for power by Interior than even Harold L. Ickes ever dared to dream of, obviates the need for the series of power authorities proposed by President Truman—Missouri, Arkansas, Columbia River, St. Lawrence, etc. Under the method already in effect a power system gridironing the country will fall into Federal hands by indirection.

Oddly enough, the first experiment has been made in the home State of President Truman and in the district represented by CLARENCE CANNON, the czaristic chairman of the House Appropriations Committee. He forced approval of grants totaling $44,000,000 over the objections of Representative JAMIE L. WHITTEN, of Mississippi, who heads the subcommittee handling these matters.

Representative BOYD TACKETT, of Arkansas, seeks to block the scheme through a measure that will prevent use of Federal funds for this purpose, especially as the Flood Control Act of 1944 specifically denies Interior the right to build steam generating plants.

Other attempts to break up the plan will be made when the measure providing money for these two agencies reach the floor of the House and Senate.

Besides Missouri, other States where these loans have been made or are now under consideration are Arkansas, Oklahoma, and Texas. But these are only the beginning, according to REA-Interior officials, the Cannon group, and the public-power lobby headed by former Representative Clyde Ellis, of Arkansas. As well-paid president, he heads an organization here known as the National Rural Electric Cooperative Association.

The device for funneling Federal funds into allegedly illegal channels is simplicity itself. It is described by Members of the House as one of the neatest schemes for "bypassing" and "defying" plainly written prohibitions of law that has been seen around Washington in many years.

Under the intent of Congress and its original management, REA loaned money to cooperatives to build steam generating plants where they were required and to transmit electricity to their rural customers. When the property had been paid for by liquidation of the Government loan the generating and distribution system was turned over to the farmers.

Now, however, three or four of these farm groups form what is known as a supercooperative, with their operations covering a fairly large area. As in the past, they obtain money from REA for construction of electric power plants and lines.

But now their applications and contracts contain a new provision under which they merely lease the property, with Interior becoming the actual owner at the end of 40 years with only a $10 payment by the Government.

By building these systems in various sections of the country, and then tying them into into the great power dams and plants already operating or under construction—Randall in South Dakota, Fort Peck in Montana, Big Thompson in Colorado, Bonneville in Washington, Boulder in Nevada, and the lower Colorado network—the Government will be in a position to nationalize power. Private utilities would not be able to hold their own against such a rival.

In view of President Truman's demand for extending the TVA technique to the Northeastern States, especially Pennsylvania, New York, New Jersey, and New England, that area would also become part of the network.

The taxpayers who must ultimately finance this Federal industry may find themselves holding an empty bag at the end of the 40-year period. In view of prospective changes in the generation and transmission of power, based on development of atomic energy for commercial use, these plants and transmission lines may be obsolete after four decades.

Congressional friends of the rural electrification movement, including Senator ELMER THOMAS, of Oklahoma, contend that the REA-Interior tie-up will mean less rather than more power for farmers and rural communities. Incidentally, it is estimated that there are still 1,000,000 farmers without these necessary and convenient facilities.

It is their contention that money to be spent in building generating plants should go into construction of transmission lines, with the firm power coming from private utilities, wherever that is possible. They argue that construction money will also be eaten up to pay salaries of an even larger number of Federal agents and administrators.

Save for the areas directly affected in the Southwest, the diversion of REA funds and

cooperatives' property into the hands of Interior has commanded scant notice on Capitol Hill. But it will get excited attention when appropriation measures for these two agencies come up for debate and vote.

Even proponents of the scheme do not know how they will reconcile Interior's gamble in generating power with several specific declarations by Congress against such activities. Moreover, only last year, Congress instructed Interior to negotiate with private utilities for construction of transmission lines under the Texas formula negotiated by Speaker SAM RAYBURN on behalf of his Texas utility friends.

Questions and Answers

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following questions and answers from the News-Bulletin of February 21, 1950:

QUESTIONS AND ANSWERS

Question. Can a government which spends more than it takes in be a prosperous and solvent government?

Answer. Manifestly, the answer is "No." A government, like an individual, must live within its income and means in order to remain solvent.

Question. Why is that true, since the Government, after all, is merely "we, the people?"

Answer. That is true because the Government has nothing to spend except what it takes from the people, either by borrowing or by direct and hidden taxes.

Question. If the Government borrows money from the people, do not the people merely owe themselves the amount borrowed by the Government?

Answer. If the people loan the Government money, and the Government does not have the money to repay the loan when it becomes due, then the Government must either borrow more money from the people or tax them to pay what it owes. Such a course of action sets in motion an endless chain of borrowing that may never be broken short of national bankruptcy. It is even worse than an individual loaning money to another to purchase an automobile, the purchase price of which cannot be paid by the borrower when the loan falls due. Manifestly the lender-seller must lose.

Question. Is government spending inflationary?

Answer. Certainly; because, when the Government spends money usually nothing of substance or wealth is produced to take the place of the money spent—but whatever is added to the economy to take the place of the amount spent, usually costs more than if private capital operating under the free enterprise system did the spending. President Truman on August 1, 1946, admitted that Government spending was inflationary and urged the deferment of public works, except such as were absolutely essential to the Nation's business.

Question. What of the welfare state? If it comes, will it add to inflationary pressures?

Answer. Of course it is, and it will. The more the Government spends, both of what it has and what it borrows, the greater will become the inflationary pressure on the national economy.

Increases in wages, passed on to consumers, are inflationary; and all payments for old-age, survivors, unemployment benefits, and the like are likewise inflationary, though they do all add to the cost of goods and services to the consumers, since they are passed on in increased prices.

Question. Will the Government be able to meet promised payments of $30, $50, or $100 a month as welfare benefits, when such payments become due?

Answer. Manifestly such payments cannot, and will not continuously be met, because taxes to produce funds for such payments have almost reached the saturation point. It has been estimated that, if carried to its logical and proposed end and conclusions, such welfare plans will cost in the first 50 years a total of $1,250,000,000,000. This would mean that every worker would have 15 cents of each dollar in wages deducted.

Question. If such payments are promised and undertaken, what will the money in which payments are made be worth?

Answer. It has been estimated that, if the national income reaches $1,000,000,000,000—one trillion dollars—that the dollar will be worth only 18 cents in purchasing power.

Question. Have welfare and social benefit systems succeeded in other countries?

Answer. No. They have failed wherever they have been tried.

Question. Is there a chance that the welfare state will bring destruction to our national economy and our republican form of government?

Answer. Yes, there is such chance. For the welfare state to be successful, there must be absolute governmental control. In short an oligarchy would be set up not materially different from the absolute dictatorships the whole world apparently abhors but sometimes puts up with as in Soviet Russia and her satellite countries.

"Commerce is the equalizer of the wealth of nations."—Gladstone.

Porcupine Jr., says: "The time has come for Uncle Sam to close up his international gift shop."

Steel Age for New England

EXTENSION OF REMARKS
OF
HON. CHASE GOING WOODHOUSE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith an editorial from the Boston Herald for August 25, 1949:

STEEL AGE FOR NEW ENGLAND

A group of unrelated events offer New England an opportunity for prosperity such as we have not enjoyed since the days of the clipper ships. We have almost, but not quite, been handed a great industrial and commercial expansion. So far the fates seemed to have worked in our favor without any effort on our part; from now on it is up to us.

The story, as it is being told by W. E. Playfair elsewhere in the Herald, is an astonishing picture of jigsaw pieces falling as if by themselves in place. A little while ago New England's hope for an iron and steel industry was dashed by the findings of the Econometric Institute that an integrated plant, producing finished steel shapes from iron ore, was economically impossible here. Today another kind of steel industry, but one of even greater potentiality is virtually within reach.

These are the unrelated circumstances that have so strongly worked together for us:

1. The decision of the Supreme Court sustaining the Government's power to prohibit the basing-point system.

Under this system, the steel companies have set prices, including freight charges, as if the steel had been shipped from certain basing points which usually were not the actual shipping points. Abandonment of the system means either that industries using steel must move nearer existing steel plants or new steel plants must be built in areas of large consumption. Up until recently the high cost of new plants would weigh heavily in favor of the former alternative, a sad blow to New England's growing hard goods industry. But the picture is reversed by—

2. New technological developments in steel production.

These new discoveries include the oxygenation system, by which the output of a given steel mill can be increased 25 percent, and the continous casting method, which permits the efficient use of compact and less costly equipment. Not only do these make steel production possible in smaller units, but they make the present big producing units out-of-date and inefficient. Decentralization of the industry, with plants in New England, is made almost inevitable.

3. The discovery that the Labrador-Quebec iron deposits outstrip the mighty Mesabi mines.

The possible limitless deposits, almost at New England's back door, are ready to take the place of the Mesabi mines, in the Lake Superior district, which have been the source of 85 percent of America's iron ore, but which are running out. There are now no known reserves in North America to compare with the Labrador-Quebec deposits. But though relatively near to New England, there is the difficulty that ships bringing the ore here would have to return empty. This difficulty has been greatly eased by—

4. The decision to use the abundant water power available to reduce the Labrador-Quebec ore by electricity to sponge iron.

This means that New England would import not ore but iron, which can be shipped at a great saving in cargo space. New England is better fitted for the secondary manufacturing processes, any how, and the production of steel especially fitted for our uses would serve us better than an integrated steel industry. The difficulty here, however, is that it will be at least 5 years before Labrador-Quebec can be in production. But there may be iron to tide us over in—

5. Production of iron as a byproduct of the titanium smelter soon to be built by Kennecott Copper at Sorel, Quebec.

This, too, may be a matter of several years, but it offers an earlier, or at least a supplementary source, of 800 tons daily. (The Mystic furnace has been producing 500 tons daily.)

6. A number of minor factors, such as the expected piping of natural gas to this region and the world dollar shortage which will impel Canada to export as much as possible to this country.

All these factors do not assure a big steel industry to New England. They make such an industry a natural for us, but it will not come by itself against the inertia of the country's present industrial set-up. There is already on foot a powerful move to have Congress restore the basing-point system, which, if successful, would tend to freeze the present steel concentration of the country. We need to combat that.

This present iron famine should be exploited to bring home to the steel companies the urgency of our requirements and the

growing demands of our hard-goods manufacture, now New England's most rapidly growing industry. We need to bring out that this is the center of an enormous market.

This can be, as we have said, the greatest thing for New England since the clipper ships—if we do not muff the opportunity.

Vocational Education

EXTENSION OF REMARKS
OF
HON. MERLIN HULL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. HULL. Mr. Speaker, under leave to extend my remarks in the RECORD, may I include a statement on legislation now pending in the Eighty-first Congress pertaining to the expansion of services to the physically and mentally handicapped, by Mr. W. F. Faulkes, chief of the rehabilitation division of the Wisconsin State Board of Vocational and Adult Education. Mr. Faulkes is one of the Nation's outstanding authorities on the subject, having specialized in the field of rehabilitation in an official capacity since 1920, and on a voluntary basis prior thereto:

STATEMENT ON LEGISLATION NOW PENDING IN THE EIGHTY-FIRST CONGRESS PERTAINING TO THE EXPANSION OF SERVICES TO THE PHYSICALLY AND MENTALLY HANDICAPPED

It is my understanding that there have been presented to the Eighty-first Congress two bills for the purpose of expanding the services to the physically and mentally handicapped. These two bills are H. R. 3095 and H. R. 5577. The latter bill, H. R. 5577, is based upon the Federal-State cooperative relationship that has obtained since June 2, 1920. It is my further understanding that a committee has been appointed for compromising the various items involved in these two bills. It would seem that careful consideration should be given before making such a drastic change in administration as is predicated in H. R. 3095. The latter bill, in my opinion, is based entirely upon hypothetic and presumptuous data, while H. R. 5577 is based upon more than a quarter of a century of rather successful experience, especially when for nearly 20 years, the Federal allotment did not exceed $3,500,000 per annum.

In this statement, it will not be my purpose to indulge in any acrimonious or sarcastic statements about anyone, assuming that a discussion of such an important subject should divest itself of all personalities and prejudicial statements. Our purpose and aim should be the setting up of an adequate program that is vested with sufficient authority and the necessary funds to carry on a program of rehabilitation that will adequately serve all physically and mentally handicapped, and even those who are severely disabled and those who are blind.

Bill H. R. 5577 provides for rehabilitation centers where the severely disabled, such as those who are suffering from multiple sclerosis, hemiplegics, paraplegics, and those with other severe disablements may be remedied and rehabilitated to the end that they may again function both economically and socially. On the other hand, I do not believe that the rehabilitation service should be the agency for the granting of pensions. In my opinion, that properly belongs to the agency in charge of public assistance; but I do think that a proper liaison should be provided between the rehabilitation service and the public assistance agency in regard to pensions which may be arranged for on an individual case basis, as many severely disabled persons may be feasible for at least partial rehabilitation. In my opinion, if proper rehabilitation facilities are provided, such pensions will be few in number. These rehabilitation centers should be supplemented by training centers and sheltered workshops, where those persons who are home-bound and cannot be recommended for competitive employment can be trained for suitable craft or other work that can be carried on in the home as well as elsewhere. Such training centers are now being set up in Wisconsin, but the number has necessarily been limited to the funds that are now available. There should be instituted, also, a more liberal policy for setting up individual business enterprises for both the severely disabled and the blind. All of these items for expansion are provided for in bill H. R. 5577.

The close relationship of rehabilitation to health and education predicates that these services should be in close relation to each other. Such relationship now obtains in the Federal Security Agency. Anyone who has had any experience in rehabilitating disabled persons realizes that physical therapy and education play a major part in such service to the disabled person in procuring suitable and successful employment. My experience of over 30 years has demonstrated that the employment service providing counsel and guidance alone can never solve the myriad of problems that are involved in a program of complete rehabilitation. In Wisconsin, a rehabilitation service was set up in the office of the State employment service back in 1918. The supervisor in the employment office stated that in most cases the disabled person should have some training, and even some physical restoration, before being recommended to a job. The writer was requested to take charge of the program even before the Federal Rehabilitation act was approved in June 1920.

After a disabled person has had the necessary therapy and preparation for a particular suitable job he can be effectively placed, and usually, when placed after such careful preparation, his turn-over on that job is reduced to the minimum. I am in thorough agreement that there should be a very close liaison between the rehabilitation service and the employment service, and that is more easily accomplished after the preparation has been completed than to arrange for such liaison in the midst of the program of preparation.

The writer's interest in the physically handicapped extends back to 1914, when he had an extended conversation with Senator Page, of Vermont (now deceased). I had at that time been appointed a member of a Commission to go to Europe for the purpose of studying vocational education. About that time I had conversations with several State commissioners of workmen's compensation relative to providing amendments to the Workmen's Compensation Acts, to the end of granting lump-sum settlements for injuries sustained, for the purpose of preparing such injured employees to become adjusted to some other job that would be more suitable to the injured client. Since 1920 the writer has had charge of the rehabilitation program, and organized the present rehabilitation service that obtains in Wisconsin. In other words, the writer's interest in the physically handicapped has extended over a period of 36 years, being actively in charge of the program for a period of 30 years.

The original Wisconsin Act was probably in 1920, the most comprehensive act on the statute books of any State, inasmuch as it provided for physical restoration, prosthesis and maintenance, as well as vocational preparation for a suitable employment. It is my firm opinion that bill H. R. 5577 will provide for an adequate service for all the disabled, providing adequate funds are provided by the State and Federal Governments.

Again, the present management of the rehabilitation service is in the right hands, and the program should be retained in the Federal Security Agency. I have worked with this service since its inception, when it was under the Federal Board for Vocational Education; when it was under the Department of the Interior; and now, under the Federal Security Agency, and I have no hesitancy in stating that more progress has been made since the last transfer, 1944, than in all of the previous years. The subcommittee on Aid to the Physically Handicapped of the House Committee on Labor, after a careful study of this problem, made, in part, the following statement in its report in 1946: "It is important that the administration of health, rehabilitation, and education services should be kept closely related because a high degree of coordination is necessary if the services are to be fully effective."

I am convinced that the present administration of the rehabilitation service on a national level through the Office of Vocational Rehabilitation is being effectively carried on, and that the Federal-State relationship has been built upon a very friendly and sound cooperative basis.

I am confident that the approval of H. R. 5577 will make possible an even more adequate service for all the handicapped, and enable many more disabled to make their potential contribution to our society, to which they are entitled as their birthright.

Resolution of Atchafalaya Basin Levee Board

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks, I present a telegram which I have received from Mr. A. B. Smith, Sr., president of the Atchafalaya Basin Levee Board, Baton Rouge, La., which reads as follows:

BATON ROUGE, LA., *February 18, 1950.*
Congressman OVERTON BROOKS,
Washington, D. C.:

The following resolution was unanimously adopted by the Atchafalaya Basin Levee Board on February 18, 1950:

"Whereas due to the present existing conditions of flood water stages in the lower Mississippi Valley and its tributaries, there is considerable agitation from some quarters for the Morganza spillway to be put into operation by the United States engineers; and

"Whereas the Morganza spillway has not been completed, and due to its incomplete condition, opening it would cause untold damage in the Atchafalaya Basin and adjacent territory if said spillway should be opened before it is completed: Therefore, be it

"*Resolved*, That the Atchafalaya Basin Levee Board in special session assembled this 18th day of February 1950, hereby goes on record as being unalterably opposed to the opening of this spillway under the present existing conditions of incompletement and

in view of the present predicted stage at Red River Landing, nor should it be opened under any other circumstances in its present incomplete condition, unless deemed imperative by the United States engineers and the engineers of the Louisiana Department of Public Works; be it further

"*Resolved*, That this resolution be sent to the Louisiana Department of Public Works, Gen. P. A. Feringa, Col. Charles G. Holle, Maj. Gen. Lewis A. Pick, Gov. Earl K. Long, Senators Ellender and Long, and all Louisiana Congressmen."

A. B. SMITH, Sr.,
President, Atchafalaya Basin Levee Board.

Playing Politics With Your Money

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Booneville Democrat of February 17, 1950:

PLAYING POLITICS WITH YOUR MONEY

What would you do if someone came to you and asked you to contribute several dollars to the building of a grocery store, a print shop, or other business in a town in eastern Tennessee—not only to contribute, but to add another contribution each year to keep it operating—and you not get any profit out of it? You'd say no, of course, and you might be tempted to add a short, four-letter word that some folks say is naughty. And you'd be right—dead right. Yet that is exactly what you are being asked to do to build a steam electric-generating plant in New Johnsonville, Tenn.

Congress is being asked to appropriate over $80,000,000 for a steam electric-generating plant at New Johnsonville, Tenn., to be operated by the TVA (officially known as Tennessee Valley Authority).

Some years ago Tennessee Valley Authority was established as a flood-control project with hydroelectric power as a byproduct. The Government has put almost a billion dollars into it, your tax money, mine, and other citizens, and now they have decided they want to built a steam plant—with the taxpayers' money. The plant will serve a million population, we are told, and will be a good thing for Tennessee—but what about Arkansas?—when we are doing all we can to locate industries in the State?

Why should the people of Arkansas, or Oklahoma, or any other State pay for an electric plant for TVA, so they can sell electricity below cost to people in business in that area? And how does TVA sell electricity so dirt cheap? It sells it that way because TVA pays no Federal taxes, no interest, borrows their money from the Government, and has many other advantages that privately owned companies do not have. What it really amounts to is that it is selling electricity below cost and you, and me, and other citizens are making up the difference. How can we attract more business to Arkansas and at the same time subsidize through our taxes business for TVA?

Another thing, if the Government can build an electric plant in Tennessee with our tax money, it can build another one anywhere else. And building plants everywhere means putting tax-paying electric companies out of business. No one can compete with tax-free, interest-free, Government-babied businesses. And remember, too, if Government can go into the electric business it can also go into the grocery, or hardware, or other business. Ridiculous, you say—maybe, but it has been in the printing business since before this writer was born.

We know our electric companies, privately owned, have done a good job—the way they hooked their different companies together during the war so that power could be delivered where it was most badly needed shows their attitude toward America when America needs them most—and they have kept prices down, given good service and made living a pleasure. Rates are cheaper now than they were during the late war. Their rates are regulated by State commissions, they are allowed a certain percent profit on their investment and they couldn't go above that if they wanted to.

Southwestern Gas & Electric Co., that serves this area is now engaged in a $35,000,000 expansion and building program. Other companies are doing likewise, keeping pace with the rapid growth of their State. They have the machinery either in service or on order to serve all electrical needs. They pay their full share of local, State and Federal taxes.

Government in business is what we are cussing communism for—but it is time we understood what is going on. Let's insist that Congress call a halt to this useless expense of our tax money to put the Government in business. We don't want any part of it in this country—but we may wake up some morning and find a new Government store on Main Street—and wonder how it got there. Think it over.

A Citizen Speaks

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. JENISON. Mr. Speaker, I have received a letter from a resident of my congressional district so typical of the feelings of a steadily growing body of our citizenship that I believe it merits the attention of every Member of the Congress. The writer is an informed citizen properly concerned over the tragic situation resulting from continued administration delay in the coal crisis. His letter follows:

OLNEY, ILL., *February 11, 1950.*
Hon. EDWARD H. JENISON,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE JENISON: With coal stocks at a new low, and getting shorter, schools closing, trains being cut off because of a coal shortage, it seems to me that it is high time that Congress passed a law which will restrain one man, or a small group of men, from tying up the economy of the country. It seems ridiculous to me that we permit a John L. Lewis or a Phil Murray to throw their weight around and stop the wheels of this country.

In all the strike settlements that have been made, it is we, the consumers, who ultimately pay the cost of the settlement because it is reflected in our higher coal bills and other things we purchase.

Now do not misunderstand me. I am not opposed to labor unions, and believe that in the right kind of responsible leadership, they have and can accomplish considerable good for the welfare of the laboring man. But the immense powers vested in the labor leaders that we have in this day and age, is not being wisely handled. The cause of labor is being injured rather than aided.

This coal shortage could be seen by everyone a month and a half ago, except by the man from Missouri, who for political reasons, did not want to invoke the Taft-Hartley Act. Now that he has had to proceed under it, it is too late to put coal above the ground. In the event of more rough winter weather there will be immense suffering among the people of this Nation.

Mr. Representative, the time has arrived for you and your colleagues to do something for the good of this country, and that is to curb the powers of these labor leaders, just as your predecessors in office curbed the powers of the corporations, so that in the future the people will not be harassed by the whims and fancies of John L. Lewis, Phil Murray, and all the other power-drunk labor leaders who like to throw their weight around and show just what they can do.

Very truly,

DONOVAN D. MCCARTY.

The Time Is Here for the Test

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Batesville (Ark.) News:

THE TIME IS HERE FOR THE TEST

Members of Congress never overlook an opportunity to promise reduced taxes if they can find a way to reduce them. It was to this end that a commission was appointed, headed by former President Hoover, to make a study to determine what overlapping agencies could be eliminated and what streamlining could be done to cut expenses of government and thereby reduce taxes.

Several highly important recommendations have already been made by this Commission. Reports by Mr. Hoover's group indicate that tremendous cuts can be made in the personnel of tax-financed bureaus.

One of the groups of experts working for the Hoover Commission has made a thorough investigation into the question of Government electric-power projects. It was made by independent engineers and accountants. And it has made the startling report that electric power developed at tax-financed dams in the country is actually not cheap power as has been claimed. Rates would have to be drastically increased if the Government recovers even a major portion of the huge tax outlays it has made on these projects, according to the Hoover report.

The report points out that public-power bureaus do not charge themselves with nearly all of the things that are necessary for sound business operations; they pay no taxes; they enjoy special low-interest rates; and have many other subsidies that the taxpayers must pay out of their pockets. The report even recommends that one useless public-power bureau, the Southwestern Power Administration, be dissolved, and that the Army engineers sell power generated at Federal hydroelectric dams in the Southwest.

Here is a definite and concrete proposal for reducing taxes. It is going to be interesting to see just what our Congressmen, who say they want to reduce our taxes, do about this plan. The time for their true test is at hand.

Every American Must Do What He Can

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. CASE of South Dakota. Mr. Speaker, this morning I made an announcement that I would be a candidate for the Republican nomination for United States Senator in the South Dakota primaries, June 6. Petitions are being prepared and will be sent to the State immediately.

I am led to this decision as the most effective way to say to every corner of South Dakota that our national life is in peril from the power-drunk, color-blind, inept and spendthrift leadership. As of today, for me the best place to combat that is in the United States Senate. The President in his appointments and Secretary Acheson in his administration of foreign affairs act with the advice and consent of the Senate.

No one bears the responsibility for this decision but myself. It is not easy to give up a seat in the House which many say I could keep with little campaign effort or personal expense. I do it, however, in the belief that many others could well carry on there and that I can render a greater service to South Dakota and the country by making this effort regardless of its cost to me.

Friends of South Dakota development familiar with my work in behalf of the people and district I have had the honor to represent will know that if I am elected to the Senate, every person and section of the State will receive the best representation that my 14 years of experience in Washington can bring. And those who know of my personal interest in farming will be sure that every day I will be doing something for our basic industry. In effect, we are all farmers in South Dakota; without farm prosperity there is none.

Whether my name is selected to be at the head of the Republican column on the South Dakota ballot next fall or not, my time and energy will be at the command of the Republican Party next fall.

Our life as a nation is at stake in a fearful world of shadow boxing with domestic problems like John L. Lewis and of bluffing with unmade H-bombs at a literal-minded Red Russia. It is a time when every American must live up to the best light he has and do what he can.

Imports Versus Supports

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. JENSEN. Mr. Speaker, business in surplus foods is very, very good, particularly if you are an exporter in a foreign country and want to sell in the United States.

Recently I reported the imports of some surplus foods July through November 1949. Today I have the figures from July 1 to December 31, 1949, and there has been, as I had previously indicated, a sharp increase, during the month of December. I am advised the Secretary of Agriculture remains unconcerned, despite seeming surplus problems and the outcry resulting from the waste of food and taxpayers' money.

It would appear that it is about time the administration, the State Department, and ECA and Secretary Brannan face facts and reconcile the conflict between our one-sided foreign-trade policy and the welfare of our domestic economy. The simple facts are that tariffs on most food and agricultural products have either been eliminated entirely or reduced so low that they no longer afford American agriculture the protection it needs. Meantime, the American farmer is being held up to scorn, and it is forgotten that we must maintain our farm income, so essential to our entire economy. Secretary Brannan apparently is now attempting to sell his impractical plan by using foreign imports as a club, that will result in further production cuts for the American farmer.

The imports of some surplus food commodities, as covered in my statement of February 7, 1950, totaled approximately $45,000,000, for July 1 to November 30, 1949. The new total for the July through December figure is approximately $57,000,000. These are commodities that the Commodity Credit Corporation owns and are in surplus supply or are under price-support programs or in danger of being soon. Given proper tariff protection, the cost of our agricultural price-support program could have been reduced by over $55,000,000 during the past 6 months.

From July through December, we imported 19,435,000 pounds of cheese—Government holdings on December 31 were nearly 24,000,000 pounds.

From July through December, we imported 795,000 bushels of wheat, not counting wheat in bond—Government stocks on December 31 were over 475,000,000 bushels.

From July through December, we imported 359,000 bushels of corn—Government stocks on December 31 were over 180,000,000 bushels.

From July through December, we imported 8,260,000 bushels of barley—Government stocks on December 31 were over 53,000,000 bushels.

From July through December, we imported 9,478,000 bushels of oats—Government stocks on December 31 were nearly 42,000,000 bushels.

From July through December, we imported 7,436,000 bushels of rye—Government stocks on December 31 were nearly 760,000 bushels.

From July through December, we imported over 48,940 bags of dried beans—Government stocks on December 31 were 10,850,000 bags.

From July through December, we imported 701,000 bushels of apples, while we were paying an export subsidy on over 1,500,000 bushels.

From July through December, we imported 86,000 pounds of raisins, with the surplus under marketing agreement orders estimated at 100,000,000 pounds.

From July through December, we imported 2,202,000 pounds of pork and pork products, while hog prices declined sharply.

From July through December, we imported 1,587,000 dozen eggs from Canada.

From July through December, we imported over 1,746,000 pounds of dried eggs, mostly from Communist China. We also imported 283,000 pounds of frozen eggs. The Government stock pile of eggs on December 31 consisted of over 73,500,000 pounds of dried eggs, and they are still buying at the rate of over 2,000,000 pounds a week.

Again I wish to ask the questions: How long can this foreign give-away last? When is the Secretary of Agriculture going to act to protect our farm markets?

The REA Versus SPA

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Waurika (Okla.) News-Democrat of June 10, 1949:

THE REA VERSUS SPA

Nobody, so far as we are able to learn, is in any way opposed to the REA, which has already brought electric light and power into much of the rural area of the United States. It has done much to improve living conditions in these areas and the move has the backing of practically all the people. But what a lot of people do object to is the Government going into the business of generating electricity in competition with private industry.

Private industry could not extend lines into the sparsely settled districts. This is a project that had to be subsidized by the Government. But those of the power-mad Government-ownership crowd want to dub everybody who opposes their schemes as being against REA.

There is a lot of talk now about increasing taxes in order to balance the budget, yet the Government continues to invest in private industry, using up a lot of Uncle Sam's revenue and at the same time putting out of business many of those concerns that supply that revenue.

The House of Representatives has passed a bill approving an appropriation of $12,625,530 for SPA.

The significant part of this bill is that it is all in southeastern Oklahoma. Of the lines that are proposed to be built none are less than 66,000 volts, and the line from Lulu to Anadarko is 132,000 volts. It covers the southeastern part of the State completely, extending into 28 counties and reaching every county seat in those 28 counties.

The program calls for the building of 33 substations where the current may be taken from the line and stepped down for use at lower voltages. For instance, the lines go to McAlester, where private companies already have three large lines running into Hugo now—no shortage of power at all. Yet

one of these 66,000-volt lines extends to Hugo and a substation will also be built at Hugo.

The SPA claims it intends to serve the REA's, some public bodies, and the rest will be new business. But they are building lines and substations sufficient to take over the entire electric load in this area just as completely as it has been taken over in Nebraska and in Tennessee.

Then, after they get this area entirely cleaned up, they plan on some other areas. Just which ones, we do not know.

They are doing this in the face of the fact that up until today this area has had all the current it wants and still has plenty for some time in the future, and before any great need would arise, the private companies will have installed an abundance of power.

This is just a scheme of the public-power advocates to go into the general electric business, and what alarms us is that the people, generally speaking, seem to think that we are in no danger at all of being swamped into socialism. Just take a look at what has happened in the last 10 years in England and then picture Uncle Sam still further in before another 10 years has passed.

Free enterprise has made America great and will, properly safeguarded, continue to make her great. Well, just write your Congressman and United States Senator and tell him how you feel about things.

We defy anybody to be any stronger for REA than we are, but, on the other hand, we take a back seat to nobody in being against the Government going into business against her own taxpaying citizens.

Rent Decontrol and New Housing Need

EXTENSION OF REMARKS
OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. MITCHELL. Mr. Speaker, in the near future, the Congress will begin consideration of a proposal to extend rent controls. The decision of Congress in this regard will have an immediate effect on virtually all of the Nation's renters, builders, and property owners.

Recently, Mr. Tighe E. Woods, Housing Expediter, directed a communication on this subject to the Washington Post. Mr. Wood, clearly analyzes and discusses the current problem in his communication which follows:

A COMMUNICATION—RENT DECONTROL AND NEW HOUSING NEED

(By Tighe E. Woods, Housing Expediter)

In the Washington Post of February 12, there appeared an article by Ysabel and Robert Rennie entitled "Rent Control Distorts Housing." The authors of the article say that the purpose of decontrol was to increase building, and that this objective was attained. In support of their statement they cite the increase in the total number of nonfarm units started from 1947 through 1949.

Since there never have been ceilings on the sales prices of new homes, the decontrol of rents for new construction was obviously not intended to stimulate construction for sale. It was intended to spur the building of rental property. The real estate industry had repeatedly asserted that if rent ceilings were removed from new construction enough rental housing would be built to wipe out both the housing shortage and the need for rent control. On July 1, 1947, when the Housing and Rent Act of 1947 went into effect, rent control was removed from all new construction, including houses completed on or after February 1, 1947. The decontrol of new rental housing now gave them their chance.

What happened after decontrol? The authors admit that most of the new houses were for sale, not for rent. Between July 1947 and October 1949, 431,400 rental-type units were started in nonfarm areas.

Rental-type housing since July 1947 constituted only 19 percent of all new nonfarm construction, and represented an addition of less than 3 percent to the number of occupied nonfarm rental units in the United States reported by the Census Bureau in April 1947.

Thus, decontrol did not result in any great outpouring of new rental housing as the real estate industry had predicted that it would. On the contrary, it fell far short of our previous achievements in this field. During 1925 and 1926 a total of 723,000 rental-type units were started in nonfarm areas. In other words, in those 2 years we produced 68 percent more rental-type housing than in the 28-month period after July 1, 1947, when new construction was decontrolled.

Obviously, we are paying a premium in high rents for new housing and, as the authors point out, there are two levels of rents—a high one for uncontrolled new construction, and a lower one for controlled housing. The authors state that when rent controls go off the differential will disappear—rents for new construction will fall, and the formerly controlled rents will rise. In a general sense that is true, although there will probably always be some differential between new and old housing. People are willing to pay something more for the latest equipment in a new house, for lower initial costs of maintenance, and for the general feeling of comfort in a new home. Nevertheless, the two groups of rents will tend to move toward each other.

The real question, which has been left unanswered, is "At what point will they tend to be equalized?" All evidence points to the conclusion that the high rents will drop very little and the presently controlled rents will rise a great deal. In other words, the more than 11,000,000 families now paying controlled rents will pay considerably more; the few hundred thousand families now paying uncontrolled rents for new housing will pay a little less. For new houses, high construction costs will act as a brake on rent reductions.

For controlled housing, a survey recently made by the Bureau of Labor Statistics in Dallas, Tex., where rents were decontrolled in June 1949, shows the probable effect of decontrol. Let us see what happened to the rents of the units in Dallas which were under rent control at the time the city council voted decontrol, excluding those units which were under lease and could not have their rents increased. The survey showed that by November 1949, only a few months later, 67 percent of these units had rent increases averaging 35.4 percent. If we throw in the 33 percent of the units which had no increase, the general rise in rents is 20.5 percent, but this figure does not measure the actual burden on the majority of the tenants who had to pay rent increases. To use a combined average including the units which had no increase is like saying that a millionaire and a pauper have average assets of $500,000, and just as unrealistic. The significant fact is that two out of every three tenants had to pay an average rent increase of 35 percent.

The authors imply that all controlled units have been held frozen at low levels. I should like to correct this false implication. Rent increases have been granted through individual adjustments to more than 2,000,000 units under rent control, and to more than 430,000 units through area-wide increases. Over 2,250,000 units have had rent increases through voluntary 15-percent leases signed in 1947 and 1948. Finally, almost 3,000,000 units have been decontrolled since April 1, 1949. This certainly does not add up to any picture of a rigid freezing of rents.

The authors say that the high premium on new rental housing encouraged builders to bid up costs, that prices for homes for sale were consequently inflated because they are a mirror of inflated rentals, and that if rent controls go off builders will have to cut costs and lower profit margins if they want to tap the great new potential market for homes at lower prices that will be created by decontrol.

This is really putting the cart before the horse. In the first place, the premium on new rental housing was, in itself, in part a recognition that construction costs had already risen to such an extent as to require a rent differential between new and old housing. In fact, during the period when new housing was subject to rent control, we recognized this need and established higher maximum rents for new construction to compensate for higher construction costs. What the authors are saying, in effect, is that the builders of new housing for sale—and this new sales housing was 81 percent of the total since July 1947—went ahead merrily bidding up their costs because rents were decontrolled for the remaining 19 percent of the new construction which was of the rental type. That makes no sense whatsoever.

If the authors' reasoning had any foundation in fact, we should find that the big rise in building costs had taken place since the decontrol of new construction in July 1947. Exactly the opposite happened. The Bureau of Labor Statistics reports that by June 1947 its index of wholesale building material prices had increased 58 percent above the 1942 average. After June 1947 the index increased only 17.2 percent to its peak in September 1948, and it has declined since that date so that in December 1949 it was only 9.3 percent above June 1947.

The biggest factor in the rise of construction costs was the premature lifting of price ceilings in November 1946. The building material price index jumped 29 percent in the short period from October 1946 to June 1947. Average hourly earnings of building-construction labor show a similar big rise before July 1947 and a much smaller increase since that date. Since most of the increase in building costs took place before July 1947, attributing the rise in building costs to decontrol of new construction (which did not take place until July 1947) is a distortion of the facts.

The great new potential market that the authors talk about is not something that will magically come into being the day rent controls are lifted. That great potential market is here today. Our real need today is for low-priced and low-rent housing within the means of the vast majority of our people—for homes to sell for less than $8,000 and to rent for less than $75 a month. Builders don't have to wait for the end of rent control to tap this market. They can do it right now, if they will cut costs and lower profit margins.

The end of rent control will not create that market. That is the cart before the horse all over again. But if builders will build for that market now, and build enough homes, the need for rent control will be ended. That is something I should like to see happen as soon as possible. However, premature decontrol will mean great suffering and hardship for the American people; and until most men can house their families decently at a rent or price within their income, decontrol would be premature and foolhardy.

Incorporating Girl Scouts

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. BOLTON of Maryland. Mr. Speaker, I was delighted to vote for H. R. 6670, to incorporate the Girl Scouts of the United States with domicile in the District of Columbia.

The Girl Scouts were organized to promote the qualities of truth, loyalty, helpfulness, friendliness, courtesy, purity, kindness, obedience, cheerfulness, thriftiness, and kindred virtues among girls as a preparation for their responsibilities in the home and for service to the community. No higher ideals could be taught to the future womanhood of America. These young women will, in large measure, guide the future destiny of this great Nation, because it is the hand that rocks the cradle that rules the world. Together with the Boy Scouts, these young women will be the future leaders of our country. They are doing a splendid job to preserve democracy in America and in teaching the youth of other countries who attend their conventions, what we mean by democracy. Would that we had more Girl and Boy Scouts in America to make their Scout promise, as follows:

On my honor, I will try to do my duty to God and my country; to help other people at all times; and to obey the Scout laws.

What of the Night?

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. JENKINS. Mr. Speaker, I have just come upon a copy of the December 1949, issue of the Ohioan Post, published by Ohio University at Athens, Ohio. One of the contributors to that issue was our distinguished colleague, Congresswoman FRANCES P. BOLTON, of the Twenty-second District of Ohio.

Mrs. BOLTON'S article, What of the Night?, is so replete with political, economic, social, financial, agricultural and labor facts and economies, that it merits the reading of every Member of this House.

Her pictorialization of the news of the day, of changes that have taken place in these last 20 years of congressional activities; of the days when annual appropriations by the Congress were still in the millions instead of billions of dollars; of the waste, inefficiency and extravagances that have characterized the maladministration of Federal affairs in recent years; her discourse on bureaucracy; so-called Federal aid; of a Government that is today spending more than $4,000,000 an hour every day of the year; make it worth while to all to read this article by FRANCES BOLTON, What of the Night?

WHAT OF THE NIGHT?
(By Congresswoman FRANCES P. BOLTON)

As the outline of this article is being written, the telegraph wires, the radio, the television, and the cables are carrying the happenings of today to the people of the world.

Over the radio comes word that "the weatherman advises that a blanket of snow is being laid over the Midwest"; "there is no further news about the steel strike, affecting not alone the steelworkers, but hundreds of thousands in other industries"; "that settlement of the coal strike is further away than ever"; "schools are closed in Indiana for lack of coal," says the Governor of Indiana; "the Governor of Illinois stated today that coal will be rationed in that State if the strike continues 10 days longer"; "the Government opened negotiations with eight foreign nations to provide them with arms under the military-assistance program"; "Dictator Tito of Yugoslavia will be permitted to buy several civilian, but no military planes"; "Senator TYDINGS, of Maryland, upon his return from Europe, states that 'the Russian Army is many times larger than our own, but the United States Air Force is about equal to Russia's.'" Now comes word that "the Governor of Minnesota has just stated that with snow falling, the small towns of Minnesota are in a pathetic condition for want of coal."

"Within a few hours President Truman will address the Nation. The title of his speech has not yet been announced, but the President says it will be 'bipartisan and nonpolitical.'" The country is awaiting the President's address.

To quote a Nation-wide popular radio commentator, "That is the top of the news as it looks from here."

Many in Congress feel with me that each day brings not alone a new challenge but a new crisis to the people in America. These challenges have to do not alone with the lives and fortunes of individuals, both young and old, but seemingly have to do with every spiritual and material interest to which all studious and contemplative minds address themselves in this modern civilization.

Tremendous and epochal changes have taken place in America in these last 20 years. They first appeared as the backwash of the great world-wide economic depression which engulfed this Nation in the late twenties and the early thirties. They continued insofar as our domestic front was concerned until the lush boom times which struck our country with the beginning of World War II.

A veritable catalog of changes have occurred. Changes with respect to industry and agriculture, in production, marketing and in the pricing systems. Changes with respect to bank deposits and banking controls affecting deposits and loans and reserves. Changes having to do with labor and management in their relations with wages and with hours. In the field of social security, changes have taken place as to the care of the aged and the indigent. Then there are questions of taxation * * * extended bureaucratic controls * * * management of the public debt * * * the extent of financial support that is being rendered not alone to the veterans of all wars but for the support of foreign nationals across the seas. The foregoing are all problems to which the youth of America will some day have to address themselves and solve in their own time and in the national interest.

My personal knowledge of congressional activities goes back before the days of billion-dollar Federal appropriations, when Government expenses were still in the millions. This Eighty-first Congress, in its first session, appropriated roughly $37,000,000,000 in cash, but pledged another additional four and a half billion in contract authorizations. These figures do not include six billion for interest on the public debt * * * half a billion for statutory public debt retirement * * * and another billion for annual indefinite appropriations. It all adds up to the staggering total of almost $50,000,000,000 which we, the taxpayers, must meet.

How well I recall the occasion and the clamor provoked by the first year of deficit spending by the Congress. Yet during the past 16 years I have seen billions annually appropriated and expended in excess of Federal income. The exception to this current practice was the two memorable years when the Republican Party controlled both Houses of the Eightieth Congress of these United States.

The waste, the inefficiency, the extravagances which have characterized the maladministration of Federal affairs in recent years were most vividly disclosed by the talk recently made in Cleveland by the Honorable Louis B. Johnson, Secretary of Defense. In discussing the economy drive which he recently launched, Secretary Johnson said he was convinced he could save hundreds of millions and even billions of dollars without reducing the fighting efficiency of our armed services, and even a billion dollars, my friends, is a saving of one thousand million of the taxpayers' dollars effected in but one department of Government alone.

It is my conviction, reached after careful study, that a saving of more than $5,000,000,000 could be effected in Federal expenditures in the next fiscal year alone if equally sound business principles were made applicable to expenditures in all other departments.

Second only to the proper management of the national debt comes a factual and long-delayed revision of the tax structure of the Federal Government, which has not been basically altered in the last three quarters of a century.

Up until 1939 all the new revenue measures that have been written were amendments and additions to, or extensions of, the basic tax structure, which dates back to the year 1874.

To have even a meager idea of the tax laws of these United States one must make practically a lifelong study of tens of thousands of pages of small print comprehended in hundreds of volumes of tax digests.

In addition to the laws themselves as enacted by Congress and signed by the President, are hundreds upon hundreds of amendments thereto, administrative rulings, regulations, interpretations, which cover the collection of taxes and which by virtue of usage alone are now part and parcel of the law of this land.

Because of congressional delegation of power to executive departments in order to execute loosely drawn legislation, and because of rulings pertinent to legislative enforcement, the day is not far distant when the Congress of these United States will be called upon * * * actually to repeal laws which as a Congress they never enacted.

The number of these instances are legion. The rulings, orders, and so forth, are applicable to farmers, to manufacturers, to common carriers, to those who come under the provision of the Federal Trade Commission, the Pure Food and Drug Administration, the Federal Power and Security and Exchange Commissions * * * and a host of other agencies who have now issued hundreds of administrative rulings which because of usage courts have held * * * to have the full force and power of law.

The last two decades have seen deep and penetrating incursions made into the field of States' rights. The adjustment of the rights of sovereign States to a highly centralized form of government is a matter which is going to invoke the greatest intellects that

will develop in those who now constitute the American youth.

For years past I have argued with my colleagues that there is in fact no such thing as extending Federal or financial aid to the States.

Political aid, Yes. Financial aid, No.

On innumerable occasions I have advanced argument that every last dollar that is covered into the Federal Treasury at Washington must first be collected either by direct or hidden taxes from the people in the 48 States, our insular possessions, the Territories of Alaska and Hawaii, or the District of Columbia itself.

So-called Federal aid to States whether for highways, bridges, roads, schools, or any other purpose whatever, must first be collected from the States—by the tax gatherers of the Federal Government. Then, by congressional action, and by another group of Federal agents it is returned in part only to the States from which it was collected.

Experience has taught me that the dollar which citizen taxpayers in the States send to the Federal Treasury in Washington is not as big a dollar when it gets back home, because bureaucracy imposes a heavy "brokerage fee" for first making the collection and then the refund.

It is both significant and startling that for the year 1948 the total of all grants and aids returned to the State of Ohio (which grants total 45 in number for various activities) but exclusive of the $157,000,000 paid for veteran benefits, the Federal Government paid back to the State of Ohio a bare $80,000,000 as contrasted with the total of $2,665,000,000 that it took out of the State.

PART II

I have just listened with deep interest to all that the President had to say in the memorable broadcast on this the last day that marks the 100th anniversary of the Louisiana purchase and the establishment of the territory of Minnesota.

In no one sentence did the President address himself to a single one of the many issues which confront this country.

He characterized as reactionaries each and every one who gives any thought to the future or to the administrative tasks which lie ahead!

He totally ignored what Governor Thye of Minnesota, who sat on the platform with him, had stated earlier in the evening about the pathetic condition of the small towns of Minnesota suffering for want of coal.

Neither did the President make mention of the fact that one person out of every nine in these United States is now on the pay rolls of Government, Federal, State, and local, drawing all or a part of his income from the taxpayers of the United States.

He made no mention of the fact that there is one Government payroller for every three families in the United States. Neither did he mention the impending deficit of nearly $6,000,000,000 which the Government is at present facing in this the first fiscal year since his reelection to office.

What the President stated in fact was that his personal program was not alone to continue, but that he intended to extend the peculiar brand of national socialism which has been slowly engulfing America.

The President did say in his talk that this was a day of change—but what a change. From a balanced economy to reckless bureaucracy, and still more reckless spending.

He did not tell the people that he is spending more than $4,000,000 an hour of the taxpayers' money, or nearly a million dollars more every hour of the day and year than is collected in taxes.

Yes; it is a different day—it is a day of change—a day when it would seem that our National Government no longer believes it must pay as it goes.

It is because of the President's unwillingness to face these facts that I put the question to you, my readers: What of the night?

Platform of American Veterans' Committee

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. BOLLING. Mr. Speaker, under the unanimous consent granted me, I include that portion of the platform of the American Veterans' Committee which deals with veterans' affairs:

VETERANS' AFFAIRS PLATFORM

PREAMBLE

We believe that military service in time of war is an obligation of citizenship in defense of our families, our homes, our security, and our freedom.

We further believe that to each man or woman, physically disabled by such service, and to the immediate families of those men and women who suffered death in such service, our country should provide adequate medical, financial, and other benefits and assistance. We are opposed, however, to Treasury raids and grab-bag legislation and believe that rehabilitation and reintegration into the community is the scope and purpose of a veterans program.

We maintain that it is the veterans' basic need and right that he be properly restored to the economic and social status which he would normally have achieved as a civilian had he not entered the service, without regard to his race, color, creed, or political belief.

The achievement of economic security for veterans through sound economic planning as citizens rather than through special grant or favor as veterans is basic AVC philosophy. To effect these ends, we urge:

CARE OF THE DISABLED AND DEPENDENTS

Adequate care of veterans disabled in military service and of the immediate families of those who suffered death in such service requires:

(a) Comprehensive, careful review of the adequacy and fairness of the existing compensation rates, and of the rating system employed by the VA;

(b) Provision for adjusting compensation rates periodically in accordance with movement of the BLS Consumers' Price Index;

(c) That the VA should raise its compensation schedule for disabled veterans with dependents;

(d) That the VA conduct a continuing active program to aid disabled veterans in securing gainful employment;

(e) Ironclad preference in Federal, State, and local governments for veterans who by reason of their war service are amputees, paraplegics, hemiplegics, blind, or otherwise disabled to a degree of 50 percent or more;

(f) Comprehensive, careful review of the adequacy and fairness of the existing medical facilities for treatment of veterans with a view to extending the service provided by the VA in this respect.

(g) Provision for increasing Government appropriations to the VA to carry out the extension of medical service to veterans.

(h) Provision for developing a training program to adequately staff VA hospitals.

(i) An equalization of the benefits of hemiplegics and paraplegics.

(j) Extension of the GI bill of rights benefits to widows and orphans of the men and women who died in the service.

EDUCATION, TRAINING, AND REHABILITATION

We affirm that use of Federal funds to speed full adjustment of the veteran to civilian life not only constitutes simple justice, but represents a worth-while investment in increasing the productivity and enhancing the culture of our Nation. Therefore, we support:

(a) The reversal of the apparent trend by the Veterans' Administration denying educational and vocational rehabilitation benefits through cutting the essential staff for these services and through unreasonably stringent requirements of veterans who need these services.

(b) Increasing the base-subsistence allowances from their present figure to such figure as is justified by increases in the cost of living as measured by the BLS consumers' price index.

(c) Legislation assuring veterans in the employ of the Government of the right to educational leave at the earliest possible date and in no case later than 1954.

(d) We call for the raising of the present limit of $500 for books and tuition to $600, and that the maximum total allowance for the purpose be raised from $2,000 to $2,400. Ceilings on earnings should be raised proportionately.

HOME-LOAN GUARANTIES

Increases in building costs and in the cost of living have rendered the home-loan-guaranty program, ostensibly guaranteed by the GI bill of rights, relatively meaningless. To accomplish the purpose of the original act, we believe that it is to the best interest of the veteran that the present rate of interest on loans be decreased and to this end we urge that the Government establish a Veterans Home Owners' Loan Corporation, providing for 100-percent financing of GI loans at a rate of interest lower than the current 4 percent.

DISCRIMINATION

We call upon the VA and all State agencies administering veterans benefits to discharge their duties without any discrimination whatever based upon race, creed, color, national origin, ancestry, or political belief, and we urge these agencies to exert every effort to induce employers, loan agencies, and education institutions to make veterans benefits available to all veterans without such discrimination.

We urge the elimination of Jim Crow practices within all branches and departments of the armed forces. Furthermore, we call for a review of all blue discharges by an interracial civilian examining board.

We call for the initiation by the Veterans' Administration of machinery to investigate reports of unpaid terminal-leave benefits and the denial of the 52–20 payments to Negroes in the South, and for provision of machinery to aid in the collection of these benefits and to insure the collection of the pending NSLI refunds.

EMPLOYMENT

In addition to the assistance we urge for disabled veterans, and within the context of AVC's long-standing support of the Full Employment Act of 1946 and the various improvements in that act which we urge elsewhere in the platform, we ask that the Congress revive the benefits of the Readjustment Allowance Act, otherwise known as 52–20, and extend these benefits, increasing the benefits therein in accordance with the movement of the BLS Consumers' Price Index since the amount of benefits was set.

We urge elimination of superpreference in the civil service except as mentioned above in the case of disabled veterans. Veterans, whether in public or private employment, should be given seniority credit for the time spent in military service and in vocational rehabilitation after release from such service. The present 5- and 10-point preference in civil-service examinations should be continued, but a passing grade should be required before the preference is given.

Until Congress acts to remove the absolute preference given veterans in civil service, reductions in force in the appropriate Government agencies should give consideration to measures alleviating the hardship imposed upon career employees by such preference policy. These measures should include:

(a) Where reductions in force are ordered the workweek of all employees be shortened to minimize the number of lay-offs.

(b) Reducing the retirement age for those involuntarily separated from service.

(c) Maintaining an over-all Federal seniority list so that those laid off by one agency may be transferred to another agency.

BONUSES AND PENSIONS

As citizens first and veterans second, we stand opposed to bonuses and general pensions, the right to which rests solely upon service in the armed forces of the United States. We regard such bonuses and pensions as economically unsound political hand-outs, for which the veteran himself would ultimately pay. We propose, instead, as benefiting veteran and nonveteran alike, the AVC program of social legislation.

RESOLUTIONS

Employment

Resolved, That the chapter of the AVC should encourage local organizations to assist in the economic rehabilitation of the disabled veterans by urging their employment by local employers and by assisting in the merchandizing of their products.

Insurance

Resolved, That we call for making renewable term insurance a permanent program on a convertible and automatically renewable basis.

Because of large overpayments, veterans are now going to receive a large refund on payments made. We ask the VA, therefore, to immediately reduce the amount of premiums on GI insurance, and to make available to veterans any additional amounts of insurance they desire.

We ask that AVC take definite steps toward insuring that all veterans in the South are made aware of this refund, and that some plans be devised through southern AVC chapters and the Veterans' Administration to get the necessary forms for refunds to all who are entitled to them.

Arthur Krock's Interview With President Truman

EXTENSION OF REMARKS

OF

HON. JOHN A. McGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. McGUIRE. Mr. Speaker, considerable comment has appeared in the press recently in connection with an interview with President Truman published by the New York Times over the byline of Arthur Krock.

Mr. Krock, who usually expresses the Republican viewpoint in his column on political and governmental affairs, can scarcely be regarded as an admirer of the Democratic Party or of its program.

For this reason it is especially interesting that Mr. Krock finds, despite the Republican sloganeering concerning socialism, that our President is sincere in his efforts to preserve our great free-enterprise economy and our democratic form of government.

For the convenience of the Members who may not have read this article, I am inserting it in the CONGRESSIONAL RECORD:

AN INTERVIEW WITH TRUMAN: HE SEES MAN'S BETTER NATURE BRINGING PEACE TO ILL WORLD—COVERS WIDE FIELD—HE SEES NORMAL DEALING WITH SOVIET HOPELESS—BROKEN PACTS CITED—DEFICIT SPENDING DECRIED—GOP TAX SLASH IS BLAMED—"RED HERRING" HELD TO APPLY TO SPY HUNTERS' METHODS

(By Arthur Krock)

WASHINGTON, February 14.—In the age of atomic energy, transmuted into a weapon which can destroy great cities and the best works of civilization, and in the shadow of a hydrogen detonant which could multiply many times that agent of destruction, a serene President of the United States sits in the White House with undiminished confidence in the triumph of humanity's better nature and the progress of his own efforts to achieve abiding peace.

This President, Harry S. Truman, is a controversial figure in the world and in domestic politics. But to those who talk with him intimately about the problem of global life and death, his faith that these good things will happen, and probably in his time, shines out with a luminous and simple quality which no event or misadventure of policy can diminish.

The following is an account of the President's current views on the international and domestic issues of his time which I can vouch for as to accuracy. It may serve further to reveal to doubters and critics what manner of man he really is; and crystallize in the minds of those who instinctively supported him in the campaign of 1948 what were the personal qualities they sensed but did not always comprehend.

UNDAUNTED BY WAR CLOUDS

He sits in the center of the troubled and frightened world, not a world he ever made; but the penumbra of doubt and fear in which the American Nation pursues its greatest and most perilous adventure—the mission to gain world peace and security while preserving the strength of the native experiment in democracy—stops short of him. Visitors find him undaunted and sure that, whether in his time or thereafter, a way will be discovered to preserve the world from the destruction which to many seems unavoidable, as moral force is steadily weakened by the conflict of two great rival systems and by new skills in forging weapons of destruction that make the discovery of gunpowder seem like the first ignition of the parlor match.

His reasons for this serenity and this sureness emerge from current conversations with the President on the issues of the time. For Mr. Truman is the kind of American who must be observed at first-hand, free to speak with the candor and natural piety of his make-up, to be wholly understood.

In such meetings he answers questions that bear directly on the problems before him. And these questions and his answers that follow (the latter put mostly in the indirect discourse which is due to a President for his own protection and that of the country) reveal the man and what he conceives to be his mission and his methods of accomplishing it better than the formal record can do.

CHANGE ON SOVIET EXPLAINED

Question. You recall the hopeful prospect of peace that surrounded you, and you expressed, at San Francisco in 1945 when the United Nations was organized. What has happened since to bring about deterioration to the point where a member of your Cabinet can say of it: "The cold fact is that we are still in a hot war?" When did you conclude that normal negotiation with the Kremlin was hopeless?

Answer. The President said he remembered that time well, and with what good-will toward the Russian people and their rulers he went to Potsdam shortly thereafter. There he explained to offer help for reconstruction, of Russia as well as the rest of the world, on a very large scale. He remembered with pride and sympathy how Russians had smashed the German armies in the East, and he believed their assistance was necessary to win the war against Japan. But he found that all Stalin wanted to talk about was the abrupt cessation of lend-lease; hence the atmosphere was unfavorable to what Mr. Truman had in mind.

"To abolish lend-lease at the time was a mistake." But he was new then; the papers had been prepared for Roosevelt, and represented a Government decision. He felt there was nothing else he could do but sign. He had no staff and no Cabinet of his own. Now he has both.

The agreement the Russians made at Yalta to enter the war against Japan was the only one they ever kept out of nearly forty. He has no hope they will keep any which now it would be good policy to seek. But he remains hopeful of the outcome.

When the Russians, after the Potsdam agreements, blocked East-West trade he began to lose the last vestige of hope that what seemed so good a peace prospect at San Francisco had survived. Gen. George C. Marshall, he recalls, came back from Moscow deeply discouraged. And when Ambassador Bedell Smith reported to the President from Moscow that the Russians were carefully concealing from the people all facts about the war assistance we had given them, and what our proposals had been for joint reconstruction of the world, that last vestige disappeared.

BARRED DIVISION OF JAPAN

It would have been the same in Japan as in Germany if the President had not demanded an American as the allied generalissimo there at the signing of the surrender on the *Missouri.* Otherwise the Russians would have divided that country as they have Germany; and the situation in the Far East would have been so much worse than it is that one can take comfort from it.

The real trouble with the Russians is that they are still suffering from a complex of fear and inferiority where we are concerned. If a campaign had not been in progress in 1948 he would have sent Chief Justice Fred M. Vinson to try to straighten out Stalin and the other Russians leaders on this and on our real intentions. Maybe that will be the thing to do some time. But in nothing must we show any sign of weakness, because there is none in our attitude. To appreciate some of the importance of this read "Berlin Command" (a book by former Brig. Gen. Frank L. Howley, published by Putnam's, New York).

He is reliably informed that the Russians have 16,000,000 people in concentration camps. This is the way of the police state, which he finds utterly abhorrent.

Question. In view of your background, training and dislike of debt, how do you reconcile these with your toleration of deficit spending and your advocacy of new spending programs? Critics of the Fair Deal program say it proposes permanently to burden the more able, diligent and successful with the cost of "insuring all others against the results of their own improvidence, ill-luck or defective behavior"; that this is very nearly the Marxian doctrine, "to each according to his need, from each according to his ability."

Answer. In no sense does the President tolerate deficit spending. There wouldn't be any now if the Republicans had not cut the income taxes in the Eightieth Congress. Tax changes should not have been made piecemeal at any time, but conformed to a general and revised plan. This was equally

true when he approved the repeal of the excess profits tax. He wishes he had not done this, because it was piecemeal also. But then again he was new at the job.

AIMS AT EXPANDED ECONOMY

His object is steadily to expand the economy so as to provide jobs and careers for the million and a half young people who come annually into the stream of commerce. This cannot be done without the measures outlined in the Fair Deal. From a peak of 59,600,000 of persons employed in civilian activities last September, the number has gone down to 56,000,000, with 4,800,000 unemployed. A certain amount of unemployment, say from three to five millions, is supportable. It is a good thing that job seeking should go on at all times; this is healthy for the economic body. But the main thing is to keep the economy rising to absorb the new entrants into the stream of commerce. There are now 62,000,000 employed in the labor force in the United States, including the military. Ten years ago whoever had suggested that this could happen would have been written down a fool or a dreamer.

Senators GEORGE and BYRD call for a reduction of $6,000,000,000 in the budget. They know very well it can't be done. The President has cut the defense requisitions this time from $22,000,000,000 to less than $14,000,000,000 and paid for the military-aid program for the North Atlantic Treaty nations out of it also. He is an old hand at budget making, and at the last session he sent a tight one to the Capitol and they sent it back with increased totals. He feels he has cut this one as much as can be done in consideration of the basic needs of the foreign program and of the dynamic domestic economy he seeks to create and maintain. This in itself will bring an end to deficit spending, which represents exactly the amount the tax cut of the Eightieth Congress cost the revenues. He hates deficit spending as much as HARRY BYRD ever could, and it is only a temporary condition, brought on by necessities which could not be removed by any genius of statecraft known or available to him.

A reduction of more than $8,000,000,000 in the defense bill, with $1,000,000,000 for the military-assistance program (MAP) found extra, compares rather well with the blueprint of the economizers.

He has no policy which contemplates permanently burdening the more able, diligent and successful with the cost of insuring all others against the results of their own improvidence, ill luck, or defective behavior. This charge—also that the Fair Deal approximates the Marxian doctrine—is absolutely untrue. The President's aim is to preserve life and property and expand opportunity and the standards of living. There isn't a drop of Marxist or Socialist blood in him.

The globe shows vast areas inhabited by hundreds of millions of people who want to improve their lot, and this can be done with our American surpluses and with a moderate amount of our assistance, financial and technical. When that is done the chief threat of international communism will pass, and this is the primary objective of his policy.

Question. Your views on party obligation: that all elected as Democrats must abide by platform pledges. Suppose (1) you construe a pledge in detail differently from a Member of Congress; or (2) he has made a commitment to the contrary prior to the adoption of the platform. Is he recreant as a party man?

Answer. The President does not expect 100 percent support from those elected to Congress on the same platform with him. He recognizes that local situations may require some Members to refuse to follow a President on certain matters. As a Senator, he reserved the right of independence at times for himself. But he does not believe that, after a platform has been duly adopted by a convention, all those who have participated or run on that platform should generally abide by its detailed construction by the national candidate.

Only that national candidate, the President, can translate a platform into actionable terms. There are few chairmen of congressional committees who follow the platform and the President's construction of it more than 50 percent of the time, and this is very bad. These chairmen should be the right arm of the administration in orderly government by party. If there is any other way to have a responsible Government, he does not know what it is.

GIVES HIS STAND ON FEPC

Question. You favor the Fair Employment Practice Commission legislation providing Federal police powers in the States to correct employment discriminations, some of which are implicit in the present condition of racial minorities. You know intimately the condition of the Negro race and the limitations of its capacity to fill certain kinds of employment. Many believe that education will be required before an FEPC could operate even on a voluntary basis. Why then is it desirable in mandatory form, requiring that the burden of proof be on the employer?

Answer. The President would not support or continue to support any legislation which deprived a citizen of the right to run his own business, for which that citizen was responsible, as he thought best. The President does not agree that the administration's FEPC legislation would have any such result. If he thought so, he would not be for it, and under him it will not be so administered.

But opportunities to get jobs for which applicants are fitted by every fair test must not be denied in this country on grounds of race, color, or any similar discrimination. The value of the FEPC bill will be to give this position the dignity, strength, and clarity of a national policy, not just political, but social and economic as well. For that reason he wants the bill passed, even if it were only to serve as a club in the closet.

EARLY "INADEQUACY" DESCRIBED

Question. When you became President you expressed a sense of inadequacy which many thought was far too humble for your abilities. Now and for some time you seem to have dropped that feeling overboard, where it belongs. How did this change come about?

Answer. When Mr. Truman became President he did not intend to convey the sense of inadequacy which many people thought he did. He came into office without a single member of the Cabinet who was devoted to him personally, without having been briefed on the processes or current problems of government, without knowing who the people were to whom he should apply for the counsel and facts a President must have to serve the best interests of the country. Often some member of that Cabinet tried to see him privately to complain about another one. He stopped that: first, by recounting the incident at the Cabinet meeting and asking the two or three involved to work it out; second, by getting his own Cabinet. Now he is served by the best personal staff he could find and by a loyal and able Cabinet. The problem remains how to find the very best qualified persons outside for counsel and for collecting the facts in special matters. That is an unending task, as well as a vital one. But the inadequacy of the position he was in to do that has disappeared, and that was all he meant at the time.

Question. It is true that chairmen in Congress get these places through senority, and it is a bad system. Have you any idea of a better one, or any other that would be operable?

Answer. The seniority system by which chairmen of committees in Congress are selected is a defective one because the best qualified men do not always get the jobs. But any substitute that has been proposed is unworkable, and the present system has the merit of keeping order in the legislative process. If the Administration were allowed to pick the chairmen, which is one substitute that has been proposed, the Executive would dominate Congress and this is not only undesirable but contrary to the intent of the Constitution.

Question. Will you explain your use of "red herring" and "hysteria" in the context of the spy trials and hunts since you are charged (1) with not comprehending the gravity of this situation or (2) playing for votes of groups under suspicion?

Answer. When Mr. Truman on several occasions spoke of "hysteria" and "red herrings" in connection with revelations about espionage, and so forth, he was criticizing the methods employed by the Un-American Activities Committee and by individuals in Congress and out of it. The objective of having only loyal citizens in Government service and in positions of importance and responsibility has been his fundamentally, too.

His loyalty board (Chairman Seth W. Richardson) has done much more effective screening of this kind without headlines and personal publicity than the congressional spy hunts, which have been animated chiefly by quests for headlines and personal publicity. These produced the hysteria he was talking about, reminding him of the public excitement in the days of the Alien and Sedition Acts, the Know-Nothing Movement, the Ku Klux Klan, and the red scares of 1920. And he has never changed his opinion that the way the Un-American Activities Committee handled the Hiss and other cases was a red herring to distract public attention from the blunders and crimes of the Eightieth Congress.

When the President was chairman of the special Senate committee during the war, he followed a method which he sought to endorse by contrast when he made the above comments about hysteria and red herrings. Whenever he found something wrong or some indication of potential wrong in the war program, he privately communicated the facts to the departments concerned, and usually it was corrected or averted without the kind of publicity that unfairly shakes public confidence, and spreads through the more than two millions in Government employ a feeling of insecurity in their jobs which hampers and damages their work.

The result was that no major scandal occurred in the war. This is the responsible method which, because it was not followed in these other matters, impelled him to say what he did. The Government service is 99 percent plus loyal and secure.

If the facts about a Government employee show the contrary, out the man will go at no expense to public stability—though, it is true, without a headline for a politician who has that chiefly in his mind.

Such are the President's statements on his views.

Those who have the privilege, necessarily a limited one, of searching in this way the mind and purpose of Harry S. Truman usually come away with faith in his honesty and courage. They usually come away also with the conviction that, whether or not he has the greatness which the times require—a question that must be left to the verdict of history—he means to preserve the basic system by which this Nation attained its greatness, and to achieve and maintain that peace which has been the highest aspiration since 1783.

Commemorative Stamp Issues

REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mrs. BOLTON of Ohio. Mr. Speaker, for several years I have been pursuing the matter of special and commemorative issues of stamps with only confused information from the Post Office Department.

I have received a most clarifying letter from the Third Assistant Postmaster General in whom rests the departmental responsibility for these issues. Certain that many other Members have sought information in this field I am inserting General Lawler's letter in the RECORD as part of my remarks:

POST OFFICE DEPARTMENT,
THIRD ASSISTANT POSTMASTER GENERAL,
Washington, D. C., January 26, 1950.
Hon. FRANCES P. BOLTON,
House of Representatives.

DEAR MRS. BOLTON: This will acknowledge your letter of January 5 and other correspondence relative to commemorative stamps.

In the Postmaster General's letter of February 9, 1949, it was explained that under section 351, title 39 of the United States Code, he has the authority to issue new stamps of both the ordinary and commemorative variety. Prior to 1948 all postage stamps were issued under this authority, the ordinary stamps being determined by the various postal rates in force and the public convenience. Commemorative stamps are issued to recognize important historical anniversaries of events of national importance, or of famous persons. The Postmaster General, under the authority cited above, determines the number of new stamps to be issued.

There is a limit to the number of commemorative stamps that may be issued each year, as they must be manufactured and distributed in addition to approximately 20,000,000,000 stamps of the ordinary variety. It has been found from experience that not more than 10 or 12 commemoratives can be issued each year without dislocating normal functions or being accused of exploiting the collecting public. After a program of this extent had been approved for 1948, the Eightieth Congress enacted legislation requiring 14 additional stamps to be issued in a period of 6 months. This greatly augmented program had many unfavorable results, one of which was the delay in filling orders by the Philatelic Agency, as was brought to the attention of this office in your letter of February 1, 1949.

Philately is a hobby enjoyed by millions, among whom are many school children and people in modest financial circumstances who can ill afford more than a few pennies at a time for stamps. To issue a large number of commemoratives each year makes the cost of collecting prohibitive to these people, who then protest vigorously to the Department. A problem is also presented by our Philatelic Agency when stamps are issued in such profusion. Additional personnel, working quarters, and equipment are not immediately obtainable, and new clerks must be trained in the technicalities of philately if patrons are to receive the service they demand.

You will note in the attached table showing the issues in 1948 that the number of each stamp printed was reduced from 115,000,000 to 50,000,000 or 60,000,000, beginning with the Salute to Youth issue. This action was necessary in order to keep abreast of the numerous issues being released. Such reduction results in a higher philatelic value being placed on the stamps, which is undesirable from the small collector's point of view, as he is then required to pay higher prices to dealers for the stamps he was unable to obtain from the post office. The Philatelic Agency could not keep apace with such a program as that of 1948, which also seriously retarded the distribution of operating supplies of ordinary stamps to postmasters.

There is attached a statement showing the commemorative stamps issued during 1948 and 1949, together with the number of each sent to postmasters, and their total manufacturing cost. Also given is a statement showing the sales, salaries, etc., of the Philatelic Agency. To determine the total cost of providing commemorative stamps it would be necessary to add to the manufacturing cost and philatelic salaries not only that part of the cost of transportation, heat, light, power, and storage involved, but to apportion the time and salary of every clerk in the 41,000 post offices who handled them. While it is possible to determine this cost, the Department has not undertaken the task, as the final result would be of no value. The profit derived from the sales of commemorative stamps cannot be found by deducting this cost from the receipts. The profit depends rather on the number of commemorative stamps sold that are never used for postage purposes. It is impossible to even accurately estimate this, as a great many collectors buy sheets of 50 or 100 stamps and select only a few for their collections, the balance being used for postage. Then again there are those who have been collecting for years that unfortunately meet financial reverses and are forced to use their collections for postage purposes. In order to ascertain with any degree of accuracy the profit derived from the sale of commemorative stamps, it would be necessary to know the number of stamps used strictly for collecting purposes and those affixed to mail. It is of course impossible to obtain this information.

It is hoped that this will clarify the situation sufficiently to enable you to furnish satisfactory answers to your constituent's inquiries.

Sincerely yours,
JOSEPH J. LAWLER,
Assistant Postmaster General.

Commemorative stamps issued to postmasters in 1948

Date issued	Name of stamp	Number issued
Jan. 5	George Washington Carver	121,548,000
Jan. 24	California Gold Centennial	130,709,500
Apr. 7	Mississippi Territory	[1] 117,000,000
May 28	Four Chaplains	[1] 115,000,000
May 29	Wisconsin Statehood	[1] 115,000,000
June 4	Swedish Pioneer	64,198,500
July 19	Progress of Women	[1] 115,000,000
July 31	Golden Anniversary, City of New York	38,449,100*
July 31	William Allen White	77,642,600*
Aug. 2	United States-Canada Friendship	[1] 115,000,000
Aug. 9	Francis Scott Key	[1] 115,000,000
Aug. 11	Salute to Youth	[1] 75,000,000
Aug. 14	Oregon Territory	52,214,000
Aug. 25	Harlan Fiske Stone	53,958,100
Aug. 25	Palomar, Mount, Observatory	[1] 50,000,000*
Sept. 7	Clara Barton	[1] 50,000,000
Sept. 9	Poultry Industry	52,975,000*
Sept. 21	Gold Star Mothers	[1] 75,000,000*
Sept. 22	Fort Kearny	[1] 50,000,000*
Oct. 4	Volunteer Firemen	[1] 50,000,000*
Oct. 15	Indian Centennial	[1] 50,000,000*

Nov. 4	Will Rogers	[1] 60,000,000
Nov. 5	Fort Bliss	63,490,000
Nov. 9	Moina Michael	[1] 60,000,000*
Nov. 19	Lincoln's Gettysburg Address	[1] 60,000,000*
Nov. 20	American Turners Society	[1] 60,000,000*
Dec. 9	Joel Chandler Harris	[1] 60,000,000

[1] Number of stamps ordered printed rather than the number issued. This is given when the issue is not yet complete.

*The asterisks mark the stamps that were required by congressional action. The others were approved by the Postmaster General.

Total number of new stamps issued in 1948 was 2,009,111,000 at a manufacturing cost of $442,123.

Commemorative stamps issued to postmasters in 1949

Date issued	Name of stamp	Number printed
Mar. 3	Minnesota Territory	100,000,000*
Apr. 12	Washington and Lee University	110,000,000
May 11	Alexandria Bicentennial	70,000,000*
May 23	Annapolis Tercentenary	100,000,000*
Aug. 29	Grand Army of the Republic	110,000,000
Oct. 7	Edgar Allan Poe	112,000,000
	Universal Postal Union:	
Oct. 7	15-cent	35,000,000
Nov. 18	10-cent	20,000,000
Nov. 30	25-cent	15,000,000
Dec. 17	Wright Brothers Air Mail	75,000,000

*The asterisks mark the stamps that were required by congressional action. The others were approved by the Postmaster General.

The total number of commemorative stamps issued to postmasters in 1949 was 1,144,456,700, at a manufacturing cost of $264,036.

Work load and cost of clerks

Fiscal year	Average number of employees	Salaries	Orders	Amount of business
1947	47	$124,767	161,251	$3,331,291.00
1948	46	117,643	124,208	2,490,705.00
1949	58	169,782	194,660	4,136,122.01

Veterans' Organizations Disagree With Part of the Hoover Report

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. JENKINS. Mr. Speaker, about 2 years ago Congress passed legislation providing for a Commission to study the numerous Government departments with the idea of making much needed economies in many departments of the Government. Former President Hoover, America's greatest administrator, was placed at the head of this Commission. He, with other members of the Commission and a large corps of experts in Government management selected to advise them, brought forth a few months ago a masterful document known as the Hoover Report. This report recommended certain drastic changes in the management of the medical centers and hospitals which are now under the control of the Veterans' Administration.

The national commanders of the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans and the American Veterans of World War II protested vigorously that it was not for the best interests of the disabled veterans of the country to have the recommendation of the Hoover Commission carried out. These veterans' organizations made a thorough study of the problem and published their recommendations in well-written briefs. I have read these briefs and feel that these organizations have made a good case. I feel that the views of these organizations can be carried out without seriously affecting the usefulness of the Hoover Report.

I expressed my views on this subject in a short speech that I made in the House of Representatives in Congress on February 2, 1950. This speech is as follows:

RECOMMENDATIONS OF THE HOOVER COMMISSION WITH REFERENCE TO VETERANS

Mr. JENKINS. Mr. Speaker, the various veterans' organizations in the country are objecting to one of the recommendations of the Hoover Commission. They assert that this recommendation if carried into effect will work a severe hardship on disabled veterans and those needing hospitalization.

I want to commend the leaders of these organizations for the thorough study they have given to the subject before they announced their opposition to this one section of the Hoover report. I have read the statements made by the American Legion and other veterans' organizations on this subject and I feel they made a good case. It shall be my purpose to assist them in their efforts.

The people are strong for the recommendations made by the Hoover Commission and, likewise, they want to do justice to the veterans, especially those who are disabled and those who are in need of medical care and hospitalization.

I think Congress can work out a plan that will meet the wishes of the veterans and not seriously disturb the recommendations of the Hoover Commission.

The high officials in several of the veterans' organizations approved my speech and complimented me for making it. At a meeting of American Legion leaders from Ohio recently held in Washington the viewpoint expressed by me was in good part the viewpoint of most of those present.

The First World War affected the United States and the whole world tremendously and in many ways. It brought many difficult national problems. One of these problems was what to do for the disabled veterans and the widows and orphans of veterans who had given their lives for their country. Millions of our young men participated in this war and many thousands gave up their lives and many more thousands returned as permanent cripples.

Lincoln said after the Civil War that it was the obligation of the Government to care for him who bore the brunt of the battle in the heat of the day and for his widow and orphans. To the everlasting credit of our country the Government through the actions of Congress has always done this.

Soon after the First World War, Congress passed legislation setting up what is known as the Veterans' Administration. In this new department of the Government was reposed the authority and the responsibility of administering the laws providing for pensions and compensations and also the laws providing for the management of medical centers and hospitals for the care of disabled veterans.

The Veterans' Administration has become a very important Government department and employs many thousands of office employees and physicians. These employees have the responsibility of caring for many thousands who are receiving assistance and medical care of different kinds.

The Second World War brought many of the same problems with many hundreds of thousands of additional disabled to be cared for.

The burden on the Veterans' Administration came to be tremendous in volume and tremendous in expense. It was only natural that there would be many complaints made against this organization and while many of these complaints may not have been justified, it is only natural that many of them would be well founded. In fact, the work of this great organization became heavier and heavier by reason of the increased load that came with the passage of new legislation giving to veterans many new privileges for training and education, all of which called for the expenditure of great amounts of additional funds.

In my somewhat extended service in Congress, I have had occasion to serve many thousands of disabled veterans in their efforts to secure pensions and other assistance. Likewise I have assisted in securing pensions for thousands of widows of war veterans. Back in the period following the First World War when the veterans of that war were claiming pensions and compensation for injuries and the effects of gas, I think the records will show that I had for two separate years gotten more pensions than any other Congressman. My experience as a lawyer and with the help of efficient office assistants, enabled me to secure material assistance for many worthy veterans.

The GI bill of rights which passed Congress following the Second World War, and for which I voted, brought to Members of Congress a great deal of additional work. By reason of this law thousands of deserving veterans have been able to equip themselves to fill responsible positions in the professions and in every form of social activity.

I feel confident that this Congress will give favorable consideration to the expressed wishes of the several great veterans' organizations with reference to the maintenance of the medical centers and hospitals now under the control of the Veterans' Administration and that this will be done without weakening the power and influence of the Hoover Commission whose recommendations have quite generally met with the most hearty approval of the American people.

The veterans' organizations are to be commended for their efforts in securing for the sick and disabled veterans what they are entitled to. If the Veterans' Administration has been inefficient in its handling of the medical centers and hospitals, it will, I am sure, immediately endeavor to correct its faulty methods.

I hope that the veterans' organizations will in the future encourage the Veterans' Administration in its management of the medical centers and hospitals to which the disabled veterans are sent. If these agencies are properly and economically operated by the Veterans' Administration, the veterans will be benefitted and the general public will be satisfied.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks, I include an eloquent address by the Honorable Joseph Mruk, mayor of Buffalo, N. Y., together with introductory remarks by Hon. Chester T. Skibinski, chairman of the Massachusetts Board of Arbitration and Conciliation, recently delivered over the radio under the auspices of the western Massachusetts branch of the Polish American Congress, Inc.:

JUSTICE FOR POLAND

INTRODUCTORY REMARKS BY CHESTER T. SKIBINSKI, CHAIRMAN OF THE MASSACHUSETTS BOARD OF ARBITRATION AND CONCILIATION

Poles came to America before the Pilgrim fathers arrived on the Mayflower and even before Henry Hudson sailed into what is known today as the port of New York. The first Poles landed in 1608 and helped to establish the oldest American colony at Jamestown, Va.

During the next two and one-half centuries, the immigration consisted mostly of Polish intellectuals who left an indelible stamp on the progress and development of the United States, which is too lengthy to narrate in this brief introduction. The massive influx of Poles, however, began in the middle of the nineteenth century and was comprised chiefly of people engaged in agricultural pursuits. Today there are some 6,000,000 Americans of Polish ancestry in the United States.

Since one of the characteristics of Poles is an intense love of freedom, it was not surprising that during our war for independence, the noble Polish military leaders volunteered their services to General Washington. The address you are about to hear is devoted to the evaluation of accomplishments of one of them.

Our speaker was born in Buffalo, N. Y., in 1903, the son of Polish immigrants. In 1937 he became a member of the Buffalo city council and in 1943 a Congressman from the Forty-first New York District. In 1949 he was elected mayor of the city of Buffalo, a city of 600,000 inhabitants, on the Republican ticket. I feel proud and honored to present to you, the recorded address of the Honorable Joseph Mruk, mayor of Buffalo.

ADDRESS OF HON. JOSEPH MRUK, MAYOR OF BUFFALO, N. Y.

When a famous French writer met Thaddeus Kosciusko at a banquet, and asked him bluntly, "General, please tell us all about your revolution," Kosciusko answered, "I have been a soldier, and I fought."

This little story gives us a more convincing picture of the man, whose birthday we commemorate today, than lengthy biographies. For, modesty is an attribute of greatness, and Kosciusko was a great man. There are no doubts about it. But he was so modest that he probably never realized that his birthday would be celebrated in speech and writing for many, many years to come, not only in his native Poland, but also in the United States, which became his beloved country of adoption. He never guessed that after 204 years his name would be heard by millions of listeners, in the privacy of their homes, thanks to an invention called the radio.

I wish that not only his compatriots, but that all Americans could join today in a tribute, paid the man who was justly called the Polish Washington.

Strangely enough we are facing almost the same problems that worried Kosciusko and stirred his heart to action. In his times Poland was victimized by three rapacious neighbors. The country was partitioned, and overrun, by Russian and German armies. Nowadays, Poland is again a victim of a ruthless occupation, but many other countries are suffering the same hardships. If only the world would have more men of the stature of Kosciusko, who never hesitated to risk his life defending a just cause, we would not have to worry.

The life of that political refugee, who later became a general of the young American Army, should be taught in every school as an inspiring example. He came to the United States of America as a heartbroken, displaced Polish soldier, a refugee from a defeated country, and a few years later he was planning the defense of Billingsport and of Saratoga, he was constructing fortifications of our first Military Academy at West Point, where we may now admire his monument. He joined the army of Washington, and had the privilege of firing the last shot in the American Revolution.

Even in Charleston, deep in the South, the name of Kosciusko sounds familiar to all inhabitants, because it is connected with the memorable day of December 14, 1782, when victorious armies marched into the city, and a young American colonel, of Polish origin, was cited by General Greene for his extraordinary zeal, vigilance, and brains.

Kosciusko arrived in America in 1775 as a political exile after the first partition of Poland, because the noble words of the American Declaration of Independence prompted many enthusiasts to leave their countries and help the heroic American soldiers in their strive for liberty.

The American war for independence became thus his personal problem. Kosciusko embraced the ideal of democracy and became its promoter in his own country, where he returned 10 years later as an American general to lead a fabulous insurrection against three powerful occupants. Before his departure from America, where his promotion was recommended by Washington as an individual proclamation, he was bestowed another honor by a city where he lived for a long time. The exclusive Society of Cincinnati, with only three foreigners in its midst, offered Kosciusko a perpetual membership. Washington gave him his own sword, which he used during the battle of Saratoga. That token of a lasting friendship between a statesman and a soldier was for many years one of the greatest treasures of the Polish National Museum, because of its symbolic meaning, namely, that of the friendly relations that existed from the very beginning between the United States of America and Poland. A friendship cemented with the blood of Polish heroes, Kosciusko, Pulaski, and many others.

After his departure from America in 1784, "he took with him," as a biographer states, "besides ideas of political and military nature which had, up to then, been less effective in the Old World, also the treasures of experience, of endurance, and of authority which were to prove so invaluable to Poland." His liberal manifesto, assuring Polish peasants of their rights, was an echo of the American Declaration of Independence.

Almost single-handed he waged a war against Russia, and its allies. He dared to challenge not only Catherine of Rusisa, but also the German and Austrian rulers. Guided by a truly American democratic spirit, he mobilized men of all social classes.

For the first time, members of the Polish nobility and peasants joined their hands, and formed a powerful living chain. Unfortunately, it did not prove strong enough to withstand the joint onslaught of three well armed enemies. The hero of both the American Revolution and Polish Civil War, was critically wounded and thrown in a dungeon in St. Petersburg. But such was his prestige that the newly elected czar paid him a visit and set him free.

Kosciusko never surrendered. He remained faithful to his principles. Even the magnetic charm of Napoleon would not make him collaborate with the French Army, because the Emperor refused to promise complete independence to Poland. "Everything or nothing" was the motto of Kosciusko. Heartbroken over the plight of his native land he went into voluntary exile, and returned to his beloved United States of America, for the independence of which he fought with such unselfish zeal and devotion. Americans freed from a foreign rule were gladly building the future of the New World. They greeted Kosciusko in 1797 like the best of friends. They forgot their shops and labors, their troubles and quarrels, and—as his biographers state—they poured en masse on the wharf of Philadelphia to celebrate the return of the "illustrious defender of the rights of mankind." The citizens of Philadelphia, in their ardor, unharnessed the horses from Kosciusko's carriage, and dragged it to his lodgings.

The popularity of Kosciusko in this country grew even more after the publication of his last will, addressed to his dear friend President Jefferson. In that testament the noble Pole asked that all his meager funds be used for the freeing and educating of Negroes. And though his intentions have never been carried out, he nevertheless, deserves the title of a pioneer of their emancipation. The last words of his will "each citizen must defend his country against foreign as well as internal enemies," sound nowadays more timely than ever.

Kosciusko is a symbol of all the values that make a good citizen. And today again, his inspiring example appeals to all those who suffer persecution and who strive for freedom. He is also a shining example for all Americans of foreign birth who came to this blessed country of ours from their native lands, as war victims or political refugees, and instead of becoming a burden to America are her real asset. He is a symbol of the indomitable Polish spirit.

Once more Poland lost its independence through no fault of her own, but solely through the fault of greedy, imperialistic-minded neighbors, and through the shortsightedness of the modern world which did not realize that not only Poland but the entire civilization is threatened by an impending danger of a totalitarian enslavement. Once more the lovely country which in 1918 regained its independence, dreamed of by Kosciusko, and accomplished many striking achievements, only to be overrun in 1939 by German and Russian Armies, joined again in an unholy alliance, became in our times a target of despicable political bargaining which caused her enslavement by Soviet Russia. And once more Thaddeus Kosciusko seems to rally young and old, men and women around the historic Polish flag, which bears the memorable motto: For your freedom and ours.

Poland, the country of Kosciusko, Pulaski, and so many other heroes, will never die.

Why I Had To Step Aside

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Dr. Edwin G. Nourse, who recently resigned as Chairman of the President's Council of Economic Advisers because he could not twist economic facts to suit political purposes.

The article should be of interest to every American citizen, since it sheds light upon the policy of the Administration and how political and personal bias sway official decisions and warp their thinking on economics. The article is entitled "Why I Had To Step Aside," and it appeared in Collier's magazine for February 18, 1950.

I am informed by the Public Printer that the manuscript is estimated to make approximately three pages of the RECORD, at a cost of $246.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY I HAD TO STEP ASIDE

(By Dr. Edwin G. Nourse)

(In 18 years of Democratic rule in Washington, no one man's break with the White House has had deeper meaning than the resignation of Dr. Edwin G. Nourse as chairman of the President's Council of Economic Advisers. Past rifts between presidential righ-hand men and their boss have stirred up louder tempests and juicier gossip. But Dr. Nourse is no mere disgruntled politician or disaffected crony. At 66 an economist of the highest distinction, formerly vice president of the Brookings Institution, head of the American Economic Association, and United States delegate to international economic conferences, he quit his council post as an act of intellectual protest against the things he saw done and the attitudes he met behind the top-level Washington scene. This is Dr. Nourse's own story of why he quit. He tells it with characteristic dignity, restraint, and lack of sensationalism. But in it he raises one of the most important questions of our time: How far do we want to let political and personal bias go in swaying the official decisions which daily affect our economic lives?—The Editor.)

It made live newspaper copy to say I fired a blast at the administration and that this act cost me my job as Chairman of the Council of Economic Advisers. But such an explanation does not square with the facts, and it fails to shed any light for my fellow citizens on some developments in our system of free government which I believe important for our future.

The mere addition of one individual—technically past retirement age—to the ranks of the unemployed would in itself have no importance or general interest. But in this particular case the individual was connected with a highly important innovation in the United States effort to make free enterprise work splendidly within a system of free government. Thus my departure has significance for the businessman, the worker, the taxpayer, the voter, and the reasons should be frankly told.

I did not resign because of any doubts or disillusionment about the Employment Act of 1946 itself, which set up the Council of Economic Advisers. I still firmly believe in the declaration of national policy with which the act begins. It states a purpose which is practical, sound, and deeply held in the hearts of most Americans. It registers an intention of ending, or at least lessening, the periodic depressions which have plagued us in the past.

The act proposes no panacea. But it seeks to mobilize our economic brains, inside Government and outside, to improve our public and private economic practices, and to coordinate the economic thinking and policy making of business executives, labor leaders, farm organization officials, and Government people. It promises unprecedented recognition to the scientifically trained economist as a practical aid in public affairs.

Nor did I resign because I felt that the Council of Economic Advisers itself was either inadequate or ill-designed to promote the purposes of the Employment Act. It was set up as a small advisory agency, with no administrative powers or responsibilities. It was not to gather its own facts or rely exclusively on its own interpretations, but to

synthesize data from many agencies in Government and in private business. Its task was to bring this data into focus for use by a greatly overworked and heavily pressured President.

This exacting job was to be done by three men who, as a result of training, experience, and attainments were especially qualified to analyze and interpret economic developments, appraise Government programs and activities, and formulate and recommend national economic policy.

A LETTER TO THE PRESIDENT

When Mr. Truman asked me to become Chairman of the newly established Council of Economic Advisers, I first tried to see what kind of a council was expected or desired. After our initial discussion I wrote to the President, outlining my view of the Council's role. I said I saw no need for it to become in any way involved in the rival beliefs and struggles of different political and economic factions. I added that, if this statement correctly interpreted the act and reflected his hopes and purposes for the Council, the position offered me was one of unparalleled opportunity as well as responsibility, and one to which I would give my most loyal service. Mr. Truman at that time expressed agreement with my interpretation.

In my more than 3 years on the Council, my troubles stemmed entirely from the interpretation placed on qualifications for Council membership and from the way Council members interpreted the general instructions laid down in the act. In the end, I felt I had to step aside because I had become convinced that the Council of Economic Advisers could not, under present circumstances, be operated as the professional and nonpolitical agency I had supposed was called for by the Employment Act of 1946.

The impasse which led me to feel that I had to step aside began to develop early. When I accepted the post of chairman, I was entirely unacquainted with either Mr. Leon H. Keyserling or Dr. John D. Clark, the other members. As we got down to work, it became evident that both my colleagues conceived the role of the Council as one of much more active participation in the political process by which policies are carried out than I did.

I had stated my idea of our duties in a paper read before the American Economic Association in late January 1947, under the title Economics in the Public Service. I disavowed the idea that we were the three wise men of economics standing at the President's elbow to give him pontifical answers to every economic problem as it arose.

Instead, I said, we should undertake to show him the agreements and disagreements among qualified economists and experienced business, labor, and agricultural leaders and the grounds on which these disagreements arise. We should tell him briefly and simply which courses of action we, individually or collectively, believe promised best results for the national welfare. My paper concluded: "When we have brought this sort of material to the President's desk, we shall have discharged our responsibilities under the act as I conceive it."

That paper was called to the President's attention, with this passage specifically pointed out. He later said he had read it with approval. But our Council discussions soon made it clear that neither of the other members would have stated our role in any such terms. Instead of marshaling pros and cons for the President's consideration and analyzing probable consequences of alternative policies or actions, they were emphatic that the Council should come to the President with a single definite policy recommendation and do our best to "sell" him on it. After he had bought it—or taken a different policy line—they thought the Council should be prepared to testify on the President's policy if asked to do so by the Congress.

One member insisted strongly, and the other more or less acquiesced, that a three-man Council must follow a majority rule, certainly as to operational matters such as the Council's role and scope or activities and, hopefully, even as to economic views. I did not feel that the Council could or should be expected always to come to agreement. Since actual agreement was impossible and formal agreement was demanded, both omission and verbal subterfuges were resorted to in order to produce documents to meet deadlines. Subsequently, a member could claim that his pet idea was still there by implication.

It was also argued that it was fruitless, if not improper, for us to draft analyses and expositions whose conclusions varied with the President's known and publicly stated beliefs and intentions. My answer was: "We are not here to take our economics from the President. We are here to bring him the best thinking that economic training and enlightened business experience (including labor and agriculture) have to offer. If any one of us believes the course he is following or proposing is harmful to the best interests of the economy, it is his duty to keep saying so (privately to the President) and to make as clear as possible to him the reasons for our concern."

In the first 2 years of the council, our difficulties were somewhat minimized by the fact that the reports published were explicitly Economic Reports of the President and appeared in his name. No separate statement appeared over the signatures of the council. Even so, there were gentlemanly brawls around our council table in which I was accused of running out on the President because I insisted on holding to reservation or dissents I had originally expressed, but which had been removed or stultified in the devious literary process ending under the editorial pencil of the White House staff.

In the first 2 years, there was considerable criticism of the President's Economic Reports as being infused with politics. Presumably this infusion occurred after documents of pure economics had been given him by the council. The President was peculiarly sensitive to this charge as the campaign of 1948 got under way.

He urged me very strongly, therefore, to have the council present a report of its own in conjunction with the Midyear Economic Report of the President.

DISQUIETING POSSIBILITIES

My colleagues were delighted at this proposal. I finally acquiesced, although with great misgivings. I felt that either the document signed by the council would be so written as to support the President's program, whatever that might be, or that the public would note real or alleged discrepancies between the council's analysis and his recommendations and thus embarrass the whole relationship between the council and the President.

The midyear report of 1948 contained a separate Review of the Economic Situation over the signatures of the Council. I tried to have it limited to a factual statement and an objective analysis, with no policy recommendations, thus preserving the principle that the Council is not itself a policy-making agency. By dint of what I called persistence and others called stubbornness and overreaching the Chairman's prerogatives, I had the Review's concluding section limited to an examination of the issue between inflation and stabilization rather than devoted to the argument that inflationary dangers demanded the reimposition of price and other economic controls. The situation was made somewhat delicate by the fact that presentation of the midyear report had been postponed until after the Democratic National Convention so that it would not seem a political document designed to influence the country and the delegates.

But when Mr. Truman made his acceptance speech to the convention at 2 o'clock on the morning of July 15, he announced that he would call a special session of Congress to enact a rather specific program of controls. Thus he scooped himself on his forthcoming Economic Report. When that report appeared, on July 28, the President's statement was limited to five pages of general policy on the theme "A time for action," followed by a page and a half excerpt from his message to the special session on July 27. This presented an eight-point program, which ran from an excess-profits tax to price control for scarce commodities.

General public comment was that the Council's Review, presented separately in the report, was factual and objective. But it was also commented that the President's program for the special session did not logically follow from our analysis. Thus the division of the document into two parts with separate responsibilities did not allay the charge of politics, but sharpened it.

It was at this time that I definitely broke with the practice of trying to arrive at single, unified statements of the Council's views in private documents prepared for the President's guidance. Sometimes I would merely append a dissenting opinion. Sometimes, if my views basically differed from my colleagues', I would submit a separate document with my own evaluation of the available facts, or if the facts were agreed on, indicating the logic by which I had arrived at a different recommendation.

Developments in connection with the third annual Economic Report of the President, on January 7, 1949, caused the Council's position to deteriorate still further. The special session had not enacted the President's eight-point program, and there was every indication it would be reintroduced in the new Congress. There was a strong move to add to this program specific proposals that the Federal Government take steps to enlarge industrial capacity, notably steel, on the theory that inflationary danger stemmed from a persistent shortage of industrial output.

The Council's Review at this time limited itself to observing that "attention should be given to the possibility" that allocation controls might be needed and that "selective price controls also call for consideration" as well as "special measures (that) may be needed to stimulate the increase of capacity and production."

But the legislative recommendations in the President's report went somewhat further than mere consideration. He asked for selective price-control authority and for measures which would "remedy shortages of supply in certain critical areas so serious as to impede maximum production in an expanding economy and to limit programs related to national security."

PROVISION FOR FUTURE NEEDS

He concluded that "immediate legislation * * * should impose upon the Government specific responsibility and provide the funds to make careful surveys of future supply needs and productive capacity * * * at maximum employment, production, and purchasing power. To the extent that facts reveal the need, it should provide additional authority to deal more adequately and effectively with inadequacy of capacity and supply."

Out of these recommendations there promptly came the Spence bill. That bill provided for promotion of production and supply, priorities and allocations, price control and decontrol, and the adjustment of wages, salaries or other benefits through collective bargaining. It was widely hailed by those who believed in it as a new action

program by Government to carry the Employment Act into effect. Those who feared this bill branded it as the opening wedge to nationalization of industry and eventual state socialism.

Certain members of the Council and its staff lent their support to the Spence bill. They not only helped draft it, but gave assurance that it was in line with the Council's findings of fact and its private recommendations to the President. Such a course was not justified by any Council understanding, but this could not be made clear in view of the peculiar circumstances. It might be all very well in the political game of a party administration to have a bill of uncertain parentage go to the Congress without specific Presidential sponsorship, be used as a trial balloon and abandoned when that seemed expedient (as was done). But for members of the Council, unofficially and somewhat surreptitiously, to give such a measure a cloak of Council approval created an impossible situation for the chairman of the Council.

February 1949 saw the first real show-down between the political and the economic interpretations of the Council's role. The President had several times told us, "You bring me the economics of the question. I'll take responsibility for making the political judgments and final decisions." I was content to obey this directive, but other members of the Council were not willing to terminate their activities at this point. They were not content to wait for the Council to win prestige and usefulness based solely on professional competence, mature judgment, practical realism, and a stubborn refusal to let economic judgment be warped by political considerations. They wanted to advance philosophies or causes for which they had a personal enthusiasm.

One said, "People who were interested in seeing me attain a place on the Council are chiding me for my ineffectiveness, now I am here."

The most direct and dramatic means of gaining such personal influence was, of course, to go before a congressional committee in active support of the President's program.

This question had not arisen sharply when the first economic report of the President went to the Congress in January 1947. But in January 1948 it was proposed that I appear on Capitol Hill to argue in support of the President's economic program. When I demurred, several members of the Cabinet agreed with me that this was not appropriate for the chairman of a professional and nonpolitical body. They recognized that the Council has a unique role within our frame of government, which calls for a detachment from active political affairs comparable, in its way, to that of the Supreme Court.

The Employment Act of 1946 made this nonpolitical role of the Council as clear as possible without actually forbidding legislative activities by Council members. At the same time it set up in the Congress an entirely distinct machinery for carrying the purpose of the act into legislation. This is a Joint Committee on the Economic Report, composed of seven Senators and seven Representatives, instructed to make its own continuing study of matters relating to the economic report. For this purpose it has both committee funds and the extensive Legislative Reference Service of the Library of Congress. Thus it is entirely unnecessary for the committee to draw the Council over into the inevitably political atmosphere of the Congress.

Such a course is also mischievous and fatal to the Council's unique character as a staff arm on which the President could rely for politically disinterested or colorless analysis and advice. If a member of the Council exposes himself to merciless questioning in the political and partisan atmosphere of Capitol Hill, he faces a dilemma of a sort intolerable to an economist of professional training and scruples. Shall he accept the role of economic attorney and, by rhetorical agility, make the most plausible case he can for someone he serves as mouthpiece? Such following of the party line would be not only repugnant to professional standards, but also self-defeating in the case of anyone who had previously contributed to serious economic literature.

It is quite unthinkable that the President would always follow the economic philosophy of such a Council member; and, in supporting the President, the Council member would be liable at an awkward moment to be trapped by some well-read Congressman who would confront him with contrary views he had expressed in private life.

On the other hand, if a Council member stated his honest conviction that a policy espoused by the President was, in his judgment, economically unsound, this would be exploited by political opponents as evidence of stupidity or of willingness by the President to subordinate economic soundness to political advantage. Such an episode or series of episodes would embarrass and strain future relations between Council and President.

I, for one, have been unwilling to stultify myself and my profession by arguing for positions I could not honestly support. I have been equally unwilling to appear debating, criticizing, and in effect tearing down the policies espoused by my chief—for whatever reasons. The moment such a situation was allowed to arise, my usefulness and that of the Council itself would be seriously impaired, if not destroyed.

My colleagues kept insisting that I took much too restricted a view of the Council's function, and that I was hampering its usefulness and lowering its place in public esteem. I was told that we should not merely contribute material for the President's use in formulating his economic policies, but that we should go on to play an important part in effectuating those policies in the Congress and through the public, on the cheerful assumption that the President always followed our (not unanimous) advice or that we were prepared to accept his decision, whatever it might be.

This view was also shared by some, though not all, members of the Joint Committee on the Economic Report. When Senator TAFT was chairman of this committee I explained my view to him and he refrained from requesting either my appearance or that of other Council members. The President had said that he would not urge me to appear, since I felt such activity improper. Nor would he dissuade the other members if they wished to appear.

MESSAGE PRECISELY WORDED

Senator O'MAHONEY became chairman of this commitee in January 1949 with the change of party control in the Congress. On February 4, he wired me the first formal request for the Council to appear before the committee. The message was worded with notable precision. He asked us to appear to develop and amplify those major analyses and findings in the Annual Economic Review of current problems and prospective trends and developments which accompanied the President's report. However, anyone of normal political sophistication would realize in advance that the question of whether our analyses justified the President's recommendation would arise at every stage of the discussion.

The Senator's telegram arrived after I had left Washington for a long-standing speaking engagement in New York. On my return I at once wrote him:

"I understand that Mr. Keyserling and Mr. Clark freely and gladly accepted your invitation to appear before the committee. If I had been here, I would have had, in good conscience, to ask that I be excused.

"I think you are aware * * * of my belief that this agency cannot, over the years, discharge its functions effectively and without embarrassment either to the Chief Executive or to Council members if it is drawn out of the Executive Office into the political atmosphere of Capitol Hill. * * * I would strongly regret being put in a position where my testimony could be used to embarrass or weaken the position of the President."

The presentation before the joint committee, chiefly by the vice chairman of the Council, stressed the imminence of inflationary dangers. This made the Council not a little ridiculous, since, by that time the problem to be faced was the onset of recession. The President's program had been framed in the latter part of 1948, when it was still possible to be worried about inflation. But even then, there had been evidences of a reversal of trend; this was clearly noted in the Council's review, but was underplayed in the preparation of the President's program.

Instead of appearing publicly in support of a Presidential policy already made obsolete by the march of events, all members of the Council should have been diligently weighing the significance of the latest recessionary developments and privately advising the President as to revisions of policy that would square with the new facts.

This episode is a striking example of how active participation in the process of political persuasion will corrupt the Council's performance of its duties in the sphere of economic analysis.

During the time of the joint committee hearings I was on the Pacific coast, fulfilling speaking engagements, business and academic, arranged long before. There, and after my return, I began to hear rumors that I had resigned or was about to do so. Reporters inquiring at the White House were told: "Just the routine resignations such as many officials submitted at the opening of the new Presidential term."

My resignation had been handed to the President on December 14, 1948, and was intended to be taken seriously, not as a mere gesture to protocol. As I pondered the meaning of the November election returns and noted the reaction of my fellow members, I became convinced that my departure from the council was only a matter of time—a very short time. In my letter to the President, I reiterated my deep concern that the council become established on a high professional plane, with its members not subject to the vicissitudes of politics but retained or replaced solely on the grounds of their qualifications as objective economists."

The fact that this interpretation had not been accepted and observed had made my work as chairman so difficult, and the internal tensions so great that I expressed a wish to be relieved at a not too distant date. I would defer my going until I had completed any duties or responsibilities in connection with your forthcoming Economic Report.

The President responded, neither orally nor in writing, to my December resignation. I discussed the difficulties of my situation with Dr. John R. Steelman, Assistant to the President, on two or three occasions but did not press the matter for some 8 months. Circumstances made it apparent that this was no time for anyone in the executive office to rock the boat.

The program of anti-inflation controls included in the President's Economic Report in January of last year, his call for $4,000,000,000 of new taxes, and the alarm caused by the section of the Spence bill providing for Government action to enlarge steel and other industrial plant capacity had now to be considered against a background of rising unemployment, failing production and lower prices. It was obvious that everyone

concerned for our economic welfare should stand by to give all the aid he could.

For the council this meant having the best possible council review and midyear economic report of the President.

TRENDS EVALUATED IN REPORT

I therefore did all I could to quiet the talk of my resignation and to prepare a council evaluation of trends which would have greatest guidance value for the President. When the midyear report appeared, the reactions of informed persons made me feel that this end was measurably accomplished.

One other task remained. On July 1, at a meeting of various major department heads in the Cabinet room, the President handed me a letter requesting a Council critique of the economic impact of budget ceilings being considered for the fiscal year 1951. As the Council undertook the drafting of this document, it became glaringly evident that no common ground for evaluation of fiscal policy existed between us. Hence, I set about drafting my own independent analysis. Without waiting to complete this task, I decided that the time had arrived for me to seek early acceptance of my resignation.

August 9, 1949, third anniversary of our swearing-in ceremony, seemed a fitting date for raising the matter again with the President. Referring to my letter of resignation of December 1948, I urged as much speed as possible in the selection of my successor.

On September 9 I renewed my request.

"I have not had any direct response from you to my letter (of August 9), but Mr. Steelman informed me on August 11 that the only question which would be involved was that of timing of the announcement of my retirement. He said you desired to name my successor at the same time that you announced my resignation. You could thus avoid pressure on behalf of persons whom you would not care to consider for appointment. In accordance with this suggestion, I have not mentioned my pending retirement even to my colleagues on the Council. This has caused delay in organizing our program of work and our staff arrangements between now and the Economic Report in January. My relations are rendered ambiguous also with reference to Mr. Pace and budget discussions. If the work of the Council is to be kept from serious demoralization (these men should know) that I shall be leaving not later than November 1."

This matter proved one of the best-kept secrets of recent Washington experience. It was not until the morning of October 17 that the story appeared in print and then obliquely, through a commentator's column, rather than directly, as a news release.

By coincidence, I was addressing a trade association group at the Mayflower Hotel the following day on a program that had as its theme the March of Progress. Speaking from the economic side, I reviewed the enormous potentialities for progress within our grasp and then expressed concern lest policies and practices being followed in private and in public areas might seriously impede that progress. My speech had been written some days in advance, and I was completely surprised when the belated story of my resignation broke the day before this meeting. The fact that the news was out did not infuse any added feeling into what I said on this occasion. Nor did it occur to me that I should withhold or modify my prepared paper. The press, however, seized upon my speech as either a parting shot to relieve my mind after I was out, or as an indiscreet utterance which caused prompt acceptance of a resignation which otherwise I might have been urged to withdraw. The facts as here cited make it clear that neither interpretation was correct.

In fairness to the job, I had felt I could not press for acceptance of my resignation during the first half of 1949. But, in fairness to myself, I could not defer it longer than the autumn. After the age of 66, this sort of thing takes a heavy toll. While the midyear report was in preparation I hung on at my office till nearly midnight on both Saturday and Sunday nights of one of the hottest, most humid bouts of Washington summer. On several occasions over the preceding 2 years I had seen the physical and nervous breaking point too close ahead for me to feel that I could, under existing conditions of work, risk the strain of another annual report.

I would gladly have taken that risk if it had appeared that such a gamble on my part would be offset by a reasonably good prospect of being able to make any really effective contribution to sounder economic policy. I felt deeply that this is a serious juncture in the history of our country—looked to now as the bulwark of a free world. But I knew that the chance of effectiveness had gradually fallen near zero.

At various times, one of them as late as the summer of 1949, the President had expressed a courteous regard for the labors of the Council. When we handed our final draft of analyses and suggestions to Mr. Truman his almost unvarying formula was: "I'll take this home with me—or on the *Williamsburg*—and read it with great care. Then we can discuss it further." But never—from the first annual report of January 1947 to the third midyear report of 1949—did such a discussion materialize.

To be sure, the President's course often substantially paralleled our recommendations. We could beguile ourselves with the thought that our labors had borne fruit. But on no occasion did the Council have so much as a single hour's time in which we could sit down with the President to answer any question that arose in his mind, clarify data, or examine alternative courses and probable consequences. We learned of his final policy decisions through an assistant or an assistant to an assistant on the White House staff. "Arm's-length bargaining" has become a phrase of frustration in the business world. Our position might be called "arm's-length economic advising."

On the last council assignment in which I took part—a memorandum on the economic impact of the budget ceilings proposed for 1951—differences of view were so basic that I submitted a separate analysis. In handing these memoranda to the President, I suggested that the majority view be stated first. I then commented that I felt that that memorandum gave an unduly complacent view of moderate deficits, soon to be followed by comfortable surplus.

I said I could not derive any such easy confidence from a reading of the discernible facts and foreseeable trends. I thought the President was being encouraged into taking inflationary short cuts, which give us a superficial short-term prosperity but which seemed to me to carry unwarranted risks for the longer, but not very distant, future.

DEFICIT SPENDING DEFENDED

The President said he would read both memoranda with care. But we never heard anything further from him. However, when I read his Pittsburgh address of last September 5th, it seemed to me a very clear reply not alone on the fiscal issue but on almost the whole of national economic policy. Deficit spending was depicted as only a "scare word" to "turn the American people against the programs which the people want and need." I quote:

"The selfish interests [a phrase repeated 22 times in the speech] say we can't afford these programs during a boom because that would be inflationary. They say we can't afford them during a recession because that would be deflationary. They say we can't afford them during a war because we are too busy with defense, and we can't afford them in time of peace because that would discourage business. So according to the selfish interests, we never can afford them. But the truth is—we can't afford not to put these programs into effect. We can afford them, we ought to have them, and we will have them."

It seemed to me a casting to the winds of any economic analysis of the intricate process by which the several segments of a total economy can be helped into workable balance and sustained high production. In its place I seemed to discern a highly political and dangerously inflationary economic program.

I view this as a menace to our American hope of making free competitive enterprise produce continuing abundance within a framework of free government. And since my position as chairman of the Council of Economic Advisers gave me no opportunity to do anything effective to bring economic analysis honestly to bear on the merits of these pressing issues, I was glad that the day of my retirement had already been set.

I left the council deeply disappointed over a purpose not fully accomplished, but stubbornly hopeful for the future. It will take time for successive Presidents to learn how to use a nonpolitical advisory staff agency effectively. It will take time for successive council members to learn how to bring the most competent and realistic analysis of economic problems simply and effectively to the President's aid.

A position on the Council of Economic Advisers should come to be regarded as the highest recognition to which any economist can aspire after he has risen to mature stature in the profession. Choice should not fall so much upon the most brilliant theorists, as upon men wise in the realities of current business organization and behavior, capable of recruiting and directing an able staff and of drawing effectively upon the wisdom and cooperation of businessmen and administrative officials. Most of all, council members must be above and beyond the temptation to make economic rationalization serve any predetermined conclusion or policy.

Problem of National Security

EXTENSION OF REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. CROOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition given inception by Hon. Charles C. Price, head of the chemistry department, University of Notre Dame, South Bend, Ind., and his local chapter for world federation, in support of House Concurrent Resolution 64 and Senate Concurrent Resolution 56, the world federation resolutions.

The petition embraces the names of many prominent citizens of the Third District, Indiana; and, to date, the names of 1,250 citizens of various sections of Indiana in favor of said resolutions are on file in my office for inspection.

FEBRUARY 6, 1950.

A PETITION TO THE UNITED STATES SENATORS AND CONGRESSMEN FROM INDIANA

We, the undersigned citizens of Indiana, believe the following to be true:

1. The atom bomb and other weapons of swift, long-distance mass destruction have

revolutionized the problem of national security.

2. Armies, navies, and air forces cannot protect civilians from atomic attack. Their power to retaliate may deter an aggressor, but they cannot insure us against the possible annihilation of vast numbers of our people and a large portion of our capital assets.

3. Achievement of security in the atomic age, security for our own people as well as those millions throughout the world who look to this country for the leadership we alone can give, is therefore the most important challenge which you as our representatives in Government must meet.

4. We believe that the preatomic system of security through the control of armaments by sovereign nations must give way in the atomic era to a system of security based on enforceable world law—in short, a world federal government endowed with those powers necessary to settle international disputes without recourse to war.

5. We cannot state with certainty that the endorsement of this policy by the United States will break the chainlike reaction of events now leading to a third world war. However, should the United States advocate such a system of world security based on law, and yet fail, we believe that our country would be strengthened morally and politically by the stand which we had taken, and thus be in a better position to fight, if fight we must.

In view of the above, and in view of the moral and economic benefits which would inevitably follow the substitution of world law for the present international anarchy, we request that you use your position as our national representatives to insure that our Government undertake every possible action toward this goal while there is still time.

House Concurrent Resolution 64 and Senate Concurrent Resolution 56, the world federation resolutions, have been sponsored by 105 Members of the House of Representatives and 22 Senators. These resolutions read as follows:

"*Resolved by the House of Representatives (the Senate concurring)*, That it is the sense of the Congress that it should be a fundamental objective of the foreign policy of United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law."

We ask full support of this resolution in the belief that it will be an essential first step in the establishment of a just and enduring peace through world law.

Listed below are some of the leaders among some 1,250 signers of the above petition. The positions or occupations are listed solely for the purpose of identification:

L. M. Hammerschmidt, attorney, South Bend, Ind.

Sherman L. Egan, M. D., South Bend, Ind.

Rev. Philip S. Moore, C. S. C., dean, Graduate school, Notre Dame, Ind.

Charles C. Price, Department of Chemistry, Notre Dame University, South Bend, Ind.

A Congressman's Day

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. RAINS. Mr. Speaker, in a recent issue of Scholastic magazine, our colleague, the gentleman from Alabama, the Honorable CARL ELLIOTT, is featured in an article called, A Congressman's Day. This is a most interesting article, and depicts clearly the busy life of a Member of Congress. Scholastic magazine could not have chosen a more outstanding Member to be featured than CARL ELLIOTT. His colleagues here in the House of Representatives, and especially those from Alabama, share with his constituents, deep pride in his accomplishments.

The article follows:

A CONGRESSMAN'S DAY

(By Herbert L. Marx, Jr., associate editor, Scholastic magazines)

"I tied 'em by myself," said 5-year-old Martha Elliott, as she pointed to her neatly tied shoelaces. It was 7:30 a. m. Thursday, January 12, and this was one of my first glimpses into the life of Representative CARL ELLIOTT and his family.

I had come to Washington to spend a day with Congressman ELLIOTT, a freshman Representative from the Seventh District of Alabama. From the railroad station the taxi driver had taken me to 3623 Alton Place, the Elliotts' new brick home in northwest Washington. At the door to meet me were Carl Elliott, Jr., eight (who was soon very busy again reading about Indians), and Mrs. Elliott. Inside were Lenora, toddling around at 15 months, and the Congressman himself—a tall, serious-looking man of 36. It was at this point that Martha came proudly down the stairs to display her tied shoelaces, and in a few minutes 2-year-old John followed—to complete the Elliott family.

Representative ELLIOTT'S day had begun at 6:30 a. m. He was downstairs before his children, to read the previous day's CONGRESSIONAL RECORD and the daily newspaper. At 7:20 his assistant called him from home, to check on a detail of the day's schedule. At 7:30 the four children were downstairs and Mrs. Elliott was in the kitchen. The Congressman took these few moments to play with his children. Except for week ends, he has almost no time to be with them.

At 7:45 the Elliotts sat down to breakfast. After breakfast, Carl, Jr., was packed off to school, and the Congressman and I, with Mrs. Elliott and Martha, drove in the family car to the Old House Office Building. There Mrs. Elliott and Martha took over the front seat, and Mr. ELLIOTT and I headed for his third-floor office. Now, here's a minute-by-minute account of Representative ELLIOTT'S day.

8:45 a. m.: We arrive at room 140. The Congressman's staff has not yet arrived, so he picks up the first of eight daily mail deliveries already outside the door. He unlocks the door and leads me into one large room where his assistant, Hershell McNutt, and his three secretaries work. To the right is another room of the same size. This is Mr. ELLIOTT'S own room. His large desk stands under a window and is flanked by United States and Alabama flags. To either side are deep easy chairs for visitors, and along one wall is a long couch. Sitting on that couch most of the day, I watched the Congressman at work.

9:10 a. m. (Sorting out some of the mail and handing it to his assistant): "Tell these folks I appreciate the expression of their views, but I don't agree with them." "Make me a couple of copies of this letter." "Keep sending this boy the information he wants. He's ———'s brother, a mighty fine boy." "Let me see an Alabama road map. I can't tell just what road this fellow's talking about." "And get me the county agent of Cullman County on the telephone."

9:40 a. m.: The Congressman pushes a signal button, and two secretaries come in. Now begins the morning attack on the mail. During this day I was to learn how very important these letters are to the Congressman. Just listening to them being answered gave some idea of the breadth of interests and demands of his constituents. For this morning session of answering letters, the Congressman moves from his desk to a long table in the center of the room. The Congressman dictates his replies standing up, pacing back and forth. Here is the gist of some of the 37 letters which Mr. ELLIOTT answers in the next hour and a half.

"I am enclosing an Alabama road map. Please sketch in the exact road you are talking about, and I will take up the matter with the Bureau of Public Roads."

"In answer to your request to be a census taker, may I suggest that you write the district supervisor. I am enclosing a paper listing the necessary qualifications." This was only one of dozens of similar letters the Congressman answered. These short-lived jobs for the 1950 census are made by appointment of district supervisers, who are, in turn, recommended to their jobs by Congressmen.

COTTON, OLEO, LOANS

10 a. m.: Interruption to speak to the Cullman County farm agent on the telephone. Cullman County is a heavy cotton producer in Mr. ELLIOTT's district. The Congressman is worried about effects of a 1949 cotton acreage allotment law, which Congress may revise. The agent tells Mr. ELLIOTT that there have been only a few complaints and the law ought to be left as it is.

10:10 a. m.: More letters. "The House has already passed a bill to repeal taxes on oleomargine, and I join you in hoping that the Senate will do likewise."

"I shall be happy to place a copy of your editorial, which I have read and reread in the CONGRESSIONAL RECORD."

"Please be advised that the Post Office Department informs me today that it has authorized a new rural route in our district."

10:25 a. m.: Assistant announces that Mr. Howard Hopkins, Assistant Chief of the United States Forest Service, wants to see the Congressman. Mr. ELLIOTT tells his assistant to have Mr. Hopkins wait.

10:27 a. m.: Telephone call from Representative LINDLEY BECKWORTH, of Texas, about a bill before the House.

10:29 a. m.: (More letters.) "The Birmingham office of the Reconstruction Finance Corporation may make loans up to $100,000. Please send me more details on your proposed project, and I will submit them to RFC headquarters here and get their expression of views on it."

"There is no possibility of changing the law to raise minimum wages from 75 cents to $1 at this time.

"I am interested to learn of your plan to run for Lieutenant Governor of Alabama, and am a firm believer in cooperation between the State officials and the congressional delegation."

11 a. m.: Assistant reminds the Congressman that Mr. Hopkins is waiting.

11:01 a. m.: More letters, more about census taking, a number about possible post office jobs, one thanking the Congressman for his part in getting a local housing project started, and others urging him to vote for certain bills before Congress At this point, Mr. ELLIOTT sends out the two secretaries who have been alternating in taking dictation.

11:15 a. m.: Mr. Hopkins of the Forest Service comes in. This was the first time the two men—one a freshman legislator and the other a career employee of the Government—had met. But it took only a moment for them to find common interests.

Within Mr. ELLIOTT's district there is a national forest, owned by the Government and operated by the Forest Service. Mr. Hopkins commented on the fine timberland in the forest. The Congressman told him about a 70-year-old bridge which needs repairing. Then the two men talked about making greater use of the forest to create new jobs and new recreational facilities for the people of Alabama. Mr. Hopkins pointed out the necessity of the Government's buying up little parcels of land to "fill out" the forest and make it a larger unit.

Behind Mr. Hopkins' visit, at least in part, was the hope that Mr. ELLIOTT would support the Forest Service's request for funds when they were voted on in the House. And Mr. ELLIOTT, in his turn, was looking for more activity by the Service in the national forest in his district.

11:28 a. m.: A young lady from Mr. ELLIOTT's district telephones. She is in Washington, looking for a job. Can he help? He makes a few suggestions, and tells her to call again if she has no luck.

11:45 a. m.: As Mr. Hopkins leaves, Representative JOHN RANKIN, chairman of the House Veterans' Affairs Committee (of which Mr. ELLIOTT is a member) comes in. They discuss details of the committee's work, scheduled to start again in a few days.

A TRIO FROM ALABAMA

11:55 a. m.: Representative RANKIN leaves, and Representatives ROBERT E. JONES, JR., and ALBERT RAINS, both from Alabama, come in. Representative ELLIOTT has asked them to come in to discuss the President's budget proposals as they affect Alabama districts. Congressmen JONES and ELLIOTT were classmates at the University of Alabama. (They and Congressman RAINS are shown in photo above.) Their talk today soon turns from the budget to more general topics—of how the Southeast can best make use of its resources. They agree that the southeastern States must join together in asking for river development and other projects, rather than simply requesting them piecemeal, each man for his own district.

12:10 p. m.: Congressman ELLIOTT looks at his watch and reminds his two colleagues of the session of the House now beginning. We all get up and leave the office. Congressman ELLIOTT and I go through the long passageway which connects the Old and New House Office Buildings with the Capitol.

12:20 p. m.: The House is just marking time this week, waiting for legislation to be cleared to the floor. The brief session is devoted to routine business. Mr. ELLIOTT carried out his promise to place an editorial into the CONGRESSIONAL RECORD.

12:41 p. m.: The House adjourns, and the Congressman goes to a special room reserved for the Alabama delegation. Once a week the nine Alabama Representatives (and occasionally the two Senators) meet together for lunch. Other State delegations have similar arrangements, to permit the Congressmen to discuss problems of their State. At today's luncheon Representative FRANK W. BOYKIN is host. Among the guests are several officials of the Mobile, Ala., real-estate board, who are friends of Mr. BOYKIN. To meet these men Mr. BOYKIN has also arranged for Tighe E. Woods, the Federal Housing Expediter, to be present. Seated at an adjoining table is Majority Floor Leader JOHN W. MCCORMACK, of Massachusetts. He is asked to say a few words to the delegation. Lunch includes servings of freshly baked southern corn pone, made at the special request of the Alabama delegation.

2 p. m.: Luncheon is over, and the Congressmen return to their offices. Mr. JONES returns with Mr. ELLIOTT to discuss the cotton-acreage law. They exchange views and tell each other what they've been writing to the folks at home about it.

2:25 p. m.: Congressman JONES leaves, and Mr. ELLIOTT returns to his mail, still stacked high.

2:40 p. m.: The secretaries reappear, and there's more dictation.

2:47 p. m.: The Congressman talks by telephone to one of the experts who works for the Veterans' Affairs Committee. Mr. ELLIOTT wants to find out what would be necessary to extend the GI bill of rights so that veterans could continue to qualify for medical school with Government financial aid.

3:15 p. m.: Now the Congressman turns to me, and for the first time during the day, he has a few moments to relax. I asked him about this double job of his—being a member of a lawmaking body and also doing favors for his constituents. "To be an A–1 legislator," he told me, "you would have to spend all your time at it. But then you'd be living in a vacuum, out of touch with the folks whom you represent. Yet the way it is now, it's always a fight to preserve enough time for legislative matters between running errands for the people at home."

I asked the Congressman if there were any bills in which he had a particular interest. "I've introduced a bill," he replied, "to permit the Federal Government to lend money to needy boys and girls on a long-term basis so that they can get a college education. Our greatest resource is the boys and girls who read your Scholastic magazines. I started college at 16 with $2.30 in my pocket. I had to work 8 to 10 hours every day—for 20 cents an hour back in those depression days—to pay my way. I don't regret any of that, because it's given me strength for hardships which were to come. But not everyone can work it out that way, and young folks deserve a chance for a full education."

4 p. m.: A lobbyist for a Mississippi Valley association telephones to discuss his hopes for new laws with the Congressman.

4:10 p. m.: More letters, more dictation. But by now the Congressman is sitting slumped in a chair at the table. He's had a long day since he was pacing up and down the floor so energetically this morning.

5 p. m.: An army colonel drops in to say hello.

5:15 p. m.: Representatives JONES puts his head in the door to arrange to leave with Mr. ELLIOTT for the President's party in half an hour.

5:45 p. m.: The Congressman calls his wife, telling her when to expect him at home. He ends his dictation—leaving about 50 letters to be answered tomorrow.

5:50 p. m. (By now the Congressman has his hat and coat on): A telephone call comes from the Alabama Governor's representative in Washington. They discuss plans for the forthcoming Democratic State Committee meeting in Montgomery, which the Congressman plans to attend.

5:55 p. m.: The Congressman leaves the building with Mr. JONES. They take a taxicab to the Shoreham Hotel, where President Truman is host at his annual buffet supper for all Democratic Senators and Representatives.

7:45 p. m.: The Congressman leaves the party and takes a taxicab home.

8:15 p. m.: Home again. There's time to see the children for a few moments, and then, in his little workroom in the cellar, the Congressman spends the evening working, undisturbed. These hours he uses every evening to work on bills he is going to propose and studying other bills before his committee or the full House.

12 midnight: And so to bed.

While this is a typical day in a Congressman's life, it is by no means the same as all others. For instance, the House often meets from noon until 6 p. m., and Representative ELLIOTT makes a point of attending every session. Often there are committee meetings in the mornings. Sometimes he is called upon to testify before other committees, and must often make visits to Government agencies downtown.

But, as long as Congress is in session, the pace never slackens, although Saturdays and Sundays are less crowded. Does this portrait of a Congressman seem a little different than the speech-making, hand-shaking, hail-fellow-well-met you may have had in mind? We hope so. It would be difficult to find a group anywhere more hard working and more conscientious than our 435 Congressmen.

Soil Conservation Program

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. PASSMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the Agriculture Subcommittee of the House Appropriations Committee, February 10, 1950:

Mr. Chairman and gentlemen of the committee, I am most grateful for the opportunity to appear before this committee in support of the budget item of $52,255,000 for the soil-conservation program. In fact, I hope, in the wisdom of this committee, that an increase can be justified over the amount recommended by the budget.

I have stated on other occasions and should like to state at this time that I realize the very great importance of keeping Government expenditures to a minimum, and as a member of the House Appropriations Committee, I expect to be a party to keeping Government expenditures at a minimum. May I further state that, in my opinion, with the high degree of prosperity we are now enjoying, deficit financing is undesirable and unsound. However, I am convinced that certain budget recommendations should not be reduced, and, in some instances, should be increased. In my opinion, soil conservation is one program that may suffer unless the budget's recommendations are increased. Almost all the money appropriated to the Soil Conservation Service is used to provide soil-conservation districts with technical assistance needed to carry on a high-quality program of soil and water conservation. The money now available to this Service barely provides for a minimum assistance to the districts now organized in the 48 States of the Nation, and the Territories. It is encouraging to note that farmers are organizing new districts, and if these districts are to receive the vital technical assistance they expect and need, some provision must be made for them in the appropriation we are considering for the Soil Conservation Service.

It has been directed to my attention that the budget's recommendation for fiscal year 1951 is approximately only $400,000 over the amount appropriated for fiscal 1950. In effect, this is a decrease inasmuch as the recommended increase is more than offset by public laws passed during the first session of the Eighty-first Congress which, of course, include salary increases authorized by the Congress.

Mr. Chairman, in my opinion, a sound soil-conservation program would be one of the best investments that the Congress could make. There is a published table which I consider accurate and dependable, disclosing that for each dollar spent in the field of soil conservation, the wealth of the Nation is increased by $2.25. Certainly if these figures are accurate, then soil conservation is a good investment.

I have been furnished on what I believe to be good authority, information that every year enough top soil is being washed or blown from American fields by erosion to fill a train of freight cars long enough to reach around the earth 19 times at the Equator. This would make a train of freight cars almost half a million miles long. A conservative estimate on the value of top soil lost annually by erosion is in excess of $1,000,000,000.

Today our standard of living requires 3 acres of cultivatable soil to provide food for each person. It has been well established that soil erosion has now reduced our cultivatable soil to the point where we only have 3¼ acres of cultivatable soil for each person in the United States. With our population increasing and soil erosion running rampant, in another 12 to 15 years we will be on the border line. In 25 years, unless this evil is checked, we could very easily be importing part of our food supply.

The Soil Conservation Service cooperated with 2,078 districts during the current fiscal year. This is an increase of 154 districts over the previous year. These districts cover more than 1,100,000,000 acres.

Mr. Chairman, by July of this year there will be 150 new soil-conservation districts organized. They will expect, and are entitled, to receive needed technical assistance from the Soil Conservation Service. Unless the amount recommended by the budget is increased, these new soil-conservation districts will have to go without funds or the standard of service afforded the active districts which is already at a very minimum must be lowered.

I am sure that this committee has in its possession all technical data and statistics dealing with the soil-conservation program. Therefore, I shall not incur added expenses to the Government by filing for the record additional statistics and technical data. However, I should like to reemphasize the need for an increase in the budget's recommendations because certainly it can be established that funds expended in the field of conservation are a wise and profitable investment.

Our Federal Government Team

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD an interesting and informative article from the February 1, 1950, Congress at Work section of Senior Scholastic magazine, styled Our Federal Government Team. This article was prepared by Herbert L. Marx, Jr., associate editor, and Mary Jane Dunton, art director, Scholastic magazines.

OUR FEDERAL GOVERNMENT TEAM

Do you sometimes find yourself expressing thoughts without knowing the precise meaning behind them?

Try yourself on this 30-second test: You have learned that the United States is a Federal Republic which operates under a system of separation of powers with checks and balances. But, if you are challenged, can you give real meaning to each of the phrases used above? If you can, score 100 and turn to the next page. If you're a little doubtful, let's take a look at each of them.

I. A FEDERAL REPUBLIC

The word "Federal" tells us that the United States is a union of individual States, each of which reserves certain powers to itself. The national (or Federal) Government has broad—yet limited—powers.

By contrast Britain is not a federal government. Her counties (geographically equivalent to our States) have few powers of their own. However, our Canadian neighbors do live under a federal form of government, with certain powers retained by the provinces within the national dominion. Several of the Latin American nations are also federal republics.

"Republic" comes from the Latin words res (thing, affair) and publicus (public)—in other words, a public affair, or matter concerning the people at large. The United States is a republic because qualified voters select the President, Senators, and Representatives by direct vote.

The Constitution of the United States was written and signed more than 160 years ago. Since the adoption of the first 10 amendments (the Bill of Rights in 1791) the Constitution has been amended only 11 times. Yet it remains a living thing, guiding our democratic form of government through every kind of trial and strife.

The Constitution is proclaimed (in Article VI) as our permanent guide in government: "This Constitution and the laws of the United States which shall be made in pursuance thereof * * * shall be the supreme law of the land."

II. SEPARATION OF POWERS

In earlier sections the Constitution provides for the separation of powers among three branches:

Article I: "All legislative powers herein granted shall be vested in a Congress."

Article II: "The executive power shall be vested in a President."

Article III: "The judicial power * * * shall be vested in one Supreme Court and in such inferior courts as Congress may from time to time ordain and establish."

The founding fathers were breaking new ground when the Constitution was written. Never before had the theory of the separation of powers within a national government been put into practice. Since our early days other nations have patterned their systems of government on ours. The Philippines, Liberia, and many of the Latin American countries are examples.

The British Commonwealth nations and most European countries follow the parliamentary system. Under this system the prime minister and his cabinet (the executives) are members of the legislature, and the courts have much more limited power than in the United States.

But the men who wrote the Constitution went still further. They felt that each branch of the Government should have certain checks over the other two—in order to balance the power and prevent any one branch from becoming too strong. Thus we come to our system of:

III. CHECKS AND BALANCES

Congress has these checks (or restraints) on the President and the courts:

1. The Senate must approve the men whom the President appoints as Cabinet members, other high officers of the executive branch, Ambassadors, and Ministers, and as Federal court judges.

2. The Senate must ratify (approve)—by a two-thirds vote—all treaties which the President works out with foreign countries.

3. The Congress may remove a President or a Federal judge from office for serious misconduct ("high crime and misdemeanor"). In these circumstances the House impeaches (accuses) the official, and the Senate sits as judge and jury in a trial to convict or clear him.

4. Congress also holds a check over the lower Federal courts, through its power to create or eliminate these courts.

5. Through its "power of the purse" Congress exercises a very effective control over the President's activities. By refusing to approve funds Congress can prevent the President from carrying out certain activities—even if he has the authority for them.

6. Finally, Congress is a check on itself. The House and Senate must agree on the exact terms of each bill before it becomes law. Every session hundreds of bills are passed by one House, and are either rejected or ignored by the other. Most important bills are modified in conference, so that the varying opinions of the House and Senate can be brought closer together.

The President has these checks on the legislative and judicial branches:

1. His most powerful check is the veto. He may disapprove any bill passed by Congress by returning it to Congress with his veto (which, in Latin, means "I forbid"). However, if both Houses of Congress repass the vetoed bill by a two-thirds majority it becomes law without the President's signatire.

2. The President acts as a check on the Supreme Court and other Federal courts by his power to appoint new justices when vacancies exist.

The judicial branch—and the Supreme Court in particular—holds one all-important check over the other two branches:

The Supreme Court may set aside any law passed by Congress and approved by the President if it finds that the law conflicts with the Constitution. We know that the Constitution is the "supreme law of the land." When a person or State challenges a law, claiming that it conflicts with rights granted in the Constitution, the Supreme Court makes a decision. If it finds the law unconstitutional, it is declared null and void and is no longer a law. However, the Supreme Court does not examine Federal laws unless a case is brought before it by a citizen or a State.

IV. CHANGING THE CONSTITUTION

It is true that our Constitution has served us well throughout the years, with only a few changes. But the people of the United States may alter the Constitution. It may be amended in a variety of ways.

One Hundred Taxes Hidden in an Egg

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following broadcast by Robert Montgomery on hidden taxes:

There's been a lot of talk about taxes this week. Some of the talk about reductions reminded me of a magician's patter when he tells you to watch his left hand so you won't notice what his right hand is doing.

Before I comment on the President's tax message, I want to take a look at what we really pay in taxes—the ones we don't realize we're paying—hidden taxes.

We'd do a lot more thinking about hidden taxes, if for just one day, every time we made a purchase, we were told how many taxes were tucked away in the price we pay.

Let's try the experiment right now. Let's start with something just as simple as buying an egg. It seems we haven't just bought an egg, we've also paid a hundred hidden taxes.

One hundred, hidden in an egg.

What are they? Well, for example the grocer. He paid 14 Federal, State, and local taxes. Among them Federal income, Federal transportation, Federal safe-deposit box, and Federal social-security tax.

In an excellent article in the American Weekly, reporter Dave Camelon tells how the Tax Foundation discoverd 116 taxes woven into a man's suit of clothes—150 on your Easter bonnet.

Now you say, most of these hidden taxes are pretty small, fractions of a cent. What do they really amount to in the course of a year?

Listen carefully. If you are an average American family, hidden taxes cost you more in 1 year than your income tax.

For what really happened is that the President agreed to reduce certain luxury taxes provided * * * Congress will increase the taxes on necessities.

On necessities? How so? Because increased corporation taxes will, in fact, increase your hidden taxes. The tax burden on corporations is so great today that further increases can mean only one thing—that these increases are passed on to you in the form of higher prices.

In other words, you the consumer, will be no better off. You may pay less for your wife's handbag, less for a trip to the country, but more for your necessities—more for your eggs.

No party, Republican or Democratic, can wipe away overnight the staggering debt we accumulated to win the war. We owe this money. We owe it to the future prosperity of ourselves and our children. But it's high time responsible leaders in Washington cut our expenditures so that we can have a real reduction in our tax burden * * * start reducing our national debt. So that we, as a Nation, can risk more, make more, and so buy more.

Next week I'll have something to say on how we can begin to reach that goal * * * a lower tax plan that has proved it brings prosperity.

Reduction of Government Expenditures

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. HILL. Mr. Speaker, I wish to include in the Appendix of the RECORD a communication from a management-labor committee of the Denver, Colo., Chamber of Commerce urging the adoption of legislation recommended by the Hoover Commission "as a possible means of reducing governmental expenditures and promoting efficiency."

JANUARY 24, 1950.

To the Certain Members of Congress of the United States, Washington, D. C.

GENTLEMEN: This communication is from a management-labor committee initiated during the early days of World War II. It is composed of the active heads of the major labor organizations of the State of Colorado and the city of Denver, and a number of business leaders of the community, all meeting under the auspices of the Denver Chamber of Commerce. The purpose of this committee has been to perpetuate the friendships formed at a time when the common defense was paramount and factional disputes were subordinated in the all-out effort to win the war.

The committee holds regular meetings about twice a month to explore in a friendly fashion the many areas in which such widely diverse groups can think and act in concert for the common good of all.

This committee has been much concerned over the failure of the Congress to take action on more than a small part of the recommendations made by the Hoover Commission on Reorganization of the Executive Branch of the Government. They feel very deeply that the present situation of an outgo of money exceeding by billions the income is deplorable. They believe that obvious waste in many quarters, overlapping of functions in Government, excessive red tape, unnecessary expenditures, and unwarranted extension of bureaus should be eliminated at the earliest possible moment.

The committee therefore urges the Congress, and specifically the representatives from this territory in both branches of Congress, not to forget the principles expressed in the Hoover Commission report, but to constantly keep these principles in mind as a possible means of reducing governmental expenditures and promoting efficiency. Bills for this purpose should be introduced, kept free from entangling riders, and be constantly pushed forward to the end that some reasonable economy in Government will be attained.

It is the intention of this committee to make detailed study of the various recommendations contained in the Hoover report, and from time to time to express the views of this committee to the Members of Congress with respect to the items so studied.

O. H. Knight, President, Oil Workers International Union, CIO; Michael Livoda, Regional Director, CIO; A. R. Kinstley, Vice President, Oil Workers International Union, CIO; George A. Cavender, President, Colorado State Federation of Labor; Charles O. Voigt, President, Stearns-Roger Manufacturing Co., President, General Iron Works Co.; Roger B. Mead, Secretary-Treasurer, Mead & Mount Construction Co.; B. Vissig, Vice President, Gardner-Denver Co.; Paul Ducey, President, Local Union 111, International Brotherhood of Electrical Workers; J. Cline Evans, President, the Denver Fire Clay Co.; Fred Lusk, Business Representative, Denver Building and Construction Trades Council; John A. Ferguson, Jr., Vice President and Secretary, Morey Mercantile Co.; R. S. McIlwaine, President, Rainbo Bread Co.

Communists in China Demand Hostages for Release of American Citizens—American Prestige in Far East Is at a New Low

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I have in my possession reliable

information to the effect that the Chinese Communist Government refuses to permit American citizens to leave that country unless a Chinese guarantor or hostage is provided. If this is true, then President Truman and Secretary Acheson should resign forthwith as they are derelict in their responsibilities to citizens of the United States who are abroad.

The information, Mr. Speaker, comes to me from Mr. Alfred Kohlberg, one of the vice presidents of the American China Policy Association, Inc. I include as part of my remarks a telegram addressed to Dean Acheson, a letter of February 9, 1950, from Troy L. Perkins, Department of State, and a letter in reply thereto from American China Policy Association by Alfred Kohlberg:

NEW YORK, N. Y., *January 15, 1950.*

Hon. DEAN ACHESON,
Secretary of State,
Washington, D. C.:

We have received reports from China that each of the employees of the American State Department in that country now ordered to return home will have to provide a Chinese guarantor or hostage before being granted exit permit. Is this accurate and is the State Department permitting its employees to accede to this demand?

AMERICAN CHINA POLICY ASSOCIATION, INC.

DEPARTMENT OF STATE,
Washington, February 9, 1950.

AMERICAN CHINA POLICY ASSOCIATION, INC.,
New York, N. Y.

DEAR SIRS: Reference is made to your telegram of January 16, 1950, addressed to the Secretary, concerning reports you have received that Department of State personnel returning from China "will have to provide a Chinese guarantor or hostage before being granted exit permits."

These reports undoubtedly refer to the regulations enforced in recent months by the Chinese Communist authorities that foreign nationals must provide shop guaranties as a prerequisite to the issuance of exit permits. It should be noted that this requirement is not limited to official American personnel, and that, so far as is known, there has been no general stipulation that the guarantor must be Chinese. It is our understanding that officials of other nonrecognizing countries have also been subject to this requirement. Furthermore, it is believed that the word "hostage" is misleading in this context. As you are probably aware, the shop guaranty, although not a standard requirement under previous governments for persons wishing to leave China, is widely used in China, and is generally equivalent to the type of bond which is required in this country of persons in positions of financial responsibility.

Prior to the departure some months ago of certain official American personnel from Nanking, protests were made by our Embassy in Nanking to the Chinese Communist authorities on the basis that diplomatic and consular officials are exempt from such requirements. These protests were disregarded by those authorities for the stated reason that our Government personnel in China were considered by the Communists to have no official standing. To enable these persons to return to the United States as instructed, the Embassy was authorized to comply with this demand, and at the same time was instructed to emphasize to the Chinese Communist authorities that this treatment of United States Government representatives was considered contrary to international custom and usage and that the Embassy action did not constitute a waiver of any rights under such diplomatic usage.

Recent reports indicate that the shop-guaranty procedure may be changed somewhat by the substitution therefor of advertisements in newspapers of the intention to leave China.

The Department is giving its attention to this problem and will take all those steps to protect its prerogatives under existing treaties and diplomatic usage as are consonant with this Government's policy of withdrawing all official personnel from China.

Sincerely yours,

TROY L. PERKINS,
Officer in Charge, Political Affairs,
Office of Chinese Affairs.

AMERICAN CHINA POLICY
ASSOCIATION, INC.,
New York, N. Y., February 15, 1950.

Mr. TROY L. PERKINS,
Officer in Charge, Political Affairs,
Office of Chinese Affairs,
Department of State,
Washington, D. C.

DEAR SIR: Your letter of February 9 in reply to my telegram of January 15 confirms my understanding of the system of so-called shop guaranties required of Americans, both official and unofficial, seeking to leave Red China. You are, I believe, mistaken in referring to such shop guaranties as widely used in China insofar as Americans are concerned. In my 34 years in business in that country, I had never heard of it, except as a bond or guaranty for Chinese holding positions of financial responsibility.

I think you are also mistaken in assuming that "advertisement in the newspaper of the intention to leave China" will be a substitute therefor. This advertisement has been a requirement in Shanghai in addition to the shop guaranty since the Reds took over, and is not a substitute therefor.

In writing "that the word 'hostage' is misleading in this context," I fear you may not be familiar with the actual working of this Communist requirement. For example, a certain American, one of those who was able to get out on the *President Gordon*, September 22, 1949, talked to the press when the *Gordon* arrived at Hong Kong. A few days later, at sea from Hong Kong en route for San Francisco, he received a radio from the man you call his guarantor and whom I call his hostage, reading approximately: "Please make no statements of any character about China because authorities will hold me responsible."

Feeling grateful to his Chinese friend, without whose guarantee he could not have escaped, he has since remained silent. You may not consider this American's guarantor a "hostage" for his satisfactory behavior. I do.

The man I refer to was not an official. This same system applies to our officials and your Department's authorization of their compliance with this demand must lead either to the public gagging of Americans leaving China, or the punishment of their "hostages." This latter would result in refusal by responsible Chinese to further guarantee their American friends and thus make it impossible for the Americans remaining there to leave.

If this is the best that the State Department can do for Americans, both official and unofficial, stationed abroad, I do not believe that I will be the only American who will wonder whose interests the State Department serves.

Sincerely yours,

ALFRED KOHLBERG, *Chairman.*

Proposed West Point of the Air

EXTENSION OF REMARKS
OF

HON. HAROLD A. PATTEN

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. PATTEN. Mr. Speaker, I received a letter addressed to the Congress of the United States from a Mr. Ted Essex, of Douglas, Ariz., which is in district 2.

Mr. Essex' letter is brief and to the point and sets forth the voice of many of my constituents as well as other citizens in the State of Arizona. You will find his letter timely and certainly brings forth to us in this, the second half of the twentieth century, the great possibilities that are available to our Nation in the West.

As an ordinary citizen of our great country, Mr. Essex is asking that his voice be heard.

DOUGLAS, ARIZ., *December 16, 1949.*

An Open Letter to the Congress of the United States.

GENTLEMEN: I am a native Arizonian, born and reared in the baby State, and I feel that my State is not receiving due consideration in your search for a favorable site for your proposed air academy. Arizona has been neglected so many times and in so many instances that I made up my mind to speak out in defense of our young but virile State. There is no better locale in the Nation than ours, but because we have a small population and so few millionaires, you continue to give us the run-around. We have two able Congressmen and we are proud of their efforts in our behalf, but they are not enough so it seems, and I feel that there must be some sort of bloc against our efforts to get the recognition accorded other States with much less to offer than politics.

I know that for such a venture as the proposed West Point of the Air, you naturally seek an ideal location, and we have that in every sense of the world. We have the best all around climate in the country, and no State has a greater safety record in aviation. We have all the facilities necessary for such a venture, and our geographical position cannot be surpassed. Above all, our people are loyal and would support it to the hilt. We have never had to submit to a so-called loyalty check, and never will. We are proud of our country, and our record in every crisis is unblemished and unsullied. We need such a program as is being proposed to build up our prestige and earn the respect so readily given to the more populated sections of the Nation. Of course, I know that the lobbyists are fighting for the project on every hand, and of course they will be given priority, being heavy on cash but light on the stuff called patriotism to gain their ends. We, being westerners, are not of the ilk that uses this sort of procedure. We merely operate on merit. It could mean much to us, but we would not want it any other way than the right way. We are the most discriminated-against State in the Union and if it were not for our hardiness and indomitable will to survive we would still be a Territory plagued by Indians, and our deserts would still be barren wastes instead of the great agricultural praradise we have become. We are also proud of our strides in the fields of culture and business, and all we need to really become a State on equal terms with the others is to be given something such as

the proposed air academy to prove we are qualified and ready for recognition. We are not asking too much and neither are we beggars, because we will become prosperous regardless. But you could help us to achieve our goal at a faster pace by giving us the consideration due us.

I am just a mere citizen asking for a break for my State of Arizona. No one has prompted me to make this request, as I hold no office of any kind. But being an Arizonian, I feel it my duty to further the ambitions of my State. I am not a lobbyist as they have money behind them and I have not. But I feel that you gentlemen of such high position can help if you will. Leaving this plea in your hands and hoping you will give it some thought, I am,

Very truly yours,

TED ESSEX.

Thank you.

Dr. Paul S. Heath

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. TAURIELLO. Mr. Speaker, on Tuesday last, an event of interest took place in my home town of Buffalo, N. Y., which was indeed a fitting preview to the official opening of Brotherhood Week, which we are celebrating this week.

Dr. Paul S. Heath was installed as general presbyter of the Buffalo-Niagara Presbytery to succeed Dr. Frank L. Janeway, who is retiring.

The fact that this auspicious event was attended by Protestant leaders of many denominations represented in the western New York area is, indeed, significant of the spirit of unity and brotherhood which exists in Buffalo among the various church groups.

Our need for brotherhood is even greater today than it was when our great Republic was first proclaimed, and certainly the expression of cooperation such as was evidenced at this impressive ceremony is a splendid example of the efforts of all religious groups in Buffalo to implement the Christian concept of the brotherhood of man under the fatherhood of God at a time when all such proposals are under such violent attack by the forces of totalitarianism.

I join the citizens of Buffalo in extending to Dr. Heath a cordial welcome and my very best wishes for a long and happy stay in my native city. To Dr. Janeway I extend my felicitations and warm personal regards. The affection with which he is held in the hearts of the people of Buffalo is proof of the splendid spiritual influence he has generated and nurtured among so many thousands and he has spent many years of fruitful endeavor for his Church and our community.

It is indeed fitting that all of us, at the beginning of Brotherhood Week reaffirm our faith in God and rededicate ourselves to brotherhood under God through all the peoples of the world.

Under leave to extend my remarks, I include herewith articles from the Buffalo Evening News and the Buffalo Courier-Express relating the details of this happy occasion.

[From the Buffalo Evening News of February 15, 1950]

DR. PAUL S. HEATH FORMALLY SEATED AS GENERAL PRESBYTER

In a ceremony significant for its interdenominational spirit of unity, Dr. Paul Silas Heath was installed Tuesday evening as general presbyter of the Buffalo-Niagara Presbytery.

Protestant leaders representing a score of denominations heard the former minister of First Presbyterian Church, Kalamazoo, Mich., receive the charge in spacious Lafayette Avenue Church from his predecessor, Dr. Frank L. Janeway, who is retiring.

Dr. Heath was congratulated by the Rev. Harlan M. Fronst, executive secretary of the Council of Churches of Buffalo and Erie County, "on behalf of a Christian community * * * of 270 (Protestant) churches."

Then, on the flower-decked altar, the Rt. Rev. Lauriston L. Scaife, bishop of the Episcopal Diocese of Western New York, told an audience of 200 that there is "a need in these days * * * for a united Christian witness." He added: "There is a growing cooperation among most bodies of Christians."

URGES RETURN TO LOVE OF GOD

The number of denominations present, he said, was a token of cooperation in praying together and seeking together the truth.

The problem of life today "is really the problem of Cain and Abel," Dr. Harold E. Nicely of Rochester, moderator of the Presbyterian Synod of New York, declared. The answer, he noted, lies in a return to love of God.

"Sooner or later Cain and Abel will come together," Dr. Nicely observed. "And how they come together will determine our future. Will one say, 'I have an adversary; he wants to destroy me, so I'll destroy him first'?"

A fair question, the Rochester clergyman added, is "What have we in this power-driven, industrialized age to do with the Galilean carpenter?"

"Yet, if we look for * * * peace only in science, or in apparent progress, we are likely to be guided into a false complacency which can be turned overnight into despair."

COMMISSIONERS ELECTED

The Rev. William Thomas Heath, rector of Trinity Episcopal Church and brother of the new general presbyter, read from the Scriptures. The invocation was by the Rev. David S. MacInnes, minister of the host church, and the constitutional questions of the ceremony were administered to Dr. Heath by Dr. James W. Laurie, Presbytery moderator.

The installation prayer was given by the Rev. Murray S. Howland, former minister of the Lafayette Avenue Church, who officiated at Dr. Heath's ordination in 1921.

Earlier, the Presbytery elected these commissioners to the General Assembly in Cincinnati in May:

The Reverend Richard W. Firth, Fredonia; the Reverend Clair S. Emerick, Ellicottville; the Reverend Ray K. Hallin, Niagara Falls, and these elders: Harold Rich and Edward P. Lupfer, of Buffalo, and Edward H. Cartwright, Tonawanda.

[From the Buffalo Courier Express of February 15, 1950]

PRESBYTERIAN CHURCH SEATS NEW PRESBYTER

Dr. Paul Silas Heath was installed last night as general presbyter of the Buffalo-Niagara Presbytery of the Presbyterian Church, United States of America, at the Lafayette Avenue Presbyterian Church.

Dr. Heath, former president of Auburn Theological Seminary and minister of First Presbyterian Church, Kalamazoo, Mich., was praised for his accomplishments and devotion as an educator and postor by Dr. Harold E. Nicely of Rochester, moderator of the Presbyterian Synod of New York, and by Dr. Frank L. Janeway, stated clerk and retired general presbyter.

During the month that Dr. Heath has served unofficially as general presbyter, Dr. Janeway said, he has demonstrated a calm spirit, judicial mind, and deep sincerity.

In giving the charge to Dr. Heath, the retiring presbytery leader urged him to get to know intimately all the 80 ministers and 32,300 members of the presbytery's 62 churches. He further admonished him to be a patient and willing listener and to free pastors of organizational details in order that they can devote their full efforts to curing souls and preaching the word of God.

The presence of clergy and laity of other communions at the installation ceremonies was cited by the Rt. Rev. Lauriston L. Scaife, bishop of the Episcopal Diocese of Western New York, as an evidence of a growing spirit of cooperation in the Christian church.

"In these days there is need for a united Christian witness as the forces of godlessness wax strong among us," Bishop Scaife declared. "There are those who impatiently call for an immediate uniting of all Christians into a single church in order to combat this godlessness.

"That is not possible, but what is possible is the churches themselves working together, praying together, thinking together, sharing a faith greater than we have yet grasped and deeper than we have ever fathomed, seeking together the truth which none may know in its fullness alone."

Greetings on behalf of other churches were extended to Dr. and Mrs. Heath by the Reverend Harlan M. Frost, executive secretary of the Council of Churches of Buffalo and Erie County.

The Reverend William Thomas Heath, rector of Trinity Episcopal Church and brother of the new general presbyter, gave the Scripture reading. A processional of clergy of Protestant denominations and elders of the Presbyterian Church was led by Dr. Ralph B. Hindman, minister of the First Church.

Dr. Murray S. Howland, a retired minister who officiated at Dr. Heath's ordination at the Lafayette Avenue Church in 1921, gave the prayer of installation. Dr. James W. Laurie, moderator of the presbytery, presided and asked the constitutional questions.

Rogers Is Right

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. HERLONG. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therewith a short editorial from the Tampa (Fla.) Tribune commending my colleague, Congressman DWIGHT ROGERS, for his resolution proposing an amendment to the rules which will provide that no appropriations shall be passed without a yea-and-nay vote:

ROGERS IS RIGHT

Representative DWIGHT L. ROGERS, of Florida, has a level head, containing a sound

mind. Concerned about the tendency to vote millions and billions of the people's money without due process or consideration, Mr. ROGERS has introduced a resolution, in these wise words:

"*Resolved*, That rule XXI of the rules of the House of Representatives is hereby amended by adding at the end thereof the following new paragraph:

" '5. No bill or joint resolution of a public character making an appropriation shall be finally passed, and no amendment of the Senate to, or report of a committee of conference on, such a bill or resolution shall be agreed to, unless the vote of the House is determined by yeas and nays.' "

Mr. ROGERS briefly stated the reason for his resolution. He said: "I do this for the purpose of letting us become appropriation conscious. I have seen in this House not millions but billions of dollars of the taxpayers' money appropriated without even having a majority of the Members of the House present. I think we owe it to the taxpayers of this Nation, our constituents, to let them know how we stand on the appropriation of their money. I hope you will give consideration to this resolution."

The Rogers resolution, intended to make it harder to "railroad" appropriations, thus promoting governmental economy, may not get through, but the Floridian is thoroughly right in his plan and purpose. Members of Congress should at least be required to go on record on vast expenditures of Federal funds. Voting billions by a minority of the lawmakers is the worst kind of bad business.

Ancient Ferry May Escape Scrap Heap

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article by Mr. Frank O. Braynard which appeared in yesterday's New York Herald Tribune.

Mr. Speaker, when I read this article, which had with it a picture of the old *Brinckerhoff* ferryboat, which we who lived on the west bank of the Hudson River used so many years to cross the river in order to go to Poughkeepsie, it brought back very pleasant memories. I think that it is no more than fitting that this article about the *Brinckerhoff* be inserted in the CONGRESSIONAL RECORD for the benefit of my many constituents who, like me, must still have a very soft spot in their hearts for this old ferry. I hope that it will be possible to give it a permanent location for those interested in the history of the Hudson River Valley.

In the old days I used to use this ferry when driving to Poughkeepsie with a good team of horses and a buggy and again occasionally in the winter with that same team and a cutter. Sometimes the ferry would be unable to make the trip because of the thick ice in the river. Then the great thrill was to drive across the river in a sleigh back of a good snappy pair of horses and very often you could pick up quite an exciting race. Most of the time, however, the old *Brinckerhoff* kept the channel open and you wondered how it stood the wear-and-tear banging away and dashing against the floating cakes of ice.

This article speaks of the *Brinckerhoff* in connection with the annual intercollegiate rowing races held on the Hudson River. What a service it did for thousands of people in those days. It was quite an event to be one of the passengers on the old boat to view the race from that vantage point.

When the Mid-Hudson Bridge was built, of course the old *Brinckerhoff* could not withstand that competition. It did its best, however, to keep going and very often we would use the old ferry, during those trying days for its existence, just for old-times' sage.

The article follows:

ANCIENT FERRY MAY ESCAPE SCRAP HEAP—MUSEUM BERTH OPEN IF VETERAN CAN MAKE TRIP

(By Frank O. Braynard)

The historic ferryboat *Brinckerhoff* may yet escape the scrapper's blow torch. Eastern members of the Steamship Historical Society of America hope to find ways and means to sail or tow the 51-year-old craft from Kingston, N. Y., to a permanent location at the Marine Historical Association's Mystic, Conn., Museum.

The *Brinckerhoff* is the last of dozens of small sidewheel ferries that criss-crossed the bays and rivers of the Northeast a generation ago. She has been described as a choice specimen of nineteenth century ferryboat architecture—from her quaint pilot houses—topped by huge, old-fashioned range lights, each with its gilded ball—to her two horse-and-buggy-size vehicle gangways.

If successful, the society will deliver the boat to the Mystic museum to be "enshrined" alongside such famous relics as the square-rigged *Joseph Conrad*, the whaler *Charles Morgan*, and the original clubhouse of the New York Yacht Club, towed last year from Glen Cove, L. I.

There will be no lack of a good crew to man the ancient craft if it is found feasible to move her under her own steam to Mystic. A good percentage of those attending a recent New York chapter meeting of the society volunteered to help. Capt. Earl C. Palmer, vice president of the society and an executive of Moran Towing & Transportation Co., has offered to skipper the 140-foot craft to her final resting place.

The *Brinckerhoff's* former captain and chief engineer also have offered their services for the voyage, according to William Hopkins Ewen, society president and assistant advertising manager for the Borden Co. Ashby O. Reardon, a society member and secretary of the Mutual Ice Co., Alexandria, Va., has volunteered to provide a ton of coal and to shovel it himself.

Capt. Elwell B. Thomas, proprietor of the Thomas Boat Yard at Stonington, Conn., has offered to bring a crew of workers to Mystic to paint or otherwise put the *Brinckerhoff* into exhibition trim. If the society succeeds in bringing the boat to Mystic, a joint society-museum committee will be set up to determine what work is necessary for her upkeep and to get volunteers for it.

But many problems beset the society in its efforts to save the *Brinckerhoff*. Built in 1899 for the Poughkeepsie Highland (New Paltz Landing) Line, she ran faithfully until 1941 lowered tolls on the mid-Hudson bridge forced the company to close after continuous operation since 1798. From 1942 to May 1948, the ferry served Bridgeport, Conn., as a pedestrian link between the city and nearby Pleasure Beach. She made an occasional moonlight cruise on Long Island Sound.

The *Brinckerhoff's* years on the Hudson were fairly uneventful, except for the annual intercollegiate rowing races. On these occasions she carried hundreds of spectators and her crew once saved eight boys when their canoe capsized.

The *Brinckerhoff's* engine, built by the W. & A. Fletcher Co., Hoboken, N. J., still operates with flawless smoothness. It is one of the few of Fletcher's 200-odd beam engines to survive. More recent such engines are in the Hudson River steamboats *Robert Fulton* and *Bear Mountain*, and in the Lake Champlain steamer *Ticonderoga*.

Last May the *Brinckerhoff* was sent to her regular lay-up spot at Roundout Creek, Kingston, and it was found that her outboard paddle-wheel braces would have to be replaced. The cost of restoration led Bridgeport to decide not to return her to service. It is hoped that her general condition will permit a temporary certificate from the Coast Guard for her projected trip. Mr. Ewen estimated that it will cost $1,500 to reconnect pipe lines and tow or steam the *Brinckerhoff* to Mystic.

The historical society entered the picture last fall when its former president, Freeman R. Hathaway, passed through Bridgeport. Inquiring about the old ferry, he was led promptly into Mayor Jasper McLevy's office. He explained why the society was interested and was told the case would be taken up in due course. Last December the Bridgeport City Council turned the ferry over to the Mystic Museum.

The society has been designated as the intermediary in the transaction, and is conducting complex negotiations. Towing is being investigated if the more romantic way of sailing her under her own power is ruled out. Coast Guard certification also is being investigated and insurance coverage, particularly if society members run the boat, is being studied. Permission from the various maritime unions for such a voyage has been requested.

The matter has been discussed with the National Maritime Union and the Marine Engineers Beneficial Association, CIO, affiliates, and the AFL Masters, Mates and Pilots of America. All three unions are considering the project and representatives have indicated that no objection probably would be made to the 200-mile voyage of a 51-year-old vessel manned by a volunteer crew.

A general appeal for funds for the project will be launched tomorrow by Mr. Ewen for the society. He will ask that interested persons send checks or money orders to the Marine Historical Association, Inc., Mystic, Conn. Checks should be made out to the association and not to the Steamship Historical Society, he said.

Donations will be recorded, and in the event the required $1,500 total is not reached all gifts will be refunded, according to Charles A. Brooks, association business manager.

Freight Trains on the Highways

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. MADDEN. Mr. Speaker, the following editorial from the Hammond (Ind.) Times sets out some factual information regarding the rapid deterioration of the Nation's highways. A complete survey should be made as to the vast number of trucks that have been added to the various truck fleets throughout the country in recent years. One has only to drive his automobile on any sin-

gle-lane main highway to find that his progress is blocked by great numbers of trucks driving bumper to bumper and refusing to allow passenger cars to pass.

Unless the truck interests of the country do something regarding their heavy trucks from taking over the highways, Congress must take the necessary steps.

FREIGHT TRAINS ON THE HIGHWAYS

One of the most important questions affecting the taxpayers of the Nation is this: Are the huge modern commercial trucks paying their way—or are the vast sums needed to build and maintain highways suitable for this kind of traffic being paid by the rest of us?

Various authorities have spoken on the subject. And here is what some of them say.

The chief engineer of highways, State of California, said: "Big trucks in this State are responsible for 55 percent of the total cost of new highway construction."

The highway-traffic problems commission of Illinois said: "Private automobiles in this State are paying three times more tax per ton-mile than the largest-type truck."

The United States Commissioner of Public Roads said: "The chief destructive factor of highways is overloading (of heavy trucks)."

The Cincinnati Post said: "What * * * every State is up against is an effort to put freight trains on the highways, with the taxpayers providing the right-of-way—not the railroads, as happens when freight cars are kept on rails."

The American Automobile Association said: "Billions of dollars worth of the Nation's finest highways are being pounded to pieces by overweight and overloaded commercial vehicles."

It's no wonder that more and more highway officials—to say nothing of the people who pay the bills—are looking anxiously for ways to solve the critical highway-destruction problem.

The Drift Toward Socialism

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. MILLER of Nebraska. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I include a special resolution adopted by the American National Livestock Association at their convention in Miami, Fla., January 5, 1950.

Mr. Speaker, the President of the United States and the Democratic administration, at the Jefferson Day powwow, chided the Republicans about their charge that this administration was leading us down the road of socialism. Apparently the consciences of the Democrats are being troubled. They protest too much.

Mr. Speaker, your party should be called the Labor-Socialist Party. It is nothing more nor less. If socialized medicine, socialized housing, the Brannan farm program, and a host of other pending legislation does not lead us down the road of socialism, then it is hard to understand just where such proposals will lead the American people.

The resolution passed by the American National Livestock Association on January 5 reaffirms the thinking of this large group as to the direction the legislative program of this administration is leading the country.

The livestock association is worried about becoming mere numbers in a completely socialized state. They further state that "our country is rapidly and unmistakably drifting toward the consummation of a false concept—the socialized state."

I would suggest, Mr. Speaker, that your party heed the warning of the livestock industry. They speak the truth in their resolution. Your party will find it hard to throw off the yoke and charge that you are sponsoring socialistic legislation. The resolution follows:

There impends today a threat to our country and the freedom of its citizens which so menacingly overshadows the future that we, American cattlemen of all shades of political belief, feel it our duty to speak out in unmistakable terms.

This threat lies in the fact that our country—without conscious choice on the part of its people—is rapidly and unmistakably drifting toward the consummation of a false concept—the socialized state.

Tokens of this danger are everywhere and undeniable. The growing power and expansion of wasteful government; the colossal public debt; the heavy burden of taxation; the malicious attempt to substitute an artificial economy for the natural economy which alone can function in freedom; the gradual assumption by the state of financial responsibility for every hazard incident to life—hazards which should be personally met and borne by every human being who has the instinctive will to survive and the inherent impulse to be free; the arraignment of economic and social groups, one against the other, and numerous other conditions and proposals similarly inspired and equally false.

Government produces nothing and has no means by which to support these false and destructive theories except by exacting from its citizens the fruits of their labors.

The course the Government is now taking, unless it is promptly reversed, must inevitably lead to national bankruptcy. In a vain effort to prolong a specious sense of security, more similar expedients will be applied until we become mere numbers in a completely socialized state: Therefore, be it

Resolved, That we, the members of the American National Live Stock Association in convention assembled at Miami, Fla., January 5, 1950, reaffirm our solemn conviction that the future health, strength, and prosperity of our country depends on the reestablishment and maintenance of free and competitive enterprise and hereby pledge ourselves as individuals and as an association to work diligently and actively toward this objective and toward the defeat of the falacious philosophies that are beguiling our country into socialism.

Iowa People and Their State

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. DOLLIVER. Mr. Speaker, the story is told of four European statesmen who were conducted on a tour of the United States last year. They saw the skyscrapers of New York, they visited Niagara Falls, they descended into the Grand Canyon, they flew over the snow-capped Rockies, and they were entertained in Hollywood. But when someone asked them to name the most impressive sight they had seen, they all agreed that it was the tremendous expanse of rich farmland in the upper Mississippi Valley.

This story is a striking reminder of the fact that we Americans sometimes forget that we possess, in our great heart land, one of the largest areas of fertile land on the globe. In a world in which food for hungry millions is a major problem, the importance of this area cannot be overemphasized.

Anyone who has taken a morning plane west out of Chicago on a clear autumn day has seen below him the ocean of patchwork grain fields stretching for miles in every direction. To use the psalmist's phrase, these prairies "stand so thick with corn that they laugh and sing."

The State of Iowa is the food-producing core of this great valley. We are situated almost in the Nation's center with the great Mississippi River on the east and the great Missouri River on the west. Our State contains a quarter of all the Nation's grade A farmland and 97 percent of our soil is under cultivation. Those of us who live in Iowa—who have literally heard the corn grow on hot summer nights—love that deep black soil. We love it because we know it and can work with it. Each spring it challenges us; each autumn it rewards us with abundant crops.

Iowans are proud of their 36,000,000-acre garden spot between two great rivers. We are proud of our children and our churches, our schools and our industries. We rejoice that we have no really showy mansions and no really sordid slums. We brag that Anton Dvorak found inspiration for his New World Symphony in our own Spillville, but we are just as proud of the fact that we conduct a music festival each year in which over 5,000 high-school boys and girls participate.

Most of all, perhaps, we rejoice in the role of creating food for this great Nation and for the world. Our food-production statistics are almost unbelievable to some people. Iowa normally leads all other States in the Union in cash farm income—over $1,808,000,000 in 1949; in the value of our market cattle; and in the production and marketing of corn, hogs, eggs, poultry, and oats. During the past year, Iowa produced for the homes of America a total of 3,750,000,000 pounds of pork, 156,000,000 pounds of butterfat, and 332,000,000 dozen eggs. Translated into breakfasts, that is bacon and eggs every morning for over a tenth of the population in this country.

Last fall, 11,303,000 acres of corn in Iowa produced a total of 554,000,000 bushels. This year's corn crop, is in its own way proof of the fact that corn can be raised in the Hawkeye State under almost any circumstances, since especially adverse conditions prevailed. No million-dollar rain appeared for weeks during the critical period of July and

August. In addition, the worst corn-borer manifestation in the history of the State appeared. Still Iowa produced a record crop of corn and, in addition, raised the largest number of pigs ever produced in peacetime.

For the most part, as many of you know, our grain crops reach the tables of the Nation through corn-fed hogs and cattle. Iowa produces and markets more hogs than any other two States in the Nation combined—and has enough corn left over to fatten about a million head of cattle imported each year from the western ranges.

We are proud of last year's record in Iowa. We look forward to the future even as we are proud of our past. But even with mechanization which has revolutionized farming in the last decade—even with improved strains of grains and livestock which have added so much to our productivity—we know that the crops have been raised and the livestock has been fed in spite of storm or snowdrifts and at the cost of sore muscles and weary bones. In this sense we are close to those stanch pioneers who built our State and we are aware of the kind of courage and self-reliance which they possessed.

The history of Iowa, like its present, is more a story of slow achievement than of spectacular but fleeting glory. We can offer to our visitors neither historic battle sites nor elaborate shrines which preserve a golden antiquity. But in a very real way, the name of every village and every county in our State speaks of our own history and of the story of our country. The eighteenth century French period gave us such names as Dubuque and Des Moines. The roll call of our counties is studded with Indian names—Winnebago, Pocahontas, Wapello, Mahaska, Winneshiek, and Pottawattamie—which remind us of the days of the buffalo and the tall grass. Interspersed between the musical Indian names in the county roll call are other more familiar names which are part of American history. Fort Madison, named for the fourth President, was first built in 1808 and was burned and evacuated during the War of 1812. As more and more settlers began to cross the Mississippi at Davenport and Dubuque and Keokuk, the names of other Presidents—Washington, Jefferson, Adams, Monroe, and Jackson—began to appear on county maps. The Mexican War added the Spanish names—Cerro Gordo, Buena Vista, and Palo Alto—to the county roll call. Webster and Calhoun Counties, standing side by side, suggest the debates in Congress which were echoed on the frontier as settlers from the North and the South continued the argument around log-cabin fires. Lee County is said to take its name from the surveying trip which brought the young Gen. Robert E. Lee to Iowa.

Some of the names chosen for our cities and towns reflect the delight of the first settlers in the beautiful country they found—names such as Iowa Falls, Spirit Lake, Cedar Rapids, and Greenfield. Outstanding men of the pioneer period are remembered in such names as Grinnell, Fort Dodge, and Grimes. The European migrations to Iowa beginning in the 1840's brought the Germans and Hollanders, the Irish, Scots, and Swedes. But from the beginning, Iowans, regardless of their origin, have joined together to harvest crops, to establish schools and churches, and to maintain law and order.

By December 28, 1846, when James K. Polk signed the bill admitting Iowa into the Union as the twenty-ninth State, its residents had already discovered that corn grew taller than any other place in the world. Many of the early towns grew up around mills established for the purpose of grinding the grist. At the end of its second decade of statehood, Iowa had sent 48 regiments of its young men to the battlefront in the Civil War, had subdued Indian raids from the north, and had extended its farmlands to the Missouri River.

A special chapter of Iowa history in the 1860's records the story of the mad race of the railroads across the State to be the first to connect with the Union Pacific at Council Bluffs. This race was won by the North Western on January 22, 1867, but the Rock Island and Burlington lines continued to build, and today all three roadbeds serve major transcontinental railroad lines and take the food we raise to market.

Iowa's first century brought tremendous changes. During this period the canoe, the barge, the steamboat and the stagecoach have been replaced by trains, streamlined cars, busses, and planes. It is interesting to note that the river traffic on the Mississippi, which was the major means of transportation in the early period, is showing a marked revival. With the outbreak of World War II especially, traffic on the upper Mississippi grew to giant proportions. A striking fact is that three modern towboats can push as much freight upstream in one trip as four steamboats could carry in a year in the period from 1900 to 1910.

In 1846 there were 102,553 people in the new State of Iowa. A century later there were over 2,500,000—a growth equal to that of the Thirteen Original Colonies between the settlement of Jamestown and the outbreak of the Revolution.

Iowa is proud of the fact that our factory pay rolls are increasing to the point where the State's manufacturing has recently passed the billion dollar mark in valuation. When William H. Voss invented a washing machine at Davenport in 1877 he built the basis for a famous Iowa industry. In 1873 George W. Douglas and Robert Stuart brought to Cedar Rapids the Scotch process for making oatmeal which is now produced in one of the largest factories in the world. In 1878 John H. Morrell, of Ottumwa, founded the packing company which bears his name. In 1913 W. A. Shaeffer, of Fort Madison, established in a back-room workshop the world-famous Shaeffer Pen Co., which is now one of the largest fountain-pen factories in the world.

Already Iowa has an industrial income virtually equal to its agricultural income, from its packing plants, its farm implement and tractor factories, its canneries, and its food processing plants. Today Iowa and Nebraska, together, produce nearly a fourth of the country's serums, vaccines, toxins, and other biological products. Des Moines ranks second only to Hartford, Conn., as an insurance capital. Department store sales increased 201 percent from 1939 to 1948 and bank deposits went up during the same period from 1 to 1½ percent of the national total. We are glad that this industrial growth is integrated into our economy instead of dominating it. About 160,000 Iowans are working in packing houses, tire factories, machine shops, mining and other industries. Unions are well organized and many of the workers are exfarm boys who retain close ties with the farm. Many of them, indeed, are hoping to save enough money to buy a farm.

Iowa is equally proud of the sustained interest in education and cultural pursuits which has kept our State close to the top in literacy since 1870. The first public-school law was passed in Iowa in 1839—7 years before the State entered the Union. Within the year after we became a State, the State University of Iowa was organized. Today more than 50 buildings are scattered on the 386-acre campus which is cut in two by the Iowa River, and dominated by the old stone Capitol so dear to all Iowa hearts. Over 10,000 students are enrolled in courses including the liberal arts, medicine, law, dentistry, pharmacy, engineering, education, commerce, journalism, religion, and the fine arts. In a very real sense, the university reflects the rich cultural tradition, the fine family environment, and the splendid education facilities throughout the State. Walter Damrosch first called Nation-wide attention to Iowa's love of music when he noted that he received more letters from there than from any other State. The annual musical festival and the fine concert and symphony programs at the university draw a State-wide audience. Iowa's graduate school of art, which was inspired by a group of Iowa artists is the largest in the country. The list of famous Iowa writers includes many well known names. Since its first newspaper, the Dubuque Visitor, appeared in 1836, the press in Iowa has grown to produce prize-winning country weeklies, as well as the famous newspapers and widely read magazines.

The Iowa State College of Agriculture and Mechanic Arts at Ames, established in 1858, not only serves as the home of Iowa agriculture but has become internationally famous in its field. Early in its history Iowa State became a pioneer in the establishment of a cooperative extension service between farm and college. Today the county agricultural agent pattern has extended throughout the country. Radio broadcasts, home demonstration agents and printed matter spread the knowledge gained in laboratory and experimental farms operated by the college to all of our farmers and to their sons and daughters. Most Iowa farm boys and girls have participated in the 4–H Club livestock and homemaking demonstrations at Iowa State before they enter high school. In addition to these State institutions, 29 denominational colleges, 4 universities, and 23 junior colleges make their own contri-

bution to Iowa sons and daughters. This year the school budget in Iowa reached $101,500,000—an increase of $7,000,000 in 1 year. In addition, a capital outlay of $15,000,000 is anticipated. In the rural districts, approximately 400 consolidated school districts have been established to supplement the little white schoolhouses which dot the landscape.

It is a privilege for me to bring you a part of the story of Iowa—of its history, its people, its industries, and its farms. As the Iowa farmer and laborer work today, they know that their State is important not only to the Nation but to the world. It is endowed by nature and by its citizens with the capacity to respond to the world's plea for food. It is geographically situated to distribute that food to the Nation's markets and the Nation's ports. And with its paved roads, its extensive railroad mileage, and its broad rivers, it has the transportation facilities to get the food moving to the consumer.

Today the young men and women of Iowa are seeing visions just as their grandfathers dreamed dreams as they sat on the hard seats of covered wagons. As farm markets have become a part of the great complexity of world trade and world politics—and as they themselves have participated in a war which took them to so many parts of the globe—they have gained at once a new perspective and a new appreciation for their home State. Their radios and newspapers bring the football games, the fashions, and the symphonies of the world into their homes; their automobiles and their airplanes make the whole country more accessible. They have seen the bitter fruits of concentrated living. And they believe that only as our country fuses the vigor and might of the cities with the peace and security of our farms, will we achieve a new beauty, and harmony, and completeness which will be our own.

Yalta Agreement—Roosevelt and Churchill Sell China Down the River—Congress Stands Supinely By

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, when President Roosevelt returned after his conference with Stalin and Churchill at Yalta, he addressed a joint session of the Congress early in March 1945. At that time he was obviously a very sick man but nevertheless he tried to appear jovial and happy. I shall never forget his statement to us that "there were no secret agreements at Yalta."

Now, Mr. Speaker, the sordid details of the agreement consummated at Yalta are in the open. Many Members have asked to see such a copy as they did not believe that President Roosevelt could be a party to the sell-out of a loyal and trusted ally.

The people of this country will not forget, Mr. Speaker, that Alger Hiss, the convicted Communist sympathizer was Mr. Roosevelt's adviser at Yalta. The agreement placed Russia in a strategic position to take over all of China which is an accomplished fact today.

As part of my remarks, I am including a copy of the famous Yalta agreement:

AGREEMENT REGARDING JAPAN

The leaders of the three great powers—the Soviet Union, the United States of America, and Great Britain—have agreed that in 2 or 3 months after Germany has surrendered and the war in Europe has terminated the Soviet Union shall enter into the war against Japan on the side of the Allies on condition that:

1. The status quo in Outer Mongolia (the Mongolian People's Republic) shall be preserved.

2. The former rights of Russia violated by the treacherous attack of Japan in 1904 shall be restored, viz:

(a) The southern part of Sakhalin, as well as all the islands adjacent to it, shall be returned to the Soviet Union.

(b) The commercial port of Dairen shall be internationalized, the preeminent interests of the Soviet Union in this port being safeguarded and the lease of Port Arthur as a naval base of the U. S. S. R. restored.

(c) The Chinese-Eastern Railroad and the South Manchurian Railroad, which provides an outlet to Dairen, shall be jointly operated by the establishment of a joint Soviet-Chinese company, it being understood that the preeminent interests of the Soviet Union shall be safeguarded and that China shall retain full sovereignty in Manchuria.

3. The Kurile Islands shall be handed over to the Soviet Union.

It is understood that the agreement concerning Outer Mongolia and the ports and railroads referred to above will require concurrence of Generalissimo Chiang Kai-shek. The President will take measures in order to obtain this concurrence on advice from Marshal Stalin.

The heads of the three great powers have agreed that these claims of the Soviet Union shall be unquestionably fulfilled after Japan has been defeated.

For its part the Soviet Union expresses its readiness to conclude with the National Government of China a pact of friendship and alliance between the USSR and China in order to render assistance to China with its armed forces for the purpose of liberating China from the Japanese yoke.

JOSEPH V. STALIN.
FRANKLIN D. ROOSEVELT.
WINSTON S. CHURCHILL.

FEBRUARY 11, 1945.

One Big Bill

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Wednesday, January 4), 1950

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Washington Daily News of Monday, February 20, entitled "One Big Bill."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE BIG BILL

This year, for the first time, Congress is trying to combine all its annual appropriations of money into one big omnibus bill.

That's a fine idea—if it works.

In previous years a dozen or so appropriation bills reached the House and the Senate, one at a time, over a period of months. Until the last of them was passed nobody could know what the total amount appropriated would be.

With a single big bill Congress can know its total, and, if so minded, can reduce that total to bring it within the Government's anticipated revenues. Or, at least, Congress can make a much more intelligent effort to economize. That's the theory.

But there's one danger in the plan. If Senators and Representatives start logrolling, the one big bill can become much too big. And, because President Truman has no authority to veto items in an appropriation bill, he may be forced to approve even more spending than he proposed in his $42,439,000,000 budget.

Congress should give the President power to veto items.

Whether it does that or not, Congress most certainly should shun all temptation to swell the size of the one big bill by logrolling and back scratching. Otherwise, the fine one-big-bill plan will either have to be abandoned or all the economy talk by Members of Congress may turn out to be a costly bad joke.

As to the future, another good idea comes from Senator MCCLELLAN, of Arkansas: Establish a joint House-Senate committee on the budget, with an adequate, capable, full-time technical staff.

At present, some 500 people in the spending branch of the Government work all year preparing the President's budget.

Congress needs a well-staffed committee on the job all year, every year, studying the budget while it is being prepared and equipping Congress with the accurate information it needs—and does not now get—to do properly its duty of controlling the public purse strings.

Brotherhood

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. MULTER. Mr. Speaker, this is Brotherhood Week throughout the country. Whether by coincidence or by Divine impulse, most significantly, in every synagogue and temple in the world—Orthodox, Conservative, and Reform—the portion of the Torah, the Old Testament, that will be read this week deals with the Divine revelation on Mount Sinai, through which Moses received the laws for dispensing justice to mankind.

These laws covered every imaginable classification. For the purpose of emphasis of brotherhood it suffices to remind you here of a few of those statutes, to wit: the laws establishing the principle of majority rule and of equal justice for all, forbidding oppression of foreigners, and prohibiting malicious gossip.

The last rule of neighborly living is observed too often in these Halls by its breach.

With pointed reference to that rule, permit me to call your attention to the following editorial by Dr. Harry Halpern, which appeared in the current issue of the Bulletin of the East Midwood Jewish Center:

FROM WHERE I STAND

I have just read one of the periodic reports issued by the Anti-Defamation League of B'nai B'rith, and I found it to be a very interesting document. What interested me particularly was a report on race riots in Chicago and a discussion of what was involved in them.

Let it be made clear from the outset that B'nai B'rith cannot be accused of Communist tendencies by anyone in his right mind. The record of service to our country which the organization has achieved is an imposing one. Its efforts in behalf of the men and women in our armed forces during the war and its contributions to the work of rehabilitation after the war have earned for it a place among the great patriotic agencies in our land.

The aforementioned report points out that the Chicago riots started out with an anti-Negro slogan which, in turn, became anti-Communist and finally as anti-Jewish. This metamorphosis of a hatred is worthy of note because it follows a pattern which is becoming alarmingly too familiar.

That relations between Russia and our country are strained is clear to all; that ideologically, religious people are opposed to the antireligious crusade of Russia is obvious; that there have been clear-cut cases of espionage, particularly in the matter of atomic-energy experimentation, no one will gainsay. And yet, knowing of all this, we must be on our guard lest the struggle against communism becomes a smoke screen for all anti-Semitic and reactionary forces in our country. For, under the impact of war, many subversive groups found it the wisest policy to suspend operations or, at least, to keep out of the glare of publicity. But now the lunatic fringe sees an opportunity for attacking Jews under the guise of fighting communism.

The method of accomplishing this is really very simple. First, you label something "communistic." Then you show that many Jews are in favor of the thing you've so labeled. Finally you attack Jews, not because you're anti-Semitic but because you want to protect America.

It is true that many Jews are progressive. They believe in social security, in old-age pensions, in unemployment insurance, in proper schooling for children, and adequate housing for families. They believe that the Government should intervene to make these things possible. Does this mean that they are taking dictation from Moscow or are trying to overthrow the Government? Oscar Ewing, the Federal Security Administrator, who is a Wall Street lawyer, has been attacked as a Socialist by those who oppose what they call the welfare state.

All of us should clearly understand that dealers in prejudice hate first and then find slogans to rationalize their hatred and to justify the protection of some selfish interest. The struggle against communism must not be permitted to become a weapon in the hands of Jew-baiters or Negro haters. We should recall the rabbinic statement that Satan, the evil inclination, and the angel of death are merely different names for the same unholy and dangerous character.

FEPC Legislation—White Americans Betrayed

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. RANKIN. Mr. Speaker, if George Washington could come back tomorrow and see the communistic FEPC program that is being proposed on his birthday, and especially if he could look up and see that hideous distortion of the United States seal, and the American eagle, right over our heads, he would be shocked beyond measure.

The FEPC bill which is to come before the House tomorrow is the most dangerous piece of communistic legislation with which this country has ever been threatened.

If it should become a law, it would do more to drive industry out of this country than anything else that has ever been done by the Congress of the United States.

CALIFORNIA

Remember that it was referred to the people of California for a popular vote, and was defeated by a clear majority in every single individual county in the State.

Are you Members from California now going to vote to impose this hideous monstrosity on your people who have said by their votes, by more than a million majority, and by a clear majority in every single individual county in the State, that they do not want it?

PENNSYLVANIA

Are your Members from Pennsylvania going to vote to impose this monstrosity on your people after the legislature of your great State has killed it twice?

Do you want to drive industries out of Pennsylvania by harassing them with a program of this kind that could not pass the Legislature of Pennsylvania?

OHIO

Do you Members from Ohio want to force this monstrosity on your people after the legislature of your State has killed it twice?

Do you want to drive your industries to Canada, or to some other foreign country by harassing them with this monstrosity?

Remember that this is going to be an issue in every congressional district in the United States in the primaries this year.

MICHIGAN

Do you Members from Michigan want to drive your industries out of the country by imposing this monstrosity on your people, after your legislature refused to pass it?

If you were to place it on the ballot in the State of Michigan, Pennsylvania, Ohio, or any other State in the Union, and let the people vote on it, they would kill it in every county just as they did in California.

ILLINOIS

Do you Members from Illinois want to impose it on your people after your legislature has killed it as dead as Hector?

Do you want to run industries out of Illinois and across the border into Canada, or to some other foreign country?

You know, and I know, that it would not carry in a single county in Illinois, if left to a popular vote and explained to the people who would do the voting on it.

MINNESOTA

They tried to pass it through the Legislature of Minnesota last year, but when the members of the legislature of that State found out what it meant they refused to pass it.

Are you Members from Minnesota now going to impose it on your people and drive your industries across the line into a foreign country?

It would not pass in a single county in Minnesota if left to a popular vote.

COLORADO

Take the State of Colorado. They tried to pass it through the Legislature of Colorado last year and failed.

Are you Members from Colorado now going to vote to impose it on your people, when the legislature has said they do not want it, and when you know it would not pass in a single county in Colorado by a popular vote?

The same thing applies to every other State from Iowa to Maine, from North Dakota to Florida.

You cannot pass this thing in a single county in a single State in this country if left to a popular vote of the people if they are told what it means.

NEW YORK

They rammed this measure through the Legislature of New York and appointed a commission to enforce it, with the result that they have tantalized and annoyed the business people of New York beyond measure. The best thing the Legislature of New York could do would be to repeal it.

If they had left it to a vote of the people of New York, it would have been buried worse than it was in California.

And the same thing would have happened in Massachusetts, New Jersey, Connecticut, and Rhode Island.

I am inserting at this point excerpts from a speech which I made on this FEPC in New York in 1947, and am setting out 18 different questions that you cannot ask a person seeking employment in that State.

I want every Member to read them and see whether or not he would like to have these restrictions, these paralyzing restrictions, imposed upon the people of his own State.

Here are some of the things you cannot do under the law of New York:

"Unlawful employment practices before hiring anybody."

Those words are written in capitals, and here is the first unlawful practice:

First:

"Inquiry into the original name of the applicant for employment, whose name has been changed by court proceedings or otherwise."

If you inquire as to his name or what his name used to be you violate the law. You commit an unlawful practice. For instance, take this man who writes for PM, who calls himself I. F. Stone. His name was Isadore Feinstein, as Cordell Hull once pointed out. Suppose he comes to you asking for employment and you ask him that question. Then you will have committed an unlawful act.

Second. Here is the next one:

It would be unlawful practice to make "inquiry into the birthplace of the applicant for employment, the birthplace of his parents, spouse, or other close relative."

How would you like that in Iowa, Illinois, Texas, or Nebraska? In California I know you do not like it, because you have just voted on it.

Third. Here is the next unlawful practice:

"Requirement that the applicant for employment produce a birth certificate or baptismal certificate."

That would be an unlawful practice under this FEPC Act in New York.

I was surprised to see Governor Dewey get his mustache in the wringer on this proposition. I do not see how he is ever going to get loose from it.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. What about this requirement during the war that every person employed in certain industries had to prove that he was born here before he could get a job?

Mr. RANKIN. Certainly. If we had had this law all over the country then, the Japs would have had a spy at the elbow of every man in a key position; so would the Germans, and so would every other enemy country.

I thank the gentleman from Illinois for his timely suggestion.

Fourth. It is an unlawful practice in New York, under this law, to make "inquiry into the religious denomination of an applicant for employment, his religious affiliations, his church, parish pastor, or religious holidays observed. Inquiry into whether an applicant for employment is an atheist."

Inquiry into whether an applicant for employment is an atheist is forbidden, although you may be publishing literature for the Methodist Church, the Baptist Church, or any other denomination.

Fifth. Another thing, an applicant for employment—and I am reading from the rules laid down by this Commission:

"An applicant for employment may not be told that this is a Catholic, Protestant, or Jewish organization."

In other words, if you are in the business of publishing religious literature you cannot even give him that information under this law which the gentleman from Illinois [Mr. Dirksen] now proposes for the whole country, including Illinois.

Sixth. Here is another unlawful practice:

"An applicant for employment may not be told that the following holidays will be observed by the firm and no others, naming the holidays; e. g., Decoration Day and July the Fourth, etc."

You cannot tell them under the laws, rulings, and regulations of the State of New York that they may observe the Fourth of July.

Seventh. Here is another unlawful practice:

"An applicant for employment may not be told that employees are required to work Rosh Hashana and Yom Kippur."

Frankly, I did not know there were any such days until the last few years.

Eighth. Another thing, it is an unlawful practice under this New York law to make "inquiry into the complexion of an applicant for employment."

Inquire into his complexion and you are likely to get yourself tangled up with the law of the State of New York.

Ninth. Here is another unlawful practice:

"Requirement that an applicant for employment annex a photograph."

That would be an unlawful employment practice. You are not supposed to know how he looks.

Remember, this is not in Russia, but in New York.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. And yet the State Department, in order to grant a visa, requires a photograph of the person to be presented with his application.

Mr. RANKIN. Certainly, and they ought to do so. Much as I respect the distinguished gentleman from Illinois [Mr. MASON], I certainly would not want to employ him unless I knew how he looked. If I had never seen him, I would certainly want to see his picture.

Tenth. Here is another unlawful practice:

"Inquiry whether an applicant for employment is a naturalized or native-born citizen; the date when the applicant acquired citizenship; whether the applicant's parents or spouse are naturalized or native-born citizens of the United States; the date when such parents or spouse acquired citizenship."

You cannot inquire into those questions under this FEPC law in New York.

Eleventh. Here is another unlawful practice:

"Requirement that an applicant for employment produce his naturalization papers or first papers."

He may lie to you and tell you that he is a naturalized citizen, but you cannot ask to see his papers.

Twelfth. Another unlawful practice in New York is to "inquire into the lineage of an applicant for employment, his ancestry, or national origin."

You remember a few years ago the Dallas News inserted an advertisement for a colored janitor, and this FEPC outfit down the street, ordered them to take it out, said it was an unlawful practice.

One member of this FEPC outfit here in Washington went into the office of Swift & Co. in Chicago. This FEPC man asked them: "How many Negroes do you have on your board of directors?"

The answer was "None."

Then the FEPC man asked him: "Why haven't you?"

That was the FEPC down here in Washington a few years ago before it died because a few radicals could not browbeat Congress into perpetuating it.

But it is now in force in the State of New York.

Thirteenth. Here is another unlawful practice under the New York law:

"Inquiry into the location of places of business of relatives of an applicant for employment."

Fourteenth. It is an unlawful practice to make "inquiry into the place of residence of the parents, spouse, or other close relatives of an applicant for employment."

I am reading from the records at Albany.

Fifteenth. Here is another unlawful practice:

"Inquiry into the maiden name of the wife of a male applicant for employment and/or inquiry into the maiden name of the mother of a male or female applicant for employment."

The other day we had the Eislers down here. One of them has been shown to be representing the Comintern, according to his sister's testimony. He has a brother out in California, who seems to be poisoning the public mind through the moving-picture industry. He tries to defend his brother and refers to this woman as "my former sister." If you wanted to employ any of them and check the name of at least one of them as given here, you could not inquire into those names at all—if you are trying to do business in the State of New York—even though one of them has a half dozen aliases. You could not even ask where they came from or when they got here or when they changed their names.

Sixteenth. Here is another unlawful practice, in New York:

"Inquiry into the general military experience of an applicant for employment."

Seventeenth. I wish every ex-serviceman could read that, and the next one.

Here it is: It is an unlawful practice to make "inquiry into the whereabouts of an applicant for employment during the First World War, i. e., during the period from 1914 to 1919."

In other words, inquiry as to his whereabouts in the period from 1914 to 1919 is forbidden as an unlawful practice in the State of New York.

Is that what you want in Colorado? Is that what you want in Massachusetts?

Mr. GIFFORD. We have it.

Mr. RANKIN. Get rid of it, and we will help you.

Is that what you want in Kansas, in Ohio, and in other States?

Let your States vote on it. Michigan is going to vote on it right away. If you will tell the people of Michigan the whole truth, let them know the whole truth about this monstrosity, I will guarantee you they will beat it worse than they did in California.

Eighteenth. Here is another unlawful practice:

"Inquiry into the organizations of which an applicant for employment is a member, including organizations the name or character of which indicates the religion, race, or national origin of its members."

I presume, if they should ask me if I am a member of the Masonic lodge, I could have them jerked up and brought before this inquisition board or probably prosecuted at various places throughout the country.

Mr. Speaker, I am not criticizing the people of New York. I have long since learned in going from one State to another that real Americans are about the same everywhere. I believe if they had a vote on it the people of New York would beat it, just as they did in California.

They are having a vote on it in Michigan because a little minority group has been attempting to browbeat the Legislature of Michigan into passing it. I dare say when it goes on the ballot in Michigan and the people of Michigan understand what it means they will defeat it more thoroughly than they did in California. The same thing would happen in probably every other State in the Union.

Mr. AUGUST H. ANDRESEN. Mr. Speaker, will the gentleman yield

Mr. RANKIN. I yield to the gentleman from Minnesota.

Mr. AUGUST H. ANDRESEN. Will the gentleman tell us what the penalties are in New York?

Mr. RANKIN. In addition to being harassed to death with orders and directives to cease, desist, rehire, and so forth, there is a punishment provided of "imprisonment in a penitentiary or county jail for not more than 1 year or by fine of not more than $500, or by both."

Mr. GIFFORD. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Massachusetts.

Mr. GIFFORD. I want to remind the gentleman that we have that law in Massachusetts.

Mr. RANKIN. I was afraid of that.

Mr. GIFFORD. I was thoroughly amazed when I looked into it; I had not learned what the rules were. But, perhaps we carried it too far. I am so sorry, and I have been, and I am not in favor of this, I can assure the gentleman.

Mr. RANKIN. I know the gentleman is not, and I am sure the people of Massachusetts would not favor it if they had a vote on it.

Mr. GIFFORD. Employers always inquire and must know whether you come from a respectable family or not. They are so careful. Perhaps they overdid it. But I think a man ought to be able to find out whether he came from a respectable family.

Mr. RANKIN. There are a great many questions that should be asked, which are forbidden under this law.

FEPC IN WASHINGTON, D. C.

Mr. Speaker, in order to give the new Members an idea of what a mess this FEPC was here in Washington during its existence under Executive order, I insert a speech I made on this subject in 1945.

It reads as follows:

"FEPC A BETRAYAL OF WHITE AMERICANS

"(Speech of Hon. JOHN E. RANKIN, of Mississippi, in the House of Representatives, Thursday, July 12, 1945)

"Mr. RANKIN. Mr. Chairman, the passage of a law at this time legalizing this so-called FEPC would be a betrayal of the white people of the country. If every individual in the United States could understand just what it means, there would be such a roar of protest coming from every State in this Union that it would never see the light of day.

"If every Member of Congress would 'screw his courage to the sticking place' and vote his convictions on this so-called FEPC, it would not get 50 votes out of the entire membership of 435.

"It is a most dangerous and brazen attempt to fasten upon the white people of America the worst system of control by alien or minority racial groups that has been known since the crucifixion.

"When I read the names of the personnel of this outfit you will understand what I mean.

"To sanctify this organization by law would give the lie to everything we have told our American boys they were fighting for. Instead of coming back to liberty, freedom, and democracy, they would find themselves sold into this bondage, herded, humiliated, and regimented by alien influences directed by a foreign comintern representing the deadly doctrine of Karl Marx that is based upon hatred for Christianity and for everything that is based on Christian principles.

"It is a manifestation in legislative form of that infidelity that has closed thousands of Christian churches in Europe and been responsible for the murder of untold millions of Christian human beings.

"This measure is not directed altogether at the white people of the South. If it were, you folks in the North would not have so much ground for alarm. We in the South know how to combat subversive elements. As Henry Grady once said, 'We wrested the South from such domination "when Federal drum beats rolled nearer and Federal bayonets hedged closer to the ballot box of the South than it ever will again in this Republic."'

"But you people in the North have not had that training, and this FEPC is likely to bring grief, strife, hatred, race riots, and chaos in your northern cities if this vicious agency is perpetuated and sanctioned by your votes.

"Do not forget that the returning servicemen know what this thing means, and they are going to call you to account next year—beginning with the primary. They are not going to wait until the general election.

"Do not forget that every businessman, every farmer, every professional man, and every other independent individual whose blood glows with the instinct of American liberty, is going to join these men, and those other patriotic forces that are fighting to save American institutions for which these boys have been fighting and dying upon every battlefield in the world.

"If every man and every woman in the United States could just read the list of individuals that compose the personnel of this crazy FEPC, and its subdivisions throughout the country, I dare say there would not be enough of you left who vote for it, even if nominated in the primaries next year, to form a corporal's guard.

"For your information, and for the information of the American people generally, I am going to read you the official personnel as it exists today. Remember, this list is taken from the official record. This is the group that wants to nose into and control every business in the United States. Remember, they can search the files and records of every business establishment in America where some disgruntled individual is willing to trump up a charge of discrimination. They can drag them all over the country and try them, and in that way destroy any ordinary business concern.

"The next thing they are going to try to do is get control of your schools and force their communistic henchmen into the schools and teach your children their subversive doctrines.

"Read these lists carefully, which, as I said, are taken from the official records here in Washington, and you will see that not 1 out of 10 on these rolls is a white gentile American.

"Here is the official list:

"Committee on Fair Employment Practice, Washington, D. C., office of the chairman

Incumbent	Title	Race	Salary
Ross, Malcolm	Chairman	White	$8,000
Johnson, George M.	Deputy Chairman.	Colored	8,000
Hubbard, Maceo	Hearings examiner.	do	5,600
Bloch, Emanuel	do	White	5,600
Copper, Evelyn	do	do	5,600
Berking, Max	Assistant to Chairman.	do	3,800
Alexander, Dorothy	Secretary to Chairman.	Colored	2,600
Clifton, J. Jeanne	Secretary to Deputy.	do	2,000
Brooks, Mary	Clerk-stenographer.	do	1,800
Banting, Myra	do	White	1,800

"You will note that in this office of the chairman, consisting of 10 people, there are 5 Negroes and 5 white people, most of whom have foreign names. One of the whites is a stenographer who receives the smallest salary of anyone on the list.

"Remember that the members of this group preside over the destiny of every business enterprise in America, and are using their assumed powers to harass white Americans out of business.

"This is the organization Members of Congress are being asked to perpetuate by the passage of this bill.

"FIELD OPERATIONS

"Here is the Division of Field Operations:

"Field operations

Incumbent	Title	Race	Salary
Maslow, Will	Chief	White	$6,500
Mitchel, Clarence	Principal fair-practice examiner.	Colored	5,600
Davidson, Eugene	do	do	5,600
Beall, W. Hayes	Senior fair-practice examiner.	White	4,600
Mercer, Inez	Fair-practice examiner.	do	3,800
Rogers, Eleanor	Clerk-stenographer.	Colored	1,800
Saito, Otome	do	Japanese-American.	1,800
Thompson, Mildred	do	Colored	1,800
Cornick, Emma	do	do	1,620

"You will note that it consists of nine people—five Negroes, one Japanese, and three others—two of whom have records of affiliations with Communist-front organizations, according to the reports of the Dies committee.

"Imagine this group going about over the country riding herd on the white American businessmen of the Nation, telling them whom they shall employ, whom they shall promote, and with whom they may associate.

"It would be interesting, and probably enlightening, to check up on these people and see how many of them are native-born Americans.

"Members of Congress had better do this now, before they get caught in this trap, because this question of un-American activities is going to be an issue in every congressional district next year, beginning with the primaries.

"The people are not going to wait until the general election for someone who holds a commission as a result of the pernicious activities of Sidney Hillman and his gang to wrap the party cloak about him and shout to the people of his district that 'I am a Republican' or 'I am a Democrat.'

"More than 2,000,000 young men have already been discharged in this war, and they are organizing now to try to save America for Americans. They are going to read your records, and they are likely to ask you some very embarrassing questions when you get home.

"REVIEW AND ANALYSIS DIVISION

"Now look at this list and see who reviews all these records of racial discrimination when they come to Washington, and you will understand how the editor of the Dallas News felt and how other white gentiles feel, including Cecil B. DeMille, the great American movie producer, when they are harassed out of business.

"Here is the list:

"Review and analysis division

Incumbent	Title	Race	Salary
Davis, John A	Chief	Colored	$5,600
Lawson, Marjorie	Research analyst.	do	3,800
Colightly, Cornelius.	Compliance analyst.	do	3,200
Hemphill, India	do	do	2,600
Coan, Carol	do	White	2,600
Davis, Joy P	do	Colored	2,600
Hoffman, Celia	Clerk-stenographer.	White	1,800
Spaulding, Joan	do	Colored	1,800

"You will note that it consists of six Negroes and two white people, one of whom is named Carol Coan and the other Celia Hoffman, a white stenographer receiving the lowest salary on the list.

"Now, if you sign the petition to bring out this bill or vote for this monstrosity, do not forget that when you get home those white American businessmen who help to sustain this Nation in time of peace and whose sons are fighting its battles in time of war are going to want to ask you some questions that you may not be able to answer.

"LEGAL DIVISION

"But if you want a real laugh, look at this legal division.

"Legal Division

Incumbent	Title	Race	Salary
Reeves, Frank D	Attorney	Colored	$4,600
Stickgold, Simon	do	White	4,600
Gordon, Jernevive	Clerk-stenographer.	Colored	1,800

"You will note that this so-called Legal Division consists of two Negroes and a Simon Stickgold.

"INFORMATION DIVISION

"Now we come to the Information Division. If you want information about this outfit, write to this Division:

"Information Division

Incumbent	Title	Race	Salary
Bourne, St. Clair	Information specialist.	Colored	$3,800
Whiting, Margaret	Clerk-stenographer.	do	1,800

"You will note that it consists of two Negroes, one registered as an information specialist and the other as a clerk-stenographer.

"BUDGET AND ADMINISTRATION

"Now we come to the Budget and Administration Division. This Division not only makes up the budget but administers the regulations. Here is the list:

"Budget and Administration

Incumbent	Title	Race	Salary
Jones, Theodore	Chief	Colored	$5,600
Jeter, Sinclair	Assistant administrative officer.	do	3,200
Baker, Vivian D	Clerk-stenographer.	do	2,000
Jackson, Bosales A	Clerk-typist	do	1,620
Paynter, Minnie A	do	do	1,620
Hollomon, Irving	Clerk	do	1,440
Selby, Ralph R	Chief, fiscal	do	2,600
Ross, Sylvia B	Voucher auditor	do	2,000
Nelson, Otelia	Accounting clerk	do	1,620
Carpenter, Elizabeth	do	do	1,620
Brent, Pearl T	do	do	1,620

"This outfit, which is composed of 11 Negroes, and no whites at all, not only makes up the budget for financing this aggregation, but it seems to have the power of administration. I hope you will read this list to your white businessmen, farmers, and exservicemen at home when you get back and ask for renomination in the primaries next year.

"MAIL AND FILES DIVISION

"Now, here are the ones that have control of the mails and filing system:

"Mail and Files

Incumbent	Title	Race	Salary
Douglas, Lela	Chief, Mail and Files.	Colored	$2,000
Welch, Selena	Docket clerk	do	1,800
Gamble, Jessie	File clerk	do	1,620
Phillips, Rose	do	do	1,440
Reed, Charles	Messenger	do	1,380
Mitchell, Regina	File clerk	do	1,440

"You will note that this division is composed entirely of Negroes—six Negroes, and no whites at all. I wonder why they discriminated against the white race in setting up these two powerful branches of this most dangerous agency?

"REGIONAL OFFICE, NEW YORK

"Now, let us turn to the regional offices and see who is going to harass the business people back in the States. Here is the list for the State of New York:

"Regional office, New York

Incumbent	Title	Race	Salary
Lawson, Edward H.	Regional director.	Colored	$5,600
Jones, Madison S	Fair-practice examiner.	do	3,800
Jones, Robert G	do	do	3,800
Donovan, Daniel R	do	White	3,800
Irish, Miriam	Clerk-stenographer.	Colored	2,000
Asepha, Tillie	do	White	1,620
Schwartz, Sonia	do	do	1,620

"This is the list that is going to help Governor Dewey harass the white American businessmen of the Empire State. You will note that it is composed of four Negroes and three white people. Please read the names of the three white people and see if you can figure out their antecedents.

"Businessmen of New York are going to have a hard time after this war without having all this communistic conglomeration to deal with, to say nothing of the one which Governor Dewey and his political henchmen have now heaped upon them.

"REGIONAL OFFICE, PHILADELPHIA

"Now, let us turn to Philadelphia, the birthplace of the Constitution—the City of Brotherly Love. At the risk of causing glorious old Benjamin Franklin to turn over in his grave, I read you the list:

"Regional office, Philadelphia

Incumbent	Title	Race	Salary
Fleming, G. James	Regional director.	Colored	$5,600
Greenblatt, Mildred	Fair-practice examiner.	White	3,800
Manly, Milo A	do	Colored	3,800
Risk, Samuel R	do	White	3,800
Grinnage, Willard	do	Colored	3,200
Gorgas, Helen	Clerk-stenographer.	do	1,800
Klinger, Karyl	do	White	1,800
Brown, Grayce	do	Colored	1,440

"You will note that it is composed of eight individuals—five Negroes and three whites, Mildred Greenblatt, Samuel R. Risk, and Karyl Klinger.

"Don't you know there will be some brotherly love when that crowd gets going on the businessmen of the Philadelphia area?

"REGIONAL OFFICE, WASHINGTON, D. C.

"Now, here is the regional office in Washington, D. C., the Nation's Capital, where there has been so much persecution of white gentiles in the last few years. Here is the list:

"Regional office, Washington, D. C.

Incumbent	Title	Race	Salary
Evans, Joseph	Regional director.	Colored	$5,600
Houston, Theophilus.	Fair-practice examiner.	do	3,200
Kahn, Alice	do	White	2,600
Chisolm, Ruby	Clerk-stenographer.	Colored	1,800
Urback, Dorothy	do	do	1,620

"You will note it consists of four Negroes and Alice Kahn. Just what chance a white gentile will have with this group is entirely problematical, to say the least of it.

"REGIONAL OFFICE, CLEVELAND

"Now, let us move out where the West begins and take a look. Here is the list in the Cleveland regional office:

"Regional office, Cleveland

Incumbent	Title	Race	Salary
McKnight, William.	Regional director.	Colored	$4,600
Abbott, Olcott R	Fair-practice examiner.	White	3,800
Glore, Lethia	do	Colored	3,200
Kelley, Berniza	Clerk-stenographer.	do	1,620
Wasem, Edna	do	White	1,800

"You will note that this group is composed of three Negroes and two whites, Olcott R. Abbott and Edna Wasem.

"Don't you know the white people of Cleveland will enjoy being dominated by them?

"CINCINNATI REGIONAL OFFICE

"Cincinnati seems to be largely under the jurisdiction of the Cleveland office since it only has two people:

"Cincinnati

Incumbent	Title	Race	Salary
James, Harold	Fair-practice examiner.	White	$4,600
----------	Clerk-stenographer.	----------	1,800

"DETROIT REGIONAL OFFICE

"Now let us move on to Detroit, Mich. Here is the regional office for Detroit:

"Detroit

Incumbent	Title	Race	Salary
Swan, Edward	Examiner in charge.	Colored	$4,600
Sese, Doris K	Clerk-stenographer.	Japanese-American.	1,620

"You will note that it is composed of one Negro and one Japanese. I know the businessmen of Detroit are grateful for this consideration.

"I should like to hear some of the comments they will make to you gentlemen from Detroit when you get home next summer, if you support this vicious measure.

"REGIONAL OFFICE, CHICAGO

"Here is the list of the regional office in the Windy City:

"Regional office, Chicago

Incumbent	Title	Race	Salary
Henderson, Elner	Regional director.	Colored	$5,600
Gibson, Harry H. C.	Fair-practice examiner.	do	3,800
Schultz, Joy	do	White	3,800
Williams, Le Roy	do	Colored	3,200
Zeidman, Penny	Clerk-stenographer.	White	1,800
Ingram, Marguerite S.	do	Colored	1,620

"You will note it is composed of four Negroes, Joy Shultz, and Penny Zeidman. I am told that a representative of this group went into the office of Swift & Co. and asked how many Negro members they had on their board of directors. The answer was, 'We have no Negro members on our board of directors.' Then the question came back, 'Why haven't you?' This just shows what this supergovernmental set-up is driving at. They want to communize America and destroy everything which our glorious ancestors have left us and for which our boys are now fighting and dying all over the world.

"REGIONAL OFFICE, ATLANTA

"Here is a list of the Atlanta office:

"Regional office, Atlanta

Incumbent	Title	Race	Salary
Dodge, Witherspoon.	Regional director.	White	$4,600
Hope, John	Fair-practice examiner.	Colored	3,800
McKay, George D	do	White	3,200
Chubb, Sally	Clerk-stenographer.	do	2,000
Ingram, Thelma	do	Colored	1,800

"You will note that it consists of two Negroes and three whites; the most important post in this office, that of examiner, is held by a Negro. I wonder how

the people of Georgia enjoy the domination of this group. I may have more to say about them later.

"REGIONAL OFFICE, KANSAS CITY

"Here is the list of the Kansas City office:

"Regional office, Kansas City

Incumbent	Title	Race	Salary
Hoglund, Roy A.	Regional director.	White	$5,600
Ormabee, Eugene	Fair-practice examiner.	do	3,800
Jones, Mildred	Clerk-stenographer.	Colored	1,620
Schlien, Helene G.	do	White	1,620

"You will note that this office force consists of three whites and one Negro. You can read the list of whites yourself and then judge how many of them really represent the people of that area.

"ST. LOUIS REGIONAL OFFICE

"Here is the list of the regional office at St. Louis:

St. Louis

Incumbent	Title	Race	Salary
Theodore Brown	Examiner in charge.	Colored	$3,800
Morris Levine	Examiner	White	3,200
Armatha Jackson	Clerk-stenographer.	Colored	1,620

"You will notice that it consists of two Negroes and Morris Levine. Just how they came to select these particular individuals to preside over the destiny of the white businessmen of the great State of Missouri I cannot understand.

"REGIONAL OFFICE, DALLAS, TEX.

"The members of the regional office at Dallas are as follows:

"Regional office, Dallas

Incumbent	Title	Race	Salary
Castenada, Carlos	Regional director.	White	$4,600
(Vacancy)	Fair-practice examiner.		3,200
Gutleben, Willetta	Clerk-stenographer.	White	1,800

"You will note there is one vacancy. Last year that position was held by a Negro, namely, Roy V. Williams. The other two members, Carlos Castenada, the regional director, and Willetta Gutleben seem to be in charge of the office at the present time. This is the regional office that attacked the Dallas News last year for carrying an advertisement for a Negro janitor. This fellow Castenada, the director, held the same position that he holds now. If this set-up is made permanent, then I presume the rest of the white American businessmen in Texas may expect to be harassed just as the Dallas News was.

"REGIONAL OFFICE, NEW ORLEANS

"The regional office at New Orleans consists of the following members:

"Regional office, New Orleans

Incumbent	Title	Race	Salary
Ellinger, W. Don	Regional director.	White	$3,800
Morton, James H.	Fair-practice examiner.	Colored	3,200
Ronning, Evelyn	Clerk stenographer.	White	1,800

"You will note that there are two whites and one Negro in this office. As the Negro is the fair-practice examiner, just what the decent people of Louisiana may expect at the hands of this outfit is something to contemplate.

"REGIONAL OFFICE, SAN FRANCISCO

"The San Francisco office consists of the following individuals:

"Regional office, San Francisco

Incumbent	Title	Race	Salary
Kingman, Harry L.	Regional director.	White	$5,600
Rutledge, Edward	Fair-practice examiner.	do	4,600
Ross, Bernard	do	do	3,800
Seymour, Virginia	Administrative assistant.	do	2,000
Mazen, Jewel	Clerk-stenographer	do	1,800

"This is the only office we have found yet that consists entirely of white (?) people. Just what the background of each one of them is I am unable to say.

"LOS ANGELES REGIONAL OFFICE

"The Los Angeles regional office consists of the following:

"Los Angeles

Incumbent	Title	Race	Salary
Hunt, A. Bruce	Hearings examiner.	White	$5,600
Brown, Robert E.	Fair-practice examiner.	Colored	3,600
Lopez, Ignacio	do	White	3,800
Vetter, Vera G.	Clerk-stenographer.	do	1,800
Lerna, Marie	do	do	1,620

"You will note that there are four whites and one Negro in this office, the Negro being the fair-practice examiner. I do not know what consideration the white businessmen of the Los Angeles area are receiving at the hands of this group, but from what I can hear there is considerable gnashing of teeth over the situation.

"Mr. Chairman, this FEPC is a supergovernment of commissars, with more power for evil than any other agency that has ever been created in this country. If Congress should ratify it and make it the law of the land, then we will have sacrificed and destroyed that sacred freedom for which our brave men are now fighting and dying on every battle front in the world.

"We have no right to pass such a drastic revolutionary measure that literally changes our way of life, as well as our form of government, while these boys are away from home in uniform, fighting to sustain American institutions.

"As I said before, we are going to carry this battle against such un-American activities into every congressional district in the United States next year, in the primary, so that no one can crawl behind the party cloak and claim immunity at the hands of any segment of our people.

"This is a battle for the survival of free constitutional government, for the survival of the American way of life, for the survival of free enterprise, for the survival of American liberty itself.

"It is a battle to save America for Americans."

The New McCloy Spanks Germany

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. MULTER. Mr. Speaker, many of my colleagues, as well as I, have, from time to time, called the attention of this House to what appeared to be a deterioration of democratic thinking in Germany.

Today I desire to call your attention to what I believe will cause a great improvement thereof.

The following article by Don Cook in the New York Herald Tribune of February 19, 1950, is worthy of your perusal:

THE NEW M'CLOY SPANKS GERMANY—VAST CHANGE FOR BETTER FORECAST IN FIRM POLICY

(By Don Cook)

FRANKFURT.—Decisive pronouncements of foreign policy or political policy generally are well-marked historical events, such as the Monroe Doctrine, the Truman doctrine, the Harvard speech of Secretary of State George C. Marshall, or the British decision to get out of India.

But at least as decisive, though less well marked, can be a change in the application of a policy or doctrine already laid down—the mood or attitude of the responsible official whose objectives remain the same but whose method of approach suddenly takes a radical alteration almost as if he had been handed a new directive.

This, it appears, has happened suddenly in western Germany, and in the opinion of a good many Allied officials it has happened none too soon. The basic Allied objective of restoring a free and independent government to the western European community of nations is unchanged, but since the Stuttgart speech of United States High Commissioner John J. McCloy the whole atmosphere of the German situation has altered.

From a defensive position Mr. McCloy has suddenly carried the Allied High Commission over to a new high point of psychological authority in western Germany. No longer is everybody wondering what Chancellor Konrad Adenauer will do next: The question now is what the High Commission will do.

This Mr. McCloy has achieved by the simple act of telling the German people clearly, concisely, and unmistakably that they are still committing a lot of their old traditional political mistakes, and that before the world will trust the new Germany she must humble herself and learn the lesson that "humility leads to strength and not to weakness * * * that the highest form of self-respect is to admit mistakes and to make amends for them."

To understand the impact of such relatively obvious and elementary remarks one must first understand the instinctive fashion in which Germans respond to the voice of authority. Mr. McCloy has that authority by virtue of his position and the power which the United States represents here in the heart of Europe.

But the voice of authority must be clear and unmistakable and it must be heard continuously if it is to be kept effective. It need not threaten to get results, but certainly it must speak strongly enough and judicially enough to demonstrate a constant sympathetic interest in the future of this somewhat autocratic democracy.

Last November 30, for example, Mr. McCloy was confronted here with a request for comment on a directive which the German cabinet had issued to government civil servants, forbidding them from talking to the press. He remarked very carefully: "Free comment on the acts of government leaders must always be encouraged, and if any errors are committed in that respect they should lie on the side of liberal rather than restrictive policy."

This comment was barely even reported by the German press, but when Mr. McCloy arrived in Stuttgart and was asked for comment on the efforts to suppress news of the Wurttemberg-Baden denazification scandal, he got strong results from this statement:

"I cannot too strongly indorse the right of freedom of the press and the principle that public officials must exercise their responsibilities under the bright light of public discussion. Any thought of suppression of the news is intolerable and I commend the German press for its demands for the facts and the punishment of the guilty."

In the contrasting wordings of these two statements, each involving the same principle, lies the difference between strong psychological authority here in Germany and ineffective comment. What has produced the change in Mr. McCloy's attitude?

"A man can't go on being patient with the Germans forever," one of his high advisors remarked in discussing the matter. In 6 months here Mr. McCloy gave in tremendously to Chancellor Adenauer and the west German government—gave in at what many felt was an alarming rate in the hope that demands would cease, but only to be confronted with other demands from other quarters.

"I remember a remark Ernie Bevin made in a discussion about Germany," a British official said, talking about the McCloy speech. "Some one at the foreign office asked him at a conference one day if we weren't trying to make Germany a democracy. He hit the table with his fist and said, 'Of course, I want them to be a democracy. I want them to think what they like and do what I tell them'."

A chief factor in Mr. McCloy's new approach was the mood of American opinion he found on his last trip home—concern, he felt, at the growth of the old German autocratic temperament instead of the humility and pan-European spirit of which he spoke in Stuttgart.

The high commissioner had set a new pace for his mission here in Germany and the favorite topic of conversation now is the question: "Is this the new McCloy?" Germans being the people they are and the politicians they are, he should not have to wait long to prove whether his speech is backed with policy.

Petition To Reject World-Government Resolution

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a petition signed by women of 35 patriotic organizations which met in conference in the city of Washington in the last week of January. These 35 patriotic groups represent 3,000,000 women in the United States. As part of my remarks I am including the petition together with the signatures and a copy of the resolution adopted by the twenty-fourth Women's Patriotic Conference on National Defense held in the city of Washington, January 6, 7, and 8, 1950:

A PETITION TO REJECT WORLD GOVERNMENT RESOLUTIONS PENDING BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE

A petition to reject the world government resolutions now pending or which may be presented; a petition to hold strictly to the liberty with which we are endowed by the Constitution of the United States and to ask Congress to vote against any efforts to supplant or overthrow the Constitution of the United States and place in the hands of a world government authority, necessarily dominated by the totalitarian world, the rights, freedoms, and liberties of we, the sovereign people of the United States.

Kathryn M. New, Buffalo, N. Y.; Mrs. Carl O. Oyleo, Fostoria, Ohio; Mrs. William B. Shelton, Brooklyn, N. Y.; Mrs. Josephine Jarvis, Hartford, Conn.; Mrs. Irene E. Wangel, Milwaukee, Wis.; Mrs. Emma Johnston, New York City, N. Y.; Mrs. Earl Atkinson, Forest Hills, N. Y.; Josephine W. Ottman, New York City, N. Y.; Mrs. Alice B. Huntington, Maplewood, N. J.; Edna H. Brown, Washington, D. C.; Gladys Thomas, Lafayette, Ind.; Mary E. Porter, Eloise E. Whitmer, Mrs. Anna Hansman, Washington, D. C.; Mrs. Lillian Nugent, Rutherford, N. J.; Mrs. Leonard J. Bradley; Mrs. W. Graydon Painter, Lewisburg, Pa.; Pauline Walker, Waverly, Va.; Mrs. H. Klyspeel, Providence, R. I.; Mrs. Anne H. Drysdale, Warren, R. I.; Mrs. Ola D. Lee, Washington, D. C.

Aub, Mrs. Lyall Lipscomb, Mitchell, Fort Mitchell, Ky.; Mrs. Ruth Martin, Mrs. L. B. Crawford, Cincinnati, Ohio; Ida McMillan, Covington, Ky.; Helen Mullen, Nina Brewster, Frieda Roesser, Cincinnati, Ohio.

Resolution No. 22

Subject: Oppose surrender of national sovereignty, world government

(Presented by National Society of New England Women and amended on floor of conference)

Whereas various schemes are advocated to bring about world government, world federation, or world union under world law of unknown character, which would supersede the Constitution of the United States or, indirectly, by international treaty, to establish an international central council planning group which would control the lives, work, investment, and genius of free Americans and thus abrogate the national sovereignty of the free people of the United States;

Whereas the United States has 7 percent of the world's population and, as one of the few solvent nations, would be outnumbered and outvoted in any scheme for world government;

Whereas United States gold reserves, currency, taxes, and immigration would be regulated by the world government, with world courts to try and sentence Americans;

Whereas the Army, Navy, and Air Forces would be abolished for an international police force maintained at the level approved by the world government;

Whereas the destruction of the United States Government would be accomplished by the stroke of a pen, thus serving the aims of the Communists: Therefore, be it

Resolved, That the Twenty-fourth Women's Patriotic Conference on National Defense oppose membership in any international organization which would inevitably have powers and rights over the United States, including Atlantic Union, and its sovereign people and supersede the Constitution of the United States.

Christian Leaders Term Jerusalem Plan Dangerous

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. MULTER. Mr. Speaker, the hopelessness of attempting to internationalize Jerusalem in contradistinction to the internationalization of the holy places within Jerusalem is now established beyond contradiction. In support of that statement I am pleased to submit the following item which appeared in the February 1950 edition of the New Palestine:

CHRISTIAN LEADERS TERM JERUSALEM PLAN DANGEROUS

A fact-finding mission of Christian leaders and spokesmen, sent to Israel to investigate the feasibility of the internationalization plan for Jerusalem, concluded in a report that "the United Nations plan to internationalize the Jerusalem area is dangerous and unnecessary." Having rejected the internationalization plan, it recommended that a United Nations commission "with no territorial sovereignty" be established in order to insure the free accessibility of the Christian world to the holy places of Jerusalem.

"Guaranties should be given to such a commission by both Jordan and Israel assuring the freedom and sanctity of the sacred places within their territories. This is all that the Christian world has a right to require of two sovereign states, which we believe will in time compose their differences. This making of the peace will be accomplished all the more speedily if Israel and Jordan are encouraged in their negotiations by the western powers," the report emphasized.

Members of the investigation commission, who occupy leading positions in the Presbyterian, Methodist, Baptist and Congregational denominations, included: Dr. Samuel Guy Inman, former adviser on Latin-American Affairs to the State Department and member of the Federal Council of Churches Commission of International Goodwill; Dr. Charles J. Turck, president of Macalester College in St. Paul and president of the National Council of Presbyterian Laymen; Mrs. H. E. Tilly, member of President Truman's Commission on Civil Rights and field representative of the Southern Regional Council; Dr. John W. Bradbury, editor of the national Baptist magazine, the Watchman-Examiner; Dr. Ralph W. Riley, president of the American Baptist Theological Seminary; and Prof. Victor Obenhaus of the University of Chicago, national chairman of the Council of Social Action, Congregational Christian Church of America.

The Jerusalem investigation group disclosed that while it was in Israel and the Holy City, it had discussed the problem of internationalization with representatives of the Coptic Church, the Greek Catholic Church, the Copt Catholic Church, the Roman Catholic Church, ministers of Protestant groups, and with Jews and Arabs. From these discussions, the fact-finding mission was able to conclude, according to its report, that the UN plan was unworkable.

IMPEDE PEACE

"The overwhelming majority of leaders of religious groups we interviewed expressed the belief it would not work. Many held it was impractical and certain to add confusion and impede peace negotiations now in progress," the report stated.

The mission called upon the United States Government to press for a reconsideration of the United Nations Assembly decision. It asserted that a reconsideration by the United Nations of its internationalization plan was within the prerogatives of the international organization, and that the formulation of a just and workable plan for guaranteeing the sanctity of the holy places would enhance its prestige and power.

At the same time, Louis Lipsky, chairman of the American Zionist Council, threw up a charge of inconsistency at the State Department for its statement that the United States would participate constructively in the Trusteeship Council's consideration of the Jerusalem issue.

Mr. Lipsky made direct reference, in his statement, to the State Department's failure to amplify its meaning of the term: "participate constructively."

The Zionist leader stated: "To 'participate constructively' in the Trusteeship Council—a principle by which our Government has always been guided—should not mean that the United States has yielded its strong feelings of opposition to an impotent and impossible regime for Jerusalem which, according to the views conveyed by the United States delegation on December 5, 'does not in any way express the wishes of the people of that city.' "

Mr. Lipsky went on to quote from statements made at Lake Success by John C. Ross, United States representative to the United Nations, pointing out the impracticability of the Jerusalem plan.

In that conection it is well to set forth the following excerpt from an address delivered by the Israel Ambassador to the United States before a Jewish National Fund gathering in San Francisco:

WE WILL NOT FORGET OUR RESPONSIBILITY FOR JERUSALEM

(By Eliahu Elath, Israel Ambassador to the United States)

Our efforts for lasting peace and security for Israel and its population were seriously hurt by the ill-starred plan which the United Nations has just adopted for Jerusalem. This plan ignores experience and reality and violates fundamental principle, for the United Nations was established to defend the right of a people to govern themselves. The United Nations is seeking to annul Israel's authority in Jerusalem and has no means by which to assert its own. By passing this resolution, which is foredoomed to futility, the United Nations has fallen victim to incredible light-mindedness. Those who sponsored the resolution have charged themselves with grave moral responsibility for the moral authority of the United Nations.

Let me state with full clarity that Jerusalem is an integral part of Israel and cannot be severed, neutralized or separated in any way from the state. The failure to implement an internationalization plan in 1947 is tragically marked in Jerusalem's cemeteries by the graves of 1,490 Jews who fell in Jerusalem's defense.

Jerusalem, throughout the ages, meant to the Jews the embodiment of everything Jewish. Today, Jerusalem, in addition to being a symbol, is a reality. The new city of Jerusalem is as much a part of Israel as Tel Aviv, because it was built up by Israelites, is inhabited by Israelites, and draws its livelihood from Israel. But for our successful stand against aggressors, Jewish Jerusalem would have been signed off the face of the earth.

The government of Israel does not believe that there has ever been any fundamental clash of interests between the Christian world and Israel as to the safeguarding of the holy places. Only about 5 percent of the holy places in Jerusalem are located in the Israeli-held part of the town. Approximately 95 percent are in the Old City, which is controlled by Jordanian forces.

It must be stressed that the Arab authority in control of almost all the holy places refuses to concede any title or function whatsoever to the United Nations.

My government has solemnly declared its determination to honor the rights of every faith and religion in Israel, to protect the shrines and holy places in its territory and to guarantee free access to them. My government is equally determined to protect, with all its means and power, the security and well-being of the Jewish community in Jerusalem and its sovereign rights in its historic capital. We will protect Jewish Jerusalem with the same vigor and, if necessary, self-sacrifice as in our defense of Haifa, Safed and Negba.

We in Israel are fully aware of our sacred responsibility to the Jewish people for justice to Jerusalem. We will not forget and not betray that responsibility.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Wednesday, January 4), 1950

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article relating to displaced persons, by William A. Millen, from the Washington Evening Star of yesterday.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DP'S ARE APT TO LEAVE SUDDENLY, FARMERS IN NEARBY STATES FIND

(By William A. Millen)

An up-to-date version of "How you gonna keep 'em down on the farm?" is plaguing Maryland and Virginia farmers who have employed displaced persons.

A tendency of the recently arrived Europeans to move out without warning was cited by area farmers as probably their greatest fault.

L. M. Walker, Jr., Virginia commissioner of agriculture and State DP committee chairman, put it this way:

"The biggest all-round objection is that the DP's leave suddenly, and the farmers are left high and dry. The farmer provides a house and some furniture. But he still is worried whether the DP will be there next week, or will move to the big cities—Chicago, Philadelphia, Baltimore or Washington.

He blamed the screening of DP applicants in Europe—an apparent failure to select farm people for farm work.

Virginia has about 120 DP families now. About 40 percent of these originally employed on farms have switched to other occupations. More than half the Virginia DP's are Ukrainians, with Lithuanians and Poles making up most of the others.

Dr. T. B. Symons, dean of the School of Agriculture at the University of Maryland, figures Maryland has between 400 and 500 DP's.

In addition to a need for screening, Dr. Symons believes the DP program would be improved by a follow-up check on performances, a requirement that DP farmers remain on farms for a reasonable time, and that they be registered for a reasonable period.

Anne Arundel County's members resigned recently from the Governor's Committee for the Resettlement of Displaced Persons. They charged the DP program has been "haphazard."

Anne Arundel County Agent Stanley E. Day said that often "farmers" turn out to be tailors, beekeepers, or florists.

To illustrate, he told how one DP family, given a chicken by a farmer, had to ask him to kill it for them.

Other difficulties arise from the difference in languages. Some farmers, believing they were more than generous in wages and living quarters, were amazed to find DP's walking out on them at a minute's notice, Mr. Day said.

At Joyce Lane, Md., Dr. Charles E. Iliff, a Baltimore eye specialist, invited a young Ukrainian family to work on his farm last May. The DP's were given a third-floor apartment in the large farmhouse, with their own bath, radio, and a large fan to keep cool in the summer.

The Ukrainian woman did not know how to cook, so Mrs. Iliff patiently coached her.

The immigrant often talked about how nice things were back home and said that some day, when the Russians left, they would move back. Almost without warning last month, the Ukrainians left the Iliff farm.

On the Arnold (Md.) Angus cattle farm of Charles B. Lynch, there's an empty house. It was prepared for another Ukrainian family last April. Last month the tenants shoved off for parts unknown.

In Montgomery County, where some of the first DP's landed, there has not been a request for a DP farm family in 10 months.

S. Gilbert Brown, manager of the Silver Spring office of the Maryland Employment Security Department, said, "They went sour on us and the word spread like wildfire."

"Now, instead of the 14 DP families in the county, there are 4 such groups, all Lithuanians," he said.

Montgomery County Agent O. W. Anderson said, "The DP's showed they were interested only in getting into this country and then going their own way."

Dissatisfaction also was expressed by Agent P. E. Clark, of Prince Georges County, where 30 foreign families still reside on farms.

"They should be called in many cases misplaced persons instead of DP's," he said. "They are chosen like picking a pig out of a bag. They land in Baltimore and the farmer is told to meet them there. The DP's have pictured to them that this is a land of milk and honey, and somebody will take care of them."

But not all the criticism of DP farm families is derogatory. Many hard-working groups have proved satisfactory, as tomorrow's concluding article will describe.

FEPC Bill

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. JAVITS. Mr. Speaker, this is a statement by eight Republican Members of the House on the FEPC bill coming up Wednesday:

The 1948 platform of the Republican Party contained these ringing words:

"This right of equal opportunity to work and to advance in life should never be limited in any individual because of race, religion, color, or country of origin. We favor the enactment and just enforcement of such Federal legislation as may be necessary to maintain this right at all times in every part of this Republic."

In line with our party platform we shall oppose any attempt to remove from the FEPC bill adequate provisions for its enforcement. Specifically, we shall oppose any amendment or substitute which would have that effect.

We realize that an FEPC law must be administered with wisdom, understanding and restraint. We shall insist that it will be so administered. All the experience under State FEPC legislation amply justifies our confidence that this can be done.

But if the FEPC law is to have any effect it also must be administered with firmness and to this end it must contain adequate machinery for its enforcement. A law without sanctions is no law at all.

We recognize that the various State FEPC commissions have been making great progress in the elimination of discrimination in employment and that they have not found it necessary to resort to the penalty provisions which their laws contain. But the evidence is overwhelming that it has been the very existence of such penalty provisions which has made resort to them unnecessary. The testimony of State FEPC commissioners is conclusive on this point. And the hearings before the Committee on Education and Labor are replete with evidence of the failure of voluntary efforts at the elimination of discrimination and the quick success of such efforts when backed by adequate legal sanctions.

We agree completely with the 15 prominent businessmen, including William L. Batt, president of S. K. F. Industries; Henry R. Luce, editor of Time, Life, and Fortune magazines; Beardsley Ruml, chairman of the board of R. H. Macy & Co.; and Spyras P. Skouras, president of Twentieth Century-Fox Film Corp. who declared to the committee:

"We like the reliance which the bill puts upon education and conciliation. On the other hand, we recognize the necessity of governmental sanctions when conciliation breaks down."

The existence of discrimination in employment is recognized by everyone. The need for a Federal law to eliminate such discrimination is generally conceded. That need cannot be met unless we enact a law with real enforcement provisions and not the mere statement of a lofty principle and the expression of a pious hope for voluntary conformity.

CLIFFORD P. CASE,
Republican, Sixth District, New Jersey.
JOHN W. HESELTON,
Republican, First District, Massachusetts.
JACOB K. JAVITS,
Republican, Twenty-first District, New York.
KENNETH B. KEATING,
Republican, Fortieth District, New York.
JOHN P. SAYLOR,
Republican, Twenty-sixth District, Pennsylvania.
HARDIE SCOTT,
Republican, Third District, Pennsylvania.
HUGH D. SCOTT, Jr.,
Republican, Sixth District, Pennsylvania.
THOR C. TOLLEFSON,
Republican, Sixth District, Washington.

The Columbia Basin

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I include articles 17, 18, and 19 in the series on the Columbia River region.

[From the Spokane (Wash.) Spokesman-Review of February 7, 1950]

LET'S EXPLORE THE BASIN
(Art. 17)
(By Leon Starmont)

Warden brought its highway battle to Spokane yesterday, and will stage another demonstration at a special highway meeting at Coulee City, Wash., next Sunday.

Warden is trying to have its north-south paved county road designated as part of the State highway that will connect Pasco at Coulee Dam. This route, once approved, the Warden spokesmen maintain, is threatened with abandonment in favor of a more westerly road through Othello, Moses Lake, and Ephrata.

Twenty-one chambers of commerce, from Vancouver, Wash., to Oroville, on the Canadian border, have been invited to a special highway meeting at Coulee City next Sunday. A special strategy meeting has also been called at Soap Lake tonight.

JUST STUDIES, SAYS ROGERS

The State highway commission will decide where the highway goes, according to Jack Rogers, ex-officio chairman of the State Columbia Basin Commission, who poured a little oil on the troubled waters at yesterday's luncheon of the Spokane Chamber of Commerce's Columbia Basin Committee.

"I believe the surveys now being made of the westerly route are merely in line with the expressed desire to determine the least expensive right-of-way as well as one that will best serve the greatest permanent population," said Rogers, who had presided at a road meeting in Ephrata just a week before.

"W. A. Bugge, State highway director, is new in office, and doubtless wants to canvass all possibilities before his office commits itself to any definite route for the road.

"But action must come soon. The irrigation districts and the Bureau of Reclamation should know where the State highways will be before they start laying out irrigable units in that part of the area that will get the first flow of water."

The Bureau of Reclamation, he said, can pay for crossings of canals on county roads designated but not yet improved, but cannot do that on State highways not yet located.

WARDEN DELEGATION

The basin commission, said Rogers, expects to meet early this summer with the interim State highway committee. He doubted whether it is practical to delay selection of the highway route until the 1951 legislature acts on a proposal to establish a seven-man State highway commission.

Warden's delegation yesterday comprised Millard Steele, president of its chamber of commerce; Finley Imbert, city councilman and treasurer of the chamber; Albert Widman, past president of the chamber, and Fred Radach, chairman of its road committee, who acted as spokesman.

Maps on the wall showed the routes in dispute. Radach answered many questions. More than a dozen stayed after adjournment to bring out more facts about the roads and the necessity of determining soon where the State arterial will be built.

The present paved road through Warden follows a 60-foot right of way and is 18 miles long, said Radach. It is oiled from the junction on U S 10, straight south, to another junction 6 miles east of Othello. It is graveled 4 miles more, almost to the Franklin County line. From the present south end, a 9-mile extension would connect with State secondary highway 11—about 4 miles north of Mesa.

EPHRATA "TRICK" SEEN

"We thought this road route was all settled until we discovered State-highway surveys were being made of the Othello route," said Widmer. "We suspect Frank T. Bell, an Ephrata political power and member of the State Columbia Basin commission.

"Of course we don't blame Ephrata for trying to have all roads directed toward the county seat. But the fact we can't get definite answers from the Bureau of Reclamation and the State highway department arouses our suspicions.

"Ephrata also tried to put over the so-called Burke cut-off, bypassing Quincy. They were stopped on that, and we think they can be stopped on this."

Adams County commissioners, the Warden spokesman said, favor the Warden road, despite the fact Othello is the only Adams County town on either route. They said they also had support from Pasco, Connell, Soap Lake, Coulee City, Grand Coulee, Coulee

Dam, and Okanogan County towns as far north as Oroville.

"We believe this road will ultimately be part of the proposed U S 197 running from Omak to Pasco via Coulee Dam, Sun Lakes State Park, and Soap Lake," said Steele.

ARGUMENTS STUDIED HERE

Spokane Chamber of Commerce should come out definitely for the Warden route, Radach maintained.

J. K. Cheadle, chairman of the chamber's Columbia Basin committee, said more information must be developed before the group can take any part in the argument.

"We don't know what facts may be brought out by the State highway department in its study of the Othello-Ephrata route," he explained.

"This group, organized in 1918, is the oldest in years of any of the several official and volunteer groups which are cooperating in bringing the hopes of many years to fruition.

"We will not take any part in any controversies among local groups until it is clearly demonstrated that one of several alternatives is the best plan for the basin project as a whole."

Several maps brought by the Warden group were left for study by the Spokane committee, which also was invited to participate in Sunday's Coulee City meeting.

[From the Spokane (Wash.) Spokesman-Review of February 8, 1950]

LET'S EXPLORE THE BASIN

(Art. 18)

(By Leon Starmont)

One of the forgotten men in the colorful history of the Columbia Basin project and Grand Coulee Dam is E. W. Southard, Ephrata (Wash.) attorney. He was talking about a dam at the head of Grand Coulee nearly 50 years ago. He is generally credited with being first to get the dam proposal onto newspaper front pages in Spokane, after 1914, when the State irrigation bond issue was voted down.

Potholes Dam, west of Warden, having been renamed for James O'Sullivan, the proposal is now being made in the district that South Dam, at Coulee City, be named for Ed Southard, one of the small group who made O'Sullivan's early labors possible.

NICHOLLS IDEA ALIVE?

Incidentally, Southard maintains that the ideas of Ralph Nicholls, former Seattle State senator, about reviving the original gravity project, to reclaim high land in Spokane, Whitman, and Adams Counties, should be taken seriously.

Southard reports—and this is verified by ex-Senator C. C. Dill—that Nicholls was working on this project many years ago, but even then included a river diversion plan at Grand Coulee.

"In 1913 I took a party to the present site of Coulee Dam, and Senator Nicholls suggested construction of a dam so high it would run water through Grand Coulee," the pioneer attorney recalls. "I considered the idea wholy impractical, as it would have drowned out all the railroad crossings of the Columbia in Canada."

This was essentially the same idea that had been advanced by Laughlin McLean in 1892, and revived periodically. It was later suggested by William E. Clapp, another Ephrata attorney, in 1917.

FILED DESERT CLAIM IN 1902

Southard recalls that he filed a desert claim a mile below the present dam site in 1902, when the Brookfield family controlled the Columbia's west bank at the coulee head.

"Bill Brookfield and I talked about the wonderful dam site even then," Southard continues, "but nobody thought it possible to get the development money."

James O'Sullivan became interested in 1919, as Southard now recalls, the gravity plan having been suggested at a Spokane meeting by E. F. Blaine in 1918.

"It was James O'Sullivan who interested Arthur Powell Davis, of the Reclamation Service, in the possibilities of the Coulee Dam site," according to Southard. Evolution of the dam idea was gradual, but neither the highest dam suggested in 1892 and 1913 nor the low power dam originally envisioned by the Army engineers had much resemblance to the structure that now stands.

Southard's own scheme, for a dam to divert water into a tunnel emerging below Dry Falls in the lower coulee, was revived as late as 1943 by a Seattle engineer.

SOME UNTOLD HISTORY

Here is some other previously unrelated history, as now recalled by Ed Southard:

"In early 1929 the idea of a dam that would irrigate by pumping was being developed by the Army engineers under Maj. John S. Butler, Seattle District engineer. But they had not yet given up the idea of a power dam at Kettle Falls. That spring I wrote a protest to the Federal Power Commission at Washington. The reply I received indicated that a permit was to be granted Washington Water Power Co. for the Kettle Falls site, which could later be condemned if the high dam at Grand Coulee ever were adopted.

"That alarmed me, so I wrote Senator Wesley L. Jones, and he visited the Power Commission and obtained assurance that the Kettle Falls permit would be held up pending further study of the high dam at Grand Coulee.

"By 1934, when President Roosevelt scheduled his visit to the project, quite a fight was going on between O'Sullivan and some of the State Columbia Basin commissioners. By that time Jim was all for the higher dam, and we in Ephrata backed him to the limit.

DANA AND GOSS AID

"Some of those concerned with the President's visit wanted the matter of the higher dam kept out of it while he was here. I sought a way to sell Jim O'Sullivan to the President and the Secretary of the Interior. So I wrote Bob Kipp, of the Portland Chamber of Commerce, to try to get me a conference with Marshall Dana, who had been making speeches for the Columbia Basin project since the early 1920's. I impressed Dana, a former president of the National Reclamation Association, with Jim O'Sullivan's qualities and asked him to intercede with A. S. Goss, head of the National Grange. That he did.

"When the President reached Portland, Dana got his ear, and when the President reached Ephrata on his inspection trip, Secretary Ickes astonished a lot of the natives by getting off the train and asking for Jim O'Sullivan.

"I have always been proud of the little trick I played to get O'Sullivan the needed audience. From that time on his going was easy."

Southard might have added that he was among those who financed O'Sullivan's early efforts in the Columbia River Development League—which fought for the pumping plan when the gravity system was still the official choice of both State and Nation—and that he also drove possibly 50,000 miles over early unpaved roads to get O'Sullivan wherever his arguments could do the greatest good.

[From the Spokane (Wash.) Spokesman-Review of February 9, 1950]

LET'S EXPLORE THE BASIN

(Art. 19)

(By Leon Starmont)

Unique among State agencies is the Columbia Basin Commission. It has no power, but lots of influence. It is sitting right now in an important spot as principal spokesman for the State in dealing with the Federal Government and the other States through the interagency committe, and in dealing with Canada through the international joint commission.

Chairman of the Columbia Basin Commission, by virtue of his office, is Jack Rogers, State director of conservation and development, who also acts as Gov. Arthur B. Langlie's delegate on the Columbia Basin interagency committee. Rogers, former mayor of Wenatchee, succeeded Frank A. Stewart, who succeeded Art Garton, of Chelan. Neither Stewart nor Garton participated officially in CBIAC activities, because former Gov. Monrad C. Wallgren refused to recognize that body as a proper instrument for advancing Columbia Basin plans.

MILLER, HAMBLEN, WOODS

Appointed by the Governor on the basin commission, as provided by statute, are three men:

H. Lloyd Miller, of Sunnyside, as mentioned in an earlier article, was with E. F. Blaine in 1918 when that noted irrigationist revived the Columbia Basin project, then dormant 4 years, and started the chain of events that led to construction of Bonneville, Grand Coulee, and other dams, and creation of today's comprehensive plan.

Herbert M. Hamblen, of Spokane, former speaker of the House of Representatives, is the youngster of the basin group, but W. S. Gilbert, his father's law partner, was one of the earliest advocates of the project.

Rufus Woods, Wenatchee publisher, began to take a serious interest in Columbia basin affairs about 1922. He opposed the gravity system of irrigation and argued for substitution of the Grand Coulee pumping plan.

The State Grange also officially opposed the Columbia Basin project until 1931, and according to A. S. Goss, State master, approved it then only on condition it be consolidated with the Grand Coulee power project.

THREE STREAMS UNITED

The so-called industrial membership of the State commission, therefore, is made up of spokesmen for three groups which approached the subject from different angles from 28 to 32 years ago.

Hamblen may be said to carry on the work started in 1918 by the hastily formed Columbia Basin committee of the Spokane Chamber of Commerce.

Miller represents the slightly older element which gathered around E. F. Blaine, and which became regionally vocal after organization of the Columbia Basin Irrigation League at Pasco in 1922.

Woods was for some years president of the Columbia River Development League, organized several years later, whose principal objective was power rather than irrigation.

By law the three irrigation districts in the Columbia Basin (Big Bend) project elect the other three members of the State commission—Leon L. Bailie, of Mesa; Don Damon, of Cunningham; and Frank T. Bell, of Ephrata as representative of J. A. Weber, of the Quincy-Columbia district. Other irrigation districts of the State are not represented.

These district men have generally acted with a State-wide outlook, says Hamblen. There is no present movement to have the law changed.

THREE EARLIER COMMISSIONS

There were three earlier Columbia Basin commissions. The first was a State board authorized by the 1919 legislature to resume surveys for the project. The second was a Federal group appointed by the Bureau of Reclamation. The third was a five-man State group authorized in 1933, after the pumping plan had been adopted.

The 1933 chairman was E. F. Banker, now deceased, of Winthrop. Other members were A. S. Goss and Rufus Woods, already mentioned; James E. McGovern, of Spokane; and Harvey Smith, now deceased, of Neppel (Moses Lake).

The 1933 board also had an advisory board, including State Senator Horace E. Smith, of Omak; W. C. Morse, of Seattle; D. C. Henny, of Portland, author of one of the 1920's reports on the basin project; and A. F. Darland, of Tacoma, who later became assistant to Frank A. Banks, chief engineer in charge of the construction of Grand Coulee Dam.

For several years both the irrigation league and development league carried on their programs, one based mainly on irrigation and one mainly on power. Both leagues had members in both Spokane and Wenatchee. The irrigation league, however, drew its support from all over the Northwest States, and became in effect after 1925 a spokesman for a comprehensive basin program. The development league was concentrated in Chelan, Grant, Okanogan, Douglas, Lincoln, and Kittitas Counties.

He's Still Here

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. REED of New York. Mr. Speaker, the fact that J. Edgar Hoover has asked for 700 more men to assist the FBI in running down spies and to protect the Government from the subversive elements working to undermine our representative form of government, I for one favor full cooperation with his request. It has been my opinion for a long time that he has been one of the greatest sources of security this Nation has had not only in war but in peace. There should be no interference with the work of this outstanding public servant, and if given the cooperation which he deserves every law-abiding person can feel more secure in life, liberty, and property.

Under leave to extend my remarks, I am inserting an editorial which appeared in the Washington Times-Herald of February 21, 1950:

HE'S STILL HERE

On May 4, 1949, the Times-Herald in an editorial entitled "Who Is the Man?" urged an all-out hunt for the big brain behind Russia's spies planted throughout our Government agencies.

It was pointed out that the machinations of this spy system are so cleverly directed that the master mind must be a top man in the Government. He must be a person of authority. He must be trusted in the inner circles. He must be an American traitor. Else he would not be so diabolically clever in placing his agents in our Government agencies where they milk so many secrets for the Kremlin.

Since that editorial was published the United States Civil Service Commission has reported that 123 Government employees have been fired for disloyalty, 848 have quit while under investigation, and 6,076 cases have been handled by the special loyalty board.

The disclosures of Elizabeth Bentley, Whittaker Chambers and Henry J. Wadleigh have resulted in the conviction of Alger Hiss as a perjurer in swearing to a Federal grand jury that he had not stolen important documents from the State Department for the Communist conspiracy.

Judith Coplon has been convicted of stealing documents for Russia from the Department of Justice.

NOT GOOD ENOUGH

All that is to the good. It proves the point of the May editorial beyond a doubt. But it's not cause for going back to sleep. In that May editorial we said:

"Actually there isn't much to be proud of in the fact that we have combed out a few of these agents. We can't go around patting ourselves on the back and say 'Look, 94.8 percent of the Government employees are loyal, law-abiding citizens.'

"Because we've caught only a few bunglers. The really efficient spies are still operating and the biggest fish is still at large."

The same goes today. FBI Director Hoover reported recently that 99.6 percent of the employees investigated have proven loyal. But what good does it do us to have 2,000,000 loyal employees and one or two thousand spies?

Did you ever hear a bank president boast that all of the bank's employees were honest except two tellers, the cashier and a vice president?

Hoover also has reported there are 45,000 card-holding Communists in this country and about 10 times that number of fellow travelers or Communist sympathizers. They prey on our Government night and day. They must be thwarted in their espionage attempts or the security of this country won't be worth one thin dime.

Hoover has asked for 700 more men to help the FBI do the job. He should have them. And he should be encouraged in his efforts to find the Soviet master spy who still is hidden in the works of the Truman administration.

Who is that man?

Advice to the CAB

EXTENSION OF REMARKS
OF
HON. CHAN GURNEY
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 21 (legislative day of Wednesday, January 4), 1950

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful article appearing in the American Aviation magazine on February 15, 1950. I ask my colleagues who are interested in aviation to give it their attention, if possible.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ADVICE TO THE CAB

In a speech the other day CAB Member Russell Adams indicated quite clearly that the Board would continue to pursue its policy of ordering investigations of air lines which it considers to be uneconomic in route structure and of route segments which it thinks have excessive competition.

The purpose of these investigations, the Board has said, is to correct deficiencies in the air-route pattern and to reduce the dependency on mail pay of the entire air-line network. To this end there can be little disagreement. Everyone wants the most efficient and the most economical air-line system possible under our present system of private enterprise.

In his strong feeling that something must be done, Mr. Adams proposes that industry itself assume the obligation of initiating corrective measures. He admits quite frankly, as other Board members have admitted, that the Board does not have the powers under the law to force mergers and radical route adjustments. He hints that unless industry does take the initiative, the Board ultimately will have to seek the necessary powers from Congress to remake the air transport system.

It was on September 28, 1948, that the Board instituted its first investigation order, against National Airlines. The hearing on the expanded proceeding resulting from this 1948 order is now scheduled to start March 6. A year ago the Board ordered investigations of Western, Northeast and Colonial, but no hearing dates have ever been set. Mr. Adams in his recent speech indicated there may be one or two other air lines needing similar inquiries.

We would like to give the CAB a little friendly counsel in its current efforts to correct the deficiencies which it believes to exist in the air-route pattern.

1. MAY IMPERIL THE ACT

First and foremost, we are certain the CAB, as well as the industry itself, does not want to upset the Civil Aeronautics Act of 1938. It is as fine an act as any industry could ever expect to obtain from Congress. If there is anything wrong, it is with the manner in which the act has been administered. No legislative move now would bring any advantages. The act as it stands must be retained.

We are not sure, however, that the CAB fully understands that it imperils the act every time it shocks the industry and air-line stockholders with new and broad investigation orders—orders which it admits that it cannot back up with enforcement powers. We are not sure the CAB fully realizes that each investigation is in reality an investigation of itself. In seeking to correct existing deficiencies the CAB is actually seeking to correct its own mistakes.

We say this not to belabor the Board again for past errors of judgment. Perfect forecasting and perfect planning in aviation is a goal impossible to attain. Industry's judgment has often been just as far amiss as the CAB's. Yet for this very reason the burden for corrections cannot be placed in toto on industry when it is the CAB that is the regulatory and the deciding agency. The Board's own record has been all too noteworthy for its whims and inconsistencies.

What we do say is that Congress currently has the impression that something is wrong with the air lines, due in part at least to the financial troubles of early 1949 which were directly traceable to the Board's delay in adjusting mail pay to reasonable levels. And due in part to the shocks which the CAB issues in the form of investigation orders. By making enough fuss over current deficiencies, the CAB might well lead itself and the industry into a full-scale investigation by Congress. And in any such inquiry the CAB is apt to come out considerably blackened, to say nothing of the repercussions on the air lines. This is no time to imperil the Civil Aeronautics Act. No matter how many accessories to the crime a congressional inquiry may line up, the biggest sentence after conviction will go to the CAB because CAB made all of the decisions.

2. GET HOUSE IN ORDER

Another bit of friendly counsel is for the Board to get its own house in order. By moving ahead more rapidly on the raft of pending proceedings, the Board might well find many deficiencies corrected if the proceedings are acted upon promptly and wisely.

Embarking on broad investigations without expediting pending matters is like an industrial firm calling in high-priced efficiency experts before the company straightens out defects and inefficiencies which are obvious and known. Investigations are conducted, and efficiency experts called in, to discover what is not known and what is not obvious.

In his speech Mr. Adams was frank to admit that there isn't too much wrong with the existing air-line network. A few relatively minor operations are all that are needed, he says. But how many of these corrections are already involved in pending proceedings? We suspect quite a few.

3. A BETTER APPROACH

A third suggestion is a changed approach by the Board in its relations with the industry it regulates. The CAB has issued a general invitation to the air lines to come forth with corrective proposals but it makes no guaranty that it will approve them when made.

Why not a more specific invitation, formally issued to each air line with a time limit on replies, to submit in a few pages the specific, concrete suggestions which each air line thinks would bring about greater efficiency and economy, and which can be acted on expeditiously by the Board with its existing powers. Hundreds of small, quickly made corrections, saving in the aggregate large sums of mail pay, might well be the result of this more specific approach.

Industry today has a feeling of futility about making proposals. Time lapses between filing of applications and decisions are much too long. CAB must give a better indication of good faith. If all airlines submitted proposals at the same time, CAB might not find a complete pattern, but it might find many of its wishes answered.

4. A FEEDER POLICY

As a final bit of counsel, the Board must clarify its feeder policy. One of the greatest steps toward moving trunk lines into the self-sufficient category could be the transfer of small towns to the feeders, or the entire elimination of costly small stops in the absence of feeder service. The Board seems to be reaching the idea that feeders can give better and more economical service to small towns. We believe this is a sound trend.

But trunk lines are reluctant to apply for suspension of service without having some assurance from CAB that this is in line with a firm policy. No trunk line wants to abandon a stop which a competitive trunk line might grab up. Without a lot of hullabaloo and scareheadline investigations, CAB has within its powers the means of clarifying a situation which is, today, inexcusably confused.

A recent test case was Chicago and Southern Air Lines which applied for suspension at Peoria, Ill., an unprofitable stop. CAB approved. Just lately Northwest Airlines has filed for suspension of three local stops in Wisconsin, towns served now by Wisconsin Central, the certificated feeder. Approval of suspension means removal of losses for Northwest and means net gains for the feeder. All major trunk lines have been discussing the elimination of unprofitable stops, but the answer is up to CAB. Industry is waiting for the cue from headquarters.

In conclusion it seems to us that CAB is doing some fairly straight thinking—or at least exploration—of the major economic and air-route problems. But in trying to find solutions it may be making things difficult both for itself and industry. It has alarmed unduly the Congress, the companies, and the stockholders. It is thinking too much about a new house which will never be built and not enough about making repairs quickly to keep the house livable.

CAB really needs no more powers and no more staff. It merely needs to bring itself closer to the industry and its own proceedings files and get caught up with what's in the mill. Every time it has had a chance to take a crack at a big problem, it has compromised and backed away. This will happen with all big investigations. Meantime, there is much corrective action that can be taken without more staff and more legislation.

WAYNE W. PARRISH.

The Business Outlook Is What We Make It

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 21 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very interesting address by the Hon. Thomas C. Blaisdell, Jr., Assistant Secretary of Commerce, delivered before the economic conference on the business outlook, at the Read Hotel, Chattanooga, Tenn., on February 17, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You have had the privilege of listening this morning to Dr. Marcus Nadler. Although I have not been privileged as you have to hear Dr. Nadler's address, I know him and I know his abilities, and I know there is no necessity for me to repeat the kind of statement which he can give you so much better than I. My comments with regard to the business outlook and what the banker can do about it will be more general than Dr. Nadler's. But they will be specific enough, I hope, to be helpful.

The business outlook is not like the weather. Mark Twain's famous statement that everybody talks about the weather but nobody does anything about it is definitely not applicable to business. In fact, just the opposite is true about business. Not only does everybody talk about it, but everybody does something about it, so that when we try to predict, we are trying to predict what everybody is going to do. This is no small task.

Each of the owners and managers of our 4,000,000 business firms makes decisions every day that affect the business outlook. The businessman decides to expand his business, or to contract it. He decides to do something, or to do nothing. In any case, he does something which automatically affects the business situation. But it is not only the businessman who affects the business situation. All the rest of us—as customers in stores, as buyers of houses, as workers who are happy or unhappy about our wages, as Government officials making decisions about regulations, controls, taxes, and Government purchases—all of us affect the volume and the kind of business that is transacted. The important question, then, is why do people do what they do? And all our study of business developments is fundamentally a study of why people act as they do. Considering the state and complexity of this mass of decisions being made every day, it is small wonder that the science of predicting business conditions is not yet perfect.

Before looking ahead, let us look back—not too far but far enough to just get a little perspective and, if you don't mind, far enough so we can do a little boasting. The Southeast has been going through a period of development which has rarely been duplicated, and the results of this period of development are evident on every side. They represent the achievement of a period of great vigor in American life.

In 1929 we saw the beginning of the great depression. For a time we literally did not know what had hit us. Only gradually did we realize we had to take concerted action, but finally the combined intelligence of the people responded to the challenge to put this country back on the road to vigorous growth and development. You will recall that during those years some people were saying that America's great period of expansion had passed. There was a certain amount of truth in this statement, since expansion in certain directions had stopped. It was true, if we were convinced that we had taken full advantage of all the material and human resources with which we had been endowed. Actually, of course, it became clear that there were new frontiers and that the use of free land and the wasteful exploitation of nature's gifts of forest and field and underground were not the only ways by which people achieved the good life. We learned—I hope for all time—that our real wealth lies in our minds and hearts and hands—that knowledge and strength and vision create the material things which we ordinarily think of as wealth.

This knowledge is so broad that it includes all the skills of our community. It is the self-respect and the broad back of manual labor. It is the skilled hands of the craftsman. It is the directing power of a manager of a plant. It is the organizing skill of a corporate executive. It is the far-seeing eye of the investor and developer. It is the understanding of people and the arts of governing of the mayor and the municipal council. It is the engineer's measuring of stresses and strains and his power to build. It is the school teacher's instilling of ideals and handicrafts in the children. It is the banker's ability to sit down with the businessman and work out his line of credit or think through the industrial development which can come from a new investment, and recognize the needs of the growing community in which he lives. All these together, and many more, are what determine our ability to grow.

But if they are to be used they call for an understanding of the way these human and material parts fit together and make us into a going concern, whether as a business organization, a city, a great government agency such as the Tennessee Valley Authority, or a corporation like du Pont or United States Steel.

What has this new concept of our capacities meant to the Southeast? If we compare the peaks of achievement in 1929 and today, we can be amazed at our growth and development as a nation; but we can be even more amazed that the proportionate growth here in the Southeast has been even greater than for the Nation as a whole. This is for the good of the Nation as well as for the good of the South. Only a decade ago there were areas of the South in which individual productivity was too low to permit the people to contribute much to the economic life of the Nation. When we look at the facts about the rapid growth of the South in recent years, we all take pride in knowing that the inherent human resources of this great region have been used by the people to make their own lives more worth living.

One does not need to have figures to be convinced of the truth of what I have been saying. Anyone who has traveled through the Piedmont, or through the Coastal Plain, or down the rivers, or over the length and breadth of the area in a plane can see with his own eyes what it means when a whole community moves ahead as rapidly as this area has. But since you are all more or less acquainted with figures and handle them easily, it is not out of place if we throw in a few statistics. Since 1929, the South's share of the Nation's total income has increased from 10.5 percent to 14 percent. This relative increase of a third is matched by only one other area in the United States, namely the Far West. This growth was not limited to any one of the States in the South; it was shared by all.

If we turn to the income of individuals, the per capita income of the Southeast, computed simply by dividing the region's total

income by the total population, expanded 175 percent from 1929 to 1948. This was three-fourths again as large as that occurring on Nation-wide scale, and in every one of the 11 Southeastern States the relative growth of income per person during this period substantially exceeded that of the country as a whole.

There were many people who said that the wartime expansion of industry in the Southeast was a temporary phenomenon. This has been proven not to be true. The progress during the war was a clear extension of prewar trends. Since the war, the South has retained the relative gains achieved during the war, and extended them. Even under the unusually severe impact of the postwar readjustment, the steady trend of the growth which was taking place was clear.

The opportunity which lies ahead is indicated by the fact that the per capita income is still below the national average. And this fact points to the necessity for further growth and further use of the great resources and opportunities which are here.

I can remember very well, and I am sure many of you will remember, the campaigns undertaken by chambers of commerce, by newspapers, and by business communities throughout the Southeast for diversification of the economy of this area. This movement showed foresight. The dependence on King Cotton, the overemphasis on crop agriculture, had not been healthy. Now we can measure the results of the campaigns of those farsighted men who worked to bring more industry to the South. Industrialization has moved forward with great strides and added its contribution to the income advance. From 1929 to 1948, the increase in manufacturing pay rolls was fourfold in the Southeast; nationally it was less than threefold. The expansion was shared by nearly every State in this area, and in most of them exceeded the rate of development in other parts of the country.

The South can still use more industry and there are numerous opportunities for further industrial development; but this does not mean that agriculture is not an important part of the economy. Agriculture is more productive now than it was 10 years ago; and it is in better balance with industry. The proportion of agriculture to the total income of the area has declined somewhat. It was one-fifth of the region's income in 1929; one-sixth in 1948.

The important point is that southern land now produces a different range of agricultural products. All of you recall the time when the farmer's income from cotton and cotton byproducts made up the greater part of the farm income. Actually, between 1929 and 1948, the gross cash income from cotton and its products to farmers declined from 43 to 28 percent of the gross cash income. At the same time, livestock and livestock products advanced from less than a quarter to a third of the total.

This refers to money income, but I am sure that you will recognize what I mean when I say there have been some other gains from this shift. I can still fly over these plains and these rivers and see the great yellow floods held back by the dams or rushing down to the sea, but the program of livestock farming and the cultivation associated with the planting of kudzu and the other soil-building legumes have had a real influence on the landscape. Contour ploughing is saving soil as the practice becomes more and more prevalent. We are learning not only to create wealth, but also to conserve some of that which a kind providence has given us.

This is what we have done. We have worked together. Private development has produced new and better products in our factories and on our farms. Private business has increased the range of services we enjoy and has built new utilities for better transportation, power, and communication. Government has developed new sources of power, built new utilities to meet the needs of our growing population, and carried on its program for conserving our water, soil, and other natural resources.

For the last 3 years we have maintained high levels of business activity, high levels of employment, high levels of investment as well as high levels of consumption. As a Nation, our living standards have been rising steadily. In fact, they are so far superior to anything we have had heretofore that we are the envy of the world.

As a matter of fact, the most potent weapon in our whole international arsenal is not some new-fangled engine of destruction, but the envy of other peoples for what we have achieved in a material way. The desire of people to come to our shores and share this good life is the finest compliment we can have. The fear on the part of those who control the Soviet bloc that the peoples behind the iron curtain will learn of the good life which we have built is powerful testimony to the strength of our best weapon. We hear much talk of fifth columns and boring from within by Communists in a capitalist society. Let us not forget that we too can bore from within. Our secret weapon is the weapon of a good life so superior to anything which can be produced in a nonfree society that those who wage the cold war against us do their best to prevent the knowledge of what we have done from reaching their people.

The last few years have indeed been years of high activity. We must, however, look forward, and the forward look calls for imagination if we are to continue our high achievements.

This conviction that we must continue to maintain our high levels of business and employment we have expressed, not only in our actions but in laws passed by the Congress. We have said that, as a matter of national policy, we intend to maintain full employment. This is the same thing as saying the Government has certain responsibilities which it cannot sidestep. Furthermore, it says that private industry and private business must continue to carry out their part of the productive process, for our Government alone cannot supply full employment.

We believe in growth and in full employment because our kind of society is designed for growth and cannot remain healthy unless it grows. But a more immediate fact dictates the absolute necessity for growth. I refer to our rapidly increasing population. Each year 700,000 workers are added to our labor force. This means more hands to work and more need for the growth of production which those hands make possible. To provide the new jobs and new business opportunities, the initiative must be taken by business with relation to its phase of our activities, and by Government with relation to the phases for which it has responsibility.

Just to be sure I am not misunderstood, I should like to remind you of what takes place in a growing community. Wherever there is a real estate development, when lots are sold and houses are built, there have to be streets, there have to be water mains, sewers, gas mains, industrial power and lighting developments. All these call for government responsibility and initiative. When Government does not carry out the work, Government lays down the terms on which private activity goes ahead.

In a growing community there is always a danger that the attempt to restrict Government activities can go too far. The people must speak clearly to their respresentatives so that the development of the community facilities and community services are provided. This means schools; it means hospitals and many other of the services which we now call on our Government institutions—either local or State or Federal—to carry out.

The second important factor in the business outlook is the business population. Immediately following the war, there was a remarkable growth in the number of business enterprises. In the normal course of things, there are many new businesses formed and there are many business disappearances. This is part of our way of doing things. But during the past year, the rate of growth in the number of businesses has declined. This need not be a long-time development. I mention it, however, because the growth of healthy new businesses is important if we are to maintain the kind of competitive society that we want, and if we are to maintain the rate of increase in our population which is essential to higher living standards. We cannot allow our business structure to stagnate, either in terms of the number of businesses or in terms of their total volume of production. The stability of the business community must be the stability of the gyroscope, which depends upon the rate at which the wheels turn over. Business is stable only as it is active. The other kind of stability is the stability of stagnation, in which we are not interested.

The expansion of population, the expansion of business firms must be paced by the expansion of capital investment. We have learned to increase production by harnessing the energy of the earth to the strength of man. We have done it, however, only by using many machines in complex organization. The intangible is as important as, if not more important than, the tangible.

The guaranties of property ownership, which are preserved by nothing more than contract, are more stable, and must be more stable, than the material things which they represent. After all, you can destroy a building, but the ownership of the building and the knowledge of how to rebuild it and the insurance against its destruction can make possible its replacement. These various agreements between people are more permanent than the building itself. They can be valued just as material things can be valued, and so we say that there must be a growth of capital investment in these productive arrangements of our society.

We are interested in investment abroad as well as at home. We have found with this growing society of ours that we have a place in the world which we did not seek. This fact is unpleasant to many of us. But our good life depends on our relationships with other peoples. We export and we import in great volume. They have things we want; we have things they want. The richness of the cultures of the world can be shared without loss. This growing place which we must have for ourselves provides not only opportunities, but it imposes responsibilities which are difficult to assume and to carry out.

The banking community holds an unusually crucial and strategic position in all this development. It is no accident that banks play such an important role in our community. In the first place, they share with the Federal Government that most essential function: coining money. Credit advances are our primary monetary medium today. Without the invention of this device for carrying on trade, we would still be somewhere in the Dark Ages. This joint monetary function is carried out, of course, through the Federal Reserve System and its relationship to the Federal Treasury. This linkage between the banking system and the Treasury is critical to our business system. The problems involved here have been clearly described in a recently published report of the Joint Committee on the Economic Report. Those of you who have not seen it will be interested in this document.

In the hands of the banking community rest the fundamental judgments on whether

business as a whole moves ahead or moves back. The implementation of fiscal policy through the banking community is of first importance. Next is the bank's role as lender of short-time funds and as middleman for long-time funds. Productive capacity must be created, and it can be created only by these new investments. The banking community's part in this process is apparent once one becomes aware of the process.

In our society, where the responsibility for most of our activities rests with private business, finding the key to community responsibility in private business is one of the major tasks before us today. The outlook is good if we look at potentialities. The outlook is good if we look at our capacities. If we can maintain our objective of moving forward in concert, we can keep business good.

I should like to illustrate the point that the level of business activity will be what we make it. During the war, normal civilian productive activities were reduced to about half of our total activity. When the war was over, business had to redirect its energies to peacetime pursuits. Everyone who studied the size of this reconversion job was staggered by the difficulties which presented themselves. This was true of every business in the land which was engaged in war activity.

The Committee for Economic Development, a farsighted organization of businessmen, sensed this problem, and worked out a method for dealing with it. In essence, the committee said to businessmen, "Plan the way you will reconvert when the time comes. As far as possible know the next moves, how you will engineer them, how you will finance them, how you will reorganize production lines." This program was carried to meetings of businessmen throughout the country, and I would be surprised if some of the people here today had not been active participants in those meetings.

One of the results of this program was that thousands of businesses all over the land knew what their developmental programs, their capital investments, and their plans for new business were going to be, before the war was over. The minute the fighting stopped they were ready to move ahead, and did. Thus, the people who predicted heavy unemployment and large-scale dislocation were proven wrong.

The important thing to note is that when the problem was seen clearly and when the business community moved in the same direction at the same time, the results in terms of productivity astounded not only the rest of the world, but even surprised us.

I am not suggesting that this planning was the only factor which was involved. One of the related factors was the speed with which Government contracts were settled when the war was over. Many of those settlements might have been made better had more time been spent on them, but from the standpoint of the national economy speed was more important than detailed correctness. This process released credit which otherwise would have been frozen.

If we are to continue to use this kind of approach, we must be in agreement on the fundamentals. As long as total population is growing, there must be a growth of production and investment. As long as we are improving our knowledge, we can improve our living standards. Knowing these two fundamental facts, we can look forward with great confidence, for they tell us that potential markets exist to be explored and developed.

I think it is clear why I have spoken to you of these fundamentals behind the outlook. Focusing on details to the exclusion of fundamentals can lead anyone astray.

I feel confident that the banking community which deals with these details will operate in the light of the major possibilities which lie ahead rather than the detailed difficulties which must be overcome.

Samuel Gompers, a Great American

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. SABATH. Mr. Speaker, due to my absence on account of illness on January 27, 1950, the one hundredth anniversary of the birth of Samuel Gompers, I was unable to carry out my intention to pay tribute to the memory of this great leader of labor, outstanding citizen, and loyal and patriotic American.

It was my great privilege to have known Mr. Gompers intimately and to have worked with him in many of his accomplishments for the improvement of labor conditions in this country.

Under unanimous consent, I extend my remarks in the RECORD on the life and work of Mr. Samuel Gompers.

On January 29, 1950, all American workers and industrialists alike did honor and paid their respects to Samuel Gompers on the occasion of the one-hundredth anniversary of the birth of this distinguished American whose works and efforts gave substance and life to the destiny of a great and powerful America. This centennial observance should continue after January 29.

I had the happy privilege of knowing intimately and well Sam Gompers, who, during his lifetime in an era of grim foreboding and discouragement for the success of the labor movement and the welfare of the worker and the toiler, had to arm himself with patience, breadth of understanding, vigor, and patriotic leadership in order to realize his goal of betterment of conditions for the working class.

Here, in the life and works of Samuel Gompers, is an outstanding example of one who becomes a distinguished American, rising from humble beginnings to high and exalted position in American industrial, political, and social life.

Here, in the career of Samuel Gompers, born in London of Dutch-Jewish stock, is found a striking example of what millions of immigrants before and after him have accomplished, namely, infusing into American life the energy and spirit of industry, honesty, and thrift which have made America the most formidable Nation in power and prestige in the world.

I like to dwell on this point because there exists too strongly in many quarters and sections of our country, a tense feeling and prejudice against our newcomers, immigrants who, like Gompers—little schooled, dissatisfied with conditions in their homeland, seeing no future there for themselves or their offspring—seek liberty and freedom in our country, and at the same time advance the interests of their adopted country. Like Gompers, they worked 6 days a week from 12 to 14 hours daily at their trade or employment, plodded their weary way home and in recent years read their paper or listen to their favorite programs, and except for one night out either on Saturday or Sunday, retire to their rest to be prepared for the next day and next week's battles extending into the years. Thus do they build up a backlog of simple but firm, honest endeavor and accomplishment which goes into the sinews and lifeblood of the Nation which gave them succor and aid. And if these contributions were not enough, they and their children further acted to repay the debt of asylum given them, when in large and overwhelming numbers, they rushed to the aid of the Nation in time of two devastating wars and write distinguished feats of valor and sacrifice in illustrious pages of history, for Americans of posterity to emulate and revere.

My friend Sam Gompers came from a so-called minority group. As a true American, he would not and did not permit wholesale or mass mistreatment of the human race. He fought with all his might the totalitarian way of life exemplified by Kaiser Wilhelm who sought to make slaves and serfs of freemen and women. Gompers labored in the vineyard of human rights and freedom. He fought to protect the minorities regardless of race, religion, or class.

In America we find many minorities so-called, which make us the greatest melting pot of all races, creeds, and colors on the face of the globe. America is great because the virtues of patriotism, liberty, and justice abide with resolute heart among her people. There are, however, though fortunately small in number but nevertheless vocally strong, those who sound notes of hate and discord against these minority groups, attempting to set minorities against each other.

This hate mongering which begets prejudice, bigotry, and discrimination must be met and overcome by means of education and by law.

Samuel Gompers did just that. He built up a sound and enduring trade unionism first as a hard working official in his Cigarmakers International Union, composed of all sorts and conditions of men. Later he organized the Brotherhood of Carpenters and Joiners, which, together with the printers, the iron and steel workers, the granite cutters and other lesser craft unions, united about 1881 to sow the seed which later brought forth the American Federation of Labor.

I am aware of the organization called the Knights of Labor which, although, it claimed at one time over 700,000 members, moved like a meteor along the sky and fell just as quickly to earth leaving practically no concrete or beneficial results from its existence.

Neither time nor space permit me to set forth in detail the complete record of the activities of Samuel Gompers. To do so would fill volumes. It is sufficient to point out a few which demonstrate that he was a pioneer in a field which called for sound, constructive, and forward-looking leadership. The labor movement in the eighties was in a critical period. The Knights of Labor had failed because of inefficient leadership.

Slowly, but the organizer, leading exponent of craft unionism, Gompers welded together an organization with his

small group of trade-unionists as a nuclei and then moved forward and pressed ahead regardless of the great obstacles confronting him on all sides which big business set up. He succeeded in keeping his organization intact, whether in time of adversity or good fortune. Gradually he became the spokesman of labor and oftentimes the spokesman of the large army of unorganized labor.

HIS PHILOSOPHY

I believe that it can be correctly stated that as president of the American Federation of Labor Mr. Gompers had no special or particular philosophy as to the aims of the labor movement. In the years before World War I his program did call for better wages, shorter hours, healthier, and safer working conditions.

These aims, he felt, could be furthered by pursuing or following business-union procedures and working within the framework of the existing order which he always upheld, supported, and protected. For a time he took the position that labor did not aspire to share with the employer or take over control of the industry.

EXPANSION OF LABOR UNION AIMS

After the war, however, Mr. Gompers was forced to adopt a different or expanded position, namely, that viewing wages and hours as its only concern and collective bargaining as its sole aim was not only the program of the American Federation of Labor; that included also was "the bidding for a progressive share in the proceeds of industry and a voice in industrial management." The union he urged would become responsible for the workers in industry. Along with this new statement of principles, he held strongly to the laissez-faire doctrine of individualism—voluntarism, he called it.

He was strongly insistent that industry "organize itself to govern itself, to impose tasks and rules and bring order into its own house." Thus it came about that in 1923 the American Federation of Labor recorded itself against the antitrust laws.

I remember in my friendly and close association with this sublime spirit whom we now honor, many instances of greatness. One, however, has always stood forth in my mind, namely, the deep and profound patriotism of my friend. The period was that of the First World War. America and Americans were debating the issues of participation by our country in the great war then being waged abroad. The country and our people were in the throes of a great debate. Indecision and vacillation were riding the crest when firm action and resolution should have been in command. The workers, like other groups, were uncertain as to whether our participation was necessary or justified. Many of the union locals opposed our entry into the war.

GOMPERS LEADS THE A. F. OF L. TO A GREAT TRIUMPH

It was at this psychological moment that Samuel Gompers as president of that great labor organization, the American Federation of Labor took hold. Here again the exceptional qualities of leadership asserted themselves. He readily realized the dangers of isolationism, its dangers not only to his own group but most important of all its danger to his adopted and beloved country. To work he went. No man ever waged a more relentless and soul-stirring fight against Kaiser Wilhelm and his type of totalitarianism than did Sam Gompers. Although ill, almost 70 years old, he traveled from one end of the country to the other, addressing meeting after meeting and exhorting the union members and the unorganized workers to action. Then biding his time, he prepared the course of the American Federation of Labor and at its convention in November 1917, at Buffalo, N. Y., he invited President Wilson to address the convention. As Mr. Wilson entered the hall, every delegate stood up and gave support and approval to the President's position, "to make the world safe for democracy." This was one of the greatest triumphs in the life of Gompers and the American Federation of Labor. The force and influence of this great body of American workers did much to dissipate and scatter the power and influence of the pacifists and isolationists. It had the effect of clearing the atmosphere of doubt and indecision for those deluded but sincere Americans, as well as casting aside the specious and untenable arguments of the Germanophiles and traitors. Gompers had more than established himself as a labor statesman.

PRESIDENT WILSON'S CONFIDENCE IN GOMPERS

Wilson showed his confidence in Samuel Gompers in October 1915 when he named him one of the five members on the Advisory Commission to the Council of National Defense. His was the job to make ready the forces of labor for the battle to be fought. His colleagues on the board were Daniel Willard, Julius Rosenwald, Bernard M. Baruch, Dr. Hollis Godfrey, and Dr. Franklin Martin. How well he did his part is best demonstrated by the great part labor played in producing the implements and matériel of war in 1917–18, just as in 1941–45 the laboring groups did the same spectacular job a second time.

President Wilson again called on him when he appointed Mr. Gompers on the Commission of International Labor Legislation in 1919. This Commission, composed of two representatives from each of the five Great Powers at the Peace Conference, were to act on matters affecting labor and work within the League of Nations for common action on conditions of employment. Although not fully satisfied with the work of the Draft Convention, he accepted it, as did the American Federation of Labor.

OPPOSITION TO COMMUNISM AND SOCIALISM

His opposition to communism and socialism manifested itself in strong, unmistakable language. He warned that "communism can only be successful if it succeeds in tying itself to the masses by directing its appeals in language of jingoistic sentiment, by aggravating and exploiting every manifestation or display of discord or discontent." Note, for example, in our day, the Communist parades and pickets for civil rights, better housing, and so forth. He knew that communism profits from the political mistakes of political parties, since these errors permit the Communists to proclaim themselves as the sole and only defenders of the national welfare and the country's traditions. Gompers kept the Communists in the labor movement on the defensive and never permitted them to take the initiative.

COMMUNISM, A THREAT TO UNION AUTONOMY

He fought communism because it constituted a distinct threat to union autonomy. To him, it meant absorption of the union by the totalitarian state and thus becomes a mere cog within the framework and machinery of politics.

He knew and recognized early in life as a union leader that when Communists win control of a union, not only do they change the personnel but also the objectives and functions of the union. In addition they form and organize opposition to the parent body. It becomes a tool, an ally of the Communist regime and loses its character as a trade-union.

His New York was a maelstrom of revolutionary groups and many different national extractions. He saw in these formative years, the actions of the extremists and the anarchists and soon came to the conclusion, how little organized labor would gain if it joined or cooperated with these groups.

Hence he was attacked by the leaders of Bolshevism, Lenin, and Trotsky who called him an enemy of the proletariat. Communists accused him of being a "bourgeois and labor faker." Lenin spoke in glowing terms of Daniel De Leon often referred to as the "Pope of the Socialist Party." De Leon was an arch enemy of Gompers in the labor movement.

It was at this time that Communists had infiltrated into a few trade-unions such as the Needle Trades in the State of New York and New England, into textile, miners, and steel workers unions. There developed consequently an aggressive left wing movement in the American Federation of Labor which constantly attacked the conservative program of Gompers, continually demanding the immediate recognition of Soviet Russia.

OPPOSITION TO SOCIALISM

Mr. Gompers had studied the principles of socialism in his youth. He soon learned to oppose it. Socialism to him meant the overthrow of free enterprise and the existing order to be replaced by socialism. Then, too, the Socialists were pacifists and opposed the war. He was viciously attacked by them because he stood for and promoted private enterprise which was and is today anathema to Socialists whose program is that of nationalization of industry. Led by Gompers, the American labor movement accepted the concept of "private property as a necessary agency for securing opportunity for individual independence and resourcefulness."

FEUDAL BARONS OF WEALTH DENY RECOGNITION TO LABOR

The enemies of labor and trade-unions with whom Samuel Gompers had to contend in the early days of their development and growth were powerful indeed. One look at the imposing list of those who opposed and fought incessantly and with every unfair weapon at their command, serves only in increasing my

admiration and regard for the man we honor:

John D. Rockefeller, Jr., who had acquired his wealth, as did some of the others I name, at the expense of low wages paid the workers. He refused to recognize the union miners of Colorado.

Andrew Carnegie, who with Henry Frick in 1892 opposed better conditions for labor and fought the Amalgamated Association of Iron and Steel Workers in the homestead strike with Pinkertons and help from unconscionable quarters, thereby almost crushing the cause of labor.

George Pullman of the Pullman Palace Car Co., at Pullman, Ill., who advocated wage reduction and whose action resulted in the Pullman strike, producing hard and heavy burdens on the laboring man and his family.

Jay Gould, an industrial tycoon of his day, a ruthless individualist, who, drunk with financial and economic power, believed that progress meant accumulation of great private fortune at the expense of the worker paid starvation wages.

James Fisk, who used his resources to beat down labor, ably seconded and abetted by another arch foe of labor, Judge Elbert H. Gary, of the United States Steel Corp., whose sense of economic justice set a new low even in those early days of high-handed action against labor unionism.

John P. Morgan, along with Carnegie, Rockefeller, and E. J. Harriman, were among those who at the beginning of the twentieth century built up and developed powerful systems of high finance, great monopolies in trade and railroad industries—all by the sweat of labor, but denying the laborer just compensation.

Take the case of miners forced always to strike for a living wage to keep out of peonage. Never given the opportunity to work the number of days of other industries, the miners were forced to put up with seasonable fluctuation in production.

Forced to trade for their food supplies in the company stores owned by the coal barons because of lack of funds, unable to obtain or afford decent housing for their families, the miners lived in squalid surroundings near the mines. Always in debt to the coal barons who held them in servitude, with no safety appliances and working hundreds of feet below the ground under perilous conditions the plight of these workers has always been a desperate one.

However, they found a champion in Gompers, encouraged by men such as William Green who fought successfully to improve these disgraceful conditions in slave wages and galley slave working situations imposed by the autocrats of the coal industry. Truly does history repeat itself.

Strange to say, these men have their exact counterparts today—ruthless men in their self-same positions in the trusts, monopolies, holding companies, who vote themselves large pensions upon retirement notwithstanding the high salaries they receive as an official of the corporation for many years. Yet these self-same men deny pensions and security to those who made possible their millions, who as they are about to complete their span of life, seek in a manner of attempted appeasement to their complaining conscience, to distribute small sums proportionately to their wealth, to worth-while purposes such as endowments for educational institutions, libraries, medical, and economic research.

But I say to them—too little and too late for they have robbed the worker and his family of the just and equitable share of the fruits of his honest and productive labor. Well did the apostle of a new era, another of my admired friends, William Jennings Bryan, phrase it in his Cross of Gold speech which I had the high privilege to hear at the Democratic National Convention in 1896 at Chicago:

> You shall not press down upon the head of labor this crown of thorns,
> You shall not crucify mankind upon a cross of gold!

GOMPERS WAGES GIGANTIC FIGHT FOR LABOR'S LEGAL RIGHTS

The Sherman Act passed in 1890. Labor unions' activities were not included in the act. But the Supreme Court in the *Danbury Hatters case* (308 U. S. 774) declared the act did apply to labor unions. Then came the Clayton Act of 1914, for which I had the honor of voting, signed by President Wilson, declaring that "the labor of a human being was not a commodity or article of commerce." This act was called by Gompers the Magna Carta of labor, and made lawful the existence of labor organizations which feared that the Government might start dissolution suits against labor unions such as those successfully prosecuted by the Government in 1911 against the Standard Oil Co. and Tobacco Trusts.

Another provision of the Clayton Act prohibited the granting of injunctions by Federal courts against certain specific labor activities such as peaceful picketing. But the interests keep up their opposition to the Clayton Act and the Supreme Court in the *Duplex Printing Co. case* (254 U. S. 443) stated that the Clayton Act did not give any blanket immunity to labor. In this and other decisions the Supreme Court read into the work unreasonable restraint of trade and commerce, the so-called rule of reason into the Sherman Act passed by the Supreme Court in 1911.

Another act, the Norris-LaGuardia Act of 1932, which I also supported, made it an absolute prohibition for any Federal court to issue an injunction in almost any case involving a labor controversy. Labor held that this act which was interpreted by Justice Frankfurter in the *Hutcheson case* (312 U. S. 219) in 1941 makes labor injunctions forbidden.

Today we find efforts made by the enemies of labor to overrule these protections and safeguards properly given to labor on the ground they say, and without authority and reason, that labor unions are seeking to monopolize the supply of labor either on a large or limited scale in restraint of trade. These opponents of labor falsely charge and urge today that labor controls of production and the fixed prices by union action in commodities or services essential to the public welfare require that labor unions come under the restraint of trade provisions of the Sherman Act. In Gompers' day, he met up with William Howard Taft whom he fought step by step as an injunction judge, and later as a presidential candidate; as President and later as Chief Justice of the Supreme Court, Gompers opposed him. Taft contended that labor sought class legislation of the most vicious sort. Gompers replied that all legislation is class legislation and that organization of labor having their origin in human need should be exempted from the provisions of the Sherman antitrust law. President Wilson accepted this viewpoint of labor notwithstanding the fact that Gompers had opposed him in 1912 as against my friend Champ Clark, Speaker of the House in 1910, whom Gompers called "a more intrepid friend of labor never occupied that position."

POLITICAL ACTION FORCED UPON LABOR

From 1906 to 1912 Gompers took up political action through necessity of self preservation of the labor movement. He had always believed that the courts under the Sherman Antitrust Act of 1890 had gone far beyond the use of their equitable jurisdiction and had rendered strikes ineffectual by unfair restrictions on picketing, free press.

These injunctive measures destroyed the rights of the union members because the working man when deprived of his most effective means of protection namely the right to refuse to work unless justly rewarded for his labor, is placed under a serious handicap. Thus, faced with injunctions obtained by employers based on flimsy evidence untrue and false testimony, Gompers and his organization had no other alternative and determined to "reward our friends and punish our enemies. Elect those who support anti-injunction bills in legislative halls." He made it clear, however, that this action did not mean the formation of a labor party. Gompers always fought those who advocated a labor party. In fact he feared it.

After World War I we find Mr. Gompers changing and modifying his views on political action. He was forced to the conclusion that economic action and non-partisan political activity could not obtain the benefits union labor was now seeking. For labor now insisted on a share in the control of industry. A great struggle was raging between labor and capital. I saw that struggle in progress here in the House. The United States Steel Corp. and all big business, making use of the injunction, also either controlled or had great influence in the Republican Party. A few members of the Democratic Party were at times too much influenced by these predatory business groups. Something had to be done. Hence much against his former views, Gompers took labor out into the political arena. The National Association of Manufacturers was already there. Big business had been there for many years.

The opposition was firmly entrenched in politics. It had men like Penrose, Root in the Senate and others in the House who placed every obstacle in the

path of labor's progress. Here is an illustration of this.

If you will pardon the personal allusion, I remember well that in the first session of the Sixtieth Congress, I introduced the first bill in the House—H. R. 21962—which embodied the principles of workmen's compensation. The Republican majority influenced by the large railroad interests refused to consider it. They said it was unconstitutional and too costly, that it would seriously impair the financial structure of the railroad industry. History records otherwise.

For 10 years we had endeavored to pass the Employers' Liability Act abolishing the barbaric doctrines of assumed risk, contributory negligence, and the doctrine of fellow servant. No sooner had we passed this act, than the railroad interests began to agitate for repeal. And on March 1, 1913, in the closing hours of the session the Republican-controlled House railroaded through the House with only 40 minutes of debate and over 100 amendments to be acted upon, a measure—S. 5382—which practically repealed the small benefits in the then existing law. This legislation favored the great railroads and corporations of the country, was a railroad measure to the *n*th degree and against the laboring men of the Nation.

On this eventful occasion, my thoughts and my memories revert to those memorable days in my early career, as a Member of Congress when labor was fighting for its very life and for a rightful place in our social and political and economic life. Its champion was Gompers and a braver, a more spirited and able fighter and leader never lived. His opposition came both from within and without. He traded blow for blow and he fought his way to the top amid a morass of confused thinking with no compass to chart the course, and dissension to quell in his own ranks.

The enemies of labor saw in him a distinct threat to their stranglehold and control of the worker—control to time, wages status, and general welfare of their workers whom they kept in serfdom. He raised their status to that of free men. He protected the rights of the union, forced the employer to collective bargaining and bettered the working conditions of the laboring men and women. Samuel Gompers represented a dynamic force in American life and left a record of rectitude, sincerity, and altruism which brought about a labor movement in America which is strong, more inclusive, and more united and compact than in any other nation in the world.

Today the American Federation of Labor reflects the aims, hopes, and aspirations of Samuel Gompers for the welfare of the worker and the Nation of which that worthy organization is an integral and necessary part.

Although departed from our midst almost a quarter of a century ago, the spirit of Samuel Gompers lives in that great organization whose objects he furthered and in whose behalf he dedicated and consecrated his entire life.

One of his admirers aptly summed up his place in American history:

America was his world. * * * Every spot and every country outside of his American horizon was merely subsidiary and suburban. As a matter of fact, Samuel Gompers was the American American, although born in Whitechapel, of his time. What he lacked in greatness of soul or brain, he made up in loyalty of untarnished rectitude.

The whole world respects and reveres the memory of Samuel Gompers and the exalted Americanism of a great American whose last words were so typical of a patriot: "God bless our American institutions. May they grow better day by day."

Haste Makes Waste

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Morning Herald, Hagerstown, Md., February 18, 1950, entitled "Lustron Fiasco Proves Again That Haste Makes Waste":

LUSTRON FIASCO PROVES AGAIN THAT HASTE MAKES WASTE

The country's costliest experiment in mass-producing prefabricated homes apparently is doomed to failure. The Reconstruction Finance Corporation has decided to start foreclosure proceedings against the Lustron Corp., maker of all-steel dwellings.

The RFC has loaned the Columbus, Ohio, firm $375,500,000 in an effort to get it well launched on big-scale housing operations. Both the company and the agency figure foreclosure may cost the Government $30,000,000 of that sum.

The Lustron case is a sad history of dreams never realized. It is made all the more dismal by the fact that the project seems to have had the blessing of high Government officials, probably, including President Truman, from the beginning.

Why were these men so interested in Lustron? From the days of Wilson Wyatt, former Federal Housing Expediter, there's been a notion in Washington that a well-developed prefabricated housing industry would go far toward bringing the cost of a decent home down to the average man's level.

At the same time it was felt this goal couldn't be achieved simply by waiting for the tiny prefabricated-housing output of established companies to swell into the desired heavy production. Government interest centered on initiating a bold effort to telescope this growth process.

The way to do it, Wyatt and others decided, was to help ambitious firms get quickly into automobile-style mass production of houses. The Lustron Co. turned out to be the prize guinea pig in this plan. It gained control of former aviation-plant space in Columbus. The RFC lent it money for machinery and operating expenses. Big things were in the wind, but the promises were lavish.

But somehow the dream always remained just out of reach. Many problems arose. It was hard to find the necessary skilled labor force, to set up a sensible selling organization. Continued rising costs wrecked hopes of a really cheap sales price.

Several times Lustron came back for more money to keep going until it could get over the hump. The story was always about the same: "Just let us have a few more millions and we'll really be rolling." So much Government money had been put into the experiment it looked unwise to let Lustron sink while there was still any hope at all. But, inevitably, there had to be an end to doling out funds without results.

The Government has decided that moment has arrived. This doesn't mean the prefabricated housing industry has failed. There are numerous small companies doing well in the field, with a few showing impressive growth. But the evident collapse of the Government's bright dream does seem to mean there'll be no spectacular catapulting of the industry onto a level with the motor makers. Progress henceforth will likely be slower than hoped for—but surer.

Weekly Newspaper Editor Points Up Difficulty in Reducing Appropriations

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. HAGEN. Mr. Speaker, there are approximately 60 weekly newspapers and 4 daily newspapers published in the ninth district of Minnesota. I make an effort to read every one of them, and in this way I keep in touch with the activities of my congressional district, which comprises 15 counties in northwestern Minnesota.

Several of the weekly newspapers have personalized special columns written by the editor himself or a member of his staff. These columns usually are very interesting and I make it a point to read them every week.

One which attracted by attention last week was entitled "Letter to My Congressman." It appeared in the Warren (Minn.) Sheaf for February 8 under the heading "Chips off the block." It was written by Neil Mattson of the editorial staff of the Warren Sheaf.

The column points out the fact that groups and individuals desire appropriations for their own needs but are opposed to all other appropriations. The article points up the difficulty of trying to cut appropriations in Congress.

I recommend the reading of the article to my colleagues. It follows:

CHIPS OFF THE BLOCK

(By Vic Boo)

A LETTER TO MY CONGRESSMAN

DEAR CONGRESSMAN: I see by the papers where Congress wants more economy in government. I see they hope to put a lot of the Hoover Commission's report into action to save the taxpayers' money. I just want to tell you that it is about time Congress thought about cutting down on spending money. You can bet, I'm all for this economy. Our taxes are high enough, let's start cutting costs so we can cut taxes.

I see the Hoover Commission recommended some changes in the Post Office Department. I'm all for cutting down the cost, you understand, but I think the Post Office has been doing a good job so far and if we were to

make any changes there, it might mean service wouldn't be as good, and if their efficiency went up too much, it would mean a lot of people would be out of work. I'm in favor of cutting costs but maybe we better leave the Post Office Department alone. After all, it is nice to have a job to offer the political precinct workers.

This economy program has been long overdue and there are perhaps a lot of changes that could be made in the Department of the Interior, but one better tread pretty lightly there. What if there are only 32 Indians for each employee of the Bureau of Indian Affairs. After all didn't we take this land away from them? To see that they have plenty of people to look out for their welfare now is the least thing we can do. Economy is a good thing, but the Interior Department is such a small part of the Government that what it spends don't amount to much anyway.

You maybe don't know me, Mr. Congressman, but I was in the Navy during World War II and I belong to the veterans' organizations. You know us veterans' organizations hate to see waste in the Government. We are 100 percent for economizing. Naturally, we feel it would be false economy to see any changes in the military set-up. We won the wars didn't we? The Army-Navy Departments must be pretty O. K. the way they are. Then there is the other agencies that serve the veterans. You know we can't do enough for the veterans. Why shoot, we shouldn't mind paying out the money that goes to the veterans' departments in the Government. We want you to know us veterans' organizations back up this economy program to the hilt as long as you don't cut the appropriations to the veterans' agencies.

Up in this neck of the woods we make our living by farming primarily so I would not recommend any cut in the appropriations to the Agriculture Department. Our folks get a lot of help from this Department.

My brother-in-law writes me (he works in the Government Printing Office) that he backs up this economy program, too, but he says they better not cut appropriations to that department otherwise there would be a lot of disappointed people when they quit printing booklets like Mist-Netting of Birds in Japan.

I want you to know our whole family is behind this cutting down on Government waste. My brother (works for the Department of Reclamation) says pretty near every time they figure out some dam or something the Army engineers do, too, and he thinks the Army should cut down. Course it's like I said before, too, the Army does a lot of good so it wouldn't be wise to cut them out.

There are many other departments to the Government, too, that do wonderful things, but I wouldn't just start cutting their appropriations. First, I would find out if there were any objections to cutting the appropriations to these other departments and then if there were some that didn't think they should be cut I would look into other departments and cut down on the departments that didn't have any objections or that said they could get along on less. That's what I'll do if I were a Congressman.

Well so long for now. I just thought you would like to know that I am all for economizing and cutting down in Government.

By the way, my hobby is to read up on all sort of insects and birds and things, and I wrote in once about a book on Hypentelium nigricans. They told me the Government didn't print this booklet so I was wondering if you couldn't see about getting them to put one out on this subject. In case you are not familiar with this scientific term, Mr. Congressman, it means a stone-roller or hammer-head bat.

Yours for cutting down Government expense.

Lithuania

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert the following copy of my address at the annual observance of Lithuanian Independence Day, Lithuanian Citizens' Club, 41 Berkeley Street, Lawrence, Mass., Sunday, February 19, 1950:

The President of the United States and the Secretary of State have recently announced that it is almost useless to negotiate with Russia, because its word means nothing.

From now on the free peoples of the world must build up their strength because power is the one and only factor which tyrants understand and pay attention to.

The Lithuanian people have known the brutal truth of this for centuries. In recent years they have been caught between the twin tyrannies of nazism and communism. One has been defeated, but the other is triumphant. The war is over. The shells and the bombs no longer ravage your homeland. It is supposed to be a time of peace, but there is no peace. Unseen terror clutches at every heart, for the Communists are putting into operation a plan to destroy the Lithuanians as a people.

No wonder they have drawn an iron curtain between themselves and the world to hide the shameless crimes they are committing. By keeping us in ignorance they hope to accomplish their devilish purpose, and then it will be too late for us to wake up.

But we have ways of knowing even now what the Russians are doing, and it is not a pretty story.

We meet on occasions such as this to consider the most recent evidence, to put ourselves on guard against the red terror, and to pledge ourselves anew to the struggle for those human rights which will banish tyranny in any form from the earth.

The United States has its Independence Day, and the Lithuanian people have theirs. Ours is open, complete; but that of your countrymen can be celebrated only in the underground. Americans and Lithuanians are brothers because they believe in the dignity of man and will bow the knee to no one but God. As we in America learn of the sufferings endured by your friends and relatives overseas, we cannot rest content. Freedom is universal. It cannot exist one-half in light and the other half in darkness. When it is stamped out in one country tyranny is on the march again; and that constitutes a threat to us here in the United States. For we can never be truly free until the whole world is liberated from slavery.

Today we face an enemy who looks like a civilized person. He even talks about democracy. But what is he doing behind the false front he shows to the world?

With the lie and the club he is trying to destroy people who never harmed him. In this we see the criminal viciousness of the Soviet regime. Russia has more land than any other country in the world. Russia may have more natural resources. But Russia is not satisfied with these.

Russia wants all.

By torture and murder, the Communists destroy many bodies but they cannot conquer the soul. In their plan for a world governed only by materialism they left no room for God. But they are discovering that all the force at their command cannot crush the faith in a man's heart. Instinctively they realize that the human spirit will not surrender, and so they are doing everything they can to crush it.

Lithuania was a free nation, asking only to live in peace with her neighbors. But Russian armies have blacked out her independence, have forced a puppet government upon the people, have robbed them of their liberties, seized their properties, gagged their newspapers, enslaved their schools, persecuted their clergy, torn people from their homes, and have made murder the rule of the land.

This we know in spite of every Russian effort to conceal or excuse her crimes against humanity.

Three hundred thousand Lithuanians perished during the Nazi occupation. That was hideous. It occurred during a time of war. In time of so-called peace, however, the Soviets have exterminated 520,000. More than 60 percent of the priests have been liquidated.

My friends, these facts strike us with horror. If applied to the United States they would mean that 40,000,000 of our people here would be wiped out if we had been conquered by the Communists. Not as soldiers in the line of battle but as innocent civilians who fell before the fury of godless hate.

We need to know of these tragic happenings so that we shall be armed against them not alone in military might but in the spiritual strength to recognize and resist this evil before it extends its brutal power.

Tear parents from their children, scatter them in the icy wastes of Siberia, break up homes and you break up the Nation, that is the Soviet technique in your homeland.

Even some who have been bedridden for years have been deported. At Birstonas a dying person was arrested but died in the motor truck some minutes later. The wife of an organist was compelled to carry her two babies in her arms for 2 miles while the Red soldiers beat her with the butt ends of their guns.

Attempts at escape are made even if there is no chance of success. Whoever has been arrested by the MVD will always prefer death to falling into their hands once more. Despite the fact that it rained hard on May 22, 1948, the forests were full of men, women, and children who had gone into hiding.

Those picked up for deportation are loaded into freight cars like cattle, and the cars are then boarded up. Strangely enough, the trucks used to carry the victims to assembly centers are of American manufacture, which we gave to them during the war under lend-lease. The Reds boast of the fact that American transportation is carrying Lithuanians to their doom—as if to kill off all hope in the hearts of the deportees.

This is the power-thirsty dictatorship which has fooled so many people with its promise to provide heaven on earth and gave them hell instead.

A power that is without conscience or mercy.

Remember after the war when the United States had a monopoly on the atom bomb? If we were evil, we could have used this fearful weapon to destroy Russia. We didn't, because our statesmen and scientists believe in God and in the sanctity of human life. We had no quarrel with the Russian people, and we would not use this tremendous weapon for aggressive purposes.

On the other hand, do you suppose the men in the Kremlin, if they were in our position, would have been deterred by any moral considerations for the rights of other people? Let us thank God that they did not find this secret first.

On this day dedicated to the memory and the hope of Lithuanian Independence, I say that the United Nations should call upon Russia to give up her occupation and control of Lithuania and the other Baltic nations.

The Soviet Union has violated the political decisions made at Tehran, Yalta, and Potsdam. Unless restitution is made, the Government of the United States should not be bound by these unratified agreements. It should use its moral leadership in the United Nations to speak up for the rights of subjugated nations so that they will not be forgotten.

Just as you who have escaped, you who live in a free country beyond the dread reach of the secret police—proclaim Lithuania's irrevocable right to independence.

As long as your voice is heard in protest at meetings like this, Lithuania's cause will not die.

For yours is the voice of truth and justice, appealing to the world conscious for recognition of Lithuania's right to live.

This is a spark that appeals to all decent men and women, and there are tens of millions of them; and there are some even in Russia for they too are enslaved and bear a heavy cross.

Not even an iron curtain can keep the peoples of this world apart. When they get together, as they surely will, we shall see the dawn of a new age where mankind will be free. Lithuania will rise again to enjoy true independence, this time forever more.

The Late Lloyd Noble

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. ALBERT. Mr. Speaker, it is with deep regret that I advise the House of the untimely death of a great son of Oklahoma, Lloyd Noble. Born and reared in Ardmore, in my congressional district, he kept his home in that city until his death. Though he became a giant in the oil industry, he never left the people and things he had known and loved as a boy.

Mr. Noble's total contributions to his native community and State will probably never be known. Certainly it can be said that he played a major role in bringing our State university to its present status as one of the great institutions of higher learning in our country. As an active alumnus and member of the board of regents, he gave unstintingly of his time and money to the development of his alma mater. Dr. George L. Cross, president of the University of Oklahoma, said of him:

> His many years of service to institutions and his great generosity with respect to gifts, which he would not permit to be published, indicate his very great interest in higher education.

Lloyd Noble was a lover of the land. Through the establishment of the Samuel Noble Foundation, he began during his lifetime the job of rehabilitating and improving the soil in his own part of our State. His job did not stop there. His soil-improvement work was not only an end but also a vehicle by which he sought to show others that the elimination of fear through knowledge would lead mankind to a better life.

His primary interest was in people—an interest that he maintained until the very last. Only a few days before his death he had accepted the chairmanship of the fund drive of the Oklahoma Heart Association.

Those who knew him best loved him most. A Republican in politics, he was elected to the Oklahoma Legislature as a very young man from one of the strongest Democratic counties in the country.

Lloyd Noble's death is a great loss to Oklahoma and the Nation.

In Defense of the Congressman

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. HAGEN. Mr. Speaker, an interesting article has been called to my attention by a former colleague of ours, the Honorable Edward J. Devitt, of St. Paul, Minn. Mr. Devitt is now judge of the probate court of Ramsey County in St. Paul.

The article he submitted to me for reading was entitled "In Defense of the Congressman" and was published in Plain Talk magazine for January 1950. The editorial comment on the article was as follows:

> The Members of Congress will hardly overlook Oscar H. West's In Defense of the Congressman * * * it seems to us that such a plea has long been needed in the interest of representative government, especially in view of the indiscriminate and ignorant criticism to which the Congress is so often subjected.

I thought it would be interesting to Members of the Congress and readers of the CONGRESSIONAL RECORD so I am glad to include it herewith with my remarks.

The article follows:

IN DEFENSE OF THE CONGRESSMAN

(By Oscar H. West)

Every year some American cities name a schoolboy to be "mayor for a day." A similar custom might well be tried out in Washington, by nominating Mr. Average Citizen to step briefly into his Congressman's shoes. After a single hectic day in the Capitol, I am sure, Mr. Citizen would breathe a sigh of relief and place a much higher value on the services of his representative.

We hear a good deal these days about what's wrong with our Congressmen, but too few of us have a real idea of what their job entails. Yes, $15,000 may be a lot of money, but the pay check is garnished with headaches. Do we employ our Congressmen to be errand boys or statesmen?

What's that guy representing me in Washington for, anyway? is the attitude of many constituents who flood their Congressman with inquiries about trivial matters and requests for personal favors. They expect his never-failing interest in everything from getting tickets for the world series to getting a job for some ne'er-do-well relative or friend of a friend; from helping to name the new baby to pursuing a petty personal complaint against Uncle Sam.

One constituent swamped his Congressman with letters concerning a $6.20 claim against the Government, plus two taxi fares, a hotel bill, and meals. The file was voluminous. The man-hours and clerical time consumed were astounding. Finally the constituent wrote: "You are just not doing any good down there in Washington."

A Senator put it this way, "I came to Washington to represent my State in the United States Senate. Instead of devoting my thought, time, and energy to subjects before the Congress which affect our economy, our way of life, the future of our country and its people—subjects that determine our place among world powers—I have to give more of my efforts to demands from my constituents about wholly unimportant matters."

Then there are the constant calls on him for speeches. Whether it is a church social, political rally, county fair, civic club luncheon, or crowning a festival queen, the Congressman has to respond. Asked about vacation plans, one Senator replied: "I can't go home. I'd be hounded to death about speeches and give most of my time listening to personal problems. Don't misunderstand—my people are well-meaning. But after a man has been in the Capitol for 7 months wrestling with problems before Congress, he should be entitled to a rest at home. I'll have to take my family and go somewhere else."

I believe that most Senators and Representatives are sincerely trying to do a good job. Yet few ever get any thanks from their constituencies. Too often Mr. Average Citizen takes no interest in decisions to be made by his Congressman, makes no effort to inform himself on proposed legislation, yet cries to high heaven when the vote is cast if it doesn't suit him.

Notwithstanding the barrage of criticism heaped upon every Congress—charges of blundering, waste, undue influence from Government bureaus, and accusations from disgruntled pressure groups employing caustic adjectives—the record of Congress down through the years is one of which we can be justly proud. When we consider the myriad complexities of problems with which our national legislative body has to deal, the personalities and individual viewpoints of its 531 Members, plus conflicting views of their constituents, it is indeed noteworthy that the vast majority of laws are enacted with reason rather than with passion. True, accumulated pressure and frayed nerves blow the lid off sometimes. Unfortunately, such episodes are played up by the press and radio. We get only a smattering report of the conscientious hours of honest endeavor put in by our lawmakers. The long, detailed, powder-dry committee hearings, requiring both patience and eagerness to get at the facts concerning proposed legislation, are seldom recounted unless colored by a spectacular witness.

For the way he handles irritating situations, the average Congressman measures rather high in terms of human behavior, I believe. But such situations are a deterrent to his efficiency. There is little he can do about it, but we can do something if only we will. All too many citizens, especially businessmen both big and small, overlook the fact that what goes on in Washington controls the hopes and heartaches of millions of Americans like themselves.

With our freedom and security and our free-enterprise system at stake; with the tidal wave of a new philosophy washing at the dikes of democracy, we are defeating our own best interests by harassing and shackling the Congressman with insignificant matters when his mind should be left unencumbered to weigh and resolve matters of national and international importance. Consider the difference between the Atlantic Pact or the ECA and the $6.20 claim.

This country has had thrust upon it the leadership of a world bogged down with the after-effects of war, beset with sinister forces.

With the Congress of the United States, which underwrites policy and sets the pace, rests the hope and security of mankind. We the people must see to it that the right men are sent to Washington—and after they get there, support and help them.

Resolutions at Lincoln Day Dinner

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted at the Lincoln Day dinner of the Republicans of Wright County, Iowa:

RESOLUTIONS OF THE REPUBLICANS GATHERED AT LINCOLN DAY DINNER

We, the Republicans of Wright County, Iowa, gathered to honor the memory of the great emancipator, Abraham Lincoln, adopt the following resolutions:

The United States are threatened by dangers both from within and from without, in a degree unparalleled in our history. As citizens, we feel it incumbent upon us to point out these dangers and to state our convictions.

FREEDOM

The historic mission of the Republican Party always has been and is today the preservation of human freedom. The freedom of millions of people in eastern Europe and in Asia has been sacrificed because of the tragic blundering of the Democratic Party. The lives, the property, and the freedom of every American citizen is being jeopardized by certain of the policies of the current Democratic administration. We assert that human freedom is the divine right of every person, the first obligation of every Christian government, to protect. It is the sacred obligation and the high honor and privilege of the Republican Party to forever oppose tyranny, and to forever champion and defend freedom here and throughout the world.

SOCIALISM, COMMUNISM, AND CAPITALISM

Every Socialist is a potential Communist. Every Communist is a radical Socialist. Socialist and Communist governments always destroy freedom, because they are monopolies and therefore exercise tyrannical power.

Socialism has been tried, unhampered and beside capitalism, here in Iowa, and it has failed as it has failed throughout the world to provide as high a standard of living as has been provided by the American capitalistic system. We denounce socialism and communism as delusions and snares. They promise a land of plenty, they create a land of scarcities. We assert that the present administration is controlled by men who believe in socialist principles and are opposed to the principles of American capitalism. We assert our faith in the American capitalistic system, properly regulated by law, as being the best system to bring the highest standard of living to the greatest number of people which has ever been devised by man. We believe in its continuance and its improvement.

MONOPOLY

Every monopoly tends to oppression and tyranny, and therefore is opposed to freedom. The basic principle of our Constitution upon which our Government is founded is opposition to monopoly and the restraint of power. We therefore divided the political power into three equal branches of Government. We placed restraints upon the exercise of judicial or military power. We provided guaranties for freedom of worship, freedom of speech, freedom of assemblage, and freedom of the press, which monopolistic governments have always suppressed. The monopolistic economic power now in the hands of the administration at Washington is a thousand times more dangerous to our freedom than a monopoly of economic power in the hands of Wall Street. We denounce monopolistic power in the hands of a political party of Government, of industry, of labor, or of any other group as a threat to freedom. We denounce Socialist and Communist governments as monopolies.

SECURITY

The security of the family from want and the security of the Nation from invasion depend upon maintaining the solvency of our National Government. We denounce the reckless deficit spending of the administration in time of full employment as jeopardizing our national security. Its continuance will lead to the devaluation of insurance policies, of Government bonds, and our American currency. It will injure our charitable institutions, such as hospitals, colleges, and libraries. It will lower the American standard of living for everyone.

SPIES

The shocking revelations of the Fuchs case prove the truth of our own Senator HICKENLOOPER's indictment of the handling of atomic affairs.

We assert that the action of Justices Felix Frankfurter and Stanley Reed in testifying as to the good character of Alger Hiss and the statements of Secretary of State Acheson render them unfit for public service. We denounce their conduct and demand their removal from public office. The statement of President Truman that the Hiss case was a "red herring," together with the conduct of Acheson, Frankfurter, and Reed show conclusively that the security of this Nation cannot be entrusted to the Democratic Party, that a new administration is necessary if we are to rid ourselves of spies from without and the disloyal from within our National Government.

FOREIGN AFFAIRS

Day by day, we are losing the cold war with Russia. We denounce the abandonment of eastern Europe and of China to the Communists. We point out that the traitor, Alger Hiss, was a high official in the Department of State in the Division of Far Eastern Affairs, that he was a personal adviser to the President at Yalta, where the dismemberment of Poland was agreed to, where Russia was awarded three votes in the United Nations, and the power of veto was agreed to.

We denounce secret agreements with foreign powers and the failure to inform Congress and the public of these agreements.

We favor the support of the United Nations and the adoption of a foreign policy which will insure peace, justice, and freedom at home and throughout the world.

TAXATION

The heavy burden of Federal taxes is oppressing the individual. It is inflating the cost of State and local government, destroying their independence and making them subservient to the National Government. It is destroying initiative and lowering our standard of living. It is handicapping our youth in their efforts to build their homes and their careers.

We declare that:

1. Federal taxes must be reduced.
2. Deficit spending must be ended.
3. Federal spending must be substantially reduced.
4. Efficiency and economy along the line recommended by the Hoover committee report should be adopted.
5. There must be a new division of sources of revenues between the Federal Government and the State and local governments.
6. The responsibilities of the Federal Government and those of the State and local governments should be redefined.
7. Because the power to tax is the power to destroy freedom, a limitation upon the percent of the national income which is spent by taxation must be fixed by Congress.

We have too long traveled the road to bankruptcy and ruin.

AGRICULTURE

Agricultural prosperity is essential to national prosperity. We point out the fact that the income of the farmer is steadily decreasing at a time when his taxes and his cost of operation is steadily increasing.

The farmers of the Nation must not become dependent upon the National Government for their income. They must not become a pawn of political bickering.

We must continue to work with farmers and all friends of agriculture, to bring about a sound solution of the problems confronting the farmers of the Nation.

Farm policies must be developed which are in the interests of all, the farmer, the consumer, and the national economy.

LOYALTY

One of the cornerstones of free government is loyalty, disloyalty, greed, and irresponsibility by individual citizens or organized groups within the Nation can become a greater threat to our national security than the force of arms from without. The spirit of freedom must be reborn. There must be a new and a deeper understanding of our American way of life. We must acquire a deeper understanding of the meaning and the threat of communism to Christian institutions and to human freedom not only to the people of Russia and of China, but to the people of the United States.

CONCLUSION

Freedom is not just a heritage which men hand down to their children. It is a glorious blessing and achievement which each generation must achieve for itself, the right to worship God in our own way, to choose our own vocations, to speak our minds freely, without the fear of reprisal or even death, and to live our lives and run our business free from the dictates of an all-powerful government.

The issue of a free government and a human freedom with equal opportunity for all, under the law, as opposed to socialism and communism within security and fear for all is the issue before the people of this State, this Nation, and of the world which transcends all other issues in importance.

What shall it profit our children, to gain security for them if we lose them their freedom?

Too Much Government in Agriculture

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following editorial from the Middletown Times-Herald, a daily newspaper in my district:

TOO MUCH GOVERNMENT IN AGRICULTURE

A generation ago farmers complained they were getting too little help from the Gov-

ernment. There was widespread agrarian demand for farm relief, as it was then termed.

Today by all the signs the farmers is getting too much help. It has been proposed to guarantee him everything through a program that is running into deep trouble. Mountainous surpluses have already blotted up billions of tax dollars.

There is a current request in Congress for $2,000,000,000 more to augment the previous authorization of $4,750,000,000 to support prices. The program has not only grown financially unwieldly to the point that a crash is in sight but is hurting the small farmer by restricting his acreage.

In fact, the mockery of the current philosophy seems to be always to injure the little man the high priests of the temple have promised to help.

Now as in the 1920's the need of agriculture is markets. Now, as then, the markets are lacking. Consumption in fact is curtailed by prices held artificially high.

The farmer himself is reported to be getting impatient. He doesn't want to drift on until the tentacles of the Government completely enfold him, leaving him no decision of his own to make. More and more farmers are beginning to see that they can do better for themselves than by waiting for handouts from bureaucrats.

If there is a prospect that there will be a diminution of Government in agriculture, it is all to the good.

Carl Elliott

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. RAINS. Mr. Speaker, in my opinion, there is no more diligent Member of Congress than my colleague from Alabama, CARL ELLIOTT. I have noted with interest that the newspapers of Mr. ELLIOTT's district are appreciative of his efforts. I include herewith an editorial from his home-town paper, the Mountain Eagle, of Jasper, Ala., entitled "Reelect CARL ELLIOTT," and an editorial from the Franklin County Times, of Russellville, Ala., entitled "Let's Keep ELLIOTT," and another editorial from the Sulligent News, Sulligent, Ala., entitled "ELLIOTT Making Good":

[From the Mountain Eagle, Jasper, Ala.]

REELECT CARL ELLIOTT

When CARL ELLIOTT defeated Carter Manasco for Congress in the Seventh Alabama District in 1948, Mr. Manasco had the magnanimity to say that he hoped ELLIOTT would not have any opposition for the office in 1950, because it is exceedingly hard on a Congressman to have to run for reelection every 2 years. That should be the sentiment of a majority of the people of the Seventh District.

The Mountain Eagle is in favor of the retention of Mr. ELLIOTT in Congress during the next 2 years, not for any sentimental reason, but because he has proven during his first term of office that he is a legislator of unquestioned ability and efficiency and has gained a strong following not only in the Seventh District but in the Halls of Congress, and he is able to compete with the best minds of the Nation in Congress. He has made a thorough canvass of the seventh district and is familiar with the needs and aspirations of the people of this district.

In a speech at Russellville, Ala., recently, Congressman JONES stated that in order to make a good Congressman one must have three requisites, good character, intelligence, and hard work, and CARL ELLIOTT has all three, he said. He said Representative ELLIOTT is the hardest worker he has ever seen in Congress.

Congressman ELLIOTT can be depended on to stand firm in his opposition to the spread of communism in any part of the world. It is the greatest menace today to the freedom and independence of the United States.

[From the Franklin County Times, Russellville, Ala.]

LET'S KEEP ELLIOTT

On more than one occasion and in various sections of his congressional districts, have we heard people say that they hoped CARL ELLIOTT, our Franklin County boy, now a Congressman, would have no opposition this year—and many years without opposition as long as he continues to do as good a job as he is now doing.

This newspaper, on more than one occasion, has suggested that Congressman CARL ELLIOTT have no opposition this time—and none for many years to come.

No young Congressman has ever done a better job than Mr. ELLIOTT is doing now in Washington.

Now comes the Mountain Eagle at Jasper, h. the home town of Mr. ELLIOTT, favoring the retention of Mr. ELLIOTT as Congressman. The editorial of this newspaper under the date of January 26, follows:

When CARL ELLIOTT defeated Carter Manasco for Congress in the Seventh Alabama District in 1948, Mr. Manasco had the magnanimity to say that he hoped ELLIOTT would not have any opposition for the office in 1950, because it is exceedingly hard on a Congressman to have to run for reelection every 2 years. That should be the sentiment of a majority of the people of the Seventh District.

The Mountain Eagle is in favor of the retention of Mr. ELLIOTT in Congress during the next 2 years, not for any sentimental reason, but because he has proven during his first term of office that he is a legislator of unquestioned ability and efficiency and has gained a strong following not only in the Seventh District but in the Halls of Congress and he is able to compete with the best minds of the Nation in Congress. He has made a thorough canvass of the Seventh District and is familiar with the needs and aspirations of the people of this district.

In a speech at Russellville, Ala., recently, Congressman JONES stated that in order to make a good Congressman one must have three requisites, good character, intelligence, and hard work, and CARL ELLIOTT has all three, he said. He said Representative ELLIOTT is the hardest worker he has ever seen in Congress.

Congressman ELLIOTT can be depended on to stand firm in his opposition to the spread of communism in any part of the world. It is the greatest menace today to the freedom and independence of the United States.

[From the Sulligent (Ala.) News]

ELLIOTT MAKING GOOD

Congressman CARL ELLIOTT representing us in our Seventh District in Washington has been rapidly making a name for Alabama in the Halls of Congress. Congressman ELLIOTT has done this through hard work and intelligent thinking.

Former Congressman Carter Manasco stated that he hoped ELLIOTT would not have any opposition in 1950 because it is difficult for a Congressman to have to run for reelection every 2 years, having gone through the same hardship for several terms. This newspaper agrees with him.

CARL ELLIOTT has kept in touch with his constituents and is familiar with their needs and those of his district. We have found him dependable and to stand firm on his convictions when he is right.

When we have able and efficient representation in Congress we believe we should keep it there.

Italian-American World War Veterans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to insert the following address of National Commander Henry Selvitella, Italian-American World War Veterans of the United States, Inc., in Washington, D. C., February 20, 1950, at dinner concluding three national conferences:

Fellow Americans, we are signally honored to have with us this evening in the Capital City of the Nation, the distinguished Secretary of Labor, Hon. Maurice J. Tobin, his excellency, the Ambassador to the United States from Italy, Albert Tarchiani, majority leader of the House, Hon. John W. McCormack, of Massachusetts, United States Senator Irving H. Ives, of New York, Congressmen William T. Byrne, of New York, Angier L. Goodwin, of Massachusetts, R. Walter Riehlman, of New York, Aime J. Forand, of Rhode Island, Thomas J. Lane, of Massachusetts, John F. Kennedy, of Massachusetts, Foster Furcolo, of Massachusetts, and many other distinguished guests.

As national commander, I welcome these outstanding leaders of our National Government and grateful to all of them for honoring us this evening with their presence. We have successfully concluded a 3-day conference of policymaking for our organization, and you members of the national executive committee, State commanders, and post commanders, and officers of the auxiliary, who have come from all parts of the United States, are to be congratulated on your fervency of devotion and attachment to your duties and obligations.

May I reiterate at the outset, some of the things that you know, and I am sure our guests this evening will want to know about our organization. That is perfectly natural.

The Italian-American World War Veterans of the United States was founded in Hartford, Conn., on November 11, 1931, and represents more than 1,700,000 Americans of Italian heritage who served under the American flag in both World Wars.

In the American way of life, there is a place for all organizations established in good faith and which have a designated sphere of activity. The problems faced by all are such that together they could never do too much work. The Italian-American World War Veterans of the United States makes a constructive and positive contribution as an organization in the community and Nation.

Here is the preamble to our constitution:

"To aid and maintain the honor, integrity, and supremacy of our country.

"To maintain true allegiance to the United States of America.

"To hold aloft the torch of true patriotism.

"To strive for a better understanding between nations.

"That peace and good will may prevail.

"To cherish and preserve the memories of our military association, and records of patriotic services performed.

"To aid and assist veterans, their widows and orphans."

There are more than 300 IAWWV posts throughout the country with about 100,000 Americans of Italian extraction enrolled as active members and a ladies' auxiliary of many thousands. The numbers are growing daily. There is no conflict whatsoever between joining any other organization, nor should there be any confusion as to the choice between them. Ninety-five percent of the IAWWV members belong to other veteran organizations.

The Italian-American World War Veterans specializes and is actively engaged in:

1. Veterans' welfare: Hospital visitations, involving individual gifts to veterans of all creeds; entertainments; presentation of facilities at hospitals and convalescent centers.

2. Servicemen's service on all problems: Veteran rehabilitation, claim filing, educational vocation training employment, personal assistance.

3. Flag education: Cooperation with parent-teacher associations and other welfare groups fostering Americanism. Cooperation with public and religious schools. Citizenship classes and group interrelationship activities.

4. Organization activity: Ladies' auxiliary, membership work, band and drum corps, and athletic clubs.

The Italian-American World War Veterans have regularly adopted annual resolutions advocating legislation to provide this Nation with a military and civil defense of sufficient strength and training to cope with any possible emergency. To speed the economic rehabilitation of all war veterans; they have repeatedly appealed for national conferences of business, labor and governmental representatives so that a constructive program might be formulated to absorb the disabled and jobless into the national productive economy. They have consistently supported programs that would extend humane and judicious assistance to those deserving nationals overseas whose struggle to establish free governments have been handicapped by hunger and illness, by inadequate shelter and lack of productive machinery. And from the very beginning of their existence as an organized group, they have vigorously affirmed their opposition to totalitarianism of any kind by closing the doors of members to believers in or servants of, political extremism, whether of the left or right.

Because America was the world's first great haven of refuge from tyranny, oppression, and liberty, the Italian people of this country have since been privileged to defend freedom as every man who is given such a privilege should defend it—in the uniform of his country.

In America, a man may serve his God and his country by no other dictate than those of his own religious convictions and a set of laws he himself helps to establish. That is why Americans of Italian extraction have served equally and proudly in every war of the Republic. They have served as Americans and they know only one allegiance. That loyalty was to our country, because America asked only if they wanted freedom; if they wanted freedom enough to do battle for it. The answer in every way has been in the affirmative. That is why the Italian-American World War Veterans is in existence.

The men who organized the Italian-American World War Veterans sought to insure that their descendants would carry on, in years to come, the ideals that made our country the freest in the world. The Italian-American World War Veterans is an organization of men who have met the first responsibility of good citizenship. We have defended our country and her way of life in time of war. But our obligations did not cease when we exchanged a soldier's uniform for civilian clothes. Our primary responsibility has not changed. Our first duty has been, and must always be, to work for the security of our country and her free institutions both at home and abroad.

Our organization brings together men and women of one racial group to use their combined influence for the purpose of making this a better America for all minority groups. We bind ourselves together to dedicate ourselves to a special job that non-Italian veteran organizations are not especially interested in, and an example of this special work can be best illustrated by our active participation to defeat communism in the general election held in Italy on April 18, 1948. We in the United States were fearful and apprehensive that the people of Italy would not defeat communism and pass this supreme and historic hour with a victory for the Catholic Party.

Our fathers and forefathers, who immigrated to the United States, carried with them the ideals and heritage of a country that gave so much to world civilization. These ideals, we feared, would be swept aside if Italy became a prey of the giant octopus that slowly was engulfing Europe with its tentacles of communism.

Early in January 1948 a campaign of letter writing was started by our organization, the first of its kind in the United States, and as part of this campaign booths were set up in our large cities where volunteer workers of our organization asked and secured Italo-Americans in the United States to write a letter to some kin or relative living in Italy and urged them to ally themselves against communism and reminding them that a victory for communism would subjugate Italy to the tenets of Stalinism and would mean the end of free election and disfranchisement of civil rights in Italy and above all the loss of world prestige as a nation.

As a result of this campaign more than 10,000 letters were sent to Italy and on Easter Sunday of April 1948, a special plane was chartered and christened by the Franciscan Fathers of Boston and named the "Freedom Plane," and on board of this plane bound for Rome were thousands of letters to supplement the work already accomplished by our organization. We did not expect this special and peculiar work to be done by any other veteran organization. We feel supremely proud of the small part played by this organization in this campaign in Italy.

Premier Alcide de Gasperi and His Holiness, Pope Pius XII, commended our participation by letters to our organization.

In the glorious history of the last war, no page more glamorous could be written than that of the story of the contribution made by individuals of Italian blood, who have so distinguished themselves in battle that they have won the plaudits of this Nation and been the recipients of the highest awards for valor. The Congressional Medal of Honor is the highest award for gallantry within the power of any nation to bestow upon its heroes, and 13 of these Congressional Medals of Honor were received by Americans of Italian heritage, and the foremost of these that comes to our minds is that of Gunnery Sgt. John Basilone, United States Marine Corps, where on July 25, 1949, in my home city of Boston, I was present when a new destroyer was commissioned and named in his honor. What a halo of proud glory surrounds these valiants of a peaceful race who have upheld the banner of gallantry on the bloody fields of battle. More than 35,000 of these Americans of Italian extraction died in battle and more than 100,000 were wounded in battle. Over 150,000 awards of various types were received by our members of our race.

Therefore, as a matter of patriotic pride and the militant contributions rendered by our boys, the Italian-American World War Veterans' Organization is an essential part of the American way of life, as any other veteran organization.

American Legion Endorses Prayers-for-Peace Movement

EXTENSION OF REMARKS
OF
HON. HAROLD A. PATTEN
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. PATTEN. Mr. Speaker, I feel it only proper, that during these times of great unrest throughout the world, that all Americans would do well to heed and follow the action which was taken by the American Legion in calling upon its members to pause for 1 minute at noon each day to pray for enduring peace. Herewith is submitted the resolution approved by the American Legion and other national organizations:

AMERICAN LEGION ENDORSES PRAYERS-FOR-PEACE MOVEMENT

The American Legion, through its national executive committee, meeting in annual session at Indianapolis, November 4–6, 1949, called on its 3,000,000 members to pause for 1 minute at noon each day to pray for enduring peace.

The national executive committee adopted, unanimously, a resolution submitted by its national chaplain, Edward J. Carney, O. S. A., who informed the committee that the movement for the daily prayer at noon for peace was started by American Legionnaires at Manchester, N. H., October 28, 1948, as a result of an inspiring address by Hervé J. L'Heureux, a career officer of the American Foreign Service, who is presently assigned to the Department of State as Chief of its Visa Division. Mr. L'Heureux is a founder of the American Legion.

Father Carney's resolution, as adopted by the national executive committee, follows:

"Whereas at this moment of confusion, doubt and uncertainty in the affairs of our country and of the world, all free men lift up their hope for continued peace and security; and

"Whereas in times of travail and trouble freemen turn to their faith in Almighty God for solace and strength; and

"Whereas the American Legion by its first declaration in its constitution has asserted its belief in God and constantly seeks divine aid in all its official acts: Now, therefore, be it and it is hereby

"*Resolved by the national executive committee in regular meeting assembled in Indianapolis, Ind., November 4 to 6, 1949,* That having complete confidence in the ability of our fellowmen with the aid of Almighty God to establish a just and enduring peace in the world, does hereby recommend to all Legionnaires everywhere that they pause for 1 minute in each day in their employments of whatever kind at noontime to raise their hearts and minds to God asking that He help us to so adjust our differences among men so as to enable the nations of this world to secure an equitable and abiding peace; and be it further

"*Resolved,* That all departments of the American Legion, through their officers and agents, seek to have this moment of daily prayer observed by Legionnaires as an example and an encouragement to all citizens in furtherance of a common aspiration."

According to Mr. L'Heureux, at least 809 organizations and other groups in the United States have endorsed the movement as of February 15, 1950. The nature of these groups are indicated as follows:

Veterans' organizations (individual posts)	512
Veterans' auxiliary groups	18
Service clubs (Rotary, Lions, etc.)	9

Fraternal societies, clubs and sororities	67
Student bodies (schools, academies, universities)	53
Alumnae groups	11
Church groups	22
Business firms, including professional offices	108
Groups of Federal employees	9
Total	809

The following national organizations, included in the foregoing categories, have adopted resolutions, urging their members to pause at noon each day to pray for peace:

1. The Benevolent and Protective Order of Elks of the United States—annual convention, Cleveland, July 13, 1949;

2. Greek-American Progressive Association—annual convention, Milwaukee, Wis., August 5, 1949;

3. The Order of AHEPA—annual convention, Miami, August 19, 1949;

4. The Society of American Legion Founders—annual meeting, Philadelphia, August 27, 1949;

5. The Delta Theta Phi Law Fraternity—annual convention, Detroit, Mich., August 31, 1949;

6. Jewish War Veterans of the United States—annual convention, Miami, October 19-23, 1949;

7. The American Legion—annual meeting National Executive Committee, Indianapolis, November 6, 1949.

The Case of Mr. Robert Vogeler, Jr.

EXTENSION OF REMARKS
OF
HON. T. VINCENT QUINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. QUINN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

FEBRUARY 20, 1950.

Hon. DEAN G. ACHESON,
The Secretary of State,
Department of State,
Washington, D. C.

MY DEAR MR. SECRETARY: According to the latest press reports Mr. Robert Vogeler, Jr., of Jackson Heights, N. Y., the eastern European representative of the International Telephone & Telegraph Co., who is imprisoned in Hungary and held incommunicado since November 18, 1949, has confessed as follows:

1. That he had received special training in espionage at a Federal Bureau of Investigation school in 1942.

2. After the war he was assigned to Hungary to collect military, economic, political, and technical data for United States Army Intelligence authorities.

3. That in 1948 in a Budapest hotel, "Colonel" Sosthenes Behn, president of International Telephone & Telegraph Co., instructed him in the methods to be employed to sabotage the Hungarian economy.

4. That he gave his reports to the United States Military Attaché while in Budapest, to be forwarded to the United States Counter-Intelligence Corps in Vienna.

The truth or falsity of these statements can be readily ascertained from the following:

(a) The Honorable J. Edgar Hoover, Director of the Federal Bureau of Investigation.

(b) Rear Adm. R. H. Hillenkoetter, Director of Central Intelligence Agency.

(c) Mr. Sosthenes Behn, president, International Telephone & Telegraph Co.

If the answers to these inquiries are in the negative then it is conclusively proved that the purported confession of guilt was induced by threats, fear, the use of drugs, or by other unlawful means.

It is significant to note that this alleged confession follows that of Josef Cardinal Mindszenty, who was tried before the same judge, Dr. Vilmos Olthy, in the same courtroom, and by the same prosecutor, Gyula Alap.

As I wrote you in my letter of February 10, 1950, to permit this outrage to continue will be interpreted as an admission of weakness on our part. We will in effect tell the world we are unable to protect the life and liberty of an American citizen from Communist tyranny. What is our answer to Robert Vogeler's children when they ask "When is daddy coming home"? Or what answer shall we give to his wife and father when they ask "Why can't something be done"? What answer shall we give to the American people who will wonder what would happen to their loved ones if they found themselves in a similar position to that of Robert Vogeler? Shall we hang our heads in shame and say that we are powerless?

The people of my congressional district would like to know the answers to these questions, Mr. Secretary, and although they appreciate everything that has been done thus far they feel that something further should and must be done.

Sincerely yours,

T. VINCENT QUINN,
Member of Congress.

Legislative Program of Italian-American World War Veterans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following national legislative program of the Italian-American World War Veterans of the United States, Inc., subject to the jurisdiction of the House Committee on Veterans' Affairs, and adopted at the national conference of the organization, held in Washington, D. C., on February 18, 19, and 20, 1950:

In the years that have intervened since the last war, the economic and social progress of this Nation has not been compatible with our democratic ideals, our unparalleled productive resources and our wartime victory. We have not moved ahead on the domestic front toward the effective implementation of the ideals for which war was fought and won. Today, an impoverished world looks to America as its sole source of economic assistance. The success or failure of our domestic economy is the difference between starvation and survival for the people of the world. We must fight the forces which are inconsistent with our fundamental freedoms whenever and wherever they arise.

VETERANS' UNEMPLOYMENT

Inasmuch as there is a consistently increasing and abnormally high rate of unemployment among veterans, we urge appropriate Federal agencies to inquire into the cause of such unemployment and take prompt and effective corrective action to arrest this trend.

IMMIGRATION AND NATURALIZATION

Our country is a nation of many races and creeds, and no particular nationality, religious or ethnic group can take full credit for its achievements. When Congress enacted barriers to immigration and naturalization based upon race and color, it turned its back upon the lessons of our history. We call upon the Eighty-first Congress to remove all barriers presently existing to the immigration and naturalization laws.

REPATRIATION OF AMERICAN-BORN ITALIANS

We urge the enactment into law of H. R. 6616, sponsored by Congressman WALTER, of Pennsylvania. This bill has already passed the House and would allow 3,000 or more native-born Americans who lost their citizenship to become repatriated to their American citizenship. These 3,000 or more Americans of Italian extraction were in Italy and voted in the elections held in 1946 and 1948 when the fight against communism was the chief issue. Many injustices have been done these good people who rendered such valiant service to Italy and, incidentally, to all liberty-loving people in America and throughout the world. These people have no way of returning to the United States except by special act of Congress.

We urge the favorable consideration and enactment of the following proposals that have been introduced in the Eighty-first Congress and subject to the jurisdiction of the House Committee on Veterans' Affairs.

1. We favor the extension for 2 years the period during which World War II veterans may receive readjustment allowances under the Servicemen's Readjustment Act. H. R. 1374 by Mr. HUBER.

2. We strongly oppose any legislation that would reduce the hospital benefits now available to veterans suffering from non-service-connected disabilities.

3. We urge the enactment of legislation increasing compensation by 20 percent for those having combat-incurred disabilities and diseases. H. R. 903 by Mr. RANKIN.

4. To amend Veterans Regulation 2676 (B) (4) so as to permit acceptance of lay testimony in determining service connection for malaria.

5. We favor the enactment of H. R. 4234 by Mr. RANKIN for legislation to enable veterans rated totally disabled service-connected to reinstate Government insurance.

6. We urge the passage of H. R. 5331 by Mr. RANKIN, which authorizes an equitable adjustment of certain NSLI policies by applying contemplated dividends to unpaid premiums so as to revise lapsed policies.

7. The speedy passage of H. R. 909 by Mr. RANKIN, which will increase disability compensation and pensions for World War I and World War II veterans and widows and orphans.

8. We favor the passage of H. R. 4617 by Mr. RANKIN, entitled "Veterans' Pension Bill," and now pending before the Senate Finance Committee.

9. We urge the enactment into law of H. R. 921 by Mrs. ROGERS of Massachusetts, to increase the income limitations governing eligibility for widows' and veterans' non-service-connected death pension to $2,000 for those with no children, and $3,000 for those with children.

10. We urge the President of the United States, (a) to rescind his orders for the cutback of the 16,000 beds, and (b) to issue orders for the prompt construction of these and such other beds as may be required for adequate care of America's disabled veterans. H. R. 5965 by Mr. RANKIN.

11. To support the liberalization of existing law relating to the granting of automobiles to disabled veterans so that the Government contribution will be $2,000 instead of $1,600.

12. The enactment of H. R. 5509, by Mr. RANKIN, which will provide a statutory seniority equal to the time spent in the armed forces during World War II for those veterans employed in an industry governed by the seniority system.

13. To amend Public Law 483, Seventy-eighth Congress, so that widows of World War II veterans would be eligible for pensions on the same basis as now provided widows of World War I veterans.

VETERANS' BONUS

Federal legislation for a bonus or adjusted compensation for World War II veterans is presently in the minds of all veterans in the country. This issue must be faced head-on sooner or later, and somehow steps must be taken to speak in loud tones instead of the hush-hush manner in which this subject is now being discussed.

Undoubtedly this will be a No. 1 resolution in all future conventions of veteran organizations, and the Italian-American World War Veterans of the United States, Inc., and representing more than 1,700,000 American veterans of Italian heritage in America, favor legislation authorizing $3 for each day of domestic service and $4 a day for overseas service; and said bonus to be paid in 10 years with interest-bearing bonds. Any benefits received by a veteran under the GI bill of rights would be deducted from the bonus.

Potatoes in the Soup

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Washington Post on Tuesday, February 21, 1950:

POTATOES IN THE SOUP

Congressman DANIEL REED, of New York, draws some remarkably misleading conclusions about the potato glut in his letter appearing elsewhere on this page. Mr. REED implies that it is not high support prices for potatoes, but imports from Canada that are primarily responsible for the present mess. This is ridiculous in light of the fact that imports from Canada will be at most 12,000,000 bushels for the 1949 crop, whereas the domestic crop will run about 402,000,000 bushels, and the Government probably will be forced to buy 70,000,000 bushels. Actually imports are a small factor in the surplus.

Where Mr. REED goes astray, it seems to us, is in his comparison of present prices of $1.36 a bushel with the 1943 price of $1.31 and only slightly lower prewar prices as evidence that farmers now are getting a fair price. In determining a fair price he apparently takes no account of the effects of mechanization and increased use of fertilizer in lowering costs to producers. The significant fact is that under the stimulus of high supports more potatoes have been grown on progressively less acreage. In Maine alone, for example, the 1935-44 yield per acre was 275; in 1948 it was 370 and in 1949 it was 450.

The tariff on Canadian potatoes is 37½ cents per 100 pounds on amounts up to one million bushels of table stock and 2,500,000 bushels of seed potatoes, and 75 cents a bushel on all above that. Out of the 12,000,000-bushel import figure quoted by Mr. REED must come the Canadian seed potatoes which have been used in the Carolinas for years. The United States, of course, exports some potatoes to Canada from the West, and there is no Canadian tariff. The real point, however, is that Canada imports large quantities of other fruits and vegetables from the United States. If this country raised the tariff on potatoes, Canada could reciprocate on other commodities with harmful effect.

The potato problem cannot be treated in isolation. It is a part of the whole price support issue, and it is a graphic illustration of the disastrous consequences of past rigid supports unrelated to supply. The 1949 Anderson law, to be sure, adhered to the principle of variable supports, and this is a distinct gain. But it is apparent that even the 60 percent of parity floor provided by the Anderson law is too high for potatoes—and the Department of Agriculture has repeatedly called the potato problem to Congressional attention. The Brannan plan formula of production payments to farmers and removal of price supports would be preferable to the present system. Here, however, the difficulty would be that farmers who have no business growing potatoes would be kept producing. The production payments and strict marketing quotas which are being mentioned in Congress will be no solution unless there are concurrent efforts to direct potato farmers into more useful production.

Amendment of the Railroad Retirement Act of 1937

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. GORSKI. Mr. Speaker, when the Railroad Retirement Act was first set up in 1937, the tax rates and scale of benefits were based on the average rail worker's earnings. Since 1937 wages have increased over 100 percent. There is an inequality existing that should be corrected, and the benefits due the railroad workers will be justly taken care of in a bill I am introducing to provide full annuities at half salary or wages, based on the five highest years of earnings, for individuals who shall have completed 30 years of service or have attained the age of 60.

This legislation can be enacted, and the Railroad Retirement Act can be amended in this manner, without bankrupting the retirement fund or increasing pay-roll deductions.

The money now in the unused reserve, approximately $2,061,690,640, is the present reserve as taken from the figures of the Railroad Retirement Board published in the November 1949 Monthly Review. This leaves ample for the railroad workers to receive improved retirement benefits for which they are paying and are entitled to.

From figures cited in the November Review the reserve increased from an amount on June 30, 1937, of $60,741,671 to the present reserve figures as stated above.

An interesting fact to be considered when judging the results of the legislation contained in this bill, is that there is more money in the unused reserve than the whole amount paid out in all forms of retirement benefits since the retirement fund has been in operation, and is an honest justification for asking that the railroad workers be given improved retirement benefits.

For the year 1948–49, 45 percent of the annual income of the Railroad Retirement Board was paid out in benefits. Fifty-four percent was placed in the unused reserve. One percent was used for administrative purposes. These figures taken from the November Review show the unused reserve increasing at the rate of about $400,000,000 a year.

The passage of this legislation would not mean an appreciable reduction in the reserve of the retirement fund, it would not mean an increase in pay-roll taxes. The increased benefits can be financed without jeopardizing the soundness of the retirement system.

The Late Amadeo Peter Giannini

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a memoriam on behalf of Amadeo Peter Giannini. I knew this gentleman for many years during his lifetime. He was highly respected by the citizens of California and did very much to bring the State of California into its present state of economy. He was always sympathetic to the interests of the people whom his institution served, and his passing is deeply regretted by all.

The memoriam follows:

IN MEMORIAM: AMADEO PETER GIANNINI

Whereas on the morning of the 3d day of June 1949 the Almighty Father summoned from our midst Amadeo Peter Giannini, our beloved "A. P.," fellow director and founder of Bank of America National Trust and Savings Association; and

Whereas "A. P." was born of strong immigrant stock in San Jose, Calif., on May 6, 1870; and throughout his career exhibited the pioneer spirit inherited from his Italian parents, his fixed purpose and ceaseless energy carrying him forward from the humble circumstances of his youth to a position of preeminence in the financial world; and

Whereas endowed with extraordinary mental and physical qualities and dominated by an unbounded faith in the destiny of California and neighboring Western States, he created a great and unparalleled financial organization designed to serve and develop the West; and

Whereas Bank of America, the largest unit of that organization and the world's foremost bank, is the outstanding product of its founder's genius and dynamic personality, and the embodiment of his will to create a public-service institution capable of supplying, within its sphere, the financial needs of worthy people in every walk of life; and

Whereas A. P. was a living symbol of the American system of free enterprise, and with herculean strength fought many a battle with powers in and out of government to preserve this system and the financial organization which he had builded within its bounds; and

Whereas at the time of his demise this seemingly indestructible warrior was leading his forces in what was destined to be his last battle for the cause of free enterprise and the preservation of his life's work; and

Whereas A. P. has left behind him a battle force fully capable of carrying on in his tra-

dition under the able leadership of his illustrious son, Lawrence Mario Giannini, president of Bank of America for the past 13 years, and who, blessed with the fighting spirit and genius of his father, has long demonstrated his ability to preserve and further develop this great institution of service; and

Whereas A. P. was a public-spirited citizen and a powerful influence in the determination of the social order of his native State, and through the medium of his financial organization contributed more to the economic development of California in his time than any other man, thus earning for himself the fitting appellation, "Colossus of the West"; and

Whereas ever mindful of the fact that financial circumstances had denied him opportunities for advanced education in his youth, he made or caused to be made generous contributions for educational purposes, important among which were a gift to the University of California to further the agricultural interests of the State, and the establishment of the Bank of America-Giannini Foundation to assist worthy members of organizations with which he had been associated in obtaining higher practical and cultural education than their means or circumstances would permit, to advance medical research, and to accomplish other charitable purposes; and

Whereas A. P.'s frankness and warm personality won for him the esteem and affection of his thousands of business associates and a host of other friends, and his indomitable spirit was a source of inspiration that carried his organization forward to incomparable achievements; and

Whereas in his demise his children have lost a loving and devoted father, this association, the State of California, and the entire West have lost a fearless champion, and the Nation has lost a great American: Now, therefore, be it

Resolved by this board of directors of Bank of America National Trust and Savings Association in regular meeting assembled, That the loss of our beloved fellow director and founder, A. P. Giannini, is the source of deepest sorrow to us, and that when we adjourn today we do so in respect to his memory; and be it further

Resolved, That we tender to his sorrowing family our deepest sympathy in their bereavement; and be it further

Resolved, That we dedicate ourselves to the task of perpetuating the ideals and principles of our founder as expressed in the fruit of his labor—Bank of America National Trust and Savings Association—and that we stand in solid phalanx to preserve this glorious work as a monument to the memory of its creator and as an institution of public service to the West; and be it further

Resolved, That this resolution be spread upon the minutes of this meeting held on the 14th day of June 1949, and that a suitably engrossed copy thereof be sent to the surviving son and daughter of our beloved "A. P."

A. J. GOCK,
Chairman of the Board.

Farmers Want 100 Percent Parity and Less Bureaucratic Meddling

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. HAGEN. Mr. Speaker, the farmers of the Ninth District of Minnesota are seriously concerned about many farm problems which are confronting the country at this time.

During recent months, both the Farmers' Union and the Farm Bureau county organizations have held their annual county-wide meeting in most of the 15 counties of the Ninth Congressional District of Minnesota, which I have the honor to represent in the United States Congress.

One of the most thorough and comprehensive sets of resolutions adopted was sent to me in the mail late last week from the West Otter Tail County Farm Bureau. Its secretary, Mr. Theodore Hegseth of Fergus Falls, Minn., mailed me a copy of the resolutions adopted at the last annual Farm Bureau meeting.

I believe the resolutions will be of interest to the Members of the House and readers of the CONGRESSIONAL RECORD. Therefore, I am glad to attach them to these brief remarks.

The resolutions are as follows:

I. FARM PROGRAM

In past years Farm Bureau thinking on a farm program has centered around the theory that it is in the interest of all groups that the prices farmers receive for their products should be such that they are on a fair level compared to things that farmers have to buy—in other words, at a parity level. We believe, first of all, that to achieve that end, farmers themselves must do everything they can and only in times of emergency should they call on their Government to use its aid in trying to restore that economic balance between groups. We have always opposed vigorously any direct subsidy program in food products as unsound and unfair and will continue to do so. We believe farmers themselves should decide the kind of program they want for agriculture and that the leaders in that department should confine themselves to administering such a program in a manner sympathetic to the way in which it was written. We agree with a farm leader in a neighboring State that Farm Bureau wants 100 percent of parity but we don't want it in checks from the Government. We believe that the flexible price-support program should be given a fair trial before it is discarded as being of no value.

II. GAS-TAX AMENDMENT

We again go on record in favor of the amendment on the division of gasoline-tax money to be submitted at the next election whereby gas taxes are to be divided 50 percent to the State, 44 percent to the county, and 6 percent to the metropolitan cities.

III. SOIL TESTING

We urge Farm Bureau members to take advantage of the new soil-testing laboratory and make soil tests on fields to be fertilized before buying large amounts of commercial fertilizer.

IV. RECOMMENDED GRAIN VARIETIES

Since many farmers in recent years have been victimized by smooth talking seed and fertilizer salesmen, we urge Farm Bureau members to buy only varieties recommended by the State experiment stations and at prices set up as fair by the Crop Improvement Associations.

V. FARM SAFETY

We commend the county agent for his efforts on farm safety as carried out in 4-H Clubs and by special meetings for that purpose. We urge that farm safety again be stressed in 1950 and should feel repaid if such a program saved only one life.

VI. BANG'S TEST AND CALFHOOD VACCINATION

We again urge that continued study be made on Bang's disease testing in combination with calfhood vaccination as a means of controlling Bang's disease.

VII. NEW USES FOR AGRICULTURAL CROPS

Since we have again reached the point where certain crops appear to be in overproduction in this country and unless a worldwide distribution plan can be worked out to relieve the situation, we urge that research be carried out to find new uses for surplus crops, new and cheaper methods of production and handling so lower prices could be accepted without seriously affecting the normal margin of profit in producing such crops. We also urge that an advertising campaign be inaugurated on sale of surplus farm products and that producers themselves stand the cost of such a campaign.

VIII. POLIO SITUATION

We urge that every effort be made to combine the March of Dimes and Sister Kenny campaign for funds so as to conserve effort in raising money for this worthy cause. We would urge people without protection to consider taking out a polio insurance policy with a reliable company and through a local representative. In like manner we urge Farm Bureau families without hospital and medical protection to make use of the Blue Cross hospital plan and the Blue Shield medical plan. We would offer these plans as being better and less expensive than any compulsory health plan advocated by the Government.

IX. OCCUPATIONAL DISEASES

We again urge that some definite action be taken to help eliminate such occupational diseases as undulant fever, strep throat infection, and erysipelas.

X. RADIO PROGRAMS AND COMIC NEWSPAPER SECTIONS

Since parents everywhere are finding increasing objection to crime programs on the radio and comic sections of the newspapers that are not either comic nor educational, we, therefore, urge as a means of combating these objectionable features that a campaign be started by the Farm Bureau people of the county to get churches, parent-teachers' associations, mothers' clubs, and other interested groups to systematically object to the sponsors of these programs and to the owners of the newspapers as a means of doing away with them.

XI. SOIL CONSERVATION

Besides new uses for crops in surplus production, we urge the use of soil-conserving crops such as grasses, especially legumes, and that steep slopes or poor land be taken out of production and planted to trees and in so doing conserve the soil and help to reduce surplus production.

XII

We again urge support of the Farm Credit Administration, Farmers Home Administration, Soil Conservation Service, REA, and Production and Marketing Administration.

XIII

We urge farmers to take advantage of the new telephone program to be offered by the REA.

XIV

We believe that manufacturers of cars, trucks, tractors, and machinery use too many different sizes and types of ball and roller bearings, some of which vary as little as one-sixty-fourth of an inch. We believe the bearings could be made much more interchangeable, which would greatly simplify obtaining repairs.

XV

We wish to extend a word of thanks to the newspapers and radio stations of the county

for generously giving space to items of interest to farm people, to the board of county commissioners for their sympathetic interest in the agricultural extension program and especially to County Agent Gustafson and Home Agent Judith Nord for carrying out the extension program so vital to all people in the county, both farmers and city folks.

Water for Irrigation

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a poem by a pioneer woman in my State that emphasizes again that water for irrigation is of paramount importance to the people who live in the semiarid West.

When the Mormon pioneers, led by Brigham Young, settled in the great dry valley that was to become the center of Utah, many felt it would be impossible to grow any crop but sagebrush.

But on July 23, 1847, William Carter broke the bank of a small creek and brought water on to the parched earth, which he afterward plowed and planted. This was the first irrigation by an Anglo-Saxon in North America.

William Carter's daughter, Annie Carter Johnsen, who now lives in St. George, Utah, has watched the wasteland being transformed through the power of irrigation, and she well knows what miracles water can perform in our western lands. I am proud to insert in the RECORD the poem she has written:

GIVE US WATER, UNCLE SAM

What we want out here is water,
Just plain water, Uncle Sam,
And we think you ought to bring it
From a governmental dam.

We've just learned that you've decided,
After many years delay,
To supply the West with water—
If you find the scheme will pay.

We've been praying hard for moisture,
Through the hot and arid years,
But our cry for "water" * * * "water"
Has just lately reached your ears.

We have other kinds of liquids,
From the best brands to the worst,
And they're all quite efficacious
When it comes to quenching thirst.

We maintain out here that water
Its great function best fulfills
When it irrigates our ranches
And brings power to our mills.

If you can't resist the impulse
That impels you to expand,
You can find room for expansion
On our western arid lands.

As we furnished you with silver,
When you wanted to resume,
Now that you've espoused expansion,
We'll provide the bridal-room.

Come out West and help us finish
What God left about half done,
When he turned this desert over
To the lizards and the sun.

You can go up in the canyons
And construct a reservoir
For a tenth of what you squandered
In your recent foreign war.

You can go down in the valley
And produce a flowing well,
And won't have to run your auger
More than half-way down to hell.

With the differential duties
Which you pay the Sugar Trust,
You can pump sufficient water
To forever lay our dust.

You can dig a hundred ditches
From the Platte to Tonopah
For much less than you have taxed us
For your ditch at Panama.

If you'll only bring us water
To our arid lands out West,
We will ask no further favors
And we'll quickly do the rest.

We will make this desert blossom
Like the fertile Philippines,
Where you're educating natives
While we furnish you the means.

We will show you what strong muscles,
When engaged in honest toil,
Can produce on barren uplands
From a dry and sandy soil.

We will fill your empty coffers
With the stuff you like so well,
Then the bankers can't control you,
For you'll have gold bricks to sell.

When this prayer of ours you answer,
And our arid lands redeem,
You will see the full fruition
Of our hydrographic dream.

Then you'll see our verdant valleys
Smiling 'neath our azure skies,
Circled round by purple mountains,
Like the vales of Paradise.

What we want out here is water,
Just plain water, Uncle Sam,
And we think you ought to bring it
From a governmental dam.

Eat High on Hog

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Daily Reporter, Independence, Kans., relative to the recent $100-gold-plate "break bread with your Government" dinner of the Democratic Party on which no tax was paid:

EAT HIGH ON HOG

Thomas Jefferson may have been, but we doubt if Andrew Jackson would have been, able to read the menu of the $100-a-plate Jefferson-Jackson dinner held in Washington last night. Items such as pommes rissoles, petits fours, and filet mignon bordelaise probably would have meant nothing to old Rough-and-Ready any more than they mean to ordinary Republicans of the present day, who go in for $1-a-head box suppers, featuring good old American fried chicken, held in the hand and gnawed at.

The party which boasts of its affection for the common people doesn't have room at such parties for many common people—not at $100 a plate.

Nowadays the Democratic chieftains are eating mighty high on the hog, when they condescend to eat from such a common critter as a hog. Maybe some of that French on the menu means some part of a hog, you couldn't prove it by a Kansas Republican not educated to such fancy gorging.

The $100-a-plate eaters talk a great love for the "peepul" and do a lot of bragging about what they do for the common herd. That is exactly the same line of talk put out by Stalin and Hitler, the British Socialists, and the like.

But none of these great humanitarians loves the people enough to give them the kind of government Thomas Jefferson always said was the best government—the one that governs least. None of them trust the people to spend their own money either. They tax it way from them and spend it for them on their great humanitarian projects.

On the way they deduct enough from the money passing through their hands to pay salaries to an immense number of jobholders. They're the boys who attend the $100-a-plate dinners.

The Farmer and the Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1950

Mr. LUCAS. Mr. President, last Tuesday night the distinguished junior Senator from New Mexico [Mr. ANDERSON] delivered an address regarding the relations of the farmer and the chamber of commerce at the Association of Commerce banquet held in Bloomington, Ill. I ask unanimous consent that this illuminating address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, ladies and gentlemen, when Walter Meers called me, requesting me to come here for this address, I naturally assumed it was a farmers' meeting. He described what a nice auditorium you would have, what a distinguished group of people would be here, and how much I would enjoy another visit to Bloomington. I accepted his invitation, but awakened a few days later to discover that I had committed myself to address the Bloomington Association of Commerce.

Perhaps it is just as well. Surely this community, tied as closely as it is to rural America, united as it has to be with the welfare of agriculture throughout this Nation, is one where a farmers' meeting or one held by the Association of Commerce should have pretty much the same subject and definitely an identical point of view.

I want to talk tonight for a few moments about the farmer and the chamber of commerce, but before I do I must admit to you that I have first-hand information about Bloomington. My good friend and close associate is the distinguished senior Senator from Illinois, SCOTT W. LUCAS. When it is an election year, he may fall into the habit of public servants and travel over the State recalling how much time he has spent in every county courthouse and how well he is acquainted with the people of every village where there are votes. But it just so hap-

pens that he has the goods on Bloomington. This is, according to SCOTT, his second home because he came here, attended the Illinois Wesleyan School of Law, lived among you for many years, and seems to have a perfectly valid right to say that part of his roots are in this community.

I have a frightful time trying to keep up with speaking engagements. I try not to leave Washington when the Senate is in session, and when I do I seek to pack several appearances into one trip. At 8 o'clock tomorrow morning, God willing and the weather not too bad, I will fly into San Francisco to talk to western meat packers. We are going to explore the question as to whether the West can feed itself. Not too many hours later I will be in Boise, Idaho, where faithful Democrats will be permitted to pay $50 a head for the purpose of learning more about the virtues of Thomas Jefferson and Andrew Jackson. Soon I will be in Houston, Tex., to talk about cotton. Those subjects are too diversified to permit the use of the same speech. So I had trouble with this one.

Down in my heart I want to discuss some of the things that farmers must do to keep intact their program of price supports. We have been wrestling, you know, with the question of potato supports and have before us the unpleasant prospect of dumping many millions of bushels of good Irish spuds. I wanted to discuss the implications of that and hoped that I could lay down as a central theme a paraphrase of Wendell Phillips' famous statement that eternal vigilance is the price of liberty. I feel that eternal vigilance is the price of the farm-support program, and my talk ought to be punctuated with that sentiment.

But steadily there was a theme that kept bothering me. People have been coming to Washington in droves these past few weeks outlining what they thought the Government should do for one particular commodity. The cotton people want us to increase greatly the acreage permitted to be planted in 1950. The peanut growers do not seem to care how big the increase in acreage is that they receive as long as it's substantial and everlasting. The potato growers don't feel that we should change the rules in the middle of the game, regardless of how they have been playing the game.

Through it all, no one seems ready to remember that the Government can give you nothing it has not first taken away.

Most of the reading matter that comes out of Washington is of a high order but there is a recent pamphlet to which I want to call your attention. It is entitled "The Federal Budget in Brief." It covers the fiscal year 1951 and was issued by the Eureau of the Budget. When you read that pamphlet you understand from charts and from language clear and concise why taxes now are high, why present high levels will pretty largely be maintained for some time to come and why, if relief is not shortly obtained, the burden of taxation will continue to grind down the availability of venture capital, will continue to make it more attractive to go into the stock market and purchase a seasoned security that at current prices will yield 6 to 10 percent rather than to put money into a new venture that may have only a 50–50 chance for success.

We have been living at a rapid pace these last 10 years. We have changed our Government substantially and we have altered its activities greatly. That is why you cannot view an agricultural program solely from the standpoint of its individual desirability. The Senate of the United States today has been voting on the central Arizona project, a great reclamation undertaking that would dam up and divert the waters of the Colorado River far into central reaches of the great State of Arizona. Its total cost will probably exceed a billion dollars but in the initial stages will involve the expenditure of slightly more than $700,000,000. Now you and I can argue whether it is or is not a desirable project. I personally feel that it is but you may disagree with me. Regardless of our discussions of its validity, if it were to be constructed in this fiscal year, we would come up against the problem of our national budget and we might rule that it could be profitably postponed until there might evolve a more favorable financial atmosphere. Fortunately, the bill contemplates that.

The same thing may be said of many of our agricultural programs. It may be right to say that every agricultural product ought to be supported and the day may come when all of them can be supported. But any proposal to support them all immediately and simultaneously runs squarely into the question of whether or not it can be accomplished within the framework of the present budget and, if not, what is to be dropped out to make room for the new program. Therefore we look at all these proposals not only from the effect of the individual suggestion but against the background of the whole financial structure and current need of our National Government.

When we make that over-all examination, we discover that our Government has been moving forward rapidly in fields that we scarcely thought of cultivating a dozen years ago, but we find as well that some of the older and well-established functions of Government have mushroomed to an expanded importance out of all relationship to their earlier importance. I know it's an old story, but it may be worth telling again that for the current year we face a deficit of possibly $5,000,000,000 in contrast to a deficit that ran under $2,000,000,000 last year; that if our legislation remains as it is, if we live on under present economic circumstances, and leave our tax levels about where they are, the outlook for the coming fiscal year is not black balances but more red ink and another very substantial deficit.

Possibly as I proceed both of these themes may be integrated and woven together. Possibly if we remember that the Government can give us nothing which is not first taken away, we may be a little more cautious in our demands for price-support programs that would further distort our budget, and, finally, if we are more cautious and more modest in our demands, we may then look for some method to handle these agricultural problems without immediate recourse to the Federal Treasury, as in the case of voluntary marketing agreements or learn that the mechanism by which it can be accomplished is the same mechanism which makes those business enterprises whose membership constitutes the association of commerce function and succeed, the old-fashioned idea that it takes salesmanship to move a product. In other words, I like to sell agricultural products to the trade and not to the Treasury.

Now, after that introduction if there is anyone here who has a clear idea of what I'm going to talk about, he has my sincere congratulations. If his services could be available to me the next time I start to write a talk, I'd be better off than I am now.

For my launching point I take a brief glance at the calendar and realize that we are approaching the ominous date of March 15. I am reasonably sure that income-tax Form 1040 is now in the mails and from the magazine section of the New York Times, I take these soulful lines:

"Naughty be our deeds or pure,
Rough or calm the seas we sail,
Toil, our life, or sinecure,
Death and taxes will prevail"—

Death and taxes will prevail. I could just as well have used that as the launching platform for my Jefferson-Jackson Day rocket because income taxes are about equally unpopular with labor, businessmen, and professional people. In fact, higher personal income taxes have about as much appeal to these groups as the prospect of socialized medicine has to the doctor.

Somewhere in the Government, I have heard, a determined group plans to do something about our health and when the program is adopted and in full swing, death will be swallowed up in victory and the span of life may be stretched from three score and ten to four score and five. Those of us in Washington who are well into our fifties and fairly well along toward our sixties are much more jubilant today than we were a year ago because the new toast of the town is the Vice President and his bride. One can get along fairly well at a large reception in Washington until the Vice President and Mrs. Barkley arrive and then you must be careful not to be bowled over in the rush. Love is sweeping the country and the greatest argument for improved health facilities and extra medical attention is the youthful vigor of the Vice President as he rides past three score and ten and heads toward the century mark. He has about persuaded us that death will not prevail and thereby he has doubled our conviction that increasing old-age benefits and pensions make it certain that taxes surely will.

When I have discussed the budget difficulty with friends and neighbors, they inevitably ask, "Why don't you simply balance the budget?" It's a good question. Why does the Government spend four times as much this year as it spent 10 years ago?

You have your answer principally in the fact that 72 percent of the money spent by the Federal Government pays for the cost of past wars or for insurance against future wars. May I run quickly through the figures: $41,800,000,000 or 30 cents out of every tax dollar for national defense; $6,300,000,000 or 14 cents for present commitments in the international field, for ERA, for occupied areas in Japan and Germany; $5,700,000,000 or 13 cents of every tax dollar for interest payments of the national debt; $6,600,000,000 or 15 cents for veterans' services and benefits. There you have it—$31,400,000,000 or 72 cents out of every dollar the Government will spend in 1950 is chargeable either to past wars or to the prevention of future wars.

Now I think it will be conceded that we're not going to change those figures much. If anything, the interest on the national debt may move up. There may be some slight saving in veteran affairs but it will be small. The pressure is on always for greater rather than less expenditures in the field of national defense, and we're not yet at the point where we can anticipate the complete elimination of our activities in the international field even though we hope to see them taper off rapidly in the next 2 years.

So out of the remaining 28 cents of the taxpayer's dollar you must pay the normal running expenses of the Government, the carrying of the mail, the enforcement of laws, the collection of taxes, the assistance that must every day be given to industry, to agriculture, to our working classes in the mediation of their difficulties. Along with that must go the great programs of the Department of Interior in the conservation, preservation, and final development of our resources. We must maintain our public-health service, our transportation-communication facilities, our contribution to the advancement of the science of aviation. New and better public roads must be engineered and constructed. You will find that in all these fields economies are possible but they are small compared to the total expenditures.

One of the experts of the Bureau of the Budget put it in what to me was a clearer and more understandable form. Let me use his simplification of the budget:

"The Government spent $8 for national defense in 1939 for each man, woman, and

child in the country; this year it is spending $85. The Government spent 15 cents for international affairs 11 years ago; today the cost is $42. The Government spent $4 for veterans' programs in 1939; in this fiscal year, the cost to each person will be $44. To service the debt cost $7 per person before the war; it costs $38 this year. For all other activities of Government in 1939, the cost per person was $49. Today, in sharp contrast to other increases, that cost has risen only to $80 per person."

When we examine those figures and see how tight the present budget is, how difficult it is within the framework of that budget to find funds for the most worth-while activities, then we recognize how true it is that when we ask for new services, when we ask for new price supports when we suggest new aviation schedules and new airport construction, we come back to the fundamental proposition that the Government can give us nothing it has not first taken away.

Here in Bloomington you have a new soybean-processing plant. You should be very proud of it. It is a fine contribution to your community. You want to see it succeed and expand its usefulness. But you and I know that there could come a time when soybeans might be in price distress again as other crops have been before. If that happens, I can hear welling up from many areas a demand that soybeans be protected by support prices to help not only the planter, but the processor as well. When that day comes, you people know that I will be on the side of those who try to give protection to the soybean grower through a price-support program, but if it's a new program and a costly program, you and I will remember that we can't do it unless we can find the spot to pick up that cost within the framework of the then current budget. We can't take that money out of thin air. We have to take it from taxpayers. We can't give the farmers of this country something that the Government has not first taken away, and taken either from the farmer, the laborer, the businessman, or a combination of all. So this new business and the soybean producer realize that their programs must be worked out with an eye on the welfare of each group and with consideration by each for the other. If the cost becomes so excessive that the present budget cannot accommodate it and we have to find new sources of income that we can tap, then we might raise corporate taxes and thereby so discourage the free flow of investment capital into the expanding enterprises of this country that there will be no new soybean processing plants. We must be sure that in the long run the soybean-processing plant is not more important to the farmer than is the temporary price-support program.

I am trying to say to you that I want farm supports at reasonable levels. I prefer them at flexible levels so that the consumer shares in some degree the unexpected good fortune of a large outturn. I want to be sure at all times that the sciences of growing, harvesting, processing, and manufacturing the food and fiber of this country move ahead under a program of research that never slows down.

While I was Secretary of Agriculture, the Congress of the United States passed a Research and Marketing Act. I urged that more millions than had been appropriated be poured into the fund to implement that act, that we would shortly be facing surpluses and that it was of extreme importance that we begin then to find ways of utilizing those surpluses. I felt it was urgent that we begin to learn if there were new uses for cotton, corn, and wheat and that we needed to be ready with new processes, whatever they were, at the earliest possible moment because it seemed apparent that the day of surpluses would soon be upon us.

We have not gone far enough in that field. We ought to compare what industry does in the field of research. If a great industrial firm like du Pont spends a portion of its revenue from rayon on continued research projects seeking to reduce the cost of production and broaden the field of utilization of their product, then the American farmer might be justified in having a proportionately equal amount spent to improve the growing of cotton and the utilization of the cotton crop. I don't know how much money that would involve but I know it would be well beyond what is now being spent for research in the Department of Agriculture, our land-grant colleges, and the experiment stations and farm-product laboratories over the United States. That's the cheapest money we will spend and it will lighten the burden of future surpluses.

Which brings me again to the suggestion that eternal vigilance is the price of farm supports.

Yesterday the Senate of the United States wrestled with a proposal that no price support of any kind should be available to Irish potatoes unless marketing quotas were in effect on those potatoes. That's different treatment from what is given to other commodities. Generally speaking, the basics are supported at 90 percent or near that figure. Some nonbasic commodities may receive from 75 percent to 90 percent; others from 60 percent to 90 percent; all the rest at the discretion of the Secretary, from zero to 90 percent. But by the rider which Senator LUCAS offered and which the Senate Agriculture Committee felt it should attach to the cotton-acreage law, the Secretary of Agriculture cannot support potato prices at any figure unless marketing quotas are in effect.

Why such drastic and discriminatory treatment? The answer is, of course, that some potato farmers dipped greedy hands into the Federal Treasury. They went beyond the necessity of supplying potatoes for the domestic market of the United States. They grew potatoes to receive price support and when they did that, they jeopardized every other price-support program existing in the United States.

Let me give you some figures: In 1920 (and I quote these figures from miscellaneous publication No. 707 of the United States Department of Agriculture, p. 44) the average production of potatoes in the United States was under 100 bushels per acre. In 1949 it was 220 bushels per acre. That exceeds the normal progress of American agriculture over a 30-year period. In 1940 the average production was just over 130 bushels per acre. By 1945 it had reached the 160-bushel level. Suddenly it zoomed upward to 220 bushels and the end is not yet in sight. No one knows how much further the application of fertilizer, the development of better seed, the use of improved insecticides, the practice of narrowing the spaces between hills, can jump the per acre production.

The Congress believed there was power in marketing agreements to control this uptrend and wrote legislation into the Agriculture Acts of 1948 and 1949 to accomplish that, but the experience of 1949 was disappointing. Maine, Idaho, and California produce about one-third of all the potatoes grown in the United States. California, in 1920, produced less than 140 bushels per acre; in 1949, 380 bushels. Maine started in 1920 with a production of 235 bushels to the acre, stayed at the level of 220 bushels till 1935, but in 1949 its average was more than 450 bushels per acre.

The Senate Agriculture Committee felt that it just could not stand that sort of a performance. The potato growers are suggesting to the Congress that we kiss and make up, that we let them try the same program again in 1950. This time, they say, it will work. We learned from the cotton-planting experience in 1949 that they might recognize this as the last big chance to make a killing from the Federal Treasury and we have no way of knowing to what length they would go. Therefore, Senator LUCAS proposed his potato amendment to the cotton-acreage bill prohibiting any support to potato growers unless and until legislation could be passed providing for a system of marketing quotas and such marketing quotas could be applied to an oncoming crop. I think that will save the Federal Government $50,000,000 in 1950 alone. Eternal vigilance is the price of a continued farm-support program.

You may be thinking, "So what? It's a little bad with potatoes. We'll get that straightened out. Is there anything else in the farm price-support program that looks dangerous?"

Possibly. Take peanuts, for example. In 1948 there were 3,312,200 acres of peanuts harvested, so the 1949 acreage allotment was reduced to 2,628,970 acres. In Public Law 272 there was a new formula adopted which permitted the Secretary of Agriculture drastically to reduce peanut acreages but provided that in the year 1950 he could not drop the acreage below 2,100,000 acres. Nearly half of the 1949 crop of peanuts must be crushed for oil or exported to the Army and ECA. Losses under the shelling program or amounts charged to section 32 funds of the Department of Agriculture are going to be terrific, perhaps $35,000,000 on the 1949 crop. If an effort is made to drop the 1951 allotment down where it belongs, under 1,500,000 acres and probably as low as a million acres, there'll be a terrific outcry. If the allotted acreage is not greatly dropped, the legislative history on potatoes may be repeated on peanuts. Right now we are also having some trouble with cotton acreage.

That brings me to my final suggestion: Salesmanship. Perhaps the farmer and the chamber of commerce ought to work much closer together. The farmers primarily are producers. Every large industry needs a good sales manager. The farmer should join forces with the chamber of commerce or the Association of Commerce and try to take advantage of the sales experience of the men in these organizations. Let me illustrate what I mean.

We're running into a little trouble with dairy products. Right now it looks as if the per capita consumption of all dairy products on a fat solids-milk equivalent basis may remain considerable below wartime levels and slightly below prewar levels. I may not be up-to-date on my figures but I believe that cheese and evaporated milk are moving at record high levels. The continued low consumption of butter is chiefly responsible for the over-all drop in the consumption of dairy products. Ice cream is being sold at a rate substantially below the peak reached during the war, but it's still above the prewar rate. The consumption of fluid milk and cream and other whole-milk products is above prewar consumption, but butter is down or at least in 1948 was down 40 percent below the prewar average. Just prior to the war in the period 1935–39 the average commercial consumption of butter was 17 pounds but last year it was about 10 pounds per person. That much of a drop in the consumption of butter between prewar and last year represents a loss to the dairy industry of the equivalent of about 13,000,000 pounds of milk. Oh, I know a lot of that loss was compensated for by the increased percapita consumption of whole-milk products such as fluid milk, evaporated milk and cheese, but the fact remains that a great deal of the market of the dairy farmer of the United States has been lost in the slump of the sale of butter and I doubt if he has gone out to find himself a new market for the products that he produces.

In the free-enterprise system the answer to that is salesmanship. Too often in the present circumstance the answer seems to be price support. I still think farmers can sell.

The population of this country is moving upward rapidly. New demands ought to be steadily developing for the products of the farm. If we depend upon Government programs to utilize these products, as we have been doing with dried skim milk powder and dried eggs, then the day will come when the farmer of this country will be in trouble and bad trouble because overnight these programs can be wiped out. But if he has built up his list of customers, if he has built up a trade for his commodity in normal trade channels, then he has a market where he can solicit and sell and which he can steadily expand as the population of the country increases and there are more mouths to feed.

Salesmanship does not always mean expanding markets for the old product. Sometimes we need new products. The drop in butter consumption from 17 pounds to 10 pounds may be only an indication of future reductions in butter consumption. What would the dairy farmer do if the drop was to five pounds per person? That could happen in the next 5 or 10 years. The world changes fast and we ought to change with it. Maybe we won't be eating fats in the same degree that we now eat them.

A few weeks ago my doctor gave me a cholesterol test, found that I was carrying a little fat in my blood stream, knew that it might lead to deposits that could be the forerunner of a coronary if not watched, and so he tells me that I must eat no more butter. Salesmanship won't sell it to me. I may buy a new product that research will help the dairy farmers develop. If we approach our problem on any other basis we may finish by building up burdensome surpluses of butter with consequent great losses to the Treasury and a new demand for the elimination of another price-support program.

So there you have my story.

The Government can give you nothing it has not first taken away. The more the Government gives to farmers, the more it must first take away in taxes—with the usual collection costs added to the take or deducted from the gift.

Similarly, if farmers want adequate returns from potatoes, if they want to receive from price-support programs, the Government must first take away from the grower the liberty of planting as many acres as he would like and of marketing what he does grow as he pleases. He must plant only what the Government permits and market only those grades and quantities that the Government decides are needed. That, to be sure, is regimentation.

The bigger and better the returns the farmer expects from the Government through price support, the greater the regimentation and the tighter the controls.

To illustrate: There is intensified pressure for additional and extra cotton acreage to be still allotted for 1950 planting. That is because the support price will be relatively high—over 27 cents. If the lowest permissible levels of the Agricultural Act of 1948 had become effective this past January, the support level would have been about 6 cents less, and the demand for extra acreage would have been less. Cotton farmers want a bigger part of a better deal.

From which it would appear that marketing agreements would work better. Under them, the farmers receive little from the Government and surrender little to the Government. The farmers run their own show with the Government as referee—as is the case in Federal milk-marketing agreements—and operate without financial aid from the Government by getting their money in the market place—as citrus growers largely do.

Notice the difference in public acceptance. The citrus growers pile up unwanted quantities and qualities of oranges, spray them with oil, and burn them to sustain grower returns—and not one soul utters a protest. The Government piles up unwanted quantities and qualities of potatoes, sprays them with oil and burns them to fulfill price-support obligations—and a cry goes up all over the Nation. There may be a lesson in that.

How much better off the potato people would be today if they would seize upon the marketing-agreement provisions of the Agricultural Act of 1949 and make them work instead of producing and showing to the Government endless quantities of unwanted potatoes. Control could have been achieved through marketing agreement—but like any other agreement, success only comes when both parties to it proceed in good faith. The Government must desire the agreement to work and the grower must want to live up to its provisions. We do not have that possibility in the present situation.

That is why I have proposed that your association of commerce, established in a community whose ties are strong with the rural life around it, needs to study what the farmer gives and what he gets.

For farmer and businessman are not of different classes. "Men," said Confucius, "are near one another by nature, but practice sets them apart."

May it be the purpose and practice of your community to bring them together.

Missouri Basin

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by W. G. Sloan, chairman, Missouri Basin field committee, delivered before the thirty-first annual convention of the Mississippi Valley Association, St. Louis, Mo., February 7, 1950.

The address exceeds in length that which is permitted to be printed without an accompanying estimate of cost. Therefore, I attach an estimate by the Public Printer of 3¼ pages of the CONGRESSIONAL RECORD, at a cost of $266.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This morning I am taking the opportunity to discuss with you the role of the Missouri Basin Inter-Agency Committee in the Missouri Basin resources development and to answer, in part, some of the criticisms which have been published concerning the conception of the plan of development and the manner in which it is being executed.

I expect to give you some of the details of the workings of the interagency committee so that you may have a better insight, not only of its accomplishments but, of its limitations.

There is a popular idea that the Missouri Basin Inter-Agency Committee was set up to accomplish the same thing as a board of directors for a corporation and because it does not take upon itself some of those duties which would ordinarily fall to such a board, there has been a studied effort on the part of some people to create the impression that it has many shortcomings. The interagency committee is a unique organization. Nothing like it has existed in the world of internal resource development and for that reason, it has been critically examined and studied by students of political economy and well-intentioned planners for the purpose of searching out its flaws and in seeking a conclusion as to its workability in other sections of the United States. Having been a member of the committee for about 4 years and its chairman for the past year, I believe I can speak with some assurance concerning the workings of the committee and I will not attempt to inflict my personal convictions upon you as to its competence. That you must decide for yourselves after hearing both sides of the question.

Early in the year 1943 a voluntary Federal interagency committee was formed in Washington for the purpose of bringing about better cooperation among the various Federal departments in Washington having to do with resource development in the United States. On March 29, 1945, this Federal Inter-Agency Commitee passed a resolution which states in part as follows:

"In order to facilitate progress on the multiple-purpose development program authorized by the Congress for the Missouri River Basin, there is established a Missouri Basin Interagency Committee. The purpose of this committee is to implement the policies and purposes of the Federal Interagency River Basin Committee established under the Federal Interagency Agreement dated December 29, 1943, by providing a means through which the field representatives of the participating Federal agencies may effectively interchange information and coordinate their activities among themselves and with those of the States in the preparation of reports and in the planning and execution of works for the control and use of the waters of the Missouri River Basin. The establishment of this committee should not be interpreted as related to or in any way affecting the consideration now being given by the President and the Congress to the possible creation of a Missouri Valley Authority, or any other administrative device."

Note that the principal purpose for which the Missouri Basin Interagency Committee was established was to provide a means through which field representatives of Federal agencies may interchange information and coordinate activities among themselves and with the States in preparation of reports and planning and execution of works.

The committee has no authority in the administration of the public works within the Missouri Basin nor has it responsibility for execution of the works. It is simply a voluntary coordinating body.

Committee membership: At the time the committee was activated there were designated one member from each of the four Federal departments and four Governors from the basin States to represent all of the States in the basin. In May 1947 Federal participation was increased by one member who represents the Department of Commerce. State representatives then were increased by one member to keep pace with the Federal representation. The Federal members are named by the heads of the respective Federal departments. State representatives are selected by a committee known as the Missouri States Committee which was organized in 1943 for the purpose of coordinating State activities in the basin toward promotion of the development of the entire basin. The Missouri States Committee is composed of the governor of each of the States and two other representatives of each State selected by the respective governors. The committee meets only once or twice a year or, at the call of the chairman. It is quite informal but important in that it has the responsibility of selecting the governors who will become members of the Missouri Basin Interagency Committee and thus represent all of the States in the basin.

Each of the Federal departments has functions distinct from the other. Therefore, the representative of each department

functions for his department in different ways.

The Corps of Engineers is organized in such manner that all of the activities in connection with the civil functions of the Department of the Army, of which it is a part, are centered in the Division Office of the Division Engineer at Omaha, Nebr. This division covers the entire Missouri River Basin. Therefore, the division engineer is the top-ranking official for the Department of the Army in the entire basin and can speak for all the civil functions of his Department in the basin.

The Department of the Interior, however, is not thus organized. Its activities are much more diversified than those of the Corps of Engineers. These activities are divided among seven Bureaus of the Department, each of the Bureaus having special functions in its particular field. These Interior agencies are as follows: Bureau of Reclamation, Fish and Wildlife Service, Geological Survey, Bureau of Indian Affairs, Bureau of Land Management, Bureau of Mines and National Park Service.

For the purpose of coordinating the wide variety of activities of these agencies, the Secretary of the Interior has set up the Interior Missouri Basin Field Committee. The field committee meets once a month to coordinate all the activities of Interior in the Missouri Basin, formulate programs, and recommend allocation of annual funds for the purpose of producing a balanced coordination of all of the work assigned to the Department of the Interior in the Missouri Basin development. The chairman of the field committee is appointed by the Secretary of the Interior and is the present representative of the Interior Department on the Missouri Basin Interagency Committee.

Likewise, the Department of Agriculture has many varied activities within the basin, but to date there has been little acceleration of its activities toward the sole purpose of matching the intensified activities of other departments in the Missouri Basin development. In order, however, to coordinate the activities of numerous of its agencies so that it can be adequately represented on the interagency committee the Secretary of Agriculture has appointed on his staff a field representative. His responsibility, like that of the chairman of the Interior field committee, is to coordinate and program the activities of Agriculture agencies to the end that Agriculture may serve to implement the purposes of Missouri Basin development to the greatest extent.

These three Departments, Army, Interior, and Agriculture, carry the bulk of action work in the Missouri Basin development, but as necessary complement to the work of these agencies, the Department of Commerce is represented on the committee for the purpose of channeling the vast amount of statistical information which it gathers and its knowledge of business enterprises and opportunities to the over-all study of basin development being pursued by the interagency committee. The Weather Bureau and Coast and Geodetic Survey are important agencies of Commerce with active participation in the basin work. The present representative of Commerce on the committee is the regional director of the branch of Foreign and Domestic Commerce.

The development and distribution of power is one of the important purposes of basin development. Therefore, the regulatory powers and market forecasts of the Federal Power Commission are necessarily involved. Consequently, their representative, who is the regional director for the Chicago regional office, represents that phase of development on the committee.

During the history of the interagency committee a total of 20 persons have been members, which represents about one complete turn-over in membership. Changes in membership have come about through transfers of Federal personnel or election of new governors in the Missouri Basin States. The present representative of the Federal Power Commission is the only member, Federal or State, who has held office as a member continuously since the committee was activated.

Finances: Since the committee is a voluntary organization it receives no appropriations as an entity of the Federal Government, nor does it receive any contributions from any of the States involved. The salary and expenses of each of the Federal members are paid by the respective departments of the Government. The expenses of State personnel are provided by the respective States. Expenses of the monthly meetings are usually provided by the community in which the meeting is held. The duty of preparing, mimeographing and distributing the minutes and agenda of the meetings usually falls upon the Federal member who happens to be chairman of the committee. The secretary of the committee is appointed by the chairman from his own staff and it is his duty to prepare and distribute the minutes of the meeting. When the committee decides to issue a pamphlet or publication, the expense of such work is usually prorated among the committee agencies.

Method of operation: The first meeting of the Missouri Basin Interagency Committee was held on July 19, 1945, in the office of the Division Engineer of the Corps of Engineers at Omaha, Nebr. Prior to the general meeting, the four Federal members of the committee met for the purpose of electing a presiding officer. He, in turn, selected his secretary.

At the August 1945 meeting it was agreed that meetings would be held monthly so far as practicable, that they would be rotated from State to State and that all questions, resolutions, or motions should be carried only by unanimous approval. If unanimous approval was not obtained the subject should be referred to the Federal interagency committee for disposition. In compliance with the instructions of the Federal interagency committee the Federal members only were considered as having a vote on the committee but, as the meetings proceeded, this requirement has been waived and the votes of State members have been recognized as having equal validity with those of the Federal members. It never has been necessary to refer any questions to the parent committee.

All meetings are open to the public and the press. It is the usual procedure at each of the meetings to devote at least the first half of the day to a report by agency representatives of the progress and plans of those agencies within the State where the meeting is being held. The afternoon session is usually devoted to a discussion of general and specific problems in the basin. Quite often papers are delivered to the committee by specialists on some specific problem in the basin. A custom has grown up and is generally being followed, of having a general civic meeting in the evening which is sponsored by the local citizens and at which some member of the committee is called upon to discuss the over-all development of the basin and the progress which is being made. In this manner businessmen and local citizens who have no opportunity to attend the routine sessions of the committee, may learn about basin development.

As construction work progressed, opportunities to view the work in progress have been taken by making a field trip on the second day of the meeting whenever the weather and location of the meeting place would permit. Thirteen of these all-day tours have been made to date.

When problems of coordination arise they usually involve only one or two of the agencies. It has been the practice of the committee to advise these agencies to work out their problems among themselves and bring the matter before the full committee only if they have been unable to reach an agreement.

The need for an over-all coordinating body: In the development of the Missouri River Basin the plan envisions development of all of the natural resources of the basin. In the beginning, major emphasis was placed upon control and use of the water resources but, in authorizing the development, the Congress stated the principle of broad development of all of its resources and thus enlarged to a great extent upon the original conception. Consequently, any interpretation of the concept of broad resource development involved many other things besides the use of the water flowing in the streams. Thus minerals, fish and wildlife, recreation, industrial, and all the activities which make up the basic, natural, renewable, and processed resources of the basin were brought into the picture. No single agency of the Federal Government has been functioning or has jurisdiction over all of such activities. It became of paramount importance, therefore, that there should be a central body to view the basin development as a whole and to coordinate all of the individual activities for the purpose of achieving the final goal in resource development. Each of the Government agencies is expert along particular lines. Each of them has built up organizations to fulfill its specific functions and each of them receives annual appropriations for the purpose of carrying out the mandates of Congress. The voluntary interagency committee is endeavoring to bring about this coordination without compulsion, without authority and with only the will and desire to work together toward a common end.

Achievement: No committee can be effective unless there is continued interest and attendance at regular meetings by each of its members. One measure of the effectiveness of the committee is the attendance record of those members. The committee has now held 36 meetings during the 3½ years of its existence. The attendance by Federal members of the committee has been approximately 98 percent. This percentage holds true of personal attendance by Federal members. An alternate appearing for a Federal representative is a rare occurence. As for the Governors who represent the 10 States in the basin, they have registered an average percentage of personal attendance of 62 percent throughout the period of the committee's existence. When it is realized that eight to nine meetings are held each year and that the Governors, who are especially busy people within their own States, are called upon to travel long distances and that each loses from 2 to 4 days from his own office to give his attention to the over-all basin affairs, such high attendance by the Governors is indicative of their sincere desire to be effective on the committee. It is only on rare occasions that the States represented on the committee do not have an official alternate, even though the Governor may be absent.

The first step in coordination of the program of the agencies was taken at the very first meeting of the committee. Each agency representative presented a statement of the interests of his department in the program. Soon thereafter a compilation was made of all of these programs for the information and guidance of the committee. From that date to the present there has been a studied effort by the committee to thoroughly inform not only the members of the comittee but also the attending press and public, of the myriad details of the program, progress which is being made and the problems which are continually arising in coordination and accomplishment.

In the beginning there appeared to be a reluctance on the part of State members to voice in public, questions concerning the advisability of constructing this part or that part of the project, its effect upon conditions in their own State or the need for some of the work which had been programed. But as time went on and a better understanding and better acquaintance was acquired this reluctance changed to an eagerness and willingness to lay their cards on the table and work the problems out in public. The mere presentation of the programs of the various agencies has tended to make them conscious of the need of coordinating their work and producing effective results which will stand up in the spotlight of a public meeting.

Responsible administrators of the various agencies have become acquainted with each other. The break-down of a specialist's viewpoint to that of a broader, more civic-minded attitude has become increasingly apparent as the meetings have followed one after the other. It is in this educational aspect of the committee's work that the most effective results can be seen.

The average attendance by those registered at the meetings throughout the years has been as follows: 1945, 44; 1946, 61; 1947, 57; 1948, 69, and, 1949, 83.

At the present time agenda and minutes of the meetings are distributed to approximately 450 individuals and Government agencies.

All members of the committee take back to their own agencies and to their States an understanding of the over-all problems and progress which could be obtained in no other way. Early activities of the committee were toward probing the interrelated activities of the agencies and a groping to understand the relationship of each of the program with others.

As of today most of the important or key structures in the development plan are either contracted for or have been initiated. A new stage is approaching wherein the attention of the committee is being devoted more and more to operational programs, the conflicts between State and Federal jurisdiction, and the methods and means of continuing harmonious cooperation beyond the construction stage into the operational stage.

In addition to the activities of the Federal Government in a broad program such as this, each of the individual States is carrying on many activities complementary to or related to and affected by the activities of the Federal agencies. The interagency committee offers and accepts the opportunities to enable each of the State agencies to understand and realize the relationship of the individual States to the Federal program. Thus there is brought about a meeting of the minds of those in charge of State activities with those in charge of Federal activities.

The more important actions taken by the committee are described in the following list:

(a) Unanimous agreement was obtained on the height to which Garrison Dam should be built.

(b) At the request of Governor Donnelly, of Missouri, the Corps of Engineers agreed to restudy their flood-control plans of the Osage Basin in cooperation with the State of Missouri and other agencies. A similar cooperative study is now being taken on the Grand River in Missouri.

(c) A controversy over jurisdiction of the construction of Baldhill Reservoir in North Dakota was resolved through meetings between the Bureau of Reclamation and the Corps of Engineers and State officials of North Dakota.

(d) A controversy over the construction of Glendo Reservoir in Wyoming is being worked out between the States of Colorado, Wyoming, and Nebraska with the Bureau of Reclamation. Reports on progress are being made at each meeting of the committee.

(e) A controversy over the construction of Moorhead Reservoir in Montana and Wyoming was discussed and agreement reached to postpone action until Montana, Wyoming, and the Bureau of Reclamation had reached an agreement.

(f) Repeated urging by the committee resulted in the production of a comprehensive agricultural program for the entire basin by the Department of Agriculture. This program awaits further action by Congress.

(g) Controversies over the sale and distribution of power from plants being constructed in the Missouri Basin have been discussed at several meetings of the committee, all of the known facts have been presented, and steps are being taken by the various States and the Bureau of Reclamation to bring about a harmonious agreement.

(h) Discussions on methods of future operation of the entire project are under active discussion at this time.

So much for the make-up and workings of the interagency committee.

There appears to be a growing recognition of its role in this great development. Its effectiveness must be measured by the unanimity of the support it receives from the people in the basin.

There are some honest critics of the Missouri Basin program but, in the main, no adverse criticism stems from the well-informed. Therein lies the strength of the interagency committee—to inform the people—critics and supporters alike. To be well-informed on the many complex facets of the program is to support the development. There has always been opposition to the program since it was first proposed and authorized, but this opposition originates largely from interests outside the Missouri River Basin. Charges have been made that the Government bureaus operating under the program are wasting Federal funds, that they are torn by rivalry and have refused to work together. Panaceas have been proposed to demolish the straw men they have constructed. Lately there has been a new rush of criticism and some of it has come from within the Missouri Basin itself. Perhaps the criticism which has been made has received its greatest impetus from a document which was incorporated in the task-force report of the Hoover Commission on natural resources. This task-force report has often been erroneously referred to as a part of the Hoover report. It is not. Apparently the Commission felt that a case study of the Missouri Basin development would yield basic information to assist their Commission in formulating recommendations as to reorganization of the Federal Government for greater efficiency. They, therefore, employed a young professor of geography from the University of Chicago to make such a case study for them. He had never before had any experience in resource-development planning, nor had he ever visited the Missouri River Basin. His case study was based upon such reports, newspaper articles, etc., as he was able to find in libraries and with the aid of conversations with various executives in Washington. Neither the findings nor the recommendations of this case study were quoted by the Commission in its final report. The prestige given to his report is a natural result of its incorporation within the task-force report on natural resources and, therefore, deserves serious consideration in any study of the advantages or disadvantages in carrying out a basin-wide development on such a big scale as is proceeding in the Missouri Basin.

The report occupies some 30 printed pages and is accompanied by a bibliography setting forth the publications used as a basis for the study. The author apparently did not realize that the development has now been proceeding for 5 years and that there is already under way at least 40 percent of the work contemplated in the development. Such a conclusion can be drawn from the opening statement of his report which is as follows:

"For many years Missouri River Basin development has been the subject of an intermittent but fierce struggle between seemingly irreconcilable groups in the United States."

Such a statement might have been true 5 years ago. It certainly has not been true at any time since the development program was authorized by the Congress in December of 1944. Whatever differences of opinion there might have been prior to that time and however bitter the controversies might have been, all were resolved upon the passage of the authorizing act, and from that day to this opponents have been searching in vain for evidences of noncooperation, competition, and waste—without success.

You people in the lower part of the Missouri Basin are well aware of the struggles in the basin and in the Congress over the plans of development before the whole problem was aired within the committees of Congress. You are also aware that since that time there has been such a unanimity of opinion in all parts of the basin that the Congress has appropriated increasing amounts from year to year to carry out the work with very little argument or controversy.

In the summary of the case study to which I am refe ring there is a prelude to those findings. The statement is made that while the Missouri Basin will benefit greatly from the works to be constructed and other Federal activities in the area, the procedure is not recommended as a pattern for similar development in other areas. Seven conclusions are listed to support this statement. Let me make it clear that those of us who are engaged in this development program do not consider ourselves missionaries to other parts of the United States nor do we contend categorically that what is being accomplished here can be used again in other parts of the country. Each area of the United States has its own peculiar problems, and in outlining a program for other basins the problems peculiar to each should dictate the nature of administration required and the manner in which the work should be executed. We do contend, however, that within the Missouri Basin the job is being accomplished as expeditiously as the funds made available will permit, with a minimum of friction and with a greater degree of cooperation by the various Federal agencies than has ever been attained in the history of the country.

Now, to get back to the seven conclusions in the case study.

1. In referring to the plan, "It has not been sufficiently evaluated in terms of national interest."—It may be the opinion of the author of the report that such evaluation has not been made. Could it be that he is oblivious to the fact that voluminous documents were submitted to the Congress basic to the plan; that extensive public hearings were held all over the basin and within the committees of Congress, and that debate was frequent and furious during the time it was under consideration? When the program was finally authorized it was done by voice vote of Congress. Surely, a great deal of attention had been given to evaluating the project in the national interest, perhaps not by a board of political economists but by the Representatives of the people themselves.

2. "Planning was not undertaken in the proper order, especially because of a lack of basic data * * * Operations have been commenced in the face of uncertainties." There are three clauses in this statement. Let us consider them one by one:

(1) "Planning was not undertaken in the proper order." This is a vague generality.

Who is to determine the proper order, the author of this report? The engineers who did the planning? Or, the Congress, who authorized it? It could not ordinarily be stated that a single person without experience in planning resource development should be the sole judge of the "proper order" in which it should be planned. The Missouri Basin development was planned by qualified engineers and approved by the Congress. There is no clue in the report as to what that proper order should have been, nor has 5 years of experience in carrying out the work disclosed any upside down undertaking to date.

(2) "Especially because of a lack of basic data." I doubt if there ever was a large undertaking commenced of any type in the United States with all so-called required basic data at hand. Indeed, if all development were to await the time when a board of experts had concluded that all basic data necessary were on hand nothing would ever be accomplished. The problem we always face is to accomplish a purpose with available data. If you want 50 additional years of records you must wait another 50 years. The people chose not to wait. We have records of the discharge of the streams for periods from 10 to 50 years on more than 400 individual stations on the streams of the Missouri Basin. We had preliminary surveys of all of the proposed projects. We had preliminary soil classifications of all the land proposed to be irrigated, a background of more than 40 years of experience along these particular lines, and over 70 volumes of basic data gathered in the course of the previous 5 years of intensive study. That the basic data were sufficient and that the planning was sound is evidenced by the fact that after 5 years of intensive and detailed study of the program the over-all changes now in sight amount to less than 10 percent of the plan as first proposed. We are continuing to obtain basic data and we will not have such complete data within the course of the next 40 years, in fact, at no time will there be all the data available that we would like to have.

(3) "Operations have been commenced in the face of uncertainties." The plan was authorized near the close of the greatest war in history. It was started at a time when materials were scarce, there was a distinct undersupply of both labor and skilled personnel, and no one could foresee what the future would bring forth. But, was there ever a time in the history of the United States when an undertaking that may require from 20 to 30 years to complete could be started without uncertainty? Such a time has not occurred nor will it ever in the future. On the other hand, we were dealing with an area with perhaps the least internal development in the country; an area ravaged by drought and flood; an area losing population. It was high time something was to be done about it and the time to begin was when the people agreed that it should begin.

3. "Organization for the administration of the program lacks flexibility." Again, a search of the text fails to reveal why there is inflexibility. By voluntary agreement the work of each of the agencies was laid out for them within their particular expert field. Adjustments are being constantly made in programs to fit the changing conditions from time to time. Flexibility is one of the greatest features in the present procedure as is well illustrated by the fact that the vast agricultural program now proposed in Congress can be fitted into the program as complementary to it and without interference with any of the work now going on. There is flexibility to the highest degree.

4. "Congress and the President are the only effective coordinating authorities." I have taken some considerable time to explain to you the workings of the interagency committee, which is a coordinating body. It was specifically agreed at the beginning of the committee's existence that if agreement could not be reached on any problem it would be referred to higher officials in Washington or to the Congress. To date not a single problem has been thus referred. As for furnishing funds to carry on the work the Congress itself always has been and always will be the final coordinating authority as it should be in any democracy.

5. "There is no complete program for the valley as a whole." Again, who is to judge what is a complete program? The author of this case study? The Congress? The officials of the various agencies? Or, the people themselves? Consideration has been given to every facet of natural-resource development in the basin so far as its features could be recognized, not only by the different departments but by the interagency committee. If there is lacking any part essential to a complete program none of us is aware of it and we would certainly be glad to be informed of such a weakness. The study, however, discloses no part of the text which points out wherein the program is incomplete.

6. "The procedure leaves causes for future sectionalism." In an area as big as the Missouri Basin comprising one-sixth of the area of the United States and, with parts of 10 States involved, sectionalism is inevitable in any over-all program development.

The people in Missouri will worry as to whether they are going to receive too much or too little water; the people in Montana in the other end of the basin will have the same worries. The people in Nebraska will be content if they receive the lion's share of the power in the basin, while the people of South Dakota will worry about their proper share of the power since much of it is developed within their own State. The people in Nebraska may worry because a reservoir in Wyoming on a stream flowing through their State may interfere with some of their water rights. Such worries and fears and evidence of sectionalism could not be avoided under any type of plan or administration and the interagency committee and all other departments and agencies are continually striving to smooth out such worries and apprehensions. But none of these quarrels or arguments have become of any great consequence, nor have they interfered in any way with progress in the development plan. In fact, the wonder is that the States are working together so well and so harmoniously. Could it be because they feel that they are a part of the development themselves, are kept continually advised and are given opportunities to express their feelings before a body which does not meet behind closed doors? Any community or group which is alive to its opportunity under the plan can be heard.

7. "The system of accounting is complex and difficult to understand." With this conclusion I can fully agree, but such a conclusion was drawn by the Hoover Commission on practically every department of the Federal Government. It has always been so and probably always will be so, as long as we are working in a Nation so huge and with such a complex Government organization.

I have dealt at some length on the findings in this particular study simply because it has probably had wide circulation and has been dignified by its association with the Hoover Commission reports, but since I personally have had such a prominent part in the unfolding of this plan and since it has hit directly at the fundamental concepts which motivated the plan, I feel that I am justified in standing up to its defense. There is no intention on my part to be critical of the findings of the Hoover Commission in general. I am treating this study by itself and I hope you will interpret my comments as a contribution to the increase of your knowledge of what is going on and how it is being carried out in the Missouri River Basin.

Let's Beware of a 1950 Munich

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. CANFIELD. Mr. Speaker, under the caption "Let's beware of a 1950 Munich," the Morning Call of Paterson, N. J., editorially contends that history will show that the good will and friendship of a hostile conquest-bound nation cannot be bought, and the proposal for our country to spend $50,000,000,000 as economic aid to Communist Russia to obtain peace would be the writing of another Munich. This editorial was written by the Call's editor, Henry A. Williams, who was an aviator in World War I. The editorial follows:

LET'S BEWARE OF A 1950 MUNICH

Through all the pages of history there is no recorded instance, to our recollection, of successfully buying the good will and friendship of a hostile, conquest-bound nation. It was tried in the ancient days of glorious Greece and later of the mighty Roman Empire. It was tried in the more recent era of the diabolic Hitler 20 centuries later. It was tried in the case of militaristic Japan, only to have our own scrap iron and oil rain down death upon our fellow citizens from Jap planes at Pearl Harbor.

It is hard, therefore, to believe that the majority of our Congressmen in the Senate and House of Representatives, who profess to be solicitous of the taxpaying citizens of America, will be so gullible as to fall in with last week's proposal of Senator McMAHON of Connecticut. This contemplates the spending of fifty billions of United States dollars (none of any of our allies, mind you) on a peace crusade involving economic aid to Communist Russia, which now has billions of its own to spend on atomic weapons, as well as to our more friendly associates in the United Nations. * * * Where could one find a better way, from the Moscow viewpoint, for us to play into the hands of Russia's Communist conspirators who have pledged their lives to the destruction of our constitutional democracy.

Every international event since Japan's surrender adds proof to the Call's long-held conviction that the present crop of fanatical Soviet leaders will never abandon their Marxian dream of world conquest until forced to. Before our statesmen's eyes they have been allowed to acquire new territory and subject millions of people to the status of serfdom, and to seize spoils of war, much of which belonged by the rules of war to the United States rather than to Russia. Instead of showing appreciation to our Government for acceding to their demands, they have taken these concessions as a sign of American weakness and an invitation to go a step further in defying us and all their former allies.

Russia still owes our country millions upon millions in lend-lease and her wealth-laden leaders show not the slightest desire to live up to her agreement and pay it back. How then can we for a moment expect them to live up to an agreement to stop making atomic weapons and scrap those already made if we lower ourselves in their eyes by seeking to buy Stalin's signature with a billion or more dollars? Honor from people of dishonor can never be purchased by dollar bills. That kind of attempted appeasement might prove to be Munich all over again, but on an even more calamitous scale.

Religious and Racial Bigotry in George Washington University

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. KLEIN. Mr. Speaker, on this two hundred and eighteenth anniversary of the birth of George Washington, I am sickened by learning of the recent outburst of religious and racial bigotry in the head of the university which was founded by Washington, which bears his name in the city which is his namesake, and which was chartered by Congress over a century ago with a specific prohibition of discrimination.

Dr. Cloyd Heck Marvin has in recent weeks, and to my intense sorrow and disappointment, conducted himself in a pattern reminiscent of the late and unlamented Herr Dr. Goebbels. The disgraceful situation at George Washington University, the only Jim Crow institution of higher learning in the District of Columbia, has come to a head in this most completely incongruous time, the week in which we celebrate the memory of the founder of his country; the period proclaimed Brotherhood Week; the week in which the District of Columbia has discovered that its un-American pattern of discrimination and segregation is illegal.

It was not many weeks ago that the George Washington Hatchet, student weekly, ran an editorial declaring it was time for GWU to rejoin the United States by abandoning its anti-Negro policy. George Washington left 50 shares of C. & O. Canal Co. stock to found a college "to teach democracy to the people." James Monroe and John Quincy Adams supported and patronized Columbian College, out of which GWU grew.

The Newman Club, the Hillel Foundation of B'nai B'rith, and a number of Protestant and secular student groups endorsed the editorial.

There was no reaction from the president of the university until the Jewish press widely reprinted a brief story sent out of Washington by Milton Friedman, JTA correspondent here.

Immediately the wrath of Olympus descended on Hillel Director Irwin Glatstein. According to the Jewish Telegraphic Agency, Dr. B. H. Jarman called on Glatstein. Not satisfied with Glatstein's assertion that he could not confirm or disavow the statements in the JTA story except as to the resolution, Jarman haled Glatstein before the great man himself for a 1½-hour stormy interview.

JTA says that Dr. Marvin threatened to have Glatstein fired, and later tried to carry out the threat; that he also threatened to ban Hillel from the campus; that he talked wildly of a Jewish plot against the university and demanded that Glatstein sign a letter dictated by Marvin saying the JTA story was untrue. Rabbi Arthur Lelyveld, national director of Hillel Foundations, was forced to come to Washington in an effort to smooth out the row, in cooperation with the Anti-Defamation League.

The Jewish community of Washington is up in arms.

During depression days, Abram Lisner and other Jewish philanthropists bailed out George Washington University when the going was tough. Lisner Auditorium was built by funds bequeathed by Abram Lisner. By his direction the Bill of Rights is inscribed on the walls. His direct command that no discrimination be practiced is openly flouted by barring Negro citizens from the hall. At various times Protestant churches and private philanthropists have helped George Washington University. Yet so far as I am aware there is not a single Negro student in the university, and the medical school follows the infamous AMA quota system.

For the benefit of Dr. Cloyd Heck Marvin I want to quote from the famous Washington letter to the Hebrew congregation at Newport:

> The citizens of the United States of America have a right to applaud themselves for having given mankind examples of an enlarged and liberal policy. * * * All possess alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of, as if it was by the indulgence of one class of people that another enjoyed their inherent natural rights. For happily the Government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that they who live under its protection should demean themselves as good citizens in giving it on all occasions effectual support.

Gen. U. S. Grant III, grandson of the great American who helped free the slaves and the man who tried to impose a permanent pattern of segregation on the District of Columbia, is vice president of George Washington University.

The Lincoln Philosophy of Government

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Lincoln Day address entitled "The Lincoln Philosophy of Government," delivered by me at Tuscon, Ariz., on February 14, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

After I received the invitation to join you here at this celebration of Lincoln's birthday, I spent some little time in thought and study about what to talk about. I got hold of a biography of Lincoln. Although I have read Lincoln's life before rather carefully, I got a great deal of pleasure out of glancing through those volumes again. I also secured a collection of quotations from Lincoln's speeches, letters, and other statements.

As I read this material, I could not help but becoming enthusiastic about joining you here today for your Lincoln Day celebration. I got this feeling because as I read over some of the things that Lincoln had said, it struck me so forcibly how directly they applied to the problems we face today. It almost seemed that I was reading the work of some great statesman who was commenting on the problems of 1950.

For example, listen to these words of Lincoln: "Coming expenditures must be met, and the present debt must be paid; and money cannot always be borrowed for these objects. The system of loans is but temporary in its nature, and must soon explode. It is a system not only ruinous while it lasts, but one that must soon fail and leave us destitute. As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and next no one left to borrow from, so must it be with a government."

How could any comment be more to the point of our present problem? This administration would have you believe that some new formula has been found that makes deficit financing or borrowing money a good idea. This quotation from Abraham Lincoln shows us clearly that there is nothing new about Government financial problems. There is nothing progressive or modern about going into debt. Then, as now, there was a tendency for demagogic governments to promise more than they could perform. That is as old as the hills.

Lincoln faced that issue frankly and boldly. He knew that excessive spending and borrowing would destroy the national prosperity, and particularly, the prosperity of the average man. That is why he was so firmly against it—because he knew that the chief burden would fall on the average man.

There is one thing he probably did not know. I doubt if he ever could have imagined any national administration throwing around such gigantic sums of money as Harry Truman's $42,000,000,000 budget. Do you know how much it cost President Lincoln to run his administration during the entire Civil War? In 4 years his administration spent just $3,250,000,000. That was the entire cost of the Civil War and all the other Federal expenses during those 4 years. That $3,250,000,000 would be enough to last this administration not quite 1 month.

In fact, it is hard to get any realization of what a tremendous money-spending machine our Federal Government has become. During the nearly 5 years since Truman became President, he has spent more than all the 32 Presidents spent before him in the 156 years up to the beginning of the Second World War. The war has been over for almost 5 years now, and yet the Government is still spending at a rate five times as great as President Roosevelt's average rate of peacetime spending. Before the war we used to think that F. D. R. was a fairly expensive President.

Of course, when I talk about President Truman's spending, I am talking about just those programs that are already in effect. I don't include those spending programs that Congress has refused to authorize, such as the Brannan plan for agriculture and the socialized medical proposal. If Congress gave the President everything he asked for, we would hit some new high records on spending. That is why it is all-important to send some more Republican Congressmen and Senators to Washington.

Lincoln stood for sound finance. He also stood for another ideal which is even more important, and that is human freedom. We meet today at a critical time in the history of our Nation and the world. While vast areas of the earth are being covered with tyranny, we meet to honor a man who not only believed in freedom but fought for freedom. Much of the world seems to have retreated into a new kind of dark ages. It is particularly fitting at such a time that we turn our eyes once more to a man who stood

out as a symbol of light and hope at another time when darkness seemed to be moving over the face of the earth.

We meet to honor a man about whom numberless eulogies have been written and speeches have been made. Nothing ever has affected the American people so greatly and so unanimously as the assassination of Abraham Lincoln in 1865.

A tree is best measured when it is down. Men who had never considered Lincoln great while he was alive suddenly went into deep mourning for one whose works they suddenly understood.

Why did Lincoln's death bring so many men—North and South—to their knees in prayer? Why have we not been able to forget him although he has been dead for almost 85 years? I think I can tell you why.

Abraham Lincoln lived by great principles. He built his life on those principles. He developed, step by step, a philosophy of government based on the finest of the American tradition he inherited. He could give more life and meaning to those principles of government because he himself had gone through a hard life on a harsh frontier.

He had been handed an ax when but a lad and told to start cutting. He had hewn rails by the thousands. He had felt the cutting chill of a prairie wind against his worn clothing. He had tried a variety of occupations and had struggled to establish himself as a prairie lawyer. In political life he had known both success and failure, but until his election to the Presidency, more failure than success. Even during his term as President, he was subjected to the most unjust and unworthy criticism and ridicule.

In short, by the time of his death Abraham Lincoln symbolized America as no other man could. He bore in his heart and his mind the spirit of the honest toil that has created America. He revealed, by his speech, the pride of living in a free land under a free government. None before him and none after him was able to state so well as he the principles by which he lived and to stir the people as he could. His supremacy in leading the people by those principles was due to the fact that he expressed those principles in his personal life.

What are some of those principles that Lincoln lived by? Before I answer that, let me say this. Times change. The appliances that we use change. Circumstances and problems change. But principles never change. Lincoln's principles were sound because they have stood the test of time. Those principles are still sound today.

I have mentioned the fact that Lincoln did not believe in phony finance that swindled the people out of half of their savings and their earnings by cutting the buying power of their money in half. One of his principles was simple honesty, and that quality is something we need badly in public life today.

I have also mentioned his love of freedom. He sought to free the slaves but he also sought to maintain the freedoms of the average man against Government regimentation and Government confiscation. He said on one occasion, and I quote: "We see it and to us it appears like principle, and the best sort of principle at that—the principle of allowing the people to do as they please with their own business." On another occasion he said: "Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

He believed that every man was entitled to the fruits of his own labor and that the Government had no right to take them from him.

He was a practical statesman as well as an idealist. He knew that once the process of Government regimentation and of confiscating wealth began, it would be very difficult to stop. He said, and I quote: "A house divided cannot stand. I believe this Government cannot endure permanently half slave and half free." He referred, of course, to the immediate challenge before him—the issue of Negro slavery. But in a broader sense the words ring true when applied to our economic problems today. We cannot long maintain a free political system if our economic system is not free. We cannot have socialism and capitalism at the same time, no matter what President Truman may say. The systems are the very opposite of each other. If we have socialized medicine, socialized farming, socialized banking, socialized housing, how can we have a free economic system?

The entry of government into new fields always has meant a gradual strangling and elimination of free economic forces in that field. The Germans tried it and got war instead of security. The British have a poor house. The Russians have a police state. It is the lesson of experience that if the government goes into the housing business to any extent it drives out those who want to construct private homes. If it goes into the railroad business, privately owned railroads cannot long stand against subsidized competition. It is the same in every field. The government cannot afford, once it is engaged in any economic operation, to have competition. To allow competition is to allow the people to see the inefficiency of government operation. For free men working freely are able to do a better, more resourceful job than men who are working for a top-heavy centralized government, tied up in every step by red tape and excessive supervision from top to bottom.

That is the central issue we must face today. Shall we move toward a greater and greater concentration of power in Washington? If we adopt the President's program, control of something like half our economic system will be in the hands of the Federal Government. If we reach that point can we remain half controlled and half free? Or will the growing power of the Federal Government be able to pull us the rest of the way toward socialism until every man's daily life and activities are completely controlled. Remember that socialism, practically speaking, is nothing more nor less than an extreme concentration of power in the hands of the central government.

The trend toward totalitarianism of some sort has been running pretty strong over a good part of the world, but perhaps you don't realize that all of these various types of centralized government are merely varieties of socialism. We used to call the Hitler doctrines fascism, but Hitler himself called it national socialism. We usually call the British Government a labor government, but it calls itself a socialist government. And don't forget the correct name for the Government of Russia is the Union of Soviet Socialist Republics.

We have our own brand of Socialists in this country too, only here they don't generally call themselves Socialists. There is a Socialist Party and a Communist Party, but most of the Socialists in America don't belong to those parties. They have found it more expedient to join up with the Democratic Party, gain control of its party machinery, wrap themselves in its traditions of Andrew Jackson and Thomas Jefferson, and pretend to espouse its time-honored principles. They refer to themselves as believers in economic planning or perhaps in a controlled economy. They never use the ugly word "Socialist." In practical effect if they succeed in their aims, they will have changed our form of government.

There are several roads to socialism and the Socialists in this country have been smart enough to choose those roads that arouse the least opposition. For example, this administration does not generally talk much about Government ownership of our major industries. That might arouse too much public opposition and criticism. They believe they can achieve the same results through controls over business and industry and through confiscation of a major portion of the people's income through taxation. If they can concentrate all power in Washington, they can run the country just as if it were a fully socialist state.

Observe how closely the proposals of the President follow the path that has already been laid down in socialist England. The Ewing proposal for socialized medicine is almost an exact duplicate of the British health program which has failed so miserably. In fact, Mr. Ewing, during his visit to England, pointed out the similarity and openly said that his program would draw directly on the experience of the British.

Take a look at the Brannan plan for agriculture. Under this proposal farmers would be subsidized to produce and overproduce so that the market would be flooded with farm surpluses, and farm prices would fall to unbelievably low levels. Then Mr. Brannan promises he would pay the farmer directly with a Government check enough to give him a living income. The result, according to Mr. Brannan, would be low prices to consumers and high incomes to farmers. I don't need to point out the obvious catch in this plan. Anything you saved on your grocery bill you would have to pay on your tax bill. That stands to reason. That is the way it works in England where they have the same system.

There is another point to this Brannan plan which is more subtle. Once the farmer's market has been destroyed, he will be completely dependent on his Government check for a living. The income he gets from the sale of his produce at the market place will be too small to live on. He will be so dependent on that Government check that he won't dare to argue with the Government official about the program or about his rights.

I can imagine one year they will pay him for producing. Perhaps the next year they will pay him for not producing. The third year maybe they will run out of money and not pay him at all. He wouldn't be in a position to argue or complain if he gets a raw deal. He will just be a pawn in a vast system of regimentation. He will have to do what the Government bureau tells him to do, regardless of how impractical it may be.

Take another example—the Federal housing program or programs, because there are so many that I can hardly keep them straight. Last year Congress passed a bill to subsidize housing for the low-income groups. The subsidy for this limited program alone will be vast and extremely burdensome. I can't tell you just how large the subsidy will be because it will spread over a 40- or 50-year period, divided between Federal, State and local governments and mixed up with tax exemptions and fancy financing.

This year we have up in Congress another bill which is supposed to take care of housing for the middle-income groups. It is another vast subsidy program, but it is not called that. The subsidies are cloaked under a system of low-interest-rate loans, tax exemptions and maturities running far beyond sound lending practices. I am certain that this program also, if enacted, will run into heavy expense to the taxpayer but no one can say just how much it will amount to. If this bill is enacted to go along with the public housing law of last year, we will then have the Federal Government in the field of both lower income and middle-income housing, and that makes up about two-thirds of the entire housing field.

Altogether, the Ewing proposal for socialized medical care, the Brannan plan for socialized agriculture, and the new program for socialized housing would put the real basic needs of the average man—food, shelter, and

health—on a substantially subsidized basis. And once you subsidize all these basic needs, you can control both their production and their use.

There is another road to socialism which our economic planners are also following, and that is the road of excessive spending and taxation. I mentioned the President's $42,000,000,000 budget. The taxes to support this program will not only break the back of American industry; they will also confiscate the surplus of the average workingman.

When we talk about destroying the incentive to produce, we mean the incentive of the average man on a salary or a wage just as much as the incentive of the businessman who is working for profit. In England today, a working man is not interested in overtime work even at time and a half. Too little of what he makes on that extra pay is left to him after the Government income tax. He has no hope of bettering himself by working an extra day or by trying for a job with better pay. He has resigned himself to a life of poverty.

The excessive concentration of power in Washington has been brought about to a material extent through these gigantic spending programs. The kind of budget that the President proposed is a long step on the road to socialism. We have to fight against excessive spending, just as we have to fight against direct regulations and controls from Washington.

And in that connection, I can't resist quoting another great American, Thomas Jefferson. Of course, the Democrats claim Jefferson and sometimes they hold celebrations in his honor, but they never quote him. They never quote him because they can't find anything he ever said that backs up what they are doing. On one occasion, Jefferson said: "I place economy among the first and most important virtues, and public debt as the greatest dangers to be feared. * * * To preserve our independence, we must not let our rulers load us with perpetual debt. * * * If we run into such debts, we must be taxed in our meat and drink, in our necessities and our comforts, in our labors and in our amusements. * * * If we can prevent the Government from wasting the labors of the people, under the pretense of caring for them, they will be happy."

Thomas Jefferson was speaking of the New Dealers, Fair Dealers, demagogues of his day. Political demogogy is not a new invention. Jefferson knew about it and Lincoln had plenty of demagogues to deal with in his time. There have been plenty of men in every age who have promised that every problem would be taken care of if only they were given more and more power. Lincoln knew how to handle such men. He faced the issues boldly and courageously. He did not try to fool the people. Instead, he told them frankly what the problem was, how it could be handled and what he proposed to do about it if elected to office. He did not always win, but when he did win he was in a position to perform the supreme service for our country.

He knew two and two always make four—and he could give that moral a homely application that made it clear to the average man of his day. One story is told by a Mr. Roland Diller, one of his neighbors in Springfield, that illustrates his practical wisdom. Mr. Diller tells us that one day he heard the cries of children in the street. When he looked, he saw Lincoln striding by with two of his boys, both of them wailing at the top of their lungs. "Why, Mr. Lincoln, what's the matter with the boys?" Diller asked. "Just what's the matter with the whole world," Lincoln replied. "I've got three walnuts and each boy wants two."

That's what's the matter with so many of the New Deal and Fair Deal promises. They promise you a great deal more than they can perform. They tell you that they are going to give you this or that, but when the time comes to make good on the promises, they pay you off in 50-cent dollars.

Whenever any of us have criticized any of these peculiar New Deal and Fair Deal programs, it has been customary for them to call us all sorts of names, and say that we are reactionaries and against all progress. You know that is not true. Of course I believe in progress and I am willing to work for it and to fight for it in Congress and elsewhere. For example, most Republicans believe we should expand our present system of Government security until its provides real security, not phony security, to everyone. All of us are in favor of making real progress. We want to build up our land. We want to see the desert bloom. We want to see public improvements and we want to see the number of happy people increased day by day. That is not the real question we are arguing. The real point is, What kind of progress; and progress toward what? If we are going to progress toward a police state, I am against it. But if we are going to progress toward more production, more security, a fair distribution of the world's goods, better living for all, I am for it.

Can we make progress by wasting billions of dollars? Of course not. Can we make real progress by promising people more money for less work, something for nothing, when it is impossible to deliver on those promises? Of course not. Is it progress to pay off social-security obligations to our old people with a 50-cent dollar? Of course it isn't. If we are going to make real progress, we had better think about setting up a sound system that will really work. If you measure progress as I do—by the number of happy homes with well-fed, well-clothed children—you will agree that we have made very little progress under the New Deal and under the Fair Deal. When Lincoln spoke of progress, he did not mean a booby-trap type of progress that offers you a benefit with one hand and picks your tax pocket with the other.

There are plenty of other issues I would like to talk about but I haven't time for all of them. There is one that I want to mention particularly. It is one that Lincoln had to deal with, also. Abraham Lincoln believed in reserving the American market for the American producer. He is the real father of the Republican system of protective tariffs; the system under which America made more and faster progress than it ever has before or since.

Ever since 1934 when the Trade Agreements Act was first passed, the State Department has been promising us everything from peace to prosperity as a result of those trade agreements. We know that the trade agreements did not give us peace, and we have not achieved real peace even yet. As for prosperity, I don't think we will ever get that by importing goods and exporting jobs.

Before I came out here, I stopped to look up what had happened to some of the industries of Arizona as a result of this trade-agreements program. I can tell you that the facts I obtained really shocked me.

Arizona is a leading copper-producing State. The prosperity of the copper mines is highly important to the prosperity of Arizona. Under trade agreements negotiated by the State Department, your protective tax has been cut from 4 cents to 2 cents per pound and for a temporary period suspended entirely. As a result of that reduction, imports in 1948 for domestic consumption amounted to 466,000 tons of copper content. And for only the first 9 months of 1949, it amounted to 417,000 tons, an even faster rate of imports. That imported copper threw American miners out of jobs. American mine production has run about 100,000 tons less than it did last year, and about 300,000 tons less than it did during the peak war years.

The story on lead is about the same. The tariff on lead has been about cut in half. Lead imports for consumption last year amounted to 318,000 tons, and in the first 9 months of this year, ran over 228,000 tons. Before the war, there were no imports to speak of. Meanwhile our domestic production has been declining steadily. In 1937—which was not a terribly prosperous year—domestic mines produced 465,000 tons. In 1948 American production had fallen to only 390,000 tons. I don't know how many displaced jobs those imports represent. I am sure it is substantial.

Zinc is another good example. The tariff on zinc has been cut in half. Zinc imports before the war didn't amount to anything but in 1948 they were over 226,000 tons, and during the first 9 months of 1949 they were 167,000. Meanwhile American production of zinc ore in terms of zinc content was only 630,000 short tons last year, a decline of over 100,000 tons from the peak figure reached a few years ago. The trade-agreements policy has just simply exported to foreign countries the jobs of the miners who used to produce that 100,000 tons of zinc.

That is one of the most important problems we have to face. We are going to have to install a flexible import-tariff policy to replace the so-called reciprocal trade policy of the New Dealers, which is not reciprocal in the least. Under it, import rates have been reduced on more than 1,500 items and there has been not one single rate increased. Under it, factories have become idle and men have lost lifetime jobs. In some States the unemployment-insurance fund has been exhausted. Unless we change these socialized deals in Washington, there will be many million of idle men in America.

We Republicans have a terrific job to do. First of all, we will have to work and organize more effectively than we have ever done before. We will have to show the people where these policies are leading us. We will have to show how false the New Deal and the Fair Deal policies are. We will have to show how real progress can be made. We will have to organize effectively at the grass roots, at the precinct level, if we expect to win elections.

Lincoln had his election problems, too. After serving as a Congressman, he was defeated for reelection, and then in 1858 he was defeated again. During his Presidency, his wise, far-seeing policies were threatened time and time again by the dangers of a political overturn. Lincoln maintained a calm faith in the face of these obstacles. He did not give up his principles and he never stopped fighting. If we Republicans expect to carry on his tradition, we will have to be just as firm in our faith as he was.

Then when we come into power, we will have the biggest job of all. We will have to clear up the evil results of years and years of misrule. There are a lot of things we will have to do. First and foremost, we have got to put a stop to this movement in disguise toward socialism. That means we have got to stop spending ourselves into socialism. Modern Socialists figure on carrying us into socialism by one or the other of those two means. If they can tax private industry to death, they can make us all dependent on the Federal Government for jobs. Maybe that is what the President had in mind when he proposed a few days ago that the income-tax allowance for mineral depletion be taken away from the mining and oil companies.

Another thing we will have to do is to clean the administration out thoroughly of all the Red sympathizers and fellow travelers. I won't speak of Alger Hiss because even the administration now admits that he is a bad one. It would be impossible to say how much damage he did to our security on such occasions as the Yalta Conference. But, at least, he is out of the Government now. I am thinking more of those with the

same cast of mind as Hiss, who are still in the Government. It is an extraordinary thing when the Secretary of State, the man who holds the threads of peace and war in his hands, publicly announces his faith and sympathy in a convicted spy. It is still more extraordinary when it is the same man who has been telling us for months past that the best thing to do with China is to let the Communists have it. When the clean-up finally comes in Washington. I certainly hope it starts with the State Department.

There are a lot of other things we will have to do, too—too many for me to mention today. It will be a big job, but I believe we can do it if we all work together. In the meantime, the important thing is to go to work and elect Republicans to office.

We must give the people a definite choice between our system and the system of those who propose to overturn it. We must meet the danger boldly and firmly, not by compromise and half measures. We must know what we stand for and be unafraid in defending that stand. We have the best system in the world in this country, and we should have no hesitancy in saying so.

Lincoln fought for what he believed in. When the Republican Party has dared to fight, it has won. Lincoln said: "Let us have faith that right makes might; and in that faith let us to the end dare to do our duty as we understand it." That was Lincoln's way. I hope it is still the way of the Republican Party.

Is This a Government Under Law or Is It a Government of Men?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. REED of New York. Mr. Speaker, is this a government under law or is it a government of men? Under leave to extend my remarks, heretofore granted, I am inserting the following article by David Lawrence, which appeared in the New York Herald Tribune of February 21, 1950:

GETTING MINERS TO WORK IS CALLED RESPONSIBILITY OF TRUMAN ADMINISTRATION, NOT COURTS

(By David Lawrence)

WASHINGTON, February 21.—This week has witnessed a serious break-down of democracy—a sacrifice of the prestige of the Government itself on the altar of political expediency and group selfishness.

The failure of the coal miners to obey the Federal Court injunction is not just an incident in a labor dispute. It has nothing to do with the merits of any wage or labor controversy as such. It has everything to do with the fact that tens of thousands of American citizens have decided to disobey their Government's judicial decrees.

This amounts to open insurrection. The only saving grace about it is that the rank and file of the miners probably do not know that they cannot lawfully defy an injunction. They do not know that they cannot even hold a union meeting and vote to refrain from work when there is a court order telling the union not to exercise such influence.

SITUATION MISCONSTRUED

The union leaders, on the other hand, have counsel. They have education. They know what it means to ignore a court order as a group. It is amazing, moreover, to note how many persons of education outside the coal industry have also misconstrued the situation, weakly commenting that there is nothing anybody can do to get coal mined—that no injunction can get the coal mined.

This is tantamount to saying that an insurrection in the United States cannot be coped with by the Government itself and that the majesty of the judicial authority has vanished. The idea that the right to strike in concert as a union is inviolate and supersedes the rights of a court of the United States is one that has been mistakenly nurtured for a long time by the radical groups in America. The present administration is culpable because it has sabotaged both the spirit and the letter of the present labor-management law through a prolonged period of inaction.

Today the Nation is suffering a tremendous economic loss apart from the inconvenience arising from the shortage of coal. The Truman administration refused to apply for an injunction until the crisis reached a danger point. Now, in the face of determined opposition by rebels against judicial authority, the administration is content with the filing of a contempt charge against the union and a 4-day lapse before any hearing is held on the charges.

All last week the court's order was flouted. No contempt charges were filed. The evidence was published in the press. The miners held meetings and, in effect, voted to violate the injunction. News of these acts has been broadcast. Judicial notice apparently could not be taken of such violations until the Department of Justice was ready to present evidence to the court. Had an act of contempt been committed before the court, the judge would have been empowered to act immediately, but, since the incidents occur far and wide, it is necessary for the evidence to be presented by the Department of Justice as petitioner.

WASTE OF TIME SEEN

Seemingly the refusal of the miners to go back to work and the apparent unwillingness of the locals to obey the instructions given them by the miners' chief officer were not adequate to impress the administration here that quicker action could be taken. As a consequence of this slowness, more time is wasted and more economic loss is inflicted.

Judge Keech, before whom the contempt charges will be tried, is a former executive assistant to President Truman but there is no indication that he is to blame.

The responsibility for pressing the court to act on the contempt charges and to mete out fines or other punishment to those violating the injunction rests squarely on the administration rather than the court.

What's Wrong With the American Lawyer?

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 22, 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject, What's Wrong With the American Lawyer, delivered by Luther L. Hill, publisher of the Des Moines Register Tribune, before the Harvard Law School Forum, at Cambridge, Mass., on February 8, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Dean Griswold, members of the faculty, students of the law, and friends, when your program chairman asked me to be with you tonight, I, frankly, was pleased. "The halls of history," it is said, "are constantly filled with the sound of wooden shoes going up the stairs and patent leather ones coming down." Your law school and its graduates are a refreshing exception to that observation. Perhaps because here is practiced the admonition of "that which thy fathers hath bequeathed to thee, thou must earn again, if thou wouldst possess it."

The title "What's Wrong With the American Lawyer" has a belligerent ring and reminds me of my friend Pat Murphy who was very sick and the padre was sent for. The padre, looking down at Pat, said, "You are a very sick man, you may not be with us much longer, you must at once embrace the Lord and renounce the devil." Pat looked up at the padre and said, "As sick as I am and the life I have led, I am in no position to renounce anyone." So let's change a few words and say the subject is A Layman Looks at the Lawyer.

Speaking with you in this historic building of rare grace and dignity, I cannot but reflect that except for the untimely interference of a certain William Hohenzollern, one time King of Prussia and Emperor of Germany, I would be a member of your chosen profession.

Yet, I have not lived isolated from the atmosphere of the law. My brother, three uncles, one of whom is a graduate of your law school, and innumerable first cousins are lawyers—not to mention a hostage to the future—my son. From all these, I gather that the law is a jealous mistress and demands your close attention. The potency of your reputation was brought home to me when I mentioned to a friend about being here tonight and he said, "You are like the chap who entered a mule in the Kentucky Derby—he knew he couldn't win but thought he would benefit by the association."

As members of the legal profession, you profess to have acquired special knowledge to be used by way of either instructing, guiding, or advising others in a way that promotes their interest or happiness. For perspective, let me say there are 180,000 lawyers in this country compared with 22,000 architects; 78,000 authors, editors, and reporters; 140,000 clergymen; 76,000 college presidents, professors, and instructors; 71,000 dentists; 152,000 doctors; 100,000 civil engineers; 1,100,000 teachers; 5,300,000 farmers; and 250,000 insurance agents and brokers.

There are two aspects in which I wish to consider the 180,000 lawyers. First, as professional men, qualified to advise and act for private clients in regard to their legal affairs. The other as citizens learned in the laws of the land, familiar with the Government of the country, and peculiarly competent to assist in the conduct of the community and the State.

As to the first aspect, I say that today the lawyer's place in trade, in finance, in business affairs, is unique—stronger and more entrenched than ever before. The whole fabric of the business world is permeated by the law—the lawyer's influence is far greater than other serving professions: engineers, economists, statisticians, analysts, accountants, advertising, public-relation experts, etc. In short, if the businessman sometimes finds it difficult to live with the lawyer, he finds it impossible to live without him.

This strategic position now occupied by the lawyer is due primarily to the growth and the presence of the corporate era, together with the legal and political conditions arising therefrom. The spread of Government

controls, perhaps as an inevitable result of the problems so created, over most fields of business activity has enormously increased the need for legal services. One businessman expressed his feelings by saying that "what started as a government of laws not of men, has ended as a government of lawyers and not of men."

What do I, as an individual or as an officer of a corporation, expect of my lawyer? I agree with George Shattuck, law partner of Oliver Wendell Holmes, "the business of a lawyer is to know law,"—he must keep abreast of changes. In other words, be prepared and that means constant study. Now, I realize that to ask for unqualified opinions on most legal problems is absurd. Mr. Justice Brandeis aptly described the lawyer's position thusly: "I can tell you where the edge of the cliff is, but I cannot tell you how hard or in what direction the wind will be blowing when you pass it."

Second, my lawyer must study and know not only the law but be equipped to advise and counsel with me on economics, politics, and the related social sciences. I ask him to adjust law to life. To remember and to remind me that we are dealing with human beings, and not just things.

I want advice before wrong action is taken and thus prevent trouble. I ask him to accept the responsibility of seeing that his client is legally fit and well. Legal planning is essential to a successful business operation.

I need to feel that confidential information may be given him without any fear of disclosure.

I ask for the skill in negotiations which comes from an innate sense of fairness and honesty combined with the will to win.

Yes; the law is referred to as the calling of thinkers. I believe that the specifications of my lawyer are in keeping with that definition and I trust you would not have it otherwise. Parenthetically, may I say that our general counsel, a graduate of your school, fully meets, in my judgment, every requisite I have just enumerated.

Let us now observe the lawyer in a broader sense as a specially equipped citizen. We are privileged to live in one of the decisive periods of history. Our country urgently needs the services which you are being prepared to give. Such a role is your heritage.

The judgment of history as of today says America was a colony—not her own master. Under the leadership of lawyers we became free, have grown, prospered, and, better still, preserved freedom and opportunity, the like of which the world has never before seen. It is unnecessary to tell of the faith this Nation has placed in her lawyers—as, for instance, the one simple fact that for the 160 years of selection of their Presidents the people of the United States have chosen a lawyer three times out of four. Approximately 1 person out of 800 of our population is a lawyer, yet this small minority has held, roughly, 70 percent of the positions of Government trust and authority.

No tradition of your profession is more cherished than that of leadership in public affairs. As Fowler Hamilton recently wrote, "The political traditions and the gifts for government that have enabled the United States to maintain dynamic balance find expression in laws and the task of reconciling the concentration of business power and labor power with our characteristic democratic dispersal of political power can be performed only by the legal processes, of which the lawyer is an essential part"; and, I might add, the most essential part.

The great figures of the law inspire our reverence, as they have used their special gifts for the advancement of public interest. Yet, candor would force the admission that today the bar does not occupy its traditional position of public influence and leadership. The changes have come by almost imperceptible stages and are only now beginning to be recognized. I mention these changes, not to condemn, but to describe. The changed character of the lawyer's work has made it difficult for him to see himself and his profession in proper perspective. No longer does his list of clients represent a cross-section of society. The demands of practice are more exacting. He is more a man of action and less a student of history and government. Big business, big labor, and big government have produced inevitable specializations of the bar. The successful lawyer is today very often the general manager of a mass production factory of legal products.

More and more the amount of his income is a measure of his professional success. These conditions have given us a bar whose leaders, like its rank and file, are on the whole, less likely to be well rounded professional men than their predecessors. The energy and talent for public service and for bringing the law into harmony with present conditions have been largely absorbed in the advancement of the interests of clients. The changed system has, at best, given the commercial world a superior proficiency and technical skill, but at its worst, it has made the learned legal profession the servant of the market place and tainted it with like morals and manners. I am not unaware that criticism of lawyers and law administration is no new thing. Much of it is merely a reflection of dissatisfaction with the prevailing political and social order.

To me, as a layman, the license which you will obtain to practice law is not a right, but a privilege to be granted, or withheld, or withdrawn by the court. The bar has been properly called a "democratic aristocracy," democratic in that its ranks are open to all who meet the requirements prescribed by law and aristocratic in the true sense, being a body of selected citizens qualified by learning and character to advise upon the laws of the land.

What are the standards which a layman has a right to expect of you as citizen lawyers?

1. The making of money shall be secondary. It must not be the sole standard of success or measure of service rendered. Here I would like to interpose and say, as a businessman, that lawyers, as a group are poorly paid, mind you, I did not say underpaid. According to available figures for the year 1948, the median income for all lawyers was $6,336.

2. Your sense of public service shall be at least equal to that of a minister or a doctor. The lawyer must be conscious of a feeling of trusteeship for he is a necessary part of the State's function of administering justice—in the part he plays, he is just as essential as the judge.

3. The practice of law represents the applied science of law just as medicine represents the applied sense of biology and chemistry.

Thus, set apart as a profession, you must practice your legal ethics which limit, yet uplift your means of livelihood. This philosophy of conduct is something that a lawyer must practice in his day-to-day dealings with his individual clients and the public.

What does a representative cross section of men and women think about the legal profession? Through the research department of the Register & Tribune Co. of Des Moines, using the accepted techniques of public opinion research, I can give you some of the answers from the people of Iowa. For the benefit of those not so fortunate as to live in Iowa or to be familiar with it, may I say that the State ranks in the top 5 percent of all the States in literacy and that its economy is evenly balanced between agriculture and industry. In Iowa we have a thrifty, homogeneous population with a high general level of well-being. You may be skeptical of such a survey. I don't claim it is 100 percent or 95 percent accurate, but the pattern is there.

One of the questions which the trained interviewers asked was: "Which one of the following do you regard as the most important in protecting your personal rights—the President of the United States—the courts—Congress. Forty-seven percent said the courts, 25 percent said all three equally, 17 percent Congress, 5 percent the President, and 6 percent had no opinion.

Have you ever hired a lawyer to handle something for you? Forty-nine percent said "Yes" and 51 percent replied "No."

Incidentally, one out of five believed they were charged too much for the legal services they obtained.

If you had a legal claim for damages, do you think you would settle out of court for one-half or less of what you felt you had coming to you rather than go into court and maybe recover the full amount? Forty-three percent would settle for one-half or less, 34 percent would go to court, and 23 percent were undecided.

A great many of our Senators, Congressmen, legislators, and other elected governmental officials are lawyers. In general, do you think having lawyers elected to these offices has been good or bad for our country? A strong majority considered that this had been a good thing for the country. It is interesting to note that the favorable majority is stronger among women than it is among men.

How does the public rate your profession along with other professions and businesses? The research people took a list of seven groups: doctors, bankers, teachers, businessmen, lawyers, farmers, and dentists. The list was presented in alphabetical order and the question was asked which group the people thought did the best job of leading and participating in worth while community affairs. The businessmen were at the head of the list; teachers second; farmers third; bankers fourth; doctors fifth; lawyers sixth; with dentists bringing up the rear.

What do our people consider the best life work for their sons if they plan to go to college? Engineering was at the head of the list, which is not surprising, since this is widely publicized as a scientific age. There is food for thought in the fact that over seven times as many named engineering as the legal profession and over four times as many thought young men going to college would do better by preparing for the medical profession than the law. Twice as many named business, and the teaching profession came in a little ahead of the legal profession. Only dentistry and ministry trailed the number naming the profession of law.

The question was asked, which one of six groups they trusted the most. The medical profession headed the list, bankers were second, teachers third, businessmen fourth, lawyers fifth, and dentists at the bottom.

I know that neither you nor I are satisfied with these answers. One may not simply shrug his shoulders or easily explain away the results of this survey. For the moment, I am not concerned with the truth or falsity of the beliefs. I am concerned with the fact that the beliefs exist. If the beliefs continue to exist even though they be false, you and I will see action predicated upon them. For that reason, it is vital to the future of the legal profession that it have available to its use the facts concerning the profession and its services to the public and that it tell its story clearly and understandably.

I offer one simple suggestion; there would be greater trust if the public knew that the unworthy member of the profession was promptly and effectively punished. The public may very likely believe that the unpunished practices of the few are condoned by the many. The dishonesty of Samuel Insull was harmful to the whole private utilities industry. So may the conduct of a few lawyers injure the public confidence of the

entire profession. The bar should itself be the first line of defense against sharp or dishonest practice. This distrust can be remedied. To do it is your job. To accomplish it will be a great public service of which you will be the direct beneficiary.

May I suggest that one function of the organized bar should pertain to the selection of judges? For example, in the selection of municipal judges in my city of Des Moines there were 11 candidates, of whom 8 were to be nominated and 4 ultimately to be elected. The average voter had no knowledge or ready means of knowledge as to their training, ability, or desirability for a position where liberty, property, and reputation are directly involved. It seems to me the bar should know who is or is not qualified. Does not the organized bar, directly related as it is to the administration of justice, have an obligation to give the public the benefit of its appraisal? Naturally, the weight of the bar's recommendation will be in direct ratio to the voters' confidence in the organized bar and their belief that such recommendations are entitled to respect as being solely in the public interest.

Listen to these words of the Honorable Learned Hand: "The profession of the law has its fate in its own hands; it may continue to represent a larger, more varied social will by broader, more comprehensive interpretation. The change must come from within. The profession must satisfy its community by becoming itself satisfied with the community. It must assimilate society before society will assimilate it: it must become organic to remain a living organ. The lawyer must learn to live more capaciously or become content to find himself continuously less trusted, more circumscribed until he becomes hardly more important than a minor administrator, confined to a monotonous round of record and routine, without dignity, inspiration, or respect. There can be no ambiguity in the answer of those who are worthy of the traditions and the power of a noble calling."

Gentlemen, one thing more: Our Nation began as a brave experiment based on the conception of the rights and dignity of the individual. Today an imperialistic, totalitarian state, under the rule of atheistic communism, seeks to destroy the hard-won freedom of man. We want, above all else, to hold on to freedom in our half of the world, at least.

In America, through the expansion of suffrage, the enormous increase in popular education and the perfection of techniques of modern mass communications, unprecedented power is today in the hands of the plain people. So really, the future of freedom is in the custody of the ordinary man. Therefore, the man in the street must know, as you do, the full connotations of the phrase "constitutional guarantees"—he must know that only in a government by law—not men—are these guarantees safe, and their maintenance depends on the independence and integrity of the court. Yes, let every American realize the writ of habeas corpus in his defense against a concentration camp.

Our people must be aware of the requisites of popular rule and stable self-government—they must understand how justice is administered and the importance of maintaining law and order.

Yet, even assuming these things were all understood, then I say knowledge alone is not sufficient. Free men must learn and practice self-discipline or freedom cannot be preserved even in an educated United States. The present world conflict is essentially a struggle of fundamentally opposed social disciplines. The discipline of the totalitarian is forced, regimented, ruthless, and built on fear. Ours is self-imposed and is built on hope and aspiration—on the promise of greater happiness and well-being. Freedom is secure only when it marches hand in hand with responsibility and again I repeat, self-discipline.

I ask you, the straight-thinking lawyer, to take the lead. Our case, our future, must rest upon the foundation of justice and you have decided to enter into the priesthood of justice. If you accept the challenge of leadership, you shall find in your work great and rewarding satisfaction.

Resolution of the Executive Committee of Young Republican League of Minnesota Opposing Construction of the Hydrogen Bomb

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1950

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the executive committee of the Young Republican League of Minnesota, on January 29, 1950. I feel that the resolution adopted by the Young Republican League of Minnesota is not only thought provoking, but most timely.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY THE EXECUTIVE COMMITTEE OF THE YOUNG REPUBLICAN LEAGUE OF MINNESOTA, JANUARY 29, 1950

There was a time not many months ago when it could be argued that any attempt to compromise with the Russians would be interpreted as a sign of weakness on our part. Many of us could not see that the risk of a cold war was as great as the risk of a partnership with tyranny.

Nothing has occurred to alter our opinion of the Russians. They are today as dangerous, as enigmatic, and as antidemocratic as they were a year ago. Their system of government and their system of economics are equally incompatible with our own.

But the risk of the cold war has multiplied itself beyond belief and almost beyond comprehension. Somehow or other, we must put a stop to it—must welcome or wheedle or bully the Soviets into the society of free nations. Hateful or not, we must work out a way of living with them, or face the alternative of universal suicide.

The reason is the hydrogen bomb. The uranium and plutonium bombs dropped in Japan were primitive little gadgets equivalent to only 20,000 tons of TNT and with a destructive radius of only 2 or 3 miles. There was a merciful limit to their size. Above the critical mass these bombs fizzle and are scarcely more lethal than an earthquake.

But the hydrogen bomb now contemplated by our Government, and by the Russians, is something else. It suffers from no limitations. It threatens not only our big cities but the earth itself. The first one would be a thousand times as powerful as the atomic bomb; the last might blow the earth out of its orbit.

It must not be built. Not by us, not by them, not by anyone else during this generation or ever in the future. There is no possible justification for its existence. It is totally and solely an instrument of destruction. Unlike the uranium bomb, it could not be used for the peacetime production of energy. It is fiery death and Armageddon.

If the democracies cannot now avoid the building of the bomb for fear of Russia, it is criminally naive to assume that we can build it, let the Russians build it, and then prevent it from being used. When, and by whom, matters hardly at all. When the first hydrogen bomb is dropped civilization will have ended.

President Truman is considering a final authorization to the Atomic Energy Commission to proceed with the development of the hydrogen bomb. David Lilienthal's resignation as head of the Commission was intended as a protest against any move toward the fatal decision before all possible negotiations with the Russians had been exhausted.

There still remains some hope that Russia may agree to UN control of atomic energy. Although the U. S. S. R. has rejected the Baruch plan for unlimited inspection of atomic plants, Vishinsky has submitted a plan for limited plant inspection, which, with all its weaknesses, would open a door in the iron curtain. If it did not break down, such a plan would lead eventually, we believe, to the development of a plan of fool-proof inspection. At the moment, the only alternative to the acceptance of a limited inspection plan is the development of the hydrogen bomb.

The choice should not be hard to make. There will be no hope for a world dominated by the hydrogen bomb. The Russians may someday be brought to see reason; the bomb will never be tamed. Once this monstrous power has been unleased, the problem of maintaining our democratic institutions against the Communist threat will disappear into thin air and we along with it: Therefore, be it

Resolved, That the executive committee of the Young Republican League of Minnesota opposes the construction of the hydrogen bomb until all possible means of international control of atomic energy through cooperation with the U. S. S. R. have been exhausted and that we specifically recommend consideration of the proposal made in the United Nations for limited inspection of atomic plants in the belief that such a plan would lead eventually to a foolproof unlimited inspection plan. Acceptance of such a plan would hinge upon the inclusion of adequate safeguards and would allow construction of the hydrogen bomb only in the event that such an inspection plan should fail to prove effective.

Atlantic Union

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1950

Mr. KEFAUVER. Mr. President, the Washington Post of February 18, 1950, published a very thoughtful editorial setting forth the next logical step in our foreign policy. I hope the State Department will consider further the desirability of this proposal. In any event, Congress is demanding and the people are expecting the Department of State to move on from the present sit-tight program.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ATLANTIC UNION

To give men's thoughts a direction is the highest mark of statesmanship. If the new direction points to closer ties for living and working together in amity, then the statesman is insuring his immortal soul. Moreover, such a direction inspires a drive in behalf of the good and the true which otherwise would remain potential. On this subject we have in the past quoted the great nineteenth century historian, Lord Acton. Lord Acton out of his erudition and wisdom observed that "the pursuit of a remote and ideal object which captivates the imagination by its splendor and the reason by its simplicity evokes an energy which would not be inspired by a rational, possible end, limited by many antagonistic claims, and confined to what is reasonable, practicable, and just." This is the reason we have backed the resolution calling for a convention of the free world to discuss a union of the Atlantic community.

Now the State Department, playing Mr. Obstinate to this Pilgrim's Progress, thinks the pilgrimage is a will-o'-the-wisp. As the administrative unit of our foreign affairs, perhaps this was inevitable, though a better attitude might have been one of neutrality. It is hardly wise to include the illusion of the brotherhood of man in the current slaughter of illusions. The opposition, the Department may be sure, will be no deterrent to this growing movement, nor to the friendliness exhibited toward it by so many of the legislators. Since the H-bomb decision, Members of Congress have been searching for a parallel line to pursue along with that of what may at any time be a provocative and a frightening line of militarization. The line on which the State Department was asked to comment has as its goal freedom and union. Surely that is the hope of the world.

Even the President shares the vision that the (more or less) world government or federation advocates are working to achieve. At any rate, on June 28, 1945, he said, "I am anxious to bring it home to you that the world is no longer county size, no longer State size, no longer Nation size—it is one world, as Willkie said. It is a world in which we must all get along. And it is my opinion that this great Republic ought to lead the way. It will be just as easy for nations to get along in a republic of the world as it is for you to get along in the Republic of the United States."

The way is more difficult than the President then seemed to envisage—a way that he seems himself to think is too full of road blocks to venture further. But some of the road blocks are imaginary. For instance, there seems to be an idea that if there were a union, Europeans would throng their ports immediately and make for America. Not the slightest reason exists for this fear. Are any of the immigration quotas, except that of Italy, filled? Not at all. A State Department spokesman objected that few Americans would allow foreigners to outnumber them in a union parliament. This was a misstatement of the aims of the union movement. The fields of activity of an over-all body would be as limited as the constituents cared to make it, and the voting could be weighted—and might well be—instead of numerical.

However, the advocates of one form or other of union would welcome the ventilation of real as well as imaginary difficulties. That is the reason for this resolution. It simply calls for a convention. Such a convention would clearly put men's thoughts in the direction of ways and means of living together better, and togetherness is the only means of survival. Presumably the convention would dissolve into working committees which would seek agreement on details for further discussion. The process itself would be of great service in furthering existing American policy of cooperation, as, for instance, in making the Atlantic Pact a reality. In sum: The unionists have a goal, and they serve a purpose to the rest of us in showing us the end of the route toward which we are, presumably, walking. The trouble is that time is not on the side of the pedestrian.

Coal: The Eleventh Hour

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1950

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of February 22 which concludes with this significant sentence:

If the administration is not now convinced of the necessity for such a course (namely, more adequate law than is now available for the protection of the public in the current coal crisis) the Congress should and, in our opinion, must shoulder that responsibility without further delay.

Senate bill 2912, to make what John L. Lewis has done in denying coal to the consuming public subject to the provisions of the Sherman Antitrust Act, is my answer to the responsibility of Congress in the premises. Hearings on that bill are now being conducted by a subcommittee of the Senate Judiciary Committee.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COAL: THE ELEVENTH HOUR

President Truman issued an Executive order on February 6 which set in motion the machinery provided in the emergency sections of the Taft-Hartley Act. Theoretically, this offered two approaches to the problem of restoring normal coal production. First, it provided for the enforced resumption of negotiations between Mr. Lewis and the coal operators; second, it paved the way for the issuance of an injunction which would compel the miners either to return to work or face penalties for contempt of court.

A Presidential fact-finding board named under this same machinery reported to the White House on February 11. In this report it said:

The Bureau of Mines reported to this board of inquiry on February 9 that over-all stocks (of coal) have declined to approximately 22,100,000 tons. Based on an estimated daily consumption of 1,385,000 tons, this represents a 16-day supply in the hands of consumers.

Twelve of those sixteen days have now passed. Meanwhile, on the evidence available to date, the two approaches opened up by the President's reluctant invocation of the Labor-Management Act have proved for all practical purposes dead end roads. Cyrus S. Ching, Director of the Federal Mediation Service, who has been sitting in on the so-called negotiations between Mr. Lewis and the operators, says he can see no signs of progress in that direction. Meanwhile, not only have the miners flouted the Government's court order directing them to return to work, but they have indicated a similarly defiant attitude toward a citation by Federal Judge Keech for contempt of court.

In theory, the stalemate on either or both of these fronts could be broken any day and at any hour. In theory, Mr. Lewis, who was reported yesterday to be "jaunty and unconcerned" and "smiling broadly" at the way things were going, could suddenly abandon his 9-month-old strategy and agree to a reasonable settlement of the contract dispute. And, in theory, the rebellious mood of the miners could miraculously disappear overnight. But the time for dealing with the coal emergency in terms of theory and wishful thinking has passed. There is little, if any, reason to believe that we are moving toward a solution along either of the two routes now being followed. But even if there were a reasonable basis for hope in these directions, the country is no longer in a position to proceed on such an assumption. We are now at the point where, if we are to guard against a national catastrophe, we must assume the worst—namely, that both negotiations and the injunction process have failed. If the administration is not now convinced of the necessity for such a course, then Congress should, and, in our opinion, must shoulder that responsibility without further delay.

Cooperative Action Against Water Pollution

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1950

Mr. WILEY. Mr. President, on previous occasions in the Senate I have pointed out the critical problem of water pollution existing throughout our Nation. I have pointed out the tremendous interest of the conservationists of Wisconsin—members of the Isaak Walton League and other fine conservation groups—in preserving our water heritage clean and unpolluted.

As an aid, I personally have introduced legislation providing for rapid tax depreciation benefits to industries developing waste treatment facilities. In the House of Representatives there is companion legislation for this objective.

So far the action that Congress has been taking is in the too-little-and-too-late category, but I trust that even at this late hour, while the waters of Wisconsin and of Ohio and of New York are becoming increasingly befouled and diseased, we in the Congress will help conservation organizations, municipalities, States, and private industries working on this tremendous challenge.

In the February 1 issue of the Conservation News published by the National Wild Life Federation here in Washington there is a fine write-up of the efforts of the Water Pollution Control Advisory Board which was set up in accordance with the act which we passed. I ask unanimous consent that the text of this statement, as published by Mr. Carl D. Schoemaker, the able Washington correspondent of the federation, be printed in

the RECORD. I know that his comments will be of deep interest to Waltonians and other conservationists in my own State and elsewhere.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WATER POLLUTION CONTROL BOARD TAKES ACTION

There are not many problems facing the American people that are more important and vital to their health and well-being than those which center in cleaning up the pollution, both domestic and industrial, which is hourly dumped into our rivers and lakes, the National Wildlife Federation reminds us. Increasing populations, the creation of new and the expansion of old industries, aggravate the nuisance and add to the burdens of solution. People must have clean water to use and drink. Industry likewise penalizes itself when the waters so essential to its working are loaded with filth. It requires a crisis or an epidemic to bring home the urgent need for action.

The Ohio River watershed or drainage basin covers the whole or parts of 14 States. A tip of southwestern New York, the western third of Pennsylvania, the whole of West Virginia, the southwestern portion of Virginia, nearly all of Indiana and Kentucky, about three-fourths of Ohio, and the eastern fringe of Illinois are embraced in the area, and total 154,880 square miles. Pittsburgh, Wheeling, Columbus, Cincinnati, Louisville, Indianapolis, and some 1,100 other cities and towns drain their sewage and waste, either directly or indirectly, into the Ohio River. North Carolina, Tennessee, South Carolina, Georgia, Alabama, and Mississippi, likewise, in lesser degree make use of the Ohio for drainage purposes.

It was at the turn of this century that the people of Ohio began to notice a change in the great river that bears its name. They were conscious of a stench that reached them from the deposits of pollution coming from as far upstream as Pittsburgh and augmented by the rapidly growing industrial communities in West Virginia, Kentucky, and Ohio itself. These people, who were looking ahead, decided to take the matter to their State officials. Contrary to their expectations the State in 1908 declared that no Ohio River city need install sewage treatment facilities until the communities on the banks of the river in other States did likewise. Here was the germ of an interstate compact. Nothing, however, was done about it until 20 years later when the States mentioned above entered into an informal agreement to control taste-producing phenol discharges coming from coke plants.

The droughts of 1930 and 1934 made it extremely difficult to produce safe drinking water from the polluted streams in the area. The Cincinnati Chamber of Commerce screamed its protests just as New York City is now battling the means to increase its safe water supply. In 1936 the United States Congress passed an enabling act which gave permission to the Ohio River States to enter into a compact or agreement to fight this menace to the health and prosperity of their people. This act of Congress was merely the push button that started the campaign. It took another 12 years to get the States—eight of them were needed—to sign on the dotted line. On June 30, 1948, at a gala ceremonial the compact became effective and plans were immediately set in motion to tackle the job and clean up the rubbish in the waters. There are well over 16,000,000 people within the watershed of these eight States which have signed the agreement, officially known as the Ohio River Valley Water Sanitation Commission. Each State contributes a share of the annual budget in proportion to its area and population in the basin. Joseph L. Quinn, of Terre Haute, Ind., is chairman of the board which is made up of three members from each State appointed by the Governor. Edward J. Clearly, of Cincinnati, is executive director and chief engineer.

THE TAFT-BARKLEY ACT

On the same day that the Ohio River compact was signed, President Truman affixed his signature to the Taft-Barkley Water Pollution Control Act which brought to a successful conclusion the long and bitter fight in Congress for a measure of Federal control over the increasing horrors of pollution. The act provides for the establishment of a Water Pollution Control Advisory Board upon which are representatives of the interested Federal agencies and others who represent industry, States, and municipalities, and wildlife.

This board last month held its quarterly meeting in Cincinnati and for 1 day met in joint session with the Ohio River Valley Commission. It was brought out with remarkable clearness that the main burden, as well as the responsibility for water pollution control, belongs to the States, their cities and towns and their private industry. The part that the Federal Government plays is to give a large measure of assistance and encouragement to local governments and their industries. The Water Pollution Control Advisory Board is required to develop comprehensive plans covering all the major watersheds in the Nation. This board did not get under way until over a year after the law was passed—Congress did not provide appropriations—but since it did get the green light, it has moved fast and much has been accomplished to cover the preliminary phases which are so essential to later smooth working of the machinery. Ten regional offices have been set up and staffed with sanitary engineers and water biologists; $800,375 have been approved as grants to the States for industrial waste studies; $67,508 have been allocated for special studies such as citrus wastes, treating wool-scouring wastes, the effect of industrial wastes, including paper and pulp mills, on aquatic life and the treatment of wastes from beet-sugar refineries and intensive research into State sanitary laws for pollution control. There is room for much improvement in this latter category.

NO LOAN MONEY IN BUDGET

While the Taft-Barkley Act authorizes $22,500,000 annually for 5 years for loans to municipalities for construction of treatment plants, no money for this purpose was appropriated last year and the President's budget sent to Congress early last month carries no recommendation for such loans.

The law further provides that such loans shall not exceed $250,000, or one-third of the construction cost, whichever is the lesser amount. Assuming that the maximum loan would be made to every applicant, the $22,500,000 authorized by Congress would be available only to 90 communities in the United States. New treatment plants, expansion of present facilities or replacement of obsolete equipment to the number of 13,952 are required throughout the Nation, according to an official survey made in 1948. Should all these take the maximum loan, it would take appropriations totalling $3,487,000,000 out of the Federal Treasury to do the job. To depend upon the Federal loan feature of this bill would prolong the day when such treatment works would be installed throughout the country. For instance, one Congressman says that in his small district there are eight towns which want immediate loans. There are 435 congressional districts in the United States. Inasmuch as these are loans and not grants, the amount involved must be repaid to the United States. Therefore, it seems to be a better philosophy for the municipalities to finance these plants through bond issues sold to private financing concerns.

The present plight of New York City, through its shortage of water and the need for extensive increases in the supply, has brought forth the suggestion that the waters of the Hudson River be used for this purpose. These waters are, of course, thoroughly polluted, unfit for drinking, unfit for recreational use. Pumping the waters from the river into the present reservoirs or into newly constructed ones would call for treatment before it could be used domestically. Senator LEHMAN, who only recently took his seat in the United States Senate from New York, introduced Senate bill 2823 2 weeks ago. This bill seeks to liberalize the loan provisions of the Water Pollution Control Act. He wants to increase the annual authorization from $22,500,000 to $50,000,000 a year. Furthermore, he seeks to raise the amount that may be loaned for any one project from $250,000 to $5,000,000. This bill is aimed directly to aid and assist New York in its water crisis. Should it pass and the limits raised as proposed, and assuming that other large cities would want to avail themselves of the loan feature, only 10 such projects could be undertaken each year. The Water Pollution Board, at its Cincinnati meeting, reaffirmed its position that States, municipalities, and private industry accelerate their respective efforts at once and provide the needed revenues from their own resources. This matter of financing these local activities for pollution control should be under such terms and conditions as will encourage private investors to extend private credit and money into this field.

The Board recommended to the Surgeon General the establishment of a National Technical Task Committee on Industrial Waste. The proposal was made by L. F. Warrick, a senior sanitary engineer for the State of Wisconsin. The proposal calls for a committee to be composed of industry's representatives of 150 to 200 of the best minds in the country. Its functions would include inventorying, appraising, coordinating, and promoting research and development work on treatment and control of industrial wastes; stimulating close working relations on technical phases with industry and Federal, State, and local governmental agencies; and would aid in the establishment of Federal grants-in-aid for industrial-waste problems in water-pollution control where major needs exist.

The Board tentatively agreed to holding three more meetings this year, one on the west coast, one at Boston to study the extremely hazardous pollution problem in the Merrimack River Valley, and another in Washington, D. C.

Relations of the United States With International Organizations

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1950

Mr. O'CONOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Where the 'One World' Effort Runs a Little Wild," by Arthur Krock, which appeared in the New York Times of February 21, 1950.

This article is a summary and analysis of Senate Report 1274, prepared by the Subcommittee on Relations With International Organizations of the Committee

on Expenditures in the Executive Departments, of which it is my privilege to be chairman. Because it deals with the tremendous rise in this Government's international-organization expenditures during the past fiscal year and emphasizes the need for economy and efficiency in this important field, I feel that the Members of this body will be interested in examining it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—WHERE THE ONE WORLD EFFORT RUNS A LITTLE WILD

(By Arthur Krock)

WASHINGTON, February 20.—A Senate subcommittee, dealing with the costs of executive departments, has made some recommendations which appear to possess the rare virtue of pointing the way to lower costs and greater efficiency in government. This virtue the reports of the Hoover Commission revealed on a much larger scale, but the Senate document was dealing only with the expense of United States participation in international organizations.

The subcommittee chairman is HERBERT R. O'CONOR, of Maryland, with Eli E. Nobleman as counsel, and these were in charge of the survey. Its stated purpose was to examine "United States policy with respect to the Government's relation with international organizations * * * to determine the extent of the benefits which accrue * * * the need for careful analysis of any increased participation, the advisability of continued membership * * * and the possibility of reducing the financial burdens." In the fiscal year, which ended June 30, 1949, these burdens amounted to $144,600,000 plus.

SOME STATISTICS

Of this sum the Government contributed about $129,000,000 to permanent and temporary world organizations, spent above $3,300,000 on missions and other conferences, advanced $11,500,000 to the United Nations toward its $65,000,000 building loan and otherwise disposed of the remainder. In fiscal 1948 the total was about $127,500,000.

Of the 1949 amount, the bulk, $104,100,000, was expended on emergency agencies and projects—$70,600,000 to the International Refugee Organization, $25,500,000 to the United Nations' children's emergency fund and $8,000,000 to the Palestine-Arab refugee relief fund of the United Nations. The money was spent in connection with 258 conferences involving about 6,000 meetings, 8,000 documents printed in five languages, and travel over the spaces between New York and Shanghai.

THE EAGLE'S SHARE

The subcommittee found that the average United States contribution to the cost of all these activities was 47.2 percent, ranging from 2 percent to 70 percent, and from $50 per year per organization to $70,000,000. It found also that these contributions are higher to postwar than to prewar organizations and highest to inter-American agencies, where membership is limited and disparities in financial capacity are greatest.

The Senators and their counsel also discovered a lack of coordination among Government agencies and departments represented in this international field serious enough to suggest waste and duplication that may impair the effective presentation of this Government's policies and position in the conferences and meetings on global subjects. Thirty-three interdepartmental committees have been set up, dealing with politics, economics, health, labor, education, transportation, communication, and finance. But, said the report, they are not properly coordinated.

Since February 1948, however, the report noted, the State Department has headed off the creation of 10 new agencies—5 in new world-wide organizations and 5 in the pan-American area. Proposed were a study of conservation, a control committee of the issuance of identity cards to foreign correspondents, an irrigation and high-dams committee, an international rice organization, and a court of honor to deal with cases involving journalists and foreign correspondents. On the other hand the Department is supporting the creation of four new specialized agencies—the International Trade Organization, the Intergovernmental Maritime Consultative Organization, the World Meteorological Organization, and a Northwest Atlantic Fisheries Commission.

IMPROVEMENTS RECOMMENDED

Much good work is done by the global and hemispheric groups on which the United States is spending these millions and underwriting their costs at an average of 47 percent. But some of these have been used by officials to provide agreeable junkets at the taxpayer's expense for personal friends of good human intent and influential outsiders. So the Senate subcommittee came to the following conclusions:

1. These activities should be recognized as a cornerstone of our foreign policy and contributory factors of peace. But in 3 years the cost of the United Nations and related agencies has expanded from $43,000,000 during 1947 to $220,000,000 during 1949.

2. The United States can no longer afford to sit by and await the advent of improved economic conditions in * * * other nations * * * before seeking to reduce these expenses. No new agencies should be created. Where duplication or overlapping exists, and it is frequent, there should be liquidation. Better budgeting and auditing should be required. And pressure should continue toward reduction of the assessments these organizations levy against the United States.

3. The President by Executive order should establish guiding principles for all in this Government concerned; also an over-all interdepartmental committee with Cabinet and sub-Cabinet membership and a permanent secretariat. The personnel now constituting the scattered groups should be required to conduct this business without any additional expense and at a saving

These proposals, if carried out, ought to get more and better results for less out of this important segment of foreign policy.

Brotherhood

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1950

Mr. STEFAN. Mr. Speaker, under leave granted me, I include in my remarks the following editorial appearing in the Washington News on Wednesday, February 22:

This is Brotherhood Week.

The fact that men are brothers and should live as such has been recognized in the religions of many lands and many ages.

Selwyn Gurney Champion, an English physician, has recorded a study of the world's major faiths in a book, The Eleven Religions, published by E. P. Dutton & Co. It contains 4,890 quotations.

We cite just 10 of the quotations which show that the golden rule is a teaching of 10 of the 11 religions. Here they are, in the alphabetical order of the religions:

1. Buddhism: "Hurt not others with that which pains yourself."

2. Christianity: "All things whatsoever you would that men should do to you, do ye even so to them: for this is the law and the prophets."

3. Confucianism: "Is there any one maxim that ought to be acted upon throughout one's whole life? Surely the maxim of loving kindness is such—do not unto others what you would not they should do unto you."

4. Hebraism (the Jewish religion): "What is hurtful to yourself do not to your fellowman. That is the whole of the Torah and the remainder is but commentary."

5. Hinduism: "This is the sum of duty: Do naught to others which if done to thee would cause thee pain."

6. Islam (Mohammedanism): "No one of you is a believer until he loves for his brother what he loves for himself."

7. Jainism: "In happiness and suffering, in joy and grief, we should regard all creatures as we regard our own self, and therefore should refrain from inflicting upon others such injury as would appear undesirable to us if inflicted upon our selves."

8. Sikhism: "As thou deemest thyself, so deem others."

9. Taoism: "Regard your neighbor's gain as your gain; and regard your neighbor's loss as your own loss."

10. Zoroastrianism: "That nature is good only when it shall not do to another what is not good for its own self."

The eleventh religion, missing from that list, is Shinto, the religion of imperial Japan. Shinto has no Golden Rule.

Mr. Speaker, most of us regard the Golden Rule as the chief, at least the most practical part of our religion. It gives us respect for the other fellow's religion to know that he, too, has the Golden Rule.

The fact that the Golden Rule has been taught by many religions, in many ages, shows that the mind of man has always seen that, by the very nature of humanity, we are bound to live together.

Brotherhood, then, is not something we may choose or not choose, if we would live. Inescapably, we are brothers and must live as such or suffer the consequences.

General Pulaski's Memorial Day

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the American Legion Pulaski Post, No. 562, of the city of Los Angeles, Calif., on January 20, 1950, memorializing the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski Day resolution now pending in Congress:

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the

present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucy, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New Hampshire, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1949, to be General Pulaski's Memorial Day in the United States of America: Now, therefore, be it

Resolved by the American Legion Pulaski Post, No. 562, of the city of Los Angeles and State of California—

SECTION 1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski Memorial Day resolution now pending in the United States Congress.

SEC. 2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, and each of the United States Senators and Representatives from California.

PHILIP A. FINIE,
Commander.
FRANK A. HARASICK,
Americanism Chairman.
JOHN KULCZYK,
Post Adjutant.

Racism at George Washington University

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. KLEIN. Mr. Speaker, there has been brought to my attention a situation in the District of Columbia, at George Washington University, which I feel under obligation to bring to light and to do what I can toward correction.

A statement which I issued to the press today contains the essence of this unsavory story, and I am including that release as a part of my remarks. Since this morning I have been informed by a former GWU student that when he enrolled in a course in the economic history of Europe at George Washington summer school in the second summer term of 1948, he was shocked by the initial lecture by a Professor Ragatz, which outlined and advocated a theory of racial superiority.

It has also been brought to my attention that George Washington University has been the beneficiary of Federal funds from many sources, and that the substantive legislation governing some, at least, of these grants contains specific prohibitions of discrimination. I am taking appropriate steps to ascertain the closest possible estimate of such funds, with a view to insisting that all discriminatory practices cease before any further Federal funds are made available to the university.

The text of my release follows:

In a prepared statement Representative ARTHUR G. KLEIN, Democrat, of New York, today made a slashing attack on bigotry at George Washington University. Congressman KLEIN said:

"On this two hundred and eighteenth anniversary of the birth of George Washington, I am sickened by learning of the recent outburst of religious and racial bigotry in the head of the university which was founded by Washington, which bears his name in the city which is his namesake, and which was chartered by Congress over a century ago with a specific prohibition of discrimination.

"Dr. Cloyd Heck Marvin has in recent weeks, and to my intense sorrow and disappointment, conducted himself in a pattern reminiscent of the late and unlamented Herr Dr. Goebbels. The disgraceful situation at George Washington University, the only Jim Crow institution of higher learning in the District of Columbia, has come to a head in this most completely incongruous time: the week in which we celebrate the memory of the founder of his country; the period proclaimed Brotherhood Week; the week in which the District of Columbia has discovered that its un-American pattern of discrimination and segregation is illegal.

"It was not many weeks ago that the George Washington Hatchet, student weekly, ran an editorial declaring it was time for GWU to rejoin the United States by abandoning its anti-Negro policy. George Washington left 50 shares of Chesapeake & Ohio Canal Co. stock to found a college 'to teach democracy to the people.' James Monroe and John Quincy Adams supported and patronized Columbian College, out of which GWU grew.

"The Newman Club, the Hillel Foundation of B'nai B'rith, and a number of Protestant and secular student groups endorsed the editorial.

"There was no reaction from the president of the university until the Jewish press widely reprinted a brief story sent out of Washington by Milton Friedman, JTA correspondent here.

"Immediately the wrath of Olympus descended on Hillel director Irwin Glatstein. According to the Jewish Telegraphic Agency, Dr. B. H. Jarman called on Glatstein. Not satisfied with Glatstein's assertion that he could not confirm or disavow the statements in the JTA story except as to the resolution, Jarman haled Glatstein before the great man himself for a 1½ hour stormy interview.

"JTA says that Dr. Marvin threatened to have Glatstein fired, and later tried to carry out the threat; that he also threatened to ban Hillel from the campus; that he talked wildly of a Jewish plot against the university and demanded that Glatstein sign a letter dictated by Marvin saying the JTA story was untrue. Rabbi Arthur Lelyveld, national director of Hillel Foundations, was forced to come to Washington in an effort to smooth out the row, in cooperation with the Anti-Defamation League.

"The Jewish community of Washington is up in arms.

"During depression days, Abram Lisner and other Jewish philanthropists bailed out George Washington University when the going was tough. Lisner Auditorium was built by funds bequeathed by Abram Lisner. By his direction the Bill of Rights is inscribed on the walls. His direct command that no discrimination be practiced is openly flouted by barring Negro citizens from the hall. At various times Protestant churches and private philanthropists have helped GWU. Yet so far as I am aware there is not a single Negro student in the university, and the medical school follows the infamous AMA quota system.

"For the benefit of Dr. Cloyd Heck Marvin I want to quote from the famous Washington letter to the Hebrew Congregation at Newport:

" 'The citizens of the United States of America have a right to applaud themselves for having given mankind examples of an enlarged and liberal policy. * * * All possess alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of, as if it was by the indulgence of one class of people that another enjoyed their inherent natural rights. For happily the Government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that they who live under its protection should demean themselves as good citizens in giving it on all occasions effectual support.'

"Gen. U. S. Grant III, grandson of the great American who helped free the slaves, and the man who tried to impose a permanent pattern of segregation on the District of Columbia, is vice president of GWU."

LEGISLATION INTRODUCED IN 1947

In connection with this situation, Mr. Speaker, I wish to remind you and the House that on January 13, 1947, I introduced in the Eightieth Congress H. R. 867, a bill to prevent certain payments by the Veterans' Administrator to any educational or training institution which consistently pursues a policy of discrimination.

The bill was adversely reported by all agencies to which it was referred; and I deferred reintroduction in the belief that I would be able to find time to reword the bill to meet the valid objections made on administrative grounds; and of course there can be no valid objections on ethical and moral grounds.

Under leave, I am including the text of the press release I issued at that time and also the text of the bill:

An amendment to the GI bill of rights to forbid any payments to schools which purport to be nonsectarian but actually discriminate against veterans belonging to minority races or religions was offered today by Representative ARTHUR G. KLEIN, Democrat, of New York. The bill is based on studies of discrimination against GI's in schools of higher education made by the Jewish War Veterans and the American Jewish Congress jointly which reveal that numerous veterans are unable to take advantage of their rights under the GI bill because of the fact that many schools have adopted a quota system limiting the number of Jews, Negroes, Catholics, and persons of Italian descent who may be admitted.

The proposed law would empower the Veterans' Administrator to hold hearings wherever a school is charged with discriminating against veterans. The Administrator would first attempt to eliminate the discrimination by means of conciliation and mediation, but if the school refuses to discontinue the practice the Administrator is empowered to stop all further payments to the offender. Students already enrolled in such a school will continue to receive regular payments. In proposing the bill today, Mr. KLEIN said:

"A GI who was not excluded from the hedge rows of Normandy or the beaches of Okinawa should not be excluded from the so-called educational institutions of our country. Discrimination by an educational institution against a veteran because of his color or religion strikes at the very heart of

the democracy for which he fought. This bill may not eliminate this un-American practice but will at least stop these institutions from feeding at the public trough. There is no reason why the Treasury should subsidize un-American practices."

H. R. 867

A bill to amend Veterans Regulation No. 1 (a) to prevent certain payments by the Veterans' Administrator to any educational or training institution which consistently pursues a policy of discrimination, and for other purposes

Be it enacted, etc., That paragraph 5 of part VIII of Veterans Regulation No. 1 (a) be amended to read as follows:

"5. (a) The Administrator shall pay to the educational or training institution, for each person enrolled in full-time or part-time course of education or training, the customary cost of tuition, and such laboratory, library, health, infirmary, and other similar fees as are customarily charged, and may pay for books, supplies, equipment, and other necessary expenses, exclusive of board, lodging, other living expenses, and travel, as are generally required for the successful pursuit and completion of the course by other students in the institution: *Provided,* That in no event shall such payments, with respect to any person, exceed $500 for an ordinary school year unless the veteran elects to have such customary charges paid in excess of such limitation, in which event there shall be charged against his period of eligibility the proportion of an ordinary school year which such excess bears to $500: *Provided further,* That no payments shall be made to institutions, business or other establishments furnishing apprentice training on the job: *Provided further,* That any institution may apply to the Administrator for an adjustment of tuition, and the Administrator, if he finds that the customary tuition charges are insufficient to permit the institution to furnish education or training to eligible veterans, or inadequate compensation therefor, may provide for the payment of such fair and reasonable compensation as will not exceed the estimated cost of teaching personnel and supplies for instruction; and may in like manner readjust such payments from time to time: *And provided further,* That no payments shall be made to any educational or training institution holding itself out to the public to be nonsectarian which engages in a practice or pursues a policy of discrimination in the admission of, or in providing the full use of its facilities to any such eligible persons, otherwise qualified, by reason of the race, creed, color, national origin, or ancestry of such person or persons.

"(b) Whenever it is charged by a person aggrieved or by an association or organization formed or organized to protect the rights of veterans or the Administrator has reason to believe that any educational or training institution has engaged in the practices of discrimination or exclusion set forth in subparagraph (a), the Administrator shall cause a preliminary investigation to be made, and if such investigation establishes a prima facie case of the existence of any discriminatory practice or policy, he or his representative shall attempt to eliminate the same by conference, conciliation or otherwise. In the event of failure to eliminate such practice or policy, the Administrator or his representative shall hold and conduct one or more hearings, invite or subpena and compel the attendance of witnesses and the production of books, papers, records, and other documents, administer oaths, take the testimony and evidence of the witnesses and reduce the same to writing. The transcript of the minutes of such hearings shall be deemed a public record and a copy thereof shall be given to any person or organization interested therein and requesting same. If after such hearing or hearings, the Administrator or his representative is satisfied that the educational or training institution has engaged in such practices of discrimination or exclusion, the Administrator shall cause such educational or training institution to be placed upon a list of disapproved institutions. No payments shall be made under this part with respect to any eligible person who shall register or enroll therein after the publication of such list of disapproved institutions, but payments shall be continued to be made as provided in this part with respect to eligible persons who theretofore registered or enrolled in such institution.

"(c) Any institution or any person claiming to be aggrieved by a determination of the Administrator pursuant to this paragraph or any association or organization formed or organized to protect the rights of veterans may obtain a review of such order in the circuit court of appeals for the circuit wherein the institution affected is situated or within the United States Court of Appeals for the District of Columbia by filing in such court a written petition within 60 days after the publication of such determinations, praying that the determination be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon the Administrator, and thereupon the Administrator shall certify and file in the court a transcript of the record. Upon the review by the court, the findings of fact by the Administrator when supported by substantial evidence, shall be conclusive. The judgment and decree of the court shall be final subject to review by the Supreme Court of the United States upon certification or certiorari as provided in section 239 and section 240 of the Judicial Code, as amended (U. S. C., 1940 ed., title 28, secs. 346 and 347).

"(d) Any educational or training institution placed upon a list of disapproved institutions may petition the Administrator for removal therefrom. If the Administrator shall be satisfied that the discriminatory practice or policy has been eliminated, he shall cause the institution to be removed from the list of disapproved institutions and it shall thereafter be eligible to receive payments under this act."

Repeal of Excise Taxes on Entertainment

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks I would like to include petitions that have come to my office in recent days from patrons of the movies in my district urging that the Federal excise tax on movie admissions be repealed.

One petition from the United Artists Theater contained over 2,000 names affixed over one week end. Another, from the Town Theater, contained almost a 1,000 names, all willingly and gladly listed. A third from the Bill Robinson Theater also contained almost a 1,000 names.

The petitions state that a tax of 1 cent on each 5 cents of movie admission discriminates against that form of entertainment and unfairly taxes those who seek and need relaxation and entertainment at moderate cost. It states futher that movies have become so much a part of the American way of life, that such a continuing tax upon them imposes an unjust and discriminatory burden.

The House will remember that in the past I have urged the repeal of various excise taxes: First, because many of them were discriminatory; second, because they fell upon those who often could least afford to bear them; and, third, that their emergency need during the war had long since passed.

I feel that excise taxes on movie admissions fall into the same category as excise taxes on telephone, telegraph, and transportatiotn, whose repeal I have urged since 1947. My most recent bill, H. R. 6151, introduced August 26, 1949, would repeal all Federal excise taxes except those of a regulatory character. That would include taxes on telephone, telegraph, transportation, entertainment, and so forth.

As additional petitions are received, I will ask permission that they be recorded.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1950

Mr. LUCAS. Mr. President, recently 15 United States editors made a 3 weeks' journey in Europe studying the operations of the Marshall plan in England, Germany, Italy, and France. One of these distinguished editors was Mr. Edward Lindsay, editor of the Herald and Review of Decatur, Ill. Mr. Lindsay has written a most interesting article about his trip and his convictions and conclusions with respect to the ECA, published in the Herald and Review, and an editorial for the same newspaper entitled "Vital Marshall Plan." I ask unanimous consent that the article and editorial be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

UNITED STATES IS WINNING COLD WAR, BUT RUSSIA IS BETTING WE WON'T FINISH THE JOB—EDITORS SEE ECA GAINS—STAKE RESTS WITH FUTURE

(By Edward Lindsay, editor of the Herald and Review)

The United States is winning the cold war in Europe—with dollars and know-how—but Soviet Russia is betting that we can't or we won't finish the job.

The people of the 19 Marshall plan nations of Europe are grateful for what we have done but turn white at the thought of a United States depression of even modest proportions and regret that we have hesitated to take our own advice of full economic cooperation in Europe for ourselves.

This is a brief summary of the findings of 15 American editors—of whom I was one—just returned from a 3 weeks' visit with political, business and labor leaders of all complexions in England, Germany, Italy and France.

Since the beginning of our program for rebuilding Europe we have spent $8,250,000,000. Large as this sum is, it seems relatively small when compared with the cost

of a hot war. Our economists have not been able to estimate within $40,000,000,000 the cost of World War II. The total figure is somewhere between 340 and 380 billion dollars.

In the forefront of the American cold war leadership are American industrialists, businessmen and labor leaders. Their mission is to help European countries make a success of free-enterprise economics in the United States pattern.

WHO IS RUNNING THE SHOW?

Our top man in ECA is Paul Hoffman, president of the Studebaker Corp. He spends most of his time in Washington, but makes frequent trips to Europe.

W. Averell Harriman, financier, chairman of the board of the Union Pacific until 1946, is the United States special representative located in Paris. He has over-all responsibility for dealing with the representatives of the cooperating countries.

Our labor mission, also located in Paris, is headed by Boris Shishkin, economist for the American Federation of Labor. His job, among other things, is to wean European labor—especially in France and Italy—away from Communist leadership.

The heads of our missions in individual countries include such men as Barry Bingham for France, W. John Kenney for England, and James D. Zellerbach for Italy. Bingham is the publisher of the Louisville Courier-Journal; Kenney is an attorney; Zellerbach is chairman of the board of Fibreboard Products, president of Crown Zellerbach Corp., paper manufacturers, and director of numerous companies and the California State Chamber of Commerce.

It will be recalled that A. E. Staley, Jr., chairman of the board of the A. E. Staley Mfg. Co. of Decatur, has just returned from a year's tour of duty as head of the ECA mission in Norway.

One of the architects of the ECA approach to European recovery was Roy W. Gifford, chairman of the board of Borg-Warner International Corp. A year ago he was making speeches around Illinois and elsewhere urging that we show European industry how to be self-supporting so we would not have to continue to think in terms of relief.

These topflight business executives and labor leaders are working in close cooperation with our State Department representatives on the ground. They are putting hardheaded business judgment behind the United States position as it is discussed by our diplomats and diplomatic advisers.

WHAT HAVE WE ACCOMPLISHED?

The strictly relief stage of European recovery was passed a year ago.

All of the editors felt that genuine recovery, apparent on all sides in Europe in January 1950, had progressed much further than we had heard about through the news accounts that have been published in American newspapers.

Statistically, industrial production is 125 percent of the prewar figure (1938). Agricultural production, on the average, equals prewar production.

The shops are full of goods of all kinds. There is no unemployment in England or France, and the unemployment in Italy and Germany has been sensationally reduced.

These figures do not mean that life is easy for the average European workman—industrial or white collar. All European countries still are operating under wartime wage controls and prices in relation to wages are higher than in the United States and, in many instances, higher than in prewar Europe.

A Paris architect told me that the average Frenchman pays as much as 80 percent of his income for food, but only 5 percent for housing. This last because rents have been frozen at prewar levels.

Our impression was that the architect's statement was an exaggeration but that it is true that food takes a disproportionate share of the European's income.

Inflation, that was running rampant when the Marshall plan started, has slowed to a walk with every indication that it will be stopped entirely. The pound, the D-mark, the franc, and the lira have relatively stable values since devaluation. While there is a black market in money, it now is a relatively furtive and unprofitable business.

In France, for instance, the official rate is 350 francs to the dollar and the black market rate is 380. We heard no black-market quotations for pounds or lire but we were warned in Italy to deal with only reliable people in cashing traveler's checks because of the possibility that we would get counterfeit money.

The reconstruction of buildings destroyed by war in England, Germany, and Italy was so far advanced as to be sensational to the visitor who saw these countries 4 years ago. We did not see the invasion coast of France.

All of the countries of Europe are working hard to develop export business. All of them have plans for getting into the dollar market (the United States, Canada, and some South American countries), but so far they have done the best selling job in the sterling countries.

WHAT IS HAPPENING POLITICALLY?

The European recovery that we saw is reflected in a marked swing to the right in political thinking in all countries.

Prominent members of the Labor Party in England think the party will return to power on February 23, but with a reduced majority. Both the Conservatives and Liberals have real enthusiasm in this campaign.

We got the impression that if the question of nationalizing more industries were put to a vote that a good many people who would vote for the Labor Party would vote against further nationalization. In fact, a minor labor official said that was his opinion.

In Italy about 30 percent of the population voted for Communist deputies in April of 1948 and 70 percent voted for non-Communist parties.

A majority of the deputies were elected as Christian Democrats, the party of Alcide de Gasperi.

This was a remarkable turn around for Italy in response to American aid. All of the Americans we talked with who were in Italy during 1947 thought the Communists could have taken over the Government at any time, but that they deliberately chose to wait for the April 1948 elections so that they could go in legally and without risk.

De Gasperi is regarded by American observers as the finest, most dependable and sincere leader that Italy has ever had. He deserves the characterization of statesman.

For 15 years he was in hiding in the Vatican because of his opposition to Mussolini. When he returned to politics, he had the financial backing of Italian industrialists and the Vatican and yeoman support throughout Italy from Catholic laymen.

He could have formed a Christian Democrat Government, but insisted on bringing in as many of the non-Communist parties as possible. He realized that the vote of 1948 was not a genuine Christian Democrat vote but the result of rallying of the non-Communist voters from all parties.

After the election De Gasperi established a system of collecting dues from party members so he would not need to rely upon industrialists and Vatican financing of party activities.

Since the recovery in Italy the Liberal Party (rightist), which ran the country for 40 years before Mussolini, is gaining in strength.

Most American observers believe that a new election in Italy would see a further loss of Communist deputies and a loss of Christian Democrat votes to the Liberals and Moderate Socialists.

In France the Communists have been the strongest single party and have about 30 percent of the deputies. The second party, the MRP, which is made up essentially of the Catholics of liberal thought, is expected to lose a good many of its followers in the next election to the Radical Socialists (rightists despite the name) and even to De Gaulle's Rally of the French People.

Like Illinois, France has a reapportionment problem. In France this has resulted in too many deputies from some of the districts in which the Communists are strong. An effort is being made to get a reapportionment bill through the Chamber of Deputies. Even if it fails, most observers think that the Communists will lose some seats in the next election.

Of equal significance is the weakening of the Communists' grip on the trade-union movement in Italy and France. In Italy the non-Communist unions are growing rapidly. In France the big Communist union, CGT, is losing membership more rapidly than the non-Communist unions are gaining.

It is becoming increasingly difficult for Communist leaders to deliver their members in nuisance strikes for political effect. The big-shot Communist leaders can send word to a port, for example, suggesting a strike against the unloading of military equipment from the United States. The strike will not come off unless one of the well-known Communist leaders appears in person to demand it. If the French Government sends troops to unload the ships, as it has been doing, there is no violence and no real resistance from the unionists, most of whom did not wish to strike anyway.

WHERE DO WE GO FROM HERE?

Nineteen hundred and fifty is the critical year in nailing down the gains we have made among the 270,000,000 people of western Europe. (This is an increase of 20,000,000 since prewar.)

The word "integration" appears early in every discussion of Marshall-aid plans. By this is meant the reduction of tariff barriers and particularly the elimination of the quantitative quotas on the movement of goods between countries. We also mean simplifying the exchange of money and permitting the freer movement of peoples.

We have been insisting on sound fiscal policies within European countries and the balancing of budgets.

(On this last point, one of the editors asked a American leader if it wasn't embarrassing to demand that European governments balance their budgets in view of our own in the United States. He replied, off the record, that if we would take two-thirds of the good advice we are giving Europe what a wonderful country we would have. He did point out that our savings and reserves made it possible for us to do deficit financing for a little while, but that we could not keep it up indefinitely.)

We already have gotten quantitative restrictions taken off of 50 percent of the import items in each of the countries of Europe. At the recent meeting of the council of European leaders who administer the Marshall plan (OEEC), France took the lead in proposing that restrictions be taken off an additional 10 percent of the import items.

It should be understood that there has been no genuinely free movement of goods in Europe since before World War I. The wave of nationalization that swept through Europe like a plague was the incentive for each nation to try to be economically self-sufficient.

The result of this was that Italy, which has neither coal nor iron ore, attempted to maintain a steel industry.

France, which is not as far advanced as either Italy or England in the textile trade, attempted to create an artificial market for French textile makers within France by erecting not only tariff walls but actually

to set a limit on the quantities of textiles that could be imported regardless of price.

We are at the point now where we are beginning to make actual accomplishments in easing the flow of goods, money, and people throughout Europe and the world on a multilateral basis. The success of this program is the best hope of giving permanence to the European recovery that has been primed with Marshall plan money.

If we stop now, with the program half accomplished, we not only risk losing the gains we have made but laying ourselves open to later greater expenses for a military preparedness budget and for a return to emergency relief grants.

The leaders of ECA planning for European countries have agreed with our officials that they can stand a reduction of a billion dollars in the United States appropriations for the coming year to a total of $3,100,000,000. They have agreed to a further reduction to $1,700,000,000 for the following year, and to an end to the program in the middle of 1952.

WHAT DOES THIS MEAN TO UNITED STATES?

About 75 percent of the Marshall plan money we are putting into Europe returns to the United States. Basically it is a plan to underwrite for Europe purchases in the dollar area. The second largest salesman of goods for delivery to Europe with Marshall plan dollars is Canada, which in turn does a good deal of business with the United States.

While Marshall plan appropriations underwrite European recovery to a considerable extent, they also are a means of underwriting the American economy. We saw United States corn, wheat, and machine tools in all the countries we visited.

A part of the difficulty in the United States coal fields today is the loss of the European market. Coal cannot be economically exported, but we had to export it anyway until British, German, and French mines got their production up and until the electrical generating industry in Europe could be stepped up to an all-time peak.

We will not lose the European market for agricultural and some manufactured goods if the present phase of the Marshall plan succeeds.

Of the countries we visited, only France can feed herself. England, Germany, and Italy must continue to import foodstuffs in large quantities. There is no possibility (because of the available acreage per thousand people) that England, Germany, and Italy can increase agricultural production sufficiently to support their populations.

There is no possibility that Italy, for example, can produce steel in quantities that will satisfy her needs. Fiat automobiles are now being made with steel ingots and bars purchased from Bethlehem and Republic steel companies in the United States. It is not immediately likely that Germany, England, and France can produce steel in sufficient quantities to supply their own needs and Italy's.

WE SHOULD GET IN DEEPER

The real problem in economic and political integration in Europe is the absence of European leadership.

We are attempting to get Europe's 270,000,000 people under 19 governments to work out their own salvation economically with advice and financial aid from the United States but without our actual participation as a party to the decisions.

Historically, England, the banker for the sterling area, has been the only leader Europe ever had. Most European countries feel, and with some justification, that England's only interest in the continent has been to exploit it.

Today, England puts economic integration in Europe in second place to her plans and obligations in reference to the commonwealth. A part of this commonwealth thinking in England is based on her fear of competition from a revitalized Germany. This fear of German vitality and productivity is shared in greater or lesser degree by all the countries of Europe.

It is apparent everywhere in Europe that our plans for integration would move quickly to realization if they were extended to include the Atlantic Pact countries, especially the United States.

It is difficult for us fully to realize the extent to which we are the bellwether in world affairs. We are the leading nation in the world by every measure. It is for us to decide not only the economic and political future of Europe's 270,000,000 people, but the future of our own economy which now is so productive that it cannot operate within the confines of our own borders, a market of 150,000,000 people.

As we decide, we must be aware of the fact that the future world will be slave or free, depending entirely upon which way the people of Europe drift. These people, next to the United States, are the people with the resources and the skills to win a war or win a peace.

If we should permit them to be enslaved by Russia, there is grave doubt if our civilization could stand in anything like its present form 9 hours away by air.

VITAL MARSHALL PLAN

Hearings in Congress will begin February 21 on appropriations for Marshall plan aid to Europe for the next 2 years.

We are now at the half-way point in this program that has a definitely scheduled end on June 30, 1952.

This is not a give-away program as Paul Hoffman says. It is a planned program for making the economy of Europe sound and self-supporting. We do not get into the details of the use of Marshall plan money except to approve the items that the representatives of European countries decide upon.

We get each country to agree upon its minimum needs, then in meetings with representatives of all of the countries to pare these figures down to an over-all total that we think is reasonable.

Each manufacturer or farm organization needing American equipment or commodities, must pay for them in the money of their own countries. The governments of the individual countries make the necessary dollar exchange available to the would-be purchaser out of Marshall plan funds.

The European governments then have what we call counterpart funds. In the case of England these funds are used for debt retirement. In the other European countries they are used for public-works projects such as drainage, irrigation, roads, public housing.

Last year this cost us roughly $4,000,000,000. The total to June 30, 1950 will be about eight and a quarter billions.

Our ECA officials and the representatives of European countries have agreed upon a reduction of a billion dollars for the next fiscal year—June 30, 1950 to June 30, 1951. This makes the appropriation request $3,100,000,000.

The plans for the final year—June 30, 1951 to June 30, 1952—call for an additional appropriation of one billion seven hundred million.

The Marshall plan program, administered by some of the best business brains of this country on a nonpartisan basis, has been accomplishing more than we had a right to expect from it in so short a time. (See Edward Lindsay's report on a recent visit to Marshall plan countries.)

The year 1950 is a critical time in the Marshall-aid program. It is this year that we expect the recovery that has taken place in western Europe to be given permanence through a program of economic integration—a reduction of quantitative quotas, a reduction in tariffs, a stepping-up of the interchangeability of moneys, and the freer movement of peoples.

It would be a mistake for the United States to permit its need for a reduction in the Federal budget—which is real enough—to jeopardize the success of the Marshall program. This program is our best hope not only of continuing to win the cold war, but stabilizing and making sound the foreign markets for American goods so necessary to the success of our own economy.

We should not only finish the Marshall-aid job, but should agree to a further revision of our tariffs to permit a freer interchange of goods between the United States and western Europe, actually between the United States and the rest of the free world.

We cannot afford the consequences of a weak or unstable Europe.

Settlement of Alaska a National Necessity

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. LEMKE. Mr. Speaker, the Alaska settlement bill, H. R. 4424, will come up on the floor before very long. This bill is necessary for our national defense. It is also necessary for the development of Alaska. The Territory of Alaska belongs to this Nation as a whole, not to a few monopolistic corporations, nor to the stooges of these corporations. The rank and file of the Alaskan people want Alaska settled. They know that their future prosperity depends upon that. A few despoilers do not want it settled.

This bill provides for the settlement of Alaska by giving to the homesteaders an enlarged homestead. It permits the Secretary of Interior to designate the lands that will be first surveyed and offered to homesteaders for settlement. These homesteads will be laid out in lots large enough to sustain an American family on the American level. It provides for the sustained yield on a timber claim.

It gives the veterans a 1-year preference whenever an area is opened for homesteading. If we want to get Alaska settled, we must give them more than 160 acres. When our Midwest and West was settled, we gave to settlers a homestead, a tree claim and a preemption, consisting of 480 acres. Later we increased it to the so-called dry farming or desert claims.

That is how the Midwest and West was settled. It was settled by adventurers and pioneers. Tenderfeet are not proper people to settle Alaska, any more than they were fitted for the settlement of the West. It is mere nonsense to think that prospective homesteaders will go to Alaska for 160 acres unless they are given special inducements by the Government as was done at Matanuska Valley.

We are told that Russia has over a million settlers right across the strait. The time has come that we wake up and get Alaska settled. This for our national defense as well as for the development of Alaska for Alaskans and not monopolies.

With my remarks I enclose herewith a letter from the Veterans Alaska Cooperative Co.; also a letter from a veteran in Oregon:

VETERANS ALASKA COOPERATIVE CO.,
Washington, D. C., June 9, 1947.

Re Settlement of Alaska by war veterans.

Hon. WILLIAM LEMKE,
House of Representatives,
Washington, D. C.

DEAR SIR: After many hours of study and investigation in regard to your proposed bill for the settlement of Alaska by war veterans, I am more firmly convinced of the need for assistance by the Government and a public purpose corporation such as would be the position of the Alaska Rural Rehabilitation Corp.

The thousands of requests for information that have been received by Government agencies, as well as our company, is proof that veterans want to settle Alaska. The Canadian Government reports hundreds of requests daily to drive the ALCAN highway. The largest percentage of the inquiries to our company have been made by veterans who want to settle in Alaska and who are married with an average of three and one-half members per family. The average age of these people is approximately 28 years old. This age is important, as it shows a person in the prime physical condition of his life, as well as a balanced mental attitude. These people are not speculators but desire to become good, solid Alaska citizens. Veterans who take their families, and the majority of them will, cannot afford to be gold seekers and adventurers for the sake of adventure.

My investigations show that the contents of this bill are apparently misunderstood by many people. Several remarks have been made that this bill will void present homestead, home-site, and business-site regulations. If this be so, the bill will certainly discriminate and discourage thousands of veterans who wish to make their living in the small-business basis. It is extremely necessary that any veteran should receive the benefits of this bill regardless of the size tract he requests.

Past records show that certain lands have been denied a settler on the ground that it was not properly classified as suitable. It is important that a method such as is proposed in this bill be used to insure the settler absolute minimum of delay due to administrative procedure. The experiences of this company is such that it has cost the individual members much of their private capital that should have been used to make their home in Alaska.

It is unbelievable that any so-called resistance should be stopping the development of Alaska. I have talked with members of the War Department and they agree with us that the industrialization of Alaska with the small "unit-veteran-settler" to expand the hinterlands will be the true defense of Alaska more than the millions being spent to make another Maginot Line. An uncontrolled settlement of Alaska is dangerous, and this is going on right now and will continue. It is therefore important that this bill be put into effect as soon as possible. Should this method be but 20 percent effective, I am sure that it will be beneficial to the settler and Alaska more than the haphazard individual action that is now going on.

History shows that it is always the pioneer who struggles and battles his way through the wilderness and eventually goes bankrupt or dies of the hardship. To let this happen to hundreds of veterans who are once again voluntarily accepting many hardships to improve our country, would be the individual responsibility of all Members of Congress.

A continued delay of any help to Alaska discourages the veteran-settler to such an extent that he is forced to take other work. This has been our sad experience. Veterans who are just out of the armed forces are enthusiastic about such an experiment as the settlement of Alaska. After a year's delay, they will lose this spirit. This bill can be adjusted as problems develop and can be a true aid to the veteran-settler.

Should any member of this committee make a trip to Alaska, our veterans' settlement at Port Chilkoot at Haines, Alaska, will be extremely glad to offer them accommodations as we are sure there are none to compare with it in Alaska. You will get the opportunity of seeing what veterans have done without this bill and can judge for yourselves the great possibilities that are there, with this bill. We again hope to have you as our guests.

Sincerely,

CARL W. HEINMILLER,
Executive Vice President.

RIDDLE, OREG., *January 8, 1950.*

GENTLEMEN OF CONGRESS: Every week I read something in the newspapers pertaining to settlement of Alaska. Seems to me someone wants to get our main line of defense built up so as to defend the greater portion of North America and the population of the United States. A small front like Alaska would be easier and cheaper to defend than the great plains across Canada if our northern line of defense was walked through as Hitler walked through the European countries. Who has control of building up this line of defense? The Army or Navy or Marines don't. Congress does. What does Congress do about it? Nothing but talk. You've been talking 2 years I know about two bills that a Mr. LEMKE has introduced. While you're talking, Russia is rumored to be killing off thousands of slaves by working them to death building up an army and stocking up war supplies not far from Alaska. In other words concentrating on our northern line of defense. Are you going to sit and talk through this session of Congress and let Russia get another year of preparation ahead of us and have another catastrophe like Pearl Harbor except on a larger scale? Russia is acting every hour you talk.

The homstead law (H. R. 4424) introduced by Mr. LEMKE in 1949 should be dusted off and passed. The sooner the better. The Department of Agriculture says wheat, potatoes, all vegetables, some fruit, meat, milk, eggs and many other foodstuffs can be raised in Alaska. In fact it can produce enough for Alaska and its Army with possibilities of some for export. The big drawback that is curtailing this production is transportation. No roads or railroads. Also people who went up to Alaska to fight these odds against making a living couldn't get needed assistance and some couldn't get a title to the land. There are, to my understanding, too many restrictions to the present homestead law. If you will modernize the homestead law or pass H. R. 4424 which provides land and assistance that is all you need to get Alaska settled. The assistance is for the man who will go because the man that has a bank account necessary to put him through a year in Alaska starting a homestead isn't walking off his job, comfortable home, and security to go up there. He isn't the pioneer type. Which of you gentlemen will give up your job for a homestead in Alaska? This assistance is to be paid back but even if you didn't get a cent back it would be as some gentleman said in one of your hearings last year if you want airplanes you pay a subsidy; what for? Nothing. If you want butter you pay a subsidy; what for? Still nothing. But if you pay a pioneer a subsidy to stay on his homestead, what do you get? More pioneers and a stronger home front or line of defense.

A pioneer will need equipment to clear lands, tools to build with, tools and machinery to produce, trucks for transportation, the market is already available and will increase with each family that comes to Alaska. Each homestead will decrease the unemployment roll of 5,000,000 of today. Each timber homestead claimed and worked will start competition which will bring prices of lumber down so that the lower-income people can afford to buy lumber which in turn will give another man a job further decreasing the unemployment roll.

Under this homestead bill, H. R. 4424, if I were to go and stake a claim I probably would have a neighbor or two soon after I got started building a house. Soon there would be enough people to start a school, have a church, need a store and post office and other business and community establishments.

If you want Alaska settled pass H. R. 4424, or one similar, include a subsidy clause, which I say is to be paid back by 95 percent of total assistance loaned. (Check your veteran-loan figures.) Pass it by April 1, 1950, and I'll be in Alaska on April 30, 1950. All I need is assistance after I get there and I know two more families that will drive alongside me.

I am sure I wouldn't get lonesome going or be lonesome after I got settled. These two men are good, hard-working men who would be the makings of a good settler. I have a truck and a semitrailer and also a portable sawmill. Plenty of hand tools and enough furniture. I could get to Alaska and carry another family's furniture but I couldn't eat very long with my small cash outlay. I couldn't work at public works and build a home and clear land. I personally would need a loan to buy food and some building materials as nails, windows, and roofing and equipment to get my homestead to produce a living and repay the loan.

I would like to ask you to remember the VFW Resolution No. 5 pertaining to veteran settlement for Alaska when you pass this bill. Or are you going to pass up the opportunity to get Alaska settled and let Russia walk in our back door and ram a bayonet down our throat and make us like it?

It is up to you gentlemen of Congress to do something besides talk. Talk is all right sometimes but not right now. Action is needed. I would fight a bear (Russia) with a gun until I dropped but I would run if I were barehanded. Are we going to be caught barehanded again?

Thank you.

RALPH L. MEALER, JR.

Japanese Naturalization Bill

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I should like to call to the attention of the Members of this distinguished body the fate of House Joint Resolution 238, a resolution to remove the racial restrictions which prevent the naturalization of some 90,000 resident aliens of Japanese and Korean descent in this country.

This joint resolution was adopted by the House unanimously last year and was unanimously approved by the Judiciary Committee of the other body last fall.

When it came up on the floor of the other body under unanimous consent on February 1 of this year, objection was raised and the resolution was passed over.

Fear has been expressed in certain quarters that if this resolution is adopted all sorts of aliens at present in this country because of special status—students, treaty merchants, and so forth—would be blanketed in and naturalized.

Not only is that not true, but both the House and Senate reports expressly state that this resolution does not affect the status of any but long-time permanent residents. Therefore, it does not, and cannot, affect any persons who have come in under special arrangements, whether by treaty or otherwise, with other countries.

Injustice and racial prejudice in our naturalization laws must not be permitted to continue. These persons of Japanese and Korean descent have been residents of this country for more than 25 years. They have demonstrated their loyalty and devotion to their adopted country these many years. Almost all of them had sons and daughters who served the armed services during World War II, and many with distinction.

In all fairness to this minority in our midst, we should hasten to correct this all-too-long injustice and inequity by removing race restrictions from our naturalization procedure, and granting to these people the recognition and dignity which is justly theirs.

I sincerely hope when this resolution comes up again in the Senate it will be unanimously approved, as the House has long since done.

In the Shadow of the Sun and Death

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1950

Mr. MYERS. Mr. President, I recently received from the editor and publisher of the Wynnefield Forum, Mr. S. Bakove, a copy of a poem entitled "In the Shadow of the Sun and Death," of which he is the author, and which was published in the February 11 edition of his paper. I ask unanimous consent that the poem be printed in the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

IN THE SHADOW OF THE SUN AND DEATH

(By S. Bakove)

Hush and rush: a ghastly mission—
Fission, fusion, and then perdition.
Ah! S-U-N is the clue:
A strong UN is overdue.
Foreboding stuns the world.
An H-bomb hurled
May doom to incandescence
And gradual evanescence
The very earth we tread.
The havoc we so dread
As to induce delirium
When pondering the chaos deuterium
Wed to helium may beget,
That cataclysm may be averted yet.
Renounce all war: that's the quintessence,
Or be adjudged supreme assassins.
Hasten, lest a chunk of Sun
Blast us to oblivion.

Morganza Floodway Funds Badly Needed

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 22, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit an article by Mr. George W. Healy, staff writer of the New Orleans (La.) Times-Picayune, published on February 19, 1950, as follows:

MORGANZA FLOODWAY FUNDS BADLY NEEDED—PROJECT IN PROGRESS 12 YEARS STILL NOT FINISHED

(By George W. Healy, Jr.)

The Morganza floodway has been in the talking and planning stage for 22 years.

It has been a-building for 12 years.

But today, with backwater forcing thousands of families from their homes just upstream from the point where the floodway would relieve the Mississippi of thousands of cubic feet of water each second, the Morganza floodway is not ready for operation.

Louisianians are asking "Why?"

The only thing the United States engineers need to complete the floodway is money.

This is the statement of Brig. Gen. Peter A. Feringa, president of the Mississippi River Commission, who recently told a congressional Appropriations Committee that completion of the floodway is a vital need.

TWENTY MILLION DOLLARS SPENT

The United States has spent about $20,000,000 in work on the floodway. Actual allocations have been $20,811,597, including $1,781,000 for a combined control structure and rail and highway crossings at the point where the floodway touches the Mississippi River.

The engineers estimate that $18,899,000 more will be required to complete the project.

First legal step toward building of a spillway from a point near Old River, north of Baton Rouge, to the Gulf of Mexico was taken in 1928, when Congress adopted the Flood Control Act.

That first act contemplated a floodway along the right bank of the Atchafalaya River from its source to the Gulf. The Atchafalaya runs out of Old River, near the point where the Red River runs into Old River—the stream which connects the Old and the Mississippi Rivers.

SUBSTITUTE PROJECT

In 1936, Congress amended the Flood Control Act of 1928 to substitute the Morganza floodway for the so-called East Atchafalaya floodway. Morganza floodway would take water direct from the Mississippi below Old River and drain it into the Gulf over a route partially the same as that planned earlier for the East Atchafalaya floodway. The latter project would have taken water from Old River, instead of from the Mississippi.

In 1938, a modification in design for the project was adopted, and work on the Morganza floodway, as such, was started. This work was interrupted by World War II and was resumed in 1946.

In reply to an inquiry from the Times-Picayune, General Feringa reported Saturday that by June 1950 all parts of the floodway with the exception of the control structure will be essentially complete. This means that the guide levees will stretch from the Mississippi River to a point near the Gulf, that rail and highway bridges over the spillway will be operating, and that incidental works, such as canal locks, will be installed.

DAM FOR CONTROL

The control structure, for which only $1,781,000 had been allocated, will be a dam, or weir, over which will be a railroad and highway crossing.

This dam will be used, when it is complete, to permit water from the Mississippi to flow into the floodway or to stop it from flowing into the floodway—as conditions dictate. It will be operated just as the United States engineers operate the Bonnet Carre spillway, opening or closing it at will.

Demand for completion of the Morganza floodway was loud in north Louisiana in 1945, when backwater covered large acreage in Concordia and Catahoula Parishes—just above Old River. The demand, as expected, died down when the waters subsided. Now, with about 7,000 families evacuated from backwater areas, the demand is louder than ever.

Completion of 17 cut-offs in the Mississippi River between Memphis and Old River has aggravated the backwater problem in the Concordia-Catahoula area. By shortening the big river, these cut-offs have speeded the flow of water in the stretches where they have eliminated bends in the stream. As a result, water flows from Memphis to Old River faster than it did before the cut-offs were made. However, the Mississippi River channel below Old River is no larger than it was before the cut-offs were dredged or blasted. A greater proportion of water is reaching the Gulf by way of the Atchafalaya than was the case before the cut-offs, but the Atchafalaya's carrying capacity is limited by the size of its channel, which is enlarging.

FAVORS SHORTER ROUTE

From Old River to the Gulf by way of the Mississippi River is 322 miles. From Old River to the Gulf by way of the Atchafalaya River is 159 miles. Naturally, the water seeks to follow the shorter route, but it can't flow to the Gulf any faster than available channels can carry it.

The Morganza floodway would be an added channel, speeding the flow of water from a point where it is being "piled up" by the new channels, or cut-offs in the river, upstream.

The "piling up" of water in the Old River area is blamed by Concordia and Catahoula Parish citizens for the flooding of towns and farms which formerly had no difficulty with backwater. They believe that opening of the Morganza floodway would stop the backing of water up the Red and Black Rivers.

But, Morganza floodway isn't ready for operation—yet. It's only half finished—measured in dollars and cents.

Given adequate appropriations, General Feringa says the engineers will have the floodway finished before high-water time in 1953.

"The rate of engineering progress," said the general, "is entirely dependent upon congressional appropriations."

FHA Discriminates Against Indians Under Housing Law

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mr. CASE of South Dakota. Mr. Speaker, a most unfortunate ruling has been made by the solicitor in the Department of Agriculture. It makes a mockery of all this talk that the Truman

administration is opposed to racial discrimination.

Under permission given by the House, I include herewith a letter from the Administrator of the Farmers Home Administration to Felix S. Cohen, attorney for a number of Indian tribes, and Mr. Cohen's reply thereto. They tell the story:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FARMERS HOME ADMINISTRATION,
Washington, D. C., January 31, 1950.

Mr. FELIX S. COHEN,
Washington, D. C.

DEAR MR. COHEN: In your letter of December 22, 1949, you raised a number of questions regarding the eligibility of certain Indian tribes for the benefits of the financial assistance authorized under title V of Public Law 171 (81st Cong.). We referred your letter to the Office of the Solicitor of the United States Department of Agriculture, and in reply we received the following comments:

"I. TRUST PATENTS

"According to Mr. Cohen's letter most of the land in the reservations of the Blackfeet Tribe, the Omaha Tribe, and the Ogiala Sioux Tribe has been allotted to individual Indians in severalty under trust patents as provided by the act of February 8, 1887 (24 Stat. 388). The trust patents in effect provide that the holders thereof are only entitled to the use and possession of the land, legal title being retained by the United States, and that the land cannot be alienated while the United States holds legal title thereto. The act of June 18, 1934 (48 Stat. 984 (25 U. S. C. 462)) extended the trust period and the restraints against alienation indefinitely.

"Section 5 of the act of February 8, 1887, as amended (25 U. S. C. 348), provides that any conveyance of, or any contract made touching, allotted lands prior to the expiration of the trust period shall be null and void and, as stated above, the trust period and the restraints on alienation have been extended until otherwise directed by Congress. The holders of trust patents will not be entitled to fee patents to their lands until it is determined that they are competent to handle their own affairs. The act of May 14, 1948, 62 Stat. 236 (25 U. S. C. 483) authorizes the Secretary of the Interior in his discretion and upon application by Indians holding land under trust patents to remove the restrictions against alienation and issue fee patents.

"One of the requirements of eligibility set forth in section 501 (c) of the Housing Act of 1949 is that the applicant must be the owner of a farm. Since section 502 (b) of said act requires that each farm housing loan be secured by the equity of the borrower in his farm, it is our view that the term 'owner of a farm' as used in the act contemplates that the applicant have such an interest in his farm that he can alienate or encumber it. Inasmuch as Indians holding land under trust patents cannot alienate their land or their interests therein, it is our opinion that they would not qualify as being 'owners of farms' and for that reason would be ineligible for Farm Housing assistance.

"II. FEE PATENTS

"On the reservations of the Blackfeet, Omaha, and Ogiala Sioux tribes part of the land is held in severalty by individual Indians under fee patents. It is our opinion that these Indians would qualify as being owners of farms, providing the land falls within the definition of a farm as set forth in section 501 (b) of the Housing Act of 1949, since the issuance of a fee patent removes the restraints against alienation and enables the Indians to deal with their property the same as any non-Indian. See *Larkin* v. *Paugh* (276 U. S. 431 (1928)); *Marks* v. *Brooks* (32 F. Supp. 422 (1940)); section 6 of the act of February 8, 1887, as amended (25 U. S. C. 349).

"III. TRIBAL LAND

"As stated in Mr. Cohen's letter, part of the land comprising the reservations of the Blackfeet and Omaha tribes is unallotted, held in tribal ownership, and occupied by tenants of the tribe for grazing and agricultural purposes. These tribes have been incorporated under a Federal charter issued by the Secretary of the Interior under section 17 of the act of June 18, 1934 (48 Stat. 988, 25 U. S. C. 477), and exercise the usual powers of a municipal corporation. On the reservations of the San Carlos Apache and Hualapai tribes, all the land is tribally owned and is occupied by Indians as tenants of the tribe for grazing and agricultural purposes. These tribes also have been incorporated pursuant to the authority cited above. Likewise on the reservations of the Pueblos all the land is held by the tribes, the tribes having been incorporated under an act passed by the New Mexico Territorial Legislature in 1847, and is assigned by the tribe to its members for occupation and agricultural purposes. On the reservation of the Ogiala Sioux tribe, an unincorporated association, certain lands are held by the tribe and occupied by tenants of the tribe for agricultural purposes.

"Land held by the tribe constitutes the public property of the tribe and the individual members of the tribes do not have a vested interest in any specific part of such land, although they may have a perpetual right of occupancy in the lands occupied by them under the laws of the tribe. See *Tuttle* v. *Moore* (3 Ind. T. 712, 64 S. W. 585); *Crowell* v. *Young* (4 Ind. T. 148, 61 S. W. 607); *Sizemore* v. *Brady* (235 U. S. 441 (1914)); *Franklin* v. *Lynch* (233 U. S. 269 (1914)). A member of a tribe cannot alienate or encumber tribal lands occupied by him because tribal lands can only be disposed of by treaty or convention as provided in R. S. 2116 (25 U. S. C. 177). Inasmuch as members of a tribe do not have an alienable interest in the land they occupy, it is apparent that they would not qualify as being the owners of farms for the reasons hereinbefore set forth in our consideration of Indians holding trust patents.

"Until 1871 Indian tribes were recognized by the United States as being nations for treaty purposes. However, the act of March 3, 1871 (25 U. S. C. 71), made all Indian tribes subject to the legislative power of Congress. Nevertheless, Indian tribes are distinct political communities as long as the tribal relation is maintained and possess powers of local self-government. The internal affairs of Indian tribes are controlled and directed by a tribal council which is established pursuant to the tribal charter or constitution. The council so established can enact whatever laws and regulations which are deemed necessary for the government of the tribe and the control and use of tribal property, providing such legislative action is not inconsistent with the laws and Constitution of the United States. See 27 American Jurisprudence—Indians, sections 6, 7, and 9. Since Indian tribes may properly be classified as being corporate or quasi corporate bodies politic, we are of the opinion that farm-housing loans cannot be made to Indian tribes as such in view of our previous determination that farm-housing assistance could only be extended to natural persons.

"In conclusion, it is our opinion that only those Indians occupying land under fee patents can be considered as owners of farms and as eligible in this respect for farm housing assistance.

"In view of our determination that Indians holding land under trust patents cannot be considered owners of farms for the purposes of the Housing Act of 1949, and that Indian tribes are ineligible for farm-housing assistance because the act limits assistance to natural persons, it is not necessary to consider the instruments used by the Department of the Interior to pledge income from trust property as security for loans made pursuant to the lending programs carried on by that department."

The comments of the Office of the Solicitor explain the position of the Farmers Home Administration with respect to the eligibility of Indians for farm housing loans and grants. If you have further questions on this subject we shall be glad to discuss them with you.

Sincerely yours,

DILLARD B. LASSETER,
Administrator.

WASHINGTON, D. C., *February 6, 1950.*

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: The decision of the Farmers Home Administration on January 31, 1950 (copy attached), declaring about 400,000 American Indians ineligible for farm housing loans, will shock all consistent supporters of the civil-rights program to which you have given such courageous leadership.

As attorney for the Blackfeet Tribe of Montana, the Omaha Tribe of Nebraska, the Ogiala Sioux Tribe of South Dakota, the Hualapai and San Carlos Apache Tribes of Arizona, and the All-Pueblo Council of New Mexico, comprising some 40,000 of our first Americans, I appeal to you to end this executive discrimination.

Of all the racial strains that make up our America, our Indian fellow-citizens are probably most in need of Federal housing aid. They do not ask for any special favor to them as Indians. All they ask for is fair treatment as American citizens.

There is no excuse in law or in public policy for denying to Indians the aid that is now given to home owners of every other race.

Your own humane concern for Indian welfare is beyond question. I had the best possible evidences of that concern when I served as Associate Solicitor under your first two Secretaries of the Interior. Equally clear is your consistent backing of housing aid for the ill-housed rural population of our country. Your concern for the principle of equal rights to all, regardless of race or ancestry, is clear to all of us, and is particularly clear to me. When I called upon you at the White House 3 weeks ago you made it perfectly plain that the executive branch of the Government was fully and wholeheartedly committed to the principle of nondiscrimination. Unfortunately, as we both have reason to know, the executive branch of the Government contains a good many otherwise decent Americans from whom the principle of nondiscrimination receives only lip-service.

Lip-service to the principle of nondiscrimination in the Farmers Home Administration begins and ends with the Administrator's first regulation on applicants:

"In considering the qualifications of applicants to receive farm housing assistance, no discrimination shall be made on the basis of race" (sec. 302.1, 14 Federal Register 6546).

The decision of Farm Housing Administration to exclude Indians (except for the 1 percent or so of Indians who hold lands under unrestricted fee patents) from the scope of the Federal rural housing program is not based on the existence of any other special fund for Indian housing. There is no special housing fund for Indians in any other department or agency. Until now Indians have been led to assume that their applications for farm housing loans or grants would receive impartial consideration.

The decision of the Farmers Home Administration is inconsistent with the settled policy of other departments and agencies of the Federal Government to treat Indian land

owners on a par with other land owners in the allocation of Federal assistance.

The only grounds given for the decision are technicalities more specious than any "grandfather clause" technicality ever invented to justify discrimination against an outcast minority without using racial terms.

The first argument advanced is the senseless contention that Indian land owners have no equity in their lands. The Supreme Court has consistently held that the entire equitable estate in Indian lands is vested in the Indian owners. *United States* v. *Paine Lumber Co.* (206 U. S. 467); *Shoshone Tribe of Indians* v. *United States* (299 U. S. 476).

The second of the solicitor's arguments is that Indian land owners are not owners of land because their lands are protected by acts of Congress from alienation. These acts of Congress were passed in all good faith to protect, and not to deny, the land-ownership rights of Indians. Their land "is not the land of the United States" (*United States* v. *Paine Lumber Co.* (206 U. S. 467, 473)). Your Secretaries of the Interior for many years have encouraged Indians to hold their lands under these congressionally authorized protections. Under that form of tenure, Federal loans based upon Indian land as security have been repaid with a delinquency rate of only one-half of 1 percent.

The Farm Home Administration appears to be in fundamental conflict with Interior Department Indian policy in suggesting that any Indian, to qualify for housing loans from his agency, must give up his right to Federal protection.

The final argument of the Farmers Home Administration is that individual Indians are not entitled to loans as farmers because Indian tribes are really corporations. It would make just as much sense to say that workers who are members of incorporated labor unions are not employees entitled to the protection of labor laws.

No other department or agency of the Government has found any difficulty in recognizing that Indians are human beings.

Even the Department of Agriculture made Farm Security loans to Indians. The ridiculous character of this argument is shown up by the fact that it is applied even to the Oglala Sioux Tribe, which never has incorporated. It assumes that these Indians are a quasi corporation. So, I suppose, are all of us who are members of any cooperative, trade association, labor union, or other organization.

Obviously, an agency that will invoke such legal cobwebs to disqualify an entire race from the beneficent protection of your rural housing policy will not be influenced by legislative or judicial authorities, and I therefore refrain from citing here the statutes and the decisions which establish the invalidity of each of these arguments. In any event, the authorities are collected in the Handbook of Federal Indian Law which I wrote for the Government some years ago.

There are two things that you can do, as President, to right this latest injustice to our Indian fellow citizens. You can instruct your Farmers Home Administrator to reverse his decision. Or you can ask the Budget Bureau to arrange for, or recommend to the Congress, the allocation of a reasonable portion of Federal farm housing funds in current and future appropriations to some agency that will be willing to consider the housing needs of our first Americans, our own original displaced persons. I would estimate that of the 700,000 or so farm homes most in need of Federal loans or grants for improvement, approximately 70,000, or 10 percent, are owned by Indians. I suppose the Commissioner of Indian Affairs can give you a more precise figure on this.

Here is a situation in which two Departments of our Government, Agriculture and Interior, are at odds on Indian policy and Indian law, and the result is Indian suffering, disease, and everything that goes with bad housing and racial discrimination.

In such a dispute between Departments only the President of the United States can set right the injustice that is being done. The 40,000 Indians that I represent appeal to you to set right this injustice. I think that millions of my white fellow Americans will join in that plea. What is at stake here is basically the issue of Executive respect for civil rights.

Indeed, the Farmers Home Administration is attacking the most basic and most widely supported of all civil rights when it attacks the principle that the Federal Government, in its public services, is equally the servant of all its citizens.

Respectfully yours,

FELIX S. COHEN.

Mankind at the Crossroads

EXTENSION OF REMARKS

OF

HON. FRANK P. GRAHAM

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. GRAHAM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the junior Senator from Tennessee [Mr. KEFAUVER] at the Young Democrats' rally in Greensboro, N. C., February 11, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great honor which you have shown me to invite me to address this large and enthusiastic meeting of the Young Democrats of North Carolina. I am glad to have the opportunity of speaking in the home district of my friend, CARL DURHAM, who is a conscientious Member of the House of Representatives and with whom I enjoyed serving for many years. Also I note that present here tonight is Congressman HAMILTON JONES of Charlotte, with whom I have served in the House of Representatives and whom I call my friend.

I am delighted to be here with Senator FRANK GRAHAM, who I think is one of the great statesmen of our times. As a matter of fact, I have much admiration for both of your United States Senators. Senator HOEY is a very conscientious, hard-working statesman, and of course FRANK GRAHAM has already made a remarkable impression for the good in the United States Senate.

It should be noted that North Carolina in recent years has been furnishing many most capable men and women to the national scene. Such people as Mrs. Gladys Tillett, Gordon Gray, Kenneth Royall, Jim Webb, Jonathan Daniels, Lindsay Warren, Lamar Caudle, and many others whom I could name, have brought much credit to this great State and to the Democratic Party.

The newspaper headlines of the past 2 weeks have dramatically spelled out for us again the brutal fact that mankind stands at the crossroads.

By direction of the President, the United States is moving ahead with production of the hydrogen bomb—a weapon supposedly 1,000 times more destructive than that which wiped out Hiroshima.

The ink was hardly dry on the front pages carrying this announcement when we were confronted by another, equally shocking—that our plans for this bomb may lie, even now, in the hands of a potential enemy.

We cannot help but feel a certain sense of futility at a time of such developments as these.

It must seem to most of us that the individual is powerless to halt this headlong race toward chaos—that the individual is hopelessly victimized by forces over which he has no control.

Inevitably we ask ourselves—what can I do? What possible influence can we, who are gathered here in Greensboro, N. C., bear upon a future decision of peace or war to be made halfway around the globe—particularly when that decision rests with men to whom an appeal to reason, or an appeal made in the name of humanity itself, would probably be fruitless.

We shall find our answer, I think, if we reexamine the over-all strategy with which the United States attempts to insure a lasting peace among nations and if we seek to relate our individual thinking and action to that strategy.

We Americans are motivated, first, by the faith that a world in which men enjoy the full fruits of freedom will be a world at peace; a world in which the orderly processes of popular, representative government can function effectively will be a world at peace. Nations where there is a true expression of popular will do not provoke wars. Free nations do not promote those economic and social conditions which drive men to fight through desperation, greed, fear, or hatred.

In support of this principle we are providing economic assistance, to the limit of our present capacity, to Europe—where the two great wars of this century began where free men today are waging a mighty effort to stem the tide of Communist tyranny. The aid we have offered so far was given just in time to rescue a continent from the jaws of oppression and slavery.

We are studying a program of economic aid on an even broader scale under the proposed point-4 program. Through this policy, we envision the use of American capital to provide higher standards of living for other areas where modern industrialization and democratic government are still a novelty.

A second principle which guides our planning for peace is that cooperation among nations is essential to world order. This lesson we neglected to learn a generation ago, and we paid for our oversight with 300,000 American lives.

Formation of the United Nations, even before the end of World War II, gave us high hopes that through international cooperation the many grave problems of the postwar era would be solved. These hopes faded fast with the realization that the Soviet Union felt no genuine desire to approach such issues in a cooperative spirit.

Hence we felt the necessity to draw ourselves closer into the fellowship of other free nations. The signing of the North Atlantic Pact exemplifies this third principle of our strategy for peace—that those nations which earnestly seek a free and peaceful world must work in closest harmony, utilizing their collective moral force to challenge the ambitions of any aggressor. The Atlantic Union Resolution, now before the United States Congress, providing for a limited federation of the Atlantic democracies, is a logical successor to the Atlantic Pact—and is, indeed, a forward step along the path toward effective world government.

The fourth principle is another which the democracies failed to grasp in the aftermath of World War I—that an aggressor nation knows no language but that of force, that military weakness invites armed attack.

We in the United States have built the strongest, most efficient peacetime Military Establishment in world history. We are providing arms for our friends abroad.

We do not intend to be caught asleep at the switch.

We do not intend to give anyone the idea that the democracies will be a push-over.

And if there is some consolation that we may derive from development of the hydrogen bomb, we can assure aggressive powers that we will strike back with as devastating a blow as any that may be loosed against us.

Economic assistance to Europe—full support to the United Nations—Atlantic cooperation—strengthened military defenses: These are the tangible weapons in the arsenal of peace which we are forging today.

These tangible weapons are costly.

They consume nearly three-fourths of our tremendous Federal budget.

They are investments we cannot afford not to make, even though years may pass before they yield the dividends for which we fervently hope.

But the intangible weapon we possess provides the key to our salvation.

Our intangible weapon contains the destiny of civilization itself.

That intangible weapon is the vitality, the creative energy, of the free democratic system we have fashioned here in America.

It is clear that the free economy of the United States must be, for at least a generation, the foundation of world order and peace.

If we permit our economy to remain static, or if we revert to the old cycle of boom-and-bust, we cannot possibly meet the cost of those economic and military aids which help to preserve an uneasy peace.

However, the necessity that America remain strong and secure is not merely a matter of dollars and cents.

The people of the world who yearn for freedom and peace need our dollars, our arms; but they need something more.

They need a living example of a fundamental truth—that freemen, and freemen only, can enjoy the abundant life on this earth.

It is this faith which will sustain them when all else fails.

If we cannot continue to make democracy work here; if we cannot maintain a productive, ever-expanding economy within the framework of free enterprise; if all Americans cannot share the liberty, justice, and opportunity which is our birthright, all will be lost. Where else, but America, can mankind find that faith and hope without which it cannot survive?

Our contribution, as individuals, to the cause of world peace can only be made in the forging of this intangible weapon—the vitality of a free America.

We cannot enter the walls of the Kremlin—nor the halls of the United Nations—to alter the deliberations and the policies which evolve there.

But in our homes, our towns and cities, we have the opportunity to work actively for peace—by seeking to assure for all our people the full realization of the democratic ideal.

We have the opportunity to keep alive the hopes of a despairing world by proving, in our own communities, the lasting worth of the free society.

We have in our country today an unparalleled oportunity for economic advance if we have the courage to take advantage of it. We have relatively full employment and a high rate of national income. A tremendous demand for consumer goods and services remains unfilled. American technology almost daily is developing new products which contribute to more comfortable living for all. Perhaps most significant, we have brought under control many of the destructive forces which lead to depressions. We understand, more clearly than ever before, the nature of these upheavals which gnaw at the foundations of free enterprise—which, uncontrolled, would destroy it. We have legislation which enables industry and the individual to weather periods of minor decline and uncertainty.

President Truman, in his recent state of the Union message, pointed to the phenomenal growth of the American economy in the past 50 years.

Our national production has risen in value from $50,000,000,000 a year to $255,000,000,000.

The income of the average family, in terms of buying power, has doubled.

The average hours of work have declined from 60 to 40 hours per week, while the hourly production of the average worker has tripled.

Average wages have increased from 45 cents an hour to $1.40 an hour.

The President predicted even more remarkable expansion in the next 50 years. He estimated that our total national production in the year 2000 will be nearly four times as much as it is today, and that family income will be about three times as great as in 1950.

You who may still justifiably regard yourselves as young must experience a keen sense of expectancy as you stand on the threshold of this half-century—as you consider the richness of our Nation's promise which our President outlined for us.

With such expectancy there should come an evaluation of the responsibility you have to see that promise fulfilled.

It is gratifying that you indicate, through your membership in the Young Democratic organization, your willingness to accept a share of that responsibility.

Let us think for a while of the particular sphere in which you will work to mold a stronger, more free, more democratic nation in the years ahead.

Your first sphere of action will be one of geography.

Most, if not all of you will live out your span of years here in the South—and I have no hesitancy in asserting that the South can take its place in the very front rank of the tremendous economic advance we anticipate. Today we may accurately describe the South as the Nation's No. 1 economic opportunity. A new spirit is stirring here which has startled the Nation. While we conquered the last geographical frontiers of the Nation many years ago, the South is one economic frontier whose possibilities have never been fully explored.

Your responsibility is all the more challenging, and its acceptance will be all the more exciting, because the South has a potential more vast than any other section of the Nation.

We southerners frequently have cause to wonder why we attract so much attention from writers, scholars, journalists, and political leaders outside the region.

It seems that there are thousands of experts and would-be experts on the southern problem—but we never hear about a northern problem, an eastern problem, or a western problem.

One might think we in the South have a monopoly of all the problems on the American scene.

I believe we may well regard these commentaries as compliments, whether they are intended to be such or not.

The fact is that the South today is the most interesting, the most significant, region of our Nation.

The South is interesting because our pattern of living is more complex than that of any other part of the country. The fact that we manage to live harmoniously and fruitfully despite these complexities is something of a tribute to the character of our people.

The South is significant today because of its very diversity—because, in some ways, we southerners live, think and act differently from our fellow Americans.

Those qualities of mind and heart which distinguish us as southerners are rightfully the subject of national comment. Our way of life is of concern to all the American people. The South can no longer isolate itself from the rest of the Union. At a time when national unity in the common cause of peace and freedom is essential, it is imperative that we minimize the effects of the diversity.

These distinctive characteristics of the South do, indeed, merit the attention of other Americans.

But they deserve our attention more. It is we—and we alone—who must determine the South's course in national affairs.

Let us not deny that we have problems, merely because an outsider happens to mention them.

Let us freely admit that we do have complex problems—let us talk about them frankly—and move courageously ahead to seek their solution.

No one has ever condemned the South for refusing to stand still.

Volume upon volume have been written by southerners and others who have sought to dig deep to the root of the South's problems. Perhaps I risk gross understatement and repetition in outlining a few of those problems here.

No discussion of the South today would be accurate if it did not point to our unique political system as a matter for our concern.

The one-party system which is deeply rooted in our tradition undoubtedly works to our advantage as Democrats.

However, if we look beyond partisan considerations, we see that this archaic structure is neither normal nor desirable because it saps the vitality of our political institutions here, and has widespread effects on national policy.

In many of our Southern States, absence of an opposition party destroys the incentive of the Democratic Party to provide sound, serviceable government—and to attack vigorously those conditions which are properly the concern of government.

The absence of an opposition party has too often contributed to the development of corrupt, entrenched machines.

It has permitted the rise of demagogs who do not pretend to voice the genuine opinions, nor to execute the will of the majority of the southern people.

Because it has destroyed political competition and interest in government matters, the one-party system is largely responsible for the failure of southern citizens to exercise regularly their privilege to vote. The South lags far behind the Nation in the percentage of registered voters who participate in primaries and elections. The State of Ohio outranked my own State of Tennessee about 3 to 1, in this respect, in elections for governor from 1920 to 1946. About 58 percent of the eligible voters of Ohio went to the polls in these elections, while we in Tennessee had a turn-out of 18 percent in the Democratic primaries over the same period.

This pattern extends to too many States other than my own.

Surely none of us can take pride in a political system where the majority of potential voters, either through artificial methods designed to hold down the vote, or through lack of interest, do not participate in the affairs of their government.

The suggested amendment to alter the electoral college offers great promise that we may some day have a two-party system in the South. However, until we have Republican leaders in the South who are more in-

terested in principles than in patronage, our improvement will be retarded.

We must remember that as long as we have one-party domination, the South will not receive from either major party the consideration to which it is entitled in the determination of policy.

Many commentators have suggested that the basic trouble of the South was for many years an impoverished economy—that economic development is the answer to all our problems.

Not so many years ago, Franklin Roosevelt described the South as the Nation's No. 1 economic problem.

We did not like to be labeled that—but there was considerable justification for it.

For nearly three-quarters of a century the South had trailed the Nation in almost every measure of economic progress.

Our farmers were shackled to a one-crop agriculture.

Our soil was being rapidly depleted.

Our industrial development was retarded by a lack of wealth for capital investment.

Our State governments and municipalities were too poor to provide the people adequate educational and medical services.

Millions of our people lived in abject poverty.

We have witnessed dramatic changes in the past 15 years.

We are overcoming the blight of poverty. The average income of the people here has risen more and faster in recent years than that in any other part of the United States.

Our industrial facilities have expanded rapidly. We are taking advantage of our great natural resources, our stable labor supply, our favorable climate—and we are pointing out these advantages to industrialists elsewhere who are coming to join us in building a new South.

We have learned that the absolute reign of "king cotton" is at an end, and we are beginning to achieve a well-balanced agriculture.

We are able to spend more and more money for our schools and for the health of our citizens.

These are encouraging developments. They show us that we have come far along the way to economic maturity. But we have further to go yet before the South will realize its potential effectiveness in the expanding national economy, so necessary to world stability.

A very real problem of the South is our social structure, the pattern developed here whereby two races live side by side in relative harmony.

It should be obvious to everyone that our customs are traditional, that they will continue to exist until southerners themselves decide to change them.

No social custom can ever be altered or changed immediately by law or by force.

This truth should be obvious to those outside the South who demand that we change overnight a system under which we have lived in peace for generations.

This truth should be equally obvious to those within the South who resist every effort to better the lot of the minority race—on the false notion that these efforts will disrupt our way of life.

The problem imposed by our pattern of living is that it provides a convenient weapon to oppose any program, however mild, which seeks to benefit the minority race. The fear that we may lose this pattern is a useful instrument for the demagog who plays upon the passions and prejudices of the people. By a strange coincidence, this fear is an instrument used largely by those southerners who oppose economic and social improvement for the average man of either race.

Most of us realize that to accord the minority race a full measure of legal justice, and its share of economic, educational, and political opportunity is the only sound basis for the progress of both races.

Most of us realize that such goals can be achieved without disrupting, in any manner, the accepted pattern of social relations.

These principles have won general acceptance among the people of North Carolina, which is the major reason North Carolina has won true leadership among the States of the South.

You in North Carolina are well aware that the heavens have not fallen as a result of your determination to raise the living standards of the minority group.

The South has paid a great price in regional vitality because some of its people will not follow the example you have set in North Carolina.

We have seen that your contribution to a stronger America, and hence to a peaceful world, will be made here in the South, your home and mine. The South is your first sphere of action.

We acknowledge that the South is beset with complex problems, each inter-acting upon the other. Our political system influences the growth of our economy—our economy in turn may help relieve the poverty and ignorance which create a faulty political pattern—the delicate nature of our human relations will be held in balance as we attain broader political and economic development—psychological factors may determine whether we shall take positive action on these matters, or whether our prejudices, fears, and resentments will distort us.

There is no one concrete procedure by which we can emerge immediately from these complex patterns, which are peculiarly southern, and play the dynamic role in national life which is within our power.

I do wish to suggest one underlying principle without which we cannot hope to solve any problem in human affairs on a world basis—on the national scale—or here in the South.

That principle is one which, if it were enshrined in the hearts of men everywhere, would wipe out the hatred, the greed and the lust for power which today foster man's inhumanity to man.

That principle lies at the very foundation of our Christian civilization and of our democratic faith.

I refer to the principle that every man—regardless of his color—regardless of his creed—regardless of his name or origin—has been endowed by his Creator with a certain innate dignity. Every man has a certain value and worth by the mere fact that he is a human being.

And when the dignity, the value, the worth of any man on this planet is impaired, the dignity of all men suffers thereby.

Because we live and work in the South, we can see more immediately how this great principle can simplify our task here, if we courageously put it into practice.

We can apply that principle to our political system—and we will find that every man is entitled to have a voice in the conduct of his government—and that no individual may rightfully enjoy more influence in government than another.

We can apply that principle to our economic system—and we will find that every man is entitled, by his dignity as a man, to an education, to a decent place to live and rear his family, to the benefits of medial science, to perform useful work, and to receive just compensation for it and we will find that every man should be free to move as far up the economic ladder as his ability, initiative, and effort will carry him.

We can apply that principle to our social pattern—and nowhere, more than in the field of human relations, do we need to evaluate each individual for his individual worth—and to judge him by no other standard. There should be no other valid measurement.

The idea of the essential dignity of man is indeed a simple one.

But while we can send a message around the world in seconds, it takes years, generations sometimes, for a single idea to penetrate half an inch of human skull.

There are certain institutions of society which have as a major function the teaching of this principle—and placing it into practice.

It is the home which first is charged with implanting this idea in the mind of a man; it is the church which encourages its development throughout his life; the school and the university train the individual to utilize his talents and realize his worth, at the same time teaching him how to live in tolerance and in peace with others.

It is the duty of government to assure every individual that his basic rights will not be impaired by others—to guarantee to every individual the fullest freedom to exercise those rights. Government is the one institution in society in which all men have a share—the one medium through which the people can maintain a balance of the complex forces of modern life—

You are practitioners in the art of government—as I am privileged to be. It is your second sphere of action.

We have chosen to take part in government through the Democratic Party—the only party which, throughout its history, has consistently demonstrated its concern for the dignity of the individual—the only party which has consistently followed a policy assuring every individual a chance to realize his full worth.

The Democratic Party was founded in the South, by a great southerner—Thomas Jefferson—149 years ago.

The Democratic Party and the South have come a long way together.

The principles of the Democratic Party have not changed since the time of Jefferson.

We still believe, as Jefferson did, in equal rights for all and special privileges to none.

We still believe that government is not the master of the people, but their servant.

We still believe that the interests of the majority must not be submerged to the greed of a minority.

We still believe that the protection of property in its legitimate rights is essential, but that in any conflict between property and men, the rights of men come first.

The opponents of the Democratic Party, particularly here in the South, like to recall that Jefferson said, "That government is best which governs least." These self-styled Jeffersonian Democrats assert this quotation to oppose any government effort to improve the welfare of the people. They contend that the Democratic Party of today has changed the philosophy laid down by Jefferson.

Thomas Jefferson supplied our answer to this charge when he said: "Nothing is unchangeable but the inherent and unalienable rights of man."

Democrats—true Democrats—have always insisted that government must be adapted to the needs of the time. If bold action has been necessary to make government responsive to the will of the people, the Democratic Party has dared to take such action. If new techniques of government are essential to preserve our free enterprise system, the Democratic Party has dared to experiment. We have never repudiated imagination as a component of the art of government.

No, the Democratic Party has not left the South as its enemies charge. Nor is it going to leave the South.

The Democratic Party acknowledges its debt to the South. Three of its immortal leaders—Jefferson, Jackson, and Wilson—were men of the South. Southern delegates

nominated Franklin Roosevelt in 1932, and southern leaders in Congress charted the course of Franklin Roosevelt's New Deal.

The South in turn must acknowledge its debt to the modern Democratic Party.

It was the New Deal of Franklin Roosevelt which restored the income and the land of the southern farmer, which gave dignity for the first time to the southern worker, which brought southern industry from the brink of chaos.

Much of the economic progress we have made in the South in recent years can be attributed directly to the wise policies initiated during the Roosevelt administration.

The Fair Deal program of Harry S. Truman offers continued promise for constructive action to improve the welfare of the southern people.

The Fair Deal is not a revolutionary concept.

It is not a radical departure from previously accepted techniques of Government action. It seeks simply to provide what its name implies—a fair deal for every American. It was not devised in hostility to the interests of any group of our pepole, but to advance the prosperity and security of all.

The Fair Deal concept is that the economic interests of all our people are interdependent—that the businessman cannot sell his product unless the consumer can buy at a reasonable price, that the farmer will suffer if the workingman's wages are cut, and that the social consequences of inadequate housing, health facilities, and of failure to conserve our natural resources must be shared by all in equal measure.

Any statistical measure will clearly show that the South outstripped all other sections of the Nation in economic growth under the New Deal; we can make equally rapid strides forward under the present Democratic Party.

Undoubtedly many of you—and many other southerners—may oppose some of the methods of the administration to achieve a better life for all our people.

It is heartening indeed that so many Democrats, in North Carolina and elsewhere, are willing to work these differences out within the party. I disagree with some parts of the President's program but I'm going to try to work out these differences in the party.

If we believe that some phases of the President's program are an unwarranted invasion of the field of State government, it is our task to initiate local action which will make Federal intervention unnecessary. For a number of years we have heard a great deal in the South about States' rights; we have never heard, and do not hear now, enough about States' responsibilities.

If you, or anyone you know, believe the Fair Deal program to be socialistic—take the trouble to read the actual legislation which the program calls for. There is no phase of the President's program which does not provide a maximum amount of local responsibility, a maximum amount of freedom for private enterprise, and a minimum of Federal regulation in view of the task to be accomplished.

If you believe that the Fair Deal is an invasion of personal freedom, remember that the same charge was leveled against the New Deal 17 years ago—and you can name anyone today who does not enjoy greater personal freedom and security than he did 17 years ago?

I mention these charges because they are the same which have been used, in vain, by the enemies of the Democratic Party for 17 years.

Our enemies may circulate all the scare words, myths, hysterical attacks and gloomy predictions they desire.

But in spite of the mistakes we have made, our opponents cannot charge that the Democratic Party of Roosevelt and Truman has ever wavered in its determination to bring a more abundant life to all the people of this Nation, and to serve the cause of human dignity and brotherhood.

It has been a genuine inspiration for me to be with you this evening—to think, with you, about the grave responsibility which our Nation has accepted for preserving peace; about the role which American free enterprise must play in keeping America strong and secure; about the modern South, with its complex problems and vast potentialities, the new frontier of America; about your participation as individuals, and through the Democratic Party, in bringing the South and the Nation more fully into the service of human freedom.

You as young Democrats are heirs to a great tradition of democratic liberalism.

It is heartening to know that you are bringing to the Democratic Party the ideals, energies and enthusiasm of youth * * * that you seek to preserve in the Democratic Party those dynamic qualities which have made it great.

Through your party service you not only build a better South, you not only strengthen the free traditions of a Nation. You are quickening the hopes of men the world over for a new era of peace and justice among nations.

The H-Bomb

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to present to the Congress a letter by York Sampson, editor and publisher of the Sioux Falls (S. Dak.) Forum addressed to the Honorable Harry S. Truman, President of the United States. Mr. Sampson is a careful and competent editor who is interested in maintaining the financial and moral integrity of this Nation. I hope that every Member of the Congress will read this communication with great care, as it contains some questions which I believe are vitally important to the future of America. The letter reads as follows:

SIOUX FALLS FORUM,
Sioux Falls, S. Dak., February 12, 1950.

Hon. HARRY S. TRUMAN,
President of the United States,
Washington, D. C.

DEAR MR. PRESIDENT: You recently made the gravest decision facing mortal man in modern history.

We are stuck with the most lethal weapon man has ever conceived—the H-bomb. Perhaps we need it for self-preservation. We certainly don't for any other reason.

But why, in heaven's name, didn't you take Congress into your confidence?

Why didn't you take the United Nations into your confidence, or, at least, the friendly nations therein?

More important than all, why didn't you take us—we the people—into your confidence in making this unprecedented announcement?

Why did you pass up the chance to explain your reasons over a world-wide radio network? Why did you pass up this marvelous opportunity to explain American ideas and ideals (which would have had more telling effect than a trial H-bomb)?

The history of the world may have been changed by your decision.

If this is a free country, and we believe it still is, how can you now expect any American, or any one else in the world, to believe you haven't thus irrevocably taken away a great deal more of our liberty than we yet realize?

We believe this deserves an answer at once.

SIOUX FALLS FORUM,
YORK SAMPSON,
Editor and Publisher.

The Fair Deal and Socialism

EXTENSION OF REMARKS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. LEONARD W. HALL. Mr. Speaker, under the leave given me, I desire to include for the RECORD a letter written to me by one of my constituents who is mortally sick of the antics of this administration. He says he reflects how 99.9 percent of his friends feel. He wants action taken to squelch the socialized medicine scheme, the crazy Brannan farm plan, he wants Congress to throw the traitors—Communists—out of our Government. He says what he thinks about the Taft-Hartley law and those who flaunt it, and the betrayal of China. He makes an appeal to this Congress for clear and sound thinking and certainly I want to meet his request to include his letter in the CONGRESSIONAL RECORD. Here it is, as follows:

JANUARY 31, 1950.

The Honorable LEONARD W. HALL,
United States House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: This is an exceedingly hard letter to write, for instead of writing these few lines, I would like to write books. I have spent 20 years in civic work, so I can appreciate that no matter what you do and no matter how sincere you are in your efforts, you are criticized on all sides and especially from those who do nothing. I have such little time to write and I have put it off for months but I decided to let you know how one of your constituents feels and how 99.9 percent of my friends feel.

I am really worried about the political situation in our country today. I feel that we will have a Socialistic government in another 3 or 4 years unless someone stops the Fair Deal.

I realize that you are a mighty busy man and I sincerely admire what you stand for, because I know that you are opposed to practically every one of the Fair Deal socialistic schemes. I wish that you could find time to answer a few questions for me:

1. Who is going to stop the Fair Deal from shoving through the Federal aid-to-education bill? Forget about religion, I am a Protestant. I am opposed to paying for someone else's education. When I moved to Elmont from Philadelphia my child had to go to school one-half of a day; I was one of the ringleaders in getting a new school, our children go to school a full day now. If the people want their children educated they will see that they get it. If Truman and Ewing can put this bill through, we the people, will not have a thing to say about our children's education in a few years for the Government keeps taking over a little here and a little there until they do it all,

and imagine what the cost will be, with all the thousands of additional Government employees required, and who will vote for Truman.

2. Who is going to squelch this Fair Deal socialized medicine scheme?

3. Who is going to squelch the idiotic, stupid, crazy Brannan farm plan?

4. When is Congress going to throw the traitors—Communists—out of our Government? I refer especially to our State Department (Acheson and Butterworth in particular). I realize that this is a serious accusation but I'll back it up, for actions speak louder than words.

5. When is Congress going to put the United States first and Great Britain last?

6. When is Congress going to run our country instead of know-it-all Truman? We have the Taft-Hartley law on our books but Truman has flouted it twice and our poor Congressmen, that the people had confidence in, sit meekly by. If this isn't a dictatorship, then I want to know what is.

7. Is Congress going to sit by while Nationalist China goes under? No words can describe our shameful betrayal of Nationalist China; it stinks to high heaven and Congress does nothing but talk. There's a possibility that Formosa will be deserted, just so Great Britain can keep their socialistic Government in power and so Russia can take over Asia, then Africa, then the Americas, and then set up Acheson as the dictator of the Americas.

8. How long must the American people put up with this fake ECA program? All the stuff we read about what good it is doing is plain bunk. Have you ever been in some of the mental hospitals around New York? My oldest daughter is a nurse in one and I do work in them through the American Legion and my Masonic lodge. How can I describe the crowded conditions and the need for better medical treatment in this letter? Go into New York's Harlem, go into the Bowery, go into southwest Washington, D. C., and see the need for help. Why not put our people first for once? I know that Jesus said, "Love thy neighbor as thyself" and I recognize that the Europeans are our neighbors and need help but doesn't Congress realize that Americans are our neighbors too? Why aren't the Spaniards and the Chinese Nationalists considered our neighbors too?

9. How many Congressmen realize that every decision they make will be judged by the Supreme Architect at the day of judgment? Their responsibilities are so much greater than the average man's, therefore their judgment will be more severe.

Could this letter be put in the CONGRESSIONAL RECORD?

May God give wisdom to every one of our Representatives and Senators, so that they may rule wisely, for the benefit of all mankind.

Most respectfully yours,

FREDERICK W. HILL.

ELMONT, N. Y.

Statement on Percentage Depletion by Gov. Frank Carlson, of Kansas, Before House Ways and Means Committee, February 17, 1950

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. HOPE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an excellent statement recently made before the Ways and Means Committee of the House by Hon. Frank Carlson, Governor of Kansas, and a former distinguished Member of this House and of the Ways and Means Committee.

The statement follows:

The administration, through the Secretary of the Treasury, has again attacked percentage depletion as a loophole in the income-tax law through which the Treasury is losing large sums of revenue.

The Secretary has proposed to the Congress that percentage depletion on oil and gas production be reduced from 27½ percent to 15 percent of the gross revenue of the property and that the gross revenue of the property be reduced by the intangible drilling and development costs to arrive at an adjusted gross revenue subject to the 15-percent application.

Coming as I do from a State in which oil and gas production and mining operations are important activities, I feel that I have more than a passing interest in percentage depletion. When the Treasury made the proposal in 1942 to eliminate or modify this provision, I made my position clear on the subject in my statement before the Ways and Means Committee.

Those who have questioned the deduction in the past have evidently done so on the assumption that it represented the grant of a special tax privilege, or that it represented an unwarranted subsidy to a favored group at the expense of all other taxpayers.

To make such a claim is tantamount, in my opinion, to contending that Congress for a period of nearly 30 years acted either in such ignorance of the subject as to amount to gross negligence or that Congress deliberately and intentionally legislated against the best interests of the country.

Since I am unwilling to attribute such a motive or such ignorance to Congress, my studies of the history of the legislation have been made with the object of ascertaining, first, just why Congress adopted and continued the provision and, second, whether circumstances now existing warrant a change in congressional policy with respect to the subject.

Depletion is an allowable deduction from gross income which the Congress has authorized in order to arrive at taxable net income and to avoid the taxation of the return of capital values. In this respect, it is related to depreciation allowance provision for the recovery of a taxpayer's investment in plant facilities and other physical equipment or properties used in the production of income.

Depreciation is allowed because the taxpayer's plant wears out or becomes obsolete in the course of producing income. Depletion is allowed because the taxpayer's minerals or other natural resources are being exhausted. It is, therefore, obvious that, in its simplest sense, depreciation is the impairment of the quality of replaceable property, while depletion is the reduction of the quantity of an irreplaceable commodity.

Depreciation is necessary to replace machines and plant facilities when they wear out. Depletion is similarly necessary to replace mineral deposits when they are extracted from the earth and consumed.

In order to remain in business and to meet the continued and increasing demands for supplies of minerals, the producers must continually explore new areas. They must find and develop deposits which experience indicates will be deeper, more remote, harder to find, and harder to develop.

This unending search and development becomes more and more costly. Thus, while the capital recovered through depreciation provides a substantial part of the funds required to replace machinery even in high-cost periods, this is decidedly not true in the case of mineral deposits.

The cost of finding and developing new sources of mineral supply tends to be many times as great as the cost of those recently exhausted. The producer must have available for these hazardous ventures a fund far exceeding the mere recovery of his former investment.

Those characteristics of depreciation and depletion began to receive serious consideration by Congress when our participation in the First World War quickly sent the income-tax rates up to the point at which refinements in computing taxable income became a really serious matter.

Concurrently the vital importance of ample proven and developed mineral reserves, as an absolute necessity for national defense and economic security, was dramatically brought to the attention of Congress and the public.

Among the many proposals to encourage a speedy and widespread increase in the search for new mineral reserves the most effective were those aimed at mitigating the burden of the income tax on those who were willing to take the financial risks involved in the search. In the light of experience such tax measures were deemed necessary in addition to measures for making the public lands available for development and measures for intensified governmental geological surveys and research in the technique of mineral production.

One of the outstanding tax provisions was discovery depletion. It was founded upon recognition of the enormous hazards that characterized mineral prospecting and development, and is thus distinguishable from subsidy measures. Designed to modify one of the deductions in arriving at net income, it forms an appropriate part of an income-tax law. It was also remarkably successful in its other purpose, which was to stimulate a vastly increased and sustained effort to find and develop more and more mineral reserves.

Although a deduction for exhaustion or depletion was provided in earlier acts, it was in the Revenue Act of 1918 that Congress first dealt comprehensively with the subject. It provided for a deduction which, by the time the recoverable mineral content was exhausted, would amount to the value of the property within 30 days after discovery.

In other words, it put the discoverer on the same footing as one who had bought the property after its value was demonstrated by discovery. Congress thus recognized, as a fundamental principle, that the computation of an adequate depletion provision must have a broader base than the concept of recovering the historical cost of the discovery property itself.

This provision for a base other than cost, in the case of discoveries of oil and certain other minerals, was by no means unique. Congress had also provided generally, with respect to any kind of property held by a taxpayer at March 1, 1913, that the value at 1913 would be recognized in lieu of cost, as the base for computing depreciation, depletion, or gain from sale, wherever such value exceeded cost.

The discovery-depletion provision was, in effect, merely a special substitution, of the discovery date for March 1, 1913, for the purpose of the depletion allowance, in recognition of the special character of mineral reserves hidden in the earth.

In 1921, without departing from the discovery-depletion principle, Congress limited the amount of allowable depletion for any single property (tract of land) to the amount of the net income before deducting depletion. In 1924 the limit was set at half of the net income before depletion. (These limits did not apply, however, to depletion computed on a base other than discovery value.)

In 1926 there was a widespread demand for simplification of the depletion procedure, provided it could be accomplished without seriously impairing the established and highly successful policy of encouraging continued effort in petroleum exploration and development. Ascertainment and proof of discovery value was complicated and burdensome. Congress solved this problem, in the case of oil and gas, by substituting a depletion deduction computed as a specific percentage of gross income. It did so with the express intent of preserving the essential effect of the existing law and of continuing the existing policy.

In an effort to approximate roughly the average result obtained under the discovery provision one branch of Congress proposed 25 percent and the other 30 percent. They compromised at 27½ percent of gross income, and the law was enacted accordingly.

At the same time the existing limitation to 50 percent of the net operating income from the property (before depletion) was continued in force; also, the exception to such limitation where cost depletion would be greater.

Later, beginning in 1932, as the operation of the simplified procedure proved successful in administration, percentage-depletion provisions were enacted in the case of other minerals. (Possibly, if Congress had provided percentage depletion for mines at the same time it did so for oil and gas, the mining industry would have been in a stronger position to meet the requirements of World War II.) The percentage-depletion provisions are still in effect and have survived after intensive review by committees of Congress intent upon weighing revenue needs against its merits.

Depletion allowance based on a value calculated on the price of oil at the time of discovery and estimated reserves proved to be arbitrary and inaccurate. The percentage depletion allowance based on actual selling cost over the producing life of the property has resulted in an allowance reflecting actual selling value and the actual quantity of production.

In 1926 when percentage depletion was adopted by the Congress, a special Senate investigating committee, after an exhaustive study of the problem reported to the Joint Committee on Internal Revenue Taxation that the new percentage system "distributed the depletion more uniformly among the industry without regard to price of oil on discovery" and that it "reduced valuation work in the bureau". The report also concluded that the new percentage system did not materially affect the revenue. It is my own opinion that the application of percentage depletion has materially increased the national tax revenue.

The conclusion of World War II did not terminate the very real and serious national concern over the maintenance of adequate reserves of petroleum and other minerals. This is evidenced by the fact that within the past year the Special Senate Committee To Investigate Petroleum Resources made an extended investigation of the petroleum situation, hearing many witnesses and examing evidence over a period of several months.

The testimony has been published, and I consider noteworthy the following observations taken from the testimony of Mr. Charles R. Bell:

"Obviously as new pools are discovered the number of undiscovered pools is correspondingly reduced. Because of this the producer's hazards and costs will necessarily increase. * * * Producers * * * are pledged to greater effort to replace and if possible, increase by new discoveries, the Nation's accessible reserves which were so seriously depleted by the greater-than-normal draft of wartime requirements. We believe that Congress, having adopted or approved both the intangible development cost and percentage depletion provisions as a long-range policy, will be the first to realize that their continuance is essential to the Nation's postwar petroleum program * * *. I wish to remind you that the intangible development cost provision had been in the Commissioner's regulations for 8 years before Congress adopted the percentage depletion provision. It is thus clear that Congress intended that both types of deductions remain in effect, complementary to each other."

In its final report, the Senate special committee endorsed the current congressional policy in the folowing language:

"Because oil, like other minerals, is a diminishing resource, and because investments incident to exploration involve unique risks with danger of large financial loss, the Congress through income-tax provisions has allowed deductions for depletion and intangible drilling costs." * * * To take steps to guarantee a domestic petroleum supply adequate for all eventualities * * * we should enact those laws which are most conducive to stimulating additional exploration and development in the United States. * * * Encourage free competitive enterprise by tax reforms to provide incentives for the risk of private capital in new ventures. * * * Continue the provisions of the income-tax law permitting deductions for depletion and intangible drilling costs."

The special Senate committee, after its thorough review of over 80 years of oil-industry operations, presented the conclusions quoted above as major features in its recommendations for a national petroleum policy. That committee's report and recommendation are, in my opinion, of direct and conclusive significance to us, because they clearly disclose that Congress is fully and currently aware of the necessity of continuing the existing policy of taxing income derived from natural resources.

In 30 years the depletion provision has become a vital factor in the economy of our extractive industries. Although its contribution toward the widespread and highly competitive search for minerals cannot be precisely measured, we do know that these extremely hazardous ventures have continued.

The resulting discoveries of mineral reserves have contributed substantially to national welfare and to the successful conclusion of the recent world war. These discoveries likewise have benefited our peacetime economy through wide expansion of employment and increased products.

With demand for minerals at an all-time peak, and with prospects of unforeseen world-wide demand, we shall need the full and continued effort of all present and prospective producers of minerals. The hazards and costs of exploration are increasing. Petroleum industry exploration has had to follow new, expensive scientific methods, and drilling has reached greater depths.

Search for all minerals has expanded into relatively inaccessible areas. Such conditions have substantially reduced the intended effect of the depletion allowance, namely, to partially offset the cost of replacing currently produced minerals.

Reversal or modification by Congress of the policy it has consistently followed for so many years would dangerously interfere with the peacetime economy. This is certainly no time to penalize the prospector and the wildcatter.

It is the constitutional obligation of the Congress to levy taxes for the national defense and the general welfare. Our income-tax laws have been framed to the end that these objectives may be accomplished with the least possible burden upon the enterprise of our citizens.

The strength of our Nation in peace and in war is the result of a sound economic system of which the petroleum industry is an integral part. The wisdom of the national legislative program with relation to petroleum has been well justified.

Percentage depletion has been a revenue-raising measure, because it has been an important factor in developing a strong and healthy petroleum industry which has resulted in increased oil and gas production which in turn has produced greater taxable income. Increased production of oil and gas has been in the public interest because it has reduced the price of petroleum products to the consumer.

Our system has given the American public an abundance of petroleum products at costs far below the level of any other country. Under our system, the domestic industry was prepared to supply the wartime petroleum needs of our own military forces and those of our allies in two world wars.

The American oil industry has in turn produced almost scores of other industries which contribute to the national tax revenue, for example, the automobile industry, the trucking industry, the aviation industry, and the tire industry. Both Federal and State gasoline tax receipts have increased with the overexpanded consumption of this petroleum product.

It is thus evident that percentage depletion was adopted to implement a policy on the part of Congress to promote the national welfare through encouraging private industry to risk its capital in the hazardous search for new sources of supply, and that the policy was continued in force in the realization that it was accomplishing its purpose.

My conclusion is that the policy of Congress, as expressed in the past by its actions and at present by the report and recommendations of the special Senate committee, is justified both on the basis of pure merit and on the basis of results obtained. It is my recommendation that this committee go on record as being opposed to any change which would restrict the percentage depletion provisions as they now stand.

Similarly, the right to deduct intangible development costs in the year in which they are incurred is based on a regulation of the Commissioner of Internal Revenue authorized by statute. This right has become an established national policy in the taxation of income derived from crude petroleum and natural gas and has been a substantial factor in the expansion of the petroleum industry.

This just regulation was promulgated in 1917, and is today substantially in its original form. The wisdom of this regulation and its effect on the operation under the income-tax laws has been reviewed and approved by the Congress repeatedly.

The serious effect of a change in this regulation was recently demonstrated when exploration and development in the petroleum industry was greatly disrupted by a court decision reflecting on the authority of the regulation. This was quickly corrected by the Congress again reviewing and reaffirming its previous position.

It is likewise my recommendation that this committee oppose any change in the income-tax laws that would restrict the right of oil and gas producers to deduct intangible development costs as an item of expense in the year in which they are incurred.

Sesquicentennial Concert Honoring Massachusetts

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks made

by me as guest speaker at the sesquicentennial concert honoring Massachusetts:

Friends and fellow Americans, it is a genuine privilege for me to appear tonight in this very appropriate and distinguished program honoring Massachusetts.

On the birthday of the great Father of our Country, who gave so much of his life and of himself for the cause of human freedom and democracy, it is fitting that we should dedicate a portion of this program to honoring the memory of the immortal George Washington with whom the history of my own beloved Commonwealth of Massachusetts was so intimately associated. It was under an elm tree on historic Cambridge Common in Massachusetts that Washington took command of the Colonial Army and within the confines of nearby Harvard College still stands the house which served as his headquarters.

Freedom found no more fertile ground in the Nation for its early growth and development than in Massachusetts. Faneuil Hall, the cradle of American liberty, Bunker Hill, and Concord and Lexington and many other places of the Old Bay State are truly historic landmarks of the early struggle of the American people to throw off the yoke of oppression and set up free institutions and a free way of life.

Massachusetts not only contributed unselfishly of its resources in blood and treasure to the forging of a great new democracy here in the Western World. It furnished some of the strongest, ablest, and most effective leadership in guiding and directing the conflict which led ultimately to the establishment of American freedom. As Congressman from a great and patriotic district in the Commonwealth of Massachusetts, I am proud indeed of the services, contributions, and sacrifices of the people of my district and State in behalf of the cause of free government.

Since the time it was first achieved here in America, the ideal of freedom has survived many dangerous threats. In war and peace, our free way of life has been gravely jeopardized. The tempests of civil dissension and international conflict have beat about our temple of freedom, but no foe has been able to destroy it.

But we face today greater dangers than we have ever faced before. Freedom is under attack on a world-wide front. Powerful forces intent upon the complete destruction of the free way of life have spread over much of the earth throttling democratic government and individual liberty. These forces are possessed of great strength of arms, resources, manpower, and the secrets of the awesome atomic bomb and its even more destructive twin—the so-called H-bomb.

These very same forces threaten our own liberties at home by setting up internal conspiracy designed to destroy our individual and collective freedoms through stealth, secrecy, and subversion.

My fellow Americans, freedom still lives tonight in the minds and hearts of the people, but everywhere it is in danger. Everywhere it is assailed and attacked by resourceful and powerful enemies.

In the name of Faneuil Hall, Bunker Hill, Concord, and Lexington, and all the other imperishable shrines of America, in the name of our martyred dead who gave their all that freedom might live, in the name of every principle and virtue we cherish as a people, let us solidly unite in this perilous hour to preserve our birth right of freedom. Once we lose it, it can never be regained. Let us join together under God as our forefathers did through brotherhood, through courage, through strength, and through unbounded faith in democracy to save our precious freedom before it is too late.

Thank you and good night.

What the Republican Policy Statement Really Says About a Bipartisan Foreign Policy

---

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "GOP Policy on Bipartisanship," taken from the Daily Plainsman, published in Huron, S. Dak., dealing with the foreign-policy section of the recent Republican policy statement, together with a few comments of my own.

There being no objection, the editorial and Mr. MUNDT's statement were ordered to be printed in the RECORD, as follows:

GOP POLICY ON BIPARTISANSHIP

Apparently undetected and unnoticed by the press pundits and syndicated columnists in Washington and New York is the fact that in the recent Statement of Principles and Objectives, or policy statement, by the Republican Members of Congress and the GOP National Committee, took a big step toward eliminating the tragic bipartisan foreign policy.

The bipatrtisan foreign policy has been one of the two main defects of United States foreign policy.

Primary defect, of course, has been the ineptness, lack of vision, lack of understanding of Communist influences at work, and apparent lack of intelligence on the part of Truman and his advisers.

Next to that in importance has been the bipartisan principle, whereby the Republicans agreed in advance not to criticize the administration's foreign policy, nor even debate it. That principle led to formation of foreign policy by the administration without the strengthening factor of critical debate. Many of the steps, in fact, were taken in secret and kept secret.

The most terrible consequence of that bipartisanship was that it kept the public in ignorance of what was happening, both Republicans and Democrats alike conspiring to keep the public ignorant. The result is that it has taken the public five long years to realize that the administration's policies have, step by step, literally and actually endangered the future lives of every United States citizen.

Note, therefore, what the recent GOP statement says about foreign policy:

We oppose secret commitments, and we denounce the refusal of the administration to furnish accurate and adequate information to the Congress.

"Under our indispensable two-party system, we shall be vigilant in critical exploration of administration foreign policy. We favor consultation between the Executive and Members of both major parties in the legislative branch of Government in the initiation and development of a united American foreign policy; and we deplore the tragic consequences of the administration's failure to pursue these objectives in many fields, particularly in the secret agreements of Yalta, subsequently confirmed at Potsdam, which have created new injustices and dangers throughout the world."

The statement fails to state specifically that it deplores the bipartisan foreign policy and doesn't restate its evils, as it could have done, but it does show a recognition of the fact that the safety of the public demands a restoration of vigorous two-party debate in foreign policy, as in every other field.

Note well that the statement specifies that there should be consultation on foreign policy between the Executive and Members of both major parties. This newspaper happens to be in receipt of information that the word "members" was carefully inserted by those on the policy-framing committee.

That is all-important, for it means that the Republican policy is definitely not to have a Senator VANDENBERG labeled as a spokesman for the entire party and then drawn into a secret conference.

The foreign policy is to be discussed by Members of both parties, which means debating it in Congress before the public.

That is of tremendous importance and it is a paragraph to which the Republicans themselves ought to draw more attention. For it is significant that it is one section which it would be politically unwise for Truman to criticize and he is not attacking it. He has attacked the domestic affairs section of the GOP policy and the "liberty versus socialism" phrase.

The GOP's new approach to foreign policy is its strong point and it is conversely the President's most pitifully weak and vulnerable side.

Foreign policy is literally the life-or-death issue facing the American public and it therefore ought to be the chief campaign issue.

STATEMENT BY SENATOR MUNDT

Mr. President, many have read into the Republican policy statement which was recently issued an interpretation of the Republican stand on foreign policy which is not in precise conformity with the carefully worded text of that important statement. Others have permitted what they hoped the statement would contain to color their observations about what the statement in actuality did contain.

Robert D. Lusk, one of our distinguished South Dakota editors, has analyzed the Republican policy statement on foreign policy carefully and has compared it with other earlier Republican platform expressions and Republican attitudes on foreign policy. To Mr. Lusk goes credit therefore for making an accurate and discerning report of the fact that the new policy statement definitely indicates that from this point forward the Republicans in Congress expect to insist that if we are to have a bipartisan foreign policy it must be created by bipartisan action and advice as well as supported by the Members of both major political parties.

Mr. President, I call attention to Mr. Lusk's interpretative editorial on this important subject.

What Have You Learned?

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. STENNIS. Mr. President, I have a copy of an address made by Mr. David Lawrence on February 15, 1950, at the commencement exercises of Temple University. Mr. Lawrence is one of the outstanding editors and columnists of the

Nation. His ideas are sound, his suggestions constructive, and his approach always patriotic. I consider this address of value to the Congress and to the people of the Nation, and, therefore, ask unanimous consent that it be included in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT HAVE YOU LEARNED?

I appreciate personally your award to me of the honorary degree of doctor of letters, but I appreciate it impersonally even more because you have seen fit in your citation to refer to the dissemination of news about the operations of our Government as a field of service worthy of recognition.

From the pen of George Washington we have these arresting lines: "In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened."

Next October will complete my fortieth year in our National Capital. Perhaps this experience permits some observations on what are the essential prerequisites to an enlightened public opinion. But I shall sum it up with one simple axiom: Without enlightened individuals there is no enlightened nation. It is, therefore, to the individual as a citizen that these remarks are addressed.

"Commencement" can be a meaningful word in your life. It can mean the beginning of self-examination. It can mean the beginning of an adjustment to life itself—a new perspective.

It is a time to ask: "What have you learned?" There is implied in this, of course, no questioning of the nature of the curriculum. More and more in recent years educators have recognized that the textbook and lecture do not suffice—the student must be stimulated to apply the knowledge he derives from books. The question goes rather to the point: "What have you learned about life itself? What do you know about that broad field which we call human relations?"

There is no phase of education which does not, in one sense or another, touch directly upon the fundamental problems of human relations. The rules of law, or science, or economics, can be set, but what does human nature do to those rules? We meet this factor constantly in almost every applied phase of written knowledge.

Whether in the home, in the neighborhood, in one's profession or trade, in national or international affairs, the adjustment of human relations today yearns for understanding.

Human relations, of course, includes human friction. And the sources of all human friction are quite tangible. Whether on the picket lines of trade unionism, or in the intercourse of nations, friction arises out of misunderstandings due to distrust, or antipathy, or selfishness. This friction frequently produces violence. Economic war appears at times as unrestrained as military war. Indeed, if we come to understand the characteristics of individual behavior, we will understand the behavior of nations.

Naturally, because it has been for many years my responsibility to report and analyze current happenings, I have had a chance to see the seeds of controversy as they originate, as they sprout, from time to time, in our domestic affairs. I have been able to trace, sometimes in their incipient stages, those international episodes which have led to two world wars and now threaten us with a third world war.

There is little new to discover about human relations as such. The pattern is drawn and redrawn on the pages of history. Through centuries of time men have behaved toward one another in virtually the same way; human nature is really not much different than it was, for instance, in the days of ancient Greece or Rome. The scale of human friction is more extensive today and the methods of warfare are more destructive, but the human ingredients are the same. Basically there is no novelty in the truism that when nations grow sufficiently suspicious or distrustful of one another they rationalize their fears and assert the right to kill one another in self-defense.

The main task of the modern world, therefore, is to weigh anew physical and moral force as a means of preventing war. This is not to imply a denial of the rightful part which physical force plays in obeying the law of self-preservation. But I do assert that moral force as a means of averting human friction has not played, and does not now play, its rightful part in human relations.

Moral force is relatively untried in the world. Men have proved conclusively that they can use their fists. But they have not proved that they can use their heads. All the ingenuity of mankind today is focused on the making of destructive weapons. The constructive energies of mankind have never been mobilized for peace.

The real reason, of course, is that the acquisitive instincts of the human being, the materialistic instincts, the poisons of pride and selfishness, have ruled individuals and permeated governments in a strong lust for possessions and power.

Let us not make any mistake about this—governments are the creatures of peoples. Governments are no better then their constituents' desire. If we are to have better government in the world, or if we are to have better relations between governments, we must start not just with the study of theories of government but with the practices of individuals to whom the obligations of responsible citizenship are entrusted.

But how are we to get responsible individuals? Inevitably we come back to the school as the institution from which this primary influence must radiate. But education is unjustly blamed sometimes for the misbehavior of the educated as well as the uneducated.

If prescribed courses alone could stimulate individuals to an understanding of their responsibilities this would be a different world. Yet precisely because what is written or spoken in the classroom needs interpretation by the individual in terms of his own experience, responsible individualism must be developed outside the classroom—when the individual begins to apply the lessons of life itself.

What is responsible individualism? In these days of "isms" and ideologies, we are told that rugged individualism was a ruthless exercise by the individual of his economic powers of exploitation. We are told that liberalism, on the other hand, provides a real recognition of the public interest—the greater good of the greater number.

Unfortunately, in our day there are too many people who call themselves liberals but who really believe in the mastery of the citizen by the state. Their concept of the public interest is that all rights belong to the state and that the individual must be subservient thereto. They ignore the Constitution with its clear definition of individual and state power. While the Constitution enumerates certain specific powers as belonging to the Federal Government and to the States, the tenth amendment declares explicitly that all rights not delegated to the Federal Government or to the States are reserved to the people—to you and to me as individuals.

The broad premise that those governments are best which rest upon the consent of the governed is still, to be sure, the best guaranty or assurance of human freedom for the individual. But just because we have emphasized rights and freedoms in an abstract sense, and because we have defined governmental powers in a legal sense, we may have overlooked the true meaning of individual responsibility. For the best of governments cannot function effectively if the individuals themselves fail to live up to their responsibilities.

Responsible individualism means, therefore, that there are duties and responsibilities as well as rights inherent in the enjoyment of individual freedom.

In the world today we are discussing communism, fascism, and state socialism as imposing new restraints upon the individual. We view with apprehension statism as a method whereby governments exploit peoples. But we must not deceive ourselves. These extreme forms of government have arisen largely because individuals have abdicated their responsibilities. Economic discontent and chaos have plunged peoples into a state of desperation. Out of this they have grasped at any straw, at any "ism," as a means of extricating themselves from their tragic plight.

The main objective of a responsible government is to make sure that no group or faction exploits the majority and that economic stability is made possible for the maximum number. But government in a democracy cannot legislate morals nor introduce rules of ethics for individuals. It cannot cure the excesses of materialism. Good government is dependent only upon the morality of the community and the standards which decent men and women recognize as standards.

Have you, therefore, learned your responsibility as an individual? It is time to begin. It is time to note that in an age of materialism there are spiritual values which can afford you great compensations—great happiness.

The rituals written in the various religions of mankind are not in themselves complete. It is in the everyday life of the individual that the lessons contained in those rituals must be applied.

Having been permitted to observe government over a long period of time, I do not hesitate to say that the most effective men we have had in the public service are the men in whose private lives there is no taint of dishonesty or fraud. I am referring not merely to the fraud involved in a piece of graft or bribery. I am referring rather to the integrity of men—those who give their word and keep it, who say what they mean and who do not camouflage through the phrases of expediency what their honest purpose really is. I am referring to men with a deep sense of moral values.

Politics is a euphemism which too often covers intellectual dishonesties of educated persons—those who justify expediency and openly rationalize deception.

A courageous press can expose this form of hypocrisy and assist the citizen so that he may express his disapproval of those artifices which are all too numerous in the legislative and executive bodies of our Government today.

Never underestimate the importance of a free press as a servant of democracy and good government. It is not perfect. It has flaws. But do not be misled by those who say the press in America is controlled. Controlled by whom? The criticism we sometimes hear is that the press is controlled by its advertisers. But who are the advertisers? They are the businesses of the country, large and small, which have goods to sell. Unless the public finds publications truthful and interesting to read, there will be no opportunity for the advertisements to be read. The readers—not the advertisers—are sovereign.

Some irresponsible critics have arisen to say that news is suppressed at the dictation of advertisers. What news? There have been times, no doubt, when some member of an advertiser's family has gotten himself

into trouble and maybe some kindly editor here or there has kept the name out of the paper, perhaps out of a mistaken sense of reciprocity. I seriously doubt whether the infinitesimal number of such instances in our whole press has any more significance than the occasional suppression of the name of a kidnaped child while the police work on clues.

The real test is this: Can any one point to an important piece of national or international news that has been suppressed? I mean, of ccurse, outside of the military orbit—economic news, political news, crime news, any important news touching on social welfare?

The reason why the press is so frequently attacked as being under the control of materialistic influences is that those who have a materialistic ax of their own to grind have not been able themselves to obtain control of the press.

Theoretically, the entire press might be expected to be controlled by the workers. Virtually all of its readers work for a living. But workers are tolerant citizens of the broad community. They are not a separate class. Newspapers have long since learned that the moment they become organs of classes or groups they cease to fulfill their main function in the community. That is why you will find that the statements by labor-union leaders and the statements by employers all get attention in the news columns of the American press.

Nothing like the freedom of the press which we enjoy in America can be found in the nondemocratic countries. A single group or a single man can overnight plunge those countries into war. When public opinion functions, however, as in a democracy, there is restraint and caution and the people demand that every step that can possibly be taken to avoid war be taken.

There are some defects, however, to which I would like to call your attention.

Not enough people read about their own government—what it is doing with the taxpayers' money and what it is doing or failing to do to enforce the laws of the land.

Not enough people are concerned with the basic principles of fairness in governmental operations.

Not enough people demand the information that they are entitled to receive on national and international problems.

Good citizenship requires that you be well informed. The dissemination of knowledge about our Government is increasing rapidly, but the number of persons who are actually concerned with governmental trends and who read carefully what is going on is too small a group. One would think that with a large number of college graduates the circle would be wider. It should be. The fault lies with those educated individuals who delegate this responsibility of citizenship to other citizens.

Do not be misled by the defeatist cry, "What can I do?" Do not feel that you are a helpless individual among many hundreds of millions of persons. This is the feeling that leads directly to an abdication of your responsibilities as a citizen in a democracy.

What you do in your precinct, among your friends, among your business acquaintances, in your profession, can influence others. The power of example—the power of good example—is still the greatest force that mankind has ever known.

There is happiness and satisfaction ahead for you on the day you discover the spirit of human service—when the quests of vanity and pride, the pursuit of material gain and advantage, become to you valueless if obtained at the expense of a troubled conscience. The day that you conquer yourself and learn by searching self-examination to differentiate between right and wrong, between truth and untruth, between selfishness and unselfishness—on that day you will emerge as a truly educated person—a responsible individual—in a world all too anxious to entrust you with leadership and the guidance of others who crave an understanding of that better way of life.

I venture to speak of these things only because I have felt that we depend too much on the words of written formulas, or agreements, or laws, or treaties, in order to make our institutions more effective, and too little do we search our hearts and our consciences for those motivating influences that give us character as individuals—influences which can make or unmake written formulas and the most carefully drafted laws.

I commend to you the importance of spiritual values in our modern life.

I urge you to give your attention to the sources of human friction and to pledge yourselves to try not to increase friction but actually to do your level best to diminish friction within your own individual area of activity.

Perhaps such a plea is superfluous. Perhaps the youth of today will be compelled in an atomic world to evaluate human relations with a new realism. Perhaps they see in perspective already this distraught world. Perhaps they will perceive more quickly than our generation has that communism and state socialism can thrive only when individualism throws up the sponge. Perhaps the youth of today are wiser and will not make the same mistakes because they cannot afford the risks of doing otherwise. The prayers of mankind will support that hope.

You have in the short span of years that lie ahead of you the opportunity to remake your world. It is not an unsolvable problem. What we sometimes call a new approach is as old as the ten commandments.

There is but one answer to the ills of the world—a willingness on the part of all of us as responsible individuals to listen to the guidance of God and to feel His presence as the master of conscience.

What can you do? Just remake yourself—and your example will be followed by others.

Then will nations, too, be remade. Then will real peace come to us all.

Individual character and national character are inseparable.

Nylons and Lipsticks Ruin Marshall Plan

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Nylons and Lipsticks Ruin Marshall Plan," published in the Kansas City Star under date of February 17, 1950.

This article was sent to me by a lady in Missouri with this notation: "Is this what we pay such exorbitant taxes for? I'm tired of being taxed to death."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NYLONS AND LIPSTICKS RUIN MARSHALL PLAN

PROVIDENCE, R. I., February 17.—The Marshall plan is choking itself to death on nylon stockings, lipsticks, plastic combs, and canned tuna fish, Nicholas Farmakis, a Greek student at Bryant College here, charges.

The insistence of the United States in shipping little but finished products—and then things that are unnecessary to life in Greece—is stifling Greek economy and making the people lazy and dependent, Farmakis said.

INDUSTRY LAGS

Raw materials which could be converted by native labor into articles really needed by the Greeks would start up industry in Greece and make it a strong bulwark against the Communists to the north.

But the American idea that what an American thinks is right and all that foreigners think is wrong is causing the Marshall plan to backfire into an agency of dissatisfaction among the people of Europe, Farmakis thinks.

Tuna is an ideal canned product for America with its vast inland territory, Farmakis admits, but it could help make idle thousands of Greeks who fish for a living, when shipped in large quantities to Greece if only the Greeks would use it.

But they don't. They prefer the native, fresh-caught fish. The American tuna is stored in warehouses until the space is needed, then it is dumped. But it keeps coming, Farmakis said.

FRILLS FOR WEALTHY

Lipsticks and nylons do a lot for the American girl, said Farmakis, who is a student of more than business administration, but their use among the economic level of persons supposed to be helped by the Marshall plan is slight in Greece.

The tall, 23-year-old student, who hopes to go into politics in Greece when his studies in America are completed, feels that all aid under the Marshall plan should be stopped immediately until the nations involved can meet with the United States and set up a program by which they can get the things they need—and the things that we think they need can be left in this country.

Farmakis's father is president of the Greek Rubber Co., and he wants to import raw rubber to Greece so that it can be manufactured by Greeks into things that Greeks need. But the Greek need for these products is met by Marshall plan administrators with shipments of finished rubber goods.

These fail to benefit the people because the Greek Government imposes import taxes on them to protect the native rubber companies, so other Greeks suffer.

The Danger Facing America

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. JENNER. Mr. President, I present a copy of an editorial which appeared in the Arizona Republic, of Phoenix, Ariz., the Indianapolis News, and Muncie (Ind.) Press, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WITH THE WORLD ON FIRE

The President of the United States made a speech to the Nation Thursday night. He spoke via radio to millions of Americans who may be living on borrowed time, now that an avowed enemy is building weapons of atomic

destruction aimed at America. The President spoke to a people who have been told that the even more fearful hydrogen bomb may wipe out civilization and all life on this planet in one flaming breath. At the moment he spoke, the Red tide of communism that has engulfed almost all of the continent of Asia was pressing hard against the last friendly outposts in the Pacific. In captive Berlin the noose again was being tightened by a new blockade.

On the same night the President spoke, the fires were going out in basic industries all over America. Schools were being closed, and homes and hospitals were reaching into their last reserves of coal. Men by the thousands were being laid off their jobs, trains were being canceled, and the Nation was faced with suspension of vital telephone service. Food products bought with the taxes of the people were being piled up to rot while millions throughout the world went hungry to bed. As the President spoke, citizens all over the Nation were reflecting on the treachery of those in high positions of trust who had been found guilty of betraying their country. And all over the world desperate men were shoring up the hasty defenses of freedom.

Against this background of national peril and acute drama the President of the United States made a speech.

He said the only danger to the American Nation is the Republican Party.

In the name of Washington, Jefferson, and Lincoln we reverently ask: How much lower can the leadership in Washington descend?

Social-Security Coverage of Police Officers

EXTENSION OF REMARKS
OF
HON. ROBERT C. HENDRICKSON
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. HENDRICKSON. Mr. President, on February 9 I caused to be inserted in the Appendix of the RECORD a statement by John J. Goff, chairman of the Committee of Associated Pension Funds of New Jersey, in opposition to the enactment of H. R. 6000.

Today I should like to supplement that statement with a communication and statement of Howard J. Devaney, president of the New Jersey State Patrolmen's Benevolent Association, Inc., which clearly indicates that the patrolmen of New Jersey have precisely the same concern about the effect of H. R. 6000 in its present form as have all other public employees at the State and local levels of government.

To the end that this correspondence and statement may be properly before the Senate, Mr. President, I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

NEW JERSEY STATE PATROLMEN'S
BENEVOLENT ASSOCIATION, INC.,
Glen Ridge, N. J., February 22, 1950.

Hon. ROBERT C. HENDRICKSON,
Senate Office Building,
Washington, D. C.

DEAR SIR: Apropos your suggestion, we respectfully submit in writing our objections to H. R. 6000, insofar as police officers who are members of existing retirement systems are concerned. We would appreciate your presenting our objections to this bill and our endorsement of the amendment, before the Senate at your convenience.

I have the authority to express the deep appreciation of our organization and the New Jersey State Association of Chiefs of Police for your interest in behalf of the policemen of the State of New Jersey. Your outstanding courtesy during our 1 hour's interview with you left an impression with our delegation that will be remembered for a long time.

Thank you very much.

Respectfully yours,
HOWARD J. DEVANEY,
President.

FEBRUARY 22, 1950.

Re H. R 6000, social-security bill.

Hon. ROBERT C. HENDRICKSON,
Senate Office Building,
Washington, D. C.

DEAR SENATOR HENDRICKSON: The New Jersey State Patrolmen's Benevolent Association, Inc., and the New Jersey State Association of Chiefs of Police, Inc., represents an active membership of 12,000 police officers in 563 municipalities in New Jersey.

We are opposed to the extension of social-security coverage to police officers who are members of an existing retirement system because we earnestly believe such coverage would injure police officers instead of benefiting them.

The local taxpayer will not stand for supporting both systems, nor is it economical or just to expect the taxpayer to do so. Apropos this situation, social security would impose a double burden of contribution upon police officers who are underpaid in many States. The forcing of police officers under social security would inevitably lead to the destruction of their own local pension systems, regardless of the Federal-State agreement as to coverage.

Our specific objections to social-security coverage is outlined as follows:

1. Present public retirement systems in the States and subdivisions thereof are adequate to provide for their employees.

2. The benefits under the typical retirement plan for death, disability, old age, and survivorship are better adapted to the needs of the public employees than the benefits under the Social Security Act, which was set up for industrial workers.

3. Public employees have grave doubts that many States and subdivisions thereof can afford to have both, present retirement systems and social-security coverage, without affecting their salaries or impairing public services.

Now, as to H. R. 6000, all that has been said applies besides—

(a) The proposals under this bill as to contribution costs contemplates an increasing cost to the individual as the years go by; thus, imposing a real hardship on public employees who now belong to a retirement system, as two deductions must be made from his salary.

(b) The proposed higher benefits under this bill would not exceed those paid by public retirement systems—Federal or State.

(c) We recommend that public employees covered by a State or subdivision thereof retirement system should be excluded from the bill, H. R. 6000.

4. A referendum may take us into social security, but the State or State subdivision may drop us out without a referendum. If a State withdraws from social security it loses all moneys paid in. There is no provision for any return of funds.

5. Public employees do not wish to interpose any objections to the extension of social-security coverage or benefits to those not so well covered and protected as they are under public retirement systems, but they most respectfully pray and ask that they be excluded from coverage and be permitted to remain undisturbed in their present contractual rights and expectations that they now enjoy and that they may continue to look forward to an age of retirement under a protected public retirement system.

We therefore beg the Senate Finance Committee to endorse recently introduced amendments to H. R. 6000 which would definitely exclude police officers now covered by a pension system from the scope of the bill; and we respectfully urge that the Finance Committee recommend this course of action to the Senate.

Respectfully submitted.

HOWARD J. DEVANEY,
President, New Jersey State Patrolmen's Benevolent Association.
FRED A. ROFF,
Executive Secretary, New Jersey State Association of Chiefs of Police.

The Coal Situation

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. CAIN. Mr. President, like nearly every other American, I am trying to determine and understand why many of the soft-coal miners of the Nation are refusing to obey the law of the land. For the reason that it offers one point of view on the question, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial which appeared in the Cleveland Plain Dealer on Tuesday, February 21.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MINERS' REBELLION

The Nation's soft-coal miners are engaging in a rebellion against the Government of the United States. They have refused to obey an order of the Federal court directing them to end their strike which is imperiling the health and safety of the Nation. The miners also appear to be engaging in a rebellion against John L. Lewis. But are they? Or do they have reason to believe that Lewis is secretly in sympathy with their conduct, despite the fact that twice he has ordered them to return to work?

It will be recalled that Lewis' first message to the miners, following the issuance of the injunction, was a telegram to his district presidents, couched in legalistic phraseology, in which he made it clear that it was the court's idea, not his, that the miners should go back to work. Under the circumstances, he had no alternative but to direct the miners to obey the injunction, he said.

A week went by with nothing happening, except that the union strong-arm squads, which are always responsive to Lewis' wishes, roamed the mine fields, threatening any miners who showed an inclination to return to work, and preventing any mines from reopening.

By the end of the week the strong-arm squads were in complete control of the situation. Under their influence the miners presented a solid front behind the slogan "No contract, no work."

By that time it was evident that the miners had been organized to stay out of the pits. Whereupon Lewis then sent another telegram, this time addressed to the locals, instructing them to comply with the injunction and end the strike, but the locals ap-

parently had been well briefed as to what they were to do. They ignored the second instruction as they had the first.

Was this a prearranged, phony rebellion against Lewis? Anyone who stopped to consider how Lewis in the past ruled his union with an iron hand and how the miners responded to his slightest command would conclude that it was.

It was less than 3 weeks ago that a young miner in Library, Pa., Joseph Dickmon, was suspended from the union for 6 months for calling Lewis a dictator and saying the miners ought to work full time instead of the 3-day-a-week schedule then in effect.

Another miner, George H. Livengood, of Uniontown, Pa., was expelled from the union because he asked for an accounting of the miners' welfare and pension fund.

In the past, if any mine-union official had dared to disobey an order from Lewis, he would have been fired forthwith. Any miner who expressed the sentiment "to hell with John L. Lewis," as some of the strikers have, would have been taking his life in his hands.

We think if Lewis really wanted to end the strike, he could do so. All he would have to do would be to give the right signal. But he is now engaged in a struggle to nullify the Taft-Hartley Act, an attempt to demonstrate to other unions and to Congress that it cannot be enforced and that it need not be obeyed.

Prayer for Peace

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. THOMAS of Utah. Mr. President, Mr. James Patrick McGovern, a former captain in the AEF during the First World War, and a member of Bethesda-Chevy Chase Post, No. 105, of The American Legion, Department of Maryland, has composed a poem which reflects such a basic spiritual force as mankind must cherish if civilization is to survive—let alone to advance. He has titled it "Prayer for Peace," and has dedicated it to the national welfare. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the prayer was ordered to be printed in the RECORD, as follows:

PRAYER FOR PEACE

Men's prayer for peace through brotherhood world-wide
Had never need so great as in this hour;
Love calls, with God's infinitude allied,
Regardless of the race, the creed, the power.
Now that both space and time, the atom's fire,
And all the secrets of the sun unfold,
The helmless mind speeds to a brink so dire,
Who can foretell what death's abyss would hold!
But none can steal, like land, another's soul,
Or any virtue in its quality;
But rather will thieves make good-will their goal
When heart finds heart in true democracy.
May strength have leaders who like Christ forgive—
Who for the spirit live and would let live.

—*James Patrick McGovern.*

A Kansan's Appraisal of George Washington

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. SCRIVNER. Mr. Speaker, pursuant to permission previously granted to extend my remarks in the RECORD, I wish to submit an editorial appraisal of George Washington which appeared in a recent issue of the Argonia (Kans.) Journal, as follows:

OUR FIRST NATIONAL HERO

All over this broad land the 22d of February—George Washington's Birthday—is celebrated.

How shall any man add aught to the praise or eulogy of George Washington? History and biography, eloquence and poetry have exhausted their combined riches upon the successful leader of the American Revolution and the founder of the American Republic—our first great national hero.

Every great crisis in the history of the world has found its man to control and guide it. Call it providence, accident, or what you will, the American Revolution was no exception. Before the first murmurs of discontent were heard in that struggle the man was being prepared for the crisis. On the banks of the Potomac and the Rappahannock, 30 years before Lexington and Bunker Hill, a truthful and manly boy was growing up, ripening into stalwart young manhood. With only the common-school education of that early day, the young man was being educated in the broader nature and experience, in the great forest, under the open heavens, with his surveyor's chain and sword, in Indian wars, defending the frontier settlements from the savage incursions.

Growing still apace the young Virginian was soon the leading spirit and military commander of all that Patomac region, and his skill, endurance, and courage in those campaigns swelled the measure of his fame. Then with peace, the young commander laid aside his sword, married, and settled down on his inherited country seat at Mount Vernon and, like his ancestors, was a rich-landed proprietor, a Virginia farmer and planter, and a country gentleman. So he might have remained to the end, had not the voice of patriotism called him to take part with his neighbors and the oppressed people of the Colonies against the tyranny of the mother country.

He was elected a delegate to the Continental Congress, and it was by that body that he was unanimously elected Commander in Chief of the American Army in 1775. After the war, when the Constitutional Convention was called in 1787, he was unanimously elected its chairman, and his influence had much to do with the framing of the Constitution and getting it accepted by the States. When this new scheme of government went into operation, he was unanimously chosen as its first President and reelected in 1793. Washington never accepted a cent for his services for his country during the Revolutionary War and his two terms as President, and was paid only his actual expenses.

At the close of his second term, he delivered his famous farewell address, which has become one of the outstanding public documents of all time, and which contained statesmanlike advice and sound counsel. One of his admonitions to the young republic is just as worthy today as it was 160 years ago: "Avoid the accumulation of debt, not only shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burden of debts which we ourselves ought to bear. Bear in mind that towards the payment of debts there must be revenue; that to have revenue there must be taxes; and that no taxes can be devised which are not more or less inconvenient and unpleasant." In the light of recent history, what an old fogy George Washington was.

He retired to his home in 1797 and resumed his plantation life. The following year he was again made commander in chief of the army in expectation of a war with France, but in the midst of military preparations he was stricken with a sudden illness and died December 14, 1799.

At the time of his death, one Member of Congress was Gen. Henry Lee, "Light Horse Harry," father of the famous leader of the Confederacy in the Civil War, Robert E. Lee. He was appointed to deliver the oration in a memorial service by Congress and it was in that speech that there was uttered that famous phrase, "First in war, first in peace and first in the hearts of his countrymen." Those words have stood the test of time, which were not only true at that time but were prophetic of an opinion which exists to this day.

Reservoir of Christian Hope

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the February 18 issue of America, National Catholic weekly, titled "Reservoir of Christian Hope." In these days when we are looking for a sedative for our nerves, I commend this article to all thoughtful Christians. In this atomic age people are becoming increasingly apprehensive because they do not know the solution to the problem of control of atomic energy. The encouragement that this article offers should be reassuring.

The article follows:

RESERVOIR OF CHRISTIAN HOPE

It is news, and it is welcome news, when scientists find it necessary to appeal to the moral sense of the Nation.

This is what happened on February 4, when Prof. Samuel K. Allison, director of the Institute for Nuclear Studies at the University of Chicago, expressed his own frank opinion. "I am appalled," said Dr. Allison, "to hear talk of the hydrogen bomb as just an improved piece of machinery. * * * After all, we are a nation with a sense of morality. This is a moral issue."

Yes; we are, by and large, a moral nation. Yet to exactly what extent? How deep, how sure are our moral resources when we are confronted by the need of making a moral decision of this magnitude?

Almost more terrifying than the bomb itself is the generally baffled air of the American public when the entire world is looking to us for our decision. It is hard to say which phase is the more disturbing: popular apathy and apparent inability to grasp what we are really up against, or the hysteria and demoralization that prevail when imaginations are finally stirred.

This sense of bafflement, this perplexity, this inability to take other than a merely emotional approach, is the direct result of the decay of religious and moral teaching, of the continual erosion that materialistic subjectivism has worked in our Nation's moral fiber. "The greatest change I find in the United States since my last visit," remarked a distinguished Japanese educator recently, "is the widespread weakening of moral standards."

Yet mere lamentation is of no avail. The present is the time for all citizens who have a clear sense of good and evil to do what they can to restore and strengthen our sanity, to stabilize our emotions, and clarify our thinking. If we must face such a crisis, let us face it as mature men, not as children.

No fear is more demoralizing than an hysterical fear of death. No conviction is more apt to restore courage and tranquillity to the soul, even when walking in death's own shadow, than the conviction that death, after all, is not the most dreadful of all evils.

In time of crisis more men and women will be found to share that conviction than we are likely to suspect in the piping days of peace. The greatest military mistake Hitler ever made was occasioned by his inability to understand how the people of Britain would prefer being bombed to death by German planes to the disgrace and slavery that would follow compliance with his demands.

If this is true for the patriot, it is doubly true for every convinced Christian. For we know, with the certainty of natural reason, with the certainty of all God's revelation and the supreme certainty of the Resurrection, that no H-bomb in creation can destroy a human soul. Strange anomaly, that we Christians who today are asserting the sanctity of human life on earth in the face of the abortionist and the mercy killer, at the same time maintain that the supreme values are those of life eternal, and that all human policies and decisions must ultimately be judged by the immutable standards of such a life. Yet that anomaly is only apparent, since it is the immortal in man that lends such significance to his temporal years.

What is true of one man's fate is true of the whole human race, even were the worst possible forebodings to be realized and all humanity exposed to destruction. In one instance as in another, the pivotal truth remains that we can afford to risk all on earth, if that is the only way by which we can save the liberty of our own souls. After all, as America said on August 18, 1945, the providence of God, not the schemes of man, will finally set the time for ending the earthly sojourn of the human race.

Much is said, and correctly said, to the effect that the Russians can better afford to face the risks of vast bomb destruction than can the Americans. Nevertheless, when it comes to the absolute choice of life or death, those of us who have retained our faith in God and His teachings possess a hope that is lacking to the boldest materialist. Let those of us who have such a hope in life everlasting make every effort to impart it to our entire country. No matter how tremendous the cause for alarm, we are not and we never will be intimidated. This quiet certainty that we can save our lives by dying is a weapon as mighty in its own way as the H-bomb itself.

Rescue of Greek Children

EXTENSION OF REMARKS
OF
HON. FRANK P. GRAHAM
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. GRAHAM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a plea by Archbishop Michael that Greek children be rescued, which appeared in the Orthodox Observer.

There being no objection, the plea was ordered to be printed in the RECORD, as follows:

ARCHBISHOP MICHAEL PLEADS GREEK CHILDREN BE RESCUED

My heart is full of gratitude as I take this opportunity to greet the American people and pay my respects to this wonderful democratic country.

I have just come from Greece and I want to express the warm and enduring thanks of all the Greek people for the vital aid that has been extended under the leadership of the President of the United States of America to Greece in her hour of need.

My message to you today is one, alas, of tragedy, which again hovers over the homes of Greece.

In America at this Christmastime gladness prevails in millions of homes. The mothers of America have their little ones at their own firesides and God's blessings of peace, freedom, and security are the possessions of everyone here.

It is not so in Greece. Though that nation was liberated from enemy occupation, military intervention on the part of the Communist neighbors of Greece followed that liberation and plunged the country into a long period of conflict on Greek soil. Once again Greece found herself defending freedom and Christian civilization as she so often has done through the centuries.

Under cover of this conflict the Communist guerrillas conducted one of the most unspeakable campaigns in all human history by abducting thousands of Greek children, ranging in age from 3 to 15, from the areas of guerrilla operation and transporting them behind the iron curtain.

Of these 2,000 were taken to Albania; 2,650 were taken to Bulgaria; about 3,000 were taken to Hungary; 3,800 to Rumania; 2,235 to Czechoslovakia; 11,000 to Yugoslavia; and many have since been moved to Poland and eastern Germany.

The pretext was that these children were to be given salvation from famine and that they were carried away in order to undergo a program of education in free democracy.

Some of the older ones since have actually been captured while fighting in the guerrilla bands.

I am speaking this morning from New York City, which is the headquarters of the United Nations, dedicated to peace and justice. The United Nations has condemned this violation of fundamental human rights but its resolutions asking the immediate restoration of these young people to their mothers' arms have been ignored. The continuous appeals of their heartbroken parents have fallen upon deaf ears.

There is no joy, only sorrow and heartbreak, in these Greek homes at this season of rejoicing for so many of you within the sound of my voice.

In the name of our Lord, Jesus Christ, whose eternal theme is peace on earth, good will toward men, and who is full of compassion for little children, I earnestly appeal to you to lift your voices with us on this day, December 29, in denunciation of this inhuman action.

In the name of the Christ Child, whose birthday we celebrate, I ask you to express with us—through your Christian churches, through your organizations of women, through whatever groups to which you may belong—your wish to exert all possible moral influence upon the members of the United Nations so that all civilization will demand the return of these thousands of boys and girls to their grieving and broken homes.

In the name of all decency and all religion, I ask you to pray that all the humanitarian instincts of mankind will be brought to bear against this mass outrage.

To you Americans who are so rich in spiritual gifts, as well as liberty and well-being, I address this appeal with all the fervor at my command.

May the blessings of Almighty God and our Saviour be with you.

Lincoln Republicanism

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the Lincoln Day address entitled "Lincoln Republicanism," delivered by me on February 11, 1950, at Schenectady, N. Y.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every year at this time the American people join in observing the anniversary of the birth of Abraham Lincoln. In frank recognition of the eternal debt owed by all Americans to Lincoln, all Americans—regardless of race, creed, color, national origin, ancestry, place of residence, or political party—pay sincere tribute to this man who contributed so greatly to our present well-being.

For us Republicans the anniversary of Lincoln's birth has come to be almost a sacred occasion. At these annual observances we pay tribute not only to Lincoln, the man, the statesman, the leader in crisis, but to Lincoln the first Republican President.

For Abraham Lincoln, besides having been one of the greatest of all Americans, was the greatest Republican who ever lived. He shaped the formative years of the Republican Party and established for it the high tradition of service to the American people which carried our party to greatness.

I suggest, however, that there is a way in which we can pay even higher honor to Lincoln, and at the same time do a greater favor to ourselves, than by staging annual ceremonies highlighted by effusive panegyrics of the Great Emancipator.

That way is the day-by-day practice by us of what he preached.

Even as we cannot forget that Lincoln was the greatest Republican who ever lived, so we should not forget that he was also the most successful Republican who ever lived. To try to emulate the example set by Lincoln

is to do more than to praise him; it is also to benefit ourselves as Republicans.

In March of 1832 Lincoln had just passed his twenty-third birthday. Announcing his entry into politics as a candidate from Sangamon County to the Illinois Legislature, he used these words:

"Holding it a sound maxim that it is better only sometimes to be right than at all times to be wrong, so soon as I discover my opinions to be erroneous, I shall be ready to renounce them."

Lincoln lost that election in 1832, but he never lost the habit of open-mindedness which was revealed in that early message to the voters of Sangamon County.

Thirty years later, in 1862, Lincoln, then President of the United States and approaching the peak of his magnificent career, wrote a letter to Horace Greeley which contained the following solemn promise:

"I shall try to correct errors when shown to be errors, and I shall adopt new views so fast as they appear to be true views."

Thus it is plain that from the modest beginning of Lincoln's public life to its glorious, yet tragic, conclusion, his was a steadfast rule ever to be receptive to new ideas, and never to hesitate to recast his thinking in the light of changing circumstances. Nowadays those Republicans who decry so-called "me-tooism" would do well to reflect upon this conspicuous quality in the character of the greatest Republican of all.

As we pause in 1950 and look back through the years, we can clearly see that during the first half of the twentieth century there has occurred such a world-wide upheaval of nineteenth century institutions and traditions as to amount to no less than a gigantic social, economic, and political revolution.

World Wars I and II were the most violent explosions of this revolution. Communism in eastern Europe and China, socialism in Great Britain, and their reverberations in Asia, Africa, and South America are dramatic evidences of the new and overpowering forces which have been operating on a global scale during the last 50 years.

Here in this country—fortunately for us—this revolution has taken a milder, more moderate course. But a revolution has nonetheless, been taking place.

It is most unfortunate, for the country as well as for the Republican Party, that our party has failed too often to adjust itself to the consequences of this revolution. Too often we have not been receptive to new ideas. Too often we have not exhibited that open-mindedness which characterized Lincoln. The voters of this country have repeatedly told us so. They told us in 1932; they told us again in 1936; they repeated it in 1940, 1944, and 1948.

"If you once forfeit the confidence of your fellow citizens, you can never regain their respect and esteem."

That warning comes from Lincoln and unhappily is applicable to our party's record, especially in the field of civil rights where our party's performance has failed miserably to conform to promise or tradition. Unless party platform pledges are made with the solemn conviction that they shall be kept, the party responsible for them is deserving only of the hostile public reaction which disregard for them inevitably provokes.

It seems to me that today the Republican Party can do no better than to adopt again a course based on the abiding principles and fundamental integrity of Abraham Lincoln. And never in the history of the Nation has there been more urgent needs for a reapplication of those principles and a rededication to that integrity.

As Republicans, we believe profoundly in the free competitive enterprise system. An unfortunate result of our party's traditional defense of this system has been an identification in the minds of too many Americans of the Republican Party and big business. This condition has arisen largely from the fact that through our insistence that there can be no genuine human rights without property rights we have appeared frequently to place property rights ahead of other basic individual rights and freedoms guaranteed in the Constitution.

Yet it is a fact that, while we emphasize that human rights without property rights are illusory and nonexistent, it is and always has been a fundamental principle of the Republican Party that political liberty for the individual is of greater importance than his economic security. For without political liberty, economic security constitutes no better than a condition of slavery. As Lincoln said, "Republicans are for both the man and the dollar, but in case of conflict the man before the dollar."

It is exceedingly interesting to note that at the time Lincoln was expressing this principle of Republicanism, he was criticizing the Democratic Party of his day for a complete reversal of the basic position of its founder, Thomas Jefferson, that the rights of property are secondary to other personal rights of men and women.

How equally valid is such a criticism today, as successive Democratic administrations, by glowing promises of everything for everybody everywhere, shamelessly bribe the American people to trade their political liberty for so-called economic security.

Another basic principle of the Republican Party was expressed by Lincoln in a speech made in 1854 at Peoria, Ill. During the course of this speech, an impassioned attack on the repeal of the Missouri Compromise, he made the following statement:

"If there is anything which it is the duty of the whole people to never intrust to any hands but their own, that thing is the preservation and perpetuity of their own liberties and institutions."

Today it is imperative, if this Nation is to remain a Nation of free men, that the Republican Party most vigorously reaffirm this principle. It is not, definitely not, a case of crying "wolf, wolf" to say that through its control of the strings of the enormous Federal purse, the administration has been and is moving this country toward a highly regimented state, wherein individual freedom will have been bartered away for alleged economic security through deficits, debt, and intensified bureaucratic control.

This trend to socialism, begun in 1933, is a growing one, as witnessed by such recent administration proposals as socialized medicine and, under the name of the Brannan plan, socialized agriculture.

Through financial aids, grants, subsidies, and other forms of economic persuasion, the Federal Government is promoting the further surrender of personal liberty and jeopardizing the integrity of those free institutions of American society which are the foundation of our system of free government.

It is of transcendent importance to the American people that the Republican Party, by reviving and sustaining its Lincoln heritage, arrest, and arrest now these false concepts and the trend toward a planned economy, a socialist state.

For what has until recently been only a trend is now being accelerated to a degree at which it is becoming a mad rush.

Within the past year we have seen developing in our country dangerous theories and notions. The idea that a national debt of $255,000,000,000 or $265,000,000,000 is inconsequential; the thought that uninterrupted deficit spending is not alone justifiable, but even desirable; the growing feeling that economy in government, far from being a virtue, is actually a vice and to be shunned—these are some of the theories and notions to which I refer, and they are signposts on the road to moral bankruptcy and national decay.

Striking proof of this situation is provided by the proposed budget which the President submitted to the Congress last month.

For the fourth successive year since World War II, he has presented to the Congress a Federal budget higher in amount than the one submitted by him the year before. Each successive request has set a new all-time record for Government spending in peacetime.

By seeking authority to spend more than $5,000,000,000 in excess of anticipated revenues in 1951, the President urges the Nation to increase its staggering national debt at a time when the level of national income is such that we should be rapidly reducing the debt.

To permit ourselves to indulge in continuous deficit spending, as urged by the President, is only to yield up more economic, and therefore more political, freedom. For the excessive Federal spending envisaged in his budget is the inevitable prelude to excessive Federal control. Furthermore, the increasing concentration of influence over our lives exerted from Washington marks the imminence in this country of a regimented society similar to those social orders elsewhere in the world today, which we view with such abhorrence and alarm.

The so-called New Dealers or Fair Dealers are fond of quoting the following passage from Lincoln's writings:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities."

That is often cited by the Fair Dealers as the Lincolnian expression of approval of the Fair Deal.

These people, however, fail to complete the passage as written by Lincoln. In view of his full words, this is understandable, for they are as follows:

"In all that the people can individually do for themselves, government ought not to interfere."

There, in those few words of Lincoln, lies the essential difference between the present Democratic Party and the Republican Party, from which stem the important political issues that confront us today.

The few quotations from Lincoln which I have cited in my remarks tonight are enough to reveal a very important and very distinctive part of Lincoln's personality and character. It is, however, one that too frequently is not remembered today.

Not only was Lincoln possessed with high principles, but he was practical. Not only was he a consummate statesman, but he was a shrewd politician. Not only could he hope and plan for achieving greater goals, but he could achieve them. Not only, in short, was he a thinker, but he was a doer, as well. In the truest and best sense of the word, he was a realist.

Probably today the Republican Party has greater need for realism than for anything else. It seems to me, in fact, that a lack of realism has been one of our party's chief handicaps.

If in our opposition we blindly ignore great national problems demanding solution or if—perceiving these problems—we refuse either to provide solutions or to accept solutions offered by others, we serve neither ourselves nor our country. We then present the sorry spectacle of a party devoid of ideas

or imagination, and we fail in our obligation to the American people.

Ours is the party of opposition, yes. Ours must not, however, be the party of opposition simply for the sake of opposition.

Oppose we must. But we must propose, too.

To attract the support essential to our success, we Republicans must stand for things. And we can stand for things without being a "me-too" party.

Our great task is to combat the reckless spending, the glaring incompetence, and the socialistic programs of the Fair Deal. In doing so, we must show that we possess genuine solicitude for the welfare of all the people.

We must point the way to the maintenance of our free society while indicating the steps to be taken to improve continually the lot of the ordinary man. The mighty challenge confronting us is to provide the means for the reconciliation of the ever growing demand for security with the even more vital requirement for the preservation of freedom.

Ours is the job of convincing the majority of the American people that the way to a better society lies not through ever bigger and more powerful government which would finally destroy freedom. Ours is the job of convincing the majority of the American people that only through government's cooperation with, and not its operation of, our free institutions can those institutions be fully utilized and expanded and remain free—for the benefit of all.

So tonight, in rededicating ourselves to the ideals and principles of Lincoln, let us not forget that he was also a very real and a very practical human being.

But more important, let us not forget that with all of Lincoln's practicality and shrewdness, there stands revealed in his writings and speeches, and especially reaffirmed in his everyday life, a rare appreciation and acceptance of the great moral and spiritual values. If Lincoln's success in his day was owing in large measure to his realism, his greatness for posterity is owing in even larger measure to his lofty idealism, his basic integrity, and above all, his abiding compassion for humanity.

And so let it be with the Republican Party today. Mindful of these things, profiting by them, we can move forward now to new goals of achievement and success and secure for ourselves the gratitude of generations to come.

America, World Leader Against Imperialism

EXTENSION OF REMARKS

OF

HON. LESTER C. HUNT

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. HUNT. Mr. President, on the evening of February 22 the junior Senator from Iowa [Mr. GILLETTE] delivered an address on the subject America, World Leader Against Imperialism, at the Arlington Jewish Center. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA, WORLD LEADER AGAINST IMPERIALISM

We are celebrating today the two hundred and eighteenth birthday of George Washington. Most Americans think of George Washington as the Father of our Country, and that is the way our children are taught to think of him in school. Yet the name of George Washington is known throughout the world for a different reason. Before he could become Father of the Country he had first to be its liberator. George Washington, more than any other one man, was responsible for the liberation of the American Colonies from the British Empire.

Washington was the first of a long line of liberators. The United States of America was the first new country to appear on the map of the world in more than a hundred years. Its appearance was the signal for the beginning of a world-wide struggle that has continued down to this very day, and that is going to continue until every subject people on earth has finally achieved liberation and nationhood. Many great men have followed in the Washington tradition as liberators of their countries:

In South America, Simón Bolivar and José de San Martin.

In South Africa, Jan Smuts.

In Italy, Garibaldi and Mazzini.

In Czechoslovakia, Masaryk and Beneš.

In India, Gandhi and Nehru.

In Israel, Ben Gurion, Beigin, and others.

In Indonesia, Sukarno and Sjarir.

And many more whose names stand out in their countries' history.

Washington, the liberator, has been the symbol for the anticolonial struggles for freedom on every continent for the past 150 years. His words and acts have inspired such recent liberation movements as those of the Jews in Palestine and the Republicans in Indonesia. His model will be followed again and again in the struggles for freedom of all the remaining colonial peoples.

As the first great liberator, Washington started a historic movement the end of which we cannot yet see. As Father of his Country, he and the great men working with him founded a new kind of country endowed with a new kind of society. Americans who came after them have perfected the miracle—and America—a new country with a new type of society has become an example for oppressed peoples everywhere to emulate.

In recent years the deep current of national liberation has swelled to a mighty flood. The historic trend that began with Washington's liberation of America swept unchecked through the Western Hemisphere in the early nineteenth century. Then there were set-backs. Though Spanish and Portuguese colonies in America achieved independence, European empires were extending themselves over Africa and tightening their grip on Asia.

The first years of this century saw, in the Boer War in South Africa, a reversal of the trend. Since then the drive for liberation from imperialist domination has mounted with ever greater intensity. The Austro-Hungarian, German, and Turkish Empires were smashed by the First World War. Germany's overseas colonies, however, were taken by French and British mandates. The breakup of the Turkish Empire produced a series of weak states dominated by France and Britain.

There was another reversal of the trend during the period from 1931 to 1944, when the Japanese, Italian, and German totalitarians tried to establish vast empires by military force. They, too, were smashed—largely because of American efforts, it should be noted, as in 1918. In the wake of their destruction, other European empires are staggering and collapsing.

Since 1945 we have seen more than a dozen new countries appear on the map of the world.

Syria and Lebanon drove out the French, with British help.

Israel achieved her independence.

India, Pakistan and Ceylon are now partners of the Commonwealth.

Burma is wholly independent.

We have granted full independence to the Philippines.

Indonesia is liberated from the Dutch.

Libya has been declared free from Italy.

Eritrea will be free from Italy 10 years from now.

Jordan has been granted nominal independence from Britain.

Korea has a half-way, precarious freedom.

Ethiopia is again a free country.

In the past 5 years hundreds of millions of people have begun the great adventure of independent national life—and this is not yet the end.

But again the trend is not all in one direction: The Soviet Union, expanding into Europe, has transformed some nine countries into colonial dependencies. In Poland the process has gone so far as to put a Russian general in command of the Polish armies. These colonies all work for the greater glory of the Soviet Union, as India once worked for Britain. Yet even there a counteraction has set in, producing the phenomenon called Titoism—national communism that rejects Moscow's rule of Yugoslavia. And no one can predict when a similar phenomenon may arise in Communist China.

But, setting aside for the moment the onrush of Soviet imperialism, we can see that almost everywhere else in the world the current is running strong against colonialism. The shot fired at Lexington is still echoing down the corridors of history.

Regardless of what anti-American propagandists may say, this country throughout its history has, far more often than not, been actively in support of people fighting for their freedom—whether it was the Irish, the Czechs, the Greeks, the Israelis, the Boers, the Arabs or anyone else. We have granted independence to the one Asiatic colony we stumbled into: the Philippines. There are today before Congress bills seeking to transform two of our remaining territories into full-fledged States—and I am supporting statehood for Hawaii and Alaska. Americans are uncomfortable in the role of colonial imperialists.

America has always been a profoundly anti-imperialist country. Even when, from time to time, our Government has temporarily abandoned the traditional support for colonial fighters for freedom, our deep-seated feelings sooner or later have always forced the Government to return to the path. I am thinking now of the recent period when the American people insisted that their Government stand on the side of the Israelis against the British-instigated Arab invasions and on the side of the Indonesians against the brutal attempts of Dutch imperialists to crush the Republic of Indonesia. And no one forgets the unending efforts of vast numbers of our people during the whole war period to persuade the British to grant independence to India.

When we think of the origins of our country and its struggle against the totalitarian political philosophy and the mercantilist economic philosophy of the empire it fought against—why should we be surprised that America has been and still is today the world leader against imperialism? The surprising thing would be if America were not. We can't be anything else but anti-imperialist. It is in our history to be so. It is in our best interests economically to be so. It is in our blood to be so.

Compared to the American who stands against imperialism, the Communist or Socialist who preaches—but never practices—anti-imperialism is a "Johnny-come-lately"—a poor imitator of something begun long ago by the colonists strung out along the eastern seaboard of North America, under the lead of George Washington.

This is a fact of extreme importance today. We are all aware that one of the most potent propaganda weapons of the Communists is their attack on colonial imperialism in Asia, the Middle East, and Africa. With this weapon they are hitting the weakest plates in the armor of our European allies—and through those allies are hitting at us. This is producing one of the most acute dilemmas in our foreign policy today.

The embarrassment which our alliance with Europe causes us elsewhere can be seen in all its ugliness in the Indochinese crisis. Unlike Indonesia and Israel, where we had similar though lesser embarrassments, Indochina is next door to a great new Communist power—China. Unlike Indonesia and Israel, Indochina's nationalist movement is mainly controlled by Communists. We decided, when the chips were all down, to back the Israelis and the Indonesians against the British and the Dutch Empires. We were right to do this—it was in our long tradition of anti-imperialism. History is already vindicating those many Americans who worked for this policy in Israel and in Indonesia.

Our Government's policy is not yet clear on Indochina, though the indications are that we have decided to make an all-out effort—including economic and military aid—to back the French-sponsored Indochinese regime of Bao Dai, against the Communist-dominated nationalists under Ho Chi-minh. Here our decision is influenced by factors that did not exist—or that were far less important—in Indonesia and Palestine. The question in Indochina is not only one of colonial independence versus European imperialism but also of a modified European-type imperialism against a dynamic, driving Communist imperialism.

If the French win, we will at least have the possibility of effecting reforms and even one day of seeing Indochina become independent of French imperialism. If the Communists win, we will not only lose this possibility but the Indochinese will promptly be taken over by a new and more virulent form of imperialism run either from China or from Russia. Indochina is a great gamble, and the odds at present are not in our favor. We have been forced to back the French and their puppet, because the Soviet Union and Communist China recognized Ho Chi-minh.

The fact that we find ourselves in such a trap illustrates what I have been talking about. We are being forced to compromise our traditional opposition to European imperialism in order—we hope—to stop an even worse Russian Communist imperialism. We must realize why we have been driven into this trap. I hope we insist, before it is too late, that in other parts of the world where the Communist pressure is not as immediate or as powerful as in Indochina, there will be undertaken reforms and steps toward liberation that will strengthen colonial areas so that they do not later involve us in more civil wars. I am thinking of British Malaya which lies just south of Indochina, of Iran, Iraq, and other Middle East countries, of French North Africa, British Nigeria, the Gold Coast, and the rest of Africa controlled by Britain, France, Belgium, Portugal, Italy and Spain.

There is almost no part of our foreign policy, outside our direct relations with the Soviet Union and the arms race on which we and they have entered, no aspect of our foreign affairs that calls for more attention, more deep thinking, than on the colonial question. The day is long past when we can afford to ignore what the European colonial powers are doing in their possessions and dependencies. We are tied to them by the North Atlantic alliance, by the military-assistance program, by the European recovery program, by all manner of strategic and economic interests.

It is foolish to think we do not have sufficient influence with the European colonial powers to be able to propose—and have accepted—vital and necessary improvements in their colonial policies and regimes. That doesn't mean declaring, as some rash individuals suggest, "Do what we tell you, because we're putting up the money." That is the last way to accomplish anything. Such an approach smacks of the very thing we are opposing: Dictation by a stronger power to a weaker one. But it does not mean either that we are forced to sit back, hands folded, and watch while other Indochinas and other Indonesias develop before our eyes, doing nothing to prevent the crisis, only stepping in when the policy of the European power involved has proved bankrupt.

The stakes in the colonial problem are too high to leave it to ambassadors on the spot, area desks in the State Department, or experts and specialists. Of course, what we decide to do will vary in each area according to local and particular conditions. But we can certainly develop what we do not now have: an integrated body of principles on the colonial question that will form the fundamental approach to our policymaking throughout the colonial world.

If our decision, for example, is always to go through the colonial offices of the mother countries when we want to deal with a colonial people—then the outcome of any action we take will be one thing. If, however, we make it a policy to go directly to the colonial peoples themselves—bypassing the colonial offices and their pretensions to superior standing above the "backward" peoples—we will obtain quite different results.

Take the Indo-Chinese dilemma again. If we decide to give aid to the forces fighting the Communists—as it is almost certain we are going to do—then to whom do we give this aid? To the French army which all Indochinese, Communists, and non-Communists, detest as their oppressor? To Bao Dai, the French-sponsored leader of the non-Communist Indochinese? To some other man or group less suspect in the eyes of the people we are trying to draw away from the Communists? The success of any program we may invent for Indochina will largely depend on this decision.

Take the new point 4 development for economically retarded areas—mainly for colonies and semi-colonial countries. Do we channel technical assistance and investments through colonial offices in London, Paris or Brussels? Or do we send it directly to Nigeria or French Equatorial Africa or the Belgian Congo? If we do one thing, any development that takes place will be primarily in the interest of the imperial power. If we do the other thing, the development will be for the benefit of the colonial people—their economy will grow on a broad base and their political freedom will grow on top of that.

Such decisions cannot be left to State Department officials, no matter how expert they may be. There is a crying need for a statement of general American policy on the colonial question. This means that a public body of outstanding men and women is needed to state the issues, study the alternatives, suggest the course to follow.

The colonial problem is one of relations between subject peoples and their masters. It is complicated by our alliance with the masters and by the Communist efforts among colonial peoples to identify liberation with communism. We have to think through this problem so as to attain two goals:

First. To retain our alliance with Europe, now that it exists, and to transform it, if possible, into a federal union including Canada and the United States.

Second. To prove to the colonial peoples that we favor their liberation from the very countries with which we are allied.

I doubt if a more difficult problem—involving more people and more intricate relationships among them—has ever faced this country. If we do not solve it correctly I can safely predict that we will either turn the Europeans against us as muddled meddlers in their colonial backyards, or that we will finally lose the colonial peoples to the agents of world communism. We cannot permit either of these to be the outcome.

One of the most dramatic and most fruitful ways of concentrating public attention on this problem and on its possible solution would be a national conference on the colonial question. We should have a conference called—perhaps by Presidential direction, perhaps not—to include representatives of all Government departments and agencies that deal with the colonies of other nations, Members of the House and Senate, leading representatives of business, labor, universities, professions and civil bodies, people from the United Nations, visiting witnesses from colonial areas. Such a conference would make a thorough study of the colonial issue as it affects our standing in the world, our foreign policy goals, our relations with the millions of colonial peoples. It should report its findings and recommendations to the Congress, to the executive department, to the people at large through press, radio, and other media.

I would not want to leave the impression with you that I am considering the colonial question solely in respect to its role in the cold war. Even if there were no cold war the problem would confront us. The cold war has merely accentuated it and brought it more sharply to our attention. The march toward freedom of colonial peoples began long before communism was ever heard of.

What makes me proud is that we in America began that march. The man whose birthday we are celebrating today was the first leader in that march. Millions of Americans since his time have participated in one fashion or another in the liberation of other peoples. In a very real sense our participation in both world wars had as its purpose the liberation of peoples conquered by imperialist armies. And though no one stresses it much, one of the basic issues in our present conflict with the Soviet Union is the colonization of eastern Europe by the forces of Communist imperialism.

America cannot help being an anti-imperialist country. Our Nation was born in a struggle against foreign imperialism, and our history will never let us forget it. The democratic society we have built has made it impossible for the type of feudal ruling class to develop that European nations depend on for the conquest and rule of colonial peoples. Our economic system is designed primarily to satisfy consumer wants for all the people, not to perpetuate and enrich a small ruling class of the sort that in Europe has ruled at home and ruled in the colonies.

America is never truer to herself than when she is engaged in a great liberating task. Many feel we have somehow lost the track in recent years, that we are stumbling across the world like a powerful but dizzy giant. I believe that one way to bring us back on to the path we have so long followed in the past—the true path of George Washington's America—is to make up our minds about the colonial question and to proclaim publicly and before the whole world, that one of our primary goals in foreign affairs is to help speed the process of liberation of all colonial peoples wherever they may be.

We Mustn't Flinch in the Face of Mounting Russian Threats

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. HARVEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Connersville (Ind.) News-Examiner of February 17, 1950:

WE MUSTN'T FLINCH IN THE FACE OF MOUNTING RUSSIAN THREATS

This is a time of supreme urgency in America. Not since Russian fighters buzzed our air-lift planes over Germany have we had greater need to view the future with courage and determination.

Dr. Harold Urey, atomic scientist, tersely expresses the danger: "If the H-bomb is created, there will be no place to hide."

Another eminent scientist, Dr. Vannevar Bush, warns that the only real defense against the A-bomb or the H-bomb or any other explosive weapon is to keep it away from our shores.

Urey underlines that warning by telling us that not only Russian bombers but innocent-looking tramp steamers which slip almost unnoticed into our harbors may bear the dreaded explosive cargo.

He foresees a possible Soviet effort before the year is out to split European Atlantic Pact nations off from us by mining their key harbors with atomic charges.

Rumors are rife that Russia may strike any time at defiant Tito in Yugoslavia or at Finland, tiniest partner in the Soviet Union's circle of compulsory friends.

Admiral Sherman, chief of naval operations, declares the Russians have a vast submarine fleet in Asiatic waters. Military experts see submarines as prime carriers of superexplosives for possible launching against our island outposts or our western shore.

A Government aviation research official reiterates an old story: Russia has a bigger air force than ours.

Air Secretary Symington goes him several points better, asserting that Soviet dictators have the world's largest armed forces and are capable of a surprise attack upon any part of America's 3,000,000 square miles.

These signals of peril have not gone unheeded. The cry for action to stave off civilization's ruin has risen everywhere. And that call has been answered, by Secretary of State Acheson, with the full support of President Truman.

Our policy for dealing with Russia in this hour is to be founded solely on strength and power. For these blunt tools of diplomacy are the only ones which impress Moscow.

Let the meaning of that decision sink in. There'll be no more big-power meetings, no peace treaties with Germany and Japan, no disarmament or atomic control talks until we and our friends among free nations are strong enough to establish conditions that Russia must accept whether it wants to or not.

We do not have that kind of strength now. Therefore it is clear we must set about getting it without delay. Otherwise our policy of power is a string of empty phrases.

As a beginning we must stop deluding ourselves that we do have such strength. Nothing is more dangerously misleading than the statement of Secretary of Defense Johnson that we're ready to "go over and lick hell out of Joe Stalin."

The truth is we plan to reduce our military budget for the coming fiscal year by some $2,000,000,000. Obviously we aren't going to get more defense for less money.

To obtain the power we need will force us to some hard choices. Expanded military strength almost certainly will mean contracted civilian comforts. We'd better find out soon where those choices lie—and start making them. We can't stand off a worldwide menace while enjoying business as usual.

Our military and scientific experts make the maddening decision as to the relative value of atomic bombs, guided missiles, long-range bombers, naval forces and land armies in a future war. We must seek balance in our strength.

We can't assume any weapon, including a hydrogen bomb, would give us decisive advantage even if we had it exclusively. And the story of Dr. Klaus Fuchs' spying is a reminder that we'd better not count on sole possession. Spies don't go out of business just when the stakes get bigger.

What Democracy Means to Me

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. JOHNSON of Colorado. Madam President, on behalf of my colleague [Mr. MILLIKIN] and myself, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio script by Anne Pinkney, a 17-year-old Trinidad, Colo., high school senior, which was one of four national prize winners in the annual I Am an American contest. This contest was jointly sponsored by the National Association of Broadcasters, the Junior Chamber of Commerce of the United States and the Radio Manufacturers Association. It was endorsed by the Office of Education of the United States Government.

The contest, now in its third year, this year had more than 1,000,000 entries, high school boys and girls from every State and Territory, writing on What Democracy Means to Me. The entries were recorded for radio and were judged by an eminent group of Americans, which included Associate Justice Tom C. Clark; Douglas Southall Freeman, noted Virginia editor and historian; J. Edgar Hoover; Morgan Beatty, NBC newsman and radio commentator; Edward R. Murrow, CBS newsman and radio commentator; Mrs. Raymond Clapper; Wayne Coy, chairman of the Federal Communications Commission; Andrew D. Holt, of the National Education Association; and James Stewart, motion picture star.

I was fortunate enough to be present yesterday when the two boys and two girls who were adjudged the winners were presented with their plaques and $500 each for college scholarships. As Assistant Secretary of State Edward Barrett, who presented the awards, observed, it was a fine example to the people behind the iron curtain of how democracy works. It was inspiring to note the enthusiasm and understanding these boys and girls have of America.

Naturally, my colleague [Mr. MILLIKIN] and I are very, very proud of Miss Pinkney, and we congratulate her parents and the faculty of Trinidad high school.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I speak for democracy.

Perhaps you're wondering who I am.

I am a symbol, existing only in the minds of men.

As a symbol I stand at the shores of our country.

As a symbol I cover the whole land, I exist elsewhere, but never so much as here.

Can it be you don't recognize me?

In one form I stand and welcome many travelers to our land. I am robed in skirts of iron, and I hold a bright torch aloft in my right hand. All peoples have thought of me in their dreams; many have defended me.

Do you recognize these words, "Give me liberty or give me death"? They were spoken by one of my defenders, Patrick Henry, and in times of stress have been echoed by millions after him.

What did I mean to Patrick Henry and those early patriots of our country? I meant enough to them that they risked their lives in order to set up a country in which I should reign supreme. They wrote our Declaration of Independence and our Constitution, which today stand as models upon which many governments are founded. They conceived the truths that all men are created equal in the sight of God and man, and so wrote into the Constitution of my country these things which I stand for: freedom of religion, freedom of speech, the right to vote, trial by jury, freedom of the press, and the right to do as you wish if it doesn't harm other people.

As you see, without me none of these would have any meaning—and that is why you find my name written so many times in our Constitution.

To the men who followed these early champions of me I meant a great deal too. I was the magnet that drew millions of people from across the seas in reaching our Nation. Many of these people became pioneers, pushing our frontiers steadily westward. Many of them did not go exploring however. They settled in towns and villages across the Nation, starting businesses, using skills which they had brought with them from across the waters, thus, in time, making this one of the greatest industrial nations in the world.

You say that you know all this, that you've studied it since the first grade, that it is ancient history and you want to know what it means today.

It hasn't changed. It means more today than it did then.

Democracy, through freedom which I symbolize, is still the brightest hope of mankind.

There are three institutions which are fundamental to our democracy: the home, the school, and the church.

The home lays the foundation for democratic living, the schools continue this building in many ways, through the student councils, leadership programs and even through sports, for there the student learns fair play and if he has any totalitarian instincts he can always work them off by booing the umpire.

The church is the cornerstone in cement that holds these other two together, for it was the first democratic institution teaching the brotherhood of all men.

We have the right to choose, to vote for those whom we wish to guide us. Millions of people today would tell us how wonderful and precious this is, if they could speak without fear and with freedom.

You can. You can complain of any action, even of your Government, which seems un-

fair and your complaint, if just, will be printed in newspapers all over the country so all men may see and act to remove it. But in many countries your speech would not get into the newspapers. Instead, you would be arrested and taken to court, tried and judged, a traitor to your country. You would be liquidated, so that never again would you be a problem to the government.

The trial would not be such as you have known in America either. It would be short, brutal, the sentence predestined. In America your liberty is guarded by a jury of 12 of your own neighbors, a competent judge, a lawyer who believes in you and you must be proved guilty beyond a question of a doubt.

These are my fruits, and, as the Bible puts it, "by their fruits shall ye know them."

You say you have not realized in how many ways and how importantly I had entered your life. You may not see me in all these invisible ways but every day you see my greatest symbol. The flag of the United States of America. Symbols have no voices to be heard as you are hearing me now, but this, I think, would be what the symbol of freedom would say, because this is what democracy means to me.

These Days

EXTENSION OF REMARKS
OF
HON. VIRGIL CHAPMAN
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. CHAPMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the major portion of an article entitled "These Days," by George Sokolsky, which appeared in today's issue of the Washington Times-Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George Sokolsky)

War is still our most serious business. War costs us more than 70 percent of our budget. War determines both our domestic and foreign policies.

Naturally, when a situation is so critical, differences of opinion develop as to the best way to handle the situation. Thus, the Navy and the Air Force differed, and that led to wild public recriminations.

The problem centers on two factors:

1. How much can this country afford to spend year after year on the national defense without wrecking the national economy?

2. After the maximum permissible amount is settled upon, how is the money to be allocated?

The responsibility for the conduct of the national defense rests upon Louis Johnson, Secretary of Defense; the responsibility for determining the amount to be spent rests upon the President and the Congress.

The amount that can be spent on the national defense is limitless; the amount that will be spent is limited by the judgment of the President and the Congress as to how much the national economy will permit. For the present budget, the amount is $13,000,000,000.

Secretary Johnson has emphasized economy and has won the dislike of the following elements in our population: Contractors who live by enormous expenditures; those officers of the various services who prefer high expenditures without increased effectiveness; the pro-Russian crowd who want so much spent that it will crack our national economy; the pro-British crowd who want us to maintain as much of the British Empire as is left.

These groups take potshots at Secretary Johnson. Their latest falsehood, however, sounds true because of the previous quarrel between the Navy and the Air Force. They try to give the impression that a violent quarrel has developed between Secretary of Defense Johnson and Secretary of the Air Force Stuart Symington. The object of the story is to imply that Johnson can get along with no one.

I have thoroughly investigated this story and have confirmed that it is a lie.

The Alsop brothers, who rather fancy themselves great experts, have been calling Secretary of Defense Johnson a liar and have accused him of fooling the American people.

The gist of their complaint is that while he is practicing economy, he is impairing the efficiency of the defense forces. Emphasis is placed upon the appearance of discrepancy in public statements made by Louis Johnson and Stuart Symington.

I have examined the public statements of both these officials and there are no actual discrepancies.

The gist of the thinking of both is identical:

Johnson says:

"Our establishment of defense must be so strong—in the conception of the President and myself and the joint chiefs of staff it must be so strong that it will deter anyone who wants to start trouble in this world; and secondly, it must be so strong that if somebody does start trouble, there is no question about America being the victor in the final outcome of that discussion."

Symington says:

"America is reconciled to the necessity for a peacetime defense program greater than ever required in the past. We must remain steadfast and alert until that day—God hasten it—when we can have complete assurance that any power, or combination of powers, which threaten peace will abandon their aggressive schemes and participate effectively in the community of nations to advance, and not destroy, civilization."

But there is more than that. The President, Johnson, and Symington, and every other official associated with the national defense now have the problem of turning fat into muscle, of using economy to produce efficiency, of ending the cost of Mexican and Civil Wars installations so that the needs of 1950 can be met without wrecking our national economy.

In a word, money must be saved to be used to the best advantage. This is what the Department of Defense is trying to do. It is a difficult task under any circumstances; it is particularly hard when every plan to accomplish both economy and efficiency encounters unfair opposition.

National Health and Medical Care Program

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. HART. Mr. Speaker, a few weeks ago the press of New Jersey and New York City published a statement of aims and purposes comprising a national health program put forward by the Medical Society of New Jersey, as an alternative to the compulsory health insurance plan which has been advocated by Hon. Oscar Ewing, Administrator of Federal Security Agency.

The alternative plan is largely the work of Dr. James F. Norton, an eminent physician of Jersey City, president of the Medical Society of New Jersey and vice president of the medical association.

Without commenting upon the details of the program or offering any opinion as to its value, I append it herewith as part of my remarks:

PROPOSALS OF THE MEDICAL SOCIETY OF NEW JERSEY FOR A NATIONAL HEALTH AND MEDICAL-CARE PROGRAM

A 12-point cooperative health program, in which National and State Governments may participate without endangering individual initiative, personal freedom, or scientific progress was set forth on January 30, 1950, by the Medical Society of New Jersey.

The program was revealed by Dr. James F. Norton, of Jersey City, president of the State Medical Society and vice president of the American Medical Association. In introducing the medical society's proposals, Dr. Norton said:

"We believe this positive cooperative health plan constitutes a 'standard to which all men of good will can repair.' We propose to seek endorsement and active support of this program from every private and public organization in the community.

"We are convinced that people working together can solve their social problems, acting through the many voluntary organizations that already have accomplished so much in making life safe, healthier, and happier for everyone.

"Government—local, State, and National—has a part to play, but it should seek to promote and supplement the efforts of free citizens, not to supplant or supersede those efforts. We have tried in this statement, to define the proper role of government and to show how voluntary agencies, including the medical profession, can exert the leadership that the public expects of us."

Text of the society's statement follows:

"The Medical Society of New Jersey favors, and always has favored, a constructive approach to the solution of the national health problem, particularly as it applies to the citizens of New Jersey. The solution of medical and health problems should be undertaken in a realistic, scientific spirit. Moreover, since the health of the people transcends all political considerations, it must be considered on a nonpartisan basis.

"In view of the fact that the Congress of the United States and the State legislatures are considering various extensions of the health program, the medical society believes that the following statement, presented as a definite and comprehensive program of action, will be helpful at this time.

"The Medical Society of New Jersey believes there are large areas in which Government may beneficially cooperate with the citizens, individually or acting through voluntary associations, in furthering a health program—in the interest of all the people, and without jeopardy to individual liberty. It is generally recognized that voluntary cooperative effort should have priority at all times. Government should seek to promote and supplement the efforts of free citizens (not to supplant or supersede voluntary action) whenever voluntary cooperative effort can meet the need.

"Any constructive approach to solution of the health problem must take into account the several classifications of those who require medical care, namely:

"1. Those not employed, but able to sustain the full cost of providing for hospital and medical care.

"2. Those who are employed.

"3. The medically indigent, whose income does not suffice to meet the costs of catastrophic illnesses.

"4. The totally indigent, who are on public-assistance rolls.

"5. The chronically ill.

"Any adequate program to meet health needs should include medical and hospital care. Insofar as possible, such care should be so inclusive that everyone may budget in advance against the financial burden of sudden illness. In addition, the program should assure every community of basic health protection through well-organized professional public health departments.

"No matter what program is devised, it should be experimental, flexible and evolutionary in character. It should be sufficiently concrete as to be readily understood and practically adaptable everywhere.

"The Medical Society of New Jersey, therefore, offers the following proposals for a cooperative health program, in which National and State Governments may participate, without endangering individual initiative, personal freedom or scientific progress. The sequence in which this program is set forth does not necessarily indicate the relative importance of its parts.

"1. Voluntary nonprofit organizations should be used as the best means of budgeting hospital and medical service for the individual and his family.

"(a) The Blue Cross movement, providing for hospital care on a nonprofit, minimum cost basis, is recognized as the outstanding development in this direction. First established in New Jersey less than 20 years ago, Blue Cross has extended to nearly every part of the United States. There are now 96 Blue Cross organizations with a combined enrollment of more than 35,000,000 people. In New Jersey, approximately one-third of the population now enjoys this protection.

"(b) The Blue Shield movement, launched within the past decade, has made possible the prepayment of medical care on a budget basis, which in some areas means that the doctor's bill for eligible care is covered in full for 80 percent of subscribers and their dependents, of whom there are now more than 12,000,000 persons enrolled throughout the United States. Blue Shield in New Jersey has enrolled 350,000 people in only 7 years.

"2. For persons not employed, but able to meet the cost of enrollment in such voluntary nonprofit organizations, we propose that the premiums be made eligible for deduction for income-tax purposes, regardless of the financial status of the subscriber or the amount of the premium paid.

"Such deduction is equitable, inasmuch as employers who pay or contribute to the enrollment cost for their employees are already permitted to deduct these costs for income-tax purposes, in cases where the latter enters into the computation of Federal income tax.

"3. For employed groups, it is encouraging to note the growing practice of the employer contributing toward the cost of health and welfare programs for his employees and dependents. As mentioned, such payments are usually tax-deductible as part of the cost of production, and are being increasingly recognized as a legitimate part of that cost.

"4. As an immediate encouragement toward employer contribution toward the enrollment cost of hospital and medical protection, government, at every level from municipal to national, should promote the program of such protection for its own employees, by assuming either a part or all of the cost of enrollment in voluntary prepayment plans.

"5. As rapidly as possible, consistent with actuarial experience and sound administration, the services eligible under such voluntary nonprofit organizations should be extended to cover all nonchronic ailments on an inclusive basis. An encouraging step in this direction is the decision of the Blue Shield Plan in New Jersey to provide complete coverage (within the $5,000 annual income limitation) for maternity services, including delivery and pre- and post-partum care, in the hospital, the home, or the physician's office.

"6. After sufficient enrollment is attained, we recommend that consideration be given the practicability of providing medical-care protection on an inclusive basis to subscribers in voluntary, nonprofit plans, regardless of the financial status of the subscriber, and with no salary limitation for over-all inclusive service.

"7. We propose that immediate study be given the possibility of providing voluntary, nonprofit protection for those who are medically indigent though not on public-assistance rolls, through the use of State and local funds for the purchase of such protection. As a rule of thumb to determine 'medical indigency,' the criterion might be the question whether one's taxable income is such as to exempt him from payment of Federal income taxes.

"8. For the medical and hospital care of persons on public-assistance rolls, we recommend the providing of service through State-county-municipal funds, with such Federal aid as may be found necessary or may be provided from time to time, perhaps utilizing on a cost basis the voluntary nonprofit organizations for the actual provision of the required services.

"9. There is no actuarially sound basis yet established for treating the chronically ill as an insured group. We suggest, therefore, that study be given to providing care for needy persons suffering from chronic illness, on a cost basis at State level, again with the possibility of utilizing the facilities of voluntary nonprofit organizations.

"10. The need for better local public-health service in most areas of the United States has long been recognized, but progress in providing it has been discouragingly slow. We recommend that every State government—particularly our own in New Jersey—adopt such legislation as may be needed to permit consolidation of local health jurisdictions into districts having sufficient size and resources to support at least a minimum staff and facilities for complete modern basic public-health protection.

"11. There are numerous areas in certain States where the private practice of medicine is economically or professionally impractical, because the areas will not sustain a sufficient number of capable physicians on a fee-for-service basis, or because hospital facilities are inadequate or lacking. Progress is being made under the Hill-Burton Hospital Survey and Construction Act toward meeting the deficit of hospital accommodations. We suggest exploring the possibility of the United States Public Health Service providing competent physicians to such areas when requested by State or local agencies.

"12. Such a cooperative health program as is here envisaged may require a considerable increase in the number of physicians, health officers, nurses, and other medical personnel. Ideally, every qualified person desiring to enter the field of medicine and public health should be able to do so. We support a program of Government subsidy, where needed, to assist qualified individuals in obtaining professional training and to expand professional training facilities where it is found possible to expand existing schools or to establish new ones. In this connection we renew our plea for early action looking toward establishment of a medical school in New Jersey. We believe that any governmental subsidy that may be provided for these purposes should be granted unconditionally to approved institutions.

"The Medical Society of New Jersey submits that through such voluntary cooperative action the problem of attaining an adequate national health program can and will be solved. This suggested program is not intended as a nebulous proposal for the indefinite future, but might well be inaugurated within the present year."

FEPC Resolution of New York State Legislature

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. JAVITS. Mr. Speaker, the following is the memorial passed by the Senate and Assembly of the New York State Legislature on February 21, 1950, with only seven dissenting votes in the assembly and two in the senate memorializing the Congress to enact FEPC legislation with enforcement powers in the Commission, as contained in H. R. 4453:

Senate Resolution 42

(By Mr. Scanlan)

Whereas there is now pending in the Congress of the United States, a bill, H. R. 4453, known as the Fair Employment Practice Act, the purpose of which is to establish a permanent agency of the Government to eliminate discrimination in employment; and

Whereas the State of New York has been among the pioneers of the States of the Union to enact such legislation which has been successful in reducing or eradicating such discrimination in the industries of this State; and

Whereas all citizens without regard to their race, creed, color, or national origin are entitled to equal opportunity to be gainfully employed and it is in the public interest that such unfair practices, which tend to engender bitterness and unrest among large segments of our population be eradicated as opposed to the principles of our form of government; and

Whereas during the last war when it was essential for our war industries to keep production at their highest level, the fair employment practice committee was highly successful in reducing or eliminating such discrimination in such industries: Now, therefore, be it

Resolved (*if the assembly concur*), That it is the sense of the people of the State of New York, expressed through the considered judgment of their representatives in the legislature, that the enactment of such legislation is of the greatest importance to the people and will tend to unite the country and create greater respect for our institutions among the other peoples of the world; and be it further

Resolved (*if the assembly concur*), That the Congress of the United States be, and it hereby is, respectfully memorialized to enact with all convenient speed H. R. 4453 or such other, similar, appropriate legislation as will accomplish the purposes of this resolution; and be it further

Resolved (*if the assembly concur*), That copies of this resolution be transmitted to the President of the United States, the Secretary of the Senate, and the Clerk of the House of Representatives of the United States, and to each Member of the Congress of the United States duly elected from the State of New

York, and that the latter be urged to do all within their power to bring about the enactment of such legislation.

By order of the senate:

WILLIAM S. KING,
Secretary.

In assembly, February 21, 1950, concurred in without amendments.

By order of assembly:

ANSLEY BORKOWSKI,
Clerk.

How Much of the World?

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, February 23 (legislative day of Wednesday, February 22), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Livingston Hartley, which was published in the January issue of Freedom and Union. Mr. Hartley is a well-known student and writer on international affairs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW MUCH OF THE WORLD?

(By Livingston Hartley)

WORLD UNION MINUS RUSSIAN BLOC WOULD CONTAIN ONLY 3.7 PERCENT MORE PEOPLE IN LOOSE UNION THAN WOULD TIGHTLY KNIT ATLANTIC UNION PLUS ASSOCIATED PEOPLES

Advocates of world government make much of the quantitative difference between a government representing the world's people and an Atlantic Union including initially only a minority of them. This quantitative difference shrinks surprisingly if the comparison is made on a basis which considers political and economic relationships.

When we take account of those relationships, we have to expect that Russia and the other countries now under Communist control would not participate in a world government, a conclusion which is now accepted by some leaders in the world-government movement. We have also to expect that nations closely associated with the Atlantic democracies today would be closely associated with the Atlantic Union. If these conclusions are valid, a comparison of populations in an all-conclusive world government and in an initial Atlantic Union has little meaning. A far more pertinent and realistic comparison is that between a world government which does not include the Russian bloc and an Atlantic Union together with associated peoples.

Before proceeding further, it should be stressed that such a comparison in no way implies that these two alternatives are equally feasible. We can, if we wish, compare the size of a projected liner which is soon to sail the Atlantic with the theoretical size of an atomic rocket which some scientist calculates might some day fly around Mars, without implying that both are equally practicable.

The Atlantic Union would be based upon common institutions, common interests, a common cultural heritage, and a sense of community which has developed over many centuries. The peoples who would form it have already combined for defense in the North Atlantic Pact, and for European recovery through the Marshall plan. The union is directly in line with historic evolution and its many instances of voluntary integration based upon community and proximity.

Proposals for world government, in contrast, depart abruptly from the pattern of historic evolution, disregard the controlling factors of community and proximity which have brought about previous voluntary integration, and seek at one step to bring into one government democracies, dictatorships, and all continents, races, religions, and stages of political development.

Few objective people will challenge the conclusion that in considering any form of world government today it is more realistic to consider one without the Russian bloc than one including the Russian bloc. The Russians have established this point rather clearly by official statements, and even more clearly by their actions. The attitudes toward it of many leaders in the world government movement appears to rest less upon a belief that Russians would actually participate, than upon a desire to avoid themselves any responsibility for further dividing the world.

The conclusion that peoples now associated with the Atlantic democracies would be associated with the Atlantic Union may require more substantiation. Before going into cases, let us look at the general pattern of world trade.

The Atlantic democracies account today for the greater part of international trade. The seven sponsors of the North Atlantic Pact alone, not including their dependent territories or the British dominions, accounted for 45.4[1] percent of world trade in 1948. Most nations outside the Russian bloc are associated with the Atlantic democracies closely economically, depending upon them both for markets and for goods.

Atlantic Union would develop, not diminish, these economic ties. Because it would increase the purchasing power of its own people, it would provide a larger market for the exports of all these outside peoples. Because it would also open new opportunities for its people for mass production and specialization, it would produce goods more cheaply than the Atlantic democracies have done. Thus the union would provide outside peoples with both expanded markets and cheaper goods, strengthening and enlarging the economic bonds between them and the Atlantic peoples.

It may be objected that the Russian bloc might disrupt this progressive economic association by expanding its own trade with all peoples outside the Atlantic Union. But the Russian bloc, including China, which appears destined soon to fall completely under Communist control, has played a relatively small part in international trade. In 1938 it accounted for only 8.6[1] percent of world trade. The trade statistics of most of its people are hidden today by the iron curtain, but it seems likely that the iron curtain itself and the conditions in China and many of the satellite countries have reduced this proportion.

Russia, moreover, lacks the merchant marine to conduct an extensive overseas trade, whereas the Atlantic democracies are the preeminent maritime nations. Russia's overland trade is hindered by inadequate transport and, in parts of Asia, by mountains and deserts. Finally, most of the nations associated economically with the Atlantic democracies need industrial products and the Russian bloc has failed to produce enough indusrial products to meet its own requirements.

The association of peoples all over the world with the Atlantic democracies is not only economic, but also political. These peoples, which are listed individually in the table with this article, may be divided into the following six groups:

1. The colonies or dependent territories of the seven Atlantic democracies which sponsored the North Atlantic Pact. These would presumably become, for an initial stage, dependent territories of the union.

2. The democracies and dominions which were not among the sponsors of the North Atlantic Pact, but may be expected to enter the Atlantic Union either when it is established or soon afterwards. They include three parties to the North Atlantic Pact, three dominions and Switzerland, Sweden and Eire.

3. The Latin-American Republics which have long had intimate bonds with the United States. Most of them could be expected to enter the Atlantic Union soon after its creation. None of them, not even Argentina, would be likely to remain outside the union more than a few years.

4. Six Asiatic countries which were formerly dependent territories of the Atlantic democracies and have now achieved either independence or dominion status. While most of them could not be expected to join the Atlantic Union in the near future, they are today closely associated with the Atlantic democracies and would continue to be closely associated with the Atlantic Union.

The most important of them is India, which has been attempting to avoid definite involvement in the clash between Russia and the West, yet maintains special political and economic links with Britain. If Britain, as well as the United States, became part of a union dedicated to freedom and the dignity of man, these links with the West would become not weaker, but stronger. Old antagonisms towards the British would not apply to the union, while trade ties with the Atlantic area would rapidly increase.

5. Western Germany and Japan which are now occupied by the Atlantic democracies and under their control. Western Germany which would border directly upon the Atlantic Union, might soon be enabled to join the union.

6. A somewhat heterogeneous group of countries which now has close associations with the Atlantic democracies. Greece and Turkey depend upon American military aid for security. Portugal and Italy are parties to the North Atlantic Pact. Egypt, Ethiopia and Thailand have close relationships with Britain while Liberia has long had a special relationship with the United States. Spain has been included in this group because it is reasonable to believe that by the time her European neighbors and some Latin American republics had joined the union, the Spanish people would turn from Franco to freedom in order to join it themselves.

When the economic and political realities underlying the association of all these countries with the Atlantic democracies are analyzed, two conclusions concerning their relationships with the Atlantic Union become apparent.

First, more than half the countries of the world could be expected to seek to join the Atlantic Union within a few years of its creation.

Second, the association of the others with the Atlantic Union would become stronger than their association with the Atlantic democracies. All of them would look to the union not only for expanded markets and cheaper goods, but also for security against a third world war. All peoples among them who aspired to preserve what freedom they had won would see the union as the world's great bastion of freedom. Farseeing statesmen among them would seek practical means of closer association with the union and begin to work for the day when their peoples could join in.

This analysis indicates also that the nations who would be either in the Atlantic Union or closely associated with it, actually comprise most of the world outside the Russian bloc. It may be advisable, however, to

---

[1] Compiled from Summary of World Trade Statistics, Statistical Office of the United Nations, October 1, 1949.

omit those whose future possibilities of association with the union may be open to some doubt, however much their peoples may aspire toward it. It is usually best to understate a case.

Iran, Palestine and the Arab states of Asia have close ties with the Atlantic democracies today, but might become subject, because of their geographical situation, to powerful Russian pressure. Similar pressure might be applied to Afghanistan and Nepal. The future of both Austria and Korea is uncertain. In order to be conservative, these peoples are omitted from the long list of those who would be associated with the Atlantic Union. It may be suggested, however, that not all of them would be willing to join in a "government" which the Russian bloc refused to join.

The accompanying table gives a comparison between the populations included in a world government without the Russian bloc and in the Atlantic Union and associated peoples. Population figures are from the World Almanac of 1949, taken to the nearest million for simpler presentation.

Exception may be taken to some of the specific items in the population chart, since the inclusion or omission of some countries is necessarily a matter of judgment. It might be objected, for example, that Saudi Arabia, Yemen, Jordan, and Palestine should be added, or that French Indochina should be omitted because the Chinese Communists have reached its borders.

Such adjustments may be made according to individual judgment. It is not believed, however, that any reasonably sound adjustments will materially affect the over-all figure for the Atlantic Union plus associated peoples. To illustrate, an adjustment so sweeping as to eliminate French Indochina and all of the last group, which contain countries as closely tied to the Atlantic democracies as Greece, Turkey, Italy, and Portugal, would reduce the over-all figure only to 1,209,000,000, or 53.4 percent of the world.

But to compare such radically different political entities as a world government without the Russian bloc and the Atlantic Union plus associated peoples on the basis of population alone would be misleading, just as it would be to imply that both are equally feasible.

Such a world government would be loosely constructed of widely divergent peoples, democracies, autocrats, and various shades between, who would lack common interests, common heritage, and any sense of community. Its functions would be limited to efforts to preserve peace. Since the Russian bloc would continue to maintain vast armies, air power, and atomic weapons, the world government could not preserve peace by enacting world law. Peace would then depend, just as it would in the case of the Atlantic Union, upon the creation and successful maintenance of an unquestioned world predominance of power.

The Atlantic Union, in contrast, would be founded solidly upon common interests, common heritage, and a sense of community as well as upon free institutions. Its functions would include not only preservation of peace, but also regulation trade, currency, and communications. It would be inherently much more closely knit and efficient. Functioning as a solid nucleus surrounded and supported by associated peoples and itself possessing 80 percent of the industrial capacity of the world, it would be infinitely better equipped to create and successfully maintain an unquestioned world predominance of power.

Both political aggregations would comprise almost the same proportion of the world's population. Both would depend upon exactly the same peoples to maintain peace, the Atlantic democracies which would form the initial Atlantic Union. In the world government without the Russian bloc, the Atlantic democracies would be only a minority, unable to apply their decisive combined power and influence effectively without the agreement of a heterogeneous majority composed of peoples far behind them in political and economic development. In the union these Atlantic democracies could operate as effectively as we Americans can in our Union, not only to preserve peace, but also to promote prosperity and to foster freedom.

Independence for Lithuania

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. DONOHUE. Mr. Speaker, February 16, 1950 marked the thirty-second anniversary of Lithuanian Independence Day. On the evening of that day, the priests and members of Our Lady of Vilna parish and their guests assembled in the parish hall, Worcester, Mass., for the purpose of celebrating the event with appropriate patriotic exercises. During the exercises, those assembled unanimously adopted and passed the following resolutions:

Whereas the United States of America has ever defended the God-given right of all nations to determine for themselves the form of government under which they desire to live; and

Whereas the United States of America with Great Britain signed the Atlantic Charter, the principles of which guarantee all nations, both large and small, this right of self-rule without interference of any kind from any outside and alien source; and

Whereas the United States of America joined with the Allies in World War II to assure for the entire world a just and lasting peace which can and shall exist only when all nations, both large and small, live as free and independent nations in accordance with recognized principles of justice and charity; and

Whereas the Republic of Lithuania, a small freedom-loving nation, which made astounding advancement and progress in all fields of endeavor during the 21 years of her independence (1918–39), has been forcibly and unjustly denied the exercise of this right by a cruel and ruthless Soviet and has been refused a place and a voice in the United Nations by the great powers who have acquiesced to the unjust and immoral demands of the Soviet; and

Whereas authoritative sources of information clearly indicate that the present policy of Soviet Russia calls for the shameless commission of the international crime of genocide upon liberty-loving Lithuania by the complete destruction and annihilation of Lithuania's Government and of her cultural, educational, economic, industrial, and agricultural systems: Now, therefore, be it

Resolved, That the United States of America continue to maintain and uphold its present policy of recognizing the "de jure" independence of Lithuania despite the unjust absorption of Lithuania's territories within the Russian orbit; be it further

Resolved, That the United States of America insist upon invoking the principles of the Atlantic Charter, thereby guaranteeing the immediate and positive restoration of the independence of Lithuania; be it further

Resolved, That the Republic of Lithuania be admitted and accepted as an active member of the United Nations and that her officially appointed representatives be permitted to enjoy with full privileges the status of duly elected delegates of that organization; be it further

Resolved, That the Government of the United States of America ratify the Genocide Convention, ratification of which would open up the way for Lithuania to present her case against Russia to the entire world; be it further

Resolved, That copies of these resolutions be forwarded to the President of the United States, His Excellency, the Honorable Harry S. Truman; to the Secretary of State, the Honorable Dean Acheson; to the head of the United States Delegation to the United Nations, the Honorable Warren R. Austin; to the chairman of the Senate subcommittee now considering ratification of the Genocide Convention, the Honorable BRIEN MCMAHON; to the Senators of Massachusetts, the Honorable HENRY CABOT LODGE, JR., and the Honorable LEVERETT SALTONSTALL; to the Representative of the Fourth Congressional District of Massachusetts, the Honorable HAROLD D. DONOHUE, and to the press.

CONSTANTINE A. VASYS,
Chairman.
MRS. TEKLA MAZEIKA,
Secretary.

Mr. Keogh's Reappointment

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which referred to the redesignation of my brother, J. Vincent Keogh, as United States attorney for the eastern district of New York. I am proud, indeed, to include this editorial in view of its being an objective appraisal by the outstanding newspaper of the district of the work performed in the office of the United States attorney during the last 4 years.

[From the Brooklyn Eagle of February 10, 1950]

MR. KEOGH'S REAPPOINTMENT

President Truman's redesignation of J. Vincent Keogh as United States attorney for the Brooklyn, Long Island, and Staten Island area, called the eastern district of New York, is well-merited recognition of our Federal prosecutor's excellent record. As was noted in these columns recently, the prosecutor's office, under Mr. Keogh, compiled an amazing record of approximately 90 percent convictions in cases in the Federal court.

Mr. Keogh's career has been an interesting one. A native Brooklynite, he was a public school teacher for 12 years, an assistant district attorney for 2 years, a lieutenant commander in the Navy in World War II, and has been active in many charitable and civic organizations. He was first named United States attorney 4 years ago. President Truman's decision to rename him is an excellent one.

The President's Foreign Policy Speech

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include President Truman's foreign policy speech at the unveiling of a statue of George Washington:

It is a great privilege to dedicate this inspiring statue of George Washington.

This is the climax of many years of planning and effort. I congratulate particularly the Order of DeMolay, whose contributions have made this statue a reality. This heroic likeness of our first President makes even more impressive the entrance hall of this temple. It is altogether fitting that this work should stand in the community that Washington did so much to build, and so near his own home at Mount Vernon.

George Washington, like ourselves, lived in a period of great change—a period when new forces and new ideas were sweeping across the world. He was the leader of his people in a revolution against tyranny. He commanded an army in a long and bitter war. He was a major figure in the creation of a new kind of constitution. Finally, as the first living President of our Nation, he translated that Constitution into a living government.

Washington's efforts for freedom were twofold. He was concerned first with making the ideal of democratic government work. He was also concerned with the defense of that ideal against the forces opposed to it.

UNWAVERING IN DEVOTION

Washington was unwavering in his devotion to the democratic concept. He never yielded to those who urged him to assume extraordinary powers. Even in the darkest days of the Revolution, when his task as commander in chief of the American forces was rendered doubly difficult by the weakness of the Congress and the rivalries among the States, he always considered himself as a servant of the people. In all that he did, he strove to make democratic institutions more effective.

He knew, too, that they had to be defended; that there were times when the use of force to defend democracy could not be avoided. He not only led the armies in the Revolution but, as President, he was always alert to the necessity for a vigorous national defense.

The task of Americans today is fundamentally the same as it was in Washington's time. We, too, must make democracy work and we must defend it against its enemies.

But our task today is far greater in scope than it was in Washington's time. Not only are we concerned with increasing the freedom, welfare and opportunity of our people. We are also concerned with the right of other peoples to choose their form of government, to improve their standards of living, and to decide what kind of life they want to live.

Since Washington's time the great principles for which the American Revolution was fought have become known throughout the world and have uplifted the hearts and hopes of generations of men. At the same time, through the progress of science, the nations of the world have been drawn together into a common destiny. Our security and progress are today more closely related than ever before to the advance of freedom and self-government in other lands.

A TIME OF RESTLESSNESS

This is a time of restlessness and change. In many parts of the world men are searching for a better social order. They demand a way of life that will provide greater freedom and more widespread opportunity. They yearn to own the land they live on, and to be secure against poverty, disease, and hunger. Above all, they want to live their own lives as they see fit. This rising demand of men everywhere for independence and a better life puts the ideals of freedom and self-government to their greatest test.

At the same time, these ideals are under deadly attack from those who would destroy them. The most aggressive of these enemies today is communism. Communism seeks to induce men to surrender their freedom by false promises of a better life. But the great danger of communism does not lie in its false promises. It lies in the fact that it is an instrument of an armed imperialism which seeks to extend its influence by force.

This threat of force is a challenge to all peoples who are free or who wish to be free. The fundamental issue is whether men are to be free to choose their one way of life, or whether they must live under a system imposed upon them by force.

Just as our Thirteen Original States found that survival and progress depend on closer association and common effort, so the free nations of the world today must seek their salvation in unity and concerted action. The real strength of the free nations is not to be found in any single country or any one weapon, but in the combined moral and material strength of the free world as a whole.

As members of the United Nations, the free nations are working for peace and international security in accordance with the principles set forth in the Charter. Within the context of that larger association many of the free nations have joined together to strengthen the common defense of particular areas against aggression. That is the meaning of the North Atlantic Treaty and the mutual-defense assistance program.

FOR THE COMMON DEFENSE

We shall continue to work with the other free nations associated with us in the common defense—for our defense is theirs, and their defense is ours. The united defense of these nations is a powerful deterrent to aggression, and it will become more powerful as time goes by.

In creating a common defense we do not seek to impose a way of life on any nation. Freedom is not expanded by conquest. Democracy is not created by dictation. Freedom and democracy grow only by persuasion and example, and through the actual experience of what they mean.

At the same time, freedom cannot grow and expand unless it is protected against the armed imperialism of those who would destroy it. The free nations, therefore, must maintain military force as a defensive measure.

While the free nations stand prepared to resist aggression, they are doing their utmost to find peaceful means for settling international disputes. They know that another great war could destroy victor and vanquished alike.

Consequently, we in the United States are doing and will continue to do all that lies within our power to prevent the horror of another war. We are working for the reduction of armaments and the control of weapons of mass destruction.

We are convinced of the necessity for an international agreement to limit the use of atomic energy to peaceful purposes, and for a workable international system to assure that such an agreement is effectively carried out. We believe that the United Nations is the proper forum in which to reach such an agreement. We firmly believe that all nations would gain by such an international agreement. We shall continue to work honestly and wholeheartedly toward that end. But we must remember that the outcome is not ours alone to determine. The actions of men in other countries will help to shape the ultimate decision.

We believe that the plan for controlling atomic energy, which has been worked out in the United Nations and has been approved by the overwhelming majority of its members, would be effective. That plan, therefore, has our support. It has our support not because of its form or its words, but because we believe it would achieve effective control. The stakes are too large to let us, or any nation, stand on pride of authorship. We ask only for a plan that provides an effective, workable system—anything less would be a sham agreement. Anything less would increase, not decrease, the dangers of the use of atomic energy for destructive purposes. We shall continue to examine every avenue, every possibility of reaching real agreement for effective control.

In the long run, however, our security and the world's hopes for peace lie not in measures of defense or in the control of weapons but in the growth and expansion of freedom and self-government. As these ideals are accepted by more and more people, as they give greater meaning and richer content to the lives of millions, they become the greatest force in the world for peace.

The purpose of our participation in the United Nations and other international organizations is to strengthen this great force for peace. That is the purpose of the European recovery program and our point four program to assist underdeveloped areas. That is the purpose of our foreign trade program and our other measures to help build world prosperity.

These programs are positive measures to increase the strength of freedom and self-government by helping men to meet the needs and fulfill the aspirations of their daily lives.

Today, in many countries of the world, the concepts of freedom and self-government are merely vague phrases. They express little to people who are engaged in a desperate struggle with ignorance and poverty. They mean little to men who must work from sun-up to sun-down merely to keep alive. They are not fully understood by men who cannot read or write.

On the continent of Asia and the islands of the Far East, in Africa and in the Near East, are millions of people who live in poverty and who have never known real freedom or democratic government. In their present condition the immediate benefit of steel plowshares, or smallpox vaccinations, has more appeal than abstract ideas of democracy.

FALSITY OF COMMUNIST CLAIMS

The Communists are saying that they will bring food and clothing and health and a more secure life to these poverty-stricken peoples. We know that is not true. But it is not enough to tell such people that communism is a modern tyranny far worse than that of any ancient empire. It is not enough to tell them that communism leads only to oppression. People who have never known freedom and security themselves have little basis for judging how false are the claims of communism.

These people will turn to democracy only if it seems to them to be the best way to meet their urgent needs. The benefits of freedom and democracy must be demonstrated to them.

In many of these areas there are governments which are working to improve the conditions of their people. They know that the claims of the Communists are not made in good faith. They do not want Soviet domination. If these governments are successful in raising living standards, and in

building strong and stable democratic institutions based on popular support, their people will not go over to communism.

But these governments are struggling with titanic problems as their people attempt to climb in a few years from economic misery to better standards of living. They need help. If these nations are to grow in freedom they urgently need assistance in improving their health, their education, their productive capacity, their transportation and communication systems.

That is why I have requested the Congress to act as rapidly as possible on legislation to expand our programs for giving technical assistance to such countries as these, and to encourage American investment in those countries on a mutually beneficial basis. We are not trying to sell them automobiles and television sets. Our purpose is to help them to grow more food, to obtain better education, and to be more healthy. That is the way they can gain the physical and moral strength to be free and to maintain their own governments.

As these nations prove to themselves and to others the effectiveness of free institutions in meeting their people's needs, they will show as nothing else can the true value of democracy and the false claims of communism.

PROBLEMS IN EUROPE

But the problem of making free institutions work is not confined to underdeveloped areas. The highly developed nations of Europe came out of the war with serious problems of their own. They were threatened with economic chaos. Their ability to maintain freedom and democracy was challenged.

The purpose of the European recovery program was to meet this challenge in the area of the world where the preservation of free governments was of supreme importance. The results, which have been achieved so far under that program, have amply demonstrated its wisdom.

With the aid we have provided, the nations of Europe have already made great advances in their production and have improved their trading relations with the rest of the world. Much more must be done before they reach the firm basis of economic self-support, which is essential to the maintenance of free and democratic governments. Consequently, we must complete our program of assistance. It would be utter folly to lose sight of the importance of the European recovery program. It is essential to our hopes for peace.

The preservation and strengthening of free governments depends in large measure on the creation of firm economic conditions throughout the world and on an expanding world trade. Free nations can expand their trade only on the basis of mutual respect and fair dealing.

Our reciprocal trade agreements program and the International Trade Organization are the kind of international machinery which is necessary for increasing the trade of the world. We shall continue to use the procedures of the reciprocal trade agreements program to reduce trade barriers, but more than this is needed. That is why I have urged the Congress to act favorably on the creation of the International Trade Organization, through which the nations of the world can work together effectively to increase world trade.

This program and our other plans for international action are the practical way to move forward toward peace. They recognize that we must deal with the difficult world situation which actually exists. We must not be discouraged by difficulties and set-backs. We must not be misled by the vain hope of finding quick and easy solutions. We must move forward persistently and courageously along the hard path to a peace based on freedom and justice.

The progress we have made in this country since the days of George Washington is proof of the vitality and truth of the ideals he fought for. We must be no less firm, no less resolute, no less steadfast than he was. We move upon a greater stage than he did, but our problems are fundamentally the same problems that faced the first President of this Nation—to make democracy work and defend it from its enemies.

George Washington sought guidance from Almighty God as he faced these tasks in his time; let us be guided today by divine providence as we strive for lasting peace with freedom and justice for all mankind.

Congress Must Take Immediate Action on the Old-Age Pension Problem

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. VAN ZANDT. Mr. Speaker, I came to Congress in January 1939. Then, as today, the general problem of old-age pensions has been before the Congress of the United States.

Along with other Members of Congress, I have actively supported not only by voice but also by vote all legislation designed to give the aged of this Nation the benefits to which they are entitled. During the Seventy-sixth Congress I was among the "101 immortals" designated by Dr. Francis Townsend, founder of the Townsend organization, as having the courage to vote for the Townsend bill.

Much water has flown over the dam since 1939 and Congress is still toying with old-age pension legislation. As in the past 10 years, I am still engaged in a determined effort to have Congress do something with respect to old-age pension legislation.

Since the opening of the Eighty-first Congress I have continued my activities in the field of pension legislation. Not only am I a member of the congressional steering committees for the Townsend and the American pension groups, but I have also appeared before the House Ways and Means Committee and the Senate Finance Committee in urging immediate action on pension legislation. In addition, I have spoken on this floor and called attention to the plight of our elderly citizens. I have also signed the discharge petition now being circulated in behalf of the Townsend bill.

My statements during this session of Congress on the subject of old-age pensions are as follows:

STATEMENT BY REPRESENTATIVE JAMES E. VAN ZANDT, OF PENNSYLVANIA, BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, MARCH 15, 1949, IN SUPPORT OF LIBERALIZATION OF THE SOCIAL SECURITY ACT

Mr. Chairman, I appreciate the opportunity to appear before you and the members of the committee to discuss the importance of broadening and liberalizing the Social Security Act.

All of you are familiar with the efforts I have been making, since I first came to Congress, to liberalize the provisions of the Social Security Act. On various occasions I have introduced amendments to the Social Security Act and made every effort to have them considered by Congress.

In addition, I have joined with groups such as the Townsend plan, American pension plan, and others in support of legislation to provide an adequate old-age pension for the benefit of millions of Americans who are in the twilight of life and dependent upon old-age assistance or other forms of social-security benefits.

Time and time again statements have been made on the floor, and the CONGRESSIONAL RECORD has been full of impassioned pleas for action by the House leadership with respect to improving benefits under the Social Security Act. The present plight of elderly citizens is a national disgrace and has existed for the past several years.

It is a known fact that social security is here to stay and that it is intended to provide elderly citizens with a means of livelihood in their declining years. Yet, we seem to forget, in viewing earned social-security benefits, that the formula used in computing them has never been changed since the law was first passed. Meanwhile, the cost of living has soared to the point where it has doubled itself. Since 1933 the cost-of-living index has increased considerably. It is common knowledge that persons gainfully employed are having a difficult time in making both ends meet.

The Congress of the United States has ignored the elderly citizens of America, who by their labor and taxes, built this great Nation. Yes, we have forgotten them in turning our attention to world problems. Hardly a day passes that we have not heard on the floor of the poor unfortunate people abroad. When you pick up your daily newspaper, it is not uncommon to find full-page advertisements directing your attention to the needs of millions of persons abroad. This week the House approved an appropriation of $16,000,000 for destitute displaced Arabs and Jews in the Middle East. But there is not one word said in defense of millions of our own American citizens who are on starvation diets and restricted in many instances to one scanty meal a day.

Let us examine, for a moment, the amount of financial assistance we have given to the peoples of the world. According to the United States Department of Commerce, from March 11, 1941, to December 31, 1946, in the form of lend-lease aid alone, the American taxpayers contributed $50,243,996,159. In addition, we have contributed toward world recovery since July 1, 1945, the sum of $25,495,052,923 which has been allocated as follows:

United Nations Relief and Rehabilitation	$2,700,000,000
United Nations Organization	41,426,162
Lend-lease (postwar)	2,163,000,000
International Monetary Fund (authorization)	2,750,000,000
International Bank	635,000,000
Export-Import Bank (loans authorized)	2,258,300,000
Loans to Great Britain and the Philippines	4,390,000,000
War Department, grants for relief	1,771,926,293
Surplus property sales (credits extended)	1,148,000,000
Greek-Turkish loan (authorized amount)	400,000,000
Relief in occupied area (Army)	2,230,000,000
International Relief Organization	71,073,000
International Refugee Organization	182,327,468
European Cooperation Administration	4,754,000,000
Other appropriations for foreign or international objectives by Eightieth Congress	300,000,000
Total	25,495,052,923

With the passage of the Marshall plan by the Eightieth Congress, we have obligated ourselves to spend what may amount to more than $17,000,000,000, which no doubt will be only a starter in bailing out Europe from its financial mess.

When you add together all of these sums for foreign aid, you have the almost unbelievable total of over $90,000,000,000 being sent abroad to help foreign nations.

In other words, since this Nation was founded in 1776 until 1933—a period of 157 years—we spent, in conducting the affairs of Government, less than $90,000,000,000. Yet, in 7 years we have sent abroad over $90,000,000,000, which should not be such a bad record in the eyes of foreigners for a Nation that has been called repeatedly a race of Shylocks.

Let us recognize the fact that all groups in America have received some recognition with respect to the increased cost of living. Virtually all employees in Government and industry have received wage increases. Yet little attention has been given to the plight of our elderly citizens receiving old-age assistance, and no attention has been given to those who earned retirement benefits under the Social Security Act.

For example, in the State of Pennsylvania in 1948 the minimum figures for bare existence of an individual amounted to $20 for food, $4 for clothing, $25 for shelter and maintenance, and $4 for incidentals or a total of $53.

The cost of living in Pennsylvania is typical of conditions in the United States. Yet, in Pennsylvania in 1948 the average old-age assistance paid was $3.52 per month. At the same time, retired employees under social security received an average monthly benefit of $25, with $13 additional if married, or a total of $38 monthly.

In some States many recipients of old-age assistance receive $10 to $15 a month and are told to live on such an allowance. Yet, at the same time, Great Britain has been paying, by comparison, $33 monthly to each needy person. Our gifts to the British Socialist Government in recent years have averaged $1,500,000,000 annually; and, in dispensing money under the European recovery program, Great Britain will receive approximately one-third of the money that American taxpayers are contributing to support the so-called Marshall plan. It is a ridiculous situation to realize that American taxpayers are doling out billions of dollars to foreign nations and permitting them to pay to the needy nearly three times the amount we expend for our own elderly citizens.

Even though we approved legislation to enable States to increase old-age assistance $5 monthly, is there anyone in the United States that when he reaches age 65 can be expected to live on $12.75 monthly, $25 monthly, or $38 if married? The answer is so apparent that it is an insult to question one's intelligence to even ask such a ridiculous question. Yet, that is exactly what we have been asking the elderly citizens to do the past several years.

I feel it is needless for me to continue to describe the plight of the elderly citizens of this Nation.

You have listened to the testimony of Mr. Russell Saville of the American Pension Plan, Inc., and to Dr. Francis Townsend and his son, Robert Townsend, who explained the merits of the Townsend plan. Other pension leaders have added their voice in pleading that something be done for our aged and without further delay.

Members of Congress like myself have introduced legislation for the American pension plan and for the Townsend plan. We are serving as members of the Congressional Steering Committee for both groups. We are giving our time and devoting our efforts toward securing some relief for our elderly citizens.

Before coming to Washington for this session of Congress, I talked with honest, God-fearing Americans whom I know personally and in whose homes I have visited. I learned of their poverty and the fact that the very roof over their heads is mortgaged to the State in return for the paltry sum they receive in the form of old-age assistance.

Mr. Chairman, there are many Members of Congress who share my belief that something must be done to relieve the want and suffering of our aged.

At this very moment Congress is showing great effort to hurry through the Senate and House an appropriation of nearly $6,000,000,000 for the relief of the people of Europe. Petitions are in circulation asking relief for the people of China. As I said previously, this week we approved an appropriation of $16,000,000 for destitute Arabs and Jews.

Why not apply the same concern and attention to the plight of our own American citizens.

All I ask is action by this committee in getting to the floor of the House a bill that will bring relief to our own American people who are victims of neglect by their Government.

STATEMENT ON THE FLOOR OF THE HOUSE OF REPRESENTATIVES BY REPRESENTATIVE JAMES E. VAN ZANDT, TWENTY-SECOND DISTRICT OF PENNSYLVANIA, OCTOBER 5, 1949, IN CONNECTION WITH H. R. 6000, A BILL DESIGNED TO AMEND THE SOCIAL SECURITY ACT

Mr. VAN ZANDT. Mr. Chairman, during my career in Congress which began in 1939, very little has been done toward amending the Social Security Act. Every effort made since 1939 was met with the excuse "there is a war to be won."

As a result no action was taken for 10 years despite the fact that there was need for revising the existing law. Each time we tried to do something we were told that a committe or a commission was engaged in studying the structure of the Social Security Act. The inference was that if we were patient long enough, Congress would receive recommendations for streamlining the Social Security Act.

Now we are considering H. R. 6000 which we are informed represents the efforts of the House Committee on Ways and Means over a period of 6 months.

The bill is not only disappointing in its provisions but it lacks features that should have been included in such a measure. To have waited 10 long years and then be handed a tailor-made bill without the right to amend it is a blow to the great American principles of fair play and justice.

We are considering a bill that affects the lives of over 50,000,000 persons and their families. We are taking such action at a time when the pension issue has invaded every segment of American life. We witness the pension issue being discussed freely in management and labor circles where it has become the focus point of collective-bargaining conferences.

The controversy over the need for universal pensions is so pronounced that the day is not far distant when such an objective will be realized.

Today, I am in utter dismay over the fact that this Congress is being asked to approve a bill in a take-it-or-leave-it atmosphere. This is especially disheartening when we are asked by such procedure to turn a deaf ear to the plight of the elderly citizens who helped build this great Nation.

According to the Bureau of the Census there were 16,799,000 persons in the United States aged 60 years and over on July 1, 1948. A large percentage of this number includes men and women who are unable to work or support themselves. It is this great class of citizens that we have completely ignored despite the fact that it is not their fault that they toiled and paid taxes when pensions and social security were but vague dreams.

It is a national disgrace to realize the tears we shed over displaced persons overseas while we give the "cold shoulder" to deserving American citizens who in the twilight of life have not enough material assistance to keep body and soul together. We send billions of dollars overseas and plan on sending billions more to help what are called the backward nations of the world. At the same time our only concern for the aged citizens of this Nation is the shedding of a few "crocodile" tears every time a political platform is adopted.

I cannot in good conscience remain silent any longer while this bill is lauded as being for the welfare of the American people. While I approve heartily of the increased benefits for those recipients who have earned them by contributions from their pay, it is a deplorable fact that the House Ways and Means Committee after 6 months of hearings and study failed to heed the anguished cries of the millions of elderly citizens who are left with no assurance that the present Congress intends to do anything for them but to continue to promise to consider their plight. Let us search our own conscience and face the fact that we are by our actions betraying millions of God-fearing American citizens.

I shall support this bill but I do so in a spirit of reluctance and with great disgust.

STATEMENT BY JAMES E. VAN ZANDT, MEMBER OF CONGRESS, TWENTY-SECOND DISTRICT OF PENNSYLVANIA, BEFORE SENATE FINANCE COMMITTEE WITH RESPECT TO AMENDING THE SOCIAL SECURITY ACT, FEBRUARY 20, 1950

Mr. Chairman, I supported H. R. 6000 when it passed the House of Representatives during the first session of the Eighty-first Congress. I did so, because I felt it was a step in the right direction. Yet at the same time it was my belief that the provisions of H. R. 6000 did not truly meet the general problem of old-age pensions.

As many of you know, I have long been associated with various groups in the old-age pension field including the Townsend organization and the American pension plan. I am sure that you will agree with me that these pension groups are entitled to a lot of credit for they are pioneers in the effort to bring to the attention of the American people the general problem of old-age pensions.

Fifteen years ago the American people were faced with the problem of old-age pensions and from that day until this there has been a constant effort by pension groups and many of us in Congress to bring about a general revision of social security in all of its aspects.

You know as well as I do that when Congress approved the Social Security Act our Government accepted the responsibility of that segment of the population covered by the act. This was the beginning of a program that was designed to provide eventually for the problems of our aged.

Since the Social Security Act became effective statistical information furnished by Government agencies reveal that the number of aged persons is increasing rapidly due to the lengthening of the span of life because of the rapid strides made by the medical profession in treating human ills.

Then, too, we must recognize that the Social Security Act has resulted in many people depending upon the Government for

security in their old age. While this attitude may be subject to criticism, yet it actually exists and the condition must be faced.

We cannot escape the fact that the cost of living has aggravated the general problem of old-age pensions and that present benefits under the Social Security Act are wholly inadequate. Then, of course, we have the cost of social security which has developed to be quite a problem to the Federal and State Government, as well as to the employer and employees.

While I was not in Congress when the Social Security Act was approved, yet I felt at that time that since our Government was committed to provide benefits to the aged the program was not broad enough since it did not cover all citizens. Many of you will remember that at that time I was identified with the Veterans of Foreign Wars as commander in chief and my activities brought me in contact with not only those covered under the law but also with a large number not covered. To be frank, the glaring defects in the Social Security Act were immediately apparent.

Today we are faced with the terrific problem of old-age pensions. It is my opinion that the Congress of the United States through its failure to take positive action in this field over a period of 15 years, is responsible for the situation we are confronted with today. If Congress had kept abreast of developments in the field of old-age pensions and had taken action instead of using delaying tactics, the issue would have been met and we would have today the necessary laws to meet present day needs.

Without doubt the question of industrial pensions and the many pension plans in effect at the preesnt time have made this general problem of old-age pensions an acute one. As I have already said, it is my opinion that if Congress had taken action, the pension problem would have been solved years ago and we would not have the conglomeration of pension plans now being offered to the American people.

It is the consensus of opinion that the Social Security Act will have to be rewritten or a substitute adopted. It is freely predicted that the cost of social security benefits in the near future will be so great to employer and employee that a Federal Government subsidy will be necessary.

Then, let us not forget, that we are talking only about earned benefits under the Social Security Act and that we have not considered the cost of old age or public assistance to persons who are not contributors to the social security fund. The cost of these old-age pensions, as you know, is shared by the Federal and State Governments.

In mentioning the total cost of the Social Security Act, it is evident that the day is not far off when the cost of taking care of our aged under all phases of the Social Security Act will become an unbearable burden to Federal and State Governments as well as to employer and employee.

In closing, I recognize that your committee has access to Government statistics that concern all phases of the general problem of old-age pensions. For that reason, I have confined my remarks to a general discussion of the subject. It is my considered judgment, however, that the only answer to the old-age pension problem is a universal pension for the aged of this Nation. It may be the Townsend or American pension plan or some similar pension proposal that will provide the answer to this problem. One thing certain, we are not on the right track at present. It is a known fact that the aged of this country are not being taken care of for many of them are hungry. Therefore, I say to you, Congress had better devise a universal pension plan in keeping with the solvency of our Government and the needs of the American people.

Excise Taxes

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE CENTURY PRESS,
New Castle, Ind., February 17, 1950.

Hon. RALPH HARVEY,
Washington, D. C.

DEAR CONGRESSMAN HARVEY: I have just been going over some figures for our business and I have come up with some things on the retail excise tax which might be of interest to you.

Taking 1946 as the norm, or as 100 percent, our business has for 4 years been as follows:

1946	100
1947	119
1948	130
1949	129

Now the excise taxes we have paid show no such consistent record. Actual figures are as follows:

1946 (December only)	$162.59
1947	220.48
1948	197.59
1949	92.25

Our excise taxes are mostly on fountain pens, billfolds, and brief cases.

Our pen sales now are mostly on those that are not taxable. Our billfold and brief case sales are way off in volume as tax records show.

Since our annual total volume is over $100,000 you can see that generally speaking our business has not been so bad though items carrying retail excise taxes are another matter.

It is our judgment that in most cases the unsettled situation with regard to the excise taxes has practically stopped the purchase of products carrying these taxes except in cases of absolute necessity.

We are aware of the fact that there are only two ways to make up for any revenue loss that may result from a law abolishing the excise taxes; one is to spend less and the other is to secure revenue from another source. Why not do both? Spend less and if the saving is not sufficient, tax those who are not now paying their fair share.

* * * * *

It was nice seeing you the other day and I hope that one of these times you can do something for small businesses along the lines suggested above.

Your truly,

HENRY L. CHESICK.

Resolutions of Society of Mayflower Descendants

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. WOODRUFF. Mr. Speaker, knowing the high character, intelligence and patriotism of the members of the Society of Mayflower Descendants in the District of Columbia, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the resolutions of this splendid organization adopted January 31, 1950. I wish to say, Mr. Speaker, that I agree in every particular with these resolutions and thank the members of this society for their timely action.

RESOLUTIONS OF THE SOCIETY OF MAYFLOWER DESCENDANTS IN THE DISTRICT OF COLUMBIA, ADOPTED JANUARY 31, 1950, IN RE PROPOSED WORLD GOVERNMENT

At a meeting of the Board of Assistants, the governing authority of the Society of Mayflower Descendants in the District of Columbia, held in the city of Washington, on January 31, 1950, the following resolutions were unanimously adopted, to wit:

"Whereas there are pending before the Congress of the United States proposals for the establishment of a so-called world government, to embrace all nations and peoples of the earth, with the United States of America as a constituent member; and

"Whereas because of the wide divergences, prejudices, antagonisms, distrusts and misconceptions attendant upon the existing differences of race, custom, creed, religion, speech, economic aim, interest, and need, political concept, ideal, ideology and ambition; and because, also, of the inherent urge and force of self-interest and demagogic appeal everywhere to be encountered—a single government, created for all lands and tongues, functioning with power, authority and universal harmony and beneficence, is absolutely impossible and out of the question; and any reign thus set up would prove to be a veritable babel of criminal folly and confusion; and

"Whereas the joinder of our own Nation in such a tragic and colossal misadventure would surely result in the overthrow of its system of liberty and constitutional government, and the regulation of its internal and domestic affairs; the inevitable loss of its nationality and freedom; the destruction of its unexampled enterprise and progress; the ultimate depletion and pillage—for the world at large—of its vast resources; and its reduction to a condition of hopeless impotence and futility: Be it therefore

"*Resolved*, That the Society of Mayflower Descendants in the District of Columbia absolutely opposes any and all efforts for the establishment of such world organization, and respectfully calls on the American Congress to register its prompt and overwhelming disapproval of all such schemes and proposals; and be it further

"*Resolved*, That copies of these resolutions be furnished to the Congress and its appropriate committees, for their consideration."

Postmaster Goldman and H. R. 4678

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. LYNCH. Mr. Speaker, under leave granted me by unanimous consent to extend my remarks I take pleasure in including therein the statement made by Hon. Albert Goldman at the hearing of the House Post Office and Civil Service Subcommittee on February 9, last, in connection with H. R. 4678 and H. R. 4757.

Mr. Goldman has been postmaster of the New York post office for the past 16

years during which time the receipts of the New York post office have increased tremendously and the efficiency in the handling of the mails has been greatly bettered by reason of the high morale of our New York post office employees. No small part of the credit for this achievement is due to Mr. Goldman, who has demonstrated unusual ability as an executive.

Mr. Goldman's statement follows:

The New York post office is one of the most intensive centers of industry anywhere to be found. It is the largest mail-distributing and financial center in the postal service in the United States.

As indicative of the enormous volume of the present business, it may be said that the receipts for the calendar year 1949 amounted to $164,474,009.02. This is an increase of $15,468,347.53 over 1948.

The postmaster's salary at New York, N. Y., was fixed at $12,000 per annum as far back as July 1, 1930. Only three increases in salary were granted since then—one of $400 in 1946 under Public Law 386, another of $450 in 1948 under Public Law 900, and another of $120 in 1949 under Public Law 428. In 1945, under Public Law 134, postmasters at offices with salaries in excess of $6,000 were not considered for any increase in salary, although postmasters whose salaries were under $6,000 received the benefit of this legislation.

During my incumbency as postmaster since 1934, the postal receipts of this great city have increased from $61,162,758.97 to $164,474,009.02 for the calendar year 1949; while the personnel has increased from 16,620 to 33,081 during the same period. The volume of mail and the various activities likewise, have increased correspondingly.

At New York, N. Y., the postal area embraces all postal activities in New York and Bronx Counties, and the village of Pelham in Westchester County. This includes the main post office, 4 large annexes, viz: Morgan Station—through which is cleared the bulk of foreign mails originating in the United States; Grand Central Station; Church Street Station; and Bronx Central Station; 46 classified carrier stations, 46 finance stations, and 8 contract stations; and the Postal Concentration Center in Queens, where foreign parcels and prints and overseas APO's and naval mails are distributed.

In addition there is the responsibility for the administration, supervision, maintenance, and operation of 24 Federal buildings having 93,143,113 cubic feet, ranging from the Main Post Office with 26,305,000 cubic feet; Morgan Station with 24,000,000 cubic feet; Church Street Station, a 15-story office building with 17,423,000 cubic feet; Bronx Central Station with 3,095,000 cubic feet; to the smaller buildings with 144,000 cubic feet.

The land value of these buildings is over $17,000,000, and the construction cost of the buildings $40,000,000, or a total cost of $57,000,000, which does not include equipment, machinery, furniture, or other appurtenances that are necessary for our financial and mail handling activities.

The motor vehicle service, operating two large garages with overhauling and repair units, is required to house and maintain a local fleet of 712 Government-owned trucks, plus the periodical overhauling of trucks assigned to 131 other post offices in the States of New York and Connecticut.

The mail handling operations of the New York Post Office are of such gigantic proportions that they stagger the imagination to visualize their enormity. During the calendar year 1949, there were 67,598 solid cars of mail loaded at the railroad stations located in the metropolitan area. This tremendous stream of cars, end to end, would extend from New York, N. Y., to Louisville, Ky., a distance of 865 railroad miles. In reducing the carloads of mail to sack equivalents, there were handled and transported 54,478,400 sacks of mail. In addition to the mail dispatched on trains, our Morgan Station and Postal Concentration Center prepared and dispatched on outgoing steamers 6,021,288 sacks of foreign mail, and 804,295 sacks of mail prepared and dispatched for United States military units outside the United States. With respect to the handling of air mail, there were 12,261,963 pounds of air mail, equivalent of 613,098,150 letters, prepared and dispatched during 1949.

During 1949, the division of registered mails handled 42,378,962 articles, a large percentage of which consisted of articles and pouches containing currency, and articles containing negotiable securities of great value. The registered mail addressed to foreign destinations, including parcel post of considerable value, is also handled in the registry section. Mail for all over the world is made up to connect with steamers leaving all ports.

During 1949 this office transported and delivered over 9,800,000,000 pieces of mail. Over 3,733,000,000 pieces of mail were canceled. The above statistics give you a good idea of the huge volume of mail now being handled in the New York office.

A word about our pneumatic-tube service, an underground system for the transportation of ordinary mail, daily papers, and miscellaneous letter-sized pieces of other mail when included with letter mails. The points connected with pneumatic-tube service include the general post office and 21 stations located in New York, and the general post office in Brooklyn, and consists of 27 miles of tube lines. Approximately 6,000,000 pieces of mail are transported daily via the pneumatic tubes.

The financial transactions at this office are of a magnitude exceeded by very few of the large banking institutions in the city. There were 7,953,539 domestic money orders issued amounting to $183,558,508.33, and 20,711,878 domestic money orders were paid amounting to $291,963,355.87. In addition 110,704 international money orders were issued for payment abroad amounting to $1,799,065.89, while 20,955 international money orders received from abroad amounting to $275,980.13 were paid. The New York office is also the international exchange office, and during the year, 600,483 international money orders were certified for payment abroad amounting to $9,639,691.22, while 58,439 international money orders amounting to $509,480.66 were received from abroad for payment in the United States. There were 4,962,947 postal notes issued amounting to $28,607,277.29, and 11,025,720 postal notes were paid amounting to $53,231,526.08. Furthermore, all money orders issued by Army post offices and post offices on naval vessels outside the United States and in foreign waters are under the jurisdiction of this office, excepting those in the South Pacific islands and in the Pacific Fleet.

The number of domestic money orders processed through the electrical accounting unit of the New York post office in 1949 totaled 45,669,529, which were received from 59 tributary offices, amounting to $704,176,150.16.

Postal savings are maintained at most of the stations of this office, and there are 212,152 postal savings depositors, with a total of $117,001,704 on deposit. The operation is comparable to any similar banking organization in the city.

During the calendar year 1949, we sold 327,814 United States Savings bonds amounting to $16,219,368.75 (issue value), and United States Savings Stamps amounting to $1,165,818.35 were purchased by our patrons.

This office deposited funds to the credit of the Postmaster General during 1949 amounting to $767,773,594.65.

The office collected $2,365,814.01 in postage due money; adjusted 100,716 indemnity claims, and made payment in settlement of these claims amounting to $1,119,474.36.

In my capacity as the disbursing officer for all employees of the New York, N. Y., post office, it also embraces the personnel of the inspection service and headquarters force of the New York division; the postal transportation service, second division, and rural carriers throughout the State of New York.

New York, N. Y., is also the central accounting office for a total of 1,750 second-, third-, and fourth-class post offices in New York State, and is also the depository for certain first-class offices and all second-, third-, and fourth-class offices in New York State, a total of 1,926 post offices.

The transactions at this office are constantly increasing in volume as a result of expansion and growth of New York City, inasmuch as it is the largest business center in our country. The New York, N. Y., post office is the District Central Supply Unit filling requisitions from the Assistant Postmaster General, Division of Federal Buildings, for post offices located in Federal buildings in 15 States, having a total of 1,500 Federal buildings supplied throughout the United States, including Alaska. In addition, jurisdiction is maintained over postal supplies for all the New York, N. Y., post-office units, and for 716 third- and 667 fourth-class offices in New York State, including APO and naval units.

The foregoing indicates that the New York, N. Y., post office operates one of the country's largest businesses. It has reached such gigantic proportions with ramifications so numerous and far extending that the postmaster's salary should at least approximate those of executives in private industry. In every private enterprise throughout the United States salaries have advanced in rapid succession with the times and each succeeding advance has been equally substantial. It is fair to state that salaries paid by banks, commercial houses, and mercantile establishments to those directing such activities are larger than those paid by the Government for similar qualifications and responsibilities.

The postal service is the outstanding and largest business enterprise in the United States—if not in the entire world. The New York, N. Y., post office, in turn, is the largest in the country. It may be of interest to mention that this office not only includes practically every feature of the service conducted elsewhere, but certain additional features, such as the handling of immense volumes of foreign mail and the certifying to and from foreign countries of international money orders on behalf of the entire United States. The extensive development and use of the domestic air-mail service and the inauguration of foreign air-mail service, which will further expand with the completion of the International Airport, are added features of the service.

In fact, statistics show that approximately 10 percent of the entire postal revenues of the Nation are produced through the New York, N. Y., post office. It is evident that the offices producing the greatest postal receipts are in areas where the cost of living, rents and taxes are the highest. The question presents itself whether these offices which handle the bulk of the business are to be given the recognition and proper comparable credit for the large receipts, which are the backbone of the service.

As you are aware, the salaries of postmasters are based upon the gross postal receipts of their offices, and it is obvious that a revision of this system should be made because of its existing inequalities. To be consistent, the receipts of post offices should be readjusted to include, in all equity, those offices where the receipts far exceed the present $40,000,000 and up.

A glance at the salary chart will reveal that postmasters are graduated according to postal receipts of the office, and that there is

a finely graduated ratio of postal receipts in the lower salary brackets. The graduation in postal recipts is nonexistent above the $40,000,000 and up, consequently if the bracket system based upon postal receipts of a given office is the most desirable medium of adjusting salaries, then the policy should be followed through to a more favorable and reasonable conclusion. In its present limited form, it only serves as a penalty to postmasters where the receipts of the office double or triple and quadruple the top bracket of $40,000,000 and up.

The inconsistencies of such a situation clearly serve to emphasize the need for an upward revision of the salary structure of the postmaster, assistant postmasters, and postal supervisors.

Something should be done at this session of Congress to enact a law to adequately compensate these officials because of the tremendous volume of business involved, together with the numerous responsibilities, both financial and physical which they are required to handle and direct.

I, therefore, strongly recommend the reclassification of salaries of postmaster, assistant postmasters and postal supervisors, which I deem worthy of favorable consideration.

Coal-Supply Situation in Michigan

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. FORD. Mr. Speaker, on February 21, 1950, I received the following telegram from Stanley J. Davis, the mayor of Grand Rapids, Mich. This telegram clearly indicates the seriousness of the situation facing the citizens of western Michigan. Sometime ago I introduced a resolution calling for immediate action to prevent suffering among our citizens. I trust the President's unwise delay over a period of several months will not ruin our national economy at this critical hour.

GRAND RAPIDS, MICH., *February 21, 1950.*
Hon. GERALD R. FORD,
United States Representative:

Coal-supply situation in Grand Rapids, Mich., critical. Every effort must be made to get coal in this area to meet our domestic-heating needs. By the week end our supply will be exhausted. Dealers have no coal in yards or in transit. We are deeply concerned from standpoint of public health and safety.

STANLEY J. DAVIS, *Mayor.*

Resolution of the South Dakota Legislature

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following concurrent resolution passed by the Legislature of the State of South Dakota at a recent special session of that body and which is of great importance to the United States:

Senate Concurrent Resolution 1
(Introduced by Mr. Houck)

Concurrent resolution memorializing the Congress of the United States, His Excellency the President of the United States, to make an immediate, thorough and exhaustive study and investigation of the loyalty of the members, officers, and employees of the State Department, and to take such further appropriate action to rid the Department of State of procommunistic employees in order that the safety of our Nation will not be further endangered by men in high places who condone acts of treason which endanger the safety of the United States of America and the people

Be it resolved by the Senate of the State of South Dakota (the house concurring therein)—

Whereas through the activities of the House Un-American Activities Committee and the Federal Bureau of Investigation, Alger Hiss was twice tried in the Federal courts of the United States of America and convicted of the crime of perjury; and

Whereas members of the United States Supreme Court, Supreme Court Justices Frankfurter and Reed voluntarily testified in the first trial as character witnesses, thereby breaking all of the precedents heretofore existing in relation to our Federal courts, and creating in the minds of the American people a disregard for members of our Federal judiciary; and

Whereas, upon the conviction by a Federal jury in a Federal court of the said Alger Hiss, Dean Acheson, Secretary of State of the United States of America, issued a prepared and considered statement in which he said, "I do not intend to turn my back on Alger Hiss," which statement was designed to belittle the actions of an American jury in an American court and to raise in the minds of the American people a doubt as to the guilt of one of Dean Acheson's friends and former State Department employee in spite of, and in total disregard of results of a free and fair trial and a verdict rendered by a jury as provided by the Constitution and the laws of the United States: Now, therefore, be it

Resolved, That the Senate of the State of South Dakota, the House concurring therein, do memorialize the Congress of the United States and His Excellency the President of the United States, to make an immediate check of the loyalties and beliefs of the men employed in the State Department of the United States from Dean Acheson on down to determine whether or not the ideas and ideals of such individuals are such that the American people can have continued faith that such Department through its representatives will safely keep and guard the secrets of the United States of America from foreign enemies and that such Department and its employees in preparing and carrying out a foreign policy in relation to Russia and other foreign countries will adopt and carry out policies which are not contrary to the ideas and ideals of the American people as expressed by the Constitution of the United States and the laws adopted thereunder; be it further

Resolved, That His Excellency the President of the United States, make immediately available to the House Un-American Activities Committee all secret files and lists and reports of investigations covering the loyalties and activities of any and all employees of the Government of the United States which in any way show or indicate disloyalty to the United States of America as expressed by Communist membership or otherwise; be it further

Resolved, That copies of this concurrent resolution be forwarded to His Excellency the President of the United States, to United States Senator Chan Gurney, to United States Senator Karl Mundt, to Congressman Francis E. Case, to Congressman Harold Lovre, and to the presiding officers of both Houses of Congress.

REX TERRY,
Lieutenant Governor, President of Senate.
Attest:
NIELS P. JENSEN,
Secretary of the Senate.
A. E. MUNCK,
Speaker of the House of Representatives.
Attest:
W. J. MATSON,
Chief Clerk of the House.

Why a New Farm Program?

EXTENSION OF REMARKS
OF
HON. LOWELL STOCKMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. STOCKMAN. Mr. Speaker, I would like to call the attention of the Members to an article by my constituent, Mr. Henry Baker, president of the Oregon Wheat Growers League. It represents the viewpoint of those who are actually engaged in growing wheat and is very indicative of the fact that the wheat farmers only want a fair price for their produce and not Federal subsidies. I have introduced H. R. 7245, to amend the Agricultural Adjustment Act of 1938, as amended, to establish a two-price plan for wheat, and the bill is intended to implement the income certificate plan for wheat which is discussed in the following article:

WHY A NEW FARM PROGRAM?

The Agricultural Act of 1949 extended the support program of 90 percent of parity for wheat to include the 1950 crop. The high Government loan support program has been continued since the war as a temporary relief in aiding the readjustment of the agricultural economy to postwar conditions. In his opening speech to Congress, the President of the United States recognized the shortcomings of present farm legislation and urged the approval of the Brannan Plan. Since it is apparent that present agriculture legislation is temporary and will be changed, the wheat producers in Oregon would like to have a voice in determining what national program is finally adopted.

Looking forward to the time when a permanent program is adopted, the wheat growers in Oregon through the Wheat Growers League have for more than 7 years, been developing in cooperation with the Pacific Northwest Farm Council the self-supporting certificate plan for wheat.

Along with other segments comprising national economy, American agriculture is faced with more complex problems than ever before. The Department of Agriculture endeavors through the establishment of a Federal farm program have been comparatively successful in the maintaining of a high farm income and a balanced economy for the Nation. This we believe essential and applaud all efforts which have this end in mind. It is recognized, as history emphatically verifies, depressions arise when farm prices reach such a low point that buying power is reduced. It is agriculture's responsibility and that of all organizations which have farming

interests at heart, to develop and support programs which protect that national economy. Labor and industry are highly organized, which emphasizes that agriculture must also be strong. These three groups, labor, industry and agriculture must not be divided in their goals—they are interwoven and dependent upon each other. And there can never be a sound and healthy economic condition when any one of these three has a crippling advantage over the others. We must maintain agriculture on a par with labor and industry; if we are unable to do this, we are shirking our responsibility not only to the farmers but to all the people who make up this great Nation.

While Federal assistance to agriculture has become necessary, it must be realized that both labor and industry have had legislative assistance for a long time. Where it is essential to the national economy to provide financial assistance to agriculture, we should consider the program in the light of an insurance premium to guarantee a healthy, long-lived agriculture.

We favor the continuance of the policy of maximum production geared to economic use of the Nation's wheat lands, by the enactment of a bill providing for the income certificate plan for wheat. This plan was presented at hearings held by the Agricultural Committee of the House by a Wheat League delegation last year with favorable acceptance. They requested more detailed information and asked the Wheat League to prepare a bill which has now been drafted and is available to all growers for their analysis and comments.

Our proposed income certificate bill is a direct and simplified approach to what we believe to be a sound long-range program for wheat producers. This action by our league is consistent with action taken for several years by the wheat farmers of Oregon. Discussion of our plan with wheat organizations of other States gives assurance that support of the major part of the wheat growers of the United States may be expected. National legislation of such an important nature cannot be secured on the spur of the moment. The Wheat League has a reputation for persevering until its aims are acocmplished. Genuine progress has been made in preparing the way for legislation we have consistently recommended. We urge wheat growers to take such aggressive action as will secure enactment of the wheat income certificate plan.

In view of the fact that it will not be possible to secure the enactment of such legislation immediately, we recommend that in the meantime the Oregon Wheat Growers League give support to a program providing 90 percent of parity for wheat as long as acreage allotments are in effect. This should not be construed to mean that we favor a high-support policy over a long period of time, but merely in the interim until the income certificate or other satisfactory plan for wheat is realized.

HENRY BAKER,
President, Oregon Wheat Growers League.

Fair Employment Practice Commission

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. KELLEY of Pennsylvania. Mr. Speaker, the Powell bill, H. R. 4453, embodying the establishment of a Fair Employment Practice Commission, is the heart of the civil-rights program to which the Democratic Party so vigorously and forthrightly dedicated itself in its platform adopted in 1948.

As a democratic people founded on the precept of equality for all, we must take action to guarantee that equality. There is almost no section of our country today which is entirely free from discrimination in some form. Although it is generally associated with the plight of the Negro, there is discrimination just as insidious to other racial and religious groups, and to people of foreign descent. In one place it may be directed at Jews and Catholics, another Mexicans or Japanese, and in my own part of the country I know well it is experienced many times over by our large number of people of European descent—Italians, Polish, Greeks, Slavs, and innumerable others.

That intolerance of this kind should exist in this country is a sad commentary, and I have long felt that our Government has an obligation to promote safeguards of the freedom of opportunity. Every time an individual is denied employment because of some factor which he is powerless to change, the dignity of that individual is destroyed and his faith is shaken in the principles to which we profess belief. The passage of the Powell bill would go far to restore the hopes and ideals of the many who have suffered again and again, who have been unable to find decent employment and provide for themselves and their families.

Particularly has the principle of nondiscrimination with respect to employment opportunities been a subject of great international concern during the years following the formation of the United Nations at San Francisco. Article 1 of the Charter of the United Nations at San Francisco. Article 1 of the Charter of the United Nations declares that one of the purposes of the United Nations is "to achieve international cooperation in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion."

Under articles 55 and 56 of the Charter, all members of the United Nations "pledge themselves to take joint and separate action in cooperation with the Organization" to achieve "universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion." Article 68 of the Charter of the United Nations directs the Economic and Social Council to set up a Commission for the Promotion of Human Rights. The Commission on Human Rights has manifested its concern with the problem of nondiscrimination in employment opportunities in a number of ways: First, it has set up a Subcommission on the Prevention of Discrimination and the Protection of Minorities; second, it has prepared and had approved by the General Assembly of the United Nations a Universal Declaration of Human Rights. This Declaration of Human Rights has been proclaimed by the General Assembly "as a common standard of achievement for all peoples of all nations, to the end that every individual and every organ of society, keeping this declaration constantly in mind, shall strive by teaching and education to promote respect for these rights and freedoms and by progressive measures, national and international, to secure their universal and effective recognition and observance, both among the peoples of member states themselves and among the peoples of territories under their jurisdiction."

Further concern with the principle of nondiscrimination in employment opportunities was manifested in international agreements and declarations adopted by the states of the Western Hemisphere at the Bogotá Conference in 1948. The International Labor Organization expressed its adherence to this principle at its conference in Philadelphia in 1944 in a declaration which reads in part:

> Believing that experience has fully demonstrated the truth of the statement in the constitution of the International Labor Organization that lasting peace can be established only if it is based on social justice, the conference affirms that (a) all human beings, irrespective of race, creed, or sex, have the right to pursue both their material well-being and their spiritual development in conditions of freedom and dignity, of economic security and equal opportunity.

So, despite our vulnerability at home, we are carrying forth abroad in our foreign policy the ideals of freedom and equality of the individual. As a Nation, we play a leading part in a number of international organizations in which we work with other nations of varied race and religion on an equal basis and in which we espouse a policy of nondiscrimination. Yet these nations are aware that we do not practice a like policy in our own country; consequently, our international position is weakened. In such inconsistency we give aid to those who would happily see an end to our system of government.

I have always been an ardent supporter of an adequate fair employment practices commission, one which would do as complete a job as possible toward the elimination of discrimination in employment. The bill which passed the House today, the McConnell bill, is totally inadequate. It is nothing more than a sop to those who have looked to this Congress for enactment of this long-needed legislation. The McConnell bill is not designed to operate effectively against the evil of discrimination in employment, and I was compelled to vote against it. Knowing this, I could not in conscience support it.

Hon. L. Pascual Martinez

EXTENSION OF REMARKS
OF
HON. ANTONIO M. FERNANDEZ
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. FERNANDEZ. Mr. Speaker, in the debate on the Navajo rehabilitation bill yesterday I called attention to the fact

that Indians desire to have the privilege of having their personal and property rights protected by the State and the privilege of having access to the State courts for the enforcement of those rights. They are wondering why they are being denied these civil rights to which they should be entitled as citizens of the State.

In a newspaper from Taos which I just received, there appears a news item concerning the announcement of a prominent Republican as candidate for the State legislature, and in which he points out that the first move toward the civil rights of the Indians is up to the Federal Government.

Because the item is also of historical interest, I insert for the RECORD portions of that news item, which appeared in El Crepusculo of February 16, 1950. It reads as follows:

The June election picture began to take even more definite shape in Taos as L. Pascual Martinez, present mayor, announced Monday that he "may seek the Republican nomination as State representative." * * *

Pascual, incidentally, is descended from Padre Martinez. And this introduces an interesting angle to the legislature race, because the Democratic nomination-seeker, Doughbelly Price, is descended from Colonel Stirling Price, who led the troops against the Taos Rebellion of 1847, generally thought to have been started by Padre Martinez. * * *

Martinez hopes that Taos Indians will exercise their new right to vote in the next election. "Indians, too, should have elective and appointive county positions, and take their full share in civic life." As for Indian improvements, he stated that the Federal Government would have to make the first moves, such as approval of the Hoover report which calls for full Indian citizenship. "After that," said Martinez, "the State can begin to help—with my full support."

Russian Expansionist Policy

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Speaking in Palmer last night, Congressman PHILIP J. PHILBIN, of Clinton, declared that the expansionist policy of the Soviet Union and its refusal to cooperate with peace-seeking nations in measures to limit armament requires the United States to maintain costly and unprecedented national defense.

The Clinton Congressman asserted that while the atomic bomb and the H-bomb present terrifying prospects for the world, the American people should not allow the present campaign of terrorism regarding these weapons to produce a national hysteria.

PHILBIN, who is a member of the House Armed Services Committee, stated that such weapons should be directed to constructive and not destructive purposes, but that current Russian policy is making international cooperation for peace virtually impossible.

His remarks follow in part:

"Russia has spread its sphere of influence by ill-advised diplomatic concessions, by actual aggression and by the more subtle but equally coercive methods of infiltration. The gains of the Russian expansionist policy since the war are startling. One country after another has been swallowed up in the vortex, not only in Europe but in Asia. Reversing the situation during and immediately after the war when democratic nations exercised dominant control, communism has now spread to cover wide areas and large numbers of people until directly or indirectly Russian influence extends to almost half the population of the world.

"During this time worth-while, humane programs for world peace have been thwarted, and international cooperation for peace has been rendered virtually impossible. It has been necessary, therefore, though ironic in the light of our great wartime sacrifices, to saddle the American people with a gigantic cost of more than 20 billions of dollars to maintain adequate national defense, and try to check the wildfire spread of communism in western Europe and other parts of the world.

"The H-bomb presents another startling problem. Together with the atomic bomb, it encompasses the most terrible and destructive weapons ever known to mankind—weapons which, when implemented, might destroy overnight great cities and teeming populations. Weapons and substances of such devastating strength and ominous possibilities should be regulated and restricted by international compact. Universal disarmament should be vigorously sought and applied to this world before it destroys itself. Rigid international inspection should be established to control such lethal weapons. But all this cannot be achieved when one great power sets up continual road blocks against world peace and security.

"Under these conditions we must maintain armed services, adequate and ready for almost instantaneous action against potential enemies. But let us not be unduly aroused, disturbed, or worried by the current compaign to terrorize the American people by exploiting the potentialities of the H-bomb. While we originated and implemented atomic power and bombs, and while we have made the critical decision to develop the H-bomb because of current conditions in the world, we have actually had no choice. We will have to live with the horrifying reality of these weapons until the Soviet Union makes up its mind to join democratic nations in outlawing them and in effecting disarmament in the name of and for the sake of a just, lasting peace.

"That peace cannot be based upon aggression, upon infiltration, upon oppression, or injustice. It cannot emerge from organized movements against the security of this Nation or from internal or external conspiracies to destroy it and to spread the Marxist formula to the far corners of the earth. Peace can come only from earnest, sincere cooperative action by and between nations and by leaders of good will toward mankind, and not by men obsessed by fanatical hatred of God and every decent principle of government and life.

"I believe that our Nation is well prepared as it should be to defend our shores and way of life. Let us work together to weed out subversive elements which are working from within to bring about our destruction, because if another war should come—and God forbid it—our number one problem at the outset might well be that of our internal security due to the disloyalty and treason which has been fomented in our very midst by agents of communism and domestic traitors.

"To this end let us be vigilant lest our liberties be lost because of our own inertia and failure adequately to value and protect them. And let us be sure that the Nation will be constantly ready not only to ward off attacks but to visit swift and telling retaliation at home and abroad against those working to undermine the integrity of America."

The Tax on Life-Insurance Companies

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. LYNCH. Mr. Speaker, it will be recalled that on January 26, last, the House passed House Joint Resolution 371 by which the formula for the determination of the net investment income of life-insurance companies was amended so that these companies would pay taxes on their net investment income for the years 1947, 1948, and 1949. The resolution, which had been unanimously approved by the Subcommittee on Taxation of Life Insurance Companies of the Committee on Ways and Means and had been favorably reported by a vote of 24 to 1 by the full committee passed the House with only a few scattering votes in opposition and is now before the Senate Finance Committee.

In the insurance industry there is little opposition to the bill. Whatever opposition exists is more vocal than persuasive; it is the kind of opposition that is "agin" everything and everybody in the industry. I am reliably informed that 95 percent of the industry supports this legislation.

I believe that the forthright and patriotic position of the industry is clearly revealed in an interview given to a New York Times reporter by Mr. Leroy A. Lincoln, president of the Metropolitan Life Insurance Co. I might say that Mr. Lincoln, by reason of his position as president of the largest life-insurance company in this country, is a dominant personality in the life-insurance industry. Furthermore, he is, in his own right, a man of outstanding ability and of wide vision, who understands the economic conditions of the country and who always has his feet solidly on the ground. Recognizing the critical need of the country for housing, he and his company have taken the lead in multiple-home construction. He is truly a great man and a great American.

Under the leave granted me by unanimous consent, I include herein the report of the interview which appeared in the New York Times of February 21, 1950:

LINCOLN DEFENDS RETROACTIVE TAX ON LIFE INSURANCE COMPANIES—NINETY-THREE MILLION DOLLARS LEVY BACK TO 1947, PASSED BY HOUSE, WAS A COMPROMISE, METROPOLITAN HEAD SAYS—DENIES IT SETS PRECEDENT

The Government's proposal for an income tax levy of $93,000,000 retroactive to 1947 on life insurance companies is eminently fair, Leroy A. Lincoln, president of the Metropolitan Life Insurance Co., said yesterday.

In his statement, made at a press conference at which he presented the annual statement of his organization, largest life insurance company in the world, Mr. Lincoln took issue with critics in business, finance, and the

life insurance industry itself who have attacked the retroactive features of the tax measure as establishing a dangerous precedent. The measure has been passed by the House.

The retroactive proposal, Mr. Lincoln said, was the result of 3 years of conferences of committees representing the House Ways and Means Committee, the Treasury Department and the life insurance companies. It was a compromise, he added, between two measures, one of which would have made the companies include the $93,000,000 assessment as part of their 1949 incomes.

"There was no way of insuring that the alternative measure which would have fixed the back taxes as current parts of the 1949 levy would have disappeared from the law books within a single year," Mr. Lincoln said. "Those who argue that the proposal which the Metropolitan along with 84 other life companies approved would set a dangerous precedent so far as retroactive Federal taxes are concerned, are in error.

"Because of the special circumstances surrounding our approval of the retroactive measure, it can hardly be argued that the special bill can be used as a precedent to apply to other industries. It is also certain that it will not force insurance companies to pay the special levy again in future years because of some legislative oversight."

Mr. Lincoln reported that his company had paid out $768,627,888 to policyholders and beneficiaries last year, the highest total in the company's 82-year history.

He added that the company closed its books for the year with $41,699,549,717 of life insurance in force, compared with $39,958,517,854 at the end of 1948. The amount of new life insurance issued was $2,778,793,267 in 1949 compared with $2,904,157,071 the year before.

The new insurance issued last year was divided into $1,656,021,996 in ordinary life insurance, $701,920,796 in industrial life, and $420,850,475 in group life.

Mr. Lincoln added that by March 1 the company will have written more group life insurance in 1950 than it did for the entire 12 months of last year. This, he said, will be due chiefly to the fact that his company has been designated as the insuror in Bethlehem Steel Corporation's new $325,000,000 group life and disability insurance program.

At the end of 1949 the company held assets of $9,707,947,682 for its 33,000,000 policyholders in the United States and Canada. The interest yield on all of the company's investments averaged 3.07 percent for the year, compared with 3.03 percent in 1948 and 2.94 percent in 1947.

Effect of Wartime Excise Taxes

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE NEW CASTLE CHAMBER
OF COMMERCE,
New Castle, Ind., January 24, 1950.

Hon. RALPH HARVEY,
House Office Building,
Washington, D. C.

DEAR RALPH: In the interests of finding out just what effect the wartime excise taxes are having on local sales—and on Federal revenue—we polled a number of local retailers and asked them to give us the excise taxes paid for two comparative months.

We used the months of December 1945 and December 1949. Our replies are not yet complete because the reports for last month are not due until January 31, but since the question seems hot now in Congress we thought we'd better send along what we have as the pattern seems fairly well established.

The totals run $6,641.54 for the month of December 1945 as against $4,412.63 for the month of December 1949. This indicates a drop in revenue of approximately 33 percent.

Such taxes certainly are a deterrent to business in the affected lines. We polled only on luggage, jewelry, furs, and toilet preparations. We did not ask the stores furnishing the information to identify themselves, although several have done so.

* * * * *

So you can see the kind of survey we made, I am enclosing a returned questionnaire from a firm which has no 1945 experience and therefore could not be used in our final results. There are 10 firms represented in the above totals.

We will be glad to make any further surveys on questions upon which you would like a sample of local sentiment or thinking and are always glad to be of assistance to you, if possible, in the difficult and conscientious job you are doing for us.

Cordially,

JIM
(J. B. Clements),
Executive Secretary.

The Food-Distribution Program

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish now to make available for your information and ready reference certain correspondence between myself and Mr. John C. Stalker, myself and Miss Faith Clark, economist of the Bureau of Human Nutrition and Home Economics, and myself and Mr. John Dittrich, in charge of the northeastern area of Food Distribution Programs Branch, Production and Marketing Administration:

FEBRUARY 17, 1950.

Mr. JOHN C. STALKER,
Director, Food Distribution Division,
Department of Public Welfare,
Boston, Mass.

DEAR MR. STALKER: After talking with you this afternoon, I called Mr. Albin again and expressed the opinion that you and I were in accord that the allotments should be revised upward. He told me that the proper procedure would be for you to present any evidence of insufficient quantities to the New York area office and assured me the New York office had the authority to act immediately. I have not completed my study as to what any such increases should be, but will try to do this tomorrow, with the thought of having my suggestions in your hands Monday. I thought possibly you might be able to have some data assembled on the State basis and could then take the necessary action.

UNITED STATES DEPARTMENT OF AGRICULTURE, AGRICULTURAL RESEARCH ADMINISTRATION, BUREAU OF HUMAN NUTRITION AND HOME ECONOMICS,
Washington, D. C., February 21, 1950.

Hon. JOHN W. HESELTON,
House of Representatives.

DEAR MR. HESELTON: Following my telephone conversation with Mrs. Coupe of your office, I am quoting to you from another of our technical publications, Family Food Consumption in Buffalo, N. Y., winter 1948 (now out of print). Buffalo families consume on the average more potatoes than do urban families throughout the country. Since their consumption pattern probably represents consumption in your section of the country better than the over-all national average, you may want to use the Buffalo figures in arriving at a desirable surplus distribution schedule. The average purchased quantity of potatoes used by the Buffalo families was 9.6 pounds a week. That meant an average of 2.7 pounds per person a week.

As I told Mrs. Coupe, we do not have any break-down of our recent studies by size of household. Even the national urban sample was too small to allow for such a break-down and at the same time maintain the income classification. Any tabulations that we are able to make by household size will have to be for rather broad groups of foods.

Mrs. Coupe quoted to me the following surplus commodity distribution plan for families of various sizes. I have computed averages per person from this schedule. Compared with average consumption in Buffalo in the winter of 1948, this schedule appears to me to be on the low side.

Potatoes

Number in household	Amount per household unit per month	Average amount per person per week [1]
	Pounds	*Pounds*
1	10	2.33
2	20	2.33
3	25	1.94
4		1.45
5	35	1.63
6		1.36
7	45	1.50
8		1.31
9	55	1.42
10		1.29
11 and over	65	1.37

[1] Calculated at 4.3 weeks per month.

I hope that these figures will be of use to you.

Sincerely yours,

FAITH CLARK,
Economist.

FEBRUARY 22, 1950.

Mr. JOHN C. STALKER,
Director, Department of Public Welfare,
Food Distribution Division,
Boston, Mass.

DEAR MR. STALKER: Thank you for your telegram of February 21, in regard to the procedure which has been worked out. I hope it will be of value to communities not only in the First Congressional District but throughout the country.

Supplementing our telephone conversation of February 17, with reference to my belief that the schedule of maximum amounts per household unit, per month, should be revised, and the advice given to me that the regional office in New York has full power to revise those maximums upward, upon submission by the State director of a request with any evidence supporting it, I enclose a letter from Miss Faith Clark, economist in the Bureau of Human Nutrition and Home Economics, Department of Agriculture, advising me of the result of their study in 1948 of family food consumption in Buffalo, N. Y.,

with reference to Irish potatoes. I have prepared a revised schedule in accordance with Miss Clark's report that the average consumption of potatoes by Buffalo families was 2.7 pounds per person, per week. While I believe this would still be inadequate so far as many families are concerned, at least it does offer tangible and convincing evidence of the immediate necessity of revising the existing schedule.

Realizing that you have met this situation temporarily so far as the Greenfield request is concerned by authorizing immediate delivery of a 3-month supply, may I request that you act as soon as possible to obtain a revision of the schedule so far as Massachusetts is concerned.

Sincerely yours.

FEBRUARY 22, 1950.

Mr. JOHN DITTRICH,
In Charge Northeastern Area, Food Distribution Programs Branch, Production and Marketing Administration, Department of Agriculture, New York, N. Y.

DEAR MR. DITTRICH: I enclose copies of correspondence which I think will be self-explanatory. I am confident that you will act promptly upon any request made by Mr. Stalker.

Sincerely yours,

(Enclosures: Letter to Mr. Stalker of February 22, 1950, with table attached; letter from Faith Clark, economist, Department of Agriculture, of February 21, 1950, with table attached.)

Mr. Speaker, I have now submitted the following tabulation to Mr. Stalker based on Miss Clark's report and I believe it represents a far more realistic schedule of minimum quantities which should be established immediately so far as the reasonable consumption of Irish potatoes is concerned:

IRISH POTATOES

Schedule of maximum quantities issued by the Food Distribution Programs Branch, United States Department of Agriculture, effective July 1, 1949, compared with schedule of consumption in accordance with a survey made in Buffalo, N. Y., by the Bureau of Human Nutrition and Home Economics, United States Department of Agriculture, winter of 1948:

Number in household	Present maximum amount per household unit per month	Maximum based on Buffalo survey amount per household unit per month
	Pounds	*Pounds*
1 person	10	11.61
2 persons	20	23.22
3 or 4 persons	25	46.44
5 or 6 persons	35	69.66
7 or 8 persons	45	92.88
9 or 10 persons	55	116.10
11 or more persons	65	127.71

Mr. Speaker, you will note that the variation is most marked beginning with families of three or four persons upward to families of 11 or more persons.

I have in my possession photographs of the actual weight of potatoes which are now available under the schedule of maximum weights established by the Food Distribution Programs Branch. For three persons in a family this would amount to an average of 2 pounds and one-third ounce per week, per person. That is one fair-sized potato and six small potatoes. For four persons the photograph indicates an average of 1 pound and 9 ounces per week, per person, which is illustrated again by seven potatoes slightly larger. Any one familiar with potatoes as a food knows that this amount would hardly provide sufficient food for one meal. The puzzling contradictions arising from this schedule and this study should be corrected promptly. This is all the more so since while surplus potatoes are doled out in such small amounts for food, 100-pound bags, dyed blue, have been seen on trucks by friends of mine within recent days, presumably destined for dumping or feeding livestock. While we have succeeded in establishing the procedure for diverting these potatoes for consumption by needy persons, we should not relax our efforts to get them to them in maximum amounts consistent with realistic utilization of them as food.

Charles Seymour

EXTENSION OF REMARKS
OF
HON. JOHN A. McGUIRE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. McGUIRE. Mr. Speaker, under permission to extend my remarks, I wish to insert an article which appeared in the New Haven Register on Sunday, February 19, and call attention to the retirement this June of Charles Seymour, who has been president of Yale, one of our great universities, since the year 1937.

It is earnestly hoped that President Seymour, with his outstanding background and administrative experience, can be persuaded to turn to public life. It is interesting to recall at this time when our diplomatic relations are of the greatest concern to all of us that in his early years on the Yale faculty, President Seymour wrote a book entitled "Diplomatic Background of the War (1916)," which I understand so impressed the late Woodrow Wilson that he was invited to Paris in 1919 as a member of the United States peace delegation.

The article follows:

SEYMOUR OF YALE—SOON TO RETIRE, THE HEAD OF A GREAT UNIVERSITY GIVES FRANK ANSWERS TO A REPORTER'S QUESTIONS

Into Woodbridge Hall and past the famous table on which Napoleon signed his abdication the reporter walked into a small office, clutching his note pad somewhat apprehensively and groping to see whether the three sharpened copy pencils were still in his lapel pocket. Up from his modest desk immediately rose the president of one of the world's greatest universities.

Charles Seymour of Yale smiled and shook hands warmly with the newcomer. He knew the reporter's name, offered him a chair, had a pack of cigarets ready and proffered it. Not until then did he select a corncob pipe from the six on his ash tray. Lovingly he filled the corncob, tamped the tobacco with his fingers, lighted it with obvious relish.

President Seymour is tall, slender. His blondish moustache is slight and at 65 his light-colored hair has thinned out. His most striking feature is a pair of light blue eyes, set in a kindly face which is stamped with wisdom. He is a Yale man dyed in the Blue—class of 1908, teacher from 1911 to 1937, president from 1937 to 1950. He will retire in June.

The reporter looked around the unpretentious office, noticed the old Yale prints on the walls. Mr. Seymour said they had been "borrowed" from the Mabel Brady Garvan collection at the Yale art gallery.

THE ROAD AHEAD

On a small table within arm's reach were three recent books Mr. Seymour had been reading. They were a small volume, The Road Ahead, by John T. Flynn; a middle-sized one, My Retreat From Russia, by Vladimir Petrov (a Yale instructor and a latest publication of the Yale University Press) and a big one, Human Action—A Treatise on Economics, by Ludwig Von Mises (also Yale Press).

Mr. Seymour chatted briefly about the Flynn book, mentioned that the author had been at one time on the staff of the Register. Then he thanked the reporter for sending him a copy of his questions in advance. He emphasized that he would be speaking from his experience at Yale, and that because of the limitations of the interview his answers must not be construed as all-inclusive and detailed.

He began to answer the questions in a friendly and courteous way. There was no condescension or talking down to a younger man. He even paused occasionally to ask anxiously, "Does that sound all right to you?" By now the reporter had lost his nervousness, was enjoying the interview and had the feeling he was in the presence of a man who had made courtesy and consideration for others the foundation of his philosophy of life.

The questions and answers:

Are educational standards as high as they were, say 25 years ago?

"At Yale they are very much higher and student scholarship is much better. Ever since my first contacts with Yale—I was in the class of 1908—I have noticed that standards have been consistently rising. I taught history at Yale from 1911 to 1937 and my experience during this time was particularly striking in this respect. I noticed, for instance, that in 1930 I could get three times as much reading out of the average history student as I could in 1911."

The President's commission on higher education recommends a doubled college enrollment by 1960. Do you think this desirable—or feasible?

"I think the plan is impracticable if educational standards are to be maintained. It would be materially difficult to double educational facilities by 1960 and the cost would be astronomic. If the attempt were made without adequate financial support, with an inexperienced teaching and administrative staff and with hastily planned educational equipment and service, this program would seriously injure American education as a whole. Expansion involves the serious risk of dilution.

"At Yale, we recognize our obligation to offer an education to as many young Americans as we can within the limits of our facilities. These facilities are not designed and we do not plan to use them for mass education. The implication of the report of the educational commission appointed by President Truman, that the more students given a college education the better the country, is, I think, open to serious question. Yale's service to the Nation as I have said many times, will not lie in the number of Yale graduates but in their quality."

What do you think about Federal or State subsidies to private colleges?

"Direct grants certainly imply the danger of loss of independence, and I should be strongly opposed to the acceptance of grants for general purposes. But it is a fact that

certain divisions of a university such as the medical school may not be able to survive without such aid. If this is so, the institution will have to decide between accepting the grant or giving up the service which it is contributing to the national welfare in medical education. It would seem reasonable to suppose that industry would be interested in making contributions to medical education since national health is a vital industrial asset. But there seems to be no complete answer to this particular problem without State or Federal assistance of some kind. I repeat that if private institutions accept subsidies for general educational purposes, their freedom is certainly imperiled."

In the light of financial difficulties, do you think the privately endowed university will eventually disappear?

"The privately endowed university will certainly endure so long as it meets its obligation to serve the public welfare, but it is likely that institutions of this type will be compelled to restrict and probably ought to restrict their activities to those fields in which they can give superlatively fine service. They cannot compete and they ought not to try to compete with the great State institutions in various fields in which the vast funds of the latter assure them great educational advantage. The independent institution should concentrate upon quality and avoid overextension of activities."

Do you think that State, Federal, or municipally endowed colleges can do the same job as privately endowed colleges?

"I don't suggest that privately endowed colleges are better but they do possess a certain quality that makes them different. This diversity of type in our university system is a great asset to American education. It would certainly be a great loss to the Nation if the private institution should disappear. It is not uninteresting to note the high proportion of national leaders that have graduated from the independent institutions, not merely great universities but the small liberal arts colleges."

Has the value of an unspecialized Liberal arts education decreased?

"No, in my opinion it has on the contrary greatly increased. Providing that the program is well conceived, I feel very strongly about the importance of a broad general education before a man begins to specialize. This is all the more true in these days when the tendency toward specialization and technical education is clear."

What about the role of sports in college life?

"I am enthusiastic in my belief that college sports in America form an important aspect of education. This is true for the varsity player as for the member of the intramural team. But we must be careful that the teams that represent us are truly representative of the undergraduate body. There is real danger if we lay so much stress upon the quality of our players that we import them because of their athletic ability rather than because of the leadership which they are going to give to the undergraduate body. Yale wants good athletes because we believe they will make good Yale men and leaders in their later life; but Yale gives them no privilege or help that is not open to every undergraduate. We are very fortunate in our coaching staff here—teachers of the highest ability and imbued with the highest ideals of amateurism."

Why did Yale spend millions for buildings far more lavish than the majority of its students will live in after graduation?

"This is a misconception. We accepted gifts for buildings and constructed them according to the terms of the gift of bequest. This was true of the Harkness Quadrangle and the undergraduate colleges. The Sterling Library, the Divinity Quadrangle, the law school, were provided by the Sterling bequest. I think that during the terms of President Angell and myself, no Yale money has been spent on buildings. They have all come from gifts or bequests."

What do you consider the major accomplishments of your administration?

"I like to think that perhaps I have been holding on the three-yard line, while the college has been passing through a world war and its confusing aftermath. We have maintained the morale of our faculty and improved its quality. We have accomplished an integration of the various university divisions, bringing such schools as the Sheffield Scientific, Medical, Law and Fine Arts into a unified effort in which each division knows its function and mission. We have set up the University Council in order to bring the alumni closer to the life and operations of the University."

What is Yale's greatest current problem?

"Maintenance of freedom from external influences by which we may be threatened because of inadequate resources."

What is the foreseeable future for Yale?

"Fewer students—we hit a peak of 9,400—have now dropped to 8,500 and will eventually, I think, go down to 6,000. I do not think we shall have more specialization in studies; we shall maintain a broad general basis of liberal arts education for our first two undergraduate years before the student enters upon his specialized work."

What new developments are there in the current curriculum?

"We have organized an 'American Studies' program which seems to me of the first importance in the field of American civilization and history, in order to bring into a coordinated course of study, history, literature, economics, philosophy, in fact all phases of American life. We have made a general reexamination of our curriculum and have introduced various new educational plans designed to stimulate and assist the serious student: The Directed Studies Program and the Scholars of the House Program. It would take too much detail to describe them here but they indicate that we have been actively exploring our curriculum with regard to student needs. We are also giving increased attention to the need for enlarged teaching and research in the social sciences."

Why are so many Communists seemingly associated with universities?

"We haven't any Communists on the Yale faculty as far as I know. I wouldn't appoint a Communist, for his presence here would mean the negation of academic freedom. It is not possible, of course, to know the student body so intimately, but I would say that at Yale communism is practically nonexistent."

What is the most effective way of fighting communism on the college level?

"Well, in the first place, I am sure that Communist ideas ought not to be outlawed from college teaching. Rather they should be analyzed, discussed, and deflated. We must meet the menace of communism by positive and imaginative measures. A major obligation is to train our youth in the understanding and practice of American democracy, whether in the classroom or in our campus life. That is why I am so interested in pushing forward our program of American studies which I have already mentioned. That is a positive approach. A negative defense degenerates into a rearguard action. Our purpose is to lead democratic allegiance. It is, however, important to study Karl Marx and to understand the nature of contemporary communism."

Are our public schools properly training youth for college?

"The boys we select from public schools do a very fine job. In fact, in their devotion to their work and their scholastic marks, their record is higher than that of private-school graduates. However, I must also say that it is my experience that a good many of our public schools are neglecting education in the three R's."

What are your plans after retirement?

"I plan to live in New Haven, and devote myself to the study of history. My work will be done in the house collection of the Yale Library."

Would you be available for public office after your retirement?

"In all honesty it is very hard for me to picture my future except as devoted to historical study and writing."

Who's Who lists you as a Democrat. Is this correct?

"I suppose I should call myself a Woodrow Wilson Democrat. I was brought up in the tradition of William Graham Sumner and Grover Cleveland and cannot escape its continuing influence. So you can appreciate the fact that I find it difficult to accept various aspects of the New Deal and the Fair Deal."

Looking back on 13 years as a college president, what kind of an experience has it been—Disillusioning? Exhausting?

"By no means disillusioning. On the contrary very stimulating. The college president is one of a team made up of men of the highest quality, and my chief impression is a sense of privilege in working with them. There is probably no institution in which one can find the complete devotion to a common effort that one can in a college. Differences of opinion are honest. Criticism is constructive. Methods are direct and aboveboard.

"The position is no more exhausting than that of the normal hard-working professor."

What are your hobbies?

"Unfortunately I've had small time for hobbies during the past 13 years. Golf which I used to enjoy is too time-consuming. I still like to play a little poker. My summer hobby is harmless and healthy—weeding in my wife's garden."

Speaking with a historian's perspective, are these, as some would have us believe, the worst possible times?

"How can we tell? The present, you know, is never the best time. As I look back on history I see many times as bad or worse than those in which we live; the Dark Ages, the era of the feudal peasant, the 30 Years War in Germany. The times in which we live certainly produce a sense of insecurity but they might be worse. After all, you and I are sitting in a warm room, we slept under cover last night, we had lunch this noon, didn't we? The general physical level of the Western World is much higher than it has ever been. If you're talking of the level of manners throughout the population we compare very favorably with the past. My chief worry has to do with morals, and especially morals in the field of international relations. The disregard of treaties, the disappearance of good faith which has characterized the history of the past 30 years has numbed the conscience of the world. We must hope that it will be revived."

What individuals in your time have done the most for the world?

"The first who comes to my mind is Woodrow Wilson, who brought the principle of international association into practical politics. Among others would be Winston Churchill, who saved western Europe; Herbert Hoover, who brought the principles of international relief into practical operation; Albert Schweitzer, for his direct service to mankind as medical missionary and his indirect service as spiritual leader. I think I would also include Steve Benet (Stephen Vincent Benet, Yale '19, Pulitzer prize-winning poet). His John Brown's Body brought home to the American world a sense of destiny."

Are we educating the type of young people who can lead the world through the tremendous problems we are told lie ahead?

"Our present youth in the colleges represent a high type of humanity. If we lack for leaders it won't be for lack of material, but because we have failed to train them properly."

Suppose you were asked to give a few parting words of wisdom to a young man about to enter college, what would you say?

"I try never to give advice to young people, but the following would be running through my mind: 'You are about to enjoy a great privilege. Remember you carry a great obligation: To develop to the utmost your quality as a gentleman and a scholar; to add to the gaiety of your friends; to help those less fortunate than yourself.'"

The interview was over. Before the reporter could express his thanks, Mr. Seymour was already shaking his hand and saying: "Thank you very much. Thank you especially for making it so painless."

People's Confidence Shaken by Government Indecision Regarding American Watchmaking Industry

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. DONOHUE. Mr. Speaker, I have had occasion in the past to comment on the fact that the agencies of our Government have been created for the purpose of serving and aiding, first and foremost, our own American citizens.

I have also, before, brought to the attention of the Members of this House, by editorial insertions, unhappily evidence that our own people may be on the point of losing their faith, trust, and confidence in the institutions and divisions of Government whose only reason for being in existence is to assist them. As additional information on this score, which I believe will be of pertinent interest to my colleagues, I desire to insert another editorial, reflecting community conviction, which appeared in the February 13, 1950 edition of the Lawrence (Mass.) Evening Tribune.

The editorial follows:

THE PLIGHT OF WALTHAM WATCH

Maybe President Truman doesn't know all the facts about the difficulties of the Waltham Watch Co., and maybe we don't either, but it does seem that the problem is being dismissed a little too casually. If the Waltham Watch Co. goes out of business, and there are ominous signs that it may have to, the welfare of a lot of people will be affected. And it's not something which will make this State, as a whole, especially happy. Any wallop at Massachusetts industrial strength is a serious thing. According to what has been revealed so far about the plight of the company, its assets are not sufficient to warrant letting it use $2,000,000 of a $6,000,000 RFC loan as working capital instead of for the purchase of equipment. President Truman has said there doesn't seem to be anything which can be done to save the company. It seems to us that something in the way of a try could be made without ruining our economy.

The logic of the situation is rather baffling. The RFC previously authorized a $6,000,000 loan to retool the plant, evidently figuring that the mortgage it would hold on the equipment would protect its money if things went sour. But, surely, such security as highly specialized machinery designed for the construction of watches and other chronometric devices would not be easily liquidatable and would show marked depreciation from the day of installation. What we are getting at is that there doesn't seem to be any more apparent justification for the $6,000,000 loan, which the RFC was willing to give, than for the $2,000,000 allocation, which it balks at. The RFC says the company's assets are not sufficient; a spokesman for employees of the plant says they are. A government which can cheerfully throw good dollars down a rathole to support the price of potatoes seems inconsistent when it gets virtually economical all of a sudden and shudders at the prospect of risking a mere $2,000,000.

The fact that Waltham Watch played a role in national defense in wartime, and could be called upon to do so again, is an additional reason why something should be done. The issue is not a local one, it is national in its implications. And there are human factors involved in the way of the particular skills that watchmaking, a precision trade, calls for. Skills lose their edge if they are not used. It is certain that the watchmaking industry will not be able to absorb all the Waltham workers; some of them will have to turn to other industries. This loss by evaporation of trained technicians can be shrugged off as inconsequential but it shouldn't be.

There is a feeling in the air that the Waltham trouble is being handled ineptly.

Hoover Commission

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. TAURIELLO. Mr. Speaker, there has been much propaganda in the press recently and also from certain groups throughout the Nation who are trying to create the impression with the general public that the Eighty-first Congress has not been diligent in enacting into law the recommendations of the Hoover Commission for the reorganization of our Government.

Contrary to that, I want to point out that many of these recommendations have already been enacted into law. When these reports were submitted to the Congress, they naturally had to be studied carefully and this, of course, entailed much time and study.

The work of the United States Government has grown more complex with the years. From the time of George Washington, when a few departments existed in the administering of our national needs, it has grown until there are over fifteen hundred agencies in the executive branch of the Government. Since all of these departments and agencies have some claim upon the attention of the President and the Cabinet, a good deal of their work has been taken up with administrative details, leaving less time for the more complex consideration of policy.

Mindful of these effects, in July 1947 the Congress authorized the establishment of the Commission on Organization of the Executive Branch of the Government. This body was composed of outstanding citizens drawn from a panel of public officials and eminent private citizens. They, together with their staff or task forces as they were called, were admonished to analyze and study the areas of economy and services requiring needed improvement. This group, under the leadership of the distinguished former President, Herbert Hoover, explored the many phases of government operations and reported its findings to the Congress.

In this connection I might mention in passing that 12 of the 17 major reports embodying these recommendations have been referred to the Committee on Expenditures in the Executive Departments, of which I am a member. It shall be the duty and responsibility of this Congressional Committee to analyze and evaluate these recommendations. From these studies and reports must be evolved the legislative drafts which will result in the accomplishment of the objectives recommended to the Congress. The Congress set as its immediate goal for attention those spheres of Government activity where the greatest savings could be effected at once. According to Bureau of the Budget sources, these areas were: The National Military Establishment, the Civil Service Commission, Procurement and Supply Activities, and the Post Office Department.

During the last session of Congress, by reorganization plans and substantive legislation, these areas have been amply explored and vastly improved.

Congress, as a prelude to the effectuation of the Hoover Commission recommendations, passed the Reorganization Act of 1949. This act allows the President, after a survey of the needs of the executive branch, to send up to the Congress reorganization plans which will regroup, realine, and improve that branch.

This is one of the means which can be employed for reorganization for the betterment of efficiency and economy in Government. However, two other avenues are open also for the accomplishment of these recommendations. They include: administrative action by the agencies concerned, and substantive or appropriation legislation by the Congress. By these three methods, then, the field of reorganization can be covered. There are in all about 288 recommendations in the Hoover Reports. If all were to be carried into law, the greatest amount of reorganizational work would have to be done through the administrative action of the executive branch, or by reorganization plans initiated by the President. According to the Bureau of the Budget, approximately 60 percent require initiation by the executive branch, while about 38 percent require initiation by the Congress through legislation.

In order to give a more rounded-out picture, it would be well to consider what has been done up to this time. In whole or in part, about half of the Hoover re-

ports have been acted upon favorably. Thus we have seen changes effected in the general management of the executive branch, personnel management, supply activities, Post Office Department, Department of State, Department of Defense, Department of Commerce, some regulatory commissions, certain functions of the Department of Labor.

It should be noted also that the Citizens' Committee for the Hoover Report, a research organization founded to press for enactment of these worth-while findings of fact, has stated recently that—

More reorganization has been accomplished than at any previous time in the Nation's history.

The first session of Congress closed on a very encouraging note, for many of the recommendations eagerly sought by interested citizenry had been accomplished within 90 days of the termination of the life of the Commission on Organization of the Executive Branch of the Government. Among others, the following public laws saw their light in this session:

Public Law 109, Reorganization Act of 1949.

Public Law 92, Travel Expense Act of 1949, raising per diem from $6 to $9 per day.

Public Law 429, the Classification Revision Act of 1949, revising the civil-service classification system.

Public Law 359, the Executive Pay Raise Act: This increased the salaries of Cabinet officers and other heads of departments as a means of attracting high caliber individuals into public service.

Public Law 180, Civil Service Retirement Act: This consolidated various Government retirement programs.

Public Law 152, the Federal Property and Administrative Services Act of 1949: This established a General Services Administration, transferring the Bureau of Federal Supply, the Federal Works Agency, the National Archives and the War Assets Administration into one consolidated agency for simplification of Government procurement, buildings management, records management, transportation, and surplus property disposal and utilization.

Public Law 231, operations of the Post Office Department: This provides for a long range development program for improvements in the methods, procedures, equipment and supplies used in the postal service.

Public Law 73, reorganization of the State Department: This provides for a thoroughgoing reorganization of the administrative and operational functions of this agency.

Public Law 216, reorganization of the National Military Establishment, under a performance budget, further providing for unification of the armed services.

Public Law 110, Central Intelligence Agency: This gave CIA the necessary authority to improve its internal operations.

Six of the President's reorganization plans were put on the statute books as of August 20, 1949:

Reorganization plan No. 2 tranferred the Employment Service and the Unemployment Compensation Bureau to the Department of Labor;

Reorganization plan No. 3 increased the authority of the Postmaster General;

Reorganization plan No. 4 has the National Security Council and the National Security Resources Board now residing in the Executive Office of the President;

Reorganization plan No. 5 acted to put the executive direction of the United States Civil Service Commission in the Chairman for administration;

Reorganization plan No. 6 vested the powers of the United States Maritime Commission in the Chairman; and

Reorganization plan No. 7 transferred the Public Roads Administration to the Department of Commerce.

In December 1948 Mr. Hoover stated in a press release that, if the whole of the Commission's recommendations were adopted, they would result in a savings of about $3,000,000,000 a year. Other speakers, in discussing the problems of reorganization since that time, have placed this sum at much higher levels. Be that as it may, we must point out that the primary objective was, not so much to achieve immediate economy, as to induce greater efficiency through better rearrangement of the executive branch. This will result in improved administration and will produce long-range economies of a continuing nature. Emphasis, therefore, should be placed on increased efficiency in the Government and improvements in the Federal service in order to insure a greater return for the tax dollar expended. Thus, it remains reasonable to expect economy from quite a number of the Hoover Commission recommendations, particularly through consolidation and elimination of many functions which duplicate each other. Just what the amount will be cannot be reckoned too accurately until operations have been conducted under such rearrangements for a definite period of time.

At present our committee is making studies and has held a number of preliminary hearings in fields aimed at the reduction of Government costs. It is hoped that this implemental legislation in the fields of records management, traffic management, and related fields will be fruitful of constructive legislation.

In closing, I should like to add that we must not be impatient. Much time and money has been expended to cull these facts for the aid of Congress in the work of reorganization. A good start has been made. The enthusiasm of the House and Senate membership augurs well for its continuance. Certainly, the people of the United States have displayed keen interest in the reorganization program. It would be well to proceed slowly, taking many forwardlooking steps in view of the staggering task that his problem presents. Rome was not built in a day. Worth-while legislation cannot be enacted in haste. Reorganization should mean change; but every change should bring progress.

Contract Settlement for Mining

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. BARING. Mr. Speaker, the vast bulk of war contracts with the Government already have been settled. It has even been proposed that the Contract Settlement Act of 1944—Public Law 395, Seventy-eighth Congress, second session—be repealed. I believe the settlements so far have reached the colossal figure of 20 billions of dollars. Very little further business is before the Office of Contract Settlement, which has been shoved about in the process of reorganizing the Government agencies until its very location nearly has been lost sight of. I want to point out to the Members that almost no mining claims have been allowed. Application after application has been rejected on some technicality or other, until our miners have become too discouraged either to press their cases, or to bother even to file for settlements.

I contend, Mr. Speaker, that such treatment of the mining industry of this country was not the intent of the framers of the Contract Settlement Act of 1944, and neither was it the intent of the Congress which passed that act. It is true that at the time the act was drafted, stress naturally was laid upon the manufacturing industries. This, however, was largely due to ignorance of the special problems of mining, and was not due to any deliberate attempt to slight the mining industry. As soon as the deficiencies in the bill S. 1718, which became Public Law 395, were seen, Mr. WALTER in the House and Senator MURRAY in the Senate took immediate steps to correct the situation, and wrote language into the bill which brought mining within its purviews. Furthermore, President Roosevelt in the public announcement made through Mr. Donald Nelson in 1943, guaranteed fair treatment to each individual producer, this promise being made specifically and pointedly to the mining industry. The Congress attempted to translate this promise into law, even going so far as to make the War Production Board—the authority which stimulated most mining activities—a contracting agency under the law when, in fact, it had not been one. Along the same lines, part of the language of the act was made to read "or any other request to proceed from a contracting agency, the contracting agency shall pay such person fair compensation therefor." This was done because the sponsors well knew that most mineral and metal producers had no formal contracts with the Government. There is much other language in the act also in point, but I will not bore you by reciting it. Suffice it to say that the responsible agencies never did like the idea of compensating our mining producers and they

have ignored the intent of the Congress in some instances and in others deliberately misconstrued the act.

After the First World War, there was no law quite like the Contract Settlement Act of 1944. Realizing the plight of mining producers who were cut off from Government purchasing, sometimes with cars of minerals actually on the road, Congress passed the War Minerals Relief Act of 1919. From time to time, as experience dictated, the act was revised and the language was tested in the courts and precedents established. I mention this to show that the Congress did at that time and, I sincerely believe intends now, to see that justice is done.

As time went by after the 1944 act became law, it shortly became increasingly noticeable that mining claims were being summarily rejected, no matter on what theory they were based. Bills were introduced in both House and the Senate designed to clarify the 1944 act. In a detailed discussion of contract settlement for the critical and strategic minerals and metals industry, the Senate Small Business Committee Mining Subcommittee on May 21, 1946, said:

> Of course the mine operators entitled to fair compensation, after having exhausted their right of appeal provided in Public Law 395, may be able to enforce their claims in court, but such discrimination is not consonant with the acknowledged obligation of the American people nor with the expressed intent of Public Law 395. * * * every effort has been made to clarify, classify, delimit, and define (the clarifying bill) so that the small group affected may be paid what is due them for their work.
>
> The measure provides a separate channel for settlement for mining claims and places them in a category by themselves, where they belong.
>
> It adds no claims not already existent, nor does it create any additional commitments. It simply clears the way for the discharge of an obligation already recognized, but which has become snarled in administrative and procedural difficulty.

Unfortunately, Mr. Speaker, after these carefully prepared bills were introduced the agencies concerned furnished the legislative committees with adverse reports, using every pretext to bolster the recommendation that the bills should not pass, the same opinions were exhumed from the same agency files each time a report was requested on these or subsequent bills, session after session, Congress after Congress.

The proponents of the measures trimmed their sails, revised the bills, and finally, after the committees dealing with the new bill found the cause was right, H. R. 834 was favorably reported in spite of agency opposition and passed by the Senate and House only to be vetoed by the President, who issued a detailed statement at the same time.

The veto message, Mr. Speaker, quite evidently was written by a novice with no knowledge of the history of mining settlements from the War Mineral Relief Act of 1919 to the present day, but armed with the same files full of adverse memoranda and reports which spawned the previous departmental attitudes. Unfortunately, Mr. Truman was induced to sign a statement full of obvious errors and flat misstatements of fact. Among other things the message by implication accused the mining industry of being grasping, with the words, "Other industries were urged to do their part in the war program, and other industries responded as splendidly to the challenge as did the mining industry. They too sustained losses in enterprises undertaken as a part of the war effort." Now I submit, if any other war industry has not been taken care of under the Contract Settlement Act of 1944, Congress certainly should look into the matter and take steps to rectify the oversight. I know of none. The message also said that S. 834 introduces a new principle—the gentleman who wrote it quite evidently never had heard of the War Mineral Relief Act of 1919.

Since the publication of the veto message on July 11, 1949, Mr. Speaker, H. R. 834 has rested in the Judiciary Committee awaiting action but it never has been reported to the floor with a recommendation to override the veto. I personally think that had the President had the time to give this bill the study and attention which it merits he not only would have signed it, but would have insisted upon expediting its passage. I cannot think he would have any serious objection to our repassing the bill over his veto, even though some minor bureaucrats were disgruntled thereby.

I understand from those who were here when the original act of 1944 was passed, that much was made of the urgent necessity for quick settlement of claims so that the funds could be reinvested promptly. Every effort to complicate the bill by a set of elaborate bookkeeping checks was resisted, on the theory that speedy action was more important than preventing a few errors of commission.

It is now 1950, Mr. Speaker, about 6 years since the Contract Settlement Act was passed. The producers of strategic and critical minerals and metals who labored so valiantly and successfully for the war effort still are unpaid. The agencies still show no inclination to pay them.

I beg the members of the Judiciary Committee to bring H. R. 834 to the floor again promptly and see if the Membership of this House, out of an innate sense of justice and fairness to our war mineral producers—the backbone of any plan for national defense—will not pass the bill with the necessary two-thirds majority, with a sense of correcting a mistake not within the President's power to rectify unless we take positive action and with a sense of certain satisfaction of a wrong righted, and a job well done.

The Federal Government and National Health

EXTENSION OF REMARKS

OF

HON. JOHN B. BENNETT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. BENNETT of Michigan. Mr. Speaker, under leave to extend my remarks, I include a radio address given by me over radio station WJR, Detroit, on Friday, February 17, 1950:

The responsibility of the Federal Government for the health of the American people and the extent it should function in the field of public health has precipitated a bitter controversy in Congress and throughout the country. There are two extremes in this controversy—those who favor the President's program which would take over the medical profession and its related functions, lock, stock, and barrel, and regiment the individual citizen in matters pertaining to his health—and the other which holds the Federal Government has no business concerning itself with any of the health problems of the individual American family.

There is a middle ground between these divergent views which I shall discuss a little later.

There is a marked similarity between the President's proposals and the scheme of nationalized medicine now being practiced in England. Therefore, I would like briefly to tell you something about the British plan. In the first place, no matter how unsound a thing may be it always has its redeeming features. This is true of the British medical system. It has done at least three things which have tended to improve the health of millions of British people. Many people in England were not receiving adequate medical and dental care. This class was composed of people whose incomes were sufficient to make them ineligible for relief medicine, and yet inadequate to enable them to pay for the kind of medical aid they needed. The national scheme has helped these people considerably.

The second advantage is that it has permitted people to seek early medical and dental attention which all doctors agree is desirable. Since medical care is now free, there is no hesitation on the part of the British citizen to seek early advice and care for his ills.

The third advantage is the assistance the government has given to established institutions of medical research which for years have been handicapped because of lack of funds through private sources. This has permitted an important broadening in the fields of research.

But the disadvantages of the British system far outweigh the advantages, which I have mentioned. Here are some of the devastating disadvantages.

The system makes every doctor a government employee. With but few exceptions the private practice of medical and dental surgery in England has been completely eliminated.

Since the doctor is a government employee, he has no choice in location of his practice. He must locate in the town or city designated for him by the government. Theoretically, he may choose his own patients but actually he has no choice because his location is selected for him. Because he is a government employee, the British doctor finds himself enmeshed in an endless maze of red tape. Government reports must be made daily to a dozen different branches of the Ministry of Health, and in many instances the making of these reports consumes as much as 50 percent of the doctor's time. So he must practice his profession, not by the ordinary rules of medical practice, but by rules and regulations promulgated by a government agency. His fee schedule may be changed from day to day, or week to week; he may be moved from one community to another against his will; he may be disqualified as a practicing physician by capricious regulations of the Health Ministry. Under this system the British doctor is truly a politician. He must curry a favor of the Ministry of Health in order to do the things he wants to do. He has financial security, it is true, for as long as the British Treasury holds out,

but he has lost most of the freedom to live his own life, in his own way.

What will happen to the incentive and initiative of the doctor under such a system. It is certain that both these important attributes will be partially if not completely destroyed. Because the minute you place a limit upon the amount that a man can earn to that extent, you kill his desire to excel.

What about the effect of such a system upon the people generally. In the first place, the scheme is too luxurious for the British purse. The estimate of the first year's cost was £152,000,000. The actual cost exceeded £300,000,000—more than 10 percent of the total national budget. Were it not for the financial aid that this country is extending to Britain, the plan could never have been undertaken, and certainly not sustained.

So it is not only the doctor who suffers under such a scheme, the burden falls upon the whole economy. Nor is regimentation confined to the medical profession. It affects every individual in the country. In exchange for what he believes to be free medical care, the average citizen must accept the same bureaucratic regulation and red tape, and in the end he gets what might properly be termed "assembly-line medicine." He, too, must sacrifice many of his liberties to have medical security.

There is little essential difference between the British scheme and the President's proposals for this country. Both provide for Federal control of health problems. Both provide for the same type of regimentation. The British plan covers every citizen; the President's proposal covers only the wage earner whose income does not exceed $4,200. The British scheme is financed through general taxation plus American financial aid; the President's plan provides for a specific pay-roll tax.

But other than the mechanics of the system, there is little to distinguish either plan.

The socialistic aspects of the British scheme can well be illustrated by several significant factors. These factors prove that nationalized medicine will not work under a free government but will only work as part of a pattern of complete socialism. Since the British plan was inaugurated, the Government has taken over so-called related medical and dental industries. For example, the Government has taken over the artificial appliance business—all businesses connected with the manufacture or sale of dental appliances—likewise the industry which produces eyeglasses. When our committee was in England last fall, we were reliably told that the drug industry would be next. Under that plan the Government would operate central drug dispensaries—and the corner drug store would be a thing of the past. Similarly, dietary food industries are in line for Government seizure.

All of this proves a very simple fact—once you nationalize one important economic function it immediately becomes desirable to socialize all related functions, until in the end you have a complete socialized economy.

Such schemes are all based on the assumption that the individual can do nothing for himself that the Government cannot do much better for him—with his money. It assumes that a greater part of what a citizen earns should be turned over to a central Government agency, there to be spent by an army of bureaucrats to provide the things that the citizen could provide for himself if left unmolested.

I do not believe the rank-and-file citizens of our country want that type of government here. But they can only prevent it by constant vigilance, and by refusing to submit to the entering wedge of nationalization which will ultimately lead to a completely socialistic state.

While the socialization of the Nation's health is the kind of a system we must constantly guard against, it does not follow that the Federal Government should remain completely aloof in matters relating to the health of our people.

Indeed, there are many things the Government is already doing in this direction, and there are many more things it can do without getting into the realm of socialism. Strong, healthy children are of prime national concern, and Federal funds provided to improve health standards of children is, in my judgment, money wisely spent. Federal funds for medical research in order to help discover cures for serious diseases is likewise beneficial. Aids of this nature are consistent with our form of government, and can be accomplished without bureaucratic control or dictation.

There is one additional field in which the Federal Government could, in my judgment, render valuable assistance to its citizens. It lies in providing a system which will help the average family in the payment of catastrophic medical expenses. I want to give you briefly what I consider to be a worthwhile proposal to help solve this problem.

Two economic groups of our citizens are reasonably provided for from a medical standpoint. The first group consists of the well-to-do who are able to pay for all medical services they need or desire, although it is fair to say that this group is gradually becoming extinct by virtue of present tax laws. The second group consists of the poor who are given medical care on the basis of public support and private charity, supplemented by gratuitous services of the average physician.

But there is a third group made up of the average working man and his family who comprise the main element of our population. This group is not as well provided for in all respects as either of the two other classes. It is true that great progress has been made in recent years in providing adequate medical care for members of this economic group, as for example through Blue Cross and Blue Shield and through joint labor-management health care. However, none of these protective devices give satisfactory protection to the average American family against calamity illnesses. This is the type of illness which leads to catastrophic medical expenses beyond the financial ability of such families to pay.

The ordinary family budget can stand routine medical bills. It can provide for Sally when she has the measles or for Johnny when he needs a tooth filled. But this budget cannot stand for disasters. Too often it cannot meet the financial burden of serious surgery or prolonged hospitalization and medical care. Such emergencies create financial hardship which in many cases disrupts the family budget beyond repair.

I think the Federal Government can help solve this problem by acting as the insurer against calamity sickness. The Government can collect its premiums to pay for such insurance by the simple method of pay-roll deductions or direct contributions in the case of the self-employed, on an actuarial basis, with premiums geared to the risks assumed. Such a plan would be preferable to voluntary methods working toward protection against catastrophic medical expenses, which cannot be successful because the coverage is distributed among too few and the premiums necessarily prohibitive. Moreover, under such plans those who need coverage the most are least likely to have it. What is needed is broad and extensive coverage in terms of the numbers of people protected in order to diversify the risks and minimize the cost to those insured.

This plan is based on the assumption that the average American family can take care of its ordinary medical problems without Government interference or assistance. It assumes that the medical profession is doing a good job and will continue to do so without control from Washington. It recognizes, however, that the Federal Government can help protect the citizen against extraordinary medical bills. It recognizes that this can be done in a manner sound in principle and consistent with our free-enterprise system.

The standards for such calamity insurance would be specifically written in the law just as an insurance company writes its policy. There would be a minimum of administrative costs and control. There would be no need for an army of bureaucrats to harass the citizen. Finally, the plan would provide the answer to a very vital need without making every doctor a Federal bureaucrat and without putting either doctor or patient in a political strait-jacket.

Farm Price Supports

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article by Mark Sullivan taken from yesterday's New York Herald Tribune.

Mr. Speaker, I hope Mr. Sullivan is correct in assuming that the farmers are becoming aware that continuing price supports only leads to further Federal controls over the lives of our farmers. A good many of us have envied farmers because they have always enjoyed a certain amount of freedom and independence. I have always believed that the farmer should be paid well for his efforts. The farmer who has put thought and sound judgment in his planning has always enjoyed a fair living. However, he must realize there is a limit to the subsidy program and that all things being equal, he is dependent upon the consumer when subsidies bring prices to the high level where consumers refuse to buy, something is wrong. Certainly the stories on potatoes and eggs are a disgrace. We have got to find a happy medium, and this is something the "planners" have failed to do.

FARMERS ARE BECOMING AWARE PRICE SUPPORT BRINGS CONTROLS—MARK SULLIVAN SAYS THEY BEGIN TO QUESTION POLICY THAT INCREASES PRODUCTION, CUTS CONSUMPTION

(By Mark Sullivan)

If the price of food is a principal private concern of the people, then Government actions and policies which affect the price are by that fact a principal public concern. This has come to be recognized in Congress and by the administration. The very existence of price support of farm crops is subjected to questioning. Within this field as a whole a concrete proposal in Congress, at once definite, yet limited, is especially important because of its origin; it came from the Democratic leader of the Senate, Mr. SCOTT LUCAS, of Illinois.

Senator LUCAS' proposal has to do only with potatoes. After the recent public outcry following spread of information about the immense cost of supporting potato prices,

the Department of Agriculture undertook to reduce the cost by reducing the quantity it would need to buy. Attempt was made to do this by requiring potato growers to reduce the number of acres planted. But it quickly became apparent that this would not be effective; potato growers, by planting rows closer together, liberal use of fertilizer, and intensified tillage, could grow more potatoes on the same acreage. So Senator LUCAS proposed that the reduction be imposed not on the number of acres planted but on the number of bushels raised and put on the market. This would enable the Government to establish a more effective check on growers.

FARMERS QUESTION SUPPORT

Senator LUCAS' proposal about potatoes illustrates what farmers are beginning to learn. Limitation upon the number of bushels a farmer may raise and withdrawal of price support if he raises more, is an extension of Government control. And the farmer is beginning to be aware that if he accepts the benefits of price support he must submit to regulation supporting it. Awareness of this on the part of farmers has led to an amount of questioning and discussion among them about price support comparable to the amount that goes on in Congress and among the people.

Potatoes are the example of price support that has become presently conspicuous. But the real public problem is price support as a whole, and price support covers practically every crop grown on a farm except a few minor ones. The methods of price support vary with different crops, as do the costs to the Federal Treasury and to the taxpayer, and the cost to consumers of food due to paying higher prices than they would otherwise need to. Adequate understanding on the part of the public would be facilitated by possession of as much information about all crops as the public has recently received about potatoes. An example, about which some degree of information has recently come to public attention, is eggs.

The Department of Agriculture is buying large quantities of dried eggs; in 1 week in February it bought 1,826,000 pounds. The fact that reports are in terms of pounds is one of many complexities that make public understanding not easy. A pound of dried eggs is the equivalent of three dozen eggs in the shell. The Department buys from processors, and these are required to certify that in buying eggs in the shell from farmers and other producers they have paid a price that the Department stipulates. The price thus stipulated varies with grades, sections of the country, and seasons. The purpose of buying the dried eggs is to support the price farmers receive for eggs, which means, of course, keep up the price consumers pay. The Department's average price-support figure this year, for all parts of the country and all the seasons, is 37 cents a dozen.

HUGE EGG SUPPLY ON HAND

While the department goes on buying more dried eggs, at a pace which is the equivalent of over 5,000,000 dozen of shell eggs a week, it has on hand more than 73,000,000 pounds, equivalent to more than 200,000,000 dozen of eggs in the shell, some bought last year, some the year before. The dried eggs tend to deteriorate, though the department says that less than a quarter-million pounds have deteriorated to a point where they could not be used for human consumption.

As in the case of potatoes, the department would like to get rid of its dried eggs. It has offered to give them away to charitable institutions and offered to sell them abroad at prices less than half what it paid for them and is daily paying for more. As in the case of every crop the department supports, it cannot sell for consumption as food in the United States at a price less than the support price it fixes, for that would defeat the very purpose of price support.

One of the many economic vices inherent in price support, the denials of reason and common sense, is its diverse effects on production and on consumption. It increases production, the farmer knowing that the Government will take the surplus off his hands. At the same time it reduces consumption by making prices high, leading some consumers to refrain from buying. The per capita consumption of potatoes last year was the lowest in years.

Amendment of Displaced Persons Act

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. GORSKI. Mr. Speaker, there is pending before the United States Senate several amendments to the Displaced Persons Act of 1948 which would give special consideration to persons who, during World War II, were members of the armed forces of the Republic of Poland, who were honorably discharged from such services, who reside in the British Isles, and who upon the effective date of the new amendment have registered for an immigration visa with a United States consular officer in Great Britain prior to the effective date of the act, as amended.

I have been a strong and unwavering supporter of amendments to improve the present legislation on displaced persons in the many conferences which have taken place with respect to the study of various amendments now under consideration. It has been my privilege to present all the facts concerning those members of the armed forces of the Republic of Poland whose heroic deeds in the defeat of Nazi Germany are well known to everyone. Consequently, a number of different amendments to the present law have been offered in the House of Representatives and in the Senate which would carry out my urgent pleas to permit a reasonable number of these gallant fighters for the freedom of Poland to gain admission to the United States as displaced persons.

I have made a very careful study of all these amendments and have concluded that the substitute bill now pending before the Senate, presented in the names of Senators KILGORE, GRAHAM, FERGUSON, MAGNUSON, KEFAUVER, O'CONOR, and WILEY offers the most practical amendment with respect to former members of the armed forces of the Republic of Poland now residing in the British Isles. It is my intention to offer every support I possibly can for the substitute bill when it comes before the House of Representatives for final consideration.

I should like to call to the attention of all those who have relatives and friends among these Polish soldiers who are now in the British Isles that it is imperative for them to telegraph immediately to these relatives and friends urging them to register for an immigration visa to the United States with the nearest United States consular officer in Great Britain. Unless such registration is made these relatives and friends will not be able to qualify for admission to the United States under the amendment I have been advocating. It is expected that the Senate will begin to debate this bill on February 23 and it is possible that the legislation will be ready for the signature of President Truman sometime during the second week of March. Therefore, such registrations in England must be made at the earliest possible moment.

Middle-Income Housing

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of February 22, 1950:

MIDDLE-INCOME HOUSING

Although the House Banking Committee has reported out the Administration's so-called middle-income cooperative housing plan, the reluctant testimony in which Thomas B. McCabe, Chairman of the Governors of the Federal Reserve Board, last week opposed this measure is still convincing. Not wishing to appear disloyal to the President's program, Mr. McCabe emphasized that his criticisms were limited to the economic and financial implications of the measure. Yet, these are precisely the aspects to which too little attention has been paid in the course of the bill's legislative history, and which are today of the greatest importance.

The cooperative housing idea is an attractive one to many people. Over it hangs the aura of Scandinavian prestige which was felt even by a hard-headed party of Senators who visited Sweden last summer to see for themselves how the "middle way" of housing fared. It has, for us in New York the further connotation of a rather long history and a rather successful application in the hands of our present State housing commission. But the cooperative program sponsored by the administration has nothing in common with these familiar measures except in name. When unmasked, the program appears as a thinly disguised plan for federally guaranteed mortgage lending that would allow cooperatives to borrow their building money for terms of 50 to 60 years at interest rates hardly more than the Federal Government itself pays. The objections raised by the Federal Reserve Board deal with the impact of such a multi-billion dollar program on the Federal debt and on private credit. But other major questions are posed by this measure. Why should members of cooperatives get better financing terms than other home owners? Where is the line drawn separating the middle-income sheep from the upper-income goats? Once the legitimate ground of public housing is abandoned, is there any reasonable stopping point whatever?

A notable group of Republican Senators, led by CHARLES W. TOBEY and RALPH E. FLANDERS, have participated in the creation of the bipartisan housing program enacted last

summer. Their cooperation is necessary in any further comprehensive housing legislation. What position should they and other Senators not tied by party loyalties to the President's program take now? The 1949 housing program is barely under way, but already there are grave questions concerning the wisdom and capabilities of those administering it. Part of that program included substantial new aids for middle-income housing that have been instrumental in raising the output of homes to present record-breaking levels. But where is the eagerness to press down the cost of housing through the manipulation of controls largely in the hands of the Federal Housing Administration? Where is the determined effort over a longer period of time toward lower cost housing through a better integration of the building industry? We believe that the administration should be required to give its present powers a fair test in the middle-income field before any new comprehensive legislation is authorized. Congress has done what was needed. It should now oblige the administration to do its part.

The Bicentennial Celebration in Haiti

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to emphasize the importance of the good reports about the bicentennial celebration in Haiti given by Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs. It was gratifying to all the Members of the Congress to know that this apostle of inter-American friendship had been invited by the Republic of Haiti to attend this international exposition as an honored guest. It is equally gratifying to know that, during his visit in Haiti, Dr. Thorning had interviews with the distinguished President of the Republic, His Excellency Dumarsais Estimé, as well as with the Foreign Minister, His Excellency Vilfort Beauvoir. Since the international exposition was the brain child of President Estimé, the latter must be happy to see that the realization of his dream has been widely appreciated in other countries, including the United States. It is also a triumph for Ambassador Joseph D. Charles, a most loyal friend of President Estimé and of the people of the Western Hemisphere. All of us have admired the work of Ambassador Charles in Washington. He, too, shares in the congratulations that rise in all quarters with respect to the success of the festivities connected with the two hundredth anniversary of the foundation of the Haitian capital, Port-au-Prince.

Dr. Thorning reports that the international exposition at Port-au-Prince is thoroughly worth while. As an eyewitness, he relates that the Haitian Pavilion contains numerous examples of national art. Furthermore, he was deeply impressed by the historical exhibit of documents and books which throw light upon the history of the people of Haiti and their long struggle for freedom and democracy. The exhibits of Cuba and France were also valuable, in the opinion of the Maryland educator, author, and lecturer. Naturally, Dr. Thorning was pleased to note that the Pavilion of the Republic of Venezuela featured the achievements of both Simón Bolivar, the Liberator, and Francisco de Miranda, the Precursor.

Enthusiastic praise was given by Dr. Thorning to the folklore music and dancing which, in the open-air theater on the exposition grounds, were a feature of many of the evening entertainments. The poetry of M. Jean de Brieur. Under Secretary of Tourism, was recited on these occasions, with universal applause. Many of these artistic events were dedicated to the honor of the President of the Republic and Madam Estimé.

It was noteworthy, Dr. Thorning stated, that the chapel of the Vatican, now on the exposition grounds, will be presented to the people of Haiti. This should indicate the good will and friendship of His Holiness Pius XII, and of the Apostolic Nuncio, Archbishop Francesco Lardone, as well as of the Papal Chargé d'Affairs, Monsignor Achille de Lupi.

In conclusion, Dr. Thorning related the beauty of the ceremonies which attended the formal presentation to the city of Port-au-Prince of a gold medal from the Forty Immortals, Paris, by M. Jacques de Lacretelle, a member of the French Academy, who came to Haiti with his charming wife for this express purpose. The response, in the name of the Haitian people, was given eloquently by M. Dantès Bellegarde, who in former times served his country as Ambassador to the United States and Ambassador to the Holy See. The mayor of Port-au-Prince, in turn, presented the gold medal, gift of the French Academy, to His Excellency Dumarsais Estimé, President of the Republic of Haiti. It is Dr. Thorning's most cordial recommendation that the international exposition at Port-au-Prince, Haiti, receive the most generous support and attendance on the part of the people in the other American Republics, including the United States of America.

Legislation Threatens the Oil Business

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. JENISON. Mr. Speaker, I am confident all Members of the House of Representatives will welcome an opportunity to read the following editorial from the Robinson (Ill.) Daily News, published in the congressional district I have the honor to represent. The editorial comments in a comprehensive manner on the adverse effect certain to be suffered should present provision for the 27½-percent depletion allowance on oil production be reduced or eliminated, as currently proposed in new tax legislation before the Eighty-first Congress.

The writer of the editorial is Kent V. Lewis, editor and publisher of the Robinson Daily News and, in addition, the Illinois State senator from his legislative district. Senator Lewis writes from a background of a lifetime in a community where oil and oil development have been a major factor in the economy of the area. His clear presentation of the harmful effects of the proposal merit close study before any action is taken by the Congress.

His editorial follows:

LEGISLATION THREATENS THE OIL BUSINESS

Proposed elimination of the 27½-percent depletion allowance on oil production would be a crippling blow to oil development in Illinois.

It would mean an end to exploration by the small, independent producer, and since independents drill nearly all the "wildcats" which open new pools and pool extensions the lone drilling rig which has brought prosperity to so many areas of the State would become a rare sight.

Only the big integrated companies with refining and marketing facilities would be able to support drilling programs, so another section of small business would disappear as present leases belonging to independents are depleted.

More, thousands of stripper wells producing a few barrels a day would have to be pulled, with consequent permanent loss of the large amount of oil which in the aggregate they would otherwise produce. For the tax saving provided by the depletion allowance makes it possible for producers to pump many a well which would otherwise be plugged.

For many areas in Illinois, including this county, elimination of the depletion allowance would be almost an economic calamity. It is to be hoped that the Illinois delegation in Congress will keep in mind that for many sections of the State of Illinois oil is an industry second only to agriculture, and that in many oil-producing areas there are practically no other industries.

Oil has brought, and is bringing, comparative prosperity to many towns in Illinois which are located in what may be described as economically depressed areas.

The attack on the depletion allowance is based upon "plugging a tax loophole." Actually, the depletion allowance is not a breach in the tax structure, but a necessary incentive for continued exploration for a natural resource the discovery of which increases the taxable wealth of the Nation.

Without the allowance, exploration would be greatly curtailed, and areas in which geological indications point to small pools or wells of very limited production would be neglected entirely.

The end result would be the substitution of oil imports for much oil which will otherwise be discovered and produced in this country.

This might not injure a few of the major companies with extensive foreign oil production, but it would certainly handicap the industry as a whole and sap the strength of the war potential which enabled us to "float to victory on a sea of oil" in World War II. Certainly the very limited increase in tax collection can hardly balance the economic gain to the Nation of the continuous exploration and production of oil fostered by the depletion allowance.

Even discounting the undesirable monopolistic tendency of destroying the future of thousands of small independent producers there can be no permanent gain to the Nation in removing the incentive to wildcat

for small pools and producing wells. Only the depletion allowance justifies that risk, as any oil producer can assure you.

The picture of the rich oilman enjoying a large tax exemption may be a pleasant one in Washington, but in the oil areas of Illinois it is clear that the depletion allowance is only the cushion which persuades the wildcatter that he can leap into new exploration without the certainty of breaking his financial neck.

Resolution of Delaware State Dental Society

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. BOGGS of Delaware. Mr. Speaker, under leave to extend my remarks, I wish to direct attention to a resolution adopted on February 15, 1950, by the Delaware State Dental Society in opposition to any form of compulsory health insurance or any system of medical or dental care containing the principles of federalized compulsory health insurance.

It is also appropriate, Mr. Speaker, for me to call attention at this time to the fact that both houses of the General Assembly of the State of Delaware last year passed resolutions memorializing Congress not to pass such legislation as is described in the resolution which follows:

Whereas the American people now enjoy the highest level of health, the best standards of scientific medical and dental care, and the finest medical and dental institutions ever attained by any major country in the world; and

Whereas these accomplishments of American medicine and dentistry are the results of a free people working under a system of free enterprise; and

Whereas in all countries where government has assumed control of medical and dental care the experience has been a progressive deterioration of medical and dental standards and care, to the detriment of the health of the people; and

Whereas this problem has been adjudged so serious by the people of Delaware that resolutions from its State legislature have memorialized Congress not to pass such legislation; Now, therefore, be it

Resolved by the Delaware State Dental Society:

1. That the Congress of the United States be asked to refrain from imposing upon the citizens of this Nation any form of compulsory health insurance, or any system of medical or dental care containing the principles of federalized compulsory health insurance;

2. That the Honorable JOHN J. WILLIAMS, the Honorable J. ALLEN FREAR, JR., and the Honorable J. CALEB BOGGS, Members of the Congress of the United States from Delaware, be and they are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

3. That copies of this resolution be transmitted to the President of the United States, the presiding officers of the United States Senate and the United States House of Representatives and to each Senator and Congressman from Delaware.

Report From Washington County, Benton County, Madison County, and Van Buren County Soil Conservation Districts in Arkansas

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. TRIMBLE. Mr. Speaker, the Washington County Soil Conservation District, the Benton County Soil Conservation District, the Madison County Soil Conservation District, and the Van Buren County Soil Conservation District in Arkansas have sent copies of their annual reports to me. I had hoped to be able to insert the entire reports of these districts in the CONGRESSIONAL RECORD, but their length precludes that, under the rules of the House, without special permission. I do, however, wish to quote from each report.

The Washington County Soil Conservation District, with its office at Fayetteville, Ark., is under the excellent guidance of the following board of supervisors: Walter D. Ramey, chairman, Winslow; M. G. Lewis, secretary, Farmington; C. D. Griscom, Lincoln; J. H. Pyeatt, Cane Hill; C. E. Shafer, Farmington. These men are outstanding farmers of Washington County. This year their district has had for its program soil and moisture conservation, and has stressed orchards, vineyards, and strawberries on contour in addition to the regular long-term program of soil conservation which they are carrying out. I quote from their report as follows:

Soil and moisture should be conserved on land being set to orchards, vineyards, and strawberries by planting on the contour. This practice is being encouraged by the supervisors of the Washington County Soil Conservation District. * * *

The advantages gained by planting these crops and cultivating them on the contour outweigh immensely the disadvantages. Farmers who have kept records state that they have received higher yields than they would have expected from the same crops planted the old way. These higher yields are the direct results of the savings in soil, moisture, and fertilizers which are kept on the field by the contour rows which act as small terraces.

Erosion is found at its worst in improperly managed orchards and vineyards. This is explained by the fact that few cultivated crops, other than fruits, are grown continuously on the same land for so many years. The cultivation of orchards and vineyards year after year up and down the slope throughout the life of the trees soon erodes out the middles between the trees, leaving the trees on mounds. This condition is too prevalent in northwest Arkansas.

The Benton County Soil Conservation District, with headquarters at Bentonville, is under the direction of the following fine supervisory staff: T. S. McNeil, chairman, Rogers; Harry F. Stitt, secretary, route 2, Rogers; Mac Givens, Gentry; Elbert S. Graham, Lowell; Wayne L. Shields, route 1, Siloam Springs. This soil conservation district is one of the most active in our section and it, too, is led by outstanding men of Benton County. I quote from the letter that Tom McNeil, the chairman, forwarded with the report:

I would like to call your attention to the fact that there are more farms under active soil conservation agreements with the district than ever before (773 farms covering 71,517 acres). Also there are more applications requesting assistance which have been approved by the board of supervisors than ever before (534 farms covering 57,925 acres), desiring conservation plans on their farms. This in face of the fact there has not been any campaign or action taken in years or any attempt to create a desire for farmers to make application for assistance. This district covers the entire county and from careful study there are 4,500 ownership farms covering 457,000 acres, most of which should have district coordinated conservation programs in the near future. Northwest Arkansas' agriculture is making progress and the soil and water conservation district program is advancing.

The Madison County Soil Conservation District, with head offices at Huntsville, is under the able leadership of the following board of supervisors: James M. Parker, chairman, route 2, Huntsville; Ewell E. Boyd, secretary, Huntsville; A. H. Berry, Hindsville; Hugh Hargis, route 4, Huntsville; Ralph Buck, RFD, Combs. As an example of what soil conservation is doing in our whole section, I give you one instance from the report of the supervisors of Madison County:

CONSERVATION PASTURE BRINGS WESTERN CATTLE TO MADISON COUNTY

Mr. Floyd Truman, from the State of Arizona, sold his ranch about June 1, 1949, but retained his 341 head of Hereford cattle. After having put his cattle on some very poor range, he started out in search of better pasture for his cattle. Mr. Truman, after looking for pasture for 2 months from Arizona to Arkansas, eventually landed in Fayetteville, Ark., where he contacted Mr. J. E. Critz, district conservationist of the Soil Conservation Service. Mr. Critz, having attended the "greener pasture tour" on the Paul Smith farm at Hindsville, Ark., knew that Mr. Smith, a cooperator with the Madison County Soil Conservation District, had done an excellent job of developing his pasture in connection with his soil-conservation plan on his farm. Also, he knew that Mr. Smith was short on cattle at this time. Mr. Critz directed Mr. Truman to Hindesville to contact Mr. Smith. The contact was made, and the two men made a deal to bring the western cattle to Mr. Smith's farm.

The cattle, consisting of 184 cows, 105 calves, 22 bulls, and 30 yearlings, arrived on August 16, at the Smith farm where they were tested both for TB and Bang's.

After the long trip by rail and truck the cattle arrived very tired, hungry, and gaunt. Even though the cattle were thin from being on poor pasture, there was not a casualty in the shipping. After being tested and kept in a close lot around straw stacks about 3 days, the cattle were turned on the lush pasture of the Smith farm, and they are looking better already. We know that the well-balanced, limed, and fertilized pasture on the Smith farm will start adding pounds of beef in a hurry.

Mr. and Mrs. Truman are looking for a location in this county.

Under the inspired leadership of the following men, the Van Buren County

Soil Conservation District, with headquarters at Clinton, is rapidly taking its place in the vanguard of fine districts in our section: Roy E. Tester, chairman; D. M. Baker, vice chairman; Clayton Graddy, regular member; J. O. Hill, ex officio member; J. B. Naney, secretary and treasurer. The attitude of this energetic group of supervisors can best be shown by the following paragraph from their report:

Farmers in Van Buren County have a higher standard of living today than any farmer has ever had, and we feel that the Production and Marketing Administration programs have helped them accomplish this. We have helped them by offering incentive payments for conserving soil and water on their farms. When we help the farmers, we indirectly help everyone—for the person who lives the farthest from the farm is still dependent upon the soil for his livelihood.

I am hopeful that the Congress, in this grave period of our Nation's history and in view of the absolute necessity for economy, can find ways and means to keep this great program moving forward, because wise economy dictates that we keep our soil strong and our young people on the farm.

Walter Featherly, Jr.—One of Twelve

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. MANSFIELD. Mr. Speaker, I was delighted to have the opportunity at the National Boy Scouts of America breakfast last week to join with Walter T. Featherly, Jr., of Dillon, Mont., who represented region 11 at that gathering. It was a turn-out marked by the presence of the 12 most outstanding Boy Scouts in the country and it was a pleasure and privilege for me to be with Walter on that occasion.

Walter Featherly is a credit to his school, his State, and his region, and, of course, on that basis, he must be a credit to our country as well. Walter has had an extremely interesting life, having been a Life Scout for most of his Scouting career and also having received the God and Country award. His hobbies are music, marksmanship, and minerals. He conducts his own dance band in Dillon. He is also a Life Scout Explorer. Walter typifies the fine spirit of brotherhood which prevails among the Boy Scouts not only in our country but throughout the world.

It has been well said that "Today's youth will guide tomorrow's world. The feelings which youth of one nation harbor for the youth of others will undoubtedly influence the course of relations of all nations." The Boy Scouts of America have exemplified in their service the ideal of world brotherhood. They have taken an active part in the promotion of the United Nations appeal for children; they have sent over 9,000 CARE packages to other countries to be used as food for training courses for leaders and camping experiences for boys and leaders alike; they have contributed funds to bring to the United States the national director of the Cub Scouts for the Boy Scouts of the Philippines so he might observe our methods and procedures. They have done many other things of worth-while character and the. are to be congratulated for the great amount of good they have performed in the many years of their existence. To Walter Featherly I extend my congratulations on the signal honor he has achieved; and to the Boy Scouts of America, I extend my best wishes on the fortieth anniversary of that great organization.

Your Move, Mr. President

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1950

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of the House an editorial entitled, "Your Move, Mr. President," which appeared in the Buffalo Evening News, Wednesday, February 15, 1950.

On January 10, and again on January 20, I forwarded communications to the President relative to the coal situation in western New York. I earnestly begged of him to immediately recognize the fact that an emergency does exist; and that many persons would be deprived of employment, to say nothing of going without adequate heat, unless he took action at once.

I further advised that I was fully aware of the magnitude of his duties and the demands upon his time, but I, as a Member of Congress, do believe that I am entitled to a reply to my communications. To date I have not been extended the courtesy of a reply to my letters.

The editorial follows:

YOUR MOVE, MR. PRESIDENT

The coal crisis deepens; Buffalo public schools are closed; State and city officials are forced to impose strict regulation on such thinning supplies as there are; 350,000 miners continue their outlaw strike—and the White House says President Truman plans no further action at this time.

If the children and teachers miss their Easter vacations; if homes turn cold and businesses close and jobs are lost and pipes freeze, let one and all remember that the responsibility for letting affairs drift into their present critical state rests squarely with President Truman; that the responsibility for enforcing the orders of the Federal court is his alone, and that every sign of delay or irresoluteness encourages disrespect for the law, for his own office, and for the national safety he is sworn to protect.

Unless a contract should suddenly be negotiated, the next move is President Truman's. Until he makes it, we all remain the helpless pawns of a shameless game of power and politics that the United Mine Workers, the coal operators, and the President are playing at the public expense—at an expense mounting to disastrous proportions.

Practice What We Preach

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun-Times of February 19, 1950:

PRACTICE WHAT WE PREACH

One hundred years ago Ireland's potato famine caused great numbers of persons to seek a new life in this country. There was a good deal of prejudice against the newcomers, who were mostly Roman Catholics. Sometimes it took the form of rioting and other crime.

A political group calling itself the Know-Nothing Party was formed. It wanted to repeal immigration laws. It wanted America for Americans. It wanted to forbid anyone except native Americans to hold public office.

In 1855 Abraham Lincoln felt called upon to deny that he was a Know-Nothing. Lincoln wrote to a friend:

"How can anyone who abhors the oppression of Negroes be in favor of degrading classes of white people? Our progress in degeneracy appears to me to be pretty rapid. As a Nation we began by declaring that 'all men are created equal.' We now practically read it 'all men are created equal, except Negroes.'

"When the Know-Nothings get control it will read: 'All men are created equal except Negroes, foreigners, and Catholics.' When it comes to this, I shall prefer emigrating to some country where they make no pretense of loving liberty—to Russia, for instance, where despotism can be taken pure, and without the base alloy of hypocrisy."

That was only one of hundreds of expressions by Lincoln on the subject of social harmony.

"Equal justice for all" means something more than equal justice in our courts. It means equal justice for neighbors in our thoughts, words, and deeds. This concept has inspired Brotherhood Week, which begins today.

It's a week in which Americans are urged to examine their consciences about their attitude toward all other Americans. It is a week to remember that the earliest settlers of the America which we ask God to bless came here to escape various kinds of intolerances practiced upon them elsewhere by people who thought they were different.

Prejudice, by dictionary definition, is "opinion or leaning adverse to anything without just grounds or before sufficient knowledge."

Listen to this description of a certain group:

"They introduce pauperism, slums, corruption, and crime. They are to blame for unemployment and panics. They deprive native Americans of jobs and they lower the wage scale. They are clannish, unassimilable, and half-witted."

It was used to describe Irish immigrants a century ago. Does it sound familiar today? Have you heard such words used recently to describe Americans whose family background is oriental, Jewish, Mexican, Polish, Italian, or Negro?

Most of the prejudice in this country is against members of minorities. But, as a reader points out in our letters column today, some members of minorities have prejudices, too. But two wrongs do not make a right. Prejudice against one group

cannot be justified by citing the fact that any of its members have prejudices, too.

The United States, considered a "white" nation, seeks the moral leadership of a globe populated largely by nonwhites. One of the greatest handicaps to our national leaders in their relations with leaders of other countries is the race discrimination practiced here at home. We are in a cold war which can't be won by construction of a hydrogen bomb, or a Marshall plan, or a point 4, alone.

To attract to the cause of democracy the millions in India, Pakistan, Indonesia, and Africa, America must live as well as preach the abolition of racial, religious, and economic discrimination.

Hon. Louis B. Heller

EXTENSION OF REMARKS
OF

HON. F. D. ROOSEVELT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. ROOSEVELT. Mr. Speaker, February 28 marks the first anniversary in Congress of my distinguished colleague, LOUIS B. HELLER, of Brooklyn, N. Y. Mr. HELLER was elected to the Eighty-first Congress in a special election to fill a seat left vacant by the death of Congressman John J. Delaney. Well qualified for his post, Mr. HELLER already possessed legislative experience by virtue of having served in the New York State Senate. There, his sterling abilities were utilized as secretary of the temporary commission against discrimination. The splendid record he accumulated in this and other endeavors won for him the strong support of many groups and individuals and resulted in his election to the Congress of the United States.

Since coming to the House of Representatives, he has continued to serve the Nation as admirably as he did his State. Before taking his oath of office, he pledged himself to support all progressive and constructive legislation. He promised, further, to work to crush communism and to repeal the Taft-Hartley Act. Few Members of Congress can equal the record made by him in the pursuit of these goals.

Mr. HELLER has vigorously attacked the antilabor Taft-Hartley Act. Demonstrating his keen interest in the problems of labor, he analyzed the act point by point, listing specific reasons why it should be repealed. With insight and understanding he showed how the law has undermined collective bargaining, provoked unnecessary strife, and stripped workers of basic rights. Strong unions, he declared—

> With effective power to bolster the real wages of their members through collective bargaining, represent the most democratic means of preventing the boom-and-bust cycles which have plagued our economy over the past 100 years.

He cited the 1948 elections and his own special election as "clear and convincing mandates from the people" and stated that "immediate repeal of this unjust, unfair, and vicious legislation" was the way to carry out the people's will. A coalition of misinformed House Members has forestalled further action on this measure this session. Under the spirited guidances of such men as LOUIS HELLER, however, the fight for repeal will be carried on and the mandate of the people will be accomplished.

Important as the labor and economic problems of our Nation are, we have a still larger concern in the affairs of the world. In his first year in Congress, LOUIS HELLER has shown a grasp of these affairs scarcely rivaled by many who have longer tenure. Equally as admirable as his stand on labor issues has been his fight against communism and Communist aggression.

When it became apparent that recognition might be granted to Communist China, Mr. HELLER sent a personal plea to President Truman to prevent this tragic error. In an eloquent statement he asked:

> How can there be recognition of a government that cannot even maintain minimum standards of decency and hospitality in its dealings with foreigners? How can there be, moreover, recognition of a government which callously flaunts the basic international responsibilities of a sovereign state? Finally, how can there be recognition of a government which acts not in the interests of its own citizens but rather at the behest of a foreign master?

He urged the President not to be indifferent to the expansion of communism in China and southeast Asia and not to be swayed by the action of other countries.

But, like all true statesmen, he believes in a positive program for the reconstruction of war-torn countries and the building up of democratic ideals throughout the world. When the Korean aid proposal was before this body, Congressman HELLER enthusiastically rose to its support.

The point 4 program ranks high in his estimation as a solution to international ills. He believes, with President Truman, that we should make our technical knowledge available to peace-loving peoples in order that they may realize their aspirations for a better life. Improvements of this type, he knows, will also advance the cause of freedom and will help to develop international understanding and good will.

These ideals have been challenged, however, by hostile actions of the Soviet Union and the knowledge that the Soviet Union possesses an atomic weapon. This knowledge has forced a reappraisal of our strategic position in the world. The United States answer to this problem has been the creation of a military assistance program. Mr. HELLER firmly believes in this program and in the necessity for augmenting it. In a strong and forthright speech he called for the strengthening of the military forces of western Europe against the atomic threat of the Soviet Union. He stated at that time:

> Increased military aid to western Europe is even more urgent because the whole timetable of international strategy has been speeded up by the Soviet Union's unexpected atomic progress. Russian discovery of the atomic bomb came years ahead of the predictions of western scientists. The period of grace permitted to the western powers to strengthen their defenses has been considerably shortened. Consequently, additional American military help must be hastened to close the time gap in North Atlantic defenses.

When he went on record in favor of amending the Displaced Persons Act, Mr. HELLER revealed again his great humanitarian character and noble qualities of statesmanship. On that occasion he called upon the United States to exert moral leadership in the settlement of the displaced persons problem. We must change them. He declared:

> From displaced into placed persons. Maybe then, as we work and pray for peace, for a better world, the Great Architect will listen, for we cannot expect to receive the blessings of life if we do not give of ourselves in service to others.

To Mr. HELLER these words are more than phrases to be used in debate. Not content merely with supporting progressive legislation, he has taken advantage of every opportunity to effectuate it in a practical manner. Through his efforts, 760 Brooklyn Navy Yard workers, who would otherwise have been forced into idleness, are still employed. They will not soon forget LOUIS HELLER's interest in them or his pleas to the President and the Secretary of Defense, explaining why for the good of the country, their jobs should not be abolished.

But LOUIS HELLER is not satisfied with a partial victory. With redoubled energy, he is continuing his attempt to see that workers in the navy yard area have employment. In this he has the support and cooperation of all Brooklyn citizens his eight Brooklyn colleagues, and the Brooklyn press. An editorial published in the Brooklyn Eagle on January 21, 1950, stated:

> Representative LOUIS B. HELLER has made a timely appeal to the Navy high command to assign to the Brooklyn Navy Yard one of the two giant aircraft carriers slated for modernization work. As he points out, the Brooklyn yard has pioneered in the work of rebuilding carriers along the lines dictated by postwar scientific developments and atomic research. And, as he adds, the work would provide employment for hundreds of Brooklyn workers who face dismissal on completion of several current jobs. * * *
>
> The Eagle is glad to add its voice to that of Congressman HELLER in demanding assignment of one of the two carrier modernization jobs to the Brooklyn Navy Yard.

A disturbing sidelight on the Brooklyn Navy Yard reduction-in-force problem was provided by the noted news analyst, Robert S. Allen. He revealed that among the employees discharged were six disabled veterans. Mr. HELLER's answer to this violation of veterans' rights was an immediate and thorough personal investigation. He conferred with the admiral in charge who gave Congressman HELLER definite assurances that although the six disabled veterans had previously been informed that they were being separated from their jobs, he would offer them other employment. Each man was reemployed, and is presently working at his job in the yard. Mr. HELLER went further—he personally interviewed each veteran to determine whether or not he was satisfied with his new work.

As a result of this incident, Mr. HELLER has introduced a bill—H. R. 6547—to put an end to this sort of outrage. It would prohibit the dismissal from a Government job of any veteran who has lost a limb or the use of a limb, or has a disability rating of not less than 60 percent, as a result of service in the United States armed services.

Mr. HELLER expressed his opinion that there was no need to justify this measure on the basis of need. Such legislation, he feels, should be enacted because disabled veterans are entitled to special treatment from the Government they did so much to maintain at a most critical period in its history. I am sure, however, that we would heartily agree with Mr. Allen, who, in expressing his appreciation for this prompt and vigorous action, described Mr. HELLER's efforts as "splendid and humane."

Among other worthy measures which have earned his wholehearted support have been the repeal of the oleomargarine tax, the national health insurance bills, civil rights legislation, and pay raises for Government workers.

On the issue of civil rights, Representative HELLER has put himself firmly on record as being opposed to the poll tax. Nor has he neglected other forms of discrimination in his struggle for equal rights. I particularly admire his stand against unfair employment practices. He has stressed on many occasions his belief that the right to equality of opportunity of each individual to obtain useful employment without regard to race, color, creed, and national origin is essential to the well-being of the individual and to the progress of our society.

He abhors, particularly, the totalitarian arrogance which makes one man say he will respect another only if they agree in race, religion, and social position. From his service as a member of the New York State Commission Against Discrimination, Mr. HELLER learned that this problem cannot be handled by the States themselves. With insight gained from experience, he recommends Federal action to protect States having such laws against unfair competition from States that do not.

Along with a guaranty of civil rights security, Representative HELLER believes in an expansion of the social-security program. With commendable vision he sees the growth of this program as representing not only a growth in national security, but also an aid to our national defense and to our national future. He is one of the farsighted legislators in Congress to recognize that our prosperity and our national physical well-being depend heavily upon maintaining our health at the highest level.

To give substance to this conviction he is for the passage of a national health insurance and public health bill. There is no greater duty, he believes, that we owe to the electorate of this Nation, than to secure for them a reduction in sickness and premature death, thereby promoting individual and community welfare.

The plight of the underpaid Government worker is still another of the causes that has attracted the attention of the indefatigable LOUIS HELLER. Speaking before congressional committees, civic groups, and on the air, he has promoted legislation which would correct inequities and permit these worthy employees to enjoy a higher standard of living. Edward Zeltner, foremost political writer of the New York Daily Mirror and noted charity organizer, expressed his admiration in these words:

> Battling for postal pay raises, Representative LOUIS HELLER, the fledgling Congressman from Brooklyn, turns in an appraisal of Government service that merits thought. HELLER charges that the best talent, from top echelons to the bottom, are stepping out of Federal jobs because they don't pay enough. In the case of the average Government worker, it would be cheaper to grant him a pay raise than have him quit, the Congressman contends. He points out, by way of argument, that during 1947 at one post office 3,687 employees resigned for better jobs in private industry.
>
> Figuring that it costs $15 to add or subtract each of these persons from the Federal pay roll, the cost in this one instance was $55,305. These figures projected over the Nation, show how much the Government actually loses by constant employment turnovers. HELLER is trying to show that Federal employees can't live on salaries fixed by an act passed in 1923—when applied to the 1949 cost of living.

Referring to this and other accomplishments, Zeltner also commented:

> Representative LOUIS HELLER * * * has been on his toes every minute since he parked his satchels in Congress.

Representative HELLER has indeed been on his toes. He was on his toes when a Rule Committee coalition sought to obtain the power to block legislation. He saw in this move a denial of the principle of majority rule and diagnosed it as a design "to blockade a fair deal legislative program which the Democratic Party was chosen by the people to enact." "If the resolution is adopted," he charged, "the Rules Committe will become a graveyard where the policies of both political parties and the hopes of the American people will be buried." His strong voice, along with those of other farsighted legislators spelled the defeat of this ignominious proposal and has cleared the way for constructive action.

The record of LOUIS B. HELLER's first year in the House of Representatives speaks for itself. He has measured up fully to the ideals he has expressed and to the high expectations of his friends. When I look at the record he has achieved and the volume of work he has done, I wonder how it has been possible. I know, however, that the problems of the Nation, and particularly of his own district, are of such vital concern to LOUIS B. HELLER that no task is too great if done on their behalf.

The letters which come to his office are sufficient proof that LOUIS HELLER has, in great measure, accomplished the task he set out to accomplish. These letters are interspersed with such phases as "your whole-hearted support * * * has given our people new courage," "we wish for you * * * the blessings that must come from the knowledge of a good deed well done," "we are all fully aware that this brighter future is, to a very large degree, attributable to your efforts."

We are indeed fortunate to have in our midst such an able public servant as LOUIS HELLER. His qualities of liberalism and leadership are sorely needed in these trying times. I congratulate him on the completion of a most successful first year in the House of Representatives and express my appreciation for the inspiring work he has done.

One Was Worthy of the Name

EXTENSION OF REMARKS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1950

Mr. REED of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Harvard (Ill.) Herald of February 16, 1950:

ONE WAS WORTHY OF THE NAME

Public indignation, in pre-Revolution days, over treatment the American colonists were receiving at the hands of England set the stage for emergence on this continent of the great and beloved American whose birthday we celebrate next Wednesday—George Washington.

Public indignation, today, over the sorry state into which the great United States of America has been allowed to fall, merely because the man who today occupies the office of President did not regard the coal tie-up as a national emergency soon enough, will surely manifest itself through public action.

We can't believe the American people will take this tragic defect in a President's domestic conduct with nothing more than a shrug. We can't believe they will continue to regard him as a President above impeachment.

Now that the miners are defying a Government order and refusing to get coal to a desperate Nation, on the flimsy technique that they have no contract, we shudder at the immediate future of our community and our country.

Our college students are coming home from chilled school buildings. Our train service is being curtailed. The coal bins in our homes, our places of business, our hospitals are yawning. From here on in, we can expect to get colder.

Coal means too much to America's finely geared society today to let its supply be withheld from us because of a President's outrageous timidity to deal with the unions. Mr. Truman has waited too long. We, not he, will suffer. We, not he, will be fools if we don't remember this winter of 1950 and act accordingly when it comes time to vote.

George Washington showed beyond doubt his first and foremost responsibility was to all the American people—not just one class. Mr. Truman showed his first concern is for the labor vote. Let labor have him. The people should impeach him.

Story of Alexander Hamilton as Told by Hon. Arthur H. Vandenberg, of Michigan

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. MARTIN. Mr. President, during the present week we have celebrated the anniversary of the birth of President George Washington. The birth of Alexander Hamilton came so close to that of George Washington that I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Story of Alexander Hamilton as Told by Senator ARTHUR H. VANDENBERG," published in the February 1950 issue of the magazine Sons of the American Revolution.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STORY OF ALEXANDER HAMILTON AS TOLD BY SENATOR ARTHUR H. VANDENBERG

In my impetuous youth I set out to right an historical wrong. I felt that America owed a long-overdue debt to the memory of Alexander Hamilton. I determined to make a small payment on account. So I wrote a book in 1921 to prove that Hamilton was the greatest American—meaning the greatest in the widest variety of contributions to his country's welfare. He was the most constructive statesman, the profoundest constitutionalist, the greatest lawyer, author, orator, and economist, the greatest political leader of his time, and one of its greatest soldiers. His was the most brilliant mind in an era of amazing genius. He was Washington's right arm in both war and peace. He was the brains in the pilot house when the ship of state set out into the perilous sea of history.

I have lived to realize that no one patriot can be called the greatest American in a land blessed with so many leaders of sublime and heroic stature. To that extent I overshot my mark. For example, I now freely concede that young America equally needed Thomas Jefferson and his basic rivalries with Hamilton. Jefferson would have been cheated of the presidency by Aaron Burr in 1800 but for Hamilton's refusal to permit his Federalists to condone the thought. Jefferson himself said of Hamilton, "He is really a colossus; without numbers he is an host within himself." But I have not outlived the conviction that Hamilton never has been given his historic due. Lord Bryce, in his admirable work, the American Commonwealth, said, "One cannot note the disappearance of this brilliant figure, the most interesting in the earlier history of the Republic, without the remark that his countrymen seem to have never, either in his lifetime or afterward, duly recognized his splendid gifts; equally apt for war and civil government, he stood in the forefront of a generation never surpassed in history."

We Americans love Horatio Alger heroes—brave young men who rise above adversity to win great place and fame. Well, here is the top prodigy of them all.

Hamilton was born on Nevis in the West Indies, January 11, 1757. His father was a Scottish ne'er-do-well. His devoted mother was a French Huguenot divorcee. The legitimacy of their union is still a subject of controversy. It never ceased to be a scandalizing weapon of Hamilton's enemies. It could have crushed a lesser soul.

At 14 years of age young Hamilton was successfully managing Nicholas Cruger's general store and countinghouse on neighboring St. Croix.

At 15 he emigrated to Boston—without a friend in this New World. At 16 he entered King's College, now Columbia, in New York. At 17 he was pushing his unbidden way to the rostrum at New York's famous "Meeting in the Field" to help promote the First Continental Congress. "It is the battlefield or slavery," he cried—a full year ahead of Patrick Henry.

At 19 he was captain of New York's first company of artillery, destined for 10 months of bitter combat in which his personal heroism brought him to Washington's attention. At 20 he became Washington's first aide and military secretary and in the final victory at Yorktown he led the first victorious American assault.

At 25 he qualified as a lawyer in four months of study, exciting the envy of one Aaron Burr, a fellow student, who subsequently became his lifetime foe and his dueling assassin. Shortly he was to be acknowledged as the leader of his Nation's bar.

At 30 he was in the New York Assembly struggling for full, free, public education and for easier debtors' laws. Here, too, he first enlisted in the mighty conflict which produced the Constitution. He forced his State into the Annapolis Convention from which came the call, which he wrote, for the Constitutional Convention in Philadelphia. Then he sat in the Philadelphia Convention—the only New Yorker to sign the Constitution. He wrote the major portion of the Federalist Papers, the greatest exposition of the Constitution ever penned. It was, and is, the "bible" of the Constitution. Then came the terrific contest over ratification, chiefly centering in the New York convention.

At 31 he led a forlorn hope in this New York convention at Poughkeepsie, facing a hostile majority through six guerrilla weeks. At the end he won. It was little short of a miracle. "The overwhelming eloquence of Hamilton," wrote Chancelor Kent, "Was exerted to its utmost pitch and shook the most resolved in the majority." In the light of this reality I wonder if it isn't fair to say that without him there would have been no Constitution.

At 32 he was called to President Washington's first Cabinet as Secretary of the Treasury. By now he was the dominant figure in the Federalist Party, which held power for the first 12 years of the new Nation's political life. He immediately became the master craftsman of the great American adventure. Not only did he chart the basis for restoring Federal credit and for the redemption of the public debt but also, in flashing succession, he recommended navigation laws, drafted the first bill for the postal system, proposed the means for handling public lands, establishing the mint, advised the decimal system for our currency with the dollar as the unit, recommended the beginnings of the tariff system, proposed the patent system, and generally charted the Republic's structure. John Adams said he was "all the time the commander in chief of the House and Senate, of the heads of departments and of the President himself." This, mind you, is that immigrant boy on the docks of Boston only 17 years before.

At 36 he dominated America's first great decision in foreign policy. He demanded neutrality in the war between England and revolutionary France—squarely colliding with Jefferson. Washington agreed with Hamilton. In the light of this episode it is easy to trace the source of the eloquent warnings in Washington's Farewell Address—an address which Mrs. Hamilton, the lovely Betsy Schuyler, later testified came almost exclusively from her husband's incandescent pen.

At 40 he chose to strip the veils from every last detail of the only incidental scandal that ever blemished his private life, his affair with a Mrs. Reynolds, rather than leave a shred of suspicion against the integrity of his public works. He spared nothing and pleaded no palliation. His sole purpose was to put his public honesty beyond attack.

At 47, he was killed in a duel with Aaron Burr, his lifetime enemy. Burr chose a relatively inoffensive remark of Hamilton's as an excuse to invoke what was then the code of honor. Hamilton hated dueling, but honor was the touchstone of his life. He fell at the first shot. The tears of a nation followed him to Trinity churchyard.

This is the bare chronology of as great an American as ever lived. Ten thousand pages would be required to fill in the full story of his talents, his genius and his impact upon the foundation of America. He was ever the subject of white-heat controversy—in death even as in life. But for myself, summing it all up, I say that five words might be his epitaph, "The Republic Is His Monument."

The Indiana State Banner

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have inserted in the RECORD the remarks of Mrs. Royal Eason Ingersoll, designated representative of Mrs. Roscoe C. O'Byrne, president general, Daughters of the American Revolution, at the Indiana State Society of Washington, D. C., celebration of the Sesquicentennial of Indiana Territory, 1800–1950, on February 19, 1950.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

THE INDIANA STATE BANNER

At the Twenty-third Continental Congress of the National Society, Daughters of the American Revolution, held in Washington, D. C., on April 20, 1914, attention was called to the fact that Indiana had no State flag. Memorial Continental Hall, in which the meetings of the congress were being held, had been appropriately decorated for the occasion. The chief, and one of the most conspicuous decorations consisted of the flags of the various States placed about the auditorium of the hall, just below the cornice. Spaces had been left for the flags of those States having no emblems, and Indiana was found to be among this number. The want of a State banner induced Mrs. Gaar of Richmond, and Mrs. John N. Carey of Indianapolis, two of the delegates attending the congress, to procure a flag, displaying the coat of arms of the State, and to place it in the space allotted to Indiana, awaiting the time when the State should adopt a distinctive flag, and in a meeting of the Indiana delegates attending the con-

gress, Mrs. Henry Beck, the State regent, appointed Mrs. John N. Carey the chairman of the committee to secure a suitable emblem.

Upon her return to Indiana, by means of the press, Mrs. Carey offered a prize of $100 to the person who should submit the best design for a State flag. Meantime, the campaign begun in Washington was carried on at two of the State meetings of the Indiana Daughters of the American Revolution and a State banner committee, consisting of Mrs. John N. Carey, chairman; Mrs. F. F. Hutchins; Mrs. Robert McBride; Mrs. R. C. Bennett; Mrs. Henry Beck, State regent; Mrs. M. A. Potter; Mrs. Charles Thompson, and Miss Ames was appointed to develop the idea, and to secure the adoption of a State flag symbolizing the history, valor, products, and activities of the past 100 years.

A formal notice was issued by the State banner committee stating that the Daughters of the American Revolution and certain other patriotic organizations had decided that it was wholly suitable and desirable, that the Indiana centennial observance should be lasting marked by the creation and adoption of an Indiana State banner, and inviting citizens of the State to compete in the creation of a fitting emblem. The interest displayed was Statewide and the response was most gratifying to the committee. Between two and three hundred designs were submitted.

At the close of the competition on October 1, 1916, the State banner committee called together the heads of all the patriotic societies of Indiana, and 11 votes were cast for the design finally adopted and 4 votes for the next most popular design. The committee selected three designs, which were submitted to Harry B. Smith, adjutant general of the State. General Smith called the prominent military men of the State into his office and requested them to pass judgment on the proposed designs, and the same flag which was preferred by the representatives of the patriotic societies was the one chosen by the majority of the military men. The design executed and submitted by Mr. Paul Hadley was the one finally adopted.

When the design had finally been adopted, it was submitted to the general assembly of 1917 for formal and official approval and adoption. The committee succeeded in obtaining the passage of the bill through the Senate by the efforts of Senator Harry E. Negley, of Marion County, whose committee added the word "Indiana" above the Indiana star, an amendment to which the committee of the Daughters of the American Revolution advanced no objections. The bill finally passed on the last night of the session.

The field of the banner is blue with 19 stars and a flaming torch in gold or buff; 13 stars are arranged in an outer circle and 5 stars in a half circle below the torch and inside the outer circle of stars; the nineteenth star which is appreciably larger than the others, is placed above the flame of the torch; the outer circle is so arranged that one star appears directly in the middle at the top of the circle; the word "Indiana" is placed in a half circle over and above the star representing Indiana.

The reasons for the choice of the banner which was finally selected were, first its symbolic significance. The torch in the center stands for liberty and enlightenment; the rays represent their far-reaching influence. The outer circle of 13 stars stands for the original 13 States. The inner half circle of five stars represents the five States which next entered the Union. The nineteenth star, appreciably larger than the others, and placed above the torch, stands for Indiana.

The second reason for the selection of this banner war because of the simplicity of the design, because it is a contrast to the Stars and Stripes, and because military men generally admire a blue banner.

Lincoln Day Address by Hon. Edward J. Thye, of Minnesota

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the RECORD a Lincoln Day address delivered by me at Sacramento, Calif., on February 10, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is no place where I should rather speak at an event that commemorates the birthday of Abraham Lincoln than here in California, which, beginning a century ago, has developed into one of the greatest of our States and today is second only to the Empire State itself in the number of its citizens.

Yours is an empire, too, and one whose long history is colorful and significant. California, in a sense, is a State of States, for here, drawn together by pride in your great riches of climate and fabulous resources of nature, and no less by friendly western good will, are the sons and daughters of every State in the Union. Here, at the gateway to the Orient, you who shared so magnificently in meeting the impact of World War II are perhaps more keenly conscious than many others of our fellow Americans of the historic mission of our country in the world today. Here, too, is to be found a spirit of initiative and enterprise, of love of freedom and of faith in the American way that are typical of our country at its best.

It is not surprising that from such an environment there should come to the United States Senate to represent you a young Senator as competent, courageous, and effective as Senator KNOWLAND. It is not surprising that at the head of your State government is a man such as Gov. Earl Warren, respected and beloved by the entire Nation for his proven leadership of California. You have elected him twice as governor of this great State and once the American people chose him as a candidate for one of the highest offices in this land. I know you will again elect him governor of California.

You also have as a citizen one of the most distinguished living Americans—Herbert Hoover. He selected as the one place he wished to call home, Stanford University at Palo Alto, the college community in this State where he was educated.

And as I think of all of those statesmen—all members of the party of Lincoln—I am mindful also of another young man, Congressman NIXON, whose persistence and determination to focus attention on certain dangerous influences in our Government started a train of events which recently came to a most shocking climax. Congressman NIXON should be elected to the United States Senate in this coming election. There is a need for courageous, fearless fighters for the American way of government. Congressman NIXON and his committee members spread a net that some people scoffed at, others condemned, calling the committee findings of disloyalty of former Government employees in high Government office nothing but a political red herring. It proved to be a red fish but not a political red herring that some distinguished politicians talked about almost too glibly in the 1948 presidential campaign.

I mention this specifically because I think that the curious and devious operations that have been disclosed, and, even more, the attitude that is taken toward these matters by persons in high places in our Government in Washington, reveal a complacency that is not in keeping either with our ideals or our security as a nation.

They certainly do not bespeak the ideals and integrity in public office that Abraham Lincoln displayed. All over this land there are events such as this Lincoln Day dinner in honor of the first man to be elected President of the United States on the Republican ticket. Abraham Lincoln, in a very true sense, belongs to all Americans and to all men of good will everywhere. I would not wish to detract from the universality of the homage paid him by referring to his leadership in a partisan or narrow sense of exclusive possession. It is rather in a spirit of rededication that Republicans pay tribute to him today as the honored leader who laid down the foundations of our party.

Lincoln symbolized the power, the dignity, and the sovereignty of the people, and he put into phrases that will last as long as the English language is spoken the deep aspirations of the American people for unity as a nation, for liberty as human beings, and for the achievement of "a just and lasting peace among ourselves and with all nations."

Therein is the challenge to the Republican Party: To make these aspirations live—for freedom and democracy, for unity and justice, for opportunity and growth. These—and not a so-called standard of living—are truly the American way.

A Republican Party that is steadfastly true to these ideals will deserve to live—and will live.

Now, what do these ideals mean in practical reality?

What do freedom and democracy mean in an age of cold war between the philosophy they represent of a government "of the people, by the people, and for the people," and the Communist ideology and philosophy of government wherein man exists for the benefit of the state, where freedom of mind, the rights of man, and individual initiative do not exist?

What do unity and justice mean when translated into the complex problems of an atomic age?

What do opportunity and growth mean in a nation that has assumed historic obligations of world leadership as the United States found it must do immediately upon the close of the war—a leadership we must exercise the world over if a permanent and a lasting peace is to be achieved?

I want to say to you, ladies and gentlemen, that the very circumstances under which those questions are phrased—cold war, atomic age, world obligations—suggest that there are no easy answers. It will require men in public office with courage, loyalty without question to the United States, who will not play party politics in the selection of leaders in responsible positions.

The Republican Party has no easy answers to the complex questions of our day or any of the many related problems of the American people. Those who seek to enroll under a political banner that affords them an escape from reality will not find it here, for the party of Lincoln, in all honesty, must say to the American people: "These are your problems. They cannot be solved unless you are willing to think about them. Your representative government, which has endured for nearly two centuries, cannot be made to function effectively unless you are willing to shoulder your share of the responsibilities of citizenship. The American way cannot be preserved except by the same forces by which it was evolved—hard work, self-reliance, individual freedom, equality of opportunity, individual initiative, thrift, and prudence."

Those who would belong to a party which is all things to all men, whose policies are based, not upon the long-range needs of the future, but the immediate requirements to win the next election, and which promises all kinds of benefits to be paid out of what would seem to be an inexhaustible Federal Treasury, will not be at home in the Republican Party. Such a policy would lead this Nation down the road to socialism and eventual dictatorship, the road of many and many a nation in the past and which today is the experience of the great British Empire. Those who wish to play such politics must line up from the start with the party of which Santa Claus is the guiding spirit.

Those who imagine the Government owes them a living, must change not only their imaginations but the course of their thoughts. The great achievement of our industries and business has been on the basis of thrift, prudence, and economy and if the United States is to survive, thrift, economy, and a balanced budget in our National Government must be the keystone of our Government policy.

Now, there are a great number of people who think the Government can do everything, that it is a substitute for brains, thrift, and individual effort on the part of the people. They propose to abolish poverty oy law; they are sincere in believing we can spend ourselves rich.

There are some projects such as reclamation, flood control, harnessing the mighty powers of the water for generating hydroelectric power that individuals cannot do alone. That type of Government activity is needed. It enriches this Nation by the developing of such resources and man is better served by such developments. In fact, it is the new frontier of this era. It takes the place for the American youth of the vast undeveloped areas this Nation offered only a half century ago. We must recognize there is a need for such developments in order that we may meet our expanding population and the expansion of our industrial enterprise of this Nation.

The Republican Party has recognized these needs and has supported and worked for their achievement. The Republican Party does not propose to turn back the clock on the economic and social gains that have been made in this country.

The Republican Party has been a vigorous and vigilant minority party even in the heydey of the New Deal. We still have a strong two-party system in this country, regardless of what those who are preoccupied with election statistics may undertake to prove to the contrary. The two-party system is an absolute necessity for the survival of this democracy. One political party stands as a check against the other. We, the Republicans, shall continue to fight that the freedom of man and individual initiative may survive by holding the Government only as a servant to the people, rather than a power over the people.

Now, I have said that the Republican Party has fulfilled the historic duty of the opposition party in our representative Government. It has been critical and it has served as a brake. It has often said, "Well, now, let's examine this thing on the basis of facts." These are necessary functions of the party out of power.

Nevertheless, before we relegate the GOP to a permanent place as the minority party, let's see who is in the minority. Take the last election. Mr. Truman was reelected President with a vote of 49.5 percent—less than half of the total popular vote. Governor Dewey received 45.1 percent. The rest went to the third and fourth party candidates. It would be a wonderful thing if the winning candidate had received the approval of 49.5 percent of the qualified voters. Understand, I have said qualified voters but only 51.9 percent of the qualified voters voted. I call this to your attention because you have a responsibility as citizens to urge everyone to register and to vote in an election. Oh, if this cherished privilege of voting were actually taken away from us in the United States for a short period of time, we would then realize and appreciate what a privilege we had as free citizens—the right to go to the polls in a free election and vote for the men and women whom we want to serve us in public office.

The figure I have given you will prove conclusively that the Fair Deal cannot claim a mandate, even if it allied itself with those who did not go to the polls. We might say that those who did not go to the polls were just a little too certain in the last election that the Republicans had it "hands down." Don't let that happen in another election. Fight for the right that was given you when this country was founded. It is the only way this Nation will survive as a Nation of free people.

The prophets of doom who have relegated the Republican Party to an untimely death are facing the same disappointment as their fellow travelers who have long predicted the collapse of the American system of free enterprise and free government.

We believe that it is time the American people took stock of themselves. What other nation has created a better standard of living? What other country possesses the resources, the ingenuity, the incentive that America possesses? Where, under what political system, have as great strides been made to gain not only political but economic equality? What has been achieved in this great country has been done by the American people and it has been done under a two-party political system.

There are those who would be perfectly willing to entrust our representative Government to one party, perpetuated in power over long periods of time. One wonders sometimes whether the present occupant of the White House does not consider his leadership as the No. 1 Democrat ahead of being President of the United States. Certainly the Vice President is a Democrat first. There is no other way to explain the extravagant claims of the Vice President of the United States that credit for the progressive achievements of the American people during the first half of this century belong exclusively to the Democratic Party. That view is narrow and partisan. It puts a premium on politics. It forgets the united efforts of the American people to conquer the depression, or the costly sacrifices they made together to win two world wars. It is a claim unworthy of a Vice President of the United States. The American people have repeatedly rejected such smug claims on the part of their leaders in the past. They will do so again.

But, meanwhile, we Republicans accept the Veep's challenge that only good resides in Democratic control of the Government, and that nothing constructive can be expected from the Republicans if elected to power. Let's take a quick look at the record.

It was a Republican Congress under a Republican President, Teddy Roosevelt, which passed the Reclamation Act of 1902 under which the Government of the United States undertook to champion the cause of irrigation by providing that irrigation works, beyond the easy reach of the ordinary cooperative methods, might be constructed with Federal funds. You in California know what this has meant in these 50 years since that act was passed.

And let me just add, in passing, that the Eightieth Congress—a Republican Congress—appropriated more money for reclamation and western development than any previous Congress in that half century.

When entrusted with power Republican Congresses and Republican administrations have done a great many other things for the benefit of the people during the first half of this century.

A Republican administration first made effective antitrust legislation, which has been called the Magna Carta of labor, agriculture, and industry.

A Republican administration, in 1903, established a Department of Commerce and Labor, which was divided 10 years later into two Departments of Cabinet rank.

A Republican administration launched the Panama Canal.

A Republican administration established the Postal Savings System.

A Republican Congress submitted the woman's suffrage amendment to the States.

A Republican administration adopted the Capper-Volstead Act to authorize the association of producers of agricultural products.

A Republican administration, in 1929, set up the Agricultural Marketing Act, a forerunner of modern agricultural legislation.

A Republican President, Herbert Hoover, recommended and obtained passage of the act establishing the Reconstruction Finance Corporation, one of the most important agencies used to conquer the depression, and still a vital agency of the Government in protecting savings and credit and assisting small business.

A Republican President led in the formation of the Federal system of home-loan banks and of the agricultural credit banks.

Republican governors and Republican administrations in a majority of States of the Union have made constructive, progressive, and brilliant contributions in every field of governmental activity in this half century.

The last national presidential election was won by Mr. Truman partly on the basis of a wholly unwarranted attack upon the Eightieth Congress when, as a matter of record, that Congress achieved much in spite of hostility and resistance from the entrenched administration. Let's name just a few of the achievements in that short 2-year period:

The Eightieth Congress launched the European recovery program.

The Eightieth Congress authorized unification of the armed services.

The Eightieth Congress cut six billion from the padded Truman budget.

The Eightieth Congress balanced the budget for the first time in 16 years.

The Eightieth Congress reduced wartime income taxes and gave 70 percent of the tax savings to those in lower-income groups.

The Eightieth Congress created a bipartisan Government Reorganization Commission, later known as the Hoover Commission.

When we consider politics and government, let me say that the American people, in the long run, will determine the type of government and the kind of policies they want. The Republican Party welcomes that fact because it wants the people to mold its policies and to determine its future.

There are some politicians who think that anything goes with the American people and, unfortunately, they have sometimes been correct in that unflattering analysis. Yet, these things have a way of coming out of the deep freeze, so to speak.

Take this matter of peddling influence in the high councils of the Government. A recent report of the Senate investigations subcommittee speaks of the eventual triumph for public virtue by pointing out that the fundamental reason for the success of the 5-percenter was that he was permitted to operate in secret behind the scenes. As long as this condition was allowed to exist, the 5-percenter flourished. Once the 5-percenter is exposed to the light of day, he can no longer survive.

So we are reassured, after all, that not everything goes with all the people. We find

that Lincoln was right when he said, "You can fool all the people some of the time, and some of the people all the time, but you cannot fool all the people all the time." I would just add the thought that if our people have access to the facts, you can't fool them for long, either on domestic matters or foreign policy.

As a matter of fact, we have recently had good reason to be concerned over commitments made in the international field without thorough understanding on the part of the American people or of Congress. Our Government participated in international conferences of great moment—at Yalta, at Potsdam, at other far places—but they were not open negotiations and some secret decisions were reached. We are still not certain what some of those agreements were, but we do know that they opened a whole world of difficult problems, on the continent of Europe, in the Near East, and most tragically of all, in the downfall or collapse of our once honored ally in war, Nationalist China.

Such conferences, in which our Government officials conferred in secrecy and inn which the American people did not participate through their Representatives in Congress, were not intended by the founding fathers. I doubt whether such an able leader as Senator VANDENBERG, had he been consulted, would have approved a situation where Berlin is permitted to sit virtually as an island, surrounded by Russian-controlled territory in Germany, where an air lift became a necessity for the allies to supply their sector in Berlin. I doubt if he or any other able congressional leaders would have tolerated the development of a similar situation in Austria where the Russians have delayed a peace treaty and where the great city of Vienna is completely surrounded by Soviet-held and Soviet-controlled territory.

Appeasement of the Soviet Government, so evident in all of these matters—in Manchuria, in China, in Germany, and Austria—is shocking enough when we realize what has taken place and how it has complicated the whole problem of world peace. It becomes even more shocking when we learn that a keyman who stood at the elbow of our President at Yalta, advising him on Russian and far eastern affair, since has been publicly convicted of being a fellow traveler of the Communists, if not worse.

We face a most critical situation with relation to China. It is obvious that we have not shown the same decisive, courageous attitude toward the problems in China that we showed in the defiance of Russia in our Berlin air lift and in our positive action in the European recovery program as well as the Atlantic Pact. I am not passing judgment on what we have done in China and what we are doing in Formosa except to say that the situation is not reassuring. We cannot desert our Government as it deals with these matters, but we have reason to be thankful, nevertheless, that we have in the Senate of the United States a vigilant Republican minority that wants to know what is going on and why.

There is need for a bipartisan foreign policy. The world problems are so perplexing, there is so much dependent upon the United States in world leadership, that we must stand united, we cannot be divided. We cannot be united unless the American people really know and understand our foreign policy. For that reason I say to the present administration, if it asks for a bipartisan attitude toward foreign relations, it must be a two-way avenue. They must be frank and honest with the minority on the foreign questions. The policy must be open to legitimate criticism. All questions must be open to intelligent debate to afford the American people an understanding of the problem. This is not an easy way, but it is the American way.

In much of the history of our representative government as it is written in the utterances of our political leaders, considerable stress is laid on such words as frugality, thrift, and economy, to say nothing of a shockingly reactionary phrase, "balanced budget." But in these days when the conservatives are in the "dog house," some new and shall we say foreign theories of fiscal policy have come into being, and with them the same cynical idea that anything goes. It reaches its climax in such slogans as "spend and spend, tax and tax, elect and elect."

Ten years ago Federal Government expenditures amounted to about $69 for each man, woman, and child in the country. In the fiscal year 1951 the per capita expenditure is estimated at more than four times that amount, or $278.

With this vast expenditure, amounting in total to an estimated $42,400,000,000 during the coming fiscal year, our Government has embarked on a policy of deficit financing. It is estimated that the deficit will be $5,100,000,000 next year; it is $5,500,000,000 for this year; it was $1,800,000,000 last year. Those figures, the amounts we are running behind year after year, represent a lot of money. They represent, also, a wholly unsound approach to Government fiscal policies in times of peace, and full production and plenty.

That question is one that must be weighed by everyone whether he be the man toiling in the shop, factory, or processing plant, the man classified as the white-collar worker, the executive who heads one of the great corporations of the land, or the corner merchant. Everyone must recognize that we cannot indefinitely spend more than we take in without passing on to our children financial burdens that they will not be able to carry. We cannot continue a free-enterprise system when we spend more than the revenue from sound taxation. Nor can we tax people too much and still have venture capital to create new businesses and expand present businesses, thereby creating the jobs that men and women are constantly seeking as a means of providing their own security. There would be no incentive for a man to work if he knew that it would all be taken from him in the form of taxation, either by inheritance taxes or the year-to-year taxes.

The best answer I can find to deficit financing is just to think of it in terms of a family budget. The credit of the family depends chiefly on whether the family is living within its income. And that is equally true of the Nation.

Our own course of deficit spending is not sound and it is our children who will be asked to carry the financial burdens in the future years.

The Republican Party stands for a sound program of Government financing. This means reducing the cost of government, staying within our income, and paying off our debt.

We advocate a program for agriculture that will give the producer necessary protection with a minimum of regulation and regimentation. We urge a program for labor and management that will assure fairness and balance in their relationship, with the Government an umpire and not a punitive agent.

In the field of social security and welfare, we intend to preserve and strengthen the gains that have been achieved as we have developed enlightened and humane policies, but we are vigorously opposed to radical experiments such as socialized medicine as advocated by Oscar Ewing and his associates.

We are determined to make this a Nation economically strong and productive, a Nation where civil rights and equal opportunity are confirmed in experience and not merely promised to catch votes, a Nation where national security and internal justice are commonplace and not virtues merely to be extolled by public speakers. These things we shall try to do for all, and not for one class arrayed against another class, or one group promoted at the expense of another group.

We propose to make secure and lasting the peace which was bought by such a costly sacrifice of American youth on battlefields of a global war, and by the vast investment of the productive capacity of our people. We shall do this by sustaining the European recovery program, implementing the North Atlantic Treaty, strengthening the United Nations, and revitalizing our far eastern policy, knowing that unless we go forward with courage and determination in these matters we may find that, by waiting until the dust clears, what we have to offer has become too little and too late.

Above all, the Republican Party stands for freedom of the individual, freedom of enterprise and initiative, and freedom from the evils of too great dependence upon Government.

With this challenge and this opportunity, let us, then, in the spirit of Lincoln, dedicate ourselves and our party to the proposition "that this Nation, under God, shall have a new birth of freedom."

"Old Order Passeth"

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the RECORD a letter entitled "Old Order Passeth," written to the editor by Ed Wimmer, of Cincinnati, and published in the Cincinnati Enquirer of January 22, 1950.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

READERS' VIEWS

"OLD ORDER PASSETH"

To the EDITOR OF THE ENQUIRER:

I have just read your lead editorial of December 27 entitled "The Old Order Passeth." I write to congratulate you, not only on the soundness of this one editorial, but to express my appreciation of the many other excellent declarations of faith which have preceded it.

It is too bad that more people do not turn to the editorial page instead of so often to the news and comic strips.

In this editorial you rightly criticize the present tendency of the Federal Government to "graduate income taxes so steeply as to make it impossible for an individual to withhold any sizable amount of his earnings." You deplore this tendency on the part of the tax gatherers as one which not only deprives the individual of his just earnings, but which will in the near future tend to shut off private endowments to community projects, research foundations, universities, or other institutions.

The time has come when all thinking Americans should join in such a protest as you have voiced. This leveling off idea was the beginning of the end of freedom in other nations, and if continued in this country not only the wealthy but all individuals will be paying their surplus earnings into the Federal Treasury and be dependent upon the Federal Government for everything above basic requirements.

We all know that in many instances that wealth is unduly accumulated, but the present policy is almost wholly opposed to the idea that the essence of private security is the right to earn and save more than one may actually need, and then to put such savings to productive use. Viewing the present scene one might well inquire, "Who will defend liberty and democracy when the thrifty have been wiped out with too much care of the unthrifty?"

All around us is a changing of governments due to collapsing economies, and the only reason that we have not gone down and under with the rest is our faith in the Jeffersonian principle of "proper reward for effort expended."

The only thing that will open up the Golden Age now beckoning to us is a rebirth of self-reliance, self-determination, individual, competitive enterprise, and a rededication of ourselves to the preservation of self-government.

If the "old order passeth," in which men are rewarded according to their worth, the fault will not be that of the Federal Government, but rather will it rest with those citizens who are so willingly yielding their personal liberties in exchange for the subsidies and false security which a government can promise, but which no government can continue to deliver.

ED WIMMER.

CINCINNATI.

Fantastic Lustron Case

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Fantastic Lustron Case," published in the Pittsburgh (Pa.) Press of recent date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FANTASTIC LUSTRON CASE

Carl G. Strandlund, representing a Chicago company in the business of building filling stations, traveled to Washington in 1946.

He wanted priorities for a little steel, then so scarce that the Government rationers would let him have none for filling stations.

But Government housing expediters gave him a new idea. Maybe he could mass produce prefabricated steel houses. If so, they'd get him steel.

Prefab housing was a field strange to Mr. Strandlund. He would need capital to venture into it and he could afford to risk only $1,000 of his own money. But the housing expediters had an answer for that problem—the Government's Reconstruction Finance Corporation had plenty of money.

So Mr. Strandlund organized the Lustron Corp., and leased, for $425,000 a year, a Government-owned former war plant at Columbus, Ohio. And, from the White House, Presidential Assistant John R. Steelman wrote a letter urging the RFC to make a loan to Lustron.

The first RFC loan, $15,000,000, was granted June 30, 1947. A year later Mr. Strandlund needed, and got, ten millions more. Four months later he needed and got, seven millions more. Thereafter he needed, and got, five millions more, bringing his total borrowings from the RFC to $37,500,000.

Lustron started line production of prefab houses in June 1949. Since then it has been able to produce and sell fewer than 2,000 of them. Cost to the purchaser, including a lot, has ranged from $10,000 to $14,000.

It has not been able to repay any part of the $37,500,000 owed to the RFC. Nor, in recent months, has Mr. Strandlund, been able to convince the RFC that he can make a go of the venture if only the RFC will lend him some more millions.

Now the RFC has decided to foreclose on its Lustron loans, with small chance of ever recovering more than a few cents on the dollar.

Well, of course, it's only money that the RFC will lose. But part of it happens to be your money, taken from you in Federal taxes.

So perhaps you'll agree with Congressman ALBERT M. COLE, of Kansas, that here is a sorry example of what happens when the Government goes into business and makes decisions on the basis of politics, favoritism, and wirepulling.

You will, we hope, want to add your voice to the demands for a congressional investigation of the Lustron affair and of other RFC lending activities.

And we may conclude, as we do, that Congress should call a halt on bureaucrats who risk the people's money in ventures which most of the people, if they had any say about it, would not undertake.

Segregation in the Army

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. JAVITS. Mr. Speaker, in connection with the fight which I have been waging to eliminate all segregation from the Army, there is appended hereto a factual news report which illustrates again that given the same opportunity American troops will respond to proper training regardless of their race, creed, or color:

[From the New York Times]

ARMY FINDS NEGRO EXCELLENT PUPIL—THOUSANDS TRAINED AT SCHOOL IN GERMANY SHOW APTITUDE FOR BECOMING LEADERS

KITZINGEN, GERMANY, February 12.—The United States Army is turning thousands of Negro soldiers into top-notch fighting men at a base, once a German air force installation, on the outskirts of this old Bavarian city.

At Kitzingen Training Center, the largest Army school in the European command, a student body of about 1,200 men goes through concentrated academic, military, and character-building courses that raise educational levels and provide the students with a better understanding of military tactics and methods.

According to Col. Henry C. Newton, of Los Angeles, commandant of the center, the Negro students, whose ages range from 19 to 35, have demonstrated a remarkable talent for grasping knowledge and have shown a high potential for becoming military leaders.

Failures among the soldier students have been below 10 percent. At the end of 1949 more than 13,000 men had been graduated from the center with diplomas.

"These men will be a great asset to the Army," Colonel Newton said.

Asserting his belief in academic training for soldiers, Colonel Newton explained:

"Our Army is airborne and highly mechanized. Our men must know mechanics, understand orders, and have a thorough knowledge of maps and terrain. To an educated man these things come easier. That is why we have undertaken this program for Negroes who now comprise 10 percent of our strength in the European Command."

The training center here has a faculty of 70 instructors, both white and Negro. The curriculum is divided into three categories: General subjects, motors, and weapons. The academic instruction begins with basic education for men of less than fifth grade educations.

By means of careful screening, new testing methods and improved classroom instruction the basic-level group has been nearly eliminated.

The program also includes an 8-week development course for noncommissioned officers designed to strengthen qualities of leadership and initiative; an 8-week education instructors' training course planned to orient and instrument special personnel as teachers for the Army's regular educational program; a 1-month orientation course for new personnel; and a 4-week education refresher course to supplement and continue the training of educational instructors.

The center covers a wide area. It has rifle and pistol ranges, training fields, and 49 modern buildings including 11 dormitories, school buildings, and recreation centers. There is a well equipped library, a good gymnasium, bowling alleys, game rooms, club rooms, stores, and a moving-picture theater.

Stalin's Stooges Left Imprint on American Policy

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Stalin's Stooges Left Imprint on American Policy," published in the February 25, 1950, issue of the Saturday Evening Post. The editorial is not only thought-provoking, but it calls to our attention things which have happened in the past, which may have a very serious imprint and effect upon our Government, not only for the present, but the future.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STALIN'S STOOGES LEFT IMPRINT ON AMERICAN POLICY

The turmoil caused by Secretary of State Acheson's citation of scriptural authority for visiting Alger Hiss in prison or even out on bail may have been a little overdone. After all, the Christian admonition does not limit such attentions to prisoners who have been acquitted. The fuss tended to obscure the main question, which is: What was the impact on American foreign and domestic pol-

icy of the presence in the Government of Alger Hiss and others who believed as he did? In the future annals of our history, it is certain that stolen documents will play a part less important than the ability of Communists and fellow travelers in Government posts to point American policy in directions favorable to Moscow. A memorandum here, a "minute" to a state paper there, perhaps slanting information necessary for decisions at the "policy-making level"—these will be seen to be the real reasons why Communists and fellow travelers were spotted in strategic positions throughout the administration.

Senator KARL MUNDT, of South Dakota, in a well-documented address to his colleagues, did something to keep current thinking on the right track. Going back over American postwar foreign policy, Senator MUNDT pointed out that Alger Hiss had received key behind-the-scenes assignments at the Dumbarton Oaks Conference; at Yalta, where we lost to Russia the war we had just won from Japan; and at San Francisco, where were laid the legalistic foundations for Soviet sabotage of the United Nations. At Yalta, Senator MUNDT points out on the authority of the late Ed Stettinius, then Secretary of State, Hiss continually expanded his functions so that at one point he was the sole United States representative on the committee which recommended giving Russia three votes in the UN Assembly to America's one. He was also called in to do the legal work on the Yalta decision on the Polish boundary dispute.

These official activities may mean much or little, but they provide fascinating material for speculation, perhaps for investigation as well. Certainly more damage to the cause of free peoples was accomplished through these conferences than by any secret papers our fellow-traveler friends managed to slip to Elizabeth Bentley or Whittaker Chambers. For example, Harry Dexter White, former Assistant Secretary of the Treasury, who died before the House Un-American Activities Committee could go to town on him, is understood to be the real author of the so-called Morgenthau plan for the pastoralizing of Germany. White, in some mysterious fashion, acquired enormous influence on our German policy, theoretically administered by the State Department and the Army of Occupation. White's minions in Germany succeeded in postponing any constructive recovery program for Germany and are therefore in no small degree responsible for the expansion of Soviet prestige among the Germans. These characters managed to survive long after our policy toward Germany had changed. Upon being sent back home, some of them carried on their pro-Communist activities by explaining to liberals that General Clay or Commissioner McCloy or both were reviving nazism and cartels in order to promote an attack on Russia in world war III.

Who had the bright idea that Dexter White should step out from his job in the Treasury to take on the diplomatic task of forming American policy on Germany? Why wasn't his leftist attitude suspected by those who made the appointment? Or was White's point of view supposed to qualify him for such responsibilities? According to the Un-American Activities Committee, the purpose of the Red apparatus was not primarily espionage, but Communist infiltration of the American Government—the subordination of American policy to Russian purposes. Therefore, a probe of this infiltration should be as profitable as the investigation of espionage proved to be.

The justification for this curiosity is that the primary purpose of Red infiltration through innocents, fellow travelers and actual agents was largely achieved. On the vital issues presented by the war, we let Stalin write his own ticket. We consider ourselves bound by these disadvantageous agreements. If it can be shown that all or any of them were the result of the labors of Communist agents spotted among the stuffed shirts at international conferences, the world might as well know the facts.

The American Congress and people should know the facts, too, if only for use in detecting and ridding our services of remaining subversive influences. The truth about Red impact on American policy will also prove useful when and if our one-sided effort to play ball with Russia becomes impossible, and we decide to claim a foul.

Bankruptcy Results in Dictatorship

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Bankruptcy Results in Dictatorship," written by Hassil E. Schenck, president, Indiana Farm Bureau, Inc., and published in the Hoosier Farmer, February 1950 edition.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BANKRUPTCY RESULTS IN DICTATORSHIP

(By Hassil E. Schenck, president, Indiana Farm Bureau, Inc.)

With the Eighty-first Congress again in session and with a great multiplicity of issues to be considered, there are a few which stand out as of utmost importance because they indicate trends which will influence the destinies of men in this Nation and probably in the world.

One of these is the matter of deficit financing. Many sound businesses resort to deficit financing on occasions. Sound government may well do likewise. No sound business, however, can continuously go in the red and stay in business. It will eventually go into receivership and be liquidated. When receivership takes over any corporate business, democracy ends so far as that particular business is concerned and dictatorship takes over. The stockholders no longer have a voice—the trustee in receivership, under the direction of the courts, issues the ultimatums. History bears out the fact that if governments approach insolvency the roads are paved for dictatorship.

JUST TWO BALANCED BUDGETS

Our Nation went into deficit financing in the latter part of the Hoover administration. We have had, from that day to this, just 2 years in which the budget was balanced and with slight reductions in the Federal debt. Those were the fiscal years ending in 1947 and 1948, with 1949 finding us back in the red again and with 1950 indicating a deficit of some $6,000,000,000.

Bear in mind that today our Federal debt is at the $257,000,000,000 level and also remember that in the middle thirties there was a congressional limit of $30,000,000,000 beyond which it was considered economically unsound for this country to plunge into debt. Our debt is now over eight and one-half times what 15 years ago was regarded by economists as the maximum debt which this country could stand. The Eighty-first and possibly Eighty-second Congresses will determine future fiscal policies, which will affect the everyday lives of our citizens.

An aroused citizenship can make its sentiments felt through the proper organized channels. With the farmers, this is through Farm Bureau.

NO SUCH ANIMAL

We seem to be living in an age when people want something for nothing. There just "ain't no such animal." Everything the public gets from the Government not only costs somebody, but it also costs additional for administration and interest on accumulated debts. No dollar can ever get to Washington and back without considerable leakage.

This, and/or the next Congress, will determine whether the farmer's security is to be subject to Government appropriations with Government control over what a farmer plants and markets and with Government regimentation of all handlers, processors, and distributors of food products, or whether we shall have a broad program with a minimum of regimentation, a maximum of personal liberties, and a guaranty to the farmers of an equitable income with an absolute minimum of subsidization. The latter can and should be effected.

GOVERNMENT MEDICINE IS AN ISSUE

Still another issue that will be determined is whether or not moneys shall be raised by Government from the taxpayers of our country to pay for hospitalization and medical care of our people. England is experiencing this now, and indications are that it is much to their sorrow. Government has some definite responsibilities to see that hospitals and/or medical centers under local controls are available in sufficient numbers and size to meet the actual needs of the various areas. Available local resources should be used wherever possible and in every instance Federal appropriations should be matched with local funds.

In recent decisions by the electorates of New Zealand and Australia, socialistic trends were definitely reversed. All the world has an eye on England to see what will happen in the weeks ahead. In the meantime every citizen in America should be thinking most seriously whether or not we should break away from precedents which have made our country the most independent, the most unselfish, the most powerful, the most resourceful nation in all the world, or whether we should pattern after those countries which are right now looking to us for help to prevent their economic collapse.

Liberty in Crisis

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. LEHMAN. Mr. President, on Wednesday evening, February 22, I made an address at the thirtieth anniversary dinner of the American Civil Liberties Union in New York City. I ask unanimous consent of the Senate to insert this speech entitled "Liberty in Crisis," which proposes a point 4 program for human rights, in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LIBERTY IN CRISIS—A POINT 4 PROGRAM FOR HUMAN RIGHTS—AN ANALYSIS OF LIBERTY'S ROLE IN THE WORLD CONFLICT

We are gathered here tonight to do honor to a great captain in the unending battle for human rights. Roger Baldwin has fought all his life, to secure for his countrymen the full exercise of those rights. But I was told beforehand that Roger Baldwin wished tonight to be honored by a discussion of civil liberty rather than of Roger Baldwin. So, it is to do him not less but more honor that I turn attention from Roger Baldwin's personal achievements of the past to the problem which confronts him and all of us today—the problem of civil liberty in its international and world aspects.

Not only civil liberty but all liberty stands in serious peril as a result of the forces which face us in the world today. If we succumb in the current struggle against these forces, the lamp of freedom may be extinguished for us and for our children, and for generations to come. But the threat is not one of aggression alone. If it were only that simple? Liberty faces a triple threat—aggression from without, subversion from within, and finally self-destruction. In our efforts to ward off the first two dangers, we must not yield to the third. We can lose our liberties by denying them gradually to our own people, as surely as by surrendering them suddenly to an enemy.

This is the first paradox we face in a world torn by struggle and conflict. But this paradox is not as simple as it sounds. In order to uphold liberty in a world of clashing ideologies, our first concern must be to guard and maintain liberty at home. How else can we urge the blessings of liberty upon other peoples? But how can we prevent the enemies of freedom in our own country from using that very freedom to destroy it for the rest of us? In this question lies the riddle of 1950. That riddle has not yet been wholly solved. Any solution contains some elements of danger. But one fact we know from history, and that is this: Freedom is indivisible. To deny it unjustly or arbitrarily to some is to endanger it for us all.

We must bear in mind that the Kremlin is well aware of this inner paradox of democracy and is quick to remind us of it and to aggravate it. Nothing would suit the purposes of the Politburo more than the crumbling away of political freedom in America. Anything which the enemies of democracy can do to excite us into hasty and repressive action is marked as a success in Moscow.

But this is only the first problem which we face. Another, and perhaps an equally serious one, is the fact that all Americans do not have the same value in mind when they speak of liberty. We do not all mean the same thing when we speak of tyranny.

Almost a hundred years ago an American statesman said: "The world has never had a good definition of liberty. * * * We all declare for liberty, but we do not all mean the same thing. With some, the word 'liberty' may mean for each man to do as he pleases with himself and the product of his labor; while with others the same word may mean for some men to do as they please with other men and with the product of other men's labor."

The man who gave this definition of the problem of his day was Abraham Lincoln in a speech at Baltimore in 1864. The problem of 1860 is still with us. But today it is even more pressing than it was a century ago. Today the belief held by some few Americans that liberty is the right to exploit, regardless of the rights of those exploited, makes it all the more difficult for America to convince other peoples that our kind of liberty is a cause worth fighting and struggling for.

And finally, we come to the third and most difficult of the problems of liberty, the denial of full equality and rights to some of our citizens because of their race, religion, or national origin. Every such denial of equality in this country, every such denial of political, economic, or social rights is being magnified abroad today as a cynical contradiction of our professed claims of freedom and justice. And honest men must admit that these denials are hard to explain to foreigners who hear us describe our country as the homeland of liberty and equality.

These inequalities and discriminations exist in our country by virtue of law in some cases, but in most cases by custom. The most obvious of these discriminations and inequalities are those against American citizens of Negro race. And I say to you tonight, as I have said again and again, that this shame, this blot upon our national honor furnishes ammunition to our enemies more deadly than bullets and shells.

Of course, we must not be discouraged by thes circumstances into feeling that we have no right or duty to preach liberty to the world. The fact is that we are pressing forward, with full vigor, to eradicate the cancer of discrimination and inequality from the national body politic. The policy of our Government in this field is clear and determined.

We are holding out to the world an ideal which even some of our own people do not completely understand. But great things have been wrought in this world, and they have been wrought by imperfect men and women, and by imperfect nations. We need to be truly shamed by our failures only on the day we cease to struggle for liberty and equality at home. While we continue our efforts to expand the rights and freedoms of all our citizens, we must offer our energies in the struggle to bring rights and freedoms to all mankind.

But how is this to be done? There are 2,250,000,000 people in the world. It is true that the vast majority are not Communist. But neither are they prodemocratic. The fact is that they are uncommitted. Today they hear the siren song of the Kremlin and of other advocates of totalitarianism. Communism does not promise these people personal liberty. But communism does promise—however falsely—food, equality, and security.

Can we promise less? Or should we promise more? Of course, there are some among us who would have us stand only on the atom and hydrogen bombs, and on naked military power. Certainly it is necessary that we be militarily strong and powerful. But military power is not enough. Through single dependence on military might, we might avoid attack, but we would inevitably invite being isolated and engulfed. I believe that we must offer, in addition, a positive program to the peoples of the world.

I believe that we must acknowledge and take into account the desire of these peoples for economic security. It is a tragic fact of history that if men cannot have both freedom and economic security, they will often surrender freedom, or abandon the search for it, in the false and wistful hope of winning economic security. We must advocate both freedom and security. We must make our technology and mechanical know-how available to other peoples so that their dream of security may be truly attainable.

I believe that we must stand for food, for housing, and for the ordinary comforts of living for all men. I do not mean that we should undertake to support the rest of the world. Obviously we cannot. But we can and must engage in a cooperative undertaking with all other nations to help them raise their standard of living.

Finally, and above all, we should stand for liberty—for the right of every man and woman to think freely, to worship freely, and to live freely—free of the fear of economic as well as political and religious oppression.

This is my formula. It is, indeed, a general one. How are we to implement it? It must be implemented by more than words. It must be implemented by action.

That action can be undertaken on three separate but closely related fronts.

We have the Marshall plan. It is a good plan, and must be carried through to its completion. We have given, and are continuing to give, great amounts of food and other aid through which many millions of people have been and are being saved from starvation. We must continue that program on a sound, sensible but not extravagant basis.

More recently, we have conceived the point 4 program. This is an even more dynamic project. I have great hopes for it. Through it, we can carry on the work of helping peoples to help themselves. Through it our vast and almost unlimited store of knowledge can be shared with other nations and peoples. Through that knowledge the nations may find the tools, each people in its own way, to build a better economic life. In the wake of this program, investment will flow. In its aftermath, economic strength will develop.

And finally, liberty. It is axiomatic that peace, plenty, and security are empty values without liberty. But only exceptional individuals will continue to fight for liberty in the face of hunger and total economic insecurity. This is a fact we must face, but without discouragement. And so I propose tonight that we launch a point 4 program for human rights, in close association with our point 4 program for economic betterment. Let America lead the way in espousing freedom for oppressed peoples everywhere, and I mean everywhere, whether it be behind or in front of the iron curtain. Let America lead the way in espousing the cause of both freedom and plenty, of liberty and security. And let America show the way by strengthening and expanding democracy and equality here at home.

This is my challenge to you here tonight, and to all Americans. It is my challenge to the Roger Baldwins everywhere. I have deep faith in mankind's ultimate ability to contain the terrible forces which have been loosed among us. I shall never abandon the hope that freedom and security for all peoples is an attainable goal. It is a goal that may not be fully attained in my time, but it must come, lest we perish from the earth.

Costs of Election in the United States and Great Britain

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with election expenditures and revenues in this country and in England, by Gould Lincoln, from the Evening Star of last night.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES ELECTION COSTS ARE STILL VERY HIGH—COMPARISON MADE WITH BRITISH EXPENDITURES

(By Gould Lincoln)

The high cost of elections in the United States has periodically been the subject of attack. The various corrupt practices acts, including the Hatch Act—the most recent of the statutes—may have put a check on these ever-mounting expenditures in political campaigns, but the cost of a national election is still tremendously high. Compare it, for example, to the cost of a national election campaign in England—which has just taken place.

Under the strict British election laws, one political party with a candidate for each of the 625 seats in the House of Commons is limited to $1,087,500 for campaign purposes. This is made up as follows: Each candidate in a constituency, whether county or borough may spend £450, about $1,260, plus about 1 cent for each registered voter. If 30,000,000 are registered voters, then it adds approximately $300,000 to the sum of 625 times $1,260. Treble the total and you have about $3,000,000, and probably far less was spent.

Take a look at the reported expenditures reported by 144 organizations participating in the 1948 national campaign in the United States. The total was $13,563,878. These reports came from the political committees of all parties with candidates in the field and from labor groups and other groups such as the Americans for Democratic Action. These are reports of committees. Individual expenditures, it is believed, run the total election costs much, much higher.

CHARGES LOOK SILLY

Although President Truman, like his predecessor, Franklin D. Roosevelt, has sought constantly to pin the label of "special interests"—wealthy interests—on the Republican Party, an examination of the contributions made by the so-called "fat cats" to the GOP and to the Democratic Party makes such charges look silly.

A recent and exhaustive survey of political contributions, made by Congressional Quarterly, shows that these fat cats are warming themselves in the Democratic corner. In the off year, 1949—when only a few State-wide elections and a handful of congressional elections to fill vacancies were held—contributions reported by the Democratic committees totaled $1,477,427, and by the Republican committees, $661,804.

The big contributors, too, were on the Democratic side, overwhelmingly. For contributions of $1,000 or more made up about one-sixth of the total intake of money by the Republicans and about one-third of the total intake by the Democrats. The list of these big contributors to the Democratic Party showed the names of many industrialists as well as of some of the wealthy members of the diplomatic corps. And the Democratic list made the Republican list puny by comparison.

MANY BIG CONTRIBUTIONS

Why do these people of wealth now contribute to war chests of the Democratic Party? Is it for favors they hope to receive from an administration that is doing billions of dollars worth of business? Is it because of fear of a shake-down? Or is it just for love of the Democratic Party and President Truman? There were 300 contributions by individuals ranging from $1,000 to $5,000 each, made to the Democratic National Committee.

During 1949, the expenditures by the political committees, especially the Democratic and Republican National Committees, were largely for the maintenance of their party headquarters and staff—now permanent, all the year round organizations of considerable size. With a congressional election coming up this year, the contributions and expenditures for the campaign will be tremendously increased. The labor groups have promised to spend millions to defeat Senator TAFT, of Ohio, and other Members of Congress who have incurred their wrath.

Byrd Joins GOP Attack on Truman

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "BYRD Joins GOP Attack on Truman," written by Edward T. Folliard, and published in the Washington Post of February 18, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BYRD JOINS GOP ATTACK ON TRUMAN—VIEWS GIVEN IN PARITY SPEECH ADD "INSULT TO INJURY," HE SAYS

(By Edward T. Folliard)

Republicans struck back yesterday at President Truman for his Jefferson-Jackson Day speech but the most vehement retort came from a member of his own party—Senator BYRD, Democrat, Virginia.

BYRD took up Mr. Truman's statement that the Republican slogan, "Liberty against socialism," was an insult to the intelligence of the American people, and said:

"If it is an insult to the intelligence of the American people to say that we are on the road to socialism, as the President 'cracked' last night, then the insult is added to the injury already done our intellect by Truman proposals and propaganda.

"We have been moving steadily down this primrose path for some time, but we shall be irrevocably committed to socialism—from which there is no retreat once it is entrenched—if Congress adopts but three more of the President's projects."

Senator BYRD, who was not one of those who paid $100 to attend the Jefferson-Jackson dinner, listed the three as follows:

"Socialized medicine (British brand)—the project assigned to Oscar Ewing, who was sent to England at public expense to get the 'low down' as a basis for his propaganda.

"Socialized agriculture—called the Brannan plan, after its propagandists of the same name—which would give the Federal Government control over the sale and distribution of food, despite fundamental opposition by the great farmers' organizations.

"Extension of socialized housing—the project long ago adopted by Propagandist Keyserling, who plugs his wares in reports of the Council of Economic Advisers."

DEBATE WITH TAFT PROPOSED

"Add to these the President's public embrace of chronic deficit spending and you have a nonstop, high-speed highway to socialism, with or without an insulted intelligence."

Representative WOODRUFF, Republican, Michigan, proposed that President Truman and Senator TAFT, Republican, Ohio, debate the issues of 1950 from a platform in TAFT's home State. He was prompted to make the suggestion by Mr. Truman's announcement that he would campaign in Ohio this fall.

Said WOODRUFF:

"I would like to hear, and the people of the Nation would like to hear Senator TAFT and Mr. Truman debate publicly on the trend to socialism, the mounting costs of Federal Government, the entire lack of economy in Government, and the ever-increasing tax burden on the people. I feel sure that Senator TAFT would be delighted to meet the President on the hustings."

BROWN FOUND TRUMAN AMUSING

Representative BROWN, Republican, Ohio, had this to say about President Truman's speech:

"I was amused by Mr. Truman calling the Republican Party a cuttlefish squirting out black ink to confuse national issues. I prefer the black ink of a Republican cuttlefish to his red herring and the red ink in which it writes its deficits."

Representative CURTIS, Republican, Nebraska, said Mr. Truman once more "has proved he is a prisoner of the irresponsible, left-wing spendthrift groups—predominantly CIO—in our country."

Senator LUCAS, of Illinois, Democratic leader of the Senate, said Mr. Truman's speech was an excellent answer to the Republicans' "phony slogan, 'Liberty against socialism.'"

"It seemed to me," LUCAS added, "the President gave that phrase a complete knockout. I predict that before long they will be talking about some other slogan."

Appraisal of Military Defenses of the United States

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from this week's issue of Life magazine, which every Member of Congress and every American should read.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NATURE OF THE ENEMY

This week Life appraises the military defenses of the United States in the light of the military capacity of the Soviet Union. This appraisal is undertaken in awareness that the problem of United States defense is not entirely a military problem. The American people could make no worse mistake than to assume that there is safety in military defense alone, however massive and costly the defense may become.

Then why undertake such an appraisal?

First, although there is no sure safety in military defense alone, there is sure ruin in any miscalculation or neglect of military defense.

Second, the wisdom and adequacy with which the officials who are in charge of United States policy calculate the defense necessities of the time provide a measure of the wisdom and adequacy with which they calculate the total necessities of the time.

The net showing of our report is that the defense necessities of the United States have

been avoidably underestimated by the President, by his Secretary of Defense and (to the extent that they have participated in final policy decisions) by the chiefs of the military services. Not in extenuation of these officials but to indicate the scale of the turn-about in attitudes and policy now required, this must be added:

The official estimate of United States defense necessities has on the whole been welcomed by the United States Congress, the public, and the press. The dominant desire has been to let the postwar economy run its course toward full civilian abundance. Most everybody had come to realize that the United States was in something called the world conflict, that the conflict might even be called a kind of war and that a certain amount of dollars and goods had to be put up for the fight against communism, which most everybody had come to detest. But hardly anybody really thought that the United States was really in a real war, a war for survival that might cut into the civilian economy and take more out of it than the United States has as yet been willing to pony up.

Now, chunk by chunk, the walls of illusion are falling away.

COMMUNISM AND THE OFFICIAL MIND

Some of the facts confronting the United States and all mankind are terrible, adding up to the single, elemental fact that Soviet communism is committed to the destruction of the free world. This elemental fact is still not accepted, not in its entirety and not in its full meaning, by millions who think in one corner of their minds that they do perceive the innermost fact of the Communist enemy but with another corner of their minds decline to accept and act upon the full implications of the fact. This is fatefully true of all too many of the men who mold and execute western thought and policy.

Consider Dean Acheson, the United States Secretary of State. He recognizes more and more of the separate facts of the conflict, but he still shrinks from the final fact. On February 6 Mr. Acheson said in a carefully considered statement that the Soviet system "is incompatible with a world situation which is based on peace" and concluded that only agreements based on the facts of power mean anything. So far so good—the statement was a decided advance on anything Mr. Acheson or any other administration spokesman had said previously. Yet Mr. Acheson, speaking of the achievement of peace, seemed to assume (as he has always assumed) a point at which accommodation if not formal agreement with Soviet communism would be possible.

NOW THERE IS NO TIME FOR LEARNING

Or consider Mr. Acheson's boss and admirer, President Truman. In an authorized interview with the New York Times the President said last week that he had given up any hope of meaningful agreement with the Soviet Union some years ago (although he has been talking confidently of getting over-all agreement within the past year). He said that in 1948 he wanted to send Chief Justice Fred Vinson to Moscow to "straighten out Stalin" and would have done so if the campaign had not been on. He indicated that he still has this in mind to do "some time." He also said (as paraphrased by the Times), "The real trouble with the Russians is that they are still suffering from a complex of fear and inferiority where we are concerned." Evidently the President still does not understand the real trouble with the Soviet Communists. It is, as cannot be said too often, their fixed purpose to promote by every possible means the destruction of all non-Communist societies.

Urgent demands for one more talk with Stalin are heard on every hand. Another talk with Stalin may be in order. But not on the assumption that any deal with Soviet communism can enable the two worlds (as Winston Churchill put it last week) to live their lives in separate peace. Statements assuming that the two worlds of freedom and bondage can do so, render a twofold disservice. First, they obscure and postpone the total understanding of the enemy's purpose which is necessary if Soviet communism is to be repulsed and in the end defeated without universal disaster. Second, they unwittingly serve one of the main purposes of Soviet communism's world propaganda. Soviet propagandists are doing their utmost to cultivate in the western mind a sense of responsibility for creating a war situation, a guilty conviction that the West is somehow failing to do all that it might to achieve agreement with a foe who makes agreement impossible. However inspired they may seem, however deep the yearning they may assuage, statements which elide or overlook the dedicated enmity of Soviet communism are so much grist for the Soviet mill of guilt.

Official and public understanding of the Soviet enemy has advanced considerably since Yalta and Potsdam. It has improved appreciably in the last year or so. Statesmen learn. We all learn. But now there is no more time for learning.

Two aspects of Soviet communism deserve special attention. They suggest that even the Communist mind is not immune to the pressures of the time—and that the first duty and best hope of the free world is to gird and guard its strength. These aspects are:

1. Rigid in purpose though it is, rigid in attitude though it always seems, Soviet communism has its own peculiar doctrine of change to meet changing circumstance.

2. Soviet Communists are schooled to believe that the final assault must come only when the forces of anticommunism are so rotted and so weak, and when the forces of communism are so strong, that the outcome is calculably certain. Stalin himself has told his followers again and again that they must wait, wait, wait until the world situation is "ripe" for victory.

WATCH FOR A SHIFT, BUT NEVER COUNT ON IT

Anything that smacks of departure from the fixed doctrine of Soviet communism is justified to the faithful on the ground that the doctrine has been newly "enriched by experience." In the past this theory of enrichment has never altered the end purposes of Soviet communism. But it has cloaked many important shifts of immediate aim and attitude—from revolutionary internationalism to Soviet nationalism, and then back to the present militant internationalism, for example. No less for Soviet communism than for the free world, the age of obliteration is likely to be a most enriching experience. The fact that atomic enrichment has as yet had no discernible effect in Moscow need not mean that it will never have.

What is needed is a precise yardstick by which to measure what to hope for and not to hope for. As we see it, the proper yardstick runs something like this:

To hope for any slackening or change of Communist purpose is worse than idle. To hope for any lasting agreement, balance of force, accommodation of aim and circumstance which will enable the two worlds of freedom and communism to live side by side in permanent peace is worse than idle. But to hope that the prospect of mutual obliteration will sink in upon and affect the guiding minds of Soviet communism is not idle. To hope in turn that it will alter the enemy's calculation of what pays and does not pay—of what does and does not constitute a situation assumed to be ripe for final Communist assault—is not idle. To hope further that the prospect of mutual obliteration will seep home to the peoples of the Communist world, as it is now seeping home to the peoples of the free world, is not idle. To hope finally that the enormous pressures engendered by these processes of realization will compel a shift of Soviet communism's attitude toward the uses and control of ultimate weapons is not idle. To watch for such a shift—never to count upon it, never to mistake it for a fundamental change of purpose, but always to watch for and seize upon it if it occurs—is the task of western statesmanship.

THE SUPREME QUESTION: HOW STRONG IS FREEDOM?

We have said, the free world must know its enemy. But knowing the enemy is not enough.

The free world must know itself. It must know—it must never forget—that its freedom and its strength are one. Without freedom it cannot have strength. Without strength it cannot preserve freedom. Without the will for freedom it cannot have the strength of freedom.

At this hour of this age these are not empty words. They have a very present meaning for free men, and especially for free Americans who guard the source and center of the free world's strength.

The danger and the power of obliteration on a nuclear scale are new to mankind. Only now, 5 years after Hiroshima, is the prospect coming home in its full meaning to Americans. As it must for all men, it will affect the lives, the ways, the standards of Americans. The supreme question—and the sooner it is spelled out the better—is whether it will alter the American idea and the American love of freedom.

The national habit, the good habit, is to say as a matter of course that freedom is something to enjoy, to defend, if need be to die for (though preferably not in person). The habit and the idea of freedom have been stronger than any force yet arrayed against them. Are they stronger, will they be stronger than the prospect and power of obliteration? The accustomed "what is life without freedom?" takes on an unaccustomed meaning when there is the prospect of no life. What price the free life in the free society, free men will ask, if to defend freedom is to risk all life and all society?

These are the questions, this is the risk that Americans will be living with until further notice.

Into Stalin's Vestibule

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Into Stalin's Vestibule" written by Heptisax, being a discussion of the direction in which socialism is leading the United States, published in the New York Herald Tribune of January 9, 1950.

There being no objection the article was ordered to be printed in the RECORD, as follows:

INTO STALIN'S VESTIBULE

A DISCUSSION OF DIRECTION IN WHICH SOCIALISM IS LEADING THE UNITED STATES

(By Heptisax)

The doings inside the Soviet Union have been of great interest to a limited number of persons for more than three decades. Now they interest almost everyone. The mess that Soviet foreign policy has made of

the peace has earned the Kremlin dictatorship and the administrative machinery of the police state an attention from great bodies of plain American citizens which they have never in the past given the workings of their own Government. Many features of the picture which they piece together from books by truants from utopia, from magazine articles and from news reports, are pretty horrible. Since the supreme boss of the vast Stalinist empire, and all the duly accredited apostles of Stalinism the world over, insist that a politico-economic system, to which we should not sentence those who have despitefully used us, is successfully applied socialism (Marxism-Leninism), there is not only much squirming among all sorts of Socialists, but a rank-and-file interest in radicalism which would be wholly unsympathetic if all the radicals were not so bitterly anti-Stalin.

The experiment in Russia began with an effort to implement revolutionary Marxist socialism. So, however eloquently our various Socialist friends protest that the system now clamped on Russia is not what should have come of the 1917 revolution, one damned question persists in thousands of well-informed minds—like Lady Macbeth's damned spot that would not out. The question is this: "Isn't that Mongoloid gangsterism in Russia and her neighbors the inevitable end of socialism, whether approached through an orthodox Marxist revolution, or through humanitarian reformism? That, I believe, is troubling so many different kinds of minds, bold and timid, that it accounts for the low ebb of moderate Socialist fortunes in this country. It also accounts for some interesting psychological phenomena.

Anyone who invades the circles of the tough-minded but anti-Stalinist Marxists will hear that, when one of their number has a change of heart and defects, he does not commonly retreat from the serene heights of Marxism to the lower level of the humanitarian Fabians. He makes one wild leap from extreme radicalism into the abyss of reaction. This means, of course, that he has looked over the 30-year record of the Soviet experiment and has decided that Stalinism is the unavoidable flowering of even the gentlest Christian socialism.

But the voting on socialism at the polls also reveals that a great body of reformist Socialists has shied away from guilt by association into the socialistically inclined liberal ranks of the Americans for Democratic Action, the Liberal Party, and so on. They hope to escape the stigmata which Stalinism has put upon socialism; but, at the same time, they hope to infiltrate the Democratic Party so heavily that they can turn it into an instrument of humanitarian socialism. Being persons of good will, they also hope that when the Democratic Party becomes the Social-Democratic-Labor Party, they can elect and elect by virtue of Federal largess, and herd us into a decent socialism that will bear no relation to Stalinism.

Partly they are right. They have done their infiltration; and they have President Truman functioning satisfactorily as a ventriloquist's dummy. If they can win him a lot of congressional victories in November, they will have converted poor old Jefferson's party of the horny-handed, rural individualists, who agreed on nothing so much as the cities were sores on the body politic, into a superunion of the proletarians and threadbare intellectuals (pending the arrival of Dr. Guillotine on the scene). Whether they can go on electing and electing, and can herd us into disguised socialism is another matter. That depends wholly upon the number of conservatives who have the courage to say that is what they are. If the Republican Party is not going to have the courage to say that it is the party dedicated to the conservation of American manliness, I for one shall have no interest in its bids for votes. If it is, for vote-getting reasons, going to be a party offering more efficient guidance into the vestibule of Stalinism, I shall try to compose a death song for the United States of America, based on Ecclesiastes.

Fortunately, we are not there yet. I personally do not believe that new dealism, fair dealism, welfare statism, the crypto-socialism of the ADA, skulking liberalism or the anti-Stalinist democracy of a lot of our best labor leaders, are going to fool the American people very long. I feel that the realization that these all lead into the Stalinist vestibule is very widely appreciated.

I personally feel that there is no other end to socialism. Aneurin Bevan, most popular of the British Laborites, has often been quoted on his bicycle theory. Socialism must keep going like the man on a bike, or take a tumble. Socialism must always call for more of the same, until the centralization of power is so great that the people have lost their check on it. We now have popular political power, through electoral representation, balanced against concentrations of economic power. The Socialists say that the check is not adequate. But the Socialists—the tamest of them—would put centralized political and economic power in the same hands. Upon that concentration of power, with a dozen political Al Capones fighting for it, the aroused proletarians would focus their great will—as they do in Russia through the one-ballot system.

It is just because the upshot of this welfarism is getting to be so evident that we have two marked developments. President Truman has stepped right into the vestibule of Stalinism and has asked the blessed liberals to follow him. They are swarming in. Their weng—one of the rarest of Chinese sounds, meaning the humming of insects—is all but deafening. The other development is the increasingly frequent and bold assertion of conservatism—meaning salvation of what is worth while in the United States—by top-notch persons like Dulles, Eisenhower, Hoover, Dewey, and such like.

These gentry are not against progress. As I have said many times, one can progress at high speed into a bog. (Look at Russia.)

We are all old enough to know that every extension of government service means a check on human liberty. The bigger the bureaucracy the less American we are. If we don't know it, we ought to know that every Federal school lunch to a local child has brought us just one short step into the Stalinist vestibule. No? Well, figure that out.

Communists in Government Employment

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent that there be printed in the RECORD an article appearing in the Washington Post on February 19. This is a story by my good friend and equally good reporter, Jerry Kluttz, concerning the activities of the United Public Workers of America, recently expelled by the CIO for following the Communist Party line. It should be pointed out at this time that this and similar articles by Mr. Kluttz were used by the CIO to support their action in expelling this Red union. Mr. Kluttz is to be congratulated for a job well done.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL DIARY

ANONYMOUS TIP TO REPORTER SPOTLIGHTS UPW'S "RED" TACTICS

(By Jerry Kluttz)

(EDITOR'S NOTE.—The CIO executive board has voted to expel the United Public Workers from the CIO on charges of following the Communist Party line. Among the important pieces of evidence used to support the accusations were stories by Jerry Kluttz, the Washington Post's Government columnist. A background story follows.)

Her convincing words were spoken to me over the phone in a low and halting voice. I sensed she was scared—a thought she later confirmed. The time was late April 1946.

"You must go to the convention in Atlantic City," she urged me repeatedly. "Believe me, and I know, the Communists are all set to grab control of CIO's Government worker groups. Neither the CIO nor anyone else seems to know or care what's happening."

I hadn't planned to attend the convention as Congress was in session and making employee news at the time. Also, the main purpose of the gathering was to merge CIO's United Federal Workers with its State, county, and municipal workers union. It didn't promise to be a newsworthy event and I told my unidentified caller so. I also didn't take her Communist talk seriously.

A day or so later she was back on the phone. I thought she was using a bit of psychology on me when she said:

"So you're not going—that's swell with the Communists. You're the one reporter they're afraid of and they're hoping you don't go to Atlantic City."

By that time the convention was just about ready to get under way. But I told my caller that I would make last-minute arrangements to attend if she could convince me of her Red charges. I wanted specific details, I told her, not generalities. She asked for time to think it over and promised to call me back.

She did. She talked as though she were afraid of being shot at any moment. She then unloaded and this is the gist of it:

That certain union leaders—not all of them—had discussed in highly secret and preconvention gatherings the best way to pull an effective strike against the Federal Government—a walkout that would embarrass Uncle Sam in the eyes of the world.

This one specific thought was debated at length, she said. To launch an organizing drive among the service employees of the Government, the elevator operators, char force, and so forth, and to pull them out on a strike at the right time. Many of these jobs, she added, were held by Negroes and the leaders agreed they could be easily used for this purpose since their plight would arouse public sympathy.

She also told me that a foreign-policy resolution had been drafted that would express sympathy toward Russia while denouncing the imperialistic designs of the United States and her allies. She gave me other details of the preconvention talks.

I told her I'd change my plans and would attend the convention. There was another period of hemming and hawing on her part and then said she:

"Please handle this discreetly. It won't be easy. You're already suspected as being unfriendly. If you write anything they don't like you'll be smeared as antilabor, anti-Negro, anti-Jew, and a Red-baiter."

Her last words were "Good luck but be careful."

I arrived in Atlantic City after the convention had gotten under way. Union leaders reacted coldly to my appearance. I tried without success to talk with several of them about their attitude toward strikes against the Government—all of which convinced me my tipster was on the right track.

Eventually, one of the key unionists conceded to me in a begrudging sort of way that it would be possible to call a strike against the Government under a proposed constitutional provision. He and others, however, dismissed it as meaningless and they swore no strikes were planned against any government.

The strike provision was put before the convention and several Federal-worker members took the floor to demand the right to strike and to denounce the language as weak and soft.

I wrote the story. The following morning, after my column had been read, I became the target of the abuse my caller had warned me about.

Next came the foreign-policy resolution. It was late one afternoon and little had happened that day in the convention in the way of a news story. I was invited to leave as nothing more would take place on the convention floor. I stuck around.

Then a strange thing happened. A reporter covering the convention for the Communist Daily Worker suggested to union leaders that they get out the foreign-policy resolution and get it passed that evening. He was also covering a meeting there of CIO's Textile Workers, and it had just adopted a strong anti-Communist foreign-policy resolution that supported United States foreign policy. He wanted the UPWA to approve its resolution to offset the Textile Workers' stand.

UPWA leaders complied meekly. They pulled out the pro-Soviet foreign-policy resolution and jammed it through the convention over a scattering of opposition.

This proved to be too much for a handful of delegates to swallow and they began belated protests. The small uprising was the signal for an old commie trick—a favorite of the left-wingers became the leader of the opposition. This person confused and misled the objectors while cursing out the "damn" Communists, but when the right moment came he "left them in the lurch," a helpless and bewildered lot.

Several honest opposition members confided to me that they had been threatened and they left the convention early. Because of my stories, very few delegates had the courage to talk with me in public.

The postconvention reaction in Washington was both swift and drastic. Congress was ready to adopt riders to force all UPWA members off the Federal pay roll because of the strike provision. The UPWA executive committee was forced to adopt a flat no-strike provision against the Federal Government to save the jobs of union members.

The foreign-policy issue was taken up and debated in heated meetings of UPWA locals. Many units here went on record censuring the anti-American convention stand. Members began to drop out in large numbers.

I continued to hear occasionally from my informant who couldn't help from reminding me: "I told you so." She gave me advanced information on many UPWA actions. Incidentally, I still don't know who she is.

By this time, however, many former enthusiastic UPWA'ers were beginning to see that they had been duped. Several met me in isolated spots to tell their stories. One of the most helpful was a key Negro member of the union.

His stories of how people tried to get him and others to join the Communist Party, to foment trouble and strife in Government, and their guarded suggestions of strikes against Uncle Sam were a shocking eye-opener. He told me frankly that he thought seriously of joining the Communist Party because he thought it might help his people.

"But the more I looked into it," he explained, "the more I became convinced the Communists were merely using the Negroes for their own devious purposes." "Communism," he told me, "isn't for my people, as we'd lose what freedom we have under it."

I was not one bit surprised to see many UPWA leaders fired on disloyalty charges after what he and others told me.

The National CIO was acutely embarrassed by its UPWA. Its responsible leaders have been convinced for several years that the union should be either expelled or cleaned of Communist influence. About 2 years ago an anti-Communist rival, the Government Workers Union, was set up with top CIO support.

GWU has won nearly every fight it has had with the UPWA and it's slated to take over UPWA's jurisdiction in the Government field.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the original script entitled "I Speak for Democracy," by Robert Shanks, of Lebanon, Ind., who was one of the four winners in the Nation-wide contest participated in by a million high-school students.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

Hello; my name is Brown—Richard Brown. Remember me? No; I don't imagine you do. It's been almost 5 years since anyone has heard about me. And it seems people have a knack for forgetting kinda' fast now-a-days. How about the Battle of the Bulge? Does that strike a familiar note? Of course, you recall it. The papers gave it quite a write-up at the time. I'm glad you do remember it because that's where I was killed. It wasn't very dramatic—my death, I mean. There I was crouched in a fox hole, shaking from the cold so much that I know it was my teeth that gave my hiding place away, when—boom! went a hand grenade and (snap finger) it was over that quick.

You wanta know something, friend—you wanta know why I was over there? No; it wasn't because some big shot drew my number out of a fish bowl either. I'd of been there regardless of that. I was there because of a thing we have in America called democracy. That's a pretty important word when you take time to think about it. It means something strong, good, and just. To men like Hitler and Tito it meant something that had to be destroyed and wiped out if men of their breed were to exist. Well, I was just one of many Richard Browns who couldn't see it their way. Just one of a thousand young kids who'd rather dig ditches than be told he couldn't.

When I was living, it's true that I thought of democracy as—well, like our history teacher used to say: "A noble inheritance left to us by far-sighted statesmen, a beacon light in a world of darkness." This thought hit me particularly on the Fourth of July. Yet, somehow, to me, the true meaning of democracy was kinda' more every day.

It was hot dogs and baseball games, chicken every Sunday, hayrides and roasted marshmallows, giggling girls, and dignified high-school seniors. It was the evening paper and even more informing neighborhood gossip. It was the gang and your girl. It was rugged mountains and broad, flat plains, and big cities, and small towns, churches, schools, institutions. It was a chance to grab the world by the tail and give it a whirl. Sometimes you got to the top; other times, you didn't, but you still had the chance to try.

I saw democracy in our movies, in big fat political rallies, in our colleges, and even in lovers' lanes. Well, in fact, I saw just about everything I did or said. Take away even one of the things I've mentioned and you've weakened democracy. Leave them, and you've given America something to be very proud of—a way of life to build toward a better future.

As an American, I didn't want to fight; as an American, I didn't want to die. I had too much to live for, but when I realized that there were men in the world who didn't want my kid brother to be a Boy Scout, or my pop to be an Elk; then, is when I was ready to fight, ready to fight for America, for democracy. You might even say I fought because I was stingy, stingy for my rights to live and breathe a freeman.

Those of you who have seen a college football game, or a harvest moon shining through the sycamores on a Midwest cornfield, or have listened to the President make his inaugural address, or have attended a county fair—then I think you know why I fought and why I am speaking to you from, well, let's say a place far distant from that war-torn field in Germany. And if you do know, then dedicate yourself to the job of making sure that never again will a Richard Brown have to fight and die to protect our democracy.

Well, I guess I really got wound up, didn't I? Almost needed a soap box. Still, call everything I said drivel, call it sentimentality, if you will. I call it America. I call it democracy. Democracy comes from the Greek, I think. "Demos," meaning "people," "kratis" meaning government—the people's government.

Yes; that's what I'd call it—democracy. The people's right to breathe, to worship, to speak, to think, to gather together, to make an honest living, and, yes, to fight a freeman. That's it; that's what is speaking; that's why I fought.

ROBERT SHANKS.

(Original script written October 1949. Judged State and National winner in third annual I Speak for Democracy Contest.)

The Defense Budget

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with the defense budget, by David Lawrence, from the New York Herald Tribune of this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY IN WASHINGTON—PRESIDENT AND SECRETARY JOHNSON STAND FIRM AGAINST DRIVE TO INCREASE DEFENSE BUDGET

(By David Lawrence)

WASHINGTON, February 23.—There's a drive on to augment armament expenditures by about $4,000,000,000, which would further increase the deficit and postpone indefinitely the time for a return to a balanced budget.

President Truman and Secretary of Defense Louis Johnson are standing firmly against the drive, which apparently is coming from outside the armed services.

The basic claim being made in an effort to induce Congress to expand appropriations is that the United States is weak and not prepared for war. Much of the criticism is rather unjustly concentrated on the Secretary of Defense, who, after all, is given by the Director of the Budget the amount that the President, as the final authority, decides shall be spent by all the armed services.

The question of whether the armament which the United States now has is sufficient is one that depends for its answer on a definition of the meaning of the word "adequate." From the viewpoint purely of military theory, it would take from $25,000,000,000 to $50,000,000,000 a year to be prepared in every sense for an outbreak of war.

What a democracy, however, with a limited amount of money available out of a peacetime economy, must do is set up a defense establishment capable of immediate expansion. If that definition is applied, then the United States is ready for instant warfare and for the immediate expansion of each service in the months that ensue.

AIR FORCE HELD READY

Certainly the United States Air Force, which is the main instrument of instant retaliation, is in readiness to deliver retaliatory blows. No nation in the world with a government in its right senses will wish to invite the kind of retaliatory action of which America is capable today.

But, along with the United States Air Force, there are retaliatory blows which can be struck from the seas as well as from bases across the oceans. To follow up on such moves in succeeding weeks, it will be necessary to reactivate ships and planes now in moth balls. The manpower for such recommissioning of World War II ships and planes is available because reserves are steadily being trained for that purpose.

It is true that Russia is building ships and planes, but the United States has in reserve far more aircraft and ships than Russia is now building and enough antisubmarine strength to cope with any menace to shipping.

The key to preparedness lies in the kind of reserves trained for each of the three armed services. America has always depended on its regulars to form the nucleus of wartime operating forces. The public has been led to believe that next time there will not be time to mobilize armies and navies. There wouldn't be if the counterattack from the United States were not effective. But nothing has happened to our defense forces which in any way justifies the assumption that our retaliatory blows would not be effective. The power of the potential enemy to wage war would diminish from the day war broke out, as American strength would begin to grow.

HUGE SUM AUTHORIZED

The President has authorized approximately $13,500,000,000 for all three armed services for the current fiscal year. This is a large sum, and the armed service chiefs are well aware of the necessity of staying within their budgets. It is gratifying indeed to note the acceptance of budget limitations within all three services. The attitude toward economy and maximum use of the military dollar has undergone a remarkable improvement in recent weeks.

The Secretary of Defense has accepted the task of holding the budget to the limits set and is striving to make economies in overhead and auxiliary services. Cutting expenses in government always produces repercussions and criticism. But it is significant to note that the reductions which have been made are in line with a definite policy which assumes a continuance of peacetime conditions for the next few years at least. Even if a war arises, however, the scheme of our defense organization is such as to permit of instantaneous expansion.

The veterans of World War II are not yet too old to have lost their skills, and a refresher course of a few weeks will bring a manpower strength quite comparable to war conditions.

The drive to unbalance the budget by $4,000,000,000 in the name of national security will not succeed unless a war crisis develops. Then appropriations, of course, would naturally skyrocket far beyond any such figure. The outlook is for peace—and for the continuance of a military budget that the national economy can stand.

The Soul-Searchers Find No Answer

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely and thoughtful article from this week's issue of Life magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SOUL-SEARCHERS FIND NO ANSWER—IN THE FACE OF THE WORLD CRISIS AND THE H-BOMB THEY FORESEE ANNIHILATION BUT NOT HOW TO FORESTALL IT

The melancholy state of world affairs and President Truman's decision to make the hydrogen bomb set off 3 weeks of soul-searching on the part of American scientists and statesmen. Some considered only the moral issues, others merely the practical issues. But most wrestled with both—and with thoughts of the UN and American and Russian military potential as well. None found a real answer.

As the thinkers stood in what many deeply believed to be the shadow of death, some found comfort in groups. Thus, 12 top scientists, members of the American Physical Society, spoke in unison: "We believe that no nation has the right to use such a bomb, no matter how righteous its cause. This bomb is no longer a weapon of war, but a means of extermination of whole populations. Its use would be a betrayal of all standards of morality."

In New York another group—the most august that gathered anywhere to discuss the problem—issued no joint statement but several individual ones. This occurred on February 12, when Mrs. Franklin Roosevelt presided over the first of her series of television teas. Among the guests were Dr. Hans Bethe, physicist at Cornell; Senator Brien McMahon, chairman of the Joint Congressional Committee on Atomic Energy; David Lilienthal, recently retired head of the Atomic Energy Commission; and Dr. Robert Oppenheimer, president of the Institute for Advanced Study at Princeton. "Naturally," said Mrs. Roosevelt, "there can be only one subject we can deal with—and that must be the hydrogen bomb and the future of the atomic-energy program and its direct effect upon our future lives."

Said Dr. Oppenheimer, "The decision * * * to make or not to make the hydrogen bomb is rooted in complex technical things, but they touch the very basis of our morality. It is a grave danger for us that these decisions are taken on the basis of facts held secret."

Then the broadcast switched to Princeton, where Dr. Albert Einstein phrased the problem and offered one solution: "Annihilation of any life on earth has been brought within the range of technical possibilities. * * * Is there any way out * * *? Solemn renunciation of violence * * * is undoubtedly necessary. Such renunciation, however, can only be effective if * * * a supranational * * * body is set up." But neither Dr. Einstein nor the others suggested how a world state can now be established. Later Dr. Bethe said, "Let us state * * * that we will never be the first to use hydrogen bombs." Senator MCMAHON repeated his proposal for a world-wide Marshall plan. Then the program ended with the words of Mrs. Roosevelt: "May God grant us all the wisdom to find the true path to peace through cooperation with the other nations of the world."

Elsewhere other American leaders found themselves in agreement with Dr. Robert Oppenheimer. Gen. Dwight Eisenhower said, "I can't go along with those who believe we should hide the horror of the H-bomb in ignorance. I can see no good in ignorance. From the beginning of time, every invention of mankind has been capable of two uses, good and evil. It is up to the moral fiber of mankind to decide to which use an invention is put. But certainly at this time, faced as we are with a godless opponent. I do not believe we should bury our heads in the sand." Dr. James B. Conant, president of Harvard, was shocked because the simple fact is that many important decisions are being made in Washington today without adequate evaluation.

But no matter what had surrounded the making of the decision, the fact remained that it had been made and reactions to it soon came from all over the world. Returning from Germany, United States Commissioner John J. McCloy said, "I am glad of President Truman's decision. If there were an oxygen bomb that would be bigger than the H-bomb, I would build it." In Rome the Vatican newspaper announced that it is to be deplored, of course, that human society should have come to such a pass, and this is a sad commentary on the world's inability to insure peace except by force, but then went on to justify American manufacture of the bomb because of the mysterious power explosions in Russia. In Washington, Senator MILLARD TYDINGS said, "Our failure to build while other nations are building the H-bomb conceivably could * * * destroy our own security as well as dismember the democratic, liberty-loving world." In Air Affairs Bernard Baruch, whose proposal for international control of atomic energy has been blocked for almost 4 years by Russia in the UN, wrote, "Every effort must be pressed to maintain our overwhelming advantage in the development of atomic weapons. Nor should any time be lost in proceeding to develop the best possible system of atomic civilian defense, as part of a general plan of mobilization readiness against the danger of possible war."

But atomic defense was no easily solved problem. Dr. Vannevar Bush told the Senate Armed Services Committee "the only way to defend yourself against any kind of bomb is to stop the airplane or carrier before it

gets to the target, or to bomb the place that is manufacturing the bomb before it gets started. I know of no way to detonate an atomic bomb—or any other kind—once it is on its way." Dr. Harold C. Urey warned that atomic bombs in the holds of ships could easily be sneaked into the harbors of the United States or friendly nations, and there exploded or employed as the instruments of international extortion. Dr. Ralph Lapp, head of the Navy's Nuclear Research Division, said, "Horrible as it may sound, we must be prepared to lose ten to fifteen million people in the first day of the superblitz. In a certain sense we are like the man who lives in a tar-paper shack and develops a flame thrower to protect himself."

Meanwhile the soul searching of the leaders did not seem to upset the plain citizens of the Nation. Gen. Lucius D. Clay said, "So long as Americans are thinking about it, they will do the right thing." But there was evidence on every hand that many Americans were by no means ready to think about it. In Chicago a lawyer summed up one widely held attitude with, "I've ceased to even think about the prospect of war. The whole thing is so overwhelmingly depressing that I am glad I'm not running the Government right now, that I can go about my own daily business." In Boston a business executive put it this way: "Maybe we're building up an immunity. The world keeps going from crisis to crisis, and they cry 'wolf' so often that we don't pay much attention to it." In Kansas City a cafe owner said, "The only people talking about war are those who stand to make some money out of it. The boys who were in the last war and the parents who lost sons don't want any part of it."

But in Los Angeles a 14-year-old schoolboy named Maitland Hardyman, asked by his teacher to write a short composition as an exercise in the use of words, did so. He lacked the facility of the scientists and the statesmen, and he used one horrible word 11 times while he was writing only 49. The word he used was the one that underlay the thinking of them all. The soul searchers tidily tripped around it, but the schoolboy boldly picked it up and swung it like a sledge hammer. "The hydrogen bomb reeks with death. Death, death to thousands. A burning, searing death, a death that is horrible, lasting death. The most horrible death man has invented, the destroying, annihilating death of atomic energy. The poisoning, killing, destroying death. Death of the ages, of man. The lasting death."

The Same Old Answer

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Same Old Answer," published in the Palladium-Item, of Richmond, Ind., on February 22, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SAME OLD ANSWER

Senator CAPEHART, Republican, Indiana, takes the position that the Truman administration does not know how to subtract.

He passed this judgment when he proposed a $7,000,000,000 cut in Federal spending. A balanced budget and a strong economy are more important than the things which the extra money will buy, the Senator said.

Budget Director Frank Pace, Jr., made typical New Deal reply. He said budget balance is something for the future if economic conditions remain reasonable.

Every administration official has made the same sort of evasive reply to suggestions and recommendations for cuts in Federal spending.

President Truman has sold himself on the idea of deficit spending. He proposes spending more than the Federal Treasury receives and making up the difference by borrowing.

The rapid and dangerous growth of the national debt does not disturb the President. He seems to believe that the people can carry a still greater tax load.

Whether the Federal debt will handicap future generations is of no concern to the President. He wants to spend now, and let future generations foot the bill.

Missouri River Basin Development

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement by Gov. Val Peterson, of Nebraska, on February 23, before the War Department Civil Functions Subcommittee of the Senate Committee on Appropriations. This is an enlightening statement about the conservation program being developed in the Missouri River Basin.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

We are engaged, in the Missouri River development program, in the greatest undertaking of its kind in the history of the world. One can, if he desires, become lost in the blueprints of the engineers and other technicians' statistics relating to the size, numbers, and costs of the dams, and other intricacies of the program. However, boiled down to fundamentals, ours is simply a program to conserve the soil and to make water work for man, rather than to permit it to destroy him and his property.

We've had a great vision and upon that vision the Congress of the United States has placed its stamp of approval. We plan to so manage our soil that the maximum amount of the moisture which falls upon it is contained in it to produce crops and to stop erosion. Recognizing that after we have utilized the best soil management practices known to man, there will still be periods of the year when there will be tremendous run-offs of water gathering momentum as they rush pell-mell toward the ocean destroying all that lies in their path, we have planned to construct 105 dams to impound these destructive waters and by controlling them make them work to the benefit of the people of our region and all America.

The problem of soil conservation, while I am certain that all members of this committee are interested in it, as must be necessarily all Americans, is not before your group for consideration today. It is a phase of our work which must be stepped up immediately. However, every one of the other multiple features of the great Pick-Sloan plan, for the development of our basin, is properly within the province of your committee. When we build great dams to control floods, we establish the basis for all of the other multiple benefits of our program. The water impounded can be released to provide power, irrigation, navigation, firm municipal water supplies, and the great lakes of blue water, with which our area will be dotted, have tremendous potentialities for recreation.

Today, as probably never before in its history, the Government of the United States needs to economize. When any individual or government, whether it be local, State, or national is not on a sound fiscal basis, it is like a house built upon sand, and from its financial failures stem many other difficulties and eventual disaster.

We, in the basin, are thoroughly cognizant of the need for economy in government. In Nebraska, the State government owes no one a penny, has $40,000,000 in cash or in bonds, holds property worth hundreds of millions of dollars, is on a pay-as-you-go basis, and for fiscal 1949 had the lowest per capita taxes in America. Prudent forefathers and the sternness of nature have forced us to learn well the valuable lessons of frugality; frugality of money and frugality of those things which are worth more than money, and, of course, there are many such, including soil and water.

So, at the out-set, let me make it clear that we have no objection to accept such a cut in our activities as the Congress sees fit to apply evenly across the entire scope of governmental activity. We do feel, however, that there must be discrimination in the cuts that are made, that first things should be put first and that in the broadest and true sense, the poorest excuse for an economy movement would be that which would strike at the conservation of our great natural resources which are basic to the wealth and well-being of America. We maintain that if we continue to neglect our soil and our water we lay the foundation for the eventual and final bankruptcy of America.

Public moneys which are invested in projects which add to the wealth of America are expended wisely. They are investments for the future and must be made if our country is to survive and be able to support an expanded population. In our judgment, we simply must not make the disastrous mistake of attempting to balance the budget largely at the expense of soil and water conservation.

One phase of the control of water in the Missouri Basin is basic to all other multiple features of the Pick-Sloan plan. That is flood control. Floods can be ended completely on the Missouri River and its major tributaries, and when they are stopped we have created the foundation for all the other benefits. The other benefits flow, in a broad sense, from flood control.

We simply cannot afford the luxury of continued floods in the Missouri Basin, or, for that matter, on any of the great river systems in America. They are rapidly destroying vast sections of the finest farm lands in our country besides damaging other valuable property and destroying life. They are costly, so constant and costly in fact that our economy cannot stand the drain which they are upon it.

Floods have taken a costly toll of lives and property in the Missouri Basin. For the 14½ years ending June 1, 1949, in which official records are available, the estimated tangible property loss stands at $493,500,000. The loss of human life for the same period was 269.

Only fragmentary records of flood damage are available prior to 1935. Several of the greatest floods of record on the Missouri River

occurred prior to 1935, notably the floods of 1844, 1881, and 1903. High floods struck also in 1903, 1908, 1909, 1915, and 1927. The 1903 floods on the Kansas and Missouri Rivers which converged upon the Kansas Citys in 1903 caused damage to that metropolitan area alone of $23,000,000, and 19 persons lost their lives.

The impact of floods on the lives and prosperity of the people of the Missouri Basin is illustrated in the following table of destruction on a year-by-year basis from 1935 to midyear in 1949:

Year:	*Damage*
1935	$24,000,000
1936	1,000,000
1937	3,500,000
1938	4,500,000
1939	1,500,000
1940	1,000,000
1941	8,000,000
1942	22,000,000
1943	68,000,000
1944	51,000,000
1945	46,000,000
1946	9,000,000
1947	177,000,000
1948	33,000,000
1949 [1]	42,000,000
Total	493,500,000

[1] Covers only first 5 months of 1949.

The full story of human misery and retardation of progress caused by floods in this great breadbasket region is not told in cold figures alone. Thousands of people were driven from their homes by the raging waters of the Missouri and its tributaries, dead livestock floated on the muddy crests, hundreds of thousands of acres of farm crops were washed out, industries dislocated, and highway and railroad transportation disrupted.

In the flood of 1947, 300,000 acres of land were inundated by floods on the main stream and tributaries, 26 lives were lost, and 65,000 persons displaced.

Moreover, the tangible loss figures do not include the tremendous damage to topsoil back on the farms and ranches resulting from erosion. No man is wise enough to put a value upon a ton of topsoil, but unquestionably the loss of topsoil, in terms of dollars, exceeds all other damage in floods many times over. It is an irreplaceable loss. Continued, it can mean regional and national impoverishment. They do not encompass the detrimental effect upon potential growth in natural industrial areas along the flood-menacing streams.

While the major flood damage has been on the main stem of the Missouri River, tributary basins have been hard hit by periodic floods that disrupted the economy of those areas and brought suffering and property loss to the people who live in them.

In my own State of Nebraska, for example, the Republican River Valley was ravaged by the worst flood in its history in 1935. In that flood alone which extended down into our sister State of Kansas, 105 persons, most of them Nebraskans, were swept to their deaths. And when the toll of property damage was tallied, it ran to the appalling figure of $9,000,000. Here again, topsoil losses are not calculated.

The Republican Valley has been hit again and again by destructive floods. In 1943 the loss was $1,100,000; in 1944 it was $1,700,000; in 1945, it was $2,400,000; in 1946, the toll was $1,300,000, and in 1947, it jumped to $20,000,000. On the night of June 22, 1947, 13 citizens of my State lost their lives when a flash flood on Medicine Creek, a tributary of the Republican, swept into the town of Cambridge, Nebr.

This story of suffering and waste is repeated over and over, year after year and basin by basin. In the drainage basin of the Kansas River, one of the major tributaries of the Missouri in the lower basin, the story is the same. In 1943 floods destroyed property in that basin valued at $10,000,000; in 1944, it was $4,800,000; in 1945, $13,700,000; in 1946 the loss was $2,500,000, and in 1947 property damage totalled $26,200,000 in the valley of the Kansas. In the 1947 flood, Kansas farmers saw 375,000 acres of their richest farm lands inundated and many cities and towns along the river were ravaged.

It is a story of waste, of destruction of natural resources which the Missouri Basin and the Nation cannot afford. It can and must be stopped. Under the Pick-Sloan plan, which is now out of the blueprint stage and well along the road to accomplishment, floods will be a thing of the past. Money now drained away by their destructiveness can be used to raise the level of well-being and productivity in the region and Nation. Every dollar invested by Uncle Sam in the control of floods, under our Missouri River development program, will help stop the unnecessary and disastrous destruction now caused by floods and will also help buy for us the constructive benefits that come from controlled waters.

There is no more sound program under consideration in America today. There is no major river development program which is as far along. There is no program which can bring greater benefits to a vast region or the Nation. We plead with you to provide funds in an orderly, regular manner for the development of our resources. For our selfish benefit? Yes. But more important, for your selfish benefit, for the selfish benefit of every American.

Don't force us, by your refusal to appropriate required funds, to stand along the banks of the Missouri next year, the following year, and in numberless other years, wringing our hands and exclaiming, "How long, O Lord, how long must we endure death and destruction."

I Speak for Democracy Essay Contest

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. MYERS. Mr. President, it was recently my privilege to make the presentation of awards at the second annual banquet given by the Philadelphia Junior Chamber of Commerce in honor of the Philadelphia winners of the I Speak for Democracy essay contest conducted among the high-school students of that city.

I was greatly impressed with the clarity of thinking and the sincerity of these young people. In a world where adults are too often either discouraged or indifferent, it is both stimulating and challenging to find such firm conviction among our boys and girls of the need to make democracy work.

I ask unanimous consent to insert in the RECORD the three winning essays by Marie Jesakow, W. C. Beatly, and Lawrence J. Mellon, Jr.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Marie Jesakow)

The days pass by softly, swiftly, and happily. Each day is full of sunshine, the bright smile of heaven. Each day is another day of honest labor, another day of progress, of love and respect for every common man regardless of his religion, race, or creed, another day of peace and faith. These are the days of democracy, the endless days of justice with a new, happy tomorrow, with a future filled with love and brotherhood. I look at the faces of American people radiating joy, peace, and serenity. Everywhere a song resounds with the glorious words, "We hold these truths to be self-evident. That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." This is the triumphant song of democracy which stands for the rights of a whole people to determine its own fate, democracy which has for its goal the development of each person into all that he may possibly become. Democracy dries bitter tears on the weary faces of thousands of people, giving them a sense of security and belongingness. It gives a driving faith that scales steeper heights and views farther horizons.

These are the happy days of democracy in America where every citizen is free. I was born in America with every right to liberty, but as a 7-month-old baby I was taken to Poland. There I stayed for 15 years, returning to this country over a year and a half ago. Fifteen years is a long time, long enough to learn to love freedom and to hate bondage. Those were years of terror, slavery, and death, when the roar of the bombs was deafening and stunning, when the soldier stood on the barricade looking at the burning city, and at the blood, streams and seas of blood. The piles of dead bodies with arms stretching out to heaven were whispering with dead lips words that sounded like thunder, "Vengeance, vengeance to the enemy, vengeance for blood, for burned homes, and for the dead ones that we loved." They did not want to die in slavery, nor to be burned in the concentration camps. Greater was the desire for freedom, stronger was the passion for liberty. They remembered those bright days of work in a sunny field where they lived simple lives playing their music, painting their pictures. No man had the right to destroy their happiness, to change their heaven into hell. No man had the right, but some had power, some had bombs, planes, and mortars. The sharp voice of Hitler declared, "It is a matter of course that a Pole deserves no equal rights," and "Humanism is but a mixture of stupidity and cowardice."

Then came those long, gray columns of people with angry gleams in their eyes and the burning desire for freedom in their hearts always followed by the same companion, death. "Krieg gefangener." Krieg is war, gefangener is slave. That word described everyone in those long, gray columns.

The light of that vision is painful, too bright and glaring to be borne without hurt. But the lesson that we once learned must be carried to those who live, to make them understand that democracy is the salvation of the whole world, democracy that gives us faith in which love is born, the service by which love is strengthened, and sympathy by which love is shared. Democracy has courage and wisdom to establish and maintain universal brotherhood and peace, with all nations joined in love and lawfulness to foster a life more abundant for all. Democracy gives us a belief in values, in dignity, and in the worth of every individual, and disciplines us in service to the common good. Democracy has power to make our world a

place where with fruitful industry, valiant truth, responsible freedom, creative love, and pure religion, all men may dwell in harmony.

I SPEAK FOR DEMOCRACY

(By W. C. Beatly)

I speak for democracy, because I believe in it, live for it, and will endeavor to be worthy of it. But wait! What is democracy? We hear this term used in many newspapers, magazines, and in the press and pulpit. Webster says that democracy means the rule of the people. I say it means more than that. Yes, a great deal more than that.

Democracy is a living and breathing contribution to the life of man, for without the gift of democracy the present would be dismal and the horizon dark. Democracy is not license but liberty regulated by law. It says we are free to talk, think, write, and pray, provided our neighbors have the same privilege.

Democracy is life. It gives us the privilege to call our souls our own, and the right to pursue our individual desires, hopes, and aspirations, subject to the same gift being shared by others.

Democracy is a book, whereby we turn back the pages of history and read the minds of those whose lives and deaths made a contribution to the freedom, welfare, and happiness of mankind. Eternal truths remain the same yesterday, today, and forever. We hear today from Plato, Aristotle, Burke, Pitt, Fox, Bacon, Washington, Jefferson, and Lincoln, and other giants who left an imperishable foot-print in the walk toward liberty.

Democracy is a picture more beautiful and more inspiring than any artist can paint. It gives us views of the mountains of progress, the hills of success, as well as the valleys of disappointment, and failures. We can roam the plains of ambition, and the fertile fields of work, knowing that when the sun shines tomorrow opportunity will still be our heritage, and with the setting of the same we will have had an equal chance to work and play as had the giants of old who bequeathed to us the democracy for which I speak.

Democracy gives me individual freedom. It says that I may read whatever paper I choose in the morning, and learn what others think and do without being punished for my desire. It tells me that I have the inherent right to pursue any business or profession of my choice unfettered by any limitation other than I must not injure others.

Democracy is a teacher. It instructs me in the art of thinking of others and guides me to the altar of good citizenship. It points out the folly of selfishness and tells me that no man can live for himself alone. It is a way of life which when followed with humility and earnestness brings a sense of inner satisfaction, which cannot be measured in any terms other than those which come to all who endeavor to do the right.

Democracy is at my bedside when I awake each morning and gives me the light to see the day, whether the sun shines or the clouds are dark. When the day is over it is my companion when I retire. It is my ever constant friend and helper. Individuals may fail me, and I may be unworthy of friendship, or help, but my democracy is always at my side, ready to pick me up when I stumble and urge me on when the going is difficult.

Democracy gives me a pride of ownership and an interest in the greatest treasure which man can possess. Those who share democracy can call themselves rich, not in the terms of gold and silver, but in everlasting values.

Democracy is America, and America is democracy.

I SPEAK FOR DEMOCRACY

(By Lawrence J. Mellon, Jr.)

Democracy has been the principal topic of discussion in this vast world of ours for the past 200 years. Did you ever stop to imagine the power which this one word conveys? Did you ever stop to think why it makes the peoples of the world look and wait for new hope? It is small wonder that the world yearns for democracy. To the oppressed peoples of Europe and Asia, democracy is new hope, a new light, and a new promise.

In 1776 democracy was conceived in this great country of ours. Our forefathers chose the only form of government where the people determined by free elections those who would conduct the affairs of the Nation. You can readily see how the framers of our Constitution could choose no other form of government. They well knew the many hardships suffered by the subjects of the English king, and they were determined that their children in all future ages were going to live their lives, not in the dark shroud of submission and servitude, but in freedom to read what they please, to worship what they please, and to say what they please. It wasn't easy for such leaders as Jefferson, Franklin, Washington, and Adams to forget their own interests. They looked to the future. It was there and then that they knew that a democratic form of government was the only real one. How right they were we well know today.

How can any group of governing men fail to catch the magnificence of a democracy? Yes, how can they? It seems impossible doesn't it, but it has been done, and is still being done. Hitler and Mussolini and other similar tyrannical dictators scorned the democratic way of life, denouncing the voice of the people, cursing freedom of worship, freedom from want, freedom from fear, and freedom of speech. They, like all others who defied freedom, perished ignobly, cursed and hated by those they oppressed.

But what are we going to do about this democracy, we, the youth of America, who will some day direct the destinies of this great Nation? It's easy to sit back and say: "Well, it's not my problem. Why should I get excited?" Certainly it's easy to say this, but with such harmful indifference, would we be carrying on the patriotic traditions of our forefathers? We most certainly would not. We must zealously practice at all times the democracy we so glibly advocate for others.

Democracy is something that one feels. It is something that is deep down inside of him that makes him rise in anger every time he hears of the communistic freedom-haters. Democracy is something that we young Americans know is right and just, and as future leaders our stand for democracy must be sound and determined. It's not enough to talk about democracy. We must practice its teachings. In our churches, in our schools, and in our communities, we must be ever on the alert—always, at all times, thinking, acting, and speaking for democracy.

Yes; I speak for democracy. I shout aloud to the nations across the Atlantic and Pacific who denounce a democratic government that I speak for democracy. I stand and praise it. I stand and thrust its colors to the heavens and shout, without fear, that I believe in it.

Four hundred thousand other Americans also believed in it. They also spoke for democracy, only not by their tongue, but by their blood. Don't you think that they could tell you of this nine-letter word? They died for it in World War II. Yes; people have been dying for democracy for the past two centuries, and they will continue to die for it until those totalitarian nations which dot the earth correct their freedom-hating ways.

Yes; for the sake of those 400,000, let us pray God that some day the whole world will stand and with the power and majesty of an erupting volcano shout at the top of its lungs: "I speak for democracy."

Kidnaped Greek Children

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. JAVITS. Mr. Speaker, further bearing on House Resolution 456, which I introduced, to condemn the abduction of Greek children by Communist guerrilla forces and seek the return of these children to their homes and parents, is the following prose poem by Harry H. Schlacht from the New York Journal-American of Tuesday, January 24, 1950:

CRIME AGAINST CIVILIZATION

(By Harry H. Schlacht)

Murder, looting and cruelty, kidnaping, outrages, and brutality are still the order of the day in Communist Russia.

The abduction of 28,000 Greek children by Communist guerrillas in Greece is a crime against humanity.

The American people are stirred by this shocking outrage against mankind.

It is but a succession of savage deeds and stands unparalleled in the annals of recorded history.

It is a new and unheard-of kind of warfare.

It is a new and unheard-of kind of barbarism.

It is designed to convert these children to communism.

It is designed to imbue them with a hatred against their country and religion.

The mothers of Greece plead for the return of their children.

From the woes and sorrows of Greek homes come the wailing of fathers and mothers that will not be silenced until their children are restored to them.

This is a time to give Greece—our ally in peace and war—a helping hand.

This is a time for American greatness.

America is the light of the world.

America must take the leadership in this godly cause.

This is an appeal to the conscience of civilization.

This is an appeal to the hearts of all civilized human beings.

Let us voice our thunderous protest against this communistic iniquity.

Let us speak of it until these depraved creatures will understand.

Let us speak of it until these morally deaf will hear.

Let the monsters of Moscow know that the Greek children will never be converted to communism.

Like their ancestors, they will hold aloft God's torch of liberty to light the pathway of civilization.

They will always be God-loving children, in spirit and language, in culture and religious sentiment.

They will always be the ramparts of Christian faith against the arch enemy of the world—communism.

We, as free people, must free these children from communistic bondage.

The cry of the mothers of Greece shall and will be heard.

We must not fail them.

We shall not fail them.

Acheson Logic

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, February 24 (legislative day of Wednesday, February 22), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column of comment entitled "Acheson Logic," by Rev. James M. Gillis, C. S. P., appearing under date of February 16, 1950, under the headline of his column entitled "What's Right With the World," published in the Witness, the official paper of the Catholic archdiocese, of Dubuque, Iowa.

There being no objection, the comment was ordered to be printed in the RECORD, as follows:

WHAT'S RIGHT WITH THE WORLD

ACHESON LOGIC

(A column of comment by James M. Gillis, C. S. P.)

We had a few words in this column not long ago about inconsistency in the dealing of our Department of State with foreign countries. The instance cited was our hostile attitude toward Spain and China in contrast with our favoring Greece and Russia. Being asked to explain, Mr. Acheson said:

"There seems to be a great interest in many quarters in trying to point out a logical inconsistency. They say if you do so and so in Greece, why don't you do so and so in China. The idea is that we must always act exactly the same way in every country in the world. That, I think, is not a helpful way of discussing foreign policy and it is a very false trend."

Since Mr. Acheson mentions logic let's stop right here to remark that in those words he has played a logical trick. Nobody had demanded that he always act exactly in the same way in every country. What he asked, at least in this column, was since you say the United States refuses to send an ambassador to Spain because Spain has no trial by jury, no habeas corpus act, and no popular elections, why doesn't the United States refuse to send an ambassador to Russia which has no trial by jury, no habeas corpus act and no popular elections? We said nothing about always acting exactly the same way in every country of the world. You indicate that you don't care too much for logic. Neither do we, Mr. Acheson, if by logic you mean the device of answering a question that wasn't asked.

The Secretary of State went on to say: "The United States acts in regard to a foreign nation strictly in regard to American interests or those wider interests which affect American interest. If it is to those interests to do one thing in one country and another thing in another country, * * * I am not in the slightest bit worried."

Not to be too critical, let's pass over the dubious morality of America's acting in regard to any foreign nation strictly in regard to American interests. According to that principle American interests seem to be the touchstone of justice and right. How about the interests of the foreign nation? Should not America act toward China in accordance with the interests of China? Toward Spain in the interests of Spain? And so on? Shouldn't America act in accordance with justice and right whether it helps America or hurts America? But, I say, let that pass, and come back to the question not of ethics but of logic.

Bert Andrews, Washington correspondent of the New York Herald Tribune, suggested in his column on January 15, that Mr. Acheson's disregard of consistency may have been inspired by Ralph Waldo Emerson's familiar dictum: "With consistency a great soul has simply nothing to do. * * * Speak what you think toward in words as hard as cannon balls, and tomorrow speak what tomorrow thinks in hard words again, though it contradicts everything you said today." That was a familiar sentiment with Woodrow Wilson who, by the way, used to add the still more familiar phrase of Emerson's "consistency is the hobgoblin of little minds."

But we must not put the Emersonian sentiment into Mr. Acheson's mouth, though Mr. Andrews seems to have reason to do so. We simply say that the present tragic condition of Europe and Asia is due largely to the fact that the United States of America under two Presidents and at least two Secretaries of State has followed an inconsistent foreign policy.

In the startling disclosure of Mr. X in Life magazine, a couple of years ago, the world was let in on the secret that our State Department's left hand didn't know what its right hand was doing. "That's a heck of a way to run a railroad," said the farmer when he saw a head-on collision on the railroad. And it's a heck of a way to run a government when one Under Secretary in the State Department puts into effect a plan diametrically opposed to that of another Under Secretary.

Nor would it add to the stability of the world if Emerson's fantastic notion of inconsistency as a virtue were taken as the basis of our foreign policy. The Yankee philosopher (or was he only a poet and an orator) had in mind chiefly the difficulty—he would have said the impossibility—of ever finding and holding abstract truth. I think he would have been surprised if he could have known that a hundred years later inconsistency was to become a guide in such a practical matter as international relationships.

In that same passage on consistency (from the essay on self-reliance) he does mention little statesmen who worry about being consistent; so I suppose we are to understand that big statesmen, like Mr. Acheson, have no such worry. If that is what Emerson really meant, he was a more dangerous visionary than most of his admirers have thought him.

Be that as it may, the attempt to run the affairs of the Nation, still more of the world, by having one thing today and another tomorrow can lead only to anarchy. That was the principle on which Hitler and Stalin worked. They swore allegiance to each other one day and were at each other's throat the next. So of Russia and Japan. They had a neutrality pact so long as it served them, but when the time came they unceremoniously ditched it.

Is that the kind of thing we Americans must now be prepared to do? In fact, we have done it twice, at least—once in Yugoslavia and once in China. Mihailovitch used to be our man. We chucked him and took over Tito who then executed the man who had been our man. One cynic in high political circles has said, "Tito, of course, is a s. o. b., but he is now our s. o. b." Has the great and glorious American Republic descended to that base amoralism?

Also Chiang Kai-shek was our man. Now we have jettisoned him because to hold to him would no longer be in accord with American interests. Is that what we are to call statesmanship? And justice? And right? How about it, Mr. Acheson?

Editorial Comment on Proposed Constitutional Amendment Abolishing Electoral College

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Constitutional Amendment on Elections," published in the Chicago (Ill.) Daily Calumet of February 4, 1950, and the other entitled "Lodge's Amendment," published in the Rockford (Ill.) Star of February 4, 1950.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chicago (Ill.) Daily Calumet of February 4, 1950]

CONSTITUTIONAL AMENDMENT ON ELECTIONS

An amendment to the Constitution of the United States affecting the election of President and Vice President of the United States is on the way. If enacted into organic law, no citizen will lose his vote, once he has cast a ballot.

Our own United States Senator SCOTT W. LUCAS, a Democrat, teamed with United States Senator HENRY CABOT LODGE, of Massachusetts, to win this week a two-thirds majority in the Senate providing for the election of President in the electoral college on a basis of proportionate votes of the electorates of the respective States.

Under the system which has prevailed ever since the electoral college was created the candidate who gets a plurality in any State in an election receives all its electoral votes. If a Presidential candidate defeated his opponent in Illinois by 1,000 votes say, he would be given all 28 of Illinois' votes in the electoral college. Remember, some 4,000,000 vote in Illinois.

As the law now stands, all citizens who voted for the losing candidate lose their choice in the electoral college. The proposed amendment will change that by having the State's electoral vote divided between the two candidates—or more—on a proportionate basis. For example in Illinois with 28 votes, a candidate receiving 75 percent of the popular vote would be given three-fourths of the electoral college markers. And so on, for any percentage involved.

Beyond a doubt the amendment for a fairer allocation of the electoral vote will meet with support among citizens generally. It frequently happens the popular vote of a State is divided between two candidates, with one receiving 51 percent of the ballots, and the other, 49. Yet under the present system the 2 percent plurality is enough to

give the candidate enjoying this shade of advantage all the electoral votes in the State.

Whether the amendment can succeed is another matter. It faces a long, long trial before enactment. It now must be approved by a two-thirds vote of the House. That accomplished, the amendment must be ratified by at least three-fourths of the 48 States. This may require from 5 to 7 years.

Make no mistake, this is a solid step forward for democracy because all the people have a voice right down to the wire. It would be interesting if one had the time, and inclination to statistical research, to delve back into history to see how many men missed the White House under the present system of winner take all.—H. F. W.

[From the Rockford (Ill.) Star of February 5, 1950]

LODGE'S AMENDMENT

From the time when Senator LODGE of Massachusetts introduced his plan for a proportional counting of electoral votes—a plan to take the place of the "winner-take-all" system in use today—we have looked with favor on the proposal. Nor has the argument that such proportional counting would tend to create splinter parties appeared to us to have much validity.

As for the new plan's being favorable to one party or the other, it has seemed to us that the long-distance gain would be to the Republican Party, since proportional counting would tend to make the "solid South" a ground of contest for both parties.

Yet when the resolution calling for presentation to the States of a constitutional amendment providing proportional counting, and actually doing away with the electoral college, came to a vote Wednesday, it was a bloc of 23 Republicans which offered the most opposition. The resolution was adopted, 64 to 27, with more than the required two-thirds margin. Opposing the resolution were those 23 Republicans and 4 Democrats; in favor of the resolution were 46 Democrats and 18 Republicans. Senator TAFT said he thought the amendment would work to the disadvantage of the Republican Party.

The amendment resolution must now go to the House, where a two-thirds margin is likewise required. If it passes the House, the States will take it up, and three-fourths of the States must ratify before it is proclaimed as a constitutional amendment and thus charter law.

Illinois offers an excellent example of how proportional counting would work. In 1948, Mr. Truman carried this State by a little more than 30,000 votes out of some 3,956,000 votes cast. Yet the entire electoral-college vote of Illinois had to be counted for Truman. Under the Lodge amendment, the vote would have been divided, with a margin of less than 1 percent for Mr. Truman, and with the rest credited to Mr. Dewey.

In a number of other States there was likewise a narrow edge of victory for Mr. Truman; and if the electoral vote had been divided in proportion to the popular vote, the margin would have been close, although Mr. Truman would still have had the edge.

Senator LODGE feels that, if proportional counting were used, there would develop a revived bipartisanism throughout the country, since, even in the South, a Republican could make his national vote count to the extent that it was a proportion of the total of his State's vote. A Republican in a traditionally Democratic State is disenfranchised as surely by the electoral method which we now use as he would be if he were interdicted at the polls by a poll tax.

As for splinter parties, the chief offender has been New York State, although the South presented a Democratic State's rights splinter party in the last presidential election. The splinter vote in New York, proportionately divided, would have given only a minor place to Henry Wallace. The South's splinter actually got recognition, since the electoral votes of the split-off States went to Governor Thurmond, the State's righter.

But, to meet any real splinter threat, Senator LUCAS, of Illinois, got accepted, as part of the Lodge amendment, a provision that the winning presidential candidate must get at least 40 percent of the electoral vote. If the leading candidate lacked 40 percent, Congress would decide between the two highest candidates, with each Senator and House Member having one vote each.

It is difficult to see how this Lodge arrangement would work to the disadvantage of the Republicans, save as it might create a real Republican Party in the South which could not be manipulated as to delegates in national conventions. In fact, the disadvantage would seem to lie with the Democrats if a south hitherto solid had to yield over some electoral votes to the Republicans.

We believe, with LODGE, that proportional counting of electoral votes would revivify the two-party system for the entire country. We also believe that it would reduce the talk of mandates by showing the narrowness of party victories.

Uncertainty in Steel

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial and letter:

[From the Pittsburgh Post-Gazette of June 7, 1949]

UNCERTAINTY IN STEEL

Last week the Senate made a laudable effort toward resolving business uncertainty when it passed a bill that would permit freight absorption in industrial pricing. But while this gives promise that the controversial basing-point issue, which was left up in the air in two Supreme Court rulings, will eventually be decided for good and all, the Senate's gesture can actually have a deterrent effect on future business unless the House quickly follows suit with similar legislation.

Take steel, which traditionally absorbed freight costs to its customers. Because recent Government policy on the matter has been vague, to say the least, the steel industry was changed over last year to f. o. b. or cost-at-the-mill method of pricing in practice, the latter method has proved more expensive to the average consumer of steel. Senator O'MAHONEY, the New Deal lawmaker, who sponsored the recent Senate bill to legalize freight absorption is certainly aware of this fact, thanks no doubt to his constituents way out in Wyoming, who, under the new system, have had to pay stiff freight charges on steel shipped to them. Now, however, since the Senate has voted overwhelmingly to allow industry to quit f. o. b. pricing, steel consumers may well expect that the outlook for similar action by the House is bright. And since freight absorption will mean cheaper steel on the average, these consumers may find it prudent to hold back on present orders which are still reckoned f. o. b. This added element of uncertainty is poor news for steel makers who are already experiencing a shrinkage of their markets. Production of steel, for example, has dropped from 102 percent of capacity in mid-March to 89 percent now. While this dip is due almost wholly to the general postwar readjustment of America's economy it could also be influenced in the future by a reluctance of steel customers to buy when they think there is a chance for cheaper prices. And that chance will exist as long as the House delays on the O'Mahoney bill.

For the short term as well as the long-term business good, then, the House should now give priority to writing this measure into law.

JOY MANUFACTURING CO.,
Pittsburgh, Pa., August 10, 1949.

Hon. HARRY J. DAVENPORT,
Congressman, Twenty-ninth
District of Pennsylvania,
House Office Building,
Washington, D. C.

DEAR MR. DAVENPORT: I read your speech on the basing-point bill, S. 1008, with much interest. Our company is not in the steel business, but we do have plants at different locations in the United States that will be most seriously affected in their business and their employment if we are prohibited from equalizing transportation costs to meet the prices of more favorably located competitors.

For example, our plant in New Hampshire, which manufactures rock drills, must compete in the western mining areas with competitors having plants located in California. We have no understanding or agreements with anybody respecting the prices of rock drills, but obviously we have to at least meet the prices quoted for deliveries from those west coast plants in the western mining areas. This we customarily do by paying the freight on our rock drills to our San Francisco warehouse and distributing from that point on a delivered price basis to meet the western competition. If we are compelled to cease this sales method we will, of course, be forced out of all of the rock-drill business of that great mining territory.

The same conditions prevail with respect to shipments of coal-mining machinery from that same plant in competition with plants of competitors located in or adjacent to the coal-mining districts.

This illustrates what we face in the sale of other products from plants located in New Hampshire, Pennsylvania, Ohio, Indiana, Missouri, and Texas, each of which makes special products for national distribution, and, in various markets, must meet more favorably located competitors.

I am glad to see you speaking from your own personal experience, endeavoring to give some practical relief to manufacturers in this country from the decisions of the courts that will be most hampering and restrictive unless they are changed by amendments to existing laws.

Very truly yours,

J. D. A. MORROW,
President.

Proposed Airplane Trip to the North Pole

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Airplane Scheduled To Make Landing at North

Pole Next Summer; Hubbard on Flight," published in the Daily Alaska Empire, of Juneau, Alaska, of February 20, 1950. The article deals with the proposed trip to the North Pole by plane. Father Hubbard, the famous glacier priest, will be a passenger. I am particularly desirous of having this article printed in the RECORD in view of Father Hubbard's expressed views respecting statehood for Alaska.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIRPLANE SCHEDULED TO MAKE LANDING AT NORTH POLE NEXT SUMMER—HUBBARD ON FLIGHT

SEATTLE, February 20.—Sometime this summer an airplane is scheduled to make the first recorded landing at the North Pole, and among its passengers will be the Rev. Bernard Hubbard, S. J.

It will be a thrilling climax to 23 years of Arctic exploration for the noted glacier priest.

"For years I have looked forward to conducting mass at the north pole," he said here Saturday.

Father Hubbard, who has covered thousands of miles on foot in the far north, climbing snow-covered peaks, studying volcanoes, and gathering a wide variety of scientific data, will make the forthcoming flight in a United States Air Force plane.

"The Air Force has made 400 flights over the pole," he said, "but no one has landed there—at least no United States plane.

REMAIN FULL DAY

"We plan to stay a full day. It is important to learn all we can about actual conditions on the top of the world.

"As more planes fly over the polar region we know some will be lost, but we want to save the men. It's to gain the information on survival there and to perfect the rescue program that this flight is planned."

At the North Pole the ice attains a maximum thickness of about 18 feet and the temperature rises considerably above zero, Father Hubbard said.

"In fact, it rains there sometimes," he added.

TO SOUND OCEAN

Among other things, the party will sound the ocean.

"It is reported to be 14,000 feet deep, but we want to find out for sure," he said.

Father Hubbard, who lectured and showed his latest color motion pictures of the far north at the Civic Auditorium last night, said he considers the defense of Alaska is progressing satisfactorily.

"The situation in Alaska is good," he said, "except that some places housing and recreation for the servicemen should be improved.

"Should Russia parachute troops and take some of our military fields, they could not maintain a line of supply, which would be a minimum of 1,000 miles long. And the worst handicap, the weather, works against foe as well as defender."

DECAY VERSUS INVASION

He said he feared decay from within the Territory far more than possible invasion from without.

"The vastness and impenetrability of Alaska are already strong defenses," he said. "As an offense base it has bases with runways 9 miles long—two near Fairbanks and one near Anchorage. We're ready for any kind of an air strike from Russia."

AGAINST STATEHOOD

The priest said he is opposed to statehood for the Territory because of possible exploitation of the area's rich natural resources.

"It has too few legitimate taxpayers to become a State. In the wrong hands it would make the Pendergast and Hague political machines look like peanut sellers," he said.

"I'm not nearly as afraid of penetration from without as I am of decay from within. If we ever have any real fear of the Russians coming into Alaska, we already will have been so hopelessly betrayed from within that it won't much matter."

Fight of Spain for Survival

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I wish to have printed in the appendix of the RECORD an article on conditions in Spain. This article, written by Patrick F. Scanlan, appeared in the Tablet on February 18, 1950. It follows:

PRAISES HEROIC FIGHT OF SPAIN FOR SURVIVAL—NATION, VICTIM OF MISFORTUNE AND WITHOUT OUTSIDE AID, AROUSES ADMIRATION—FRANCO GIVES INTERVIEW—LEADER URGES FRIENDLY RELATIONS WITH UNITED STATES; NATION NEEDS FOOD

(By Patrick F. Scanlan)

MADRID, SPAIN, February 11.—The heroism and the unity of the Spanish people under most distressing and discouraging circumstances impresses the visitor to Spain. The government, facing obstacle after obstacle, has with rugged determination fought against an economic debacle from within and the pressure of boycott from without.

Spain's handicaps are as follows:

1. A fearful war of liberation from the Communist menace, which continued from 1936 to 1939, costing 1,000,000 lives, crippling thousands of others and destroying an inestimable amount of property.

2. The stealing by anti-Spanish forces of the entire gold currency of the county and transferring it to Soviet Russia.

3. Six years of drought which have proven almost catastrophic. The present government has erected 11 dams but today there is no water behind any of them. The water shortage has seriously affected crops, electric power, the water supply, and the raising of cattle. Some industrial plants have had to close down 3 days in the week and elevators in large buildings have been temporarily discontinued.

4. The boycott of the Spanish Government by many other nations has prevented trade relations and the obtaining of loans. Spain is one of the few European countries barred from obtaining aid from the United States or loans from the World Bank.

Yet Spain has courageously endeavored to make a go of it alone when almost any other country would have either abdicated or succumbed to the dictatorial power and interference of other nations.

MEETING WITH GENERAL FRANCO

Yesterday afternoon we had the opportunity of meeting Generalissimo Francisco Franco. The meeting, which lasted 20 minutes, took place in the former Palace of the Kings just outside Madrid. The approach to the building was simple and we noted only 16 guards around the ruler's headquarters, or less than the guard which usually surrounds President Truman in public appearances.

The General is a short, stoutish figure and, in a double-breasted navy blue suit with civilian tie, looks like an American businessman. He is completely unlike the ferocious type of dictator pictured by the foreign press; rather he is shy, retiring, pleasant, and friendly.

In a brief message, spoken fluently and without hesitation, he called attention to the value of the airplane in promoting concord, stating "since it has been the means of reducing space and bringing peoples of foreign nations together, so, too, should it by the mingling of distant peoples promote friendship."

The Spanish people, he added, have no differences of any kind with the American people, but, on the contrary, have many points of common interest. The General then said he welcomed visitors to Spain and added newspapermen were particularly welcome in the country and he assured them that every facility would be at their disposal.

Journalists, he continued, have a special mission to perform and by their sincere efforts can bring nations together and promote friendship among the peoples. "You have every facility to see the truth about Spain and the reality of what we are trying to do," he said.

Far from having differences, the Generalissimo pointed out, Spain, by reason of discovery, of blood and religion, has many ties with the people of America. He said he hoped the journalists would return often and that many Americans would come to visit Spain. He closed by stating truth was very important and as a part of good reporting made for understanding. He hoped this would be one of the results of the visit to Spain of journalists.

To call Spain a "police state" is completely incorrect, as any visitor will note. The members of the TWA press flight had little or no trouble getting into Spain and they traveled about as they pleased without having to show a police card or obtain a permit of any kind. Moreover, in covering several hundred miles, few soldiers were observed.

The food situation is critical. Nearly everything is rationed and bread and potatoes are particularly scarce. Many farms outside of Madrid—a fine, modern, up-to-date city, with large, clean thoroughfares and a variety of good shops—have been denuded by the lack of water and the number of cattle is alarmingly low. The people are industrious, law-abiding, and only ask for the minimum requirements to get along.

The houses, apartments, and other buildings in the city are well constructed of brick and stone and present a pleasing appearance. There is, moreover, a tremendous building program for everywhere one turns structures of all kinds are being erected.

We were particularly struck by what we saw at University City in the outskirts of Madrid. This huge educational center was practically destroyed in the war for liberation. Today, however, it has practically been rebuilt and the large, modern, well-equipped and well-lighted buildings would do credit to Harvard, Yale, Princeton, Notre Dame or any large American university.

RELIGIOUS CONDITIONS

The Spanish people are good Catholics and attend church in large numbers. The 8:30 mass on Thursday in a neighboring Capuchin church had more than 300 present—and half of them men—and the 11 o'clock mass in another nearby church on the following day had close to 100 present—and these were week-day masses. In the latter church while one priest celebrated the mass another from the pulpit recited the Latin and the congregation in unison made the responses, nearly all possessing missals.

The Irish Minister to Spain, Hon. Leo. T. Macauley, who recently served in the United

States, told us it was a great problem to get a seat at any mass in a Madrid church on Sunday unless one got there from 15 to 30 minutes in advance of the starting time. He also stated the Protestant church in the neighborhood of his house conducted services and the minister's Sunday sermons were frequently quoted by visitors to his residence. Incidentally, the attractive and most pleasant Mrs. Macauley is the former Miss Georgia Gorman, of Elmhurst, in the Brooklyn diocese and she attended St. Bartholomew's Church for many years.

OPINION OF SPANISH LEADERS

At a reception in the American Embassy we, with others, were talking to a Spaniard who is a figure in public life and someone asked "is criticism of Franco permitted?" "If it isn't," he said, "just listen to me." Then he proceeded to attack the Spanish leader largely on the grounds that he had evolved no program for continuing the government once he died or went out of office.

We asked if there were many political prisoners in Spain. He answered that their number was exceedingly small, and then he proceeded to attack the government's leniency in giving a recent amnesty to prisoners who had in the war of 12 years ago committed serious offenses against people and property.

We then inquired about changing the form of government. He replied one of General Franco's strongest aids was the experience the people suffered in the war for liberation, for the horror and suffering of that period taught the people that communism and lawlessness were a far worse menace than anything that could come from the present regime—a regime headed by a man who had actually defeated both Hitler and Stalin and had restored public order.

"Do free labor unions exist?" was another query we submitted to several Spaniards. The answer was that in Spain the workers are united in syndicates and are protected by the government. In industrial disputes the government invariably rules in favor of the workers, it was said, and as an example it was stated that at present, while factories and huge industries could operate only 2 and 3 days a week due to the water famine, the government had ruled that employers must pay the employees a full week's salary. It was also observed that a government permit must be obtained for the dismissal of employees.

AMERICAN POLICY STUPID

Most Americans we talked to in Madrid denounced the United States policy toward Spain as inhuman, stupid, contradictory, and inviting disaster.

It was called inhuman because the Spanish people today are greatly in need of food and are willing to buy it, but the United States, following the appeasement of Russian policy adopted several years back, has made Spain a pariah and prevented aid to these men and women who are our friends.

It was called stupid because a strong Spain is America's best ally in the fight against communism.

It was called contradictory because the United States has been giving aid to Tito and other nations whose form of government and leaders we dislike.

It was said to be inviting disaster, for a collapsed Spain might permit the anti-American pro-Red forces to seize power, and if they did Italy, France, Spain, and Germany would likely fall to the Reds.

We asked an American official at the embassy just how the Government of Spain, to which the United States refuses full recognition and aid, differed from that of Portugal, which the United States fully recognizes and into which millions of dollars have been poured.

He answered: "The difference is that Salazar has ruled Portugal since 1927 and Franco has ruled Spain only since 1939."

We inquired as to whether the Salazar government was fully approved; the answer was "No, but then we should not interfere in the domestic affairs of foreign countries."

Yet this rule does not direct our policy toward Spain. Of this one may be sure, the Spanish people have resented the UN policy toward their country and the Russian-inspired plan to overthrow the Franco regime has made the government stronger in the minds of the masses, for the Spaniard has pride and objects to foreigners telling him how to run his country.

Spain today needs food, modern machinery, transportation equipment, and fertilizer for the farms. The United States could make no better investment from a viewpoint of humanitarianism, insurance against communism, and the cultivation of friendship which would extend all the way through Latin American countries, than by giving Spain this modicum of help and at once.

MAYOR OF MADRID FRANK

The acting mayor of Madrid—the mayor was in Rome on a Holy Year pilgrimage—was very frank in discussing the situation in Spain. He asserted the country was endeavoring to preserve civilization against communism and revolution and had succeeded thus far. It was, he added, astounding that the Marshall plan and United States aid to so many countries—some of which hated everything American—left Spain out of consideration. He urged that Americans include Spain, particularly the needy children of the country, in the help they were so generously giving to other nations and people.

BROADCAST TO THE UNITED STATES

Just how the Americans were impressed by what they witnessed in Spain was strikingly revealed on Thursday night of last week. While at a dinner given the TWA press flight delegation in the Hotel Ritz in Madrid five, including the writer, were asked at midnight if they cared to go on the mighty Spanish broadcast to the United States. Not only did all immediately consent, but in a half-hour program each praised Spain and their commendation went all the way from voicing admiration of the orderliness and cleanliness of the city to urging that the Marshall plan include the interesting and worth-seeing country.

A BELGIAN'S VIEW

A much-traveled Belgian, a man of intelligence and discernment, gave us this apt observation on world affairs: "The only two leaders of nations who know what the world conflict is all about are Stalin and Franco. Stalin is consistent in his program aiming at world revolution and the destruction of Christian civilization. Franco is equally consistent in his opposition to communism, and all its adjuncts and fronts; he refuses to budge in his fight against the menace to Christianity and is the one leader who has, without deviation, sought to preserve the values which have made men and nations great."

Electric Power Industry in Arkansas

EXTENSION OF REMARKS

OF

HON. BOYD TACKETT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the De Queen (Ark.) Bee for January 19, 1950:

NEWS, VIEWS, AND COMMENT

(By Ralph B. Kite)

Congressman BOYD TACKETT's stand against the proposed Federal grab of the electric power industry in Arkansas deserves the commendation of all who are becoming fed up with the creeping trend toward socialism in our country. The Southwestern Power Administration (SPA), the Interior Department's offshoot from Rural Electrification Administration (REA), would, with a flourish of a Federal pen, virtually take over the privately owned, well-managed, taxpaying electric power industry in the Southwest, and Arkansas in particular. They would ruthlessly disregard the interests of thousands of private citizens who have invested their savings in these power companies. We are happy to see BOYD TACKETT stand up on his feet and show up this power-mad tentacle of the Department of the Interior.

Sale of Federal Electric Power in Southwest

EXTENSION OF REMARKS

OF

HON. BOYD TACKETT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by C. F. Byrns, from the Southwest American, of Fort Smith, Ark., for January 28, 1950:

OFF THE RECORD

(By C. F. Byrns)

A good way to cut Federal Government expenses is to use private enterprises instead of competing with them. That's exactly what will happen in Arkansas, Oklahoma, and other States in this area if pending contracts governing Federal electric power sale are approved by the Interior Department.

Douglas Wright, Director of the Southwestern Power Administration, is responsible for the sale and distribution of electric power generated at federally owned dams on the Red, White, and other streams in this section of America. Lately, he negotiated contracts with the Oklahoma Gas & Electric Co. and the Public Service Co. of Oklahoma for distribution of Federal power through the privately owned electric utilities. Similar negotiations are under way with other power companies in the same area, including Arkansas Power & Light Co., Southwestern Gas & Electric Co., Gulf States Utilities Co., Arkansas-Missouri Power Co., and Missouri Utilities Co.

This week, Wright told the House committee considering his budget requests that he will cut $5,000,000 off the expense for the year beginning next July 1 if these contracts are finally approved. The reason is this: He is asking for $5,000,000 in that 1 year, with more to follow, for construction by the Federal Government with Federal money of facilities for distribution of Federal power. Those facilities will not be needed if the contracts are approved for distribution by the private companies.

The proposed contracts make the best possible use of the electric power being generated and planned in the Southwest.

They provide a way to use the hydropower for peaking purposes; that is, for carrying the excess load of demand at the peak hours, while steam plants owned by the private companies carry the normal around-the-clock demand.

Everybody in the power business, both Federal and private, recognizes that peaking power is the most profitable use of hydroelectric energy in this part of the Nation. The stream flows in this area are widely variant. Continuous power from hydro plants requires continuous flows of the streams in large quantities. We do not have that. But we do have many opportunities for developing hydro power as an incident to flood control, silt control, navigation, and other water uses. That power should be put to use in the public interest, on the most economical basis possible.

Under the proposed contracts with the private companies, Federal power will be sold to them at the Federal power plants and at existing interchange points between federally owned and private lines. The private companies will deliver power for the Federal Government to customers now on their lines or hereafter put under contract for use of Federal power.

This arrangement removes the necessity for spending large sums of public money to build parallel and competing transmission lines. It eliminates the need for federally owned steam-power plants to firm up the hydro power. It cuts down the public investment in the river development program.

When the Southwestern Power Administration proposed in 1946 establishment of a network of transmission lines and steam plants in this area, the cost was estimated at $200,000,000 or more. It would be much more now. If that added cost were necessary, it would seriously threaten and possibly defeat the whole program of river development in the Southwest. If the proposed contracts are finally approved, these heavy Federal investments will be unnecessary, the private companies will not have to face tax-free competition, and the electric users will still have all the benefits of public power.

Useless Duplication

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lawton (Okla.) Constitution for April 17, 1949:

USELESS DUPLICATION

One of the needless wastes in Government which the taxpayers must pay is the constant efforts of Federal bureaus to project the Government further into business, largely to make their own jobs more important and add to their personal power and prestige.

Probably one of the most useless duplications is the proposal, contained in the current Federal budget, to build huge power plants in various parts of the country. One of the projected plants is in southwest Oklahoma and would cost around $11,000,000.

There is no shortage of power in southwest Oklahoma that would warrant such expenditure. Existing utilities have expanded their power production to a point where they can supply ample power for any foreseeable need. To build additional plants is a waste of public money that is totally unjustified.

If Congress approves the proposed expansion of Government-owned power plants there can be only one ultimate outcome. That is the elimination of all private power production, with the resultant loss in taxes and the further expansion of big government. In most cases this will mean political manipulation of the power business and probably a loss in efficiency of operation and service to the public.

If the people want the Government to take over the power business, the logical thing is for it to take over existing systems. There is no point in duplicating existing investments where there is no need for additional facilities. We doubt that a majority of the people have become so socialistic minded that they want this to be done. The pressure for such action comes largely from the bureaucracy which thrives upon wastefulness and useless Government expenditures.

Free Enterprise Versus Welfare State

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tulsa World for July 27, 1949:

FREE ENTERPRISE VERSUS WELFARE STATE

Current legislative fencing in Congress has obscured what could well be one of the most important domestic issues facing the lawmaking body—that of public power. The Federal Government is already deep in a program of power development and each session of the Congress is confronted with requests for increased funds to extend both the production and distribution of hydro and steam-produced power. The desirability and need for a national public power policy is clear.

The Government-subsidized Southwestern Power Administration is seeking a large appropriation in order to extend its facilities which will actually duplicate those of private electric companies. The tax-free SPA would then be in a position to offer a competitive rate to customers of existing private utilities lower than the companies' rates by an amount less than the total taxes now paid by the electric firms—and which taxes the politically managed system would not have to pay. Oklahoma's two Senators [ELMER THOMAS and ROBERT S. KERR] are opposing each other in this matter. Senator THOMAS takes the correct and wise position that there is no need or reason for duplication of present facilities. Senator KERR's stand is incompatible with sound economy and subscribes to a dangerous philosophy stemming from Socialistic doctrines. There is no uniformity to his stand. On the one hand he resents and vigorously fights threats of Government interference and regulation of the gas and oil industry—in which he is financially interested. And, on the other, he wants an unfair federally subsidized competition for the private power industry—in which he is interested only as a consumer.

Speaker SAM RAYBURN has also placed himself in an analogous situation. He was instrumental in furthering a contract between the SPA and private utilities in Texas whereby the latter purchased the Government-produced power, but he is opposed to a similar proposition for the Oklahoma utilities. The SPA program is of and for the welfare state. It wants $652,000,000. If that is granted it will kill 19 private utilities in the SPA domain. In nine short years these utilities will pay $737,000,000 in taxes.

Better Save This Twelve Millions

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chickasha (Okla.) Star of June 2, 1949:

BETTER SAVE THIS TWELVE MILLIONS

The Government is asking for $12,000,000 to build high-voltage lines all over southeastern Oklahoma. No one can be found outside of the fellows whose jobs depend upon the expenditure of these funds who will claim that this expenditure of funds is needed or necessary. These lines are not needed to give any farmer in this area rural electricity. The promoters of the plan have only thought in mind to socialize the production of light and power.

They intend to completely take over the power business in southeastern Oklahoma just as they have taken it over in Nebraska and Tennessee. They do not claim that there is any dearth of power or power facilities in private hands in this section. What they want is socialized industry and the easiest group on which to start is the production and distribution of electrical power. With a mounting Federal deficit where would be a better place to start economy than by the lopping off of this twelve millions.

Mistreatment of Greek Children

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. LODGE. Mr. President, I have today called the attention of the Senate to the shocking abduction by Communist forces of thousands of Greek children, and I desire to have printed in the Appendix of the RECORD various comments regarding that subject.

The first is an editorial entitled "Crime Against Civilization," from the New York Journal-American.

I also ask to have inserted an article entitled "Children or Slaves?" published by the Greek Government Office of Information.

Next I ask to have printed an article published by the Greek Theological Institute, 50 Goddard Avenue, Brookline, Mass.

I also ask to have printed in the Appendix a statement entitled "War Against Greek Children," published by the Hellenic Boy Scouts and Girl Guides Associations.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the New York Journal-American of January 24, 1950]

CRIME AGAINST CIVILIZATION

(By Harry H. Schlacht)

Murder, looting, and cruelty, kidnaping, outrages and brutality are still the order of the day in Communist Russia.

The abduction of 28,000 Greek children by Communist guerrillas in Greece is a crime against humanity. The American people are stirred by this shocking outrage against mankind.

It is but a succession of savage deeds and stands unparalleled in the annals of recorded history.

It is a new and unheard of kind of warfare. It is a new and unheard of kind of barbarism.

It is designed to convert these children to communism. It is designed to imbue them with a hatred against their country and religion.

The mothers of Greece plead for the return of their children. From the woes and sorrows of Greek homes come the wailing of fathers and mothers that will not be silenced until their children are restored to them.

This is a time to give Greece—our ally in peace and war—a helping hand. This is a time for American greatness.

America is the light of the world. America must take the leadership in this godly cause.

This is an appeal to the conscience of civilization. This is an appeal to the hearts of all civilized human beings.

Let us voice our thunderous protest against this communistic iniquity. Let us speak of it until these depraved creatures will understand. Let us speak of it until these morally deaf will hear.

Let the monsters of Moscow know that the Greek children will never be converted to communism. Like their ancestors, they will hold aloft God's torch of liberty to light the pathway of civilization.

They will always be God-loving children, in spirit and language, in culture and religious sentiment. They will always be the ramparts of Christian faith against the arch-enemy of the world—communism.

We, as free people, must free these children from communistic bondage.

The cry of the mothers of Greece shall and will be heard.

We must not fail them. We shall not fail them.

[Published by the Greek Government Office of Information, 30 Rockefeller Plaza, room 1519, May 1948]

CHILDREN OR SLAVES?

(This is a reprint from the Union Jack (No. 1014), an English paper for the British Army in Greece)

On the 29th of February this year one of the grimmest samples of Communist-inspired cruelty was thrust at the people of Greece. The news came over in a series of broadcasts from Communist-dominated state announcing that Bulgaria, Yugoslavia, Rumania, and Albania were offering hospitality to 60,000 Greek children.

The ironical term of "hospitality" was given as a pretext that these states wished to save the children from famine and educate them in "free countries" but Greece has her own word for it—"Paidomazoma"—meaning "the stealing of the children."

FORCIBLE HOSPITALITY

On the same day from districts of northern Greece, children aged from 3 to 15 were torn from their families by armed bandits. The Communist program as usual, was well prepared in advance.

Markos and his colleagues, undoubtedly aware of the profound ties that attach Greek parents to their children, could have dealt no deadlier a blow to those thousands of mothers and fathers living in the danger zones, where his forcible hospitality would become an endless nightmare.

This unsurpassed piece of barbarism is one of which the world at large appears to be singularly unaware. The foreign press devoted little space to the kidnaping of the Greek children, nor did it seem to notice that this announcement coincided with the day on which UNO decided to form an organization for aid to children all over the world.

BLOW TO CIVILIZATION

What exactly does this deportation of children mean? How deeply does it infringe on the rights of freedom and on our conception of democracy?

Some may think that it is a purely local affair concerning Greece only, but we have seen before how totalitarian systems are aimed, not at one country, but at a whole civilization.

If the children of Greece are allowed to be abducted and to be taught the new Communist creed who can say where such methods may lead humanity?

For of course, the plan is to take those who are young and eradicate all memories of the past. To bring them up as citizens of a totalitarian regime with no thoughts in their heads other than those taught by the creed, with no feelings in their hearts other than a hatred for all people and races who do not agree with their creed.

Facts and figures, however, may convey more weight than generalizations. One of the most appalling of these facts is that up to date some 12,000 children have already been deported by the bandits.

How they were taken makes sad reading. Some were dragged from their parents who dared not protest, fearing that they would see them killed on the spot. In many cases mothers offered to go instead and were shot.

In long desperate lines these children were driven over the mountains clad in rags, shoeless and cold. Those who survived the forced marches were herded into camps in the countries where they will be taught to hate their own people.

Stories of tragedy and heroism are endless. Some of these young victims have managed to escape and have harrowing experiences to relate. From all over the threatened areas of Greece, refugees are now pouring into the main cities and most of them are children fleeing from destruction and exile.

A typical story of the courage and epic endurance of the stricken youth of Greece, is that of Eftychia Kalyva, from the village of Kalesmeno, some miles from Karpenissi.

GIRL'S HEROISM

One evening bandits entered the village to loot, and capture as many children as possible. Sixteen-year-old Eftychia was an orphan who lived with her two small brothers aged 8 and 11.

Hearing the noise of wailing and sobbing from neighboring homes, she realized what was happening, woke the children and took them away with her in the darkness. She knew that at Karpenissi there was a Greek Army outpost, but the main road would not be safe, so in spite of the heavy snows she started off on a rocky mountain path.

For hours she plowed her way ahead, digging through the snow with her bare hands while the children followed. Eftychia walked all night, her face and feet torn by thorns and rock, her hands and breast bleeding.

REACHED SAFETY

She reached the first military roadblock by dawn and when the sentry sprang forward to cry "Halt" it was one of the children who begged "Don't shoot."

Eftychia only had the strength to murmur "the children," before she fell in a heap at the sentry's feet and died. Today the two small boys for whom she gave her life are at a Red Cross convalesent home.

To save these children of Greece, the Government is now organizing a large-scale evacuation from the bandit-infested provvinces. Queen Frederika of Greece has been largely responsible for collecting the funds through which these youngsters are housed in camps all over the country, fed, and given proper care.

One of the Queen's ideas is to send evacuees to the Dodecanese Islands, especially to the island of Leros where available barracks can be transformed into suitable quarters.

The Greek Red Cross assisted mainly by voluntary nurses, takes care of the evacuation of the children and of looking after them in the camps. Last week a ship came into Piraeus carrying 1,200 young passengers from Macedonia and Thrace, who have been accommodated in the Athens area.

Many families, rich and poor alike, have offered to take refugees into their homes, but for the time being the Greek Government is keeping them together in camps where they can be cared for by welfare organizations.

Now that the United Nations Aid to Children has come into being, help will surely be forthcominig for these innocent victims of planned terror, but meanwhile their upkeep is a heavy burden to the war-stricken economy of Greece.

AMONG OWN PEOPLE

For the parents, separation from their sons and daughters is a long-drawn-out sorrow, but the consolation of knowing that they are safe and among their own people, makes it more acceptable. It is the parents whose children have already been carried away by the bandits, whose suffering is beyond words.

Our twentieth century has seen many crimes and much sorrow; most of the misery has been caused by attacks on that very freedom and tolerance which, from the earliest days of civilization, man has learned to cherish.

It was in ancient Greece that these principles of individual freedom reached their highest aspirations. Can we sit back today and remain unmoved when the youth, the future manhood of a free world, is being taken into slavery?

[From the Greek Theological Institute, Brookline, Mass.]

MORE THAN 28,000 GREEK CHILDREN ARE SUFFERING BEHIND THE IRON CURTAIN—WON'T YOU PLEASE RAISE YOUR VOICE AND FREE THESE YOUNGSTERS?

To All Fellow Christians:

Our Theological Institute, which has as its main purpose the ethical and religious training of our young Greek-American generations, in addition to the preparation and education of our present and future priests who endeavor to propagate our faith and ideals, considers it its duty and privilege to raise loud her voice in protest to the great wrong which is taking place in Greece and to 28,000 (a very moderate figure) Greek children.

The Communists and the guerrillas have seized these innocent children, have callously and heartlessly torn them from the arms of their mothers, and deported them far from our beloved Greece—to Albania, to Yugoslavia, to Bulgaria, to Hungary, to Poland, to Czechoslovakia, to Rumania. There they are kept forcibly under the false pretense that better provisions and accommodations are being made for their health and general welfare.

Actually, however, these children are being detained in these foreign countries for the main purpose of poisoning their hearts and consciences with the be-clouded, be-fogged, and utterly destructive communistic ideas and theories which are, even at this moment, being spread insidiously throughout the noncommunistic world. In other words, they wish to make murderers and janissaries of these children, so that in the future when they are released to return to their mother country they may put to the sword not only their beloved ones, by now long-forgotten, but their country, too.

The opposition which is being offered by the Greek people against the latest communistic attempts to enslave the whole of Greece is being countered by these barbarians in this evil, inhuman, ruthless, and barbaric manner.

For this dastardly crime, we protest from the depths of our hearts, and we earnestly plead with every man, woman, and child of Greek descent in America to do the same.

WIRE PRESIDENT TRUMAN AND STATE DEPARTMENT

Write to your State Senators and Representatives. Entreat them to make possible that which seems impossible—to set free from this communistic slavery these 28,000 children.

Request your newspapers and radio stations to raise their protesting voices in an appeal to the generous American public to become actively interested and sympathetic in this just and worthy cause.

Continue to discuss this intolerable situation with your friends, both Greek and American, old and young, so that we may see these unfortunate victims of aggression speedily returned to their native country and to their loved ones.

Consider this your duty as a member of a great democracy and your obligation as a Christian.

WAR AGAINST GREEK CHILDREN

Our children are being carried away.

On the 29th February, 1948, broadcasts from Communist-dominated states announced that Bulgaria, Yugoslavia, Rumania, and Albania offered "hospitality" to 60,000 Greek children. The pretext given was to save them from famine and to educate them in a free country.

On the same day from districts of northern Greece children aged from 3 to 15 years were torn from their families by armed bandits. They were dragged from the warmth of their homes. Mothers offered to go in their places. Some were shot for trying to save their children.

In long desperate lines the children were driven over the snow-covered mountains. Severed from home, parents and country they were forced across the frontier.

Since then other children have suffered the same fate. Every day more are being abducted. The threat hovers over every home in northern Greece. The children who survive the forced marches and hardships will be herded into camps across the frontier. They will be taught to hate their country and kill their brothers. The planned degradation of these children is a crime against humanity. Their abduction is an attempt to exterminate the Greek people.

We appeal to the civilized world to join in unanimous protest against this barbarous uprooting of children and to defend the ideals of the United Nations.

THE HELLENIC BOY SCOUTS AND GIRL GUIDES ASSOCIATIONS.

Rent Control

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. CAIN. Mr. President, the Congress has a real concern with the question of what ought to be done with Federal rent conrtol. The Washington Post of today offers its reasons for supporting the decontrol of rents. I think the observations are logical, sensible, and fashioned from common sense. I ask unanimous consent that the editorial entitled "End of Rent Control" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

END OF RENT CONTROL

The action of the Senate Appropriations Committee in refusing the Housing Expediter's request for additional operating funds is equivalent to a vote to end Federal rent control. We hope the Senate will sustain the committee's action, since the extension of control can no longer be justified on the ground that housing shortages are so acute and so widespread as to create a national emergency. It is nearly 5 years since the end of the war. Most wartime controls have long since been dropped. Housing congestion has been alleviated by population shifts and by the recent rapid expansion of new residential housing, although rental housing construction has lagged far behind construction of houses for sale.

To be sure, there are a number of areas where rent control is still needed to protect tenants against profiteering landlords. But if the Federal Government waited until every community in the land could safely dispense with rent controls, there would be no foreseeable end to the Federal control system. Housing shortages have, as shown by the evidence, ceased to be a concern of the Nation and have become a local problem that should be the responsibility of State and local governments. The local authorities are acquainted with conditions in their communities, indeed Federal officials have to depend on their knowledge and enlist their cooperation in administering control legislation.

The risks of decontrol are negligible compared with the advantages of relinquishing a discriminatory form of Federal regulation that denies to landlords the right accorded other property owners to sell their goods and service in the market for what they will bring. The patent inequity of the system is evident from the fact that rent increases in controlled areas have lagged far behind the rise in prices of other goods and increases in the wages and salaries of their tenants. It is further demonstrated by the gap between the rentals charged for occupancy of new properties not subject to control and rental of older controlled properties. Moreover, if Federal rent control were to be continued indefinitely, the construction of new rental housing would be discouraged. For even though the new structures are uncontrolled, rental charges cannot diverge too widely from those paid by occupants of comparable controlled properties.

Of course, removal of control will result in some rent increases that will be resented, and the transitional period of adjustment will bring hardships to some people. This is the price that has to be paid for the return to a system of free enterprise which will provide incentives for the construction of more housing accommodations in still congested centers of population. Meantime, State and local governments are in a position to ease transitional hardships by taking steps to prevent excessive increases in rentals. It is up to them to show the Federal Government that they are capable of handling their own affairs without being subject to its direction.

Lincoln Day Address by Hon. William F. Knowland, of California

EXTENSION OF REMARKS
OF
HON. BOURKE B. HICKENLOOPER
OF IOWA
IN THE SENATE OF THE UNITED STATES

Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. HICKENLOOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by the junior Senator from California [Mr. KNOWLAND] at a Lincoln Day dinner in the city of Des Moines, Iowa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Governor Beardsley, and fellow Republicans, it is a pleasure to once again be in the city of Des Moines and in the State of Iowa, and to participate with you in this meeting honoring Abraham Lincoln, whose birthday was 141 years ago. His party and ours has contributed much to our Nation's progress. I bring you a hands-across-the-continent greeting from the Republicans of California to the Republicans of Iowa.

There are several reasons why I was pleased to accept the invitation of your Republican State committee. One reason is that this is the home State of my friend and colleague Senator BOURKE HICKENLOOPER. Senator HICKENLOOPER is a member of two standing committees of great importance to the people of the Nation as well as to the people of Iowa. These are Agriculture and Foreign Relations. In addition to that he is a member and former chairman of the Joint Committee on Atomic Energy. I have served on the latter committee with him since its organization 4 years ago.

The recent case of Dr. Fuchs in England underscores the fact that Senator HICKENLOOPER was right in stressing the importance of security in matters dealing with atomic policy. The lack of adequate investigation by the British not only endangered the security of their country but endangers our own as well.

While President Truman, who has the primary responsibility for keeping men like Alger Hiss out of our Government, was calling congressional concern over espionage a

red herring, Senator HICKENLOOPER was fighting for the safeguarding of our atomic secrets. You are entitled to know the cold, hard facts of the situation. The breach of security which has taken place is of the most serious character, and I underscore the word serious. It perhaps helps to explain why the Soviet Government was able to develop an atomic explosion at least a year or two in advance of when it had been estimated they would be able to do so.

Another reason I am glad to be here is that I always feel at home in the heartland of America. This may be due in part to the fact that so many of the citizens of my State have come from Iowa and it may be partly due to the fact that my mother and her family came from Cherokee.

Tonight I wish to discuss with you some of the important problems facing us in our domestic life and in international affairs.

It is my strong belief that only with an informed citizenry can we solve these problems that confront us.

Within the last 4 months two catastrophic events have taken place. These are the Soviet success in atomic development (as announced by the President of the United States on September 23, 1949) and the establishment of a Soviet-recognized Communist regime in China. Only in retrospect will we be able to finally determine which event will have the most far-reaching influence. Both have set off "chain reactions" that have not yet run their full course.

These events separately are sufficient to cause everyone who believes we should have a free world of free men to examine his own conduct to determine if he is making his greatest contribution toward freedom. The combined events make it mandatory that we do it.

Our economic system is tied with Siamese-twin attachments to our Constitutional form of Government. If one is destroyed they both perish. There is no need for either catastrophe to happen if we get off the perpetual defensive and take the offensive.

There are too many people who have had our hospitality or advantages joining forces with Moscow and her satellites in spreading their views on "what's wrong with America".

Those who believe in our system should start a crusade to tell "what is right with America."

We, of course, will not close our eyes to the liability side of the ledger, but as citizens with our feet on the ground and common sense gained from experience and observation we know that America's assets in freedom of religion, speech and press and in agricultural, educational, fiscal, industrial, and governmental categories to mention but a few, greatly exceed our liabilities.

Seventy-eight million life insurance policyholders own policies with a face value of over $200,000,000,000.

Individuals who still believe that thrift is a virtue also own directly or through institutions for their account some $67,900,000,000 in savings institutions and $3,300,000,000 in the postal-savings system. A substantial part of the $35,800,000,000 of time deposits in commercial banks is theirs. They also have a stake in annuities and pension funds amounting to an estimated $5,000,000,000 and a direct stake in the social-security system (Federal, State, and local) of $29,000,000,000.

We have more stockholders and home owners than any other nation in the world.

To permit this solvent, going concern of ours to be liquidated by the strong-armed action of international communism or to consent to the voluntary bankruptcy proceedings of state socialism are both unthinkable and unnecessary. We need an alert and determined citizenry if the battle is not to be lost by default.

We must not let complacency destroy the spirit that has developed a great world power out of a small colony in less than 175 years. We must not build or depend upon military or economic Maginot lines.

This Nation has never been wedded to the status quo or ruled by the dead hand of the past. Our economic as well as our political system broke away from Old World patterns.

Shortsighted European-style capitalism built the gallows for its own execution by allowing and encouraging monopolies, cartels, low wages, and great aggregations of capital narrowly held.

The lifeblood of our system to the contrary is competition, productivity, good wages, and widespread ownership of our economic structure.

We must continue to demonstrate to the world that here in America we have political and economic freedom. Here our people, since the founding of the Republic, have looked forward to leaving to their children a better land than they themselves found.

The challenge we face is to meet the economic, social, and political needs of the twentieth century while we maintain free institutions under a constitutional government.

Certainly security alone is not the whole answer. The most secure man is the one who has his clothing, food, medical care, and housing guaranteed for life—as an inmate of a State prison.

The basis for an expanding standard of living for our people rests upon labor and management pulling together and not apart. It also depends upon a square deal for the farmer as well as for the urban dweller. It requires a full realization that when any part of our economy is in distress the chain reaction that takes place will soon react on all other segments. The American farmer must not be so regimented that he becomes primarily a statistic in a Washington bureaucrat's office.

The time has come, I believe, when labor and management, with the help of government, must get down to the nugget of what is really needed in America.

The sustained stability and progress of our American system of capitalistic free enterprise requires high real wages, sustained buying power for abundant markets, and maximum production at low unit costs. American agriculture, labor, and industry must not be undermined by the dumping of goods produced by low-paid labor abroad while outside markets are closed to our products.

In meeting the growing challenge of socialism and communism the dynamic American system must continue to demonstrate that labor, management, and investors all have a vital interest in maintaining our way of life.

High productivity and widespread distribution of that which our Nation can produce is more sound than the doctrine of scarcity brought about by stoppages of production or by governmental action.

Controls tend to multiply like rabbits. In the end they will destroy both the American economic and political system.

A free economy can better bring about a higher standard of living for our people than any permanent regimented economy of domestic origin or foreign import.

In the growth of our economy there have developed powerful groups in business and in labor. Not all of them have recognized that with power must go responsibility. No man or group of men in the ranks of labor or business have the right to strangle the economic life of 140,000,000 Americans and by do doing endanger the entire free world.

The Government of the United States established economic traffic laws many years ago to protect our businessmen and consumers against unregulated monopolies. These were the antitrust statutes.

More recently, first through the Labor Relations Act of 1935 and later through the Labor-Management Relations Act of 1947, the Government has sought to establish a national labor policy that would be fair and equitable, not alone to labor and management, but to the general public as well.

While some well thought out amendments are in order, they should be weighed in the light of their effect upon the entire population, and not just one part.

Our entire national economy must not be at the mercy of one man or small group who can give an order that will cause a creeping paralysis to close down our mines, factories, and transportation systems and work a hardship on countless people. This is far too much power for any responsible man to want and any irresponsible man to have.

Our Federal Government is now so large that prudent officials and citizens must examine new proposals which would increase costs to see if they will endanger its functioning or impair its solvency. We must find ways of eliminating duplication and waste, so that we may better meet essential needs. Recommendations of the bipartisan Hoover Commission should get a high priority on the legislative calendar.

There are some in Government who apparently believe that if an individual spends his own money it is inflationary whereas if the Government takes it from him and spends it such is not the case. This is economic nonsense and squirrel-cage thinking. Government spending has been, and is, a major inflationary factor.

I make no claim that we can "unscramble the eggs" of Government finance, but I do maintain that we should no longer ignore the warning lights that have led to disaster when ignored elsewhere in the world.

We should balance our Federal budget and pay something each year to reduce the national debt, which now amounts to over $250,000,000,000. This should be done by prudent economy rather than by disruptive new taxes.

For the last 17 years the Democratic administration has had control of the executive branch of the Government, and during 15 of those years has had a majority in both Houses of Congress. It is significant, I believe, that during that entire period of time the Federal budget has been balanced only during the 2-year period of the Eightieth Congress, wherein the Republicans had a majority in both the House and the Senate.

In a period of 20 years the number of civilian employees of the Federal Government increased from 570,000 to 2,100,000. Federal expenditures have increased from $9,000,000,000 in the fiscal year 1939 to over $43,000,000,000 for the current fiscal year.

For the next fiscal year, at the present rate of spending, there is another $5,000,000,000 deficit in prospect. Any business management that ran 16 out of 18 years in the red should be permanently retired. Nineteen hundred and fifty and 1952 are the years to eliminate the red ink and red herrings.

The problems facing us on the home front cannot be solved by Government alone. They cannot be solved by labor, management, or the farmer alone.

Here in America, as Lincoln put it, we have "this last best hope of earth." Each of us has an individual and collective responsibility for its preservation. We are interdependent one on the other. An American economic collapse would bring despair everywhere except in Soviet Russia.

There have never been so many people in the entire history of the world who have had as large a stake, as much to gain or as much to lose, as the people of the United States of America.

Nor does history record a people who have been as unselfish in their possession of their power, their resources, and their good will.

In this century which is not yet half over they have sacrificed blood and treasure in two world wars to prevent the destruction

of free institutions on the continent of Europe. Few dispute the fact that all of western Europe and perhaps even Britain would today be behind the Communist "iron curtain" if it had not been for the firm stand taken by this Republic and a considerable contribution of our resources to prevent the complete economic collapse of those war-torn nations.

Communism thrives on chaos. A rehabilitated Europe was the only chance for survival had by free institutions in that area of the world. While communism has been at least temporarily stopped in western Europe, it has made great gains in the Far East. At the end of the war communism ruled less than 200,000,000 people. Today 800,000,000 are within the "iron curtain."

Four factors relating to the ability of the Western World to defend itself against Communist aggression are:

1. Industrial capacity.
2. Population.
3. Raw materials.
4. Territory.

Except for the first, international communism now has the edge on all the others.

Fifty years of friendly interest on the part of our people and our Government in a free and independent China and the overwhelming contribution made by our Army, Navy, and Air Force in the Pacific during World War II, gave us the power, the prestige, and the opportunity for constructive action no western nation had ever before possessed. We could have pioneered in exporting the ideals that inspired men who loved freedom everywhere following our own break away from colonial status.

All this opportunity has been frittered away by a small group of willful men in the Far Eastern Division of the State Department who had the backing of their superiors.

In Europe where the record of Soviet aims was clearly outlined in Poland, Czechoslovakia, Bulgaria, Hungary, Rumania, Latvia, Lithuania, and Estonia, we finally stood up to communism in Greece, Turkey, Iran, Berlin, and western Germany.

Knowing that communism thrives on economic and political chaos we gave economic aid through the ECA. With the North Atlantic Pact and the arms implementation legislation, we have given moral and material support for the protection of western Europe and the Middle East from overt aggression. In that area we have given hope and support to those advancing the cause of a free world of free men.

Munich certainly should have taught us that appeasement of aggression, then as now, is but surrender on the installment plan. Mr. Chamberlain, Prime Minister of Great Britain 10 years ago, may have sincerely thought that he was gaining peace in our time by consenting to the destruction of a free and independent Czechoslovakia by Nazi Germany. We know now that paying such international blackmail only increased later demands that made World War II inevitable.

The men in the Kremlin are as power hungry as the Nazis and their system is as destructive of human liberty as was Hitlerism with which they were bedfellows while Poland was being dismembered in 1939. They have, however, learned some new techniques.

Communism is destructive of human liberty everywhere in the world. It is no less destructive in China or Korea than it is in Poland, Czechoslovakia, Latvia, Estonia, Lithuania, Hungary, Rumania, or Bulgaria. The pattern may differ slightly.

In Poland the opposition leader, Mikolajczyk, was forced to flee; in Bulgaria Petkov was hanged; in Rumania the King was given a 2-hour ultimatum to change the Government regardless of the Constitution; in Czechoslovakia Masaryk's life was forfeited when it became apparent that coalition with communism would not work.

A Chinese official put it clearly by saying to me recently: "There can be no real coalition with a tiger unless you are inside the tiger."

In Europe we have had a foreign policy in which the Republicans and the Democrats have contributed to the initiation and formulation of doctrines that are understandable. In the Far East there has been no bipartisan foreign policy. The Republicans in Congress have not been consulted in the moves leading up to the bankrupt policy which now stands revealed in all its sorry detail. The administration, and it alone, has the full responsibility for the debacle which has taken place on the Continent of Asia and which day by day and hour by hour is endangering the future peace of the world and the security of this country.

We stood up to communism in Europe and took substantial risks in doing so in Greece, Turkey, and Berlin. Certainly for the fainthearted the putting into operation of the Berlin airlift presented much greater risks than giving aid to the legal Government of China to enable it to hold the islands of Formosa and Hainan. During the airlift we were flying our planes across territory controlled by one of the great military powers of the world. This Government supported the Berlin airlift at a cost of $154,568,800. This was not the only cost, for accidents took the lives of 31 of our men. Nevertheless, had we backed down in Berlin, the Soviet Union today would have that city firmly within its grasp and might even have western Germany, if not all of western Europe. Certainly the yielding to international blackmail then would have increased the demands and made more arrogant the men in the Kremlin as an earlier yielding to Hitler at Munich increased his demands.

Our China policy has taken us to such a low point that prior to his return to the United States our Ambassador, Leighton Stuart, was confined to the Embassy compound for weeks by the Communists. A consular official was beaten by the Red police in Shanghai; our consul general, Angus Ward, was restricted to the compound in Mukden for a year, and more recently thrown into a common jail; our military attaché at Nanking, General Soule, has been trying for over 4 months to get out of the Communist area and has not had any success to date.

William C. Smith, chief electrician's mate, United States Navy, of Long Beach, Calif., and Elmer C. Bender, sergeant, United States Marine Corps, of Cincinnati, Ohio, have been held captive for over 15 months. Yes; we have waited for the dust to settle, and the American people can now see the wreckage of the position once held by this great nation in the Far East.

Our long-standing far-eastern policy was first compromised at Yalta. We gave to the Soviet Union vital rights in Manchuria which were not ours to give and it was done without prior consultation with the Government of China. It was done without the consent or approval of the American Congress or the American people. It was done in violation of the open-door policy of John Hays and of Woodrow Wilson's concept of open covenants, openly arrived at.

The Yalta agreement made Soviet domination of Manchuria and other border provinces inevitable. It made possible Chinese Communist domination of the balance of continental China. It also has opened the door to bringing the entire continent of Asia, with more than a billion people and vast resources, into the orbit of international communism. Sitting with our American delegation at Yalta and playing an important part was Alger Hiss, adviser to the Secretary of State.

The representatives of our Department of State persistently tried to get the Government of the Republic of China to form a coalition with the Communists. When they refused, we placed an embargo against the shipment of any arms or ammunition to the legal government of the country while during those same months the Soviet army of occupation, in Manchuria as the result of the Yalta agreement, was turning over to the Communist forces large amounts of captured Japanese war stocks.

Like a person with a bad conscience, the State Department, on August 6, released the China white paper. All the blame was placed on the National Government, then with its back to the wall. It was apparently issued with the hope that our own part and share of responsibility might be overlooked.

That the National Government of China made mistakes, has had "Benedict Arnolds" and men who betrayed their trust, needed no underscoring from us in the way and at the time it was done. Our own history also has examples of men who have betrayed their trust from Cabinet members down to ward bosses.

We have also been plagued with racketeers, highwaymen, and five percenters at various times.

The basic objective the United States should have kept constantly in mind was to preserve a free, independent, united, non-Communist China. In the postwar illness of that nation, we prescribed that the strychnine of communism be taken. The State Department having contributed greatly to the Chinese disaster still proclaims that we must follow a hands-off policy, or that we must wait for the dust to settle, or we must investigate some more. State Department policies were directed toward a post mortem rather than a consultation.

Had China been a former enemy, like Japan and Germany, we would have been giving large amounts of supervised material help and sending many of our ablest military and civilian leaders to stabilize her currency, feed her people, and protect her from Communist aggression. But the State Department policy has been to abandon free China, our wartime ally and friend, to the vultures of international communism.

In a very well written article in the Januarday 7 issue of the Saturday Evening Post Joseph Alsop has this to say about State Department excuses as contained in the China white paper:

"But there is also one carefully concealed defect in the State Department argument. If you have kicked a drowning friend briskly in the face as he sank for the second and third times, you cannot later explain that he was doomed anyway because he was such a bad swimmer.

"The question that must be answered is not whether the Chineses did their best to save themselves, which they most certainly did not, the question is whether we did our best to save China."

The new civilian governor of Formosa, K. C. Wu, is a graduate of Princeton. He has had an excellent record as an administrator, as mayor of Shanghai, and as wartime mayor of Chungking.

Gen. Sun Li-jen, the ground force commander on Formosa, is a graduate of the Virginia Military Institute. He is also in charge of their training centers which I visited. The morale of the men is excellent. The training program is very good. They do lack a sufficient supply of arms and ammunition for defense against the ultimate assault upon the island.

The people of Formosa are ably represented by a provincial legislature. Governor Wu has broadened his administration and consults with the representatives of the people of the island.

Like Mr. Chamberlain at Munich, there are some in this country and in Great Britain who believe that by appeasing the Communists they may change their way of life. This is naive and such a viewpoint is dangerous to the peace of the world and the security of this country.

First, the Communists will not be satisfied with mere de facto recognition. That will merely be the opening wedge for full de jure approval. When that happens, China's seat in the United Nations and on the security Council becomes a Communist one. Every Chinese embassy and consulate in this and other western nations will become centers of Communist espionage and fifth-column activity as in the case of similar Soviet establishments. At the peace conference with Japan, the Soviet bloc will have another voice and vote to help destroy the job General Douglas MacArthur has done in that country.

If the United States gives them full recognition the Chinese Communists will then consider it unfriendly unless their economic rehabilitation is financed. Such action would, of course, also increase their war potential, for power development, railroads, mines, ports, and factories are important in both peace and war. The United States is the only nation capable of such financing.

Are we to be called upon to pay out substantial sums to help stop communism in Europe while financing communism in Asia and with serious budget problems of our own? Are we to give arms and guaranties to western Europe to save that area from going behind the "iron curtain" while we or they accelerate the spread of communism in Asia?

It is my judgment that history will record the recognition of Communist China as being as great a betrayal of human freedom as was the pact of Munich. If other nations want to take that responsibility, let them do it with their eyes open. They can't for long play both sides of the street.

The signing of the Soviet-Chinese pact on February 14 is a Communist alliance. The secret sections have not yet been revealed. We may recall, however, that the secret provisions of the Nazi-Soviet pact were not disclosed until after Russia stabbed Poland in the back in 1939.

There are some American and British firms that are today sending oil and other supplies to the Communist regime which strengthens it in the effort to destroy what remains of the Republic of China. I well remember, as you no doubt do also, that there were firms, with State Department approval, which supplied scrap iron and oil to Japan in 1939, 1940, and 1941. It was used against our friends in China and ultimately against the American battle fleet at Pearl Harbor. While at Pearl Harbor 8 years after December 7, 1941, I visited the wreck of the Arizona. In her hull there are still 900 American sailors. Commercial transactions paid in "blood" money, should not set our foreign policy.

The question is asked: Can anything be done at this late date? I believe that it can. While desperate, the situation is not more desperate than it was at the time of Valley Forge or at Dunkirk.

First, of course, we need a foreign policy in the Far East. We have none there today. As a basis for such a foreign policy, I suggest the following:

1. That we make clear that we have no intention of recognizing the Communist regime in China.

2. That we have a major shake-up in the Far Eastern Division of the State Department. We cannot expect to get inspired leadership for a new policy in the Far East from those who have been receivers of the bankrupt policy we have been following. Also the people of the United States and the Congress should be informed how many persons recommended by Alger Hiss are still in the State Department?

Our policy itself, of course, will have to be set by our constitutional officers, the President, his advisers, and the Congress. Once we have a foreign policy there is great need for it to be coordinated in both its economic and defense phases. In that area of the world, so that the right hand will know what the left hand is doing, there should be selected as coordinator of American policies our outstanding soldier-statesman, Gen. Douglas MacArthur.

4. We should give supervised aid to the legal government of China in the same way we give it to the legal governments of Greece and Korea which have also been threatened by communism. I have never favored giving unsupervised assistance. A mission headed by a man of the caliber of General Wedemeyer could supervise the requests for aid, be sure that the Chinese Government was properly training the troops in the use of equipment, and make certain from a logistical point of view that the supplies were received at the points where they were needed.

5. Strengthen the American Navy in the Far East. The addition of at least two carriers and possibly three would do much to restore confidence in that part of the world just as the visit of American vessels to Greece and Turkey, while the war of nerves was at its height, restored confidence in that area of the world 2 years ago. Even the executive department now realizes there has been an overdraft in our Pacific defenses.

6. Make it clear that this Government will not sit back for more than a year and do nothing but send a series of notes when officials and service personnel representing this Government are illegally held by the Communist regime in China. They should be informed that until all Americans who want to get out have done so that an American naval blockade will prevent any ships from delivering cargoes to strengthen the Chinese Communist regime.

Yes, America has come of age. We can no more return to a policy of isolation than an adult can return to childhood. We must assume our responsibilities as a great world power without whose active support there can be no adequate international system of law and order.

We need a dynamic American foreign policy. Liberty is still a greater force than slavery. Our own fight for freedom electrified the world. Let us rekindle the torch. We must assume a moral leadership that we lost at Yalta.

Let us make it clear to freedom-loving Poles, Czechs, Hungarians, Bulgarians, Rumanians, Latvians, Estonians, Lithuanians, Koreans, and Chinese that their desire for liberty is understandable to us.

The Voice of America should become the voice of freedom. Each program beamed to iron-curtain countries should start with the ringing notes of the Liberty Bell from Independence Hall, Philadelphia.

We need new techniques to contend with communism's weapons.

Let us first make clear to the Soviet Union and her satellites that starting forthwith we and they are on a diplomatic quid pro quo basis.

The United States Government should serve notice that we will no longer tolerate our Ambassador and diplomatic officials being restricted to Moscow and occasional outside trips while theirs are free to roam from Massachusetts to California and from Michigan to Texas.

We should make it clear that we will no longer permit five times the number of visas to be issued for Soviet citizens to visit this country as are issued to our citizens to visit Russia.

It should be made clear to all the Soviet satellites that they will treat our diplomatic representatives and our citizens with respect and international law, or we will break off diplomatic relations and tell their people why it is being done. If the State Department is correct that American recognition of Bao Dai in Vietnam strengthens that new government, why will not our withdrawing recognition from the satellites weaken them?

Neither friendship nor respect can be bought by individuals or by nations. An offer of $50,000,000,000 for an atomic truce may appease today's Barbary pirates for a time. It will not change their determination to destroy human freedom in Europe, Asia, or on the Western Hemisphere. To a blackmailer the offer of a gratuity today becomes the minimum basis for increased tribute tomorrow.

Of course, we should seek a just and lasting settlement of the cold war, but not by another Munich or another Yalta. Any settlement to be worthwhile must include freedom from the tyranny under which millions of people suffer, in part at least, as a result of our past mistakes.

No nation or its leader had the moral right to barter the lives of millions of men, women, and children into the Godless hands of international communism. The Soviet Union has long since violated various parts of their wartime agreements with the west. To Polish and Chinese patriots a public denouncement of the Yalta Executive Agreement would clear the atmosphere and give them renewed hope and courage.

It was Lincoln who said: "Fellow citizens, we cannot escape history * * * the fiery trial through which we pass will light us down in honor or dishonor to the latest generation * * * we, even we here have the power and bear the responsibility * * * in giving freedom to the slave we assure freedom to the free. * * * we shall nobly save or we shall meanly lose this last best hope of earth."

If we use the same courage and common sense that motivated the men who sat in the Constitutional Convention at Philadelphia, there is no foreign foe we need fear, there is no domestic problem we cannot solve.

Soil Conservation Service Watershed Treatment Program

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the supplemental statement to the 1950 report of the Soil Conservation Service to the Subcommittee on Wildlife Conservation of the Senate Committee on Expenditures in Executive Departments with reference to the watershed treatment program of that Service in the interest of flood control.

There being no objection, the supplemental statement was ordered to be printed in the RECORD, as follows:

SUPPLEMENTAL STATEMENT

The watershed-treatment program of the Soil Conservation Service, in the interest of flood control, reduces flood damages principally in three ways:

1. It retards run-off so that there is less flooding of bottom land along the small creeks and tributaries. This is effective primarily for the smaller floods of frequent occurrence;

2. It prevents erosion to upland areas, thereby reducing land damage and soil wastage; and

3. It makes substantial reductions in the amount of sediment which otherwise is transported into stream channels, harbors, and reservoirs.

The effect of such watershed treatment may be illustrated by the following few examples taken from survey reports submitted by the Department of Agriculture and approved by the Congress in the 1944 Flood Control Act:

1. In the Buffalo Creek watershed in New York, it was estimated that the treatment on farm lands would reduce the sediment that is filling Buffalo Harbor by about 12 percent. Stabilization of stream banks would reduce the total annual accumulation of sediment in the harbor by 135,000 cubic yards, or 72 percent, making a total reduction of sediment from the upstream program of about 84 percent.

2. In the Little Sioux River watershed in Iowa, the treatment program is estimated to effectively halt the advance of major gullies and thereby prevent further land damage from this cause. It also results in substantial reduction in filling of drainage ditches in the Missouri River alluvial flood plain. The program, likewise, would reduce the flood run-off on the tributaries from about 25 percent to less than 5 percent, depending upon the intensity of storm and the size of drainage area.

3. In the Trinity River watershed in Texas, the program will be particularly effective in reducing the damages from the smaller floods which, in the past, have caused as much total damage as the upper limit floods. The program is expected to reduce the aggregate total of acres inundated over a 15-year period by about 25 percent.

4. In the Yazoo River watershed in Mississippi, the annual contribution of sediment to the stream systems is estimated at 89,000,000 tons. In 20 years this is estimated to attain a total of 137,000,000 tons annually, if treatment is not applied. With the application of watershed treatments this total would be reduced by more than 75 percent.

Let's Explore Your Mind

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. CAIN. Mr. President, one derives solid satisfaction from being able to compliment the sovereign State which he represents. In a recent column, Let's Explore Your Mind, Albert Edward Wiggan answers three questions, one of which refers to the citizens of Washington State. The two other questions and responses are interesting. I ask unanimous consent that the column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

LET'S EXPLORE YOUR MIND

(By Albert Edward Wiggam, D. Sc.)

1. Are the chief effects of quack medical cures psychological rather than physical?

2. Will more playgrounds and recreation centers solve the juvenile delinquency problems?

3. Are there smarter people in some States in the United States than in others?

ANSWER TO QUESTION NO. 1

Yes. Quack medical scoundrels use the psychological principle that people believe what they wish to believe. George Mann relates in Science Digest that at the trial of "Dr." Chadiali, 112 people swore his spectro-chrome light (merely gaudy colored lights) had cured them of everything from worry to bald-headedness. One excited witness testified it had cured him of epilepsy and instantly fell into a fit. Mr. Mann says a number of prominent businessmen and politicos wear a cigarette sized gimcrack attached to their underwear. An essential element in the device is used by veterinarians as a remedy for sick horses. Getting rid of medical quacks is largely a problem in social psychology and public education.

ANSWER TO QUESTION NO. 2

No, asserts Dr. Paul W. Tappan, sociologist at New York University. He shows the astonishing fact that juvenile delinquents have more group affiliations and are more often leaders in the groups than non-delinquents. Even church and school can have little effect except as they can cooperate with the home, according to Dr. Tappan. Other studies show the home outranks church, school, laws, and everything else combined in building character and preventing juvenile delinquency.

ANSWER TO QUESTION NO. 3

Yes. After World War I psychologists made an index of culture (indicating mental ability) for every State as shown by the following tests: (1) Number of soldiers who made A and B grades on the Army mental tests; (2) number of readers of both high- and low-brow magazines; (3) number of leaders in Who's Who in America; (4) number of illiterates; (5) number of mistakes made in making out census reports. This index shows there was more culture per square citizen in Washington State than in any other. Oregon, second; Massachusetts, third; California, fourth. My home State, Indiana, ranked twenty-ninth—probably because Mrs. Wiggam and I were then living in New York. For self-addressed postal I'll tell you where your State stands.

The H-Bomb: Humanity's New Peril

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The H-Bomb: Humanity's New Peril," written by Clarence Poe, president and editor, the Progressive Farmer, and published in the March 1950 issue of that publication.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE H-BOMB: HUMANITY'S NEW PERIL

(By Clarence Poe, president and editor, the Progressive Farmer)

A new crisis, a new challenge, and a new opportunity come to America as a result of America's decision to make the hydrogen bomb. From 10 to 1,000 times more powerful than the atom bomb, it carries the greatest possibilities for destroying human life and happiness of anything ever developed on this earth.

Atomic power has amazing possibilities for peacetime uses—uses which might bring the whole human race to new levels of well-being and prosperity. But the hydrogen bomb has no such uses. It can be used only for destruction, and not only destruction, but indiscriminate, wholesale destruction. All the men, women, infants, children, the strong and the weak, and the industries in an entire State might be destroyed almost in a moment of time—and there is no known defense against it. Ralph E. Lapp says, "A hydrogen bomb blitz could wipe out this country's major cities and kill 10 to 15 million Americans in a single day." The Federation of American Scientists made similar predictions and a group of America's foremost atomic scientists declared: "This bomb is no longer a weapon of war, but a means of extermination of whole populations. Its use would be a betrayal of all standards of morality and of Christian civilization itself."

Nevertheless President Truman decided that America should build the hydrogen bomb. He felt that if we do not build it, Russia might build one and decide to use one and so have us at a hopeless disadvantage.

With this decision itself we have no quarrel. But with the way he made it and his course of action, or inaction, since he made it we believe that all America is shockingly disappointed and appalled. Only God Almighty has ever had the power to let loose on humanity such destruction, and all humanity as represented in the United Nations should have been warned of its consequences and asked to join in plans for its control. Suppose Mr. Truman had gone before the United Nations and had first quoted what Bernard Baruch said when his plans for control of the atom bomb were presented:

"Behind the black portent of the new atomic age lies a hope which, seized upon with faith, can work our salvation. If we fail, then we have damned every man to be the slave of fear. Let us not deceive ourselves: We must elect world peace or world destruction."

And suppose Mr. Truman, in words heard round the world, had said: "Today an even greater danger and opportunity confronts us. Scientists in the United States of America can now make the hydrogen bomb. Scientists in other nations will soon know how to do so. For self-protection and under present circumstances we in the United States have no choice but to make it. But I pray God and pray you to so change circumstances that we may never have to use it. I summon all nations to join the United States in taking some gigantic steps that will prevent any nation from ever using it. * * * When God Almighty said, 'Thou shalt not kill,' He spoke not merely to persons, but to nations. America does not seek peace merely to save our own sons from being killed, their children orphaned, and their wives widowed, but equally because we do not wish to kill the sons even of our enemies. * * * This new crisis for all nations demands a new and heroic effort to save humanity from that crisis and to make the wonders of the atomic age serve humanity rather than destroy it."

All over the world—in Europe, Asia, and South America—Communists are telling these nations that the United States wants not peace, but war. By some new and convincing program for world peace we can now win these hesitant nations to our side.

WHAT MUST AMERICA ANSWER?

While President Truman and Secretary Acheson disappointed and appalled America by offering only a continuation of the cold war as an answer to the hydrogen bomb, we rejoice to say that, fortunately, there were

voices in the United States Senate and elsewhere which did summon humanity to do something majestic and far-reaching about this world-shaking peril. Senator BRIEN MCMAHON, chairman of the Joint Committee on Atomic Energy, proposed that the United States and all nations (1) forego the making and use of atomic or hydrogen bombs and instead (2) agree to use two-thirds of their present military expenditures for developing the backward and underprivileged peoples of the earth and other forms of peaceful progress. Senator TYDINGS proposed inviting all nations to a new disarmament conference. Senators GRAHAM and FERGUSON presented plans for strengthening the United Nations and Senators VANDENBERG and CONNALLY spoke constructively. Especially eloquent and historic was Senator MCMAHON's appeal which we wish every American could read in full. In part he said:

"We now spend about $15,000,000,000 annually for armaments. Why not offer to take two-thirds of this sum, or $10,000,000,000, and, instead of amassing sterile weapons, use it to foster peace throughout the world for a 5-year period? Why not offer to spread the annual $10,000,000,000 over three programs: President Truman's point 4 proposal, development of atomic energy everywhere for peace, and general economic aid and help to all countries, including Russia?

"Such a global Marshall plan might combine with the marvelous power of peacetime atomic energy to generate universal material progress and a universal cooperative spirit.

"In exchange for our own contribution of $10,000,000,000 annually, we would ask: (1) general acceptance of an effective program for international control of atomic energy, and (2) an agreement by all countries, enforced through inspection, that two-thirds of their present spending upon armaments be devoted toward constructive ends. Administration of the annual $10,000,000,000 which we offered to make available would be carried out through the United Nations.

"If the proposal were actually accepted, we would have concluded the cheapest monetary bargain in our history; we would have probably saved mankind from destruction by fire; and we would have paved the way toward a new era of unimagined abundance for all men, based upon atomic energy constructively harnessed."

Maybe Senator MCMAHON's plan is not the final answer. But to those who say it is not practicable, must we not answer, "If it is not practicable to spend $10,000,000,000 a year for world peace and progress, how practicable is it to spend ten to possibly fifty billion dollars a year for an armament race when, as Senator MCMAHON reminds us, '5,000 years of recorded history teach us again and again and again that armament races end in war'?" Of all plans so far proposed, Senator MCMAHON's seems the most worthy of a nation that calls itself Christian and the one that seems surest to bring other nations to our side in a program to preserve world peace and prevent a hydrogen war.

As has been well said, "Every crisis is an opportunity." As we have frequently said, "Always thank God when a bad situation gets worse, for then something will be done about it." The very terribleness of our new situation may well drive us into some effective plan for strengthening the United Nations and setting up an effective program for world peace. But there must first be a driving force greater than any selfish desire to save our own skins and our own wealth. Only Christianity, we believe, can supply such a driving force. There must be a program which not merely talks of the fatherhood of God and the brotherhood of man, but proposes to act on this basic Christian principle. We must let Russia and all humanity know that we are just as anxious not to kill other human beings and their children as not to have other human beings kill us and our children. We must have not merely the negative, despairing program of a continuing and bankrupting armament race ending in war. Rather we must have the inspiration of a great, challenging, constructive, hopeful program of building a better world for all men—some such objective as Senator MCMAHON envisioned in his great address.

To all the Christian men in Congress, to the leaders in all churches, our Christian periodicals, to every Christian man or woman, and to all who believe in Christian ideals, whether or not they belong to any religious denomination, comes the challenge to work as individuals and through their organizations. Christianity must lead America and the world to that "peace on earth, good will toward men" which the very seriousness of the hydrogen bomb may now make the nations of the world bring to reality.

Repeal Telephone Excise Taxes

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Repeal Telephone Excise Taxes," prepared by Mr. T. H. Sanderson, of Portage, Wis., director of the Wisconsin State Telephone Association, of Madison, Wis.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REPEAL TELEPHONE EXCISE TAXES

(By T. H. Sanderson, of Portage, Wis., director, Wisconsin State Telephone Association, Madison, Wis.; also president People's Telephone Co., main office, Rio, Wis.)

The United States Government, during World War II, placed an excise tax on telephone usage to deter the public from demanding telephone service, except where absolutely necessary, at a time when materials, such as steel, copper, lead, zinc, etc., used in communication systems, were sorely needed for war purposes. Similar excise taxes were placed on certain so-called luxuries transportation, etc., but the Government, recognizing telephone communications as of prime importance to the success of the Nation's war effort, placed higher taxes as a curb, on the telephone user-public than were placed on other taxable commodities and services.

What Government considered as an effective wartime deterrent against greater usage of telephone communications, has become a more effective deterrent during postwar times, resulting in loss of business to the telephone industry and an unjustifiable tax on telephone users throughout the United States.

What the annual excise-tax dollar value amounts to in Wisconsin, is shown by the following table, which sets forth the amounts of excise taxes paid by the various classes of telephone companies, ranging from large to small, during the year 1948.

Class of company	Number of companies	Exchange revenues	Excise tax paid on exchange revenues	Toll revenues	Excise tax paid on toll revenues
Class A	11	$32,563,510	$4,884,526	$15,254,533	$3,050,907
Class B	6	382,198	57,330	184,576	36,915
Class C	64	1,155,302	173,295	547,015	109,403
Class D	111	616,141	92,421	213,848	42,770
Class E	87	150,825	22,624	40,081	8,016
Total	279	34,867,976	5,230,196	16,240,053	3,248,011

Recap of excise taxes paid in 1948 by telephone users in Wisconsin

On exchange revenues	$5,230,196
On toll revenues	3,248,011
Total excise taxes paid in 1948	8,478,207

In 1949 it is estimated the telephone excise taxes paid in Wisconsin were over $9,274,800.

The excise tax, as stated above, was imposed by the Government as a war measure. The war is over. It ended in 1945 and 5 years later, in 1950, this wartime tax is still saddled on the general public. It affects every breadwinner in the Nation for the reason that the telephone excise taxes paid by large or small manufacturers and service companies, along with their other overhead expenses, are considered as part of the cost of production or operation and included in the basis for price fixing. Therefore, the consumer not only pays the tax on his personal telephone usage but, in addition, pays the telephone excise tax on every commodity or service he buys. Canada discontinued a similar war tax a long time ago and it's discontinuance in the United States is long overdue.

In Wisconsin, the telephone companies pay up to 41.6 percent of their total net revenue to the Federal and State Governments for income taxes alone. In addition, telephone users must pay 15 percent on all local exchange service plus 15 percent on toll calls costing less than 25 cents and 25 percent on toll calls costing 25 cents and over.

This tax is becoming a serious problem to our State regulatory commissions. General Solicitor McDonald for the National Association of Regulatory Utility Commissioners testified before the House committee that State commissions are compelled to provide $1.61 in net revenue before Federal income taxes in order to enable the utility to receive $1 after such taxes.

In the telephone industry, with the excise taxes of from 15 to 25 percent added, the tax situation is even worse. It thus appears that most subscribers pay over $2, before income and excise taxes, to net the telephone company $1.

From 50 to 60 cents of every telephone revenue dollar is required for wages, as compared with 20 to 25 cents for electric utilities, due to the large operating personnel required. In other words, about 46 percent of the subscriber's dollar for local service goes to employees as wages, social security, etc. The starting and maximum rates of pay have more than doubled since 1939, while at the same time the period required

to go from the starting rate to the maximum wage rate has been shortened.

Under the 1949 Federal Fair Labor Standards Act the increase from 40 to 75 cents in the minimum hourly wage rate has made it necessary for many small telephone companies to raise their subscribers' rates in order to survive and by raising the subscribers' rates the Federal excise tax was automatically increased so that now, 5 years after the end of the war, paradoxically, telephone subscribers are paying higher war taxes on telephones than they paid when the war was on.

Further, the collection of this tax by telephone companies is very expensive. It takes a great deal of book work and accounting to collect and account for the tax on each telephone message and on each service charge. Many of the toll costs are 25 cents or less and the amount of clerical help necessary and the expense thereof is in many instances all out of proportion with the revenues received. For this service, the telephone companies receive nothing. Not only the tax but the expense of collection and remittance must in the end be paid by the subscribers and those who use the telephone service.

The removal of the Federal excise tax on telephone service will affect a direct saving to users of over 937,000 telephones in Wisconsin and, on their behalf, your valued support toward that end is earnestly solicited.

Notes Off the Record by Gertrude Pierson

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. CAIN. Mr. President, the State of Washington produces many good things, including normal, intelligent, and curious people, among whom are found an occasional philosopher and Gertrude Pierson is one of them. Her column, Notes Off the Record which appears from time to time in the Cashmere Record is read by many and I ask unanimous consent that one of Mrs. Pierson's recent articles be printed in the Appendix to the RECORD for the enjoyment of others.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

NOTES OFF THE RECORD
(By Gertrude Pierson)
MIND YOUR P'S AND Q'S

Joe and I are not especially concerned with the "Q's." It's the "P's" that are our pet peeve, namely, potatoes, politicians, pockets and purses.

We know little of politics and less of economics, with the exception of the kind of economics that keeps us busy chewing up pencils. Luckily pencils can still be obtained at two for a nickel. We wish we could say the same for eggs and potatoes; they'd make much better chewing.

But at 5 cents a pound potatoes have become almost a luxury; apples definitely so, and eggs to be rationed carefully. Of course, we are aware that we are not as important as the cattle being fed surplus (?) potatoes at the rate of 1 cent per hundredweight, but we do wonder why we cannot buy them at $1.25 a bushel, the price paid to the farmer by the Government. We wonder also why eggs are buried underground while children go hungry.

Speaking entirely from our own personal experience, because we cannot then be accused of not knowing what we are talking about, we feel sure the problem is a shortage of consumers' dollars, not a surplus of produce.

In our case, after we have paid for rent, clothing, fuel, insurance and so forth, not to mention taxes, we have exactly $15 a week to spend at the grocery store—no more. This amount divided by 21 meals per week for 4 people comes out at about 15 cents per meal per person, about 12 cents in reality because some inedible items such as soap are included in the grocery orders.

Our budget is completely inflexible, ironclad. There's no way for us to pile up a debt in the manner our Government does, we are forced to live within our resources. And we do not think we are less than representative of a large number of families in or near our income group.

The only solution in sight, since we cannot influence the kind of reasoning that allows malnutrition to exist because of a surplus of foods, to add to the surplus and remove ourselves from the consumers' list by planting our own "tater" patch, and let the cattle eat the farmers' surplus while we pay taxes to support the price and sweat while hoeing our own rows.

Maybe we'll get a few hens and a hog too, then work for wages to support the "critters."

All because petty, paltering politicians pick the pockets and the purses of the population to produce false price levels for the Nation's products.

Passingly peculiar, wouldn't you say? Just to get the "Q" in, too, we'll say we think it's also a little queer. No, we don't understand politics.

McCarthy's Creaking Limb

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Monday, February 27 (legislative day of Wednesday, February 22), 1950

Mr. TAYLOR. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article from the Washington Daily News of today, written by Peter Edson. The article is entitled "MCCARTHY'S Creaking Limb."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

M'CARTHY'S CREAKING LIMB
(By Peter Edson)

First one of Wisconsin Republican Senator JOSEPH R. MCCARTHY'S 81 security risk cases to be identified by name is David Demarest Lloyd. He is now employed as an assistant to Charles V. Murphy, who recently succeeded Clark Clifford as President Truman's counsel.

In Senator MCCARTHY'S 6-hour speech David Lloyd was identified only as Case No. 9. Here is what Senator MCCARTHY had to say about him:

"This individual, after investigation, was not given security clearance by the State Department. After failing to obtain clearance by the State Department he secured a job in the Office of the Secretary of Defense. And where do Senators think that man is today? He is now a speech writer in the White House. That is Case No. 9.

"So that there may be no question about this, we will refer directly to the investigative file. I think I am doing Mr. Truman a favor by telling him this. I do not think he knows it. I do not think he would have this individual there writing speeches for him if he knew it.

"Both the individual referred to and his wife—this is in the file of the investigative agency—are members of Communist-front organizations. He has a relative who has a financial interest in the Daily Worker. But in any event the State Department used good judgment not to clear this individual."

That's the end of what Senator MCCARTHY had to say about Case No. 9. Senator MCCARTHY may have a lot of stuff in his 80 other cases. But even Senator MCCARTHY admits today that he is not going to push this case. The record of David Lloyd's life may indicate why.

David Demarest Lloyd is 38. He is married and the father of two children. The family for the past 10 years has lived at 2501 Ridge Road Drive, Alexandria, Va. He was born in New York. His own father and mother were Democrats, but most of his relatives were Republicans. He had one great-aunt who died about 10 years ago who was considered something of an eccentric. She was one of three wealthy women who "angeled" and fronted as publishers for the Daily Worker in its early days.

Young Lloyd himself is medium-build, light-haired, and wears glasses. He is the quiet, serious, scholarly type. He is an Episcopalian. His hobby is painting water colors. He was graduated from Harvard in 1931 and Harvard law in 1935. He got into Government service through Department of Agriculture's Resettlement Administration.

In this period he joined the Washington Co-Operative Bookshop, along with a lot of other Washingtonians who thought they were joining to get discounts on books. Later on most of them found they had been sucked in on a Commie front organization and got out. Mr. Lloyd also joined the National Lawyer's Guild, in the days when Supreme Court Justice Jackson, Judge Ferdinand Pecora, and other prominent attorneys joined. When the guild revealed itself as way over to the left, Mr. Lloyd and all the other anti-Communists got out.

In 1945 Lloyd went to Europe with the Harriman economic mission. While there he says it became clear to him that communism was trying to destroy European recovery. When he came back to the United States in 1945 he looked around to see what could be done about it.

Americans for Democratic Action was being formed. Mr. Lloyd helped in its founding, joined its staff, and helped draft the anti-Communist planks in the ADA constitution.

About this time Mr. Lloyd made application for a job in the State Department. While he was being investigated, he got a job in the National Defense Establishment. But he asked the State Department to keep his file pending, because he might want to transfer to State.

In 1947, Representative KARL STEFAN (Republican, of Nebraska) asked the State Department for an abstract of its files on employees and applicants for jobs under investigation. Lloyd's file was sent to Representative STEFAN. It became his Case No. 99 in hearings of the House Appropriations Committee in January, 1948.

When these hearings were published Mr. Lloyd recognized his case, though he wasn't mentioned by name. He protested to the State Department, and he went to see Mr. STEFAN.

From the State Department's John Peurifoy, now Deputy Under Secretary of State in charge of administration and security, Lloyd

got an abject apology. It included an admission there were no questions of security risk in connection with his case, and an explanation that his file should not have been sent to the House Appropriations Committee.

From Representative STEFAN, Mr. Lloyd got assurances that a statement on his protest would be filed with his record. Mr. Lloyd thought the matter closed. Nevertheless, 2 years later he was to find that Senator MCCARTHY had picked up the old Stefan file and publicized it without any qualifications as Case No. 9.

Senator MCCARTHY's reference to Mr. Lloyd as "a White House speech writer" is hardly correct. He works under Presidential Counsel Murphy, principally on legislative matters.

Mr. Murphy and Presidential Press Secretary Charles G. Ross describe Mr. Lloyd as a man of all work, one of a team of able young men on the White House staff. His salary is about $10,000 a year.

Mr. Ross says Mr. Lloyd has been thoroughly investigated by the FBI and cleared by the White House Loyalty Review Board. Everyone in the White House is convinced of his absolutely reliability. The President himself is said to have reviewed the Lloyd record and to have every confidence in his complete loyalty.

His record in the White House is that he has fought communism at every opportunity.

Our Foreign Policy at Midcentury

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Harold E. Stassen at a Lincoln Day dinner:

Chairman Tope, Congressman Ford, Mrs. Loomis, distinguished guests, ladies and gentlemen, it has been almost 5 years since that 16th day of April, 1945, when President Truman spoke to a joint session of the Congress and began his administration of our country.

We gather tonight in the home city of the outstanding Republican statesman and patriot of those 5 years, the Honorable ARTHUR VANDENBERG, your United States Senator. It is thus fitting and highly desirable that we should here and now review those 5 years in terms of foreign policy, and think together of the actions that should be taken by our country in the current state of world affairs.

On that 16th day of April in 1945, the armed forces of the United States and of her western Allies, under the superb command of General Eisenhower, were sweeping forward to complete victories on all fronts throughout the world. On that day the American Ninth Army crossed the Elbe River, last water barrier before Berlin. It was ranged along that river for a stretch of 150 miles, and at its nearest point it was only 75 miles from the German capital. On that day, the United States Third Army was only 7 miles from the Czechoslovakian border, and, at Chemnitz, was only 90 miles northwest of Prague. On that day, the American Fifth Army had moved forward through the last Apennine barrier and was only a mile from Argenta, the key to the Po River gap in Italy. On that day, the German Air Force had been destroyed, the German Navy had been sunk, and the German Army was rapidly retreating on all fronts before the American forces.

On that April 16, in the Pacific, the American armed forces, under the brilliant command of General MacArthur, Admiral Halsey, Admiral Nimitz, and General Kenny, had completed the recapture of the Philippines and had landed on Okinawa. Tokyo was 50 percent in ruins from air attack; the Japanese Navy was sunk; and the Japanese Air Force was largely destroyed.

On that 16th day of April 1945, the United States of America had in the field the most powerful armies in the world; we had in the air the most effective air force in the world; we had at sea the greatest fighting fleet in the world. Our homeland was undamaged by war; our industrial production was at an all-time high; our agriculture had favored us with bountiful crops.

Never, in all of history, had one nation put forth the tremendous fighting effort, or had achieved such vast production, or had exhibited the exceptional teamwork and courage and precision of execution, with which this Nation astonished the world in that war.

Never, in all of history, was the prestige of any nation as high or its position as strong as was that of our country on that day.

But today: In Poland, where Hitler's attack caused the beginning of the major war; in Czechoslovakia, object of the last desperate bid for peace at Munich; in Bulgaria; in Rumania; in Hungary; we find dictatorships which arrest American citizens, insult and attack leaders of the Christian church, trample on the human rights in which we believe, and mouth wild accusations against the Stars and Stripes.

Today, nearly all of China and its 450,000,000 people—the nation which we refused to permit Japan to subjugate and thereby suffered Pearl Harbor—is under the domination of a group of men who publicly attack us, call us imperialists and war mongers, arrest and insult our official consuls, mistreat our missionaries, and cruelly oppress their own peoples.

Today, in Berlin, our representatives find themselves in a precarious position, harried by recurring blockades of their railroads and highways and by other disruptions to the fulfillment of their rights and responsibilities in the capital of the German nation.

With your permission I should like to review concisely the major events of the 5 years intervening as a prelude to some specific suggestions for the future. I review them not with a spirit of rancor, nor of bitterness, nor of narrow partisanship. I review them because I believe that we have reached the point where a frank facing of hard facts will give us a better chance to evolve a sound program for the future.

It must be said, as we think back to April 16, 1945, and then look about the world today, that never before in the history of the world has a major nation, in 5 years' time, lost so many of its objectives through the executive conduct of its foreign affairs as has this Nation in these past 5 years.

How was it possible to lose so much in so short a time? How did it happen? Was it unavoidable?

What prevented it from being even worse?

A review of the record shows these following facts, and I recite them now quietly and carefully with an invitation to be corrected if they are inaccurate in any detail. Of course, the aggressive and coldly calculated deceptiveness of the leaders in the Kremlin has been a major cause for what has happened. But what of this country's contribution to the unhappy record?

On April 17, 1945, the day after the President began his administration, the drive of the American Army to Berlin was halted. Our Army stood still and did not move, and it was not until the 2d of May that Berlin fell to the Red Army. Then on May 6 United States troops began to withdraw from the Elbe River to a line more than 50 miles to the rear which is now the zone boundary to western Germany. That withdrawal took place without any written agreement for a corridor or line of communications to Berlin.

In Czechoslovakia the Third Army had moved forward until General Patton's patrols were only 7 miles from Prague, the capital city, and there they stopped—under orders—virtually within sight of Hradcany Hill and the spirals of its ancient cathedral, even though the Czech patriots in Prague had temporarily seized part of the city and sent out radio calls for American aid. When that aid was not forthcoming, many of those patriot leaders of Czechoslovakia were captured and executed by the Germans. Not until May 9 did the Red Army arrive in Prague.

In Austria, the American Army reached Steyr on the Enns River on May 6 and then waited there 3 days for the Russians to arrive.

I do not attempt to evaluate the varied accounts of the behind-the-scenes conflicts that are alleged to be responsible for these disheartening facts. I simply recite that which no one can deny and state the further fact that these armies would have obeyed the orders of their Commander in Chief, the President of the United States.

On July 17, 1945, the Potsdam Conference of the major powers was held. There was no Republican representation whatsoever at that conference. There was no Republican consultation in advance of that conference. The agreement there made contained many ambiguous and conflicting statements. On one hand it declared that Germany was to be treated as a single economic unit and, on the other, that the individual zone commanders would be supreme in their respective zone.

The Potsdam agreement was one of the most unfortunate ever entered into by a major nation. It made large and very definite concessions to the Russians, and it contained ambiguities concerning those things in which we had a vital interest.

The Potsdam agreement also provided for a Council of Foreign Ministers. It the midst of a series of their meetings, the Big Three Foreign Secretaries gathered in Moscow in December 1945—again without any Republican representation. It was at this December 1945 Moscow meeting that so-called agreements were made concerning eastern Europe. Actually they were concessions to the Russians. For instance, it was agreed to accept a token broadening of the Rumanian and Bulgarian Governments in exchange for United States recognition, even though the Ethridge Report had clearly shown that the Groza government in Rumania and the Georgiev government in Bulgaria were not broadly representative of the unhappy peoples of those nations.

Another similar development is noted in the European Advisory Commission's actions—without Republican participation, it rearranged the zones in Austria in such a manner that the entire northern border of Austria was placed in the Russian zone, thereby sealing off the southern border of Czechoslovakia and giving control of the Danube River to the Red army.

In December 1945 the able and distinguished General Marshall was sent to China. He was sent with specific instructions from the President which were drawn up without any Republican participation and without adequate opportunity for General Marshall to evaluate them. According to these instructions, his mission in China was specifically that of working out a coalition between the Nationalist government of Chiang Kai-shek and the Communist forces of Mao Tze-tung. The net result of these efforts clearly was to give to the Communist armies of the north time to build their strength, to move into Manchuria, and to arm; to further weaken, by delay, the already weak and corrupt government of the Nationalist Party;

and to contribute immeasurably to the subsequent Communist domination of China.

This entire series of facts has had very sad results for our country and for freedom. The result could have been even more disastrous if it had not been for other moves that were constructive. It is well for us briefly to consider them also.

The United Nations Charter was successfully completed and adopted. But in this instance there was Republican participation, carried through in accordance with appointments made by the late President Franklin Roosevelt. Under that Charter, Israel has arisen, a new and promising nation in the Near East; the Dutch Indies have emerged as a new commonwealth; French Indochina is gaining an increased measure of independence; an Atlantic Pact has been formed to bring closer together the North Atlantic nations in the face of the Communist threat. The official minutes of the American delegation at the United Nations Conference will show that not only was the American effort bipartisan in nature, but, that many of the key constructive provisions—provisions for peaceful adjustment of dispute regardless of origin for individual and collective self-defense, and for an amending convention—were all originated by Republican members of the delegation, and none of them were in the original Dumbarton Oaks draft. These provisions have been the basis of the Atlantic Pact. They have also been important in the work of Ralph Bunche in Palestine and of the committees that went to the Dutch Indies.

The aid to Greece and Turkey, which has implemented the Truman doctrine, was planned on a bipartisan basis and was constructively revised on a bipartisan basis in the Senate.

The second major constructive accomplishment in these 5 years has been the Marshall plan. This also was developed and passed on a bipartisan basis, and its success has in large measure been due to the insistence of Senator ARTHUR VANDENBERG, your fellow citizen, that it be administered by an able executive independent of the State Department and approved by the Senate. That executive is Paul Hoffman.

The negotiation of the Italian peace treaty was concluded through a definitely bipartisan effort in which Senator VANDENBERG and John Foster Dulles played a large part. That accomplishment was of vast importance in saving Italy from communism and in moving her forward toward successful rebuilding.

One other constructive accomplishment has been the Inter-American Defense Treaty, which was negotiated at Rio in August 1947. This again was a bipartisan measure. It was stimulated by the Republicans, and was ratified by the Senate by an overwhelming bipartisan vote of 72 to 1.

The Vandenberg resolution was the forerunner and spark for the Atlantic Pact, and the Republican-originated articles 51 and 52 of the Charter made the Atlantic Pact legally possible.

In emphasizing these facts tonight, I speak not so much to Republicans as to all those impartial and fair-minded citizens who are deeply concerned for their country's future. I ask that this review be analyzed. I ask this: Is it not true that in this 5-year period the sad failures in American foreign policy have occurred when the administration has moved alone, when it has not sought Republican participation in making decisions? Is it not also true that those instances in which there has been a measure of success have been those in which there has been Republican participation?

I say sincerely that I do not wish by this review to claim disproportionate credit for the Republicans. It is natural that two groups of men, each with different backgrounds and different points of view, should together reach better solutions to grave long-term problems than either group alone. This is especially true when one of the groups is not handicapped by an urgent need to excuse or confirm past administrative actions. Furthermore, when thus addressing themselves together to far-reaching questions, they are likely to be lifted above petty considerations of political advantage.

Undeniably Republican participation has been beneficial, and I emphasize this point, not for the purpose of assessing blame or credit for what has taken place, but rather for the more urgent purpose of asking that the people of our country do now insist that their President and their administration from this date forward move in foreign policy with, and only with, Republican participation.

As one of the first steps to prevent a recurrence of past mistakes, the administration should make amends for the gratuitous slap which it took at Senator VANDENBERG when, in the organization of the Eighty-first Congress, it reduced the Republican representation on the Foreign Relations Committee of the Senate to only 5 out of 13 members. This was done even though the Republicans, when in the majority in the preceding session, had granted six seats to the Democrats to seven for the Republicans, and then had cooperated wholeheartedly with the administration.

Having corrected that unwise and purely partisan error the administration should then invite the leadership of both political parties to meet with it in major conferences on the vital key questions of foreign policy before us today. Clearly these are:

First, what shall we do in Asia? When Ambassador Jessup returns from his Asiatic trip, a bipartisan conference, including Senator Vandenberg and Senator Taft, Senator Knowland, Congressman Walter Judd, and former President Hoover, should be held. From such a conference I believe an economic-aid program can be evolved which would convincingly demonstrate that the United States is interested in the future of the people of Asia and which would prove false the Communist propaganda that we are deserting all of Asia. Agreement should be sought on some able individual to become the administrator of the American aid-to-Asia program. That person would have powers and duties parallel to those of Paul Hoffman in Europe.

We cannot expect sound and favorable results until American Asiatic policy is brought together under one able man and geared in with the economic efforts of the other free nations.

It is not too soon to begin to look ahead to the end of the Marshall plan and to begin to discuss such proposals as that our separate policies for Asia and Europe should be brought together into a world-wide economic policy, which would be tailored so that its total demands upon the American economy will not be too heavy, and so directed as to give the maximum boost to the convertibility of currencies and the redevelopment of multilateral trade throughout the world.

The other major urgent question of foreign policy involves the hydrogen bomb. Clearly the decision to proceed to develop this bomb is right, for it comes at a time when there is every indication that the Soviet Union is proceeding to build its war strength in every way. But this decision, by itself, is not sufficient. Even though the chances of success may be only one in a thousand, this Nation owes it to its children, and to all mankind, to make every possible additional effort to bring about a basic change of policy in the Soviet Union and to obtain free and open United Nations inspections of atomic developments and joint world disarmament.

The President of the United States should therefore request a major midcentury conference with the leaders of the Soviet Union. American participation in the conference must be bipartisan. Its delegates must specifically include not only the President, Dean Acheson, Louis Johnson, and General Bradley but also Senator Vandenberg, Senator Taft, Bernard Baruch, and General Eisenhower. The conference should be held in a neutral location such as Stockholm, Helsinki, or Vienna. The Russians who participate must include the key men of the Politburo. In addition to Stalin, Malenkov, Molotov, Beria, and Voroshilov should be present.

To make my position very clear, I would be opposed to a conference with the leaders of Russia if it did not include Republican representation. Furthermore, the American participants must have preliminary conferences of their own to clarify their thinking in advance. In addition the President of the United Nations General Assembly and appropriate representation of Great Britain and France should be invited to sit in. A complete record should be kept of this midcentury conference, and he published in all languages and distributed throughout the world. I do not propose the midcentury conference with any view that agreements in words should be looked upon as success. Only the definite actions to carry out those agreements will indicate success.

I do not, in fact, propose this midcentury conference with any belief that it has bright prospects of success. But I do most earnestly believe that however small the chance of success the grim tragedy that would come to all mankind from a third world war, absolutely requires that a nation with our moral foundation exhaust every possibility and do so repeatedly, in an attempt to end the terrible threat of war, that lies in the race to increase atomic armament. Furthermore, even though such a conference fails, or if the invitation is rebuffed, our moral leadership in the world will be strengthened, and ultimately moral force will decide the future of mankind.

On a similar bipartisan basis, we should also formulate, and rapidly put into effect, a program of moderate economic aid to the underprivileged and less developed areas of the world.

And as we proceed, we must remain strong and alert. No matter what our individual views may be, everyone must clearly recognize that in the world situation that now confronts us we will not prove that we want peace, and we will not get peace, by permitting ourselves to become weak. But let me emphasize that it is never a sign of weakness to seek an honorable lasting peace. In fact the seeking itself adds to moral standing and ethical position which are sources of great strength.

It is my belief that if we do develop our foreign policy on a bipartisan basis, with Republican participation, and if beyond that we talk that policy through with the whole of the American people and do so frankly and sincerely, we will evolve policies that are consistent; that take a long-term view in accord with our fundamental moral and ethical principles; and that will hold the best prospect of contributing to the future peace and progress of ourselves and of all nations.

There have been those who have insisted that our foreign policy cannot be discussed openly with our people because that would involve disclosing too much of secret information. But recent court decisions and official investigations, which have revealed the presence of foreign spies in our Department of Justice, in our Department of State, and in our atomic energy program clearly indicate that the Communist leaders in the Kremlin have in fact known more about our policies and our secrets than have the American people themselves. I say, let us tighten up the American security against Communist activity, and let us open up increased information to the American people.

On this foundation, with participation by both political parties, this Nation will place

its foreign policy on a positive instead of a negative base. Even if the conference with the Russian leaders fails, America can then proceed, by employing every possible means—not only the radio but also literature distributed by balloons and high-flying airplanes—to send information over the iron curtain to the Russian people. By doing this we may well regain the ground lost for the freedom of mankind without the holocaust of war and notwithstanding the leaders of Russia.

My fellow citizens, with deep and earnest conviction I submit to you that this is the manner in which our America must give effective moral leadership to the world. This is the road that leads to the best prospect for peace and progress for the men and women and children of this Nation and of all nations.

Labor and Politics

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. JAVITS. Mr. Speaker, I append hereto a most important and interesting editorial from the New York Times of February 10 on this subject:

LABOR AND POLITICS

An interesting problem has been placed by David Dubinsky before the executive council of the American Federation of Labor. Mr. Dubinsky was one of the few important labor leaders in this city to support Newbold Morris for mayor last fall in the face of combined A. F. of L.-CIO backing for Mr. O'Dwyer. Presumably as a result of the position taken by Mr. Dubinsky and his union, the ILGWU representative was asked to resign from New York City's central A. F. of L. group. It is acceptance of this resignation by the Central Trades and Labor Council of Greater New York that Mr. Dubinsky is now asking the A. F. of L.'s highest executive body to reverse.

The problem raised by Mr. Dubinsky to the topmost Federation level is this: Should a labor organization following one political line require its officials—or, for that matter, its members—to conform to that line under pain of expulsion? This question becomes of increasing importance as labor unions as such tend more and more to take political positions. In the present case Mr. Dubinsky asks "whether a central labor union * * * has the power or the right to compel uniformity of political thought and action by all * * * members."

It seems to us in the interest both of labor and of democracy not to discourage independence of thought and action inside (as well as outside) the ranks of labor. Obviously, any labor organization, from local to top executive board, may participate in political activity if it wants to. But to enforce conformity under pain of expulsion (which is a very serious sanction indeed) would be to blanket the minds of union members. That is hardly a democratic procedure.

The CIO, to be sure, is now ridding itself of Communist domination. But there is a very real distinction, so far as labor is concerned, between political dissent as expressed within the framework of the democratic system and the tactics of distortion and disruption employed by the Communists inside the labor movement to further their own ends. The Communists use unions primarily as weapons in an ideological battle. To root out Communist influence is one thing; it is quite another for a labor group, whether A. F. of L., CIO, or independent, to require that all its members subscribed to whatever political line it may be following at the moment.

Where To Apply for Surplus Potatoes

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. HAYS of Arkansas. Mr. Speaker, supplementing the list published in the RECORD by the gentleman from Massachusetts [Mr. HESELTON] of agencies authorized to handle surplus potatoes and other commodities, I include the following names and addresses of officials of certain Southern States with such authority:

Arkansas: J. H. Carter, State purchasing agent, 1817 Spring Street, Post Office Box 2940, Little Rock, Ark.

Kentucky: H. E. Walters, Department of Agriculture, New Capitol Building, Frankfort, Ky.

Louisiana: T. B. Kirklin, State Board of Education, Baton Rouge, La.

Mississippi: J. M. Tubbs, Department of Education, Old Capitol, Jackson, Miss.; W. D. Hilton, State Board of Trustees of Mental Institutions, 2550 North State Street, Jackson, Miss.

The distributing agents for the State of Texas are as follows:

Texas distributing agents, commodity distribution program

District	Name of distributing agent	Title	Address	Counties
Amarillo	Charles M. Rogers	Superintendent, Amarillo independent school district.	Senior high school, Polk St., Amarillo, Tex.	Armstrong, Briscoe, Carson, Childress, Castro, Collingsworth, Dallam, Deaf Smith, Donley, Gray, Hall, Hansford, Hartley, Hemphill, Hutchinson, Lipscomb, Moore, Oldham, Ochiltree, Parmer, Potter, Randall, Roberts, Sherman, Swisher, Wheeler.
Austin	T. N. Porter	Business manager, Austin public schools.	701 East 11th St., Austin, Tex.	Bastrop, Blanco, Burnet, Comal, Caldwell, Dewitt, Fayette, Gillespie, Gonzales, Guadalupe, Hays, Lavaca, Llano, Kendall, Travis.
Beaumont	Only Greer	County superintendent, Jefferson County School Board.	Courthouse, Beaumont, Tex.	Chambers, Hardin, Jasper, Jefferson, Liberty, Newton, Orange.
Brownwood	Harley H. Black	County superintendent, Brown County School Board.	Courthouse, Brownwood, Tex.	Brown, Callahan, Coleman, Comanche, Concho, Eastland, Jones, Mason, Monard, McCulloch, Mills, Stephens, Shackelford, San Saba, Taylor.
Corpus Christi	Deskin D. Snow	County superintendent, Nueces County School Board.	Courthouse, Corpus Christi, Tex.	Nueces, Aransas, Bee, Brooks, Calhoun, Duval, Cameron, Goliad, Hidalgo, Jim Hogg, Jim Wells, Kenedy, Kleberg, Live Oak, Refugio, San Patricio, Starr, Webb, Willacy, Victoria, Zapata.
Cameron	Charles Hicles	County superintendent, Milam County School Board.	Courthouse, Cameron, Tex.	Bell, Brazos, Burleson, Grimes, Lee, Leon, Madison, Milam, Robertson, Washington, Williams.
Corsicana	J. C. Watson	County superintendent, Navarro County School Board.	Courthouse, Corsicana, Tex.	Dallas, Kaufman, Van Zandt, Ellis, Navarro, Henderson.
El Paso	Lynn B. Davis	Business manager, El Paso public schools	100 W. Rio Grande El Paso, Tex.	Brewster, Culberson, El Paso, Hudspeth, Jeff Davis, Loving, Pecos, Presidio, Reeves, Terrell.
Fort Worth	G. H. Stoew	County superintendent, Tarrant County School Board.	Courthouse, Fort Worth, Tex.	Denton, Erath, Hood, Johnson, Palo Pinto, Parker, Somervell, Tarrant, Wise.
Houston	J. Hall Sheppard	County superintendent, Harris County School Board.	1225 Elder St., Houston, Tex.	Austin, Brazoria, Colorado City, Ft. Bend, Galveston, Harris, Jackson, Matagorda, Montgomery, Waller, Wharton.
Lubbock	Roy Boyd	County superintendent, Lubbock County School Board.	Courthouse, Lubbock, Tex.	Andrews, Bailey, Borden, Cochran, Cottle, Crosby, Dawson, Dickens, Ector, Floyd, Foard, Gaines, Garza, Hale, Hardeman, Hartley, Haskell, Kent, King, Knox, Lamb, Lubbock, Lynn, Martin, Midland, Motley, Stonewall, Terry, Winkler, Yoakum.
Lufkin	T. J. Wilroy	County superintendent, Angelina County School Board.	Courthouse, Lufkin, Tex.	Angelina, Anderson, Cherokee, Gregg, Harrison, Houston, Nacogdoches, Panola, Polk, Rusk, Sabine, San Augustine, Shelby, Smith, Trinity, Tyler, Walker, San Jacinto.
Paris	William Wooldridge	County superintendent, Lamar County School Board.	Courthouse, Paris, Tex.	Bowie, Camp, Cass, Collin, Delta, Fannin, Franklin, Grayson, Hopkins, Hunt, Lamar, Marion, Morris, Raihs, Red River, Rockwall, Titus, Upshur, Wood.
San Angelo	Bryan Dickson	Superintendent, San Angelo independent school district.	244 Magdalan St., San Angelo, Tex.	Coke, Crane, Crockett, Fisher, Glasscock, Howard, Irion, Mitchell, Nolan, Reagan, Runnels, Schleicher, Scurry, Sterling, Tom Green, Upton, Ward.

Texas distributing agents, commodity distribution program—Continued

District	Name of distributing agent	Title	Address	Counties
San Antonio	W. B. Connell	Superintendent, Hot Wells independent school district.	400 Hot Wells Blvd., San Antonio, Tex.	Atascosa, Bandera, Bexar, Dimmit, Edwards, Frio, Karnes, Kerr, Kimble, Kinney, La Salle, Maverick, McMullen, Medina, Real, Sutton Uvalde, Val Verde, Wilson, Zavala.
Waco	J. E. Batson	County superintendent, McLennan County School Board.	Courthouse, Waco, Tex	Bosque, Coryell, Falls, Freestone, Hill, Hamilton, Limestone, Lampasas, McLennan.
Wichita Falls	B. H. Dinsmore	County superintendent, Wichita County School Board.	Courthouse, Wichita Falls, Tex.	Archer, Baylor, Clay, Cooke, Jack, Montague, Throckmorton, Wichita, Wilbarger, Young
State board of control [1]	Alice L. Miller	Assistant purchasing agent	State Capitol Bldg., Austin, Tex.	Taylor, Travis, Howard, McCulloch, Cooke, Coryell, Kerr, Limestone, Cherokee, Bexar, Navarro, Travis, Tom Green, Kaufman, McLennan, Wichita.
State board of hospitals and special schools.	Mayme Kelly	Director	Austin State Hospital, Austin, Tex.	Serving State institutions located in the above counties.

[1] To be changed to "Division of hospitals and special schools" as soon as the new board is organized.

Where Pioneer Strength of Character Still Prevails

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. WHITE of Idaho. Mr. Speaker, in these times of myriad modern conveniences we often lose sight of the sturdy character of the strong and faithful American who still carries on in true pioneering style in many of the more or less remote areas of our great Nation.

It is to preserve in the archives of our Capital a vivid portrayal of such scenes still persisting in the broad scope of our national life that I offer herewith two revealing articles from recent pages of the Sandpoint (Idaho) Bulletin:

ODEN-SUNNYSIDE
(Mrs. Oliver Long, reporter)

WINTER SCENE AROUND LAKE PEND OREILLE, IDAHO

January 5 was the last issue of Oden-Sunnyside news. Since then much may have and did happen, but your reporter knows little about it. The snows came down and the wind whipped it about to fill driveways, roads, and fields. In some yards drifts came to the eaves of houses. Snowplows came and threw high walls, over which sometimes only a high truck top can be seen along the highway.

Along the Sunnyside roads the snow plow came through from the north on January 17. They opened on Sunnyside to near the Meeker place, where the lead plow nosed a bank and stopped. Two days later the road toward the east was plowed. That part from the mail boxes west could not be opened by the plows, and on January 23 the Dunn brothers, with their bulldozer, plowed it open. Up to this time we had missed 11 days' mail. The milk producers had to sled the milk to truckers on opened roads. On January 19 Mr. and Mrs. Ralph Earle and Faith Ellen walked in to visit the Longs. Mr. Earle kindly helped shovel the buildings clear of snow, and on January 23 Mr. and Mrs. D. A. Lange also walked in, and they, too, took dinner with the Longs.

The Oden school opened that week, but the Sunnyside bus was unable to take the children that week because of road conditions.

The Extension Club called a meeting for February 6 at Mrs. Ralph Earle's. No report on that.

The Busy Bee Club met last Thursday with Mrs. Max Kluver, with 11 people present.

Last week many white fishermen passed on the way to Sunnyside. No reports on the catches.

Mr. and Mrs. Dick Stockdale and children, of Sandpoint, were seen walking past to visit the Alva McNutt family. That part of the road to the Davis and McNutt homes is open only to teams and sleds.

WINTER FISHING ON LAKE PEND OREILLE

Whitefishing shacks on the ice of Lake Pend Oreille dot the entire area from Sandpoint to Sunnyside, but some fishermen report that the cutthroat trout have driven the whitefish closer to shore.

One fisherman told Dr. C. C. Wendle Sunday that in the Fisherman's Island area near Sunnyside he had to move his location inshore as too many trout were biting out in deeper water.

A plane flew low over the whitefishing shack town Sunday and created a disturbance among fishermen who were seen to toss out fish on the ice which could or could not have been trout, an observer said.

A good many trout have been hooked fishing through the ice for whitefish in the Ellisport Bay district, along with whitefish, reported one Hope resident, who said that more were being returned to the water than were released last year when a reportedly sizable number of cutthroat were retained in catches made in the area.

A Program for Occupation of Western Germany

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. JAVITS. Mr. Speaker, there is appended hereto a statement of the Committee on National Affairs on this subject signed by many distinguished Americans and spelling out in detail a positive program by which we may achieve the aims of our German occupation:

We recently emerged victorious from the second of two great wars fought within a single generation to defend democracy. We are still imperiled by German anti-democratic elements as well as by Russian Communist aggression—these threats are not unrelated.

A major failure to date in the fight against totalitarianism by the democracies has been the lack of success in developing a democratic Germany essential to the security of the democratic world. While the Russians are building a totalitarianism of the left in eastern Germany, there is danger of the rebirth of a totalitarianism of the right in western Germany. Both are antidemocratic. An undemocratic Germany, potentially an ally of the forces of Communist aggression, is now and will remain a continuing threat to the peaceful world free men seek.

The minimum objectives proclaimed necessary to assure a democratic Germany have not yet been attained.

1. The German economic war potential has not been brought under effective international control.

2. German industry has not been decartelized.

3. The German federal and state governments have not been effectively denazified as they include many former Nazis and Nazi supporters in key positions, and the all-important civil service has not been liberalized to permit greater employment of existing democratic elements.

4. German educational and cultural institutions have not been democratized.

We seek no Carthaginian peace. We believe that the natural, industrial, and human resources of Germany are necessary to the development of a balanced European prosperity and are therefore essential to the maintenance of international security. But we also firmly believe that these resources threaten world peace unless they are brought within the framework of international control and direction.

We therefore call upon the Government of the United States to take the following measures:

1. Forbid the creation of a national army or national police force in western Germany in accordance with the requirements of the Occupation Statute and the Bonn Accord.

2. Declare that it will continue to maintain occupation forces in western Germany until minimum democratic objectives have been attained and until our withdrawal would clearly not hazard the peace.

3. Insist upon continued and effective international control of the Ruhr and Rhine industries to insure their peaceful utilization, and provide for the decartelized integration of the German economy into that of western Europe.

4. Proceed vigorously to support and assist the democratic elements in Germany in the long-term task of democratizing the economic, political, and cultural institutions of that country.

5. Seek the restoration of German participation in nonmilitary international organizations at the earliest practicable time as

one means of integrating Germany so that it becomes a member in good standing of the family of democratic nations.

Brotherhood Week

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. KEATING. Mr. Speaker, all over our Nation this past week, there has been an outstanding thought, which is appropriately labeled "Brotherhood Week." And we do well to celebrate it simultaneously as we do with the birthday of our first President, George Washington. For it was the brotherliness of George Washington that did so much to knit the dissident and discontended soldiery of the thirteen independent colonies, into a united fighting force that finally triumphed over Britain's ablest soldiery. And it was Washington's own sense of brotherhood and neighborliness that did so much to unite those thirteen independent and contentious colonies into one nation, indivisible, and powerful enough to prevail against all separative forces.

If anyone will scan the pages of all human history and note carefully the noblest expressions of the wisest of men, he will quickly discover that the Brotherhood of Man has been the greatest ideal, the most desired object of all our human strivings and fightings and inventions and travail. Brotherhood under the common fatherhood of Almighty God was the essence of the religion taught and practiced by Jesus Christ, the head of all Christian churches. Brotherhood was the constantly reiterated lesson which Moses and Aaron and their successors sought to impose upon all Jews.

Especially I commend the National Conference of Christians and Jews for having thus launched this great ideal into the common everyday life of our 150,000,000 citizens, and given it a full week's treatment, in 15,000 pulpits, 10,000 different newspapers and thousands of theaters.

A great many people are spreading the idea that Americans are not as religious and kindly and neighborly a people as they once were, and that things were infinitely better in the good old days.

As to religion, expressed in the factual terms of actual church membership, the statistics are reassuring. Today church membership is nearing the 80,000,000 mark, which is an all-time high. One may quibble or argue as much as he likes but these 80,000,000 members are voluntary church members. They are members by their own active choice and action.

The percentage of population figure confirms this analysis for the percentage of population whch was only 4 to 5 percent in early colonial decades, has steadily grown to 22½ percent in 1890, to 52 percent in 1944, and runs today around 53 or 54 percent of our total population. And that is also an all-time high. It shows how steadily and strong has been the influence of our churches, cathedrals, and synagogues. It proves that year after year the cause of human brotherhood has progressed and will continue to progress. And that very substantial fact should give us all much encouragement against the disappointments and setbacks of which we often complain.

So let us not lose heart at any temporary reversals in the slow but substantial advance we are making. Let us continue in faith and hope and human charity to make the dream come true.

Salute to Gananoque

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Richard M. McKeon from America for December 24, 1949. Rev. Richard McKeon, S. J., is director of the school of industrial relations at Le Moyne College, Syracuse, N. Y. While dean of St. Joseph's College, Philadelphia, 1935 to 1942, he founded its school of social sciences, a pioneer undertaking in the United States in free adult education in the Christian social program. Father McKeon is a charter member of the Industrial Relations Research Association.

The article follows:

SALUTE TO GANANOQUE

(By Richard M. McKeon)

On November 18, 1949, a modest gentleman journeyed from the little Canadian town of Gananoque, Ontario, to the busy industrial city of Syracuse, N. Y. The gentleman's name was Thomas J. Delaney. He is president of Parmenter & Bulloch Co., Ltd. Rightfully does this company boast to the entire world that it is 100 percent employee owned. Under the title "Every Worker a Capitalist," Mr. Delaney had come to tell the forum of the Le Moyne College School of Industrial Relations the fascinating story of this company, which is successfully putting into practice the principles of the Christian social order. A very large audience of high management officials, labor leaders, professional people, rank and file workers, and students pursuing their degree course in industrial relations showed their appreciation of his address by questioning him for more than an hour. It was a fitting climax to the fourth year of Le Moyne's endeavor to contribute to the industrial welfare of the community.

In a simple, expository style, devoid of any reference to the important part which he had played in the reorganization of the company, Mr. Delaney told the magnetic story of Gananoque. He mentioned that Parmenter and

Bulloch was established 86 years ago. The company produces rivets of all types, riveting machines, and various small metal items, including knitting needles and rings for bulls' noses. In 1946 the Bulloch family decided to sell and started negotiations with prospective buyers. One of these was a large corporation having several plants engaged in the same competitive field. There was grave danger that the Bulloch plant and its operations might be moved to another area. This would have meant loss of work for 200 employees and dismay for their families and gloom for the little town.

Here is where Mr. Delaney enters the picture, though he kept himself in the background as he spoke. He had come to Gananoque many years before, as a member of a Toronto rowing team. Because he liked the town, which is beautifully situated on the St. Lawrence River at the gateway to the Thousand Islands, he decided to remain. Entering the company, he worked himself up to the position of general manager about 10 years ago. His executive ability, together with his pleasing personality, won for him the respect not only of the entire firm but also of the community.

Realizing what the loss of the company would mean to his many friends, he recalled an idea which had made the Graybar Electric Co. a very successful concern. For Graybar, a national distributor of electrical equipment, is owned by its workers. Could he sell this idea of employee-ownership to his fellow workers? The emergency called for quick action. Rallying some leaders around him, he finally convinced the workers, and together they began a campaign to raise the necessary money. The owners were approached and a 30-day option was secured, with the purchasing price set at $600,000.

At this point in his address Mr. Delaney betrayed intense emotion for a moment. For here was the trying challenge. How could a group of 70 women and 140 men in ordinary circumstances raise this amount in a few weeks? What happened? A wonderful act of faith. Homes were mortgaged, war bonds were turned in, loans were secured, merchants fearful of their own welfare contributed. The amount raised was $252,000. No wonder the voice of Mr. Delaney thrilled when he said: "I will always admire and be grateful to my associates for their supreme efforts in raising such a substantial amount of money in a short space of time."

But the goal was far away and the cynics were sniping. Then the owners, hearing about the plan and the efforts of their employees, reduced the price to $525,000. With the ready cooperative help of Goulding & Rose, Ltd., investment brokers of Toronto, a bond issue of $275,000 was floated at very low rates. A plan to redeem these bonds over a 10-year period by means of pay roll deductions were drawn up. One may imagine the joy of Gananoque, after facing many obstacles, with hope often at low ebb, to learn that, when the bonds were offered for sale, the issue was oversubscribed before the certificates could be printed.

To protect the new company, a lengthy trust deed was drawn up by a prominent firm of corporation lawyers. There were many intricate legal details to clarify, for the idea of 100-percent employee-ownership was without precedent in Canada.

One special feature was the establishment of a voting trust. This important suggestion came from the Graybar Electric Co., with its experience of 29 years of successful operation as an employee-owned institution. The investment brokers also insisted on the voting trust before they floated the bond issue. This trust insures continuity of key management. It removes the possibility of an irresponsible group gaining control. Top management decides the policy of the company, but the workers are always kept fully informed about the more important matters.

Having thus explained the formation of the new company, Mr. Delaney now spoke of the results obtained under employee ownership. With justifiable pride he said that the plan had worked far better than they had ever hoped. The company has a happy cooperative spirit, with the result that tremendous gains have been made financially. Although during the past 3 years the number of workers has decreased, productivity has increased. The workers have a sense not only of belonging to but of actually owning the business. They do not waste time and material. They tolerate no careless work, for their own money is involved. They know that their combined efforts will determine the amount of dividends they will receive at the end of the business year. Mr. Delaney smiled when he told how a Toronto industrialist, on visiting the plant and examining the financial statement, exclaimed: "Every other manufacturer I know these days is getting only 3 days' work for 5 days' pay. Man, you're getting 6 for 5."

Every employee is a shareholder. Shares may be purchased through pay-roll deduction. If an employee leaves the company, his shares must be sold to the employees' pool and held for further distribution. An agreement is signed by all to this effect No one outside the company can own shares in it.

When the company was reorganized, there seemed to be no hope of dividends for at least 2 years; none had been paid by the old company for many years. After only 6 months of operation, however, the improved status warranted the payment of a dividend. Thus far six dividends have been paid, representing an annual yield of 5 percent. At the same time, a fair amount of earnings is set aside for reserves.

Mr. Delaney continued: "We have redeemed $77,000 of our bond issue. Our last annual statement showed a ratio of current assets to current liabilites of over 7 to 1. Bankers think that the ratio of 3 to 1 is a good risk. When we bought the company we inherited a bank loan of $130,000, which has since been entirely wiped out. Our company is now in its strongest financial condition. Don't you think this proves the workability and success of employee ownership?"

What about wages and working conditions? The wages are the highest in the industry. The work week is now 40 hours instead of 44. Yet production, even with the present lower work force, shows an increase of 14 percent. There are 2 weeks vacation with pay, with extra time for older workers. A complete renovation of the plant has taken place along lines of greater efficiency and safety. Many of the ideas for improvement have come from the workers. Smoking is allowed on the job and canteen service is available.

The company has an excellent pension plan, to which both employees and company contribute. There is full sick pay and a bonus at Christmas. The company pays the whole cost of a hospitalization plan covering employees and their families.

The workers have a firm faith in the new set-up. They recognize that management must function as in other companies. Accordingly there are a board of directors, officers, and department heads who have the power to hire and fire. Three directors are from the main office, and two are from the shop. These directors keep a close scrutiny over the distribution of shares.

In the question period, which went for a full hour after Mr. Delaney's talk, the keen mind and sincere heart of the speaker captivated his hearers. Here are a few of the questions and answers:

"We understand that the United Steel Workers has a union in your plant. In view of your remarks, what is its main function?

"Its main function seems to be an effort to keep alive. We find it useful for grievance procedures. Thus far no grievance has reached our office.

"What would happen to your company if an industry-wide strike was called? Where would you be?

"We would be sitting pretty. We foresaw such a difficulty, and in our agreement the union is freed from participating in such a strike.

"What if the union should demand a wage increase?

"That is possible but not probable. Our workers know that a wage increase would mean less dividends.

"What is the difference between your policy and that of ordinary profit-sharing firms?

"In other firms, profit-sharing depends upon the decision of management, who frequently are not the owners. Have their workers a strict right to share in such profits, presuming they are receiving fair basic pay? Because we are the owners, we have that right and we pride ourselves that increased efficiency has made this possible. We are not unmindful of our customers in the form of lower prices.

"Have other companies shown an interest in your plan?

"Very many inquiries come to our office. We understand that two companies have set up similar programs but we have no report on their success.

"Do you workers use the time clock?

"Yes and no. All employees with 15 years of service, nearly half the force, do not punch the clock. Personally, I am in favor of tossing time clocks out completely.

"What is outstanding in the attitude of your workers?

"I would say that their most characteristic attitude is a supreme faith in the principle of employee ownership."

Mr. Delaney in his concluding remarks told how the early cynics predicted that the new company would not last 6 months, that it would be a socialistic mess, that the workers would lose everything. Some are still skeptical. Paraphrasing Scripture, he added, "Can any good come out of Gananoque?" and then he gave a smiling invitation to "Come and see."

The last question was, "What would happen in the event of a depression?"

"Well, what would happen to any company in a depression? To us it would mean retrenchment, cutting down budgets, reducing expenses wherever possible. We believe that we could weather a depression better than the average firm because we have a more understanding spirit among our associates."

In 1931 in his masterly encyclical, On the Reconstruction of the Social Order, Pius XI wrote:

"In the present state of human society, however, we deem it advisable that the wage contract should, when possible, be modified somewhat by a contract of partnership, as is already being tried in various ways to the no small gain of the wage earners and of the employers. In this way wage earners are made sharers in some sort in the ownership, or the management, or the profits."

In 1949 at Gananoque, Canada, this sound advice is now being successfully put into practice at the Parmenter & Bulloch plant.

Canada has many famous historical and religious shrines. But with all due respect to tradition and religion, we believe that she may boast about a special industrial shrine to which, we trust, many American representatives of labor and management will make a pilgrimage. On the way they will see the beauty and the peace of the Thousand Islands. For that shrine is at Gananoque, and there they will appreciate the conviction of mind and the contentment of heart reflected in the lives of its capitalist workers.

China Reds To Grab Chennault Planes

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following ominous news story of a strange event in Hong Kong where Great Britain, a supposed ally in the war of survival against Communist aggression, decides to hand over a vast air fleet to our common enemy. The story is from the Washington News of February 24, 1950:

CHINA REDS TO GRAB CHENNAULT PLANES

(By Oland D. Russell)

The Chinese Communists were expected today to lose no time in flying out of Hong Kong the seventy-odd transport planes which have in effect been handed over to them by the supreme court in the British crown colony.

The planes, including communications and maintenance equipment, belong to an American corporation, headed by Maj. Gen. Claire L. Chennault of Flying Tiger fame.

They make up the biggest air fleet in China and for months have been sought by the Chinese Communists. They can be used to ferry military supplies to China from Russia, for dropping parachutists into Indochina, or for an amphibious assault on Formosa.

The Hong Kong court invoked "sovereign immunity" in deciding it could not take the planes under its protection by appointing a receiver for them. The court took the view that since the British had recognized the Communists, the Peiping regime was the legal and sovereign ruler of China and could not be disturbed from its possession of the planes.

ALREADY, RED FLAGS

Though the American owners and representatives of the Civil Aeronautics Authority have been denied the access to the planes, pro-Communist employees of the two former Nationalist airlines have been permitted to board them at Kaitak Airfield where they are impounded. Anticipating a court decision in favor of the Communists, these former employees already have painted red flags on the ships and have been overhauling the motors in preparation for a quick getaway.

British authorities in Hong Kong have been trying for 3 months—even before London recognized the Red regime—to find a legal way of turning over these two completely equipped air lines to the Chinese Communists.

Communist pressure on the local British authorties has been great and the British themselves have not been unmindful of the trade benefits and good will that might accrue to them if they handed over the planes to the Commies.

Still other pressures have been exerted on the Hong Kong British by the London foreign office and the United States State Department for recognition of General Chennault's legal title to the planes.

"GODOWN" SHOWDOWN

The showdown came this week. According to word received here, the Communists got word to the Hong Kong court that for every plane denied them, one British business establishment in Communist-occupied Shanghai would be taken over. "A godown (warehouse) for every plane," as the Reds tersely put it.

Facing this situation realistically, the Hong Kong court yielded to the Communists, taking advantage, according to observers here, of the British election following Washington's Birthday when communications with London and Washington would be at a minimum effectiveness.

The court in effect washed its hands of the whole affair, dumping a ticklish question on the London foreign office, but by choosing the holiday and election-day period, it gave some time leeway to the Communists to get the planes away from Hong Kong.

If any restraint is now to be used, it will have to be done on orders from London for some sort of executive action.

AMERICAN REPRISALS

At stake now is whether American diplomatic power can be used effectively to prod London into measures which still might save some or all of the planes from falling into Communist hands. The State Department has, through representations and notes, backed the Chennault claim to title of the planes and has insisted that the Hong Kong court conduct a trial to establish legality of this title.

But Washington consistently has refused to get tough about it, with the result that the Communists have slugged it out, and apparently have won, in the Hong Kong courts.

Some demands were heard here yesterday for American reprisals against the British through the ECA. It was pointed out that the British by letting planes and equipment valued at $20,000,000 be grabbed off by the Communists in effect have given an American air fleet to the Reds topping in value what the British will get in air equipment from the ECA.

The Columbia Basin

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my remarks, I include here the last three articles in the series by Mr. Leon Starmont on the Columbia River region, entitled "Let's Explore the Basin." There has been widespread interest in this series, both out in the Pacific Northwest and among readers of the RECORD who have followed it here in the Capital.

Again, I want to state that I have had these articles inserted here because they represent one of the most complete attempts yet made to trace the high-spots of development of the Columbia River, and the controversies which have raged and still go on in the Northwest regarding the many conflicting ideas which have been advanced. The statements made are Mr. Starmont's own interpretation of a series of events which are subject to many interpretations. They should serve to indicate, if nothing more, that no one man or three men can ever hope to speak on behalf of all the residents of the great Pacific Northwest—nor should any such group ever be empowered to make decisions regarding development of the Columbia unless they are the direct representatives of those people.

The series also demonstrates what some of our Federal planners are prone to forget—that development of the Columbia region is not something new; it has evolved in thought and planning and action over a period of 60 years. I submit that the same people who have carried that development to date are fully capable of determining what future development should be and of taking the necessary steps to attain it.

For the benefit of all interested, here is an index of the complete series, as they appear in the Appendix of the RECORD:

LET'S EXPLORE THE BASIN

(Art. 20)

(By Leon Starmont)

Big Bend residents have started a drive to restore 300,000 acres of high wheat-farming country to the Columbia Basin irrigation project in central Washington.

This would make the qualified area under the Grand Coulee reservoir 800,000 acres. If the Wahluke slope or part of it is later released by the Atomic Energy Commission it would again become a million-acre project, as described by the Bureau of Reclamation.

Frank T. Bell, member of the State Columbia Basin Commission representing the Quincy-Columbia district, reports the directors of that district got behind the endeavor this week and will push it at next week's meeting at Lind, Wash., when directors for all three irrigation districts hold a joint session.

REOPEN TIME FOR CONTRACTS

Quincy-Columbia directors, besides Bell, are J. A. Weber, president; Charles E. Kennedy, E. E. Huffman, and Albert E. Jones.

Concurrence of the State commission and the other districts is taken for granted, Bell said. But Congress will have to amend the law to permit the Bureau of Reclamation to extend or reopen the time for signing recordable contracts.

The Bureau at the same time will be requested to permit veterans to exercise their priorities and pick the tracts they want before the water starts to flow in 1952.

The basin commission will finance these efforts out of its $30,000 appropriation for the biennium, which has been cut to $72,000 at the governor's request.

"That sets no precedent," said Bell. The commission also financed the campaign for recordable contracts started in 1943 and culminating in the contract elections at 15 polling places on July 21, 1945.

The 300,000 acres involved are mostly in the east Columbia district and in Adams County. They include some land in all three districts.

MEANS 22,000 PEOPLE

"We realize the importance of getting this land back into the irrigation districts," said Bell. "It means 3,000 small farms in an area where present holdings are concentrated in a few hands.

"With five persons to a farm, and half as many more in the towns that will serve them,

this means a population of maybe 22,000 that will or will not be added to these three counties (Grant, Adams, and Franklin)."

Bell, an astute politician, has always represented the State basin commission at Washington when appropriation bills were before Congress. He knows his way around the Capital through long service as secretary to former Senator C. C. Dill and later as Federal Commissioner of Fisheries.

"Just to keep the record straight," he said, "I was not in the East on basin business this winter. My trip was on private business. When the last meeting of the commission was called at Spokane January 6, I notified Chairman Jack Rogers I could not attend because I would be in the East. My letter apparently was misunderstood."

HISTORY PROJECTED

Two other topics will be before the basin commission at its next meeting.

One is possible storage on Columbia and Kootenay Rivers in British Columbia for downriver dams. Regional planning is dependent on knowledge of what Canada will do, and results of its studies have not been presented to the international joint commission, it was indicated by Commissioners Bell and Herbert M. Hamblen.

Preparation of an authentic history of the Columbia Basin (Big Bend) project is also to be discussed. So many contradictory versions of past events have been circulated that many believe the facts should be separated from the fables.

A historical outline prepared by E. K. Vande Vere is now in the files of the University of Washington. There are also said to be historical theses in the files of Washington State College.

These documents may be compared with material in the files of Spokane, Wenatchee, Pasco, and Ephrata newspapers, and records of several State and Federal agencies, irrigation districts, chambers of commerce, and other civic groups.

INFORMATION CENTER NEEDED

This suggestion grew from a plan for a Columbia Basin information center made at the basin commission meeting in Spokane on January 6 by Chester C. Kimm, secretary of the Wenatchee Chamber of Commerce.

"It's about time we all started telling the same story," said Kimm yesterday.

Agreement on the facts is preliminary to agreement on policies, he indicated.

Albert Widmer, past president of the Warden Chamber of Commerce, drove to Ephrata Wednesday to assure Frank T. Bell that he had not accused Bell of promoting the Othello-Ephrata route for a north-south State highway, as indicated by this reporter in Tuesday's Spokesman-Review.

"The statement was made, but I am not sure it was by a member of the Warden delegation," said Widmer, referring to last Monday's luncheon of the Spokane Chamber of Commerce's Columbia Basin committee.

Bell says he has taken no part in the controversy over location of the north-south highway.

LET'S EXPLORE THE BASIN

(Art. 21)

(By Leon Starmont)

Many men spent many millions to put the Columbia basin where it is today. At least $2,000,000 was expended in preliminary promotion and surveys between 1900 and 1930. The big power dams, boat locks and irrigation works are monuments to thousands who poured their time and dollars into efforts that many times seemed hopeless.

No record has been located in the area of expenditures by the War Department from 1880 to 1900 above the mouth of the Snake River. Navigation improvements on the Columbia below the Snake had been started in the 1860's, and by 1880 had reached several millions.

FIRST PALOUSE PROJECT

The Federal Government, after passage of the National Reclamation Act in 1902, spent $76,409 in surveys of what was then called the Palouse project, for Big Bend irrigation, but which included the first surveys of ditch lines from Spokane and Pend Oreille Rivers to Grand Coulee and to the Crab Creek area.

Next appears the Spokane chamber of commerce, raising $3,000 in 1910 for surveys of the original Quincy project. Lake Wenatchee was the reservoir then proposed.

Between 1913 and 1915 the State put up $10,000 and the Federal Government $10,200 for two more surveys.

There the matter rested until 1918, when E. F. Blaine of Yakima Valley, after viewing the Pend Oreille with H. Lyold Miller, returned from the National Capital, scheduled to make a talk on apple marketing, and instead gave the address before the Spokane Chamber of Commerce that electrified the whole Northwest.

In the next few years citizens of Spokane raised and spent $38,256 to sell the idea to the rest of the inland empire, not including the personal expenditures of parties that went by special train or car to organize support for the Big Bend project in Kalispell, Mont.; Sandpoint, Idaho; Portland, Oreg.; and Seattle, Tacoma, Yakima, Wenatchee, and Pasco, Wash.

STATE HELPS AGAIN

In 1919, after Gov. Ernest Lister had come to Spokane to check on the reports of enthusiasm he had received from Blaine and Miller, the State legislature appropriated the first $100,000 for what was then called the Columbia Basin project. Lister did not live to sign the bill.

Then came creation at Pasco in 1922 of the Columbia Basin Irrigation League, which in the next 10 years raised and expended in round numbers $250,000. Spokane put up about half this money. Seattle citizens put up about $43,000, Tacoma $11,700, Portland $6,500, Walla Walla and Pasco about $10,400. Northern transcontinental railroads, naturally interested in settling the Big Bend, provided $52,000.

The Federal Government spent $4,043 in 1922 on the Henny report. In 1923 and 1924 there were other Agriculture and Interior Departments expenditures of $105,000. In 1925, $10,648 was spent by the Federal Government. Washington State appropriations in 1926 and 1927 totaled $37,500, and a 1929 fund of $18,000 still had $5,000 in it when the Army engineers' $450,000 survey was completed in 1931. There was then a $50,000 Federal appropriation for a special Columbia Basin project survey.

VARIOUS OTHER AGENCIES

All this money went directly toward creation of what has become the comprehensive plan.

Numerous organizations promoted special or local phases, such as Columbia River Development League at Wenatchee and Ephrata, Inland Empire Waterways Association at Walla Walla, the Montana groups that eventually became the Flathead Citizens' League at Kalispell, and other associations in at least half the counties of the upper basin.

Several chambers of commerce that did not directly finance the Columbia Basin Irrigation League had bureaus or committees working along similar lines.

E. F. Blaine, who started the stalled wheels with his 1918 Spokane speech, became chairman of the State development committee of the Seattle Chamber of Commerce.

Secretary of that committee was Thomas B. Hill, who later became secretary of the State chamber of commerce, then went with the State department of conservation and development at Olympia, still later was secretary of the Washington State Reclamation Association at Olympia, and now is assistant secretary of the Washington State Development Asscciation.

OLD-TIMERS STILL ACTIVE

Four Spokane men active in the early days of the campaign, 32 years ago, are still residing and active in Spokane.

Charles Hebberd was made chairman of the board when the irrigation league was organized. He induced Herbert Hoover, then Secretary of Commerce, to visit the Columbia Basin in 1926.

"We stopped in St. Louis," he recalled yesterday, "where Mr. Hoover addressed the National Rivers and Harbors Congress. He made another talk in Spokane. Then at the league's fifth annual meeting in Seattle he delivered the address that roughly outlined his conception of all-purpose river development."

"Can you," this reporter asked Charles Hebberd, "identify any among the Hoover advisers that might be the actual author of the comprehensive plan?"

"He must have been anonymous," said the veteran reclamationist, with a twinkle. "The plan evolved gradually. It was a process of evolution—not revolution."

NEWSPAPERMEN TOOK PART

James A. Ford, secretary of the Spokane Chamber of Commerce in 1922 as now, became first secretary of the irrigation league.

Ren H. Rice, became assistant secretary, and later served the old basin commission. He now manufactures breakfast foods in Spokane.

W. S. Gilbert, now wintering in the South, was a speaker at the organization meeting at Pasco.

Ford and Rice are former newspapermen.

The late W. H. Cowles, Sr., of the Spokesman-Review was, of course, intensely interested in the Columbia Basin. He assigned several staff members at various times to assist quietly and anonymously in the basin program.

The late Nelson W. Durham, who had been editor of the old Review before it was merged with the Daily Spokesman, back in the early 1890's when Grand Coulee Dam was first suggested, became chairman of the Spokane chamber's Columbia Basin committee. He was also a first-class orator.

DURHAM AND DANA, ORATORS

Speeches by Durham and by Marshall Dana, associate editor of the (Portland) Oregon Journal, featured many a basin-promotion meeting. Dana was again a speaker at an Ephrata meeting last summer, and later at Boise.

Among other newsmen still living who did yeoman service on special phases of the Columbia Basin program are J. G. Parsons of the Priest River (Idaho) Times, now running a paper at Delano, in California's San Joaquin Valley; Harry J. (Hungry Horse) Kelley of the Flathead Monitor at Kalispell, Mont.; J. G. Kelly of the Walla Walla Union-Bulletin; E. B. Aldrich of the Pendleton East Oregonian, and Ole H. Olson, of the Pasco Herald, later State printer, now a State representative from Franklin County.

The Pasco meeting of 1922 was called to order by C. F. Stinson, who now divides his time between Pasco and Spokane. Chairman was the late John A. Gellatly of Wenatchee.

Hundreds of others might be mentioned. Not least among them would be Roy R. Gill, a former president of the Spokane Chamber of Commerce, and chairman of the executive committee of the irrigation league after 1924. He now resides in San Francisco.

LET'S EXPLORE THE BASIN

(Art. 22)

(By Leon Starmont)

These articles started with a story about an 1850 wagon train en route to the Columbia Basin. They have attempted to answer three of the questions asked around that hypothetical campfire:

"Where are we going? Where are we now? How did we get here?"

No job for this reporter is the answer to the fourth and possibly the most important question:

"Which is the right road to the basin objective?"

The opening article said there are six roads ahead. Amendment: There may be seven.

WE NOW HAVE CBIAC

The road to Columbia Basin's goal, half a dozen years ago, seemed to be filled with ruts and bumps.

Too many people were getting in each other's way. Some seemed to be working at cross purposes. Some programs overlapped in one spot and left unoccupied voids in another. Certain interests and localities were yelping that they didn't want some other things done at all.

Out of the confusion then existing has come, by what political experts call democratic processes, the CBIAC. Columbia Basin Inter-Agency Committee is a voluntary association of four Federal departments, the Federal Power Commission, Bonneville Power Administration, and the governments of seven basin States—Washington, Oregon, Idaho, Montana, Wyoming, Nevada, and Utah.

Chairmanship is rotated among the Federal officials represented. Present chairman is Herbert M. Peet, a former Great Falls and Everett, Wash., editor, employed for several years by the Washington State publicity commission, now with the Department of Agriculture at Portland.

HOOVER'S HAND AGAIN

CBIAC has been functioning 5 years. Most people in the Columbia Basin seem to believe great progress has been made since 1945.

There is, for the first time, a generally accepted program.

Nobody considers it perfect. But it has been reached by residents of the basin, after thorough discussion in open hearings, and in the full light of publicity. If the press coverage has been distorted in a few spots, it certainly is not the fault of the CBIAC idea or the CBIAC personnel.

Under CBIAC auspices, the Bureau of Reclamation and the Corps of Engineers—which means the Interior and Army Departments—arrived by compromise at the present comprehensive plan.

Herbert Hoover gave a rough outline of such a plan in 1926. A quarter century later, under the second President to follow him in the White House, he heads a commission to propose certain improvements in the Federal Government. The Hoover changes, if approved, would automatically streamline and simplify CBIAC.

CVA DEBATE HARDLY CALM

The principal drawback of the present procedure is the necessity of going to Congress every year for appropriations. Of the four plans offered as "better roads" into the future, the one currently in the limelight still leaves that pitfall.

It is CVA.

A lot of people are getting mad about CVA. In fact, the very initials are being used as epithets—much as "bolsheveek" back in the 1920's.

It might be a good idea for the next year for public spokesmen to define the 95 percent of the things on which they agree rather than the 5 percent on which they disagree.

That approach has been tried by the Portland office of the Bureau of Land Management, with the result that age-old enemies discovered areas of friendship.

This reporter so far has found in the Columbia Basin only two men long identified with the basin project who are now friendly toward CVA, and one of them has his fingers crossed.

E. B. Aldrich, publisher of the Pendleton East Oregonian, has published some pro-CVA editorials. He is now on a southern motor tour and could not be reached for comment or explanation.

POOR BILL, SAYS DILL

Ex-Senator C. C. Dill is the other. But he admits the bill now being debated is poorly drawn. He says it doesn't mean what it seems to mean. He sees no reason why the number of proposed directors should not be five or seven rather than three, and why some of them should not be selected by the governors of the basin States rather than by the President.

Most CVA support comes from outside the Columbia Basin.

Officials of the Grange in Washington and Oregon have come out for a CVA. The Grange opposed the Columbia Basin irrigation project until 1931.

Spokesmen for AFL and CIO unions have also come out for a CVA. Organized labor supported the Columbia Basin irrigation project from the start.

The public-power movement is split on a CVA. Some PUD and REA executives are for it, others against it.

There may be similar splits in the Grange and labor movements, but this reporter has not been able to detect them.

Most industrial and commercial executives, reading the CVA bill, are afraid it gives the agency powers to take over all sorts of private business—power, mining, transportation, merchandising and possibly even farming.

They frankly suspect the motives of some CVA supporters. They are not convinced by assurances from ex-Senator Dill and others that "it doesn't mean what it seems to say."

If the fears of businessmen are groundless, they want to be convinced. That is why the demand grows for a series of open hearings in the basin, out of which the bill may be either amended to meet the region's desire for home rule, or abandoned.

There might emerge something called a CVA, either an administration or an authority, that the majority in the basin could accept. The future will tell.

WHY GO TO CONGRESS?

There are also elements, not yet organized, "fed up" with the constant necessity of going to Congress for appropriations.

Former Governor Monrad C. Wallgren long maintained that the State should buy Grand Coulee Dam from the Federal Government, and undertake on its own the rest of the river's development.

Representative WALT HORAN (R. Wash.) has an idea for a regional compact among the Northwest States. Subject to change, it would have a chairman appointed by the President, and four directors, to be selected from a dozen names submitted by the governors of Washington, Idaho, Montana, and Oregon.

An earlier proposal was for an independent Federal corporation, Congress to appropriate the original capital. Several ideas for local control of such a concept have been advanced.

More recent is the notion of an interstate authority, voting its own finances, independent of the Federal Government. Possible models are the New York Port of Authority, covering parts of New York and New Jersey, and "Incodel," a device by which Delaware River waters are allocated among New York, New Jersey, Pennsylvania and Delaware.

They might be worth studying.

Let's Go to the Roots

EXTENSION OF REMARKS

OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mrs. HARDEN. Mr. Speaker, under permission to extend my remarks, I call attention to an editorial which appeared in the March edition of the Farm Journal. It was written by one of our great editors, Wheeler McMillen, and it proposes a new agricultural program for this Nation. It seems to me that the content of this editorial is deserving of the most serious consideration of every Member of Congress.

The editorial follows:

LET'S GO TO THE ROOTS

Twenty years ago the big farm problem was surpluses.

Today, 1950, the big farm problem is the fear of surpluses.

During these 20 years huge efforts have been made. The best minds in agriculture, in government, and in business have been applied to the task. No one, not even the Federal Treasury, can say exactly how much tax money has been spent during these 20 years to try to do something about surpluses. But the amount ranges somewhere from $12,000,000,000 to $15,000,000,000, a tremendous sum.

No permanent solution has been achieved. After two decades of well-meant spending, agriculture still operates under programs that are obviously temporary expedients. No farmer will maintain that a sound future for his business has been assured.

What about agriculture's next 20 years? Shall we go on passing a new temporary farm bill in each Congress, spending another fifteen or twenty billions, and then wind up in 1970 still at sea what to do?

Shall we confess that we can proceed only by taxation, spending, restriction, and giving away? Shall we have to surrender freedom to all-powerful government?

Distribution? Millions of dollars have been spent to study that. There is still room for improvement. But no one has yet found out how to get farm products through to consumers without incurring considerable cost. Cooperative efforts, while helpful, have performed no miracles with surpluses.

Meantime, while 20 years have gone by and nearly as many billions have been spent, a variety of permanent advances have been achieved. Among them are hybrid corn, improved crop varieties, better fertilizing and spraying techniques, artificial insemination, DDT 2, 2.4D, quick freezing, improved power and machinery, and chemurgic markets that now total more than a billion two hundred and fifty million dollars a year.

Such permanent advances as these possess one notable common characteristic—they have been won by scientific research. Both public and private research have shared in these accomplishments.

The Federal Government now spends less than $50,000,000 a year to seek new facts about soils, plants, and animals. One chemical company spends more than that for its research. Compare the piddling fifty millions for farm research with the two hundred millions to support the 1948 potato crop.

Then note that the Government spent more than $2,000,000,000 in research to develop the atomic bomb. It now spends $600,000,000 a year on further atomic research—12 times all the expenditure for agricultural research. More will go for the hydrogen bomb. The original two billions was

probably more than all peoples in all time had ever spent for all scientific research.

Experience through half a century with scientific research in agriculture has proved over and over that the benefits invariably repay the costs many times.

The more we learn, the better we realize that present agricultural knowledge is painfully scanty and inadequate. We know too little about soils, too little about improving fertility, too little about plants, too little about controlling pests and diseases, too little about what plants are good for.

We do not know how plants grow. We do not yet know the molecular structure of starch—if we did, hundred of new markets might be found for corn and potatoes. We know how to use only about one-half of 1 percent of the plant kingdom for any purpose at all.

We do know that surpluses in wheat, cotton, and other crops could be prevented if research were to develop from wild plants a few new, more profitable crops to grow on the acres where now we keep on producing too much wheat and cotton.

We know that chemurgic laboratories already have paid for themselves many times by finding new ways, now in commercial production, to use farm products.

We know, too, that scientific research constantly cuts the true costs of farm production.

That is tremendously important. When the costs are cut, farmers can make as much or more profit with any fair price. And if the price is not too high, more people can buy the products they want. And if more people can buy the products, not so much is going to be surplus.

That's why Farm Journal has been publishing articles on how to cut costs of livestock production. If we could sell livestock cheap enough—and still make money—livestock could eat up, or displace, all of our surpluses.

Farm Journal believes that the time has come for bold thinking.

We believe it would be cheaper for taxpayers, more profitable for farmers, and more beneficial for consumers, to tackle the surplus problems with the atomic bomb approach.

Farm Journal proposes that instead of niggling over research funds, and merely nibbling at agricultural scientific opportunities, the Federal Government should make available the largest sums of research money that science could use.

Let us search the whole world thoroughly and fast for new crops—new crops to prevent surplus production, and to provide new goods for human use.

Let us plunge deeply into the search for new uses for all the crops we now grow.

Let us hunt harder for ways to utilize the huge farm wastes and residues.

Let us seek as never before for new knowledge that will cut deeper into the cost of production, and make our agricultural abundance available to more and more people.

We may need to bridge over the immediate future with support prices and similar devices, but let's quit fiddling with nothing but temporary expedients. Let's quit compromising with the surplus problems. Let's put all the power of modern science to work.

If we will do that, less than another 20 years will be needed to establish American agriculture on a permanently sound footing, to be rid of the fear of surpluses, and to relieve agriculture from being propped up with public funds. And unless we do it, we may be puttering around with stop-gap makeshifts 20 years hence.

Not only agriculture benefits from the permanent advances of science. Everybody benefits.

Here is a national farm policy truly in the interest of all the people.

Lobbies Spent Nearly $8,000,000 in 1949

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include the lobby report for 1949, compiled by the staff of the Congressional Quarterly News Features, 732 Seventeenth Street NW., Washington, D. C., for the week ending February 24, 1950, volume VIII, No. 8, pages 209–230:

LOBBIES SPENT NEARLY $8,000,000 IN 1949—BUSINESS, PROFESSIONALS LED ALL OTHERS IN SPENDING

Led by American Medical Association, 256 organizations reported to the House that they had spend $7,969,710 in 1949 in Capitol actions.

Biggest spenders include:

1. American Medical Association	$1,522,633
2. Committee for Constitutional Government, Inc	620,632
3. National Association of Electric Companies	388,833
4. United World Federation, Inc	291,672
5. Citizens Committee on Displaced Persons	222,809
6. Association of American Railroads	194,159
7. National Small Businessmen's Association	192,070
8. National Milk Producers Federation (formerly the National Cooperative Milk Producers Federation)	178,161
9. National Association of Real Estate Boards	138,600
10. Colorado River Association	115,120
11. National Association of Margarine Manufacturers	101,037

EXPENDITURES BY CATEGORIES

Business groups led all others in total spending reported, though a professional association, the American Medical Association, was the largest single disburser of funds. An organization classified in "general citizens," Committee for Constitutional Government, was second.

Expenditures by categories

1. Business (total)	$3,280,278
General	571,868
Building products, real estate	346,484
Financial	199,485
Food and agricultural products	591,009
Oil, gas, and mining	227,767
Power and communications	553,405
Retail and service	156,631
Transportation (total)	427,953
General	
Air	29,276
Highway	17,536
Rail	220,702
Water	160,439
Miscellaneous companies	17,579
Miscellaneous trade groups	188,097
2. Citizens groups (total)	1,015,073
General, civic, civil rights	803,990
Welfare, religious	176,382
Women's groups	34,701
3. Employee groups (total)	257,301
AFL (excluding rail)	138,314
CIO (excluding rail)	42,035
Rail	38,473
Other	38,479
4. Farm groups	$391,595
5. Foreign policy groups	718,556
6. Professional groups	1,672,043
7. Reclamation, rivers and harbors	374,174
8. Tax groups	154,967
9. Veterans, military affairs	105,723
1949 total, all groups	7,969,710

[Congressional Quarterly News Features, Washington, D. C.]

LOBBIES SPENT NEARLY $8,000,000 IN 1949—BUSINESS, PROFESSIONALS LED 256 GROUPS IN SPENDING ON BILLS

DOCTORS TOP ALL

Two hundred and fifty-six organizations—associations, unions, firms—reported to the Congress under the Federal Regulation of Lobbying Act that they spent $7,969,710 in 1949, an exclusive Congressional Quarterly Log survey revealed.

The American Medical Association led all others in the amount reported spent, $1,522,683, but business groups as a whole led all other categories with $3,280,278.

The round-up, which does not include expenditures of any group which had not made a year-end organizational financial report by the close of business February 10, even if they had previously filed statements for part of 1949, showed that the tempo of lobby spending, or of lobby reporting, continued to increase.

Congressional Quarterly Log's round-ups for roughly comparable dates in 1948 and 1947 showed that a steady advance occurred. Two hundred and six organizations reported spending $6,191,838 during 1948, and 149 organizations reported spending $5,058,257 in 1947. The previous round-ups were done February 4, 1949, and January 28, 1948, respectively, but because the reports are required to be filed with the Clerk of the House between the 1st and 10th of January, the vast bulk of the reports, both numerically and in dollar weight, is on file or being processed by the end of January.

However, it should be remembered that some reporting organizations straggle in with their reports for a period of months, and in some cases, years after they are due. This takes place both out of reluctance to file (with frequent disagreement with the Department of Justice over whether filing is required) and because of bookkeeping or other reporting difficulties. Disagreement with the Justice Department, but with a temporary bowing to its interpretation of the lobby law until clarification by the courts, marked many groups' reports—and doubtlessly only fear of possible prosecution led many to contribute to the swelling report totals.

(For previous expenditures round-ups, for 1949 reports see 1949 Logs, pp. 569, 993, 1391, 1428, 1450, 1474, and 1545, and the 1949 Log Index, and 1950 Log, p. 14. For 1948 year reports, see 1949 Logs, pp. 131, 208, 275, and 304. For 1947 year figures, see 1948 Logs, pp. 51, 73, 86, 110, 139, 155, 167, 183, 197, and 214.)

BIG FIGURES—BIG FIGHTS

The expenditure figures reflect some of the biggest legislative scraps of 1949—some of which are continuing in the Eighty-first Congress. The issues of national, pay-roll-tax paid health insurance versus voluntary prepaid plans; private versus public power; foreign policy matters including world affiliation, displaced persons, tariff policy, etc.; taxation, including excise tax repeal, oleo tax repeal, and additional taxation of the cooperatives; housing and rent control; reclamation, river and harbor work, and division of the waters of the Colorado River; labor relations and minimum wage bills; social security; agricultural program—and many others—find echoes in the reports.

BIGGEST SPENDERS

Eleven organizations, of those which have made final reports, reported expenditures in 1949 of more than $100,000 each. They were led by the American Medical Association's $1,522,683. (The Townsend Plan, Inc., and Townsend National Weekly, Inc., which had a combined expenditures figure for 9 months of $285,371, do not appear in this list, as they had not filed a financial report by Feb. 8.) The big spenders' list:

American Medical Association (AMA said, however, that probably half of this amount could be charged against legislation. All money was from $25 assessments.)	$1,522,683
Committee for Constitutional Government, Inc	620,632
Natl. Assn. of Electric Companies	388,833
United World Federalists, Inc	291,672
Citizens Committee on Displaced Persons	222,809
Assn. of American Railroads	194,159
Natl. Small Business Men's Assn	192,070
Natl. Milk Producers Fedn. (formerly Natl. Cooperative Milk Producers Fedn.)	178,161
Natl. Assn. of Real Estate Boards	138,600
Colorado River Assn	115,120
Natl. Assn. of Margarine Manufacturers	101,037

(Note: Some of above figures are not as reported in fourth quarter report of the group, but rather as totaled by Congressional Quarterly from the four reports of the year.)

In comparing magnitude of expenditures among the leaders, it is important to note that the medical, railroad, real estate, and margarine figures are definitely not the total expenditures of the organizations but rather are allocations to legislative activity on varying bases. The electric companies, World Federalists, displaced persons, small business, milk producers and Colorado River groups appear to have listed total expenditures for all, including legislative, purposes. It is not clear from the report of the Committee for Constitutional Government whether all expenditures of the Committee and its subsidaries are counted.

Another factor affecting evaluation of the big spenders list is that not all reporting groups with total expenditures in excess of $100,000 are on it; because some have made allocations of less than $100,000 to legislative activities from their total budgets, which may have been well over those of the listed leaders.

At least one group not on the list, National Tax Equality Association, said it spent $74,028 on what it called "fringe items"—consisting mainly of the cost of producing and distributing printed matter—which may have prompted others to write to Congress, but did not count in that total the salaries, traveling expenses and other costs of its registered lobbyists nor of various State "tax equality" and "associated businessmen" groups, the expenses of whose lobbyists it paid.

Another group not on the list, Transportation Association of America, may very well have spent enough to be mentioned—it received $371,085 during the year and is working mainly on formulating and popularizing a new national transportation policy—but because of the way in which it files uncumulated ledger sheets, Congressional Quarterly Log has been unable to ascertain its expenditures from the reports.

Finally, it should be remembered that not all organizations and others seeking to influence legislation have filed reports for the full year—in fact some have not filed at all for any part of the year 1949.

OTHER BIG SPENDERS

Other big-spending organizations, either on an all-purpose or on a legislative allocation basis (it is sometimes hard to determine from the form which basis the organization uses), or on a compromise between the two bases, were:

Between $50,000 and $100,000

National Coal Association (allocation)	$99,560
Central Arizona Project Association, Phoenix	97,301
The Producers' Council	96,007
National Council of Farmer Cooperatives	95,489
Southern States Industrial Council, Nashville	94,873
Southern Pine Industry Committee, New Orleans	93,746
Chamber of Commerce of the United States of America (allocation)	90,945
Unemployment Benefit Advisors, Inc	86,175
National Federation of American Shipping, Inc. (allocation)	84,196
National Association of Stevedores, N. Y. C	75,089
American Hotel Association, N. Y. C. (allocation)	74,966
American Federation of Labor (allocation)	74,300
National Tax Equality Association, Chicago ("fringe items")	74,028
National Association of Home Builders (allocation)	71,942
The American Legion, Indianapolis (allocation)	71,769
National Rural Electric Cooperative Association (allocation)	65,014
American Farm Bureau Federation (Washington expenses)	60,134
American Civil Liberties Union, N. Y. C. (9 months)	56,618
Council of State Chambers of Commerce, Indianapolis	56,300
National Grain Trade Council	55,807
American Tariff League, N. Y. C. (total, of which 10 percent is maximum allocable)	55,775
United States Savings and Loan League, Chicago (allocation)	54,824
National Postal Committee for Books, N. Y. C	54,598
American Hospital Association, Chicago (allocation)	53,726

SPENT NOTHING

At the other end of the reported spending spectrum were 29 forms reporting no expenditures or leaving blank the 1949 total expenditures column. At least two of the cases appeared to be new organizations which collected money in 1949, but did not begin spending until 1950. In other cases, the contention is made that the lobbying law or the form does not apply. In some cases, no reason for filing a report appears.

The organizations:

American Council of Style and Design, New York City: None.

Association of Sugar Producers of Puerto Rico, Washington Committee (gave average of three previous years as $52,239): Blank.

Chase National Bank of New York: None.

Committee for Promotion of Tramp Shipping Under American Flag in Foreign Commerce, New York City (New; spent $12,000 in January 1950; showed 1949 receipts): None.

Communications Workers of America (CIO): None.

M. J. Galvin, for 12 Minnesota railroads: None.

Henry Hoyt Morse (registered for Institute of Cooking and Heating Appliance Manufacturers): None.

International Telephone and Telegraph Corp., and its subsidiary, American Cable & Radio Corp., New York City: Blank.

Peder Kristian Kristensen (a deportation case): None.

D. D. Richards (registered for Mail Order Association of America): None.

Michigan Associated Businessmen, Inc., Lansing: None.

Harry Mopsick, Linden, N. J., for self and several tenants' councils: Blank.

George F. Meredith (executive director of National Alliance of Independent Business): None.

National Association of Refrigerated Warehouses, Inc.: None.

National Committee for Repeal of Wartime Excise Taxes (New; showed 1949 receipts): None.

National Committee on Resources: None.

National Electrical Contractors Association, by Paul M. Geary: None.

National Farmers Union, Denver: None.

National Fisheries Institute, Inc.: None.

National Home Study Council, by J. S. Noffsinger, director: None.

National League of District Postmasters, by E. A. Meeks, secretary: None.

National Society of Professional Engineers: None.

New York Stock Exchange: None.

Regional Committee for an MVA, Denver: None.

Transportation Association of America, Chicago (file ledger sheet photostats but no total expenditures).

Alan T. Rains (registered for United Fresh Fruit & Vegetable Associatiton): None.

Washington (D. C.) Real Estate Board: None.

Hilliard Schulberg (registered for Washington, D. C. Retail Liquor Dealers' Association, Inc.): None.

EXPENDITURES BY CATEGORIES

Business groups led all others in total spending reported, though a professional association, the doctors' AMA, was the largest single disburser of funds. An organization classified in the "general citizens" section, Committee for Constitutional Government, was second.

The classification of an organization is based on what appears to be the main nature of the group—based largely on their names, rather than on the specific legislative objectives they may pursue. Therefore, there would be considerable overlap between categories, with nearly every classification having some groups which have some interest in other categories. In almost every category there are groups interested in tax questions; for example, though only groups with "tax" in their names were set into that category. The groups categorized by objective—tax, foreign policy, and reclamation, rivers and harbors—and the citizens groups, frequently have substantial contributions and direction from groups in economic categories, like business, employee, or farm.

Expenditures, by categories:

Business (total)	$3,280,278
General	571,868
Building products, real estate	346,484
Financial	199,485
Food and agricultural products	591,009
Oil, gas, and mining	227,767
Power and communications	553,405
Retail and service	156,631
Transportation (total)	427,953
General	Blank
Air	29,276
Highway	17,536
Rail	220,702
Water	160,439
Miscellaneous companies	17,579
Miscellaneous trade groups	188,097
Citizens groups (total)	1,015,073
General, civic, civil rights	803,990
Welfare, religious	176,382
Women's groups	34,701

Employee groups (total)	$257,301
AFL (excluding rail)	138,314
CIO (excluding rail)	42,035
Rail	38,473
Other	38,479
Farm groups	391,595
Foreign policy groups	718,556
Professional groups	1,672,043
Reclamation, rivers and harbors	374,174
Tax groups	154,967
Veterans, military affairs	105,723
Total, all groups	7,969,710

Methods of allocation

The Federal Regulation of Lobbying Act does not spell out whether total budget or the portion of expenses judged allocable to legislative efforts shall be reported, nor has there been a decision on which is to be used. There is no clear and universally accepted method of determining how to allocate. The reported expenditure figures, therefore, vary widely as to what they cover.

Some groups which allocate simply report the expenses of their Washington office. Others, like the Chamber of Commerce of the United States, report the whole expenses of various departments and allocate a percentage of publication expense of other departments. Others take a flat percentage of the total as lobbying expense. Some, like the CIO, report the salaries of their lobbyists on individual lobbyist expense forms and other legislative allocations on the organization expense sheet (in which case the figure carried here does not include salaries).

Some organizations report that fraction of their publication costs which the legislative contents bear to the whole content (AFL and United States Savings and Loan League). Others, which have carried many legislative stands in their house organs which are sent to Congressmen and to their members, do not count their publication costs.

Still other organizations do not explain their allocation formula, but give total expense and the amount allocated to lobbying. The National Association of Home Builders adopted this procedure.

WHAT IS INCLUDED?

The totals, in a number of instances, do not include salaries of lobbyists. Some groups, like CIO, report only expenses other than lobbyists' salaries since under another section of the lobby law, registered lobbyists are required to report their receipts and expenses.

The grand total, moreover, by no means includes all the expenditures of all organizations seeking to influence legislation. Records of the Secretary of the Senate show more than 1,700 individuals and organizations registered under the lobby law since its effective date, August 2, 1946. No tabulation has ever been made of exactly how many organizations have registered lobbyists currently working for them. However, it is apparent from comparison of organization expense statements and individual lobbyists' reports that many organizations do not directly report expenses although their lobbyists report their receipts from them.

Thus for a truly complete picture of lobby spending both the statements of organizations and the reports of lobbyists should be analyzed and those salaries of lobbyists not included in the organization statement should be added to the grand total.

One effect of the situation in which the organization leaves it to the lobbyist to report his salary and expense receipts is that the source of the organization's funds is not revealed. Another effect is that organization expenditures, as for literature, local efforts, etc., which were not incurred by the lobbyist are therefore not reported.

In contrast with these omissions, there are undoubtedly some duplications within the grand total. When both a national organization and a local subsidiary branch report, there is obviously some duplication in spending reports caused by contributions to the parent group. One example of this is National Associated Businessmen, Inc., and its local groups.

Reporting errors

In addition to the variety of systems of reporting totals, there also lurks in the path of the surveyor of expenditures the reporting errors of many of the organizations. These are not errors of judgment as to what to report—Congressional Quarterly Log does not presume to guess how the courts will ultimately hold. These are errors introduced by faulty arithmetic—as the addition of 21 and 11 to make 22—or by apparent error in carrying forward previously reported totals, or in failure to carry forward all totals reported for the calendar year, or in carrying forward totals reported for quarters or other periods in years previous to the calendar year under report, or by similar mistakes.

Congressional Quarterly Log has attempted to correct for such errors, where possible in order to arrive at comparable data, and has indicated in the following lists where the figures used are Congressional Quarterly cumulation and not the last figure entered by the organization. Of the 256 reporting organizations in this round-up, at least 51, or one-fifth, appeared to have made reports which contained such mistakes.

DOCTORS' CAMPAIGN

The American Medical Association, Chicago, recorded the biggest expenditures, as it campaigned for voluntary prepaid medical care and against the administration plan for compulsory national prepaid medical care. The AMA, which also took stands on other medical issues before the Congress, collected $2,290,045 in $25-per-member assessments.

AMA spent $1,522,683 in 1949. This figure includes certain salaries, other Washington office items, and the entire $100,000 fee to, and $1,349,451 expenses of, the public relations firm of Whitaker & Baxter for the AMA's national education campaign from January 13 to December 31, 1949. AMA said that expenditures for lobbying probably will not exceed 50 percent of the total spent in any quarter, but reported the million-and-a-half-dollar figure. The figure does not include the research, publishing, and other activities of AMA which are the regular work of the organization.

Whitaker & Baxter also submitted an organizational financial report in behalf of the national education campaign. The expenditures listed in this report are divided into two categories: Those which are considered allocable to Federal legislative activity, and those which are not. The allocable figure for 1949 is $486,033. (In a report to the AMA house of delegates in December, Whitaker & Baxter reported campaign expenses of $1,394,152.)

The campaign report figures are based on the assumption that the principal purpose is not to influence Federal legislation but to acquaint people with the desirability of voluntary prepaid medical care, its advantages over compulsory types, and (flowing from the latter) to secure a lessened public demand for, and a greater public objection to, compulsory systems. Therefore, expenditure figures given are presumed to reflect the legislative part of the purpose.

CONSTITUTIONAL GOVERNMENT

The Committee for Constitutional Government, Inc., New York City, which listed the second highest expenditure total of all reporting groups, $620,632 in 1949, has been an active foe of New Deal and Fair Deal legislation since the battle over President Roosevelt's attempt to alter the philosophy and decisions of the Supreme Court by appointments in 1937.

The committee said it received $196,066 in contributions, of which $34,470 were in fourth quarter. But total receipts were $379,231 (Congressional Quarterly cumulation) which included both contributions and income from book sales, rental of lists, etc. (said latter income not re lobbying). The committee had no contributions of $495 or over; it does not solicit them. (Five hundred dollar contributions or over are reportable as to source.) There was no mention, by name, of a CCG affiliate, Fighters for Freedom, which collects money.

Expenditures listed do not include any by name to Features for America's Future, syndicate whose literature the committee frequently sent to Congress, nor to Representative RALPH W. GWINN (Republican, New York), who writes a regular column for committee and syndicate, which is sent to Congress, nor to Fighters for Freedom.

Listed fourth quarter expenditures do include salaries and expenses, advertising, rent, and other office costs, books and other literature, printing and mailing, royalties of $850 to ex-Representative Samuel B. Pettengill, (Democrat of Indiana) and items marked "dinners" to Economic Club, New York City; National Economic Council, New York City; Public Relations Society, New York City; New York Chapter SAM.

Also included in fourth quarter was $150 membership to National Industrial Conference Board, New York City, and $36 membership to Direct Mail Advertising Association.

The fourth quarter list also noted costs of memberships in National Industrial Conference Board, $150; in Direct Mail Advertising Association, $36; and in National Register Publishing Co., $25, all of New York City.

COTTON FUNDS

National Cotton Council of America, Memphis, which received $1,304,533, explained how six segments of the industry support the council. Each segment has its own trade association, but each chips into the council on the following basis:

Assessments, on voluntary basis, come from: Producer-ginner, 10 cents per bale, with ginner collecting for council and paying when producer is delinquent; warehousemen, one-half cent per bale; merchants, 2 cents per bale on merchandised basis; one-half cent per bale on brokerage basis; cottonseed crushers, 5 cents per ton; cotton spinning mills, 5 cents per bale for combined program, of which council's share is normally 3 cents; consumers of raw cotton fibers (other than spinners), 5 cents per bale.

The Council reported spending $26,728 for those Washington office expenses reflecting legislative work.

American Cotton Shippers Association, Memphis, which does not keep its books on a calendar year basis, reported receiving $29,605 during the fourth quarter from four affiliates. Receipts are forwarded by affiliate members on the basis of $25 annual dues from individual members, three-fourths of a cent per bale purchase fees, and 2 cents per bale export fees (Canada not being considered an export country).

The affiliates of ACSA are: Arkansas Cotton Trade Association, Little Rock; Atlantic Cotton Association, Atlanta; California-Arizona Cotton Association, Los Angeles; Oklahoma State Cotton Exchange, Oklahoma City; Southern Cotton Shippers Association, Memphis; and Texas Cotton Association, Waco.

American Cotton Shippers Assn. and affiliates spent $2,459 in the 15-month period from October 1, 1948, to December 31, 1949, on an allocated basis.

National Cotton Compress and Cotton Warehouse Association, Memphis and Washington, is a federation of regional associations: American Ports Cotton Compress & Cotton Warehouse Association; South Atlantic Cotton Warehouse Association; Southwestern Compress & Warehouse Association; and special members in Arizona and California.

The compress and warehouse group said its maximum allocable expenses totaled $7,319, but did not think itself required to file.

Western Cotton Growers Association of California, of Fresno and Bakersfield, filed two reports, differing by a few cents, which showed expenditures via Ralph B. Bunje amounting to $9,647.

For more details on these cotton groups, see pages 219–20 this Log, and 1949 Log index.

CO-OP TAXES

Two national groups and a number of their State affiliates reported spending a total of $175,851, including intergroup transfers, in their campaign to persuade Congress further to tax the cooperatives. These organizations argue that cooperatives should pay taxes on that part of income which the co-ops claim should not be taxed because it is not profit but an overcharge and is returned to the consumers of goods or services bought cooperatively.

One of the national groups, National Associated Businessmen, Inc., reported spending $37,351 and receiving $36,115, with contributions of $500 or more each from the following: Iowa Associated Businessmen, Inc., Ames; Oklahoma Associated Businessmen, Inc., Oklahoma City; New York Associated Businessmen, Inc., Sherburne; Minnesota Associated Businessmen, Inc., St. Paul; Maryland Associated Businessmen, Inc., Baltimore; Ohio Associated Businessmen, Inc., Columbus; Pennsylvania Associated Businessmen, Inc., Harrisburg; Missouri-Kansas Businessmen's Association, Inc., Kansas City, Mo.; Nebraska Associated Businessmen, Lincoln; Indiana Tax Equality Committee, Inc., Indianapolis; Virginia Associated Businessmen, Inc., Richmond; Wisconsin Associated Businessmen, Inc., Milwaukee; Colorado Associated Businessmen, Inc., Denver; and North Dakota Tax Equality Committee, Inc., Fargo.

National Tax Equality Association, Inc., reported receiving $536,132 in 1949 and spending for "fringe items" only, $74,028.

The fringe items were mainly for production and distribution of literature and advertisements "which may have suggested or inspired letters to the Congress or which may possibly have been sent to the Congress by members of our association or others." Salaries, rent, etc., are not included in the expenditures reported, though they do appear in the photostatic copy of the ledger sheets which accompany NTEA reports.

Expenditures shown in the photostats included $12,000 retainer fees to Vernon Scott and Loring Schuler in the fourth quarter, and other sums for expenses and/or salaries to various individuals, some of whom are registered for or working for State tax equality or other groups.

Fourth quarter contributions of $500 or more came from 26 firms and one association: Mr. P. W. Anderson, president, Farwell, Ozmun Kirk & Co., St. Paul; Mr. A. G. Rorabeck, president, George Worthington Co., Cleveland; Mr. E. B. Morley, Morley Bros., Saginaw, Mich.; Ben C. McCabe, president, International Elevator Co., Minneapolis; Mr. E. K. Tryon, Edward K. Tryon Co., Philadelphia; Edward F. Pritzlaff, secretary, John Pritzlaff Hardware Co., Milwaukee; Wever Dobson, J. F. Anderson Lumber Co., Minneapolis; Mr. L. D. Nuchols, Charlotte, N. C.; Globe Elevators, division of F. H. Peavey & Co., Duluth; Mr. H. H. Hill, Janney-Semple-Hill & Co., Minneapolis; Mr. A. Wessell Shapleigh, Shapleigh Hardware Co., St. Louis; Mr. E. B. Martindale, president, Van Camp Hardware & Iron Co., Indianapolis; Mr. H. D. Cram, president, the W. Bingham Co., Cleveland; Edwin R. Masback, Jr., Masback Hardware Co., New York City; Mr. C. H. Buhl, Buhl Sons Co., Detroit; Henry J. Allison, president, Allison-Erwin Co., Charlotte, N. C.; Mr. H. G. Dickey, president, Van Dusen Harrington Co., Minneapolis; Leonard Lampert, Jr., president, Lampert Lumber Co., St. Paul; Ray Grisham, Western Cottonoil Co., Abilene, Tex.; Mr. W. F. Stephenson, vice president, Stratton-Warren Hardware Co., Memphis; William Steltz, president, Supplee-Biddle-Steltz Co., Philadelphia; Mr. R. C. Dickerson, secretary, American Cotton Shippers Association, Memphis; Mr. M. J. Claussen, treasurer, Hibbard Spencer, Bartlett & Co., Evanston, Ill.; Mr. W. L. Taylor, president, Wilcox Lumber Co., Detroit Lakes, Minn.; Col. Robert Baker, Fones Bros. Hardware Co., Little Rock; Western Paint & Varnish Co., Duluth; and Mr. H. K. Nilssen, vice president, George A. Clark & Son, Minneapolis.

SHOE CHAINS

The National Association of Shoe Chain Stores, Inc., in its first financial report (page 222), showed receipts of $23,150 from various chains for services having nothing to do with lobbying. Those giving $500 or more in 1949 were: A. S. Beck Shoe Corp., New York City, $1,875; The Berland Shoe Stores, Inc., St. Louis, $750; Brasley-Cole Shoe Co., Ltd., Los Angeles, $562; Butler's Inc., Atlanta, $562; Edison Bros. Stores, Inc., St. Louis, $2,000; Karl's Shoe Stores, Ltd., Los Angeles, $750; Gallenkamp's Stores Co., Los Angeles, $750; Miles Shoes, Inc., New York City, $1,125; Sears, Roebuck & Co., Chicago, $2,000; Siegel & Fried, Inc., New York City, $562; Endicott Johnson Corp, Endicott, N. Y., $1,500; G. R. Kinney Co., Inc., New York City, $1,875; Shoe Corp. of America, Columbus, $1,500.

MILK INDUSTRY FOUNDATION

Milk Industry Foundation made its first report under the Federal Regulation of Lobbying Act. According to the Foundation statement, it believes the lobbying law is inapplicable to itself, or, if applicable, then is unconstitutional. Principal purpose of Foundation is not legislative but to improve business methods and sponsor technical and scientific research in milk industry. It enclosed an interchange of letters between Justice Department and self in 1948, when Justice Department asked whether Foundation had filed and Foundation replied that it did not think it was required to and then solicited Justice Department advice if the Department had contrary views. The Foundation said in current statement that it never received a reply from Justice Department. (The Justice letter was dated May 25, 1948, and signed by Irving R. Kaufman; the Foundation reply June 9, 1948, signed Benjamin F. Castle, executive director.)

Castle, in the current statement, said the Foundation has "recently" learned Justice Department position now is that "every person or organization receiving any contributions or expending any money" to influence legislation must file organizational financial reports. Such construction might make lobbying law apply to the Foundation and to everyone else who is concerned about matters of national importance. On this basis, Foundation filed, under protest, but is of opinion that, no matter how lobbying law is construed, and especially as Justice Department construes it, it is unconstitutional, violating first, fifth, and eighth amendments.

Foundation has 1,088 members, whose dues averaged $171 and totaled $186,377 in 1949. Dues are not earmarked for any specific purpose, and no contributions of $500 or more for influencing legislation have been made since effective date of lobbying law. Allocated expenses (see page 219) were $6,038.

TRAMP SHIPPING INDUSTRY

The Committee for Promotion of Tramp Shipping under American Flag in Foreign Commerce, a new group seeking Federal construction and operational subsidies for nonscheduled ocean freight vessels, reported receipts of $18,500 in December, 1949 and $3,500 in January, 1950, from 21 firms in amounts ranging from $500 to $3,500 (see pp. 63, 223). The contributors (in New York City unless stated): American Foreign Steamship Corp., $2,000; Dichmann, Wright & Pugh, Inc., Norfolk, $500; Fribourg Steamship Co., Inc., $1,500; Polarus Steamship Co., $2,000; Wessel, Duval & Co., Inc., $500; Marine Transport Lines, Inc., $2,500; Blidberg-Rothchild Co., Inc., $500; Eastport Steamship Corp., $500; Stockard Steamship Corp., $500; Prudential Steamship Corp., $1,000; W. W. Battle & Co., Inc., $500; Harvey N. Bryant & Co., $500; Walter A. DeLappe Co., $500; T. J. Stevenson & Co., $2,000; J. H. Winchester & Co., Inc., $500; Eagle Ocean Transportation Corp., $500; Seatraders, Inc., $500; Drytrans, Inc., $1,000; Transfuel Corp., $500; Shipping Enterprises, $500; and in Jan. 1950, Orion Shipping & Trading Co., Inc., $3,500.

ATLANTIC UNION BACKERS

Fourth quarter contributors of $500 or more to the Atlantic Union Committee included former Supreme Court Justice Owen J. Roberts and former Secretary of Commerce and Under Secretary of State Will L. Clayton, the cotton business leader. Total receipts are not given by the Committee, which spent $45,410 during the year (see page 227).

Other contributors during the quarter included: Hugh Moore, Craig Moore and Mrs. Berenice Moore, of Easton, Pa., Hugh Moore is founder and board chairman of the Dixie Cup Co., treasurer of the Committee for the Marshall Plan and one-time chairman of the executive committee of Committee to Defend America by Aiding the Allies (1940) and consultant in 1945 at the UN San Francisco conference. He is also an official of the Woodrow Wilson Foundation, of American Association for United Nations, and of Americans United for World Organization. Craig Moore is one of the sons of Hugh and Berenice Moore;

Edward Burnham Burling, former law partner of Secretary of State Dean Acheson, and onetime general counsel of the United States Shipping Board (1917–19); and Spencer T. Olin, of the Olin Industries family.

(For list of previous big contributors, see 1949 Log, pp. 1395–96).

The fourth quarter contributors: Former Supreme Court Justice Owen J. Roberts, Philadelphia, $3,000;; former Under Secretary of State Will L. Clayton, of Anderson, Clayton Co., Houston, $2,000; Sydnor Oden, of same firm, $500; Mrs. Bernice Moore, in care of Dixie Cup Corp., Easton, Pa., $1,000; Craig Moore and Hugh Moore, same address, $500 each (Hugh Moore is treasurer of Committee for the Marshall Plan to Aid European Recovery, see p. 228); Mrs. St. John Garwood, Austin, Tex., $1,500; $1,000 each from: Mrs. Jean de Menil, Houston; Edward B. Burling; Mrs. Benjamin M. Baker, Jr., Baltimore; Mrs. S. V. McAshan, Jr., Houston; and Edgar E. Rand, St. Louis.

Five hundred dollars each from Thomas S. Nichols, Mathieson Chemical Corp., New York, N. Y.; Mrs. T. W. Hardy, in care of Hardy Salt Co., St. Louis; Mrs. Robert S. Brookings, Washington; Spencer T. Olin, St. Louis; and R. Fairfax Funsten, St. Louis.

UNEMPLOYMENT BENEFIT ADVISORS

Unemployment Benefit Advisors, Inc., which operates in the social security field,

reported receipts of $102,415, of which $50,400 was in contributions each over $499. During the fourth quarter, over $499 receipts came from: General Motors Corp., Detroit, $3,500; Joseph Schlitz Brewing Co., Milwaukee; Atlantic Refining Co., Philadelphia; Allis-Chalmers Manufacturing Co., Milwaukee; the J. L. Hudson Co., Detroit; Marshall Field Co., Chicago; American Cyanamid Co., New York City, and American Can Co., New York City, each $1,000; Briggs & Stratton, Milwaukee, $800; Pittsburgh Plate Glass Co., Pittsburgh, $750; and $500 each from: F. W. Woolworth Co., New York City; Gulf Oil Co., Pittsburgh; Johns-Manville Corp., New York City; Weirton Steel Co., Weirton, W. Va.; Wheeling Steel Corp., Wheeling, W. Va.; B. F. Goodrich Co., Akron; United States Rubber Co., New York City; Maytag Co., Newton, Iowa; W. A. Sheaffer Pen Co., Fort Madison, Iowa; G. C. Murphy Co., McKeesport, Pa.; Kelsey-Hayes Wheel Co., Detroit; Retail Merchants Association, Pittsburgh; John Morrell & Co., Ottumwa, Iowa; and Pittsburgh Consolidated Coal, Pittsburgh.

(For previous big contributors, see 1949 Logs, pp. 996, 1403.)

CIO SUPPORT

The Congress of Industrial Organizations reported $42,035 (see page 226) spent on legislative activities, exclusive of salaries and expenses shown in reports filed by its registered lobbyists. To find how much any one affiliated union gave of that amount, it took that affiliate's proportionate share of CIO total income and prorated the $42,035 on the assumption that each affiliate gave a uniform percentage of its money to CIO for legislative work. On that basis, receipts in excess of $500 each came from: auto workers, $9,556; steelworkers, $8,984; electrical workers, $3,515 (9 months; before expulsion); textile workers, $3,307; clothing workers, $1,239; rubber workers, $1,455; communications workers, $1,239 (last 9 months of year); packinghouse workers, $946; oil workers, $713; woodworkers, $618; transport workers, $589; fur and leather workers, $520; gas, coke and chemical workers, $516; shoe workers, $510; utility workers, $509.

RAILROAD LABOR AFFILIATES

Railway Labor Executives' Association, which spent $8,220 on legislative work (see page 226), speaks for all of organized railway labor which is affiliated with 15 A. F. of L. unions, the railroad membership of CIO marine engineers, and four independent unions' rail membership. (The trainmen and locomotive engineers are not in the RLEA.) The four independents in RLEA are the locomotive firemen and enginemen, conductors, train dispatchers, and machinists (the latter are negotiating reaffiliation with A. F. of L.). In addition, the railway employees' department of A. F. of L. is represented.

The twenty unions whose railway employee membership is covered by RLEA, and which contributed to it, are: Brotherhood of Locomotive Firemen and Enginemen, Cleveland; Brotherhood of Railway Carmen of America, Kansas City, Mo.; Brotherhood of Railway Clerks, Cincinnati; Brotherhood of Maintenance of Way Employees, Detroit; the Order of Railroad Telegraphers, St. Louis; International Association of Machinists, Washington; Order of Railway Conductors of America, Cedar Rapids, Iowa; Switchmen's Union of North America, Buffalo; American Train Dispatchers Association, Chicago; International Brotherhood of Boilermakers, Kansas City, Kans.; International Brotherhood of Blacksmiths, Chicago; Sheet Metal Workers International Association, Washington; International Brotherhood of Electrical Workers, Chicago; International Brotherhood of Firemen and Oilers, Chicago; Hotel and Restaurant Employees and Bartenders International Union, Cincinnati; International Longshoremen's Association, New York City; Brotherhood of Railroad Signalmen of America, Chicago; National Organization of Masters, Mates and Pilots of America, New York City; National Marine Engineers' Beneficial Association, Washington; and Railroad Yardmasters of America, Chicago.

RAILROAD ASSOCIATION REPORT

The Association of American Railroads' report showed allocated expenditures of $194,159 in 1949. The Association of American Railroads, to figure receipts for the report, allocated receipts, equal to allocated expenditures, and then prorated among member roads on basis of total contributions, included receipts of $500 or more on that basis from 55 railroads.

Allocation of expenditures included: $21,000 given to National St. Lawrence Project Conference (against seaway); $5,000 dues to Transportation Association of America; $2,227 of total paid to E. Hofer & Sons, Portland, for preparing and distributing newspaper items re railroads; salaries, rent, communications and supplies, traveling, printing, and so forth. Fourth quarter printing item included $2,640 for 165,000 copies of This Isn't the Way To Run the Railroads, and other items, in whole or in part.

AAR also regularly lists, in financial reports, the bills it supported or expects to support, those it opposed or expects to oppose, and those it took action on without determination of whether it is for or against. There were 43 bills in the first category, 51 in second, and 88 in third (in some cases bills were duplicates or overlapped in intent, as in those to repeal excise taxes). This is a unique reporting habit, though other groups often mention a few bills acted on; it is not required in organizational report form.

WATER FIGHT

One of the most acrid regional battles in Congress came to a temporary climax February 7 and 8, this year, when the Senate postponed action on the bill to construct the proposed central Arizona reclamation project until February 21.

The financial reports for 1949 of several groups show that the California side seems to have spent more money than the Arizona group in this educational competition, though both sides got their licks in. Arizonians have used movies as a visual method. Californians have countered with such devices as distribution of a one-sentence attack on the project, written on a 7-foot ticker tape and wrapped up in a capsule. Both sides have used colorful pamphlets; one that the Californians used was made up of individual placards which had been sent to Congressmen in 1949, each signed by a different Member of the California congressional delegation.

The Central Arizona Project Association, Phoenix, which backs the project, reported spending $97,301 in 1949. Two California water groups, interested in California's share of the Colorado River's water, spent a combined $135,463, according to their statements. The latter two are the Colorado River Association, Los Angeles, with $115,120, and the Six Agency Committee, also of Los Angeles, with $20,343. The Six Agency group is composed of six California water agencies.

AMERICAN COALITION MEMBERS

Representative JOHN PHILLIPS, Republican of California, himself a member of one of the constituent organizations of the American Coalition, read into the Appendix of the RECORD on February 15, 1950, page A1091, a list of the constituent organizations of the coalition, together with a speech by its retiring president, John B. Trevor, and the resolutions adopted at its January convention.

The coalition, which reported spending $6,395 in 1949, contains the following: Sons of the American Revolution, National Society; Daughters of the American Revolution, National Society; Military Orders of the World Wars; American War Mothers; General Society of the War of 1812; National Society, Sons and Daughters of the Pilgrims; National Society of New England Women; Society of Plymouth Colony Descendants; Federation of Huguenot Societies in America; Congress of State Societies in America; Military Order of the Loyal Legion of the United States, commander in chief; Grand Army of the Republic; National Constitution Day Committee; National Society for Constitutional Security; Regular Veterans Association; Sons and Daughters of Liberty, National Council; Wheel of Progress; Women of Army and Navy Legion of Valor, United States of America.

The American coalition resolutions called for suspension of all immigration into the United States when there are a million unemployed, sharp reduction of the displaced-persons-admission program; opposition to socialized medicine, Federal control of education, and world government; adequate appropriation for the House Un-American Activities Committee, and for the armed forces. It supported military training in the schools and colleges, in lieu of universal military training which it felt would not pass Congress, and urged more recognition of the Marine Corps.

TRANSPORT GROUP REPLIES

Transportation Association of America, in answer to a congressional quarterly log inquiry as to how much it had spent in 1949 and its reason for reporting expenditures as it does, sent a comparative statement of income and expenses for fiscal years ending October 31, 1948, and October 31, 1949.

TAA statement showed fiscal 1949 receipts of $320,383 and expenditures of $309,047. Comparable figures for fiscal year 1948 were $284,602 income and $273,194 outlay. Donald D. Conn, executive vice president, told CQ TAA files total expenditures for all purposes, less than 5 percent of which is "actually spent in our relations to Congress in Washington." Conn said TAA's "acts, income and expenditures should be available to the Congress in complete detail. * * * In no way does the association consider itself as a lobbying organization in the commonly accepted meaning of that term * * * but, we have no objections whatever to complying with this law."

CAMPAIGN FUNDS FOR MORSE

Senator WAYNE MORSE, Republican of Oregon, was given $500 for his campaign by the Committee on National Affairs December 20, 1949, according to the committee's year-end report (see p. 225). The committee also reported receipt of $500 December 19 from Frank Altschul, New York banker, National Planning Association international committee chairman, Council on Foreign Affairs director and Woodrow Wilson Foundation president. The committee, which is headed by Pittsburgh industrialist Frederick C. McKee, has reported other campaign contributions in the past (see Almanac, vol. IV, 1948, p. 445 and 4th page of Lobby Addendum, following index. Also 1949 Log, p. 137) to Senators Matthew M. Neely, Democrat, West Virginia; Estes Kefauver, Democrat, Tennessee; Paul H. Douglas, Democrat, Illinois; and James E. Murray, Democrat, Montana; ex-Senator John Sherman Cooper, Republican, Kentucky; to Representative Jacob K. Javits, Republican, New York, and James G. Fulton, Republican, Pennsylvania; and to candidates running against Representatives Vito Marcantonio, American Labor, New York; Katharine St. George, Republican, New York, and E. E. Cox, Democrat, Georgia.

LOBBY SPENDING—JANUARY 1 TO DECEMBER 31, 1949

Congressional Quarterly's organization expense reports are arranged by type of organization. Where no city is given, organization filed from a Washington, D. C. address.

All expenditures listed are total expenditures reported, except where "allocation" to legislative work or similar qualification is noted.

In all but a few cases, which are specifically noted, expenditure totals are for the entire 12 months of the year.

Business

General

Chamber of Commerce of the United States of America: Received for all purposes, $2,585,154. Expenditures reported are the salary and expenses of F. Stuart Fitzpatrick, manager of construction and civic development department, expenditures of department of governmental affairs, and an allocation by possible legislative aim of part of cost of chamber publications other than those put out by Government-affairs department allocation, $90,945.

Council of State Chambers of Commerce, Indianapolis: Received from State chambers, $54,779. Spent, $56,300.

American Chamber of Commerce of Mexico, Mexico City, Federal District: Congressional Quarterly cumulation, $1,507.

Conference of American Small Business Organizations, Inc., Chicago: Received $51,357. Spent for salaries, office expenses, and traveling costs (no itemization of to whom, amounts, date, and purpose), $49,609.

Illinois Manufacturers' Association, Chicago, by James L. Donnelly, executive vice president, Chicago: Said not over $5,000 of his annual salary can reasonably be allocated to Federal lobbying. His expenses (Congressional Quarterly cumulation), $1,853.

Interstate Manufacturers Association, Winona, Minn.: Received $16,200. Allocable expenses, exclusive of $6,000 retainer of lawyer, J. M. George, 2 percent of whose time is maximum spent on reportable work, $553.

George F. Meredith (executive director of National Alliance of Independent Business), none.

National Associated Businessmen, Inc.: Received $36,115. Expenditures included rent and office supplies, printing and communications, advertising (Meneough, Martin & Seymour, Inc., Des Moines, $2,000), insurance and legal services, travel costs, salaries (including Leo Cullinane, registered lobbyist, for publicity, $7,367), and $9,999.96 retainer fees to Vernon Scott and Loring Schuler, organization counselors, $37,351.

Colorado Associated Businessmen, Inc., Denver: Reported payments of $158 to NTEA, of which $150 was for making up and printing 5,000 booklets entitled "Colorado Associated Businessmen, Inc.," and $1,333 to NAB as one-half of local group's collection of subscriptions. Other costs for stenographic services, communications, and miscellaneous. No salaries listed. Reported spent, $3,236.

Illinois Associated Businessmen, Inc., Chicago: Received $2,060. Spent, for stenographic typing, supplies, postage, "dinner for Mr. English and guest" ($18) and $25 in $5 gift certificates for five volunteer workers, $436.

Kansas Independent Businessmen's Association, Wichita: Spent, for travel, rent, and communications, but no salaries (Congressional Quarterly cumulation), $1,932.

Michigan Associated Businessmen, Inc., Lansing; none.

Minnesota Associated Businessmen, Inc., St. Paul: Received $10,312, including a $1,000 fourth-quarter contribution from Peavey Elevator Co., Minneapolis. Expenditures included $4,392 for Minnesota newspaper advertising; $3,677 for services and $1,221 to NAB for "support;" $233 to NTEA for printing and postage; and miscellaneous travel, office, and communications expenses, $14,283.

Mississippi Associated Businessmen, Inc., Jackson: Received $4.556. Expenditures included dues, typing, and printing items to NTEA; salaries, traveling expenses, rent, communications, and advertising, $5,761.

Missouri-Kansas Businessmen's Association, Inc., Kansas City, Mo.: Received $3,912. (Association fourth-quarter report corrected cumulation error of second and third quarter reports, which had not been adjusted for by Congressional Quarterly Log, either and showed 9-month expenditure of $1,960. Congressional Quarterly cumulation for that period on basis of reports would be $1,909 instead of the $4,252 previously reported.) Expenditures included $951.25 at National Associated Businessmen for printing and mailing, and other items for steno, travel, communications, no salaries. Corrected total (M-KBA figure), $3,291.

New Jersey Associated Businessmen, Inc., Jersey City: Received $1,265. Spent, including dues to National Associated Businessmen, Inc., and postage and stationery items to National Tax Equality Association, $1,823.

New York Associated Businessmen, Inc., Sherburne, N. Y., filed under protest; does not lobby. Received: $7,835. Expenditures included Austin W. Carpenter's salary, traveling costs, communications and $2,682 to NAB for research and bulletin service. Spent (Congressional Quarterly cumulation), $8,035.

Wisconsin Associated Businessmen, Inc., Milwaukee: Received $2,765. Spent, including $1,355 to NTEA and $50 for membership in Wisconsin State Chamber of Commerce, travel and communication expenses, and no salaries except stenographic, $3,010.

(NOTE.—There is considerable transfer of funds between National Associated Businessmen, National Tax Equality Association, and their State affiliates.)

National Small Business Men's Association, Akron: Received, $184,123. Listed expenditures for all purposes, including publicity; salaries; dues to Akron City Club; Executive Club of Chicago; National Press Club; membership service from Small Business Economic Foundation, Chicago ($1,700); rent and office services, supplies, etc.; $119.95 to Representative CLARENCE CANNON (Democrat, Missouri) for CONGRESSIONAL RECORD reprints of insertions of letters from businessmen demanding Government economy. Spent, $192,070.

Southern States Industrial Council, Nashville: Received, $94,430. Spent, $94,873.

Washington (D. C.) Board of Trade: First report. Receives $15 per member from membership of about 8,000. Spent, estimated maximum attributable, $5,000.

Building Products, Real Estate

The Associated General Contractors of America,, Inc.: Estimated allocation for entire year, including $5,000 salary of Burt L. Knowles, $19,500.

Building Products Institute: Filed by Douglas Whitlock, chairman, in view of uncertainty of coverage of lobbying law. Expenditures, mainly general counsel fees and legal representative fees to firm of Sanders, Gravelle, Whitlock & Howrey, and to Douglas Whitlock of the firm, of which ex-Representative Everett Sanders (Republican, Indiana) is senior partner, $19,385.

Harnischfeger Corp., Milwaukee: First report. Spent for services of registered lobbyist, Donald M. Counihan, Washington, $1,050.

National Association of Home Builders: Receipts arise from two types of dues and four other sources. Receipts from sustaining membership dues totaled $10,965. NAHB reports total expenditures for all purposes and then makes estimated allocation for expenditures believed reportable under lobbying law, but files under protest because of ambiguous and conflicting provisions of lobbying law. Total expenditure (except for separately kept convention and exposition account) was $319,699 (Congressional Quarterly cumulation), of which estimated allocation was $71,942.

National Association of Real Estate Boards, its Realtors' Washington Committee and its Public Relations Department, Chicago and Washington: Received $106,463. Allocation of expenses includes travel, printing, tape recording, luncheons, etc., and apportioned part of rent, mailing room costs and parts of salaries based on time spent on legislation (ranging from 12½ percent to 100 percent). The cost of NAREB's publication Headlines, does not appear to be reflected in the statement. Spent (CQ cumulation), $138,600.

National Electrical Contractors Association, by Paul M. Geary, executive vice president: None.

The Producers' Council, Inc.: Received $87,450 in 1949, of which eight contributions, of $150 each, came in the fourth quarter from California Redwood Association, San Francisco; Concrete Reinforcing Steel Institute, Chicago; National Terrazzo & Mosaic Association, Washington; Marble Institute of America, Inc., New York City; National Woodwork Manufacturers Association, Chicago; National Paint, Varnish and Lacquer Association, Washington; Portland Cement Association, Chicago; and Vermiculite Institute, Chicago. Filing in view of "uncertain" coverage of the lobbying law. Spent $96,007. Washington (D. C.) Real Estate Board: None.

Financial

American Life Convention, Chicago: Allocated part of salary and expenses of ex-Representative Robert L. Hogg (Republican, West Virginia) for trips to Washington, and so forth, plus 1 percent of regular office expenses to cover allocable activities re Federal legislation, $5,914.

Association of Casualty and Surety Companies, New York City.: Makes quarterly reports on basis of estimated allocations using budget allotment for immediately preceding period and actual expenditures for prior quarters. Thus, each quarter small adjustments are made to correct for differences between estimated budget and estimated actual costs. On this basis, using estimated actual first 9 month costs and estimated October-December budget, spent $5,811.

The Chase National Bank of the City of New York, New York City: Does not believe required to file. Retains firm of Milbank, Tweed, Hope & Hadley, of New York City and Washington, for various services, including consideration of Federal tax bills. Expenditures none.

Credit Union National Association, Inc., Madison, Wis.: Reported annual salary of $6,350 to Hubert M. Rhodes for various services; no special pay for lobbying. Phone calls and trips to Congressmen plus cost of notarizing lobbying reports cost $21.

The Equitable Life Assurance Society of the United States, New York City: First filing. Does not believe self subject to lobbying law. Retains law firm of Milbank, Tweed, Hope & Hadley, New York City, for various legal services performed by various members of that firm. Small part of that service is by Weston Vernon, Jr., of that firm, re Federal tax matters, and he has registered but disclaimed being covered by lobbying law. If any of his activities are covered, portion of fee to Milbank firm attributable to such activities was $467 of fee and $80 expenses in fourth quarter, $567.

Independent Bankers Association, Twelfth Federal Reserve District, Portland, Oreg.: Received $29,738. Expenditures in November included $181.53 to the Palace Hotel for Senator HARRY P. CAIN (Republican, Washington) re an IBA breakfast in San Francisco, $339.25 to United Air Lines for CAIN's fare in connection with his speaking engagement at the breakfast, $397.82 to the hotel, and various other expenses for the breakfast. IBA backs a bill to regulate bank holding companies; CAIN spoke sympathetically of the IBA viewpoint behind the drafting of the bill. Expenditures of 1949 totaled $42,349.

Life Insurance Association of America, New York City: Allocation based on prorated salaries and expenses of Bruce E. Shepherd, Eu-

gene M. Thore, and Albert Pike, Jr., and of general overhead of New York office, $4,587.

Life Insurance Policyholders Protective Association, New York City: Received $40,081, including $1,000 from Lammot du Pont. Spent, including considerable traveling costs over entire country (Congressional Quarterly cumulation), $37,392.

The Morris Plan Corp. of America, New York City: Travel costs to Washington, at invitation of Board of Governors of Federal Reserve System to discuss bank holding company legislation, 183.

National Association of Insurance Agents, New York City: Reserves question of necessity of filing because does not believe expenditures listed fall within purview of lobbying law. "Full disclosure is made as a matter of cooperative good faith," Richard E. Farrer, treasurer, added. No expenditures since those of May 1949 report; those totaled $1,662.

National Association of Mutual Savings Banks, New York City: Does not believe required to file. Received $179,775. Legislative work, besides that on bills previously reported (see 1949 Log, p. 1298), also was re housing bill, S. 2246. Spent, figuring traveling expenses, phone calls, etc., and 15 percent of $34,500-a-year average counsel fee (was $33,000 in first half, $36,000 in last half), $6,755.

National Savings and Loan League: Received $120,577; spent, all purposes, $118,161. Allocation, which included part of salary of Executive Manager Oscar R. Kreutz and national letter (Congressional Quarterly cumulation), $6,063.

New York Stock Exchange, New York City: Does not believe required to file. Retains law firm of Milbank, Tweed, Hope & Hadley, of New York City and Washington, for various legal services, including consideration of Federal tax bills. Expenditures, none.

The Prudential Insurance Co. of America, Newark, N. J.: Allocation based chiefly on salaries and expenses of Milo J. Warner, Toledo, and Charles J. Milton, Jersey City, $32,857.

United States Savings and Loan League, Chicago: Filed without admitting required to do so, but "has discovered that the Attorney General * * * has taken the position that it is subject to the (lobbying) act." League, which won dismissal of indictment lodged against it by Justice Department under lobbying law, reports allocation of spending. Allocation for fourth quarter is based on portions (ranging from 5 to 60 percent) of salaries and fees, expenses of registered lobbyists, communications, cost of that part of confidential bulletin dealing with legislation, percentage of Washington office expenditures, etc. Spent, 1949 allocation, $54,824.

Food and Agricultural Products

American Butter Institute, Chicago: Said impossible to report contributions for lobbying, as funds are collected for all functions. Reported allocated expenditures, including in fourth quarter, $9,285 to public-relations firm of Hill & Knowlton. Allocated in 1949, $46,382.

Harry Hunter (registered for American Corn Millers' Federation, Chicago): For traveling expenses on Washington trips, legal fees, communications, etc., $984.

American Cotton Shippers Association and affiliated members, Memphis: Has not collected money, nor had principal purpose to influence legislation. Filed report in deference to Justice Department view which is believed erroneous. Books are not kept on calendar-year basis, so receipts and expenditures for calendar year are not available as such. Affiliates and receipts expenditures: Allocated retainer from October 1, 1948 to March 31, 1949 was $559. Spent, from April 1 through September 30, 1949, on basis of one-fifth of attorney's fees and expenses, $650. In fourth quarter, gave $1,000 to National Tax Equality Association and allocated one-fifth ($250) of lawyer's retainer. Spent, October 1, 1948 through end of 1949 (Congressional Quarterly cumulation), allocated, $2,459.

Association of Sugar Producers of Puerto Rico, Washington Committee: Report merely referred to letter of March 4, 1949, filed with Clerk of the House. Letter said did not believe required to file, but that average expense per year for past 3 years had been $52,239: Blank.

The Best Foods, Inc., New York City: Paid allocable expenses ($1,368) and regular retainer, for all services including legislative ($35,000) of law firm of Davis & Gilbert, New York City (acted on margarine bills), $36,368.

Burley and Dark Leaf Tobacco Export Association, Lexington, Ky.: Received $18,458, from Kentucky, Tennessee, and Virginia tobacco growers, dealers, and warehouse associations. Spent, $21,770.

The Ethanol Committee: Spent, including retainer and expenses of ex-Representative Robert A. Grant (Republican, Indiana), $5,817.

Milk Industry Foundation: First report. Believes not required to report (see p. 212). Total receipts, for all purposes, in 1949 were $186,377. Expenditures reported included part of cost of a March and a May 1949 news letter to members, and $6,000 dues to Dairy Industry Committee, of which the Foundation is part. DIC has filed reports, under protest, so Foundation reports entire $6,000, although not all was for lobbying. Total allocated spending, $6,038.

Millers' National Federation, Chicago: Washington expenses, exclusive of salary, of Herman Fakler, vice president, and A. H. Krueger, Washington representative, $1,177.

Francis X. La France, Esq., of law firm of Swan, Keeney & Smith, Providence, R. I. (registered for Narragansett Brewing Co., Cranston, R. I.): Final report, according to statement on his individual form; was employed re S. 257, now a public law, which limits recovery on under- and over-charges. Individual report said he received $300 in full for services in 1949; organization form said he spent nothing, $300.

National Association of Margarine Manufacturers: Listed some expenditures for 1949, including: Expenses but not salaries of registered lobbyists Paul T. Truitt, Siert F. Riepma and Modane Marchbanks; $10,497 to Leo Burnett Co., Inc., Chicago, for advertising; $43,337 for expenses and $24,000 retainer to public relations firm of Selvage & Lee, N. Y. C. and $250 expenses to Samuel Bledsoe of that firm; $5,000 to American Soybean Association, Hudson, Iowa, for educational activities, and various communications, printing and other miscellaneous costs. Total reported, $101,037.

National Association of Refrigerated Warehouses, Inc.: None.

National Association of Refrigerated Warehouses, Missouri Valley Chapter, St. Louis: $5,329.

National Cotton Compress and Cotton Warehouse Association, Memphis and Washington: Group is federation of regional associations. Filed, though convinced not required to, as lobbying is sporadic, infrequent, and incidental to major purposes. Maximum allocable expenses, $7,319.

National Cotton Council of America, Memphis and Washington—received $1,304,563. Federal legislative work done in Washington office only, except for mimeo, stamping and mailing work. Allocation of Washington office expenses reflecting legislative work, $266,728.

National Fisheries Institute, Inc.: None.

National Food Brokers Association: Filed in organization name on organization form, saying counsel, Williams, Myers & Quiggle has advised and it believes self not required to file. During 1949 informed members about S. 2190 and S. 1008, which it opposed. Said some persons might construe that as being lobbying. Said report shows "that part of allocated expenses which might be deemed by some persons to have been incurred for the purpose of influencing legislation." Report said spent nothing. Reports on individual form show expenditures allocation based on part of salary, other items for legislative work (Congressional Quarterly cumulation), $261.

National Grain Trade Council: Said only minor and unallocable part of expense total given was for lobbying but did not list by amounts, to whom given and for what purpose. Spent (Congressional Quarterly cumulation), $55,807.

National Lumber Manufacturers Association: Estimated, in 9- and 12-month reports, that 5 percent of budget expenditures was for lobbying and therefore 5 percent of income was for that purpose (previously listed estimate of 4 percent). Reported receipts were $14,623. Spent for salaries and expenses of George M. Fuller and Robert E. Dougherty and for office expenses (allocated), $18,454.

National Renderers Association: Filed under protest. Fourth quarter receipts included $3,000 from Pacific Coast Renderers Association, San Francisco, and $1,500 from Denver, Utah, and Des Moines plants, for 1948–49 dues. Year's receipts, $25,050. Spent, 1949, $26,706.

St. Louis Local Meat Packers Association (Congressional Quarterly cumulation), $13,008.

Southern Pine Industry Committee, New Orleans: Received, $96,321. Expenditures in fourth quarter included $50 to Committee for Constitutional Government, Inc., for "publicity," $50. Total expenditures, 1949, all purposes, $93,746.

Alan T. Rains (registered for United Fresh Fruit & Vegetable Association): None.

United States Cane Sugar Refiners Association, Washington and New York City: "No money has been expended so far this year on legislative activity." Annual salaries of association attorney ex-Representative H. M. Baldridge (Republican, Nebraska), $24,000, and of Harold Burke, New York office, $8,500, total, $32,500.

U. S. Cuban Sugar Council, New York City: Doubted applicability of lobbying law. Received (total), $70,473. Spent, for items which might be directly or indirectly connected with pending bills, including council's Bulletin, printing and chart costs, and services and expenses of public relations firm of Ivy Lee and T. J. Ross, New York City (including council secretary's salary, paid by Lee-Ross firm), $34,951.

Hilliard Schulberg (registered for Washington, D. C., Retail Liquor Dealers' Association, Inc.): None.

Western States Meat Packers Association, Inc., San Francisco: Previous report noted only $978, allocated part of a July expense of E. F. Forbes, president and general manager. Fourth quarter report added four quarterly expenses of L. B. Liljenquist, Washington, for mimeo, taxis, secretarial services, and miscellaneous re backing or opposing legislation, bringing total reported spent to $1,629.

Oil, Gas, and Mining

American Petroleum Institute, New York City: Does not believe required to file, but, as Justice Department has expressed contrary view, files pending court construction of act. Allocation of expenses is based on full salaries and expenses of John E. Kane and J. L. Dwyer, Washington employees, 1 percent of salary of Baird H. Markham, then director of American Petroleum Industries Committee of API, a sum listed as $161.11 (his annual salary had been $50,000, but changed during the quarter), and one-half of 1 percent of $75,000 salary of the then president of API, William R. Boyd, Jr., for year

up to November 9. Total allocated expenditures (Congressional Quarterly cumulation), $25,799.

District of Columbia Petroleum Industries Committee. Listed salary and expenses of John E. Kane, $1,972.

American Retail Coal Association, Chicago: Allocation of salary and expenses of Bernard E. Urheim, $4,500.

Coal Exporters Association of the United States, Inc.: Does not admit required to file but did so because of Justice Department views. CEA composed of National Coal Association and about 30 exporters of coal and coke and byproducts. Received $48,000. Spent, with no explanation of basis of allocation, $655.

Committee for Pipe Line Companies, Tulsa: Received for all purposes, $44,767. Spent, for Washington and other expenses, including nonlegislative, $38,105.

Fuels Research Council, Inc.: Received $74,206. Did not report names of contributors, as no funds earmarked for lobbying. Composed of about 22 members. Allocated $100 of counsel's time, which was spent discussing with other interested parties proposed amendments to Natural Gas Act, and $321 for total cost of preparing and printing statement against proposed switch to natural gas from bituminous coal at Oak Ridge AEC gas diffusion plant. Senate statement to Congressmen "without intent or expectation of influencing the passage or defeat of legislation." Total allocation, $421.

Gas Appliance Manufacturers Association, Inc., New York City: Allocated fee and expenses of James R. Lee, Washington ($1,300), contribution toward New York Times ad August 9, 1949, for repeal of wartime excise taxes ($500; via Bulova Watch Co., New York City), and to National Committee for the Repeal of Wartime Excise Taxes, New York City ($5,000), $9,800.

Independent Natural Gas Association of America: Reported total receipts of $93,625. Allocation of expenditures included portions of salaries, based on allocation of time. These were $3,333 to ex-Representative Wesley E. Disney (Democrat, Oklahoma), general counsel; $8,320 to John A. Ferguson, executive director; and $1,933 to Louis E. Whyte, news director. Total allocated spent, $14,947.

National Association of Attorneys General Submerged Lands Committee, Maryland State Attorney General Hall Hammond, chairman: Received $31,838, including $14,000 from State of California; $9,000 from State of Louisiana; $7,000 from State of Texas, and $1,000 from State of Maryland. Expenses included $1,500 monthly salary of Walter R. Johnson, ex-attorney general of Nebraska. Spent $31,167.

National Coal Association: Does not admit required to file. Names of contributing firms not given as funds received were not earmarked for lobbying. Total received $1,973,606. Allocated expenditures, based on percentages of costs of various departments, ranging from zero to 100 percent, with general, and administrative, public relations, law, and legislative departments responsible for allocable expenses. Ex-Representative Carter Manasco's (Democrat, Alabama) $200 weekly part-time salary was 100 percent related to law-making. Spent, allocated, $99,560.

Union Producing Co. and United Gas Pipe Line Co., Shreveport, La.: Action in third quarter in behalf of Union Producing Co. re Natural Gas Act. Allocated fee and travel expense of C. Huffman Lewis, of Wilkinson, Lewis and Wilkinson, $841.

Power and Communications

International Telephone & Telegraph Corp., New York City, by Kenneth E. Stockton, president of American Cable and Radio, above. See above for legislative interest. Stockton's salary is $45,000, no part of which is specifically for lobbying. Doubted lobbying law applicable. Expenditures blank.

American Cable and Radio Corp., New York City, by James A. Kennedy, vice president. Firm is subsidiary of International Telephone & Telegraph, above, and is owner of the Commercial Cable Co., All America Cables and Radio, Inc., and Mackay Radio and Telegraph Co., all engaged in international telegraph business. Firm seeks legislation permitting merger of such firms, including cables of Western Union Telegraph Co. Kennedy's salary, no part of which is allocable, is $22,500. Said lobbying law would "appear inapplicable." Blank.

Clear Channel Broadcasting Service (CCBS), by Harold Hough, treasurer, care of Radio Station WBAP, Fort Worth. Received $55,166. Expenditures reported is part of total spent; part of the reported figure is allocable to lobbying, $26,149.

Commercial Pacific Cable Co., New York City, by Edward K. Wheeler, of Wheeler and Wheeler, law firm. Cable firm retained Wheeler in war damage claim case. Wheeler received $6,000, spent $21. Cost to client (Congressional Quarterly cumulation), $6,021.

National Association of Electric Companies: Received $358,226. Listed all expenses, including legislative. These included fees and expenses of law firm of ex-Representative, ex-Senator Prentiss M. Brown (former OPA head), Brown, Lund & Fitzgerald; $65,000 salary of President Purcell L. Smith and his expenses; fees and expenses of N. W. Ayer & Son, Inc., Philadelphia, for public relations, etc. Spent, $388,883.

National Business Publications, Inc.: Group of publishers of trade, technical, scientific, and professional periodicals. Expenses listed included fees paid to ex-Representative Carter Manasco, Democrat, of Alabama, re postal bills affecting rates on controlled circulation periodicals ($2,400 per quarter) and out-of-pocket expenses of Robert E. Harper, managing director, $8,241.

National Electrical Manufacturers Association, New York City: Received $4,690 (presumably means allocable portion of total receipts). Spent, allocation, $4,429.

National Postal Committee for Books, New York City: Received $51,025, including unstated fourth quarter amount for American Book Publishers Council, Inc., New York City. Filed by Curtis W. McGraw, treasurer. Spent, $54,598.

National Rural Electric Cooperative Association: Received $253,989 membership fees and dues from REA co-ops and power districts, based on 10 cents per connected consumer per year. Reported all expenses, without giving dates and purposes of the amounts to the various payees and without totaling them. Then, in what it said was in accordance with conference of NRECA general counsel with Federal Judge Irving R. Kaufman, who at time of conference had been special assistant to the Attorney General in charge of lobbying law, it allocated from the expenses a figure for cost of trying to influence legislation. Allocation, $65,014.

Retail and Service Groups

(Other than food and agricultural product retail. Formerly under miscellaneous trade groups)

American Hotel Association, New York City: Does not believe self subject to lobbying law. Received $533,669. Total expenses of Washington office $45,049, but only part of that sum is included in total reported under lobbying law, and only part of that part was for lobbying. Washington office deals with about 30 Government agencies. Reported expenditures of Washington office, $29,999, for two salaries and expense. Other expenditures listed were related directly to legislation. They were: $17,500 to James Langan, Boston; $5,000 to Edward H. Miller, Washington; $10,000 to law firm of Cummings, Stanley, Truitt & Cross; $3,000 to William Ingles re Taft-Hartley amendments; and $9,467 to governmental affairs committee of the hotel organization. Total reported, $74,966.

American Institute of Laundering, Joliet, Ill.: Received $39,195. Spent, largely re wage-hour legislation, $17,198.

American Retail Federation: Filed 1949 second and fourth quarter statements January 10, 1949. First and third quarter statements had been filed April 8 and October 10, respectively. Received, from various leading department stores, $126,833. Spent, for four salaries and expenses, travel and meeting, communications and bulletins, $12,111.

Institute of Industrial Launderers, Chicago: Listed $6,000 legal fees and $4,435 disbursements of Stanley I. Posner, and noted disclaimer of applicability of lobbying law. Spent (Congressional Quarterly cumulation), $10,435.

Linen Supply Association of American, Inc., Chicago: Listed fees and expenses of counsel, Stanley I. Posner, but said his legislative work was incidental to his other services, and consisted mainly of testifying at hearings. Does not believe required to file. The fees and expenses for Posner, $7,114.

National Association of Shoe Chain Stores, Inc., New York City: First report. Received $23,150 for services having nothing to do with lobbying law requirements. Said purpose of filing statement was to enable association representative to present views on pending and proposed bills. Under expenditures, listed estimates of $500 of salary of employee, Edward Atkins, "to be attributable to legislative activities," and $500 of mimeographing and mailing letters and sending telegrams "to be sent" to members of shoe group re pending bills. Thus, though report form is for 1949, expenditures appear to be future (1950) ones. Expenditures, $1,000.

National Institute of Diaper Services, Inc., New York City: Reported fees and expenses of Stanley I. Posner, attorney. Only first, third, and fourth quarter statements of NIDS are on file, with items totaling $4,509. (Congressional Quarterly cumulation), but Posner's own second quarter report figures plus NIDS three reports add up to total given in NIDS fourth quarter cumulation for the year, $5,860.

National Retail Dry Goods Association, New York City: Received $4,350, of which part was not dues but contributions from those persons interested in LIFO. Spent for fees and expenses of two Washington men, John C. Hazen and William Donald McAdams, and $8,128 expenses re booklet. This Is LIFO, $27,947.

Transportation—General

Transportation Association of America, Chicago: Received $371,085 (Congressional Quarterly cumulation). Instead of expenditure statement showing expenditure total for the year, or for any quarter, has been submitting photostatic copies of the daily expenditure journals, which total various items by the month, but give no other total. Congressional Quarterly Log is unable to arrive at total expenditures, partly through not knowing which of many column totals to count.

Air

Aeronautical Training Society, by Wayne Weishaar, secretary: Believes self and society not required to file. AST received $11,116. Spent for Weishaar's salary, $11,165; for taxies, entertainment, lobby reports (Congressional Quarterly cumulation), $25.

Aircraft Industries Association: Does not believe activities fall within scope of lobbying law. Received $684,891 for all purposes. Contributors included aircraft and other firms. Expenditures for purposes which may be attributable to lobbying included $12,666 to Hill & Knowlton, Inc., for salary of Bert C. Goss, association public relations director, $13,647.

Air Transport Association of America: Filed under protest; does not believe required to file, as lobbying is minor part of its functions. But Justice Department has advised ATAA it will enforce lobbying law against anyone, "any significant part of whose activities" is lobbying, so ATAA files. To report receipts, allocated from total receipts an amount equal to expenditures allocated to lobbying, then prorated among the 36 contributing air lines an allocated contribution to ATAA proportionate to each air line's total contribution. On this basis, 29 air lines gave less than $500 each, and 7 gave a total of $12,588. The seven were: American Air Lines, Inc.; Capital Airlines, Inc.; Eastern Air Lines, Inc.; Northwest Airlines, Inc.; Pan American Airways, Inc.; Transcontinental & Western Air, Inc.; and United Air Lines, Inc. Expenditures indicated allocated salaries (of persons unnamed), taxies, communications, and, in fourth quarter, $1,250 to National Committee for the Repeal of Wartime Excise Taxes. Spent, allocated, $15,584.

Highway

American Trucking Associations, Inc.: Allocated expenses plus unstated percent of salaries of three employees, communications, etc., $15,824.

Judge Joseph M. Wyatt, Baltimore, for a group of District of Columbia cab companies, proposing bills to limit number of District of Columbia taxis (for list see 1949 Log, pp. 477–478): He received $1,500, spent $212. Apparent cost to clients (Congressional Quarterly cumulation), $1,712.

Rail

The American Short Line Railroad Association: Received, for all purposes, $185,815. Spent, allocated, $4,891.

Angelina & Neches River Railroad Co., Keltys, Tex., and 22 other Texas railroad clients of Walter F. Woodul, Houston (see 1949 Log, p. 172 for list): Woodul's salary and expenses, $16,526.

Association of American Railroads (see p. 215 for detail on report): Spent, allocated, $194,159.

The Association of Western Railways, Western Association of Railway Executives, Chicago: Received $1,315. Spent, for Federal legislative purposes, for salary and expenses of Frank E. Haas, $1,315.

The Colorado Railroad Legislative Committee, Denver, $120.

M. J. Galvin, St. Paul (registered for Great Northern Railway and 11 other Minnesota railroad clients (for list see Congressional Quarterly Almanac, vol. IV, p. 429): None.

Illinois Legislative Committee (class I Illinois railroads), Chicago, $271.

Nevada Railroad Association, Reno: NRA is composed of Southern Pacific Co. and the Western Pacific Railroad Co., both of San Francisco, and Union Pacific Railroad Co., of Los Angeles.: Allocated portion of salary and expenses of Raymond E. Marks, secretary-manager for Federal legislative work, $534.

Railroad Security Owners Association, Inc., New York City: Does not believe required to file. Group is maintained by institutional investors in railroad securities. Appears before congressional committees, never has private conferences with Congressmen. Total receipts, $17,460. Spent, allocation, $1,223.

Railway Business Association, Chicago: for transportation tax repeal (Congressional Quarterly cumulation), $1,663.

Water

Carden-Herd claimants: Anderson T. Herd, West Palm Beach Fla.; S. A. Markel, care of Markel Services, Richmond, Va.; Mrs. Rose Porter Carden and George A. Carden, Jr., administrators of Estate of George A. Carden, Sr., deceased, care of O. M. Ruebhausen, New York City: Ex-Representative C. Jasper Bell (Democrat, of Missouri) received $5,000 from Markel and spent (Congressional Quarterly cumulation) $5,080.

Committee for Promotion of Tramp Shipping under American Flag in Foreign Commerce, New York City: First report (see Log, pp. 63,214). Received $18,500 in December, and $3,500 in January, 1950. Paid Ingoldsby, Coles & Wright $12,000 in January 1950 for legal representation. Expenditures listed for 1949: None.

Lake Carriers' Association, Cleveland: Does not believe self subject to lobbying law, nor is report form A suitable to association case. Allocated, for first half and fourth quarter 1949 (no 3d quarter statement filed) (Congressional Quarterly cumulation) $3,622.

The National Association of Stevedores, New York City: Received $122,975 from 90-odd steamship lines, stevedoring firms and others. Expenditures reports in past did not include legal fees and expenses to legal counsel, King & Lynch, New York City, as counsel advised this was not required. However, to avoid problems, this report includes such items and lists them for period since October 1947. Fees and expenses for counsel were $718 for the last quarter; full year 1948 fees and expenses were $3,054. These items are over and above previous totals for 1947 and 1948 (Spent $3,034 in 1948). 1949 expenditures included $37,400 fees and $1,433 expenses to King & Lynch, and $45,000 to Burns, Currie, Walker & Rich for account of National Federation of American Shipping, Inc. This, plus $2,056 previously reported, is 1949 total reported expenditures of $75,069.

National Federation of American Shipping, Inc.: Received membership funds from American Merchant Marine Institute, New York City, and Pacific American Steamship Association, and Shipowners' Association of the Pacific Coast, both of San Francsico, for general purposes, and contributions from National Association of Stevedores, New York for work on "overtime-on-overtime" bills. Total receipts not reported. Allocated expenses included parts of salaries, and a $45,000 fee to law firm of Burns, Currie, Walker & Rich, New York City, etc. Spent (Congressional Quarterly cumulation) $84,196.

Pacific Maritime Association, San Francisco: Final report, "as we are no longer expending any money for the purposes for which we have previously been sending in reports." Does not believe ever was subject to lobbying law but had been advised that Justice Department has taken position similar groups should file financial reports. Association is new group consolidating Waterfront Employers Association of the Pacific Coast and two other associations, and expenditures reported include $28,195 reported earlier in 1949 by waterfront group. Allocation of expenditures re legislation before Congress or to persons "that we are informed have registered" under lobbying law included $250-a-month legislative fees to William Radner, ex-counsel of the United States Maritime Commission, ex-general counsel of War Shipping Administration. Allocation, $37,452.

Miscellaneous Companies

George B. Burnham (registered for Burnham Chemical Co. re proposed tightening of antitrust law): Allocation $4,666.

Revere Copper & Brass, Inc., New York City (see Congressional Quarterly 1949 logs, pp. 995, 1401 for detail): Received $37,000 in 1949 and total of $111,000 in 1947–49 from 11 other copper-using firms. Paid ex-Senator John A. Danaher (Republican, Connecticut) in 1949, for work re extension of copper import duty suspension, $9,000.

Vulcan Detinning Co., Sewaren, N. J.: Allocation, fees and expenses of Henry H. Buckman, consulting engineer, $3,913.

Miscellaneous Trade Groups

American Council of Style and Design, New York City: None.

Associated Third Class Mail Users: Received $28,070.44. Spent, for salaries and professional fees, $28,430.

Bureau of Education on Fair Trade, by Baldwin & Mermey, public relations counsel, New York City: First report. Reported $12,000 retainer and $22,695 expenses, for total cost to Bureau of $34,695.

Consumer Mail Order Association of America, Joplin, Mo.—Spent, including fees to law firm of Arnold, Fortas & Porter (Congressional Quarterly cumulation): $16,313.

The Council for Clarification of Pricing Practices, Chicago: Received $15,680. Spent, including $6,000 fee and $5,039 expenses of William Simon, former counsel of the Senate Commerce Trade Practices Subcommittee, Eightieth Congress (see 1949 Log, p. 931): $14,896.

Henry Hoyt Morse, Gardner, Mass. (registered for Institute of Cooking and Heating Appliance Manufacturers): None.

D. D. Richards (registered for Mail Order Association of America): None.

National Agricultural Limestone Association, Inc.: Estimated that $4,500 of executive secretary's salary, $85 of his expenses were allocable to lobbying. Mailing costs brought total (Congressional Quarterly cumulation) to $4,913.

National Association of Direct Selling Companies, Winona, Minn.: Total receipts, all purposes, $41,175. Allocable expenses, exclusive of $12,000 annual retainer of lawyer, J. M. George (very little of retainer is attributable to Federal legislation), $3,004.

National Council on Business Mail, Inc., Chicago: Received $26,650. Expenditures for fourth quarter included $100 fee to Louie Marks, Chicago, for preparation lobbying report and $3,316 to Sam O'Neal, former director of publicity for the Democratic National Committee, for his fees ($2,499) and expenses. Total spent, 1949, $35,540.

National Foundry Association, Chicago: Annual salary of Executive Vice President L. E. Roark is $10,000. His expenses (none for second half) were $989.

National Paint, Varnish, and Lacquer Association, Inc.: Allocated, $6.

Office Equipment Manufacturers Institute: Does not believe lobbying law is applicable. Allocable expenditures included $1,250 advance to national committee for the repeal of wartime excise taxes, unprovided for in OEMI budget and to be covered by membership contributions, for total of $2,195.

The Proprietary Association: Receipts, for all purposes, $164,153. Spent for all purposes, $213,140, of which $8,485 was for legislative reference service. Annual cost of informing membership of current events, $21,657, of which fourth quarter proportionated space of these bulletins devoted to commenting or influencing passage or defeat of Federal legislation (11.8 percent) was $614. Adding $614 to previously reported sum, which is listed at $1,841, though composed of figures totaling $1,891, the association arrived at $2,455.

The Rubber Manufacturers Association, Inc., New York City: Interested in Government controls over rubber. Allocation, based on part of employee's time spent and prorated supporting office expenses and other Washington costs (Congressional Quarterly cumulation), $3,746.

Silver Users Association: Received $53,400, including $1,000 in fourth quarter from American National Retail Jewelers Association, New York City, for 1949 dues. Spent for Washington office salaries and expenses (Congressional Quarterly correction), $40,915.

Citizens' Groups

Civic, Civil Rights, General

American Civil Liberties Union, New York City: Submitted first, second, and third quarter 1949 reports on January 6, 1950. Received $101,962 in 9 months, including: $47,690 from Betsy B. Davis estate, care of Kurzman & Frank, New York City; $2,000 from Robert Marshall, Civil Liberties Trust, New York City, $1,000 from Trautman Bequest, care of Charles E. Beardsley, Los Angeles; $815 from Anonymous ("an American citizen" whose name "will be released if requested"); and $500 each from: Anne D. Geller estate, care of City Bank Farmers Trust Co., New York City; Mrs. Geraldine Boone, Princeton, N. J.; and Mrs. Jane A. Pratt, Bridgewater, Conn. Spent, 9 months, with no indication of to whom or for what purposes, $56,618.

American Coalition: Received $7,524, including $1,500 from John B. Trevor, New York City, ex-Coalition president and one-time Senate Foreign Relations Committee Subcommittee associate counsel (1920), and $1,000 from Miss Helen Frick, New York City. Spent (Congressional Quarterly cumulation), $6,395.

Committee for Constitutional Government, Inc., New York City: Reported spent, $620,-632.

Committee on National Affairs, New York City: Received $500 from Frank Altschul, New York City on December 19 and gave $500 to Senator WAYNE MORSE, Republican of Oregon, December 20, for his campaign. Total receipts for year $1,147. Spent $1,286.

Home Rule Headquarters, Washington, D. C.: First report. Received $93 and spent, chiefly for telegrams, $65.

Washington, D C., Home Rule Committee: Same address and treasurer as Home Rule Headquarters, above. Received $678. Spent $598.

Japanese-American Citizens League Anti-Discrimination Committee, Inc., Salt Lake City: Received $41,198 including fourth quarter sums of $500 or more from Spokane ADC and from Kikaken Kisei Domei of Northern California, San Francisco. Washington expenses, $6,070.

National Committee for the Extension of Labor Education: Received $13,122. Spent $13,971.

National Committee for Strengthening the Congress: Miscellaneous office, printing, mimeo expenses 1949 through January 6, 1950, $518.

National Consumers League, Cleveland: Received $7,508, including $500 from Textile Workers Union of America (CIO) and $1,000 from UAW–CIO. Spent $1,907.

National Council Junior Order United American Mechanics, Philadelphia: Annual expenses of Charles E. Babcock, Vienna, Va., for which no accounting is required by the order, $1,000.

National Economic Council, Inc., New York City: Fourth quarter receipts were $15,-369 from literature sales, etc., and $12,724 from contributions. Contributors of $500 or over in that quarter, for total of $8,724 were:

Empire State, Inc., New York City: Charles S. Payson, New York City; Ralph P. Mershon, Miami; Crompton & Knowles Loom Works, J. F. Tinsley, Worcester, Mass.; E. G. Howes, Boston; W. H. Regnery, Joanna Western Mills Co., Chicago. (For previous contributors, see 1949 Logs, pp. 1001, 1402.) Total receipts for 1949 $139,813 (Congressional Quarterly cumulation). Expenditure listed "include all that are properly allocable to lobbying activities. In fact, much of the expense listed is not for lobbying at all. We haven't time to separate them out." Spent (Congressional Quarterly cumulation), $41,967.

Harry Mopsick, Linden, N. J. (registered in own behalf, and in interest of National Tenants' Council and other tenant councils): First financial report. Said had no contributions, does not believe required to file, and does so to avoid penalties. Spent, blank.

People's Lobby, Inc. (Congressional Quarterly cumulation), spent, $8,992.

Special Committee on Liquor Advertising Bills, by Elizabeth A. Smart, secretary: Received and spent (for paper and stamps), $65.

Tool Owners Union, Inc., Lexington, Mass., and Washington, D. C.: Received $34,970 as follows: $19,285 in membership contribution; $3,324 gifts; $88 income from locals; $3,241 in sales of printed materials, newsletter subscriptions and research services; and $1,042 miscellaneous. Spent, including $5,667 expense advance and $13,333 salary to ex-Representative Fred A. Hartley, Jr. (Republican, New Jersey), president, $43,906.

Welfare, Religious

American Association for Health, Physical Education & Recreation: Operates on $82,935 annual budget for all purposes. Allocated 5 percent of annual salary at rate of $7,000 during January–June; $7,250 July–December of Carl A. Troester, Jr., $356.

American Parents Committee: Received $18,518, including fourth quarter sum of $2,000 from National Committee on the Observance of Mother's Day, New York City, spent, $18,033.

The Christian Amendment Movement, Topeka: Reported contributions from congregations of Reformed Presbyterian Church of North America. Total receipts, from the contributions and other items, $12,669. Spent $88 January 1–9, 1950. Spent, 1949 Congressional Quarterly cumulation), $17,043.

Friends Committee on National Legislation: Received $36,145. Expenditures included printing items paid for to Council for Social Action, National Council Against Conscription, both of Washington, and James P. Warburg, New York City; annual dues to National Peace Conference, New York City; contributions to Women's International League for Peace and Freedom, Philadelphia for services; salaries, expenses, rent, communications and supplies, travel, and so forth, totaling, $38,969.

National Catholic Welfare Conference: Salary and expenses of Washington agent, Eugene J. Butler, Esq., $15,252.

Spokesmen for Children, Inc., New York City: Received $3,860, including $3,500 from Adele Rosenwald Levy, New York City. Spent, including conference tickets from Physicians Forum, New York City ($12) and expenses of Mrs. Theodore Oxholm for Washington trip replanning of 1950 White House conference ($40) in fourth quarter, $554.

Unemployment Benefit Advisors, Inc.: Received $102,415, mostly from nationally known firms. (See 1949 Logs, pp. 996, 1403.) Expenditures included a salary and expenses each for Milwaukee and Columbus, Ohio; Washington office expenses, printing, salaries, calendars, transportation and communications, and so forth, $86,175.

Women's groups

American Association of University Women: AAUW information materials to members contains stand on Federal aid to education: support of principle of Federal aid, State control, and no public funds to non-public schools—therefore complete support for Barden bill and only partial support for Taft bill. Expenditures listed are salary of Miss Marjorie L. Temple, legislative program associate, $4,100, and information materials to members, $32 (Congressional Quarterly cumulation), $4,132.

General Federation of Women's Clubs: Expenses of Mrs. J. L. Blair Buck, nonsalaried president; Mrs. Leslie B. Wright, nonsalaried chairman of legislation, telegrams, etc. Mrs. Buck's expense not principally for lobbying. Total reported, $3,166.

League of Women Voters of the United States: Salary and expenses of Muriel Ferris, congressional secretary, and other expenses, $6,505.

National Board of the Young Women's Christian Association, New York City: Miss Elsie Dorothey Harper's salary and secretarial help, $3,060.

The National Federation of Business and Professional Women's Clubs, Inc., New York City: Funds derived from dues from 2,327 clubs and sale of publications. Washington representative's salary and expenses, $5,806.

National Woman's Christian Temperance Union, Evanston, Ill.: Received $9,043. Expenditures include expense items for Elizabeth A. Smart, but do not appear to duplicate items listed for her in report of Special Committee on Liquor Advertising (see above). Total spent, $5,898.

National Woman's Party: Received $6,624. No expenditures in second half of 1949. Total spent for year, $1,134.

Employee groups

AFL (exclusive of railway labor)

American Federation of Labor: Received on basis of proration of all receipts of per capita tax payments as related to expenditures, $115,306. Expenditures included salaries; estimated portion of portion of material in publication "American Federationist," which might be regarded as falling within lobbying law; communications, supplies, etc. Spent (Congressional Quarterly cumulation), $74,300.

International Brotherhood of Teamsters, Chauffers, Warehousemen and Helpers of America (AFL), Indianapolis: Previous quarters gave only salary of Fred A. Tobin, Washington, which had totaled $11,250 for first 9 months (Congressional Quarterly cumulation). Fourth quarter report carried his name and address and nothing else. Tobin told Congressional Quarterly total should be $15,000.

National Federation of Post Office Clerks (AFL): Received $3,129 in voluntary contributions from members and locals for legislative and publicity purposes, of which $96 came from a $1-per-member "voluntary assessment." There is also a per capita membership tax. Spent $48,709.

Matthew Dushane (registered for Seafarers International Union of North America, AFL): This report shows no expenditures; previous reports showed (Congressional Quarterly cumulation) $305.

CIO (exclusive of railway labor)

Congress of Industrial Organizations: Allocated expenditures included such items as salaries of three clerks (but not those of registered lobbyists, who filed separate reports), multigraphing and printing costs (but with no item for the CIO News), rent and supplies, pamphlets and releases, and $10,000 given to CIO Housing Committee. Total reported, $42,035.

Communications Workers of America (CIO); None.

Railway labor

Grand International Brotherhood of Locomotive Engineers, Cleveland: Salary and expenses of John T. Corbett (who has both legislative and industrial relations duties), salary of Miss Helen Corbett, his assistant,

and Washington office rent (Congressional Quarterly cumulation), $17,946.

Railway Labor Executives' Association: Listed prorated contributions equal to total allocated expenditures. Contributions were from member railway labor groups. Estimated allocated expenditures included portions of salaries, fees and expenses, postage and supplies, documents, furniture, etc. Said a bill may be studied by lawyers, distributed to member unions, and "infrequently be the subject of pamphlet comment." Allocated (Congressional Quarterly cumulation), $8,220.

Order of Railway Conductors of America, Cedar Rapids, Iowa: No salary and expense for C. W. Vance, legislative representative. On separate form, salary of vice president and legislative representative W. D. Johnson and expense of national legislative bureau, $12,307

Other employees

Active-Retired Lighthouse Service Employees' Association, South Portland, Maine (formerly filed as Retired Lighthouse Service Employees' Association): Expenses connected with legislation in first half of 1949, $431, according to report filed in August. January 1950 report referred to a previous statement (not in clerk's files) showing expenditures of $661, and cumulated year's expenditures as $1,114.

International Association of Machinists, salary and expenses of grand lodge representative, $2,700.

National Association of Federal Carrier Employees, by John Stanton Bartlett, president: Expenses for taxi, postage, phone and telegram in informing member chapters on pending bills, approximately $250.

National Association of Retired Civil Employees: Salary and expenses of Lewis H. Fisher, general counsel, and Elmer Johnson, president (Congressional Quarterly cumulation), $5,499.

National Association of United States Storekeeper-Gaugers: For services of Robert E. McLaughlin and Francis M. Sullivan, $2,000.

National League of District Postmasters, by E. A. Meeks, secretary: None.

Railroad Pension Conference, New Haven, Conn.: Received $5,639. Spent $5,592.

Retirement Federation of Civil Service Employees of the United States Government: Received contributions from branches and members at naval shipyards, gun factories, air stations and other installations totaling $24,806. Spent $21,324.

Farm groups

American Farm Bureau Federation, Washington office: Reported Washington expenses, which included salaries, rent, communications but not cost of printed publications, subscriptions, and miscellaneous farm program lobbying expenses. Spent (Congressional Quarterly cumulation), $60,134.

American National Live Stock Association, Denver: Total receipts, all purposes, $72,795. Allocation based on reportable expense and total salary of F. E. Mollin ($14,048.90) plus other items, $14,837.

Food Producers Council, Inc., by Philip C. Turner, president, Baltimore: Received $3,636 on basis of assumption that only 50 percent of receipts and expenditures are allocable to lobbying. On some basis, cutting expense items in half gives total reported, $3,896.

Forest Farmers Association, by Paul W. Schoen, executive secretary, Valdosta, Ga.: Received $989. Nothing spent in fourth quarter, previous quarters' expenditures for Schoen, $4,289.

National Board of Fur Farm Organizations, Morgan, Utah, by Joseph H. Francis, executive secretary: Did not lobby in fourth quarter. Previous quarters' total, $14,666.

National Council of Farmers Cooperatives: Does not believe required to file. Received $109,243, including $500 or more from each of 45 farm co-ops, some identifiable by name as dealing with cranberries, apples, avocados, almonds, peaches, prunes and apricots, walnuts, dairy products, citrus fruit, eggs, potatoes, tobacco, wool, grain, poultry, raisins, cotton, livestock, rice, wine, and peas. Expenditures are listed by purpose, without giving names of those to whom disbursed. Spent, for all purposes including legislative, $95,489.

National Farmers Union (Farmers Educational and Cooperative Union of America), Denver: None.

National Milk Producers Federation (formerly National Cooperative Milk Producers Federation): Because of uncertainty of meaning of lobbying law provision, full receipts and expenditures are listed regardless of purpose without admitting that law is applicable. Received $224,315.04. Expenditures included those to Hill & Knowlton for public relations work and to the General Federation of Women's Clubs for an advertisement in its publication during fourth quarter. Spent $17,161.

National Wool Growers Association Salt Lake City: Said received no contributions for legislative work. Quotas paid by various State wool growers groups are not specifically collected for above purpose. No receipts figure given. Washington expenses of J. B. Wilson and J. M. Jones, $7,053.

Wyoming Wool Growers Association: First 1949 report. Washington expenses of J. B. Wilson who receives $6,000 annual salary and whose Washington time is devoted to work before executive departments as well as lobbying, $3,424.

Western Cotton Growers Association of California, Fresno, by Ralph B. Bunje: $9,616.

Foreign policy

The American Tariff League, Inc., New York City: Said unfair to attribute to members and contributors intention to pay for lobbying so listed full receipts to avoid designation of part as designed for lobbying. Total receipts, $57,032, of which $52,700 were dues. Total expenditures, of which estimated 10 percent maximum is allocable, included $6,424 to John Lee Coulter for retainer and expenses; $12,500 salary of Richard H. Anthony, secretary, $325 to Felix Morley and $300 to Walter E. Spahr for speech honoraria; $10 dues each to National Federation of Independent Business, San Mateo, Calif., and Trade Association Executives of New York, $55,775.

Atlantic Union Committee, New York City: No total given for receipts. Spent, for salaries, expenses, travel, office costs, communications, etc. (Congressional Quarterly cumulation), $45,410.

Citizens Committee on Displaced Persons, New York City: Received $217,525. Spent, $222,809.

Committee to Defend America by Aiding Anti-Communist China, New York City: First report. Received $1,886, of which said $500 from AFL, in care of Jay Lovestone, Intl. Ladies Garment Workers Union, $300 each from ex-Navy Secretary and ex-New Jersey Governor Charles Edison and from Frederick C. McKee, Pittsburgh industrialist (see 1949 Log, pp. 505, 512 and 1950 Log, p. 11). Spent for printing, rent, and office costs, Carnegie Hall rent, no salaries or fees except for fund raising ($800), $1,838.

Committee for Equality in Naturalization: Received $3,703, including $1,500 in last half of 1949 from Japanese American Citizens League Anti-Discrimination Committee, Washington. Spent, for salary and expenses of Robert M. Cullum and printing, $4,722.

Committee for the Intl. Trade Organization: Received $25,000, in amounts of $500 or more, of which the only 4th quarter item was $2,500 from Matthew Fox, New York City (Fox is president of American-Indonesian Corp., partly owned by the Indonesian Government; see 1949 Logs, page 140). Previous quarters contributors included Sen. WILLIAM BENTON (D. Connecticut), who was not a Senator then; he gave an unstated sum, at least $500. Spent, $27,926.

Committee for the Marshall plan to aid European recovery, care of Hugh Moore, treasurer, Easton, Pa.: Spent nothing in second half year. Total for 1949, $1,500.

Peder Kristian Kristensen, by law firm of Spencer & Louiseli: Firm received unreported fees and expenses re deportation case which was decided by Court of Appeals for the District of Columbia December 19, 1949. Court held in favor of Kristensen, that he is not ineligible for citizenship and hence deportable solely on ground he had claimed ineligibility in the draft when he was on temporary visa. These receipts and disbursements had nothing to do with lobbying law, said the law firm. Firm was also engaged to support H. R. 3410, a bill for his relief, but no expenditures or fees were had in this connection.

National Council for Prevention of War: Received $37,989 in 1949, including fourth quarter $1,000 contributions from Metals & Controls Corp., Attleboro, Mass., and from Mrs. S. Emlen Stokes, Moorestown, N. J. Expenditures included fourth quarter $70 contribution to National Council Against Conscription, salaries, rent, printing, and communications, and other expenses, $44,195.

Jacob Neubauer by ex-Senator Burton K. Wheeler, Democrat of Montana, of Wheeler & Wheeler law firm: Immigration case. Wheeler received $1,000, spent $9. Cost to Neubauer (Congressional Quarterly cumulation), $1,009.

Philippine-American Committee: Spent since committee was formed March 25, including part of salary of Mary Higgins, $6,574.

Republic of Finland, by Emil Hurja: First report. Hurja was paid $10,000 and spent, for travel, and office expense and to Miss Bertha Kruss, $2,500. Total (Congressional Quarterly cumulation), $12,500.

United States Committee for a United Nations Genocide convention, New York City: Received $3,750. Spent for printing, communications, travel, no salaries, $2,626.

United World Federalists, Inc., New York City: Said counsel advised it is not required to file, but does so "voluntarily since it has nothing to conceal." Cannot determine whether lobbying law requires report of only relatively small amounts spent re Federal legislation or total expenses for all national, State, and local activities, but, in interest of safety, reports total expenditures. If a segregation were made of expenses within the coverage of the law, it would be less than 15 percent. Did not report total receipts for 1949 or for last quarter. Total fourth quarter receipts of amounts each in excess of $499 totaled $22,329 of which $4,000 was anonymous, $1,000 from Clifton Fadiman, and other amounts, ranging from $500 to $2,000, from 23 individuals or couples. Expenditures during the fourth quarter included $47.28 to William Sims, care of Senator HUBERT HUMPHREY (Democrat, Minnesota), for printing; $27 to Representative BROOKS HAYS (Democrat, Arkansas), for travel expenses; $163.72 to AMVETS for travel expenses; dues and contributions to various State UWF branches, etc. Total spent, all purposes, 1949 (Congressional Quarterly cumulation), $291,672.

Professional organizations

American Dental Association, Chicago: Appropriated from general funds $31,785 for 1949 expenses of Council on Legislation,

which works on Federal and State legislation. Members' annual dues, for all purposes, $12 each. Spent, for Federal legislative work, $15,407.

American Hospital Association, Chicago: Appropriation from membership dues for maintenance of Washington Service Bureau (which is not maintained principally for lobbying) equals expenses. Expenses, for salaries, travel, and Washington office costs, $53,726.

The American Institute of Architects, by Edmund R. Purves: Spent, including $33 for reprints for distribution of article on H. R. 3224, "Earned Income Tax Adjustment Act," $292.

American Library Association, Chicago: National Relations office in Washington has some lobbying duties; Falls Church, Va., office, headed by Mrs. Aubry Lee Graham, now in charge of lobbying. Difficult to break down expenditures between lobbying and other, so listed total, which appears to be total Washington area figure. Paid Representative WRIGHT PATMAN (Democrat, Texas), $52.96 for reprints of library demonstration bill. Spent $17,790.

American Medical Association, Chicago: Allocated, $1,522,683.

James E. Bryan, as agent for Medical Society of New Jersey, Trenton, N. J.: First report. Spent, for pamphlets, printing, and communications, $291.

The American Optometric Association, Inc., development fund, care of Dr. Samuel L. Brown, O. D., Fostoria, Ohio, $7,064.

American Osteopathic Association, Chicago: Allocated expenditures included $14,125 retainer to Lawrence L. Gourley, legal counsel to public relations department, and costs of notices to osteopathic physicians re medical education bill, H. R. 5940, and medical aspects of social security bill, H. R. 6000, $14,646.

Judge Advocates Association: Received $6,531. Spent, $7,429.

National Council of Business Schools, by Dr. J. S. Noffsinger, executive secretary: Fees and expenses of Stanley I. Posner (Congressional Quarterly cumulation), $6,722.

National Council of Technical Schools by J. S. Noffsinger, director: Fees and expenses of Stanley I. Posner (Congressional Quarterly cumulation), $4,480.

National Education Association of the United States, Legislative-Federal Relations Division: Division operates on annual budget of $57,890 covering both legislative and other work. Legislative expenditure estimated allocation (based on partial salaries and full expenses pertinent), $17,188.

National Federation of Private Schools Associations, by J. F. Noffsinger, director: Listed contributors: Pennsylvania Association of Private Vocational Schools, Pittsburgh, $3,090; National Council of Technical Schools, $725; Central Schools Association, Chicago, $2,500; National Home Study Council, $1,000; New Jersey Association of Technical Schools, Newark, $500; and McGraw-Hill Publishing Co., New York City, $500. Did not state total receipts.

Expenditures included Stanley I. Posner's fees and expenses ($1,865), printing, mailing, etc. Total for quarter and for year not given. Congressional Quarterly cumulation, assuming no duplication between third and fourth quarter expenses, $4,325.

National Home Study Council, by J. S. Noffsinger, director: None.

National Socity of Professional Engineers: None.

Reclamation, rivers and harbors

Central Arizona Project Association, by Howard J. Smith, Phoenix: Received $97,943, including $12,000 from Salt River Valley Water Users' Association, Phoenix; $9,700 from the County of Maricopa and other smaller sums from various irrigation districts; $5,000 from Central Arizona Light & Power Co.; $5,000 from Vegetable Growers' Association, Phoenix; other smaller sums from farm and business associations and firms, including Arizona Farm Bureau Federation, and Arizona Wool Growers Association. Spent, including trips to various conventions (Congressional Quarterly cumulation), $97,301.

Colorado River Association, Los Angeles: Received $84,364. Spent $115,120.

Florida Inland Navigation District, Bunnell, Fla.: Fees and expenses of Henry Holland Buckman, consulting engineer, $5,856.

Great Lakes-St. Lawrence Association (for the seaway): Received, in fourth quarter, $2,250, including $1,000 each from State of Minnesota and Nordberg Manufacturing Co. This association is successor to National St. Lawrence Association, which reported first quarter expenditures of $6,761. Expenditures reported for two groups during year would be $21,639. This group's expenditures, $14,878.

National Committee on Resources: None.

National Reclamation Association: Figures for this group are based on reports which duplicate April receipts and expenditures so that there may be excessive statement of items covered in first two reports. Receipts were reported as $41,723; (see 1949 Logs, pp. 996, 1405 for previous contributors), fourth quarter items in excess of $499 each included those from: State of California, Department of Public Works, $1,350; Water Development of Southeastern Colorado, $500; Denver Chamber of Commerce, $700; Oklahoma Water Resources Association, $1,432. Other contributions came from State, county, city, and irrigation and conservancy district agencies of Government, and from associations, chambers of commerce, firms, and individuals. Washington office expenditures in first 9 months, by Congressional Quarterly addition of totals as reported was $23,992. NRA own cumulation for that period was $28,939. Fourth quarter total Washington office expenditures was $10,948, for NRA total, $39,887.

National Rivers and Harbors Congress: Received $18,077. Congressional Quarterly cumulation, $19,103.

National St. Lawrence Project Conference (against the seaway): Received $36,427 during year, of which $21,000 was from Association of American Railroads, $5,100 from National Coal Association, $3,435 from Maritime Association of the Port of New York, $2,016 from Anthracite Institute, Wilkes-Barre, and $500 from C. F. Hood, Cleveland. Spent $25,606.

Regional Committee for an MVA, Denver, first report: None.

Six Agency Committee (six California water agencies), Los Angeles: Received $30,000 from Metropolitan Water District of Southern California; Imperial Irrigation District; Department of Water and Power, City of Los Angeles; Palo Verde Irrigation District; San Diego County Water Authority; and Coachella Valley County Water District. Spent for services of Northcutt Ely, former executive assistant to Interior Secretary and now Washington representative of committee, $20,343.

Texas Water Conservation Association, Austin: Received $18,182 in 1949, including $600 in fourth quarter from Texas Power & Light Co., Dallas. Spent, for publicity work by George Kirksey & Associates, Houston, and for salaries, traveling expenses, and office costs, $19,319.

Taxes

National Committee for Repeal of Wartime Excise Taxes, New York City: First report. Received $23,750 (see p. 180 for contributors). Expenditures for influencing legislation, none.

National Live Stock Tax Committee, Denver (composed of representatives from several livestock groups including American National Livestock Association, National Wool Growers Association, American Hereford Association, American Shorthorn Association, American Aberdeen-Angus Breeders Association, and about 30 other organizations). Received $674. Paid Stephen H. Hart, tax counsel, for work on amendment of tax laws on capital gains on sale of breeding livestock and deductions of ranch expenses (but think none of his activities were lobbying). Signed by F. E. Mollin, who is executive secretary of American National Live Stock Association. Hart's fees ($3,080) and expenses ($578), $3,658.

National Tax Equality Association, Inc., Chicago. Received $536,132. Said does not employ lobbyists, and that expenses were those of "fringe items," the "reporting of which depends upon whether or not they influenced third parties to make their views known to Congress." The "fringe items" are mainly for production and distribution of literature and advertisements "which may have suggested or inspired letters to Congress or which may possibly have been sent to the Congress by members of our Association or others." Salaries, rent, and so forth, are not included in the figures reported, though the fourth quarter figures do appear in the photostatic copy of the ledger sheets which accompanied the report. Spent, for "fringe items," $74,028.

Indiana Tax Equality Committee, Inc., Indianapolis: Received $2,328. Expenditures included items to Indiana State Chamber of Commerce for legislative action calendar service, rent, phone, and secretarial service, $5 dues and $627 quarterly assessment and postage items to NTEA; a $529 third quarter assessment to NAB, and so forth, $2,139.

Allen L. Smith (registered for Louisiana Tax Equality Association, Inc.): Spent, for travel, communications, expenses, including $5 to VFW and $5 to NTEA in November, $824.

Nebraska Tax Equality Committee, Inc., Lincoln: Received $2,572. Reported paid $650 to National Associated Businessmen for pamphlets and bulletins for 6 months (previous report said for dues) and $3 to NTEA for postage. Other costs were for communications. No salaries listed. Reported spent $2,603.

B. E. Groom, secretary, North Dakota Tax Equality Committee, Fargo: Received $12,570. Expenditures in fourth quarter included $1,000 supplies from "National Association Businessmen," $300 traveling expenses for Groom (no salary), $1,061 salary and $285 expenses of F. W. Grawe, rent, office expenses, advertising and communications. Year 1949 total, $11,007.

Tax Equality Committee of Kentucky, Louisville: Received $6,853. Spent $5,113.

Tax Equality League of Utah, E. L. Schoenhals, Salt Lake City, $779.

(NOTE.—There is considerable transfer of funds between National Tax Equality Association, National Associated Businessmen and their State affiliates.)

National Tax Relief Coalition, Greensboro, N. C.: Received $2,900; spent $2,945.

State Tax Association, Houston: Congressional Quarterly cumulation, $35,367.

Twenty Percent Cabaret Tax Committee, Chicago: Received $11,900 (for detail see 1949 Log, p. 1405). Spent, including $10,250 for expenses of Samuel P. Haines, Washington, $12,276.

Washington (D. C.) Taxpayers Association: Received $4,002. Expenditures total includes full fee of Rufus S. Lusk, president, though only 10 percent of fee is applicable to Federal legislative activities, $4,028.

Veterans, military affairs

The American Legion, national headquarters, Indianapolis: Legion neither solicits nor accepts donations for purpose of furthering legislative aims. Total receipts and expenditures are reported annually to

Congress under 1919 incorporation law, and not stated in lobbying reports. Allocation of Washington and legislative salaries and expenses, $71,769.

Disabled American Veterans, for Francis M. Sullivan and Charles E. Foster: Salaries (after taxes and social security) and expenses of the two men, $16,139.

Disabled Emergency Officers of the World Wars: Salary of L. S. Ray for first 10 months of 1949, $2,500.

National Council Against Conscription: Received $7,978, including an anonymous $1,000 during the fourth quarter, sent via Provident Trust Co. of Philadelphia. Expenditures, including fourth quarter payments to National Council for Prevention of War, for rent and supplies, $119; to Fellowship of Reconciliation, New York City, for literature and communications, and other expenditures for clerical salaries, travel, and expenses, etc., total for 1949, $9,002.

Reserve Officers Association of the United States: Received $127,716. Spent for one salary and expenses (no specific part of salary for lobbying), $6,313.

Washington and Freedom

EXTENSION OF REMARKS

OF

HON. HARRY L. TOWE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. TOWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I gave at the fifteenth annual George Washington's Birthday breakfast, Everyman's Club, First Presbyterian Church, Passaic, N. J., February 22, 1950:

Celebrating the two hundred and eighteenth anniversary of the birth of the Father of our County, we should pause briefly to speculate on the achievements of George Washington and examine his virtues and his accomplishments.

We may ask what dominated and what effused from this, the greatest of all American heroes. Was it his courageous tenacity, his valiant integrity, his sublime faith? Answering ourselves, we know that Washington had all these attributes and that it was the combination making up his character which made him great. Washington accomplished much. He was the leader and driving force in carrying out the successful Revolution, the only completely successful revolution in history in that it accomplished its purpose of creating a free republic. Revolutions in other parts of the globe have been failures, when measured by this standard.

In France the people threw off the tyranny of the monarch, which resulted in a reign of terror, followed by Napoleon, more blood, more terror, with the result that the Government of France is still weak, subject to immediate change, and fearful of another reign of terror.

In China, the revolt against the throne and the Manchu dynasty was never a success. The country became weak, and has now succumbed to the hordes of communism.

In Russia, the revolutionaries seized power in 1917, and eventually the Union of Soviet Socialist Republics was born. Its founders promised a new freedom. Today in Russia the people, instead of freedom have misery, tyranny, a complete loss of the little dignity they enjoyed under the czars, and a loss of the right to worship their God as they choose, and in addition they face the daily fear of death.

"AT ALL TIMES THE SERVANTS"

In contrast to all of these attempts to bring complete freedom in all phases of life to the people, Washington's was the only one that succeeded.

Washington led the people in war and led them in peace, led them in framing a Constitution which is the greatest document of its kind in the world's history, and then went on to found the Republic of the United States of America. It was a great thing for Washington to have served in the Revolution and to have achieved independence for the United States. It was great, too, for him willingly to surrender his military power and to become again a private citizen. But it was even greater to construct the framework of a new Nation and in 8 years to clothe the words of its Constitution with reality.

Washington and the other founding fathers were at all times the servants of the people of the new-founded Republic. It may be some time since you have reflected on your concept of just what a republic is. Let me remind you and I will take this sentence from the dictionary: "A republic is a state in which the sovereign power rests in a certain body of the people—the electorate—and is exercised by representatives elected by, and responsible to, them."

The cornerstone which makes our country strong is the Republic's guarantee to all of its citizens of the inherent right of freedom and liberty—freedom to think as you will, work as you will, play as you will, so long as you do not intrude upon the rights of others. Above all, it guarantees the blessed right of freedom to worship according to your own conscience.

AMERICAN WAY OF LIFE

Freedom then—the American way of life—is the force that has made the United States the most productive nation in the history of the world. Because men have been free, their minds have had free play. Their intellects have been stimulated and their inventive genius enriched. The telephone, the radio, the television, the phonograph, the automobile, the laundry machine, the air conditioning, the motion picture, and all the other great inventions conceived and developed in America—all of these things have been the direct products of free men, free to let their inventive genius and their ingenuity have full play.

One of the tragic facts of our era is that more and more people fail to understand this great force of freedom. Champions of philosophies completely alien to American liberty and American success have been peddling their false bills of goods in all quarters of the globe. In Russia, they are called Communists; in Germany, they were Nazis; in Italy, they were Fascists; and in England, they are Socialists.

Already a fourth of the world has become enslaved under communism. Already another fourth of the world is sampling other forms of socialism, all at the expense of human freedom and human rights.

These alien philosophies have a cornerstone, too. It is materialism, materialistic security. The formula to obtain materialistic security is the same in every case. The individual must surrender his freedom for guarantees that he will be clothed and fed. There is no guarantee of how well he will be clothed and fed, yet once he has surrendered his freedom, there is nothing he can do about it. He is trapped forever.

Politicians and governments have been trading on the materialistic desires of the people. It has been the politicians of Europe who have produced communism, socialism, fascism, and nazism.

In this country today, we have a group of fuzzy-minded thinkers who are determined to change our way of life. They are the weak-brained theorists who have been labeled socialistic planners. They are a force in Washington today. They have a formula. Their formula is that if it is necessary for the Government to do a few basic services for the people, there is no reason why the Government should not take over all of the affairs of the people and let the state manage personal lives from the time of birth until the time of death. With complete disregard for the future safety of the country, these socialistic planners have so influenced the present administration that it is unequivocally committed to change the form of government established by Washington and his fellow founders of freedom. It is plain to all clear-thinking men that we are definitely embarked on a program which deviates from our republican system of government, which has made this Nation the greatest in the history of man.

We are adopting the methods that spelled failure for the European nations. Daily we approach the stage where the dignity of the individual, his inherent rights and freedoms, and his sovereignty over his public servants, is being engulfed by the growth of government. This government expansion and control is a sharp challenge to our liberty and freedom.

The Constitution plainly says that the will and desires of the people are sovereign. The Constitution further guarantees that those persons who are elected or appointed to any public office, no matter how exalted are the people's servants and not their masters. It was clearly set forth that the people were going to be the masters, and not the few who served them. During recent years, however, the power of the few has become so great that it is questionable how long our Nation can remain free, as contemplated by Washington and his associates.

WHAT THE GOVERNMENT IS DOING

The growth of Government and Government controls has placed handcuffs on the American businessman, is taxing away his profits, and is endangering the future of his enterprise. In addition to shackling the American businessman, the Government has entered into open competition with him. The Government operates light and power plants; it builds homes and apartments and rents them. The Government is in the insurance business. The Government comes close to fixing wages, pensions, prices, interest and dividends. The Government definitely is in the banking business. The Government is in the food business—the Government buys up millions of dozens of eggs and millions of pounds of potatoes and stores them away until they rot or become poisonous. The fields in which the Government competes with American business and interferes with the private enterprise system is growing daily. Federal bureaucracy is threatening the steel industry, it is threatening the transportation industry, it is endangering the future of the professions, particularly medicine and education.

All these new formulas concocted by the socialistic-planners are put before us in the guise of new government services, something the state is going to do for us, a handout to Utopia. But like the thinking of these planners, this is a false and dishonest line of salesmanship. They don't tell all the story. They don't mention the cost, they don't tell us how much these services are going to increase our tax bill—a tax bill that is today the highest in the peacetime history of our country and increasing every twenty-four hours. They don't tell us that their objective is to make every man, woman and child

a complete ward of the state, as happened in Italy, Germany, Russia, and as is going on in Great Britain today.

TWENTY-SEVEN PERCENT OF INCOME TO TAXES

Everyone of these preposterous schemes of these planners cost money. And spending of Government money means that you must pay more taxes. High taxes is one of the main weapons of the socialistic-planners, and is the principal means they are using in their determination to change the American way of life.

Figures are dull, but I want to use a few to prove this statement. It has long been held by competent students of political science and by economists that when taxes amount to more than 20 percent of your total income, you are no longer wholly able to provide for yourself. When you are taxed more than 20 percent, you must rely on the Government for the difference. Today, the American taxpayer is paying 27 percent of his income to Federal, State, and local governments simply for the privilege of being governed. We are already at least 7 percentage points over the deadline. From the time of Washington down to 1941, 32 Presidents spent $179,620,113,645. In less than 5 years, the present administration has spent $191,081,394,191, and the budget for the coming fiscal year calls for the spending of more than $50,000,000,000, in one way or another. The planners in the present administration ran the country nearly $5,500,000,000 into the red last year, and the deficit spending this year will be approximately another $5,000,000,000.

Under the present deficit-spending policy, last year we daily spent $15,000,000 which we did not have. This is at the rate of $625,000 an hour, and $10,416 a minute.

Just a few other statistics: Twenty years ago, the average American family paid less than $200 a year in taxes. The same family today pays more than $1,300 a year.

Twenty years ago, there was 1 Government employee for every 40 of population. Today there is 1 for every 22.

ONE OF EVERY SEVEN GETS UNITED STATES FUNDS

Twenty years ago, the number of people directly or indirectly receiving money from the Government was 1 out of 40. Today, one out of seven regularly receives Government money.

The public debt today is approximately $257,000,000,000.

With taxation the cornerstone of the movement to change our form of government, and make the people the slaves of the state, instead of its masters, you can see that these planners have made great progress in this means of attack. The higher the tax, the greater danger to our liberty.

Another danger we face is the possibility of a complete surrender to materialism and amorality. This happened in Italy, Germany, it is in full force in Russia and its iron curtain satellites, it is in control in England, and it has invaded our shores. Many of our political leaders have abandoned all sense of true liberalism and morality. They still proclaim themselves to be liberals, but they are trying to sell the American people on the idea that if you have the physical necessities of life, you will be secure and happy. Yet, the fact is that the American people today are not feeling secure, nor feeling happy. The fact is that the British people feel neither secure nor feel happy. Materialism has reached its inevitable goal in Russia, and the people of that vast land have found that the price of physical security is fear.

Many of the world's great leaders understand the fatal weakness in the godless materialism now being sold to the peoples of the earth. Many religious leaders have repeatedly called for a rebirth of morality and a proper understanding of materialism. In public addresses decrying materialism, these leaders point out that the advocates of socialism are destroying the fundamental moral force of the world, the home.

Former Secretary of State James F. Byrnes, of South Carolina, also understands the fatal weakness of materialism and the threat of materialism to our Nation. Twice he has warned that "we are going down the road to statism." Mr. Byrnes declares that if these socialistic planners' programs now being concocted in Washington should be adopted, there is danger that the individual—the farmer, worker, manufacturer, lawyer, or doctor—will soon be an economic slave pulling an oar in the galley of the state.

Former President Herbert Hoover also sees the menace of materialism. The former President said a short time ago, and I quote:

"There is a considerable group of fuzzy-minded people who are engineering a compromise with all these European infections. They fail to realize that our own American system has grown away from the systems of Europe for 250 years. They have a false notion that a collectivist economy can at the same time preserve personal liberty and constitutional government."

There can be no doubt that these planners, determined to change our form of government, have their feet across the threshold of our doors. However, I firmly believe that an overwhelming majority of thinking Americans, real patriotic Americans, want to reverse the trend toward the Socialist state in America. I believe that an overwhelming majority of the American people recognize the moral and spiritual necessity to preserve freedom. I believe that an overwhelming majority of the American people are against materialism and amorality. I believe that an overwhelming majority of the American people want to save our Nation and continue our form of government, as established by George Washington and his associates 161 years ago.

Now is the time for each of us to call on our reserves of moral strength. You should withstand the blandishments of those politicians who hold out promises of material security in one hand and hide the other hand containing the shackles of taxation and loss of freedom which are the necessary instruments of such a program. And we the elected servants of the voters must withstand the present trend to be all things to all people in order to secure votes. For as George Washington so aptly stated during the arguments accompanying the framing of the Constitution—"If, to please the public, we offer what we ourselves disapprove, how can we afterward defend our work?"

And, gentlemen, how can we?

The Keating Health Insurance Plan

EXTENSION OF REMARKS

OF

HON. EDWARD T. MILLER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. MILLER of Maryland. Mr. Speaker, my native State of Maryland has always held an honorable and advanced position with respect to medical science and its practical application. There is little support for socialized medicine in the Maryland Free State, but the manner in which it has striven to meet the problem of medical care for the needy and indigent on the local level has won general approbation from those familiar with this activity. It is significant, therefore, that the Sun of Baltimore has shown editorial interest in the plan for expanding the program of national health insurance proposed in H. R. 6819 by my friend and colleague the gentleman from New York [Mr. KEATING]. I, too, advocate a voluntary program and, like the Sun, I hope the bill will not be squelched in committee.

The editorial in question, from the issue of February 18, last, reads as follows:

THE INCOME TAX AND THE COST OF HEALTH INSURANCE

A bill has been introduced in the United States House of Representatives that proposes an interesting approach to the problem of a national health program. Its sponsor is Representative KENNETH B. KEATING, Republican, of New York.

What Mr. KEATING suggests is an income-tax-allowance plan. That is to say, a taxpayer would be permitted to deduct from his Federal income tax—not his taxable income but the tax itself—a proportion of any premium he has paid for approved health insurance, whether for hospital or medical care.

As the bill is written a taxpayer with an adjusted gross income of $2,000 would be allowed to deduct 90 percent of the annual premium paid. Deductions would be scaled according to income to the point where a taxpayer with an adjusted gross income of $10,001 and over, would receive credit for only 60 percent of the premium paid.

It is estimated that there already are 52,000,000 persons carrying some form of voluntary health insurance. Mr. KEATING's plan would substitute incentive for compulsion. It would serve as a stimulus for a popular movement that already has made astonishing progress.

The significance of the proposal is that part of the money now paid by an individual to the Government in the form of a Federal income tax would, instead, go to the payment of a health-insurance premium. It is probable that some of the people in the lower-income brackets who now pay a Federal tax would, because of the allowance plan, be relieved of paying any income tax at all.

On the other hand, under President Truman's compulsory insurance plan the premium would be deducted from the pay envelope. It has been estimated that the cost to the wage earners alone would be in the neighborhood of $6,000,000,000 a year. There would be also the tremendous administrative costs of setting up a huge medical bureaucracy run from Washington.

The author of the bill recognizes that there will be objection on the ground that his plan would result in great loss of tax revenue. He admits it, but points out that, on the other hand, it would relieve the Federal Government of the stupendous burden involved in taking over the Nation's whole medical establishment.

Possibly there are circumstances that would make the income-tax-allowance plan impractical. Certainly no judgment should be passed on it until exact figures have been presented and examined. But the bill should not be allowed to be squelched in committee. Voluntary health insurance is one principle preferable to a scheme involving compulsion. Any scheme which promises to encourage the growth of voluntary plans deserves full debate.

St. Lawrence Seaway Will Seriously Affect the Economy of Central Pennsylvania

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. VAN ZANDT. Mr. Speaker, the boards of governors of the Chamber of Commerce, Clearfield, Pa., are opposed to the St. Lawrence seaway project because of its effect on the economy of Pennsylvania.

We who reside in Pennsylvania depend largely upon the coal and railroad industries, and should the St. Lawrence seaway project become a reality, it would wreck our economy and throw thousands of people out of work.

The following resolution adopted by the Chamber of Commerce, Clearfield, Pa., is self-explanatary, and I hope that my colleagues will realize the devastating effects that will follow approval of the St. Lawrence seaway project:

The board of governors of the Chamber of Commerce of Clearfield, at its regular monthly meeting held on Thursday, February 16, unanimously adopted a resolution opposing the St. Lawrence seaway project.

"Our chamber believes that it would require a great expenditure of public funds which cannot be justified at this time; that it would seriously affect the economy of central Pennsylvania and further impair the market of Pennsylvania coal, the basic industry of this area; militate against the establishment of new industry and create unfair sources of competition, by lower transportation costs on foreign-made products."

The St. Lawrence project has been discussed for more than half a century. It has never been found to be an economic development either as a waterway or power scheme. Advocated now as a national defense need it has no basis for justification whatsoever.

CHAMBER OF COMMERCE OF CLEARFIELD,
GEORGE W. GAYLOR, *Secretary*.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Hon. Maurice J. Tobin, Secretary of Labor, at a meeting sponsored by the western Massachusetts branch of the Polish-American Congress:

I am glad to appear on the justice-for-Poland program and to discuss, as requested, labor conditions behind the iron curtain, with special reference to Poland.

At the very outset, let me say that the pattern of Soviet domination of labor unions is more or less advanced in all the satellite countries. If, in other words, we wish to understand what is happening to the worker in countries like Poland, Rumania, Hungary, we must first realize what communism has done in Russia to the trade-union.

Trade-unions have no trace of independence in the U. S. S. R. They are an instrument of government. They have no right to strike for any purpose. They can merely make representations to a higher authority. They are controlled by a higher authority which does not spring from the union and is not responsible to the union. Unions simply function as part of a one-party state.

In such a situation the individual member, as well as the organization, is a rubber stamp. Opposition to union leadership, which is imposed from above, is opposition to the state and punished as such. Every hint of democracy has been rooted out. Russian unionists are like all other Russians who have not attained official power in the party or the government—just dumb, driven cattle. The only reason for retaining the form of union organization is apparently to increase production. In short, in the Soviet Union the organized worker has the right to be more of a beast of burden than he has been all along.

It is on that account that workers are forced to join unions. If they stay out, they can have no vacations, they are left out in the cold with respect to housing, they are deprived of all the little privileges which are held out as bait to Russian labor. That is why there is a large union membership. In effect, you have to join to avoid being suspected of counter-revolution, and you get nothing for joining except the right to carry out orders.

That is true in Russia. It is also true in Poland. Though the country and the population were reduced during the war, the trade-union membership is four times what it was before the war. You have to belong to the union, though when you belong your position is not improved in any respect. Your wages, hours, conditions of work are set not as a result of the kind of collective bargaining we know, but a collective bargaining which consists largely of a political boss saying "you must" and your saying "I will."

Over 80 percent of more than a thousand key trade-union officials belong to the Polish United Labor Party, which is, of course, Communist controlled, and which in any case runs the state. That can mean but one thing. The worker is a helpless creature of the state. He is regarded as having no interest outside the program of the state. That, at least, is the theory which is being hammered into a fact. The Polish union is not allowed a life of its own. The will of its members counts for nothing. Communism recognizes no right outside the authority of the government to carry out its ruthless purpose.

In such circumstances, where the objective of more and more production, whatever the cost, is paramount, it is not surprising that safeguards against injury and death, which we take for granted, and which even the Communists have put down on paper, do not prove effective. Human life means little under a Communist regime. Man's inhumanity to man is an old story, but it takes on a special brutality when it occurs for the profound purpose of keeping the proletariat on top.

The trade-unionist, unless he happens to be an important Communist official, has no standing, no influence, no part in shaping government policy, no opportunity to improve his lot. The well-being of the ordinary Russia or Polish worker is altogether outside his hands or the hands of his union. He remains ill-fed, ill-housed, ill-paid, for the sake of a future he will never enjoy. His not to reason why, his but to do and die. And if he does not do as required, he dies in a concentration camp. That is the fate of the Polish worker or any worker under a Communist Government.

The living conditions of workers in the Russian trade-unions are bad enough, but they must seem like paradise to those who are not in the unions. I am speaking of the millions in compulsory or slave-labor camps. How many millions we do not know, but the estimate runs from 5 to 20 million. From the reports of former inmates, we learn that the death rate among slave laborers is appalling by reason of the subhuman conditions forced upon them. This is what it means to be a workingman in a Communist country.

It is such conditions which prevail in what we are told are "people's democracies." They are conditions which differ only in degree in the several Soviet-dominated states. Their existence in Poland is accentuated by the fact that communism is not a Polish ideology but is something which has come with Russian conquest. This is not the first time the Poles have suffered from Russian imperialism, but the bitterness of being militarily conquered is made even more unbearable by the way in which Moscow has gone about converting Poland to communism.

The Poles have always been devout Catholics. But religion is poison to the Communists. So in Poland, as in all the satellite countries, the comfort which religion might have brought to oppressed men and women is at best suspect and at worst denied. Religion is a drug, Lenin declared. What he meant was that those who worship God, those who are moved by moral values, cannot be converted to communism, which is antimoral, antispiritual, so committed to materialism that it must root out the heartfelt things of faith.

There is no balm in Gilead for the masses of eastern Europe. They are not working or living except for mere survival. They have been robbed of every freedom. They cannot call their souls their own. Their masters talk about democracy, then profane it by removing every trace of self-government. Is it democracy to say to workers, you may band together, but only to serve the government, never to have a voice in it, never even to have a voice in protesting against wrongs, or in making demands, or in doing anything which is not strictly according to the party line?

The workers of the Western World have become a powerful force for social, economic, and political advancement. In the western democracies, unions are an expression of freedom. In the "people's democracies", unions are an expression of tyranny. Behind the iron curtain, the worker is condemned to a double misery. Politically, he is a cipher. Economically, he is so much raw material. He is being sacrificed on the altar of a deity crueler than any monster worshipped in the early pagan world.

What then is to be said about labor conditions behind the iron curtain? Nothing to gladden the heart of any civilized person. And the worst of it is that we can expect no improvement until this cold war is over. We can pray that this will happen soon, but we must be prepared for a long stretch of international confusion during which there can be little justice for Poland or for any other country in the grip of the Kremlin. For that, or for worse, the United States must be ready, militarily and in every other way.

But I do not doubt that, ultimately, this shadow will be lifted, the iron curtain dissolved, and mankind permitted again to march in peace and security toward a goal now hidden from us. Then there will be justice and freedom for all the children of men. Then Poland, which fought so bravely during the war against totalitarianism, will receive its reward. Then justice will be done for the benefit of the peoples behind the iron curtain, for the benefit of all the countries which are now shut off from the sun of liberty.

Forest Resources in Illinois

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the statement of Mr. Anton J. Tomasek, State forestry chairman, Illinois Federation of Sportsmen's Clubs, before the Agriculture Subcommittee of the House Committee on Appropriations.

Mr. Tomasek's statement follows:

I am deeply grateful for this opportunity to present a statement and on behalf of the organization that sent me I wish to thank you.

I represent the Illinois Federation of Sportsmen's Clubs which has a membership of approximately 100,000 members belonging to some 480 county chapters. Our members are farmers, laborers, small-business men and individuals from all walks of life interested in the conservation of our natural resources. Through their officers and directors they have given approval of the statements to be presented.

I myself am a small-business man in a business not related in any way to forestry. I receive no salary from any public agency. Until 3 years ago I was head of the Illinois State Forestry Division for a period of 11 years. Recently I was appointed a member of our Illinois Department of Conservation Advisory Board by our Governor Stevenson.

My statement is confined to forestry problems of Illinois but no doubt other States are affected equally. I traveled through your great State of Mississippi two weeks ago, Mr. Chairman, and saw this; although as in our State one could readily see that great strides have been made in recent years in the development of the forest resources.

We must remember that money spent on forest resource development is one of the best investments in this country today and I base that upon the fact of what that investment will bring back in the form of dollar dividends in the future. Therefore, these appropriations that you will grant are strictly a loan which will return dividends equivalent to the finest investment and eventually the loan or appropriation, as we call it here, will be paid off Forest lands under good management will do this. It has already been proven on some of our national forest lands and more recently on private land ownerships.

We in Illinois want to place our almost four million acres of timberland of which 95 percent is owned by farmers under the best forest management practices possible. Showing our 204,000 farmers each of whom owns an average of 20 acres of forest land how to do it is a tremendous problem. Our educational program has gone far enough along in Illinois that the average farmer is convinced that good forestry on his land will pay him good dividends in return. Now the problem is to show him how to do it. We have nine foresters in the State now doing as much as they can who are so far behind on requests for their assistance it is embarrassing. Is it not good business to appropriate more money for farm forestry so that more men can be hired to give the farmers the technical assistance they need to manage their farm woodlands properly so that those lands bring in the dividends that they should?

A farmer in Washington County, Ill., provides a typical example of the services a farm forester can provide. This farmer possessed 100 acres of bottomland and upland timber which he never considered too important. The land was too rough and inaccessible for farming or good pasture, so he never considered it as a real paying part of the farm.

When a large mill operator commenced cutting operations in an adjacent tract, this owner thought perhaps that he, too, should cut his trees and get some financial returns while the getting was good. When a sizable offer of $2,000 was given by the millman, the farmer hesitated and wondered. It was then that he contacted the farm forester and wanted a little more information about forestry and especially his woodland of 100 acres.

The forester and the farmer walked through the woods and made a cruise or inventory study, and upon that decided to harvest only the ripe trees and save the younger trees for a future crop. The forester and farmer then marked and volume tallied such trees, made up a list of the quantity and quality of trees now available for selling, and then they contacted many different millmen.

From this action, these marked trees were sold for $2,400 and the majority of that timber tract still stood for periodic future cuts and the stand was benefited by the removal of the overmature ripe trees allowing faster growth on the remainder. The farmer benefited by actually receiving more for less timber; his woodland was left in a highly productive state and the millman benefited by harvesting large trees which brought him more high-quality timber and lumber than would be possible from harvesting small trees. The millman further benefited by being assured of future supplies of quality timber which will be produced by good forest practices. As a result the farmer now considers his woodland as valuable as the cropland and spends slack winter months in his woods doing the things the forester advocated during his visit and follows the simple management plan prepared for the farmer's guidance by the forester.

I see there is no provision for an increase of funds in the budget for farm forestry. I hope every effort will be made for an increase but if the committee feels this an impossibility would you please consider transferring to farm forestry some of the $850,000 increase for planting which I noticed on page 448 of the budget.

I would like to call your attention to the Forest Service research program in Illinois. They are studying timber management, tree planting, and management of plantings old enough to produce forest products, at their experimental forest in the hilly section of southern Illinois. The new and improved methods they are developing will be of tremendous value to timberland owners in southern Illinois and in three adjacent States. The practices developed and demonstrated will assist our farm foresters. The new methods of tree planting will help the Shawnee National Forest, the State forests, and the private-land owners do a better job of tree planting.

This research program has our wholehearted support and it needs to be strengthened. Southern Illinois has three important types of timberlands. The one experimental forest now in operation represents only the hilly oak-hickory type. The present program is not large enough to include forests on the claypan soils which contain nearly 3,600,000 acres of forest land in southern Illinois and southwestern Indiana. Nor is any forest research being done in the bottomland hardwoods along the Wabash, Ohio, Mississippi, and many other rivers and streams. Timber grows more rapidly in the bottomlands and this type is a very important part of the total forest area in southern Illinois.

New and better forestry practices must be developed and demonstrated in each major timber type if we are ever to obtain full use of the forest lands of southern Illinois. We believe the best way to do this is to establish experimental forests in the claypan and bottomland timber types, just as the Forest Service has done already in the hilly lands. In addition to providing the information needed by forest-land owners of southern Illinois, these experimental forests would serve owners in sizable parts of Indiana, Kentucky, and Missouri. Therefore, we recommend that your committee and Congress appropriate funds for the Forest Service to start these two new experimental forests in southern Illinois this year.

Present expenditures are limited to $32,000 for this research center. Needs require an additional $30,000 to expand the work to our other additional forest types. The budget for fiscal year 1951 recommends no increase for the experimental forest and range project of the Forest Service research appropriations. It is my responsibility to express the views of my organization that an increase of this amount is needed and justified by our situation in southern Illinois.

Another item we are interested in is a tree-planting program on the Shawnee National Forest that has already reforested 25,000 acres of denuded land. There remain 10,000 acres yet to be planted of which only 714 acres were completed last year. At this rate it will take nearly 15 years for the Federal Government to complete this job. That does not set a very good example to our people on how to get things done in forestry. Last year the Anderson-Mansfield Act was passed by this Congress to speed up planting on the national forests. The Budget Bureau recommends an appropriation of $889,000 for the reforestation project of the protection and management appropriation. This is certainly a justifiable and necessary activity. The Shawnee National Forest was purchased from private citizens in our State with the idea that the Federal Government could rebuild the forest resources more rapidly than private ownership. The Anderson-Mansfield Act authorized an appropriation of $3,000,000 for planting on these public lands. The fact that this appropriation is in the budget is encouraging however it is hoped that this committee can see its way clear to increase this amount to more nearly the amount of the authorization.

I know you men have a tremendous responsibility in allocating the expenditure of public funds and I have felt in the past that this committee has recommended wisely. Due to public opinion today I know it is difficult to increase appropriations, however I feel even as a conservative businessman that sometimes it is wise to do so. An example is the appropriation of forest-survey money in the past. Illinois for years had no forest survey of its timberlands, until finally 2 years ago it was granted. The survey was made and already the results of it have more than paid off its cost. There are still other States that need the survey.

Investing money, gentlemen, in our forest resources is one of the soundest investments today and I say that not as a forester but as a businessman. Returns in a comparatively few years will not only pay good dividends but also the principal.

All or Nothing Diehards

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. STEED. Mr. Speaker, under leave to extend my remarks, I desire to call the attention of the House to an article written by Marquis Childs in the Washington Post on the subject of the recent House action on the FEPC bill. I think Mr. Childs has made the fairest and most sensible analysis of this proposition that I have read.

It was because I shared almost an identical view in regard to the realism of the situation that I offered the Hays bill as a substitute during House debate. I still think this is the best and most worthy approach to this problem and that the national interest would have been served far better under this particular approach.

The article follows:

In the handling of the fair employment practices issue the Democratic leadership has provided an example of remarkable ineptitude. The net result was an embarrassment to Democratic Members of the House in a bill that has little relation either to reasonable compromise or a strict enforcement measure.

From the beginning it has been perfectly obvious that an FEPC bill with compulsory and penalty provisions could not be passed. If nothing else, a filibuster in the Senate would block it, the Republicans having joined with southern Democrats to make it far more difficult to close debate.

But it was also obvious that a large measure of support could be marshaled behind a fair employment law that would make a start at education and persuasion. Many southern legislators were prepared to accept such a bill. They represent a shifting opinion in the South—outside, of course, of the deep and irreconcilable South—which recognizes the inevitability of change and the need to prepare for it.

A compromise measure such as that of Representative BROOKS HAYS of Arkansas calling for investigation of discrimination in employment, coupled with education of employers and public, would have meant a good start. It would have afforded a test in both North and South of intentions and capabilities, supplementing the experiment of State FEPC commissions which have now accumulated a fair amount of experience.

Such a compromise could have been accepted on a frankly limited basis. Even the most passionate proponents of FEPC could have accepted a test for a period of 2 or 3 years. They are not likely to get as much in that time if they persist in an all-or-nothing attitude.

Then, too, honest advocates of equality of opportunity in the North had come to doubt the wisdom of a Federal law providing punishment for violators. They realized that such a law could be used in the South to inflame latent feeling against minorities.

Both the Democratic leadership and the proponents of an all-out FEPC law seemed to abandon any hope of keeping a substitute measure in bounds.

This was on the theory that whatever bill was sent to the Senate would be certain to be amended before final passage.

The substitute originally introduced by Representative SAMUEL K. MCCONNELL, JR., Republican of Pennsylvania, became in consequence something of a monstrosity. Amendments were slapped on in the confusion of the late-night session providing that women should not be discriminated against and that the disabled should be protected from unfair employment practices. These amendments were mostly the work of Southerners who knew exactly what they were doing.

The Hays bill, if it had been given a chance by the leadership, would have won the votes of a fair number of southern Democrats. Moreover, President Truman had indicated that he would sign it if it came to his desk in anything like its original form.

It is hard to determine who is responsible for the present mess. But a great deal of the blame must rest on the diehard proponents of an all-or-nothing bill.

They can once again use the fair employment issue in the elections this fall. However, as one session of Congress after another fails to produce any legislation, the result may be disillusion and disgust rather than votes. The only real beneficiary is Representative VITO MARCANTONIO, of the fellow-traveling Labor Party, whose aim is to discredit major parties.

The McConnell substitute put administration Democrats on a bad spot. If they voted against it, then they were in the position of opposing the only bill that had a chance of passage. But since it was a Republican-sponsored measure, they could not take very much credit to themselves for going along with it.

One thing clearly demonstrated in the House is that FEPC has become a rather sordid football to be kicked back and forth between the two parties. The ineptitude of the Democrats made it possible for the Republicans to grab the ball and run for a touchdown.

I believe that if the Hays bill had been passed and sent to the Senate it would have had a good chance for passage there. The whole matter would have been taken out of the area of angry attack and counterattack. In a trial interval it could have been determined whether a law without sanctions would serve the cause of equal job opportunity.

Lest We Forget

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. FORAND. Mr. Speaker, there was dedicated in the city of Providence, R. I., last year a new veterans' hospital which up until now is officially known as the Veterans' Administration Hospital, Davis Park, Providence, R. I.

The veterans of Rhode Island, speaking through the United Veterans' Council, which represents all the veterans' organizations in the State, have suggested that this new hospital be named the Capt. Elwood J. Euart Veterans' Memorial Hospital, and I am today introducing a bill which I hope will receive favorable consideration at an early date so that the hospital will officially bear the name of one of Rhode Island's outstanding war heroes, Capt. Elwood J. Euart, who gave his own life to save the lives of men serving under him.

The official records of the War Department reveal the true heroism of Captain Euart, as appears in a letter I received from the Adjutant General. I quote from that letter:

The records show that the United States Army transport *President Coolidge*, carrying approximately 4,000 Army personnel from the United States, was crippled by two mines while entering Espiritu Santo Harbor, New Hebrides, on the morning of October 26, 1942, and the alarm was sounded to abandon ship. Capt. Elwood J. Euart, service number O374388, intelligence officer of the One Hundred and Third Field Artillery Battalion, who had been detailed as troop mess officer for the voyage, was on duty in the enlisted men's mess hall at that time and personally checked the clearing of that area. Having safely reached his abandon-ship station, he learned of men trapped in the hold and went there. By lashing himself to the low end of a rope, he was able to hold it tight enough for men to climb up it to safety, even though the ship was badly listing. Finally, as he attempted to climb up, almost vertically by that moment, with the help of a few men at the other end of the line, the ship careened and sank very quickly. Captain Euart exhausted himself assisting many others, whose lives were thus undoubtedly spared at the expense of his own. For this extraordinary heroism he was posthumously awarded the Distinguished Service Cross.

Dangerous Kind of Politics

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial entitled "What's This, Politics?" which appeared in the East St. Louis (Ill.) Journal on Friday, February 24, 1950:

WHAT'S THIS, POLITICS?

Senator MCCARTHY, of Wisconsin, is still at it. He is continuing his vicious campaign against—well, what is his campaign against? He says there are Communists in the State Department, but so far he has failed to prove his charges.

Senator MCCARTHY's charges so far have been in the worst tradition of congressional demagogs. He has made charges, sensational charges, but he has not backed them up or proved them. He has been challenged time and again, but always he has refused to come forward with anything more real than his wild charges. Under the circumstances, it is impossible not to suspect his motives; if he would not be suspected, he should not act so as to arouse suspicion.

But what are Senator MCCARTHY's motives?

Is he honestly concerned about Communists being in the State Department, in the White House entourage? If he is, why does he not come forward and name the dangerous ones? If he believes they are really there and really are dangerous, he should be interested in seeing them removed at the earliest possible moment. The State Department has

promised to fire immediately any Communists that are shown to be on its staff.

But still Senator McCARTHY does nothing but make more charges, confusing charges in which he bandies about different figures that started at 205, dropped to 57, then rose to 81. He is not even consistent as to the number of Communists he says are in the State Department's employ.

Could the Senator's motives be political? It is not pleasant to say, but they could be. The Senator could be more interested in trying to discredit the administration—it being Democratic and he Republican—than in anything else. In fact, if Senator McCARTHY does not come forward soon with more proof than he has offered so far, the only conclusion possible will be that his charges are nothing but politics.

Sesquicentennial of Indiana Territory

EXTENSION OF REMARKS
OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. HOMER E. CAPEHART before the Indiana Society of Washington, D. C., celebrating the sesquicentennial of Indiana Territory, 1800 to 1950. The address delivered at the Washington National Airport, February 19, 1950, is as follows:

Fellow Hoosiers, we are gathered here today to honor our native State and contemplate 150 years of events which have made Indiana one of the greatest States in this Nation.

We have just paid tribute to Paul Hadley, one of its noblest sons, a distinguished artist who gave us our beautiful banner.

It is fitting and right that we sons and daughters of Indiana, together with many friends of our beloved State, residing here in this great world capital should engage in this celebration commemorative of the 150 years during which Indiana has risen from a pioneer territory to a great State of agriculture, industry and the arts.

Those of us who because of our callings have found it necessary to reside apart from our native soil, gather frequently and exchange the typical Hoosier greeting of a heartfelt handshake and a pleasant word.

Today we are gathered to contemplate the noble history of our great State.

This is a sesquicentennial celebration marking 150 years of development of Indiana from a Territory, through statehood, to the high place of honor she now holds in the Union of States.

Indiana Territory was carved out of the vast area known as the Northwest Territory in the year 1800.

The original Indiana Territory embraced not only Indiana as we know it today, but also the land now included within the borders of our sister State—Illinois.

The territorial capitol was located at Vincennes, Ind., and William Henry Harrison—a great soldier and great citizen—was its first Governor, assuming this duty early in 1801.

He remained Indiana Territorial Governor until late in 1812, when he resigned to assume his military duties in the War of 1812.

Later this great man became the Ninth President of the United States, but unfortunately, he died in 1841 after only one month of service in that high office.

Our first Delegate from Indiana Territory, to the National Congress, was Benjamin Parke, another soldier and citizen of great distinction. He served in Congress as Territorial Delegate from 1805 to 1808, when he became Territorial Judge. In 1817 he was designated Judge of the First United States District Court for the State of Indiana, and continued in that capacity until his death at Salem, Ind., in 1835. Judge Parke had devoted 31 years of his life to the service of our great State.

Judge Parke was succeeded by Jesse B. Thomas as delegate from Indiana Territory. Delegate Thomas, headed a committee to determine whether Indiana Territory should be divided, and in his report urged this division, because the people of Illinois couldn't get across from Illinois to the court at Vincennes on account of muddy swamps.

The report also stated there were 11,000 people west of the Wabash River, and 17,000 east.

The report met violent opposition on the grounds and I quote verbatim "that the expense to the United States for this new government would be $6,950 yearly; that this proceeding might be very convenient to the men who should be appointed governors of judges, but for no other good purpose."

Our third and last territorial delegate was Jonathan Jennings. When it came to selecting the third delegate the people had been granted the right of suffrage. The contest was between Jennings and Thomas Randolph and the issue was slavery. Jennings opposed Indiana becoming a slave State.

Jennings served from November 27, 1809 until Indiana became a State. He made the strong fight for statehood and his efforts were crowned with victory when on December 6, 1816, William Henry Harrison, who had been governor of the Territory for 12 years and who was then a Representative from Ohio, moved a final resolution of statehood, which was adopted. This resolution was passed by the Senate and signed by President James Madison on December 11, 1816.

Delegate Jennings returned to Indiana, became the first governor and later returned to Washington to serve four successive terms to Congress.

Our first Representative in Congress was William Hendricks. He served from December 2, 1816, until his resignation to become Indiana's third governor. At the close of his term as governor he was elected United States Senator for Indiana and served from 1825 to 1837.

Our first two Senators were James Noble and Waller Taylor. The annals of Congress do not indicate Taylor took an active part in debates, but Senator Noble was a strong and effective debater. Senator Noble served in the Senate until his death here in Washington in 1831.

Impressive ceremonies were held in the Capitol, attended by the President and the Cabinet, and Indiana's first Senator was laid to rest in the Eastern Branch Burial Ground (now known as the Congressional Cemetery) here in Washington.

Yesterday, Mr. Hadley and I had the honor to visit the grave of this great man and place a wreath on his grave on behalf of the Indiana Society of Washington.

With Indiana taking her place among the States of the Union in 1816, she embarked on her great career. In public life she not only supplied the early leadership of such men as Parke, Jennings, Hendricks, and Noble, but as the years rolled along, her sons—William Henry Harrison and Benjamin Harrison—served as Presidents of the United States.

Colfax, Hendricks, Fairbanks, and Marshall were elected Vice Presidents and many distinguished sons have served her faithfully and well as Members of Congress and Government officials.

One son, Senator Dan Voorhees, served from 1877 to 1897, became popularly known as the "Tall Sycamore of the Wabash." While in Congress, he planted a tall sycamore at the foot of the Capitol and while the original tree died a few years ago, another sycamore was planted to replace the original tree.

This tree stands today a monument, not only to the memory of the man who introduced the resolution to establish the beautiful building which houses the Library of Congress, but to our State through whose sycamores the candlelights gleam along the Wabash.

Not only have Indiana's sons contributed to the affairs of government, but I need hardly remind you in the field of literature some of the Nation's greatest names are Hoosier—Riley, Wallace, Ade, Tarkington, Dreiser, Nicholson—and in music—Cole Porter, Hoagy Carmichael, Paul Dresser.

Many great sons and daughters throughout 150 years of history.

As Indiana grew, her great resources of coal, oil, gas, limestone, clay were developed by her people. Her fertile fields yield crops of the finest agricultural products—apples, tomatoes, onions, corn, wheat, hogs, turkeys, and again sons and daughters of Indiana took leadership.

The first automobile was built by Elwood Haynes at Kokomo in 1894.

Canals, railroads, wide paved highways, and air lines were established.

While the great wealth and resources of her lands were developing, Indiana took leadership in education as well.

The first State university west of the Appalachian Mountains was established as a State university in Bloomington.

Later, Indiana State Teachers' College was started at Terre Haute in 1870 and Ball State Teachers' College was opened at Muncie in 1917. Purdue University was organized in 1874 and is today one of the leading agriculture and engineering schools of the country.

Religious groups of all faiths founded colleges and today Indiana has the finest educational opportunities for her young sons and daughters.

Soon you will see a picture entitled "Indiana has Almost Everything."

Indiana today, as you will see from this fine picture, is a State in which we can all be justly proud—and in the words of another Hoosier, John McGee—as given to the Indiana Society of Chicago last Saturday night, I close—

"Where springs are sweetest and autumns gayest,
Small towns with Indian names,
The Wabash sparkling white under the summer moon,
Green fields of slowly waving corn,
Autumns full of the smell of burning leaves,
And huesome harvest fields stretching away into a saffron setting sun.
Bittersweet and basketball, pawpaws and pumpkins,
Country church crowds on sunlit Sunday mornings,
Courthouses with worn down front steps,
And trotting races at the county fair,
Land of Lincoln-like lawyers,
Brown County and Turkey Run,
State that remembers canals and covered bridges,
Thomas R. Marshall, Albert J. Beveridge, Benjamin and William Henry Harrison.
Literary land of poets and writers,
James Whitcomb Riley, George Ade, Booth Tarkington,
Theodore Dreiser, Meredith Nicholson and Abe Martin,
Land haunted by red men whose canoes seem to drift down blue green curving rivers,
Land of the Speedway, sycamores, and friendly conversational folk.
'On the Banks of the Wabash'—Hoosierdom and Home."

Eighteth Anniversary of Richmond Avenue Church, Buffalo, N. Y.

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. TAURIELLO. Mr. Speaker, recently the Richmond Avenue Church of Christ, of Buffalo, N. Y., my home town, celebrated its eightieth anniversary, and I want to join with my fellow Buffalonians in extending felicitations and all best wishes to its pastor, the Reverend W. L. Burner, and to its parishioners on this happy occasion.

This church has had a splendid history of four decades of service to its country, its community, and its parishioners. It occupies a respected place in Buffalo, for it has achieved an enviable record in religious, educational, and community matters and in bringing about cooperation and mutual understanding among the churches of various denominations in western New York.

To the pastor and the parishioners of this church I offer my heartiest congratulations and my sincerest wishes for many more years of good work for God and community.

Under leave to extend my remarks, I am including the following article from the Buffalo Courier-Express in connection with the celebration of this anniversary:

MATERIALISM IN WORLD ASSAILED BY THE REVEREND LANKLER

The hydrogen bomb makes a war of extermination possible because most of the world, even the United States, is gripped by a materialistic philosophy and people are more interested in what they will eat and wear than in seeking the kingdom of God, the Reverend Ralph C. Lankler, of Cortland, said here yesterday.

The Reverend Dr. Lankler spoke at the eightieth anniversary service of the Richmond Avenue Church of Christ, where he was ordained into the ministry 25 years ago. For the last 7 years he has been minister of the First Presbyterian Church in Cortland.

The Reverend Dr. Lankler began his sermon by emphasizing that there is a "great ferment of social upheaval" in the modern word and now "there is the hydrogen bomb hanging like the sword of Damocles over our heads."

"It is inconceivable that human beings as civilized as we are in the United States would ever use a mass killer of civilian population such as the atom bomb, but we did—and we can be assured that if another war comes anything and everything will be used to win it," he said.

The Cortland minister stated that three things have been tried to cure "the sick souls of society and correct the ills of our social order." He listed these as social welfare and justice, psychology and psychiatry, and science and education.

But, he said, although tremendous strides have been made in all these fields, "let us ask ourselves if our Nation is any better morally or spiritually than it was 25 years before many of these improvements for social betterment took place."

"Every economic system should be judged in the light of what it does for the individual and would we say that we are developing individuals of a higher character or more noble character?" he asked.

"On the contrary," he added, "just the opposite is indicated by the vast number of broken homes and delinquent children, the general immorality that seems to have control of our Nation."

Psychology as a means of curing mankind's ill has proven to be a false hope, said the Reverend Dr. Lankler, because, although psychologists can take the mind and emotions apart, they are unable to put the human personality together as a spiritual whole.

Pointing out that humans are fundamentally spiritual creatures, the Reverend Dr. Lankler said "the peace of mind or soul that the troubled souls of our day desire will not be found in books filled with psychological admonitions, but may be established through a right relationship between ourselves and our Creator."

"Peace is not something that we find or earn—it is a gift of God," he said.

Turning to education as a hope, the minister pointed out that Germany and Japan were two of the most literate nations on earth when they started World War II.

"Have we noticed any improvement in the character of our Nation comparable to the growth and development of our educational institutions?" he asked. "Educating a person with evil thoughts or the wrong motives is like putting a stick of dynamite into the hands of a child."

Returning to the theme of his sermon—Christianity is the Answer—the Reverend Dr. Lankler declared:

"Someone has said that the mind that can create the hydrogen bomb can control the hydrogen bomb so that it will not be used for our destruction. I would agree with this statement if it were changed to say 'the human mind controlled by the spirit of God.' We all know that the human mind can be controlled by evil as well as good."

"Christianity is the answer to the sick souls in our troubled world because it has the gospel for that purpose," he concluded. "It teaches us that we cannot be saved without the help of God as revealed through Jesus Christ."

Observances of the Richmond Avenue institution's eightieth anniversary were concluded last night with a pageant depicting the high lights in the church's history. Entitled "The Light of the World," it was written by the Reverend W. L. Burner, pastor, and produced by Mrs. Ralph E. Theobald.

Bank Deposits Safe Because of New Deal FDIC

EXTENSION OF REMARKS

OF

HON MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks I include the following article from the Denver Post of November 2, 1949:

FDIC GUARDS YOUR CASH—BUT OLD GUARD SNATCHES AT NEW DEAL LAURELS

(By Roscoe Fleming)

An engaging aspect of the new deal—now the welfair deal—is the wistful way some of its opponents lay claim to such crumbs of credit for it as they can.

When a movie nowadays shows a run on a bank, with all its ruin and heart-break, most viewers are too young to feel anything but detached historical interest. They can no more imagine it in their own lives than they can a slave auction.

They can't remember when you debated whether your $3.87 would be safer in this bank or in that—and when many folks preferred to stash their savings instead under a mattress or a hearthside brick.

A mighty small rumor could start a mighty big run. Bankers' occupational disease was bankers' nerves, for we were too unsophisticated to know about ulcers.

Nowadays everyone sleeps sweeter, for behind bankers and depositors alike stands the solid safeguarding reality of Federal Deposit Insurance Corporation, keeping your funds safe.

It has more than $1,000,000,000 stashed away to guard your $3.87, and has paid back all the money Uncle lent it, so it's on its own feet. Yet you may notice that banks in advertising their membership still refer to it as "a Federal agency." They know what folks think is safe.

Recently the people of a midwestern village discovered that a bank official had handed the stuff out to his friends until there was little left but the furniture.

A generation ago that would have meant community panic, and tragedy for every home. Now FDIC stands solid as a rock. There's surprise and regret, but no panic.

Senator HOMER CAPEHART of Indiana, the bawlbox king, hardly lets a day go by without denouncing the New Deal. But this was different. He told the Senate proudly that Senator VANDENBERG of Michigan was the real father of FDIC, and in Senator CAPEHART'S elegant quote, "stuffed it down F. D. R.'s throat."

Senator VANDENBERG deserves the tribute, the more so since he has often cracked the impermeable shell against reality which the Capeharts exude around themselves like oysters.

But bank failures averaged several hundred yearly throughout the era of wonderful nonsense, rising to several thousand at its catastrophic close, yet succeeding administrations of Senator CAPEHART'S party did nothing effective about it. That was left for F. D. R.'s party to do.

We shouldn't begrudge the crumbs of credit that the Capeharts may be able to snatch from under the overflowing New Deal table.

But isn't it likely that a decade from now some newer Capehart may be wistfully claiming a little of the credit for something they're snarling at now?

Gen. William Booth Taliaferro

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address prepared for delivery by the late Hon. Schuyler Otis Bland:

I feel most highly favored, far beyond my ability to express, for the honor which has been conferred upon me in permitting me to participate on this occasion which commemorates the achievements of Gen. William Booth Taliaferro, Confederate States of America.

As a boy and as a young man, it was my privilege and good fortune to know General Taliaferro personally. He was born and reared in my native county of Gloucester.

Among my most beloved friends was his son, William C. L. Taliaferro, who was a student with me at the Gloucester Academy and later at the College of William and Mary. As lawyers, he and I practiced before the bar in Hampton, Elizabeth City, and Newport News, and the devoted friendship we formed as children continued until his death. I can say with all the truth of which I am capable that it lives with me to this solemn hour.

So while I revere General Taliaferro's memory as one of the great men that our State has produced, there is also a sense of personal kinship. His unfailing courtesy to everyone, young and old alike, was at all times so outstanding that every person who met him felt that he was meeting a personal friend. He could even bestow that great gift to the young lad that was I.

General Taliaferro's distinguished career as a soldier in both the Mexican and Civil Wars is well known to all of us here but it is to General Taliaferro, the scholar and the devoted friend of education in Virginia that we pay tribute today.

When his daughter, Nina Taliaferro Sanders, so graciously asked me to make a few remarks on this important occasion, I turned to one of the most highly valued publications in my private library, a small volume entitled "The Seven Wise Men" written by Howard W. Wisemen of the College of William and Mary. "The Seven Wise Men" composed the faculty of William and Mary at the time of its reorganization in 1888 and it was my good fortune to have studied under these gentlemen. They were Dr. Lyon Gardner Tyler, John Leslie Hall, Dr. Thomas Jefferson Stubbs, Lyman Brown Powell Wharton (known to his old students as "Lima Bean"), Hugh Stockdale Bird, Dr. Charles Edward Bishop and Dr. Van Garrett. These were able, patriotic, loyal and hard-working men. I wish that time would permit a more complete discussion of the worth of each of these gentlemen because it was with this faculty that General Taliaferro worked as a member of the board of visitors of the College of William and Mary during that trying time. I remember now, even as though it were yesterday, seeing the board of visitors come into the chapel to greet the faculty and students and how proud I was that I knew personally one of those august gentlemen, General Taliaferro. I can see him now, tall and gracious as he entered, bearing a marked resemblance to Gen. Robert E. Lee, who was to most of us little short of the divine.

To have been a student of the College of William and Mary during the time of these great men was an inspiration and honor that I cherish to this day. A word or a wish from General Taliaferro or any of his co-workers constituted a command to me. There is a temptation to one as he grows old to dwell too long upon the past. I plead guilty and offer as my only excuse the magnificent work done by these men. Their glorious labors I remember and I wish devoutly that all of us could follow in their footsteps.

History has well taken care of the memory of "the Seven Wise Men" and the honorable gentlemen that composed the Board of Visitors but it is one of my warmest possessions that I knew at first hand the splendid contribution these men made to the success and to the honor and glory of William and Mary. To General Taliaferro and each of his colleagues, it was sacred work and a labor of love to make the college an instrument of good government built upon the design and plan of Thomas Jefferson, whom we all regarded as an elder brother. All of them labored for her and sought to make her what she finally became. To each she was and still is a mother. This was the lesson of General Taliaferro and the men like him and that lesson lives with each of us yet.

The general graduated from William and Mary in 1841 and then studied law at Harvard. There he knew as a friend and classmate a young man, George F. Hoar, who was later to represent the State of Massachusetts in the Senate of the United States. When the Civil War was over and the South deep in its poverty of reconstruction, General Taliaferro went to Washington to contact his old friend. As a result of the friendship and respect that Senator Hoar had for the general, his influence was used to secure passage of a bill which reimbursed the College of William and Mary for the damage done to the Wren Building during the Civil War.

Another achievement of General Taliaferro's will be forever recalled. With Colonel Lamb of Norfolk, he reorganized the Alpha chapter of Phi Beta Kappa here at the College of William and Mary. It is interesting to note that General Taliaferro was a member of this society, as were his four sons, James, Warner, William and Edward.

The general served as a loyal and active member of the board of visitors from 1870 until his death in 1898, but he did not confine his interest in matters of education to William and Mary. He was also a member of the board of visitors of the Virginia Military Institute and was one of the founding fathers of the State Female College at Farmville (now known as Longwood College). In his own county of Gloucester he established many public schools for white children and the first free school for Negroes.

On the mace of the College of William and Mary are engraved the names of 29 men, graduates of the college, who made outstanding contributions to education. Here in this distinguished company, which includes Thomas Jefferson, is to be found the name of William B. Taliaferro. This is the tribute—this is the memorial that will forever endure.

I know the warm pride that General Taliaferro's descendants are feeling today. To his daughter, Mrs. Sanders, to his nephew, Dr. Wellford, and to his many grandchildren and great-grandchildren, I extend my affection and my assurance that on this day my pride is equally deep.

I congratulate the College of William and Mary for having had General Taliaferro as a student and as an inspired and tireless worker on its behalf throughout his entire life. To commemorate him today and to hang his portrait in this library is to recognize the enduring achievements of one of the South's great gentlemen and scholars.

Thirty-second Anniversary of the Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following resolution adopted at a recent meeting of the Knights of Lithuania in commemoration of the thirty-second anniversary of the independence of Lithuania:

RESOLUTION OF KNIGHTS OF LITHUANIA, NEW YORK AND NEW JERSEY DISTRICT

Whereas man has been endowed by his Creator with certain inalienable rights which no human power or authority can wrest from him; and

Whereas chief among these inalienable right is the sovereign right of all peoples to choose for themselves the form of government under which they wish to live; and

Whereas the principles of the Atlantic Charter, which our Government signed, respect and guarantee this right to all nations, both large and small, to govern themselves without interference from any outside source; and

Whereas the allied nations among these our own United States fought World War II presumably for the assurance of peace which cannot be if large nations are allowed against all principles of justice and charity to subject small nations to tyrannical rule; and

Whereas Lithuania, a neutral and liberty-loving nation, has proven by her 21 years (1918-39) of advancement in all fields of endeavor that she is capable of self-rule and has ever respected this right of self-government of all peoples; and

Whereas Soviet Russia has ruthlessly and shamelessly deprived Lithuania of her freedom and is now following a policy of the complete annihilation of her people through merciless deportation into Siberia, through the relentless destruction of her government, industry, culture, and educational system, and through the cruel plunder of her population by wholesale murder and imprisonment; and

Whereas this policy followed by Soviet Russia against Lithuania is openly and defiantly against the principles of the Atlantic Charter and against the democratic policy of our own United States; and

Whereas Soviet Russia is continuing to perpetuate the heinous crime of genocide against the Baltic people: Be it

Resolved, That the Government of the United States firmly evoke the principles of the Atlantic Charter and effectively use its influence upon the United Nations to apply these principles to all nations, both large and small; be it further

Resolved, That the Government of the United States maintain and uphold its present policy of nonrecognition of Russian absorption of the Baltic states and ever use its influence to bring about the immediate and positive restoration of the independence of Lithuania and the other Baltic nations; be it further

Resolved, That our Government insist upon the immediate cessation of atrocities and inhumane treatment now being inflicted upon Lithuanian and the other Baltic peoples by Soviet Russia; be it further

Resolved, That proper provision be made to have protests and grievances addressed by small nonmember countries to the United Nations, be officially acknowledged by the Secretary General, and taken before the Little Assembly; be it further

Resolved, That Lithuania be admitted as a member of the United Nations, and that her official representatives be permitted to enjoy the status of duly elected delegates to that organization; be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, His Excellency Harry S. Truman; to the Secretary of State, the Honorable Dean Acheson; to the Senators and Representatives of the States of New Jersey and New York.

Respectfully submitted.

ALEXANDER WESEY,
Chairman.
ANNE M. KLEM,
Secretary.

Celler Offers Resolution To Investigate Denazification Program in Germany

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. CELLER. Mr. Speaker, I have this day offered a resolution authorizing the Committee on Foreign Affairs to conduct a full and complete study and investigation of all matters relating to the conduct and status of the denazification program in the zone of Germany under occupation by the United States.

Recent events in Germany indicate that dangerous trends are seriously at work, which if allowed to continue, would undermine the whole import of the denazification program. The acquittal of Wolfgang Hedler, who publicly stated that the extermination of the Jews might have been wrong but there were other ways of getting rid of them, is a flagrant example of this trend. Hedler was tried on charges of spreading anti-Semitism, and was freed by a national court of judges. Our High Commissioner John J. McCloy, protested this acquittal, and has evidenced his desire to put a curb on the growth of nationalism in Germany. But statements and protests in the face of such defiance is not enough. In his Progress Report on Germany, Mr. McCloy states:

> There is nationalism in Germany. There is a nationalist fringe on the extreme right which is more active than it has been. There is a Communist fringe that plays the Soviet game, and there is the persistent tendency of both these fringes to work together.

It has been said that it is difficult to undo the 12-year rule of Hitler in 5 years, but pressing signs of the recurrence of nazism and all its attendant evils show a pattern of regression which must be stopped. Otherwise, we will be faced with the spectre of a third world war with Germany. First the Huns, then the Nazis, and then again the devil reincarnate.

From some quarters we hear that we must use the Nazis to offset the Russians. Such comfort can only be imaginary. We could never rely on the Nazis to fight the Russians. Those who believe this myth might well remember the Hitler-Stalin pact. It is time to question the resurgence of evil forces.

The text of the resolution follows:

> *Resolved*, That the Committee on Foreign Affairs, or any duly authorized subcommittee thereof, is authorized and directed to conduct a full and complete study and investigation of all matters relating to the conduct and status of the denazification program in the zone of Germany under occupation by the United States, especially as concerns (a) the result of transferring responsibility for denazification to the German authorities; (b) whether or not there is infiltration of former Nazis, Nazi supporters, and other antidemocratic elements into denazification tribunals; (c) whether or not former Nazis and other antidemocratic elements have been eliminated from high position in public office and the economic life of Germany; (d) whether or not there has been reinstatement of thousands of Nazi teachers to former or higher positions in the Bavarian and other public school systems; (e) whether or not there is resurgence of intensive anti-Semitism and militant nationalism in the United States zone; (f) whether or not there is a rise of strong new political parties based on Nazi doctrine and militarism; (g) whether or not there has been reappearance of Nazi-type propaganda in the German press; (h) whether or not there is development in the German youth of appreciation of and devotion to democratic institutions; and to report with expedition its findings, together with such recommendations as it deems proper, to the House of Representatives.
>
> SEC. 2. For the purposes of this resolution, the committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings, to sit and act at such times and places during the sessions, recesses, and adjourned periods of the Eighty-first Congress, to employ upon a temporary basis such technical, clerical, and other assistants, to require by subpena or otherwise the attendance of such witnesses and the production of such correspondence, books, papers, and documents, to administer such oaths, to take such testimony, and to make such expenditures, as it deems advisable. The committee is authorized, with the consent of the head of the department or agency concerned, to utilize the service, information, and facilities of any of the departments or agencies of the Government.

Proposed Legislation Regarding Traffic Management in the Federal Government

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. HOLIFIELD. Mr. Speaker, I am today introducing legislation to provide for an adequate traffic management service in the Federal Government. The proposed legislation is to amend the Federal Property and Administrative Services Act of 1949 by defining the duties and functions of the Administrator of General Services with respect to transportation and traffic management. A Federal Traffic Service is to be created as a constituent unit of the General Services Administration, for the purpose of coordinating the transportation activities of the various departments and agencies and performing central management services that will reduce costs and increase efficiency in the movement of Government traffic.

Uncle Sam spends approximately $1,000,000,000 to move public property as an incident to carrying on the business of Government. By dollar volume of expenditure, Government traffic is big business, and it is high time that it be handled on a businesslike basis. Private corporations have learned the value of efficient traffic management. In proportion the large corporations invest substantially more than the Federal Government for traffic management and they make this investment because it pays off in dollar savings.

What savings can be expected if the Federal Government establishes an adequate traffic-management service? A Hoover Commission task force which gave careful study to this problem, estimated that within the next few years 20 to 25 percent of the Government's transportation bill could be saved. Since this transportation bill approximates $1,000,000,000 a year, possible savings would be $200,000,000 to $250,000,000 yearly.

These savings would result from vigorous action by the Federal Traffic Service, not only to obtain more advantageous rates in the shipping of public property, but also to get the full benefit of existing rates by improved practices and procedures in the traffic field. The Hoover Commission task force noted that the Government is paying the carriers between $50,000,000 and $100,000,000 per year in excess of their legal rates and charges. In other words, even aside from the problem of unreasonable rates, Uncle Sam is overpaying huge sums each year because he lacks the kind of traffic-management organization that can do a job for him. The task force reasons in this connection:

> It must be realized that the loss by the Government of the use of this money, measured not only in terms of the interest value represented but also in terms of the reduction in the activities of those Departments and Agencies whose appropriations have thereby been depleted, is contrary to the best interests of the Government.

The legislation I propose was developed on the basis of the Hoover Commission task-force recommendations with respect to traffic management in the Federal Government. It should be noted that this is not a proposal for a completely new agency or service. The general framework of organization was provided by Public Law 152 of this Congress, the Federal Property and Administrative Services Act. That law opens the door to the development of a traffic-management organization by giving statutory recognition to traffic management as one of the Federal supply functions. However, it was generally understood by the Subcommittee on Executive and Legislative Reorganization, which was responsible for Public Law 152, that further legislation clearly defining the intent of Congress would be necessary in this field and several related fields.

During the Eightieth Congress the Procurement and Buildings Subcommittee of the House Committee on Expenditures in the Executive Departments held hearings on the problems of traffic management and the feasibility of a central traffic bureau in the Federal Government. The committee unanimously recomended that this matter be further investigated, particularly as to the appropriate form of legislation.

My proposed legislation takes account of the legislative developments in the fields of procurement and property management, as well as of the findings of the Hoover Commission task force which reported on the Federal Supply System.

It is designed to fit into Public Law 152 as a new title.

I believe that the provisions of this bill are in accord with the principles of good management as practiced by large business and industrial organizations. It will register the intent of Congress in a field which has long suffered statutory neglect and it will provide the administrative means for effecting substantial savings.

Missoula Labor Observes Double Anniversary

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. MANSFIELD. Mr. Speaker, I am happy to bring to the attention of the House an article which appeared in the Sunday Missoulian of Missoula, Mont., and dated February 19, 1950.

I am proud of the record made by organized labor in western Montana. It is not a new idea out there but it is something which has grown up with our State.

Montana labor has always endeavored to work out solutions of its difficulties on an equitable and fair basis and always with the public interest in mind. I am especially pleased with the creation of the Missoula Labor-Management Board under the chairmanship of the distinguished president of Montana State University, Dr. James A. McCain, and composed of representatives of labor and management. This board has done an outstanding job and its worth has been vindicated on more than one occasion.

Not only is Missoula labor to be commended on its fortieth anniversary but the oldest continuous member of the Trades Council, Oscar Helding, an old friend of mine is also to be congratulated.

To the members of organized labor in Missoula County my congratulations for a job well done over the past 40 years; to the members of the labor-management council, my hope that success will continue to mark your efforts; and to the membership of both organizations—many of them my close personal friends—my prayers that the next half-century will be as fruitful as the years just passed. You all typify the America we love and all of you have contributed to the welfare and betterment of our country.

The article follows:

LABOR IN MISSOULA WILL OBSERVE DOUBLE ANNIVERSARY THIS WEEK

Celebrating the fortieth anniversary of its affiliation with the American Federation of Labor this week, and the one-hundredth anniversary of the birth of Samuel Gompers, long-time president of the A. F. of L., the Missoula County Central Trades and Labor Council will move into new quarters in the remodeled ground floor of the union hall. Space has been provided for new offices for unions, and the back part of the ground floor has been made into a clubroom for union members of Missoula County.

The council affiliated with the American Federation of Labor in 1910. The charter, signed by Samuel Gompers, was granted January 11 of that year, and the first meeting after the charter was received was held in February.

Early records of the council were destroyed in 1911 when the building in which the council had its offices burned, but sufficient history of the labor movement in Missoula has been preserved by old-time members to present a picture of the early days of organized labor in Missoula.

COMPLETED IN 1916

The present union hall was completed in 1916, when the Union Hall Co. was organized and local unions subscribed for the stock. The lots on which the building stands were donated by the late Marcus Daly to the Western Labor Union, parent of the present organization.

The ground floor front of the building has been rebuilt with brick and glass blocks, and the offices are air conditioned and soundproofed. The council and unions have occupied cramped quarters on the second floor of the building, but a spokesman said the new offices "will be the finest occupied by any labor organization in Montana."

Thursday night the public will have opportunity to inspect the new quarters.

HELDING'S ANNIVERSARY

Not only is this the birthday party for the council, but also for the delegate with the longest continuous membership in the council. Oscar Helding, delegate from Barbers Union, No. 585, will be a guest of honor. His birthday is Thursday, and he was first seated in the council as a delegate in March 1910. He was president of the council in 1914.

The presidents have been: 1910, James R. Froman, A. W. Williams; 1911, Cuthbert Peat; 1912, D. W. Fitzpatrick; 1913, Charles E. Dodge; 1914, Mr. Helding, J. Brown; 1915, C. A. English; 1916, T. E. Arnoldy; 1917–19, H. B. Cain; 1920, H. C. Johnson; 1921–22, C. H. Cook, H. K. Powell; 1923, T. P. Wilburn, E. F. Klett, John Oberly; 1924, E. E. Bestor; 1925, James M. Gregg; 1926, H. E. Fullerton, T. F. Wright; 1927, N. I. Keator; 1928, Grant Dean, E. F. Klett; 1929, V. E. Crimmins; 1930, L. H. Daly, C. H. Christenson; 1931, Frank Roedl; 1932, Samuel Barrett, 1933–34, S. H. Rivin; 1935–36–37, Ryland Walford, S. A. Barrett; 1938–39, E. A. Atkinson, R. W. Stratton; 1940–41, R. W. Stratton; 1942–43, Pete Baron; 1944, S. H. Rivin; 1945, Laverne Hamilton; 1946–47, Sherman Brock; 1948–49–50, James S. Umber

There are more than 4,000 union members affiliated with the Missoula County Central Trades and Labor Council at the present time. Largest unions in Missoula County are Hotel and Restaurant Workers local No. 427, while running so close as to almost equal is Lumber and Sawmill Workers No. 3038 of Bonner, paying per capita to the council on approximately 400 members each. Lathers Union No. 212, with only seven members, is the smallest union in the county.

LABOR-MANAGEMENT BOARD

Following World War II an epidemic of strikes occurred over most of the country and Missoula had some. Labor and civic leaders realized that some better method of settling labor disputes must be found and early in 1948 committees from the central council and the chamber of commerce met and formed the labor-management board of Missoula.

The board consists of 14 members and an impartial chairman. Seven members are appointed from the central labor council and seven from the chamber of commerce, these electing an impartial chairman of the board. Present chairman is Dr. James A. McCain, president of Montana State University, who has held the position for 2 years and was reelected for a third term this month. Representing management on the board are Oakley Coffee, vice chairman, L. A. Colby, H. R. Dix, John E. Hightower, S. J. Howard, Otis J. Mudd, board secretary, and William Steinbrenner. Labor members are Edgar Cozad, vice chairman Herbert T. Bartron, Jr., Donald Chatfield, Frank Matthews, Dene Pfeiffer, James S. Umber, and Reva Walterskirchen.

While not able to head off all work stoppages in the past 2 years, the board has been successful in settling many disputes that might have resulted in stoppages.

Meetings are held in the university school of journalism building, where once each month, oftener if necessary, members of the board sit down to try to iron out those disagreements which have arisen during the month. Often disputes are cleared up in one meeting, sometimes they are referred to subcommittees for a final settlement. One contract took 5 months to settle to the satisfaction of both parties, another one with a different union needed an emergency meeting to settle a dispute which would have resulted in a strike the following morning. In both cases the board's efforts were successful, and these contracts now have clauses specifying that any dispute must be referred to the labor-management board for settlement.

The story of the Missoula County central labor bodies is the story of labor itself in Missoula. Organized over 50 years ago, the first group was originally known as the Western Montana Trades and Labor Council and was affiliated with the Montana State Labor Council. In 1905, the Missoula group became affiliated with the Montana State Federation of Labor, and assumed the name of Missoula County Central Trades and Labor Council.

Because of the fire that destroyed the union hall in 1911, there is no record of the exact date when the first trades and labor council was organized in Missoula. However, the Knights of Labor had a labor assembly in Missoula in 1894 which may have functioned as a central council, but there are no records to prove that a trades and labor council existed in Missoula that year. Mixed assemblies of the Knights of Labor took in all workers who were not eligible for membership in an existing union.

MANY CHANGES

The Western Federation of Miners was organized in 1894 by Ed Boyce and affiliated with the American Federation of Labor. In 1896 the Western Federation of Miners withdrew from the American Federation of Labor and organized the Western Labor Union. Loggers and sawmill workers of western Montana affiliated with this union.

The Federal Labor Union, local No. 43, date of organization unknown, was the mother of most of the building trades before they were organized into separate crafts. Federal Labor Union No. 43 was an affiliate of the Western Labor Union. The local membership consisted of carpenters, laborers, laundry workers, barbers, and other crafts.

Late in 1896 or early in 1897, the Western Labor Union issued a charter to the Western Montana Trades and Labor Council of Missoula—at that time Flathead and Missoula Counties extended to the Idaho border. The jurisdiction of the Western Montana Trades and Labor Council extended from Bonner westward to Idaho and from Idaho on the south to British Columbia on the north.

A convention of the Western Labor Union changed the name of that organization to American Labor Union and new charters were issued to all the affiliated unions bearing the name American Labor Union, without any reorganization taking place.

Late in the year 1904, the general offices of the American Labor Union in Denver closed up for reasons unknown to the membership of that organization. However, the local unions of those organizations func-

tioned as independent unions, while retaining a central labor council.

The Montana State Federation of Labor was chartering unions in 1904 and when the American Labor Union went out of business the unions in western Montana, including the Missoula Trades and Labor Council, that were affiliated with the American Labor Union applied for charters from the Montana State Federation of Labor.

An old cash book of the Missoula Trades and Labor Council indicates that R. A. Fuller was the 1904–05 secretary and that 15 unions were affiliated with the early council. These unions were the stationary engineers, Federal Labor Union No. 43, printers, carpenters, woodworkers, cooks and waiters, plumbers, lumber workers, farmers, barbers, electricians, retail clerks, lathers, painters, and bricklayers.

The Missoula Trades and Labor Council held its charter from the State federation of labor until that organization ceased to issue charters, then the council was chartered by the American Federation of Labor in 1910. While the Missoula Trades and Labor Council has operated under four different charters, it has been in continual existence and functioned continually from the time it first organized regardless from what organization it held a charter.

The American Federation of Labor granted the Missoula council a charter as a direct affiliate on January 11, 1910. At that time the council had increased its membership to 26 unions. At the present time there are 34 unions affiliatel with the central council.

The first American Federation of Labor union chartered in Missoula of which there is record is local No. 277 of the International Typographical Union, chartered on February 2, 1891, and still operating under the same charter. The next oldest charter in Missoula is Carpenters and Joiners Local No. 28, organized in 1895. James Umber, of local No. 28, is now president of the central trades council and Frank Matthews, president of local No. 277, is secretary-treasurer of the council. Another early-day charter still active is the bricklayers and masons, organized in 1897. The cigar-makers union was one of the earliest in Missoula, but that charter has been surrendered and the date of its issue is uncertain. The pioneer unions of Missoula, however, are the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen. Later a lodge of the Order of Railroad Conductors was organized. But the Big Four railroad brotherhoods were never affiliated with the American Federation of Labor or Missoula central labor bodies.

Bombs Over Washington

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. THOMPSON. Mr. Speaker, yesterday's Washington Times-Herald contained an editorial entitled "Bombs Over Washington." It was of unusual interest to me because of its very kindly reference to the people of my home town of Galveston, Tex.

It points to Galvestonians as people who have learned to conquer the elements and who have developed the type of intestinal fortitude which prompts them to remain at home among their friends and kindred spirits whenever there is disaster, or threat of disaster.

Possibly the author of the editorial overdrew the picture slightly. I do not hesitate to recognize people who leave when the hurricane threatens. However, the real old-timers, the ones who built the city and who now maintain it, have learned that there is nothing in a hurricane to cause fear provided you prepare for it.

The spirit of Galveston may well be commended to the people of Washington, or to the people of any other city, as an example of how to behave in time of trouble.

The editorial is appended hereto with appreciation to the Times-Herald:

BOMBS OVER WASHINGTON

How do you think you will behave if the day actually comes that the Russians are over the Capitol dome with the H-bomb?

IT CAN HAPPEN

Thanks to American and British traitors, that's a question we must now ask ourselves. These traitors have armed the Russians with bomb know-how. And incompetents in the White House, State Department, and elsewhere have armed the Russians with the idea that the United States of America will be a soft touch.

As a result here we are, less than 5 years away from the biggest and most terrible war in all human experience, with the President of the United States of America blustering about how tough he is going to be with Stalin hereafter, and the rest of us wondering when and how an even worse war than ever will crash down.

It is obvious that in any such war this beautiful and pleasant city of Washington will be on the front line. And if what the scientists say is true, just one H-bomb will toss the whole town into the trash heap of history.

That is why, every now and then, somebody up on Capitol Hill brings up the subject of an alternate capital of the Republic, and that is why everybody in town knows the ill-kept secret that the Department of Defense is working on just such a proposition.

In the event of war, plain common sense dictates that our military forces must be able to carry on, no matter what happens, and to do that they must have secret and secure places from which to run the fighting.

But as for the President, Congress, and all the rest of us, things are a little different. All of us have to stay here, bombs or no bombs.

For Washington is not only a city. It is a symbol.

WHAT IF YOU RUN?

If this city and all of us in it were wiped out by an H-bomb, what of it? The Republic could still win its war and put together another Federal city wherever, however, and whenever it might choose. The destruction of Washington would be a curable disaster, and no doubt the tears would be dried quicker than we in our vanity might now think.

Every now and then something comes along to remind that man does not live by bread alone, and that when he tries to, he doesn't even get to keep the bread for very long.

It may be unpleasant to think about, but just the same, let's face it. We all die at least once. And nothing rings with more truth than the old saying that a coward dies a thousand times.

Just think how many times you would die if, in the event of war, you really had left Washington to hide in the Ozarks as some so lightly say now they will.

This country wasn't built by people of such a stripe, nor will it survive its present troubles if people of such a stripe set its fashion of thought and behavior. And for better or worse, Washington sets the fashion when a war is on, because the Nation cannot help but watch this city night and day for news of the struggle. So let's face it. In the event of Russian bombers over the Capitol, nobody can leave this town.

For the instinct of survival, we offer you the real American case of Galveston, Tex.

THE INSTINCT OF SURVIVAL

Galveston is right out on an exposed flat point at the edge of the Gulf of Mexico. It is low on the water and cut off from the mainland except by a causeway system. And nature has done all it could to run the Galvestonians away.

On September 8, 1900, a hurricane and tidal wave killed 6,000 of them and devastated the property of nearly all. On August 17, 1914, another hurricane killed 275 more, with heavy property loss.

Hardly a year goes by that Galveston escapes threats of some kind of natural disaster. Every time there is a storm, high water backs up in the channel and reminds the whole town how easily another two-foot lift in the sea could make an end to everything.

What do they do about it? They work hard and build seawalls. But that is not all.

In Galveston there is a rule: You can cross that causeway to the mainland anytime, unless the weather bureau has run up a storm warning. If you cross the causeway then, just keep on going.

For if you come back to town after the danger has passed, you are dead so far as Galveston is concerned. Nobody will do business with you or even speak. They won't even let their children marry your children. They are not talky tough about it. They just forget you or any of your family have ever lived. Consequently, cowardice is seldom seen in Galveston and the city continues to survive the sea.

That's a true story and it is one Americans can understand. We'd better have the Galveston spirit here in these times or it won't matter whether the Russians bother to drop an H-bomb on us.

On the other hand, with the Galveston spirit we can't lose. The place to beat the Russians is in Washington. And that goes all ways at once in cold war or hot.

Address of Hon. John J. Foley on Communism

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include excerpts from a stirring and thrilling address delivered recently by Attorney John J. Foley, former justice of one of the district courts of Massachusetts, before the officers, members, and friends of the William P. Connery, Jr., Post, No. 6, the American Legion, of his home city at their annual banquet. The speaker stressed the dangers of communism and urged his audience to combat this spreading ideology.

The excerpts follow:

CONFIDENCE IS NEEDED

Tomorrow the Nation celebrates the birthday of a man termed, "The Father of Our Country"—born in 1732 and who passed

away 151 years ago. His home in Mount Vernon is virtually a shrine and visited by thousands each year. The messages he left for the world were filled with the hope of peace, but the moving of events has left this hope unfulfilled.

It was only 36 years after the conclusion of the Revolutionary War that we were engaged in the War of 1812. Fifty-nine years later this Nation was nearly torn asunder by the War Between the States. Thirty-three years later we were engaged in the Spanish-American War. After that, only 19 years elapsed when we found ourselves in the First World War, sometimes called the war to end all wars; yet 23 years later we were engaged in the Second World War.

Certainly the record of so-called civilization is pretty poor. Wars don't just happen. They result from the ideas of men, and history proves that it is the ideas of a small group of men that result in such turmoil and bring such horror to millions. It requires no argument to prove to you that there has been something wrong with the thinking and philosophy of the so-called leaders which results in such a black record as that which I have outlined above.

The thinking and philosophy that caused these wars were known. Yet, despite the knowledge of such philosophies, the people themselves did nothing to prevent the trouble which resulted. There seemed to be an inertia among the people—a laziness. Probably it resulted from their desire for rest and quiet after each conflict, and as a result it left those with the dangerous philosophies free to bring about their harmful doings.

At the conclusion of World War I, some men and women of noble purpose tried to construct a strong organization that would avert future wars. The League of Nations was organized by men who saw the ravages of war—men who were willing to devote the rest of their lives on this earth to making that League strong and workable. Woodrow Wilson, President and Commander in Chief, a man possessed of a great and pure mind and with a vision of the future, literally worked himself into his grave in an attempt to breathe life into the League.

DISLOYALTY MUST GO

But because of narrow, picayunish and personal reasons on the part of a powerful group in this country, who were uttering catch phrases, Wilson's great attempt at peace died a-borning. Although our country was then and is now very young, it was extremely powerful, and the League had no chance to live without the cooperation of America. Time moved on and with in came the changes in transportation which meant that our protection of the Atlantic and Pacific oceans amounted to almost nothing.

Not too many years before World War II, a man named Hitler began to make great strides in the German nation, a nation whose susceptability to war-mongering is perhaps the weakest link in its nature. Long before the war began, Hitler indicated that he was a bold and immoral man. He published his famous book, "Mein Kampf," wherein he boasted of the super-race and preaching the gospel of the destruction of men who were not wanted and telling the world that the way to accomplish the results that he and his group wanted was to tell lies and that when those lies failed to tell bigger lies and to keep on lying.

The book became a best seller. People laughed and didn't take it seriously. But when the youth of the recent war were taken from their homes, schools, shops, factories, and stores to be sent overseas to fight, people didn't laugh. The toll in blood and tears and heartaches never can be sufficiently described.

The shooting stopped in 1945. Service men and women and civilians were weary of war and they wanted peace and rest and contentment. The young sought and found temporary surcease in rounds of pleasure. Nearly all were seeking some sort of a soothing sirup for frayed nerves and tired minds and bodies. Five years have now elapsed and most of the people have returned into the grooves of regular living and attempts have been made to return to normalcy.

All these attempts have failed and the condition of the country and the entire world is so bad that it has been described as that of developing into a cold war. There has never existed since the shooting stopped any feeling of warmth and neighborliness or good will between our Nation and that of the Soviet Union. The Soviet Union has vetoed in the United Nations every measure sought to bring about world peace.

They have refused to enter into a workable plan for the control of atomic weapons, such as the Baruch plan; they tried to starve the people of Germany into communism; they have seized countries and butchered and murdered those who tried to thwart their plans. Why has all this happened? It is not merely coincidental. There's a reason back of all this. The reason is an idea—an ideology, a philosophy.

AMERICANS MUST UNITE

Is it another dangerous philosophy? Were the other philosophies that we paid little attention to the kind that led us into dangerous wars? What are we going to do about it? Is it near our own homes? Is it right here in Lynn? Can we afford to ignore it or must we root it out and choke it to death? What is its source? Is it new?

It gained its origin from the brain of a German named Karl Marx, whose father was a lawyer, but who descended from a long line of rabbis. He was born in Germany, 132 years ago. He became a member of the Christian sects, but admittedly not for religious but for political and business. He studied at the University of Berlin and was greatly attracted to the philosophy of a man named Hegel. He turned to others such as Ludwig Feuerbach, whose philosophy was to destroy Christianity by creating in its place a full-fledged materialistic philosophy.

It is this Marx that the present-day communistic leaders deify. Marx issued a paper that you all have heard of and probably very few have read. It is entitled the "Communist Manifesto"—the bible of communism. In it he said: "It may be taken for granted that bloody conflicts are coming." He and other Communist leaders have preached the gospel that in order to attain their means there must never be any limit to chicanery, duplicity, and deviltry.

Another leader of their cause was known as Lenin who said: "It is necessary to use any ruse, cunning, unlawful method, evasion, concealment of the truth." Later Stalin added to this by writing: "Dictatorship means nothing more or less than the power which directly rests on violence, which is not limited by any laws or restricted by any absolute rules." These men admittedly believe in no Supreme Being, and Marx has written, "Man is the supreme being for man."

They, the same as Hitler, have told the world that they have no morals; that they consider no duties or responsibilities nor anything else, except that they will go to any lengths to attain the supremacy of communism. In a recent book by Mr. C. L. Sulzberger called Moscow Again Talks Peace But Fails To Act, he describes Lenin as the pope of bolshevism and he quotes Lenin as saying: "There is no alternative left. Either the Soviet Government triumphs in every advanced country in the world or else."

TO CURB A KNOWN EVIL

He also quotes Lenin as saying "America is strong, everybody is now in debt to her, she is being more and more hated, she is robbing everybody, she cannot come to terms with Europe." That comes from Lenin, whose mummified body is now in a shrine in Soviet Russia. Certainly Lenin had a real hatred for our own country. In his book Mr. Sulzberger also gave the opinion that Soviet Russia believes it is winning the cold war and that its whole purpose is to undermine western civilization and to weaken it until the time is right for them to attempt to attain their ends which would mean the end of America.

Do you recall back 15 or 20 years ago when the so-called intelligentsia would meet in fashionable homes and clubs, earning for themselves the descriptive phrase, "parlor pinks"? Most of them were educated fools. No proper description can be given in detail how they became attracted to such an ungodly philosophy. But we do know they were going about the country with an air of superiority, spilling words and phrases all of which were critical to our form of government and life. They and the Communists of today were and are rather smiled at in the same manner as Hitler was smiled at in the 1930's.

There are individuals, some of whom are leaders in our national life, who today are fomenting the same unrest within our own borders. Recent disclosure of the conviction of Mr. Hiss by a jury's verdict; the new trial of Judith Coplon for another offense after one conviction; the exposure of Dr. Klaus Fuchs, who has been active with atomic hydrogen weapons; the communistic leanings of the leaders of a great electrical union in our own city as well as the traces of disloyalty by irresponsible citizens has become quite disturbing. These people have openly criticized our form of government—the one that twice had come to the rescue of the world during the two world wars.

Disloyalty within our land must not be tolerated. Fortunately, the high percentage of our men in public life are fine and loyal—willing to give their all for our country. We must have confidence in them. The American Legion with its tremendous influence can do much. Your duty is great. Made up of persons who have served, you cannot feel your work is complete. It never will be.

We of World War I did our best for the younger generation for whom we fought. But that generation was let in for much sadness, sorrow, and heartache. You'll do much better. For the sake of your children, your country, and for all creation, strike down the menace of communism wherever it stalks. Marx, Engels, Stalin, Molotov, and their kind promised the conquest and the revolution. These personalities wear no labels. They will be smooth and sleek, but in their fanatical minds and merciless hearts there will only be one desire—to take from you and yours the liberties of man and his dignity. In return they will clothe you with the sickle and scythe of slavery and serfdom. This country was built on and has lived on the sublime belief of trust in God. Ask Hi- assistance to the end that a true peace may be had.

National Science Foundation

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. MITCHELL. Mr. Speaker, no one knows what the best possible airplane and the best possible use of atomic energy would mean to civilization.

A better source of energy and a cheaper, faster means of communication could

enlarge immeasurably world understanding and enhance world prosperity.

Coming from a State which has given much to both atomic and aviation development, perhaps I am more conscious than some of the vital need for basic research in science. Only basic research made possible the plutonium plant at Richland and the XB–52, the heavy jet bomber of the future, being built by Boeing in Seattle.

In this intensified scientific age only full utilization of potential scientific brains can keep us as a nation at the head of the scientific parade.

But, as contrasted with this need, basic research in the sciences is extremely inadequate. We have been prone to take for granted the benefits of science and technology. We do not realize that every important benefit has been preceded by long years of research in varied fields of scientific endeavor.

Atomic energy, which figures so prominently in our discussions of national security and welfare, is based upon successive scientific developments stretching back through the last century. Many of the outstanding contributions to scientific research which we exploit in our laboratories and in our industrial establishments today were made by persons who lived in distant lands. The world community of science has been blasted to pieces by war. In discharging the new responsibilities thrust upon this Nation for world leadership and for domestic security and welfare it behooves us to take forthright steps to build up our resources in basic scientific research.

Neither our universities nor many of the young people who attend them can afford to carry on in these fields without some assistance from the Federal Government. Modern research is costly and complex. Its results are not often immediately visible for immediate practical application. The reservoir of scientific talent among the Nation's youth will never be sufficiently tapped unless a scholarship program is put into effect.

The National Science Foundation bill provides for wide geographic application of contracts and scholarships. Representing the largest district in the State of Washington, which contains one of the finest State universities in the country, I believe it is important to register our congressional intent that the principle of geographic distribution be fully observed by the administrators who will be responsible for carrying out the terms of this legislation. Too often in the past there has been an undue concentration of scientific research in a few large universities.

As the Members well know, the question of including social sciences within the terms of this legislation has been the subject of considerable discussion. The present bill does not identify the social sciences as such, but it does not expressly eliminate them. I believe we should also register clearly our congressional intent that the social sciences are entitled to due consideration along with the physical sciences. To some this may be a rather touchy affair, but to me it seems evident that we have a lot to learn in ordering our affairs so that people can live wisely and enjoy the fruits of the physical sciences made possible by basic research.

From the information submitted to the committee by the Budget Bureau, as noted in the committee report, it strikes me that the sums probably required for initiating the program and for conducting it through the next 5 years are extremely modest. I believe the National Science Foundation, under the terms of this bill, will provide a valuable instrument for coordinating and integrating the research programs now carried on in rather a haphazard fashion by various Government agencies.

Mr. Speaker, the National Science Foundation bill, H. R. 4846, should be enacted without further delay. This legislation is long overdue. It has been the subject of considerable study in the Seventy-ninth, Eightieth, and Eighty-first Congresses. Hundreds of well-qualified witnesses have testified as to its urgency.

The failure to establish a National Science Foundation heretofore has reflected sharp differences as to certain of its provisions.

It is my understanding that the committee studying this legislation has attempted to resolve these differences in a way reasonably satisfactory to all parties concerned. Although I have some doubts as to the form of administrative organization proposed in H. R. 4846, I firmly believe that we can no longer afford the luxury of leisurely debate.

The important consideration is that this bill will provide a means for establishing and executing a comprehensive national policy in basic scientific research. It is significant that the Hoover Commission specifically recommended the establishment of the National Science Foundation.

This legislation grows out of the vision of the late President Roosevelt who requested Dr. Vannevar Bush to prepare a report on the subject. This report, submitted in July 1945, was appropriately termed "Science—the Endless Frontier." Science is an endless frontier for advancing human welfare and the security of the Nation. Let us pioneer further advances by passing this bil. for a National Science Foundation.

Dangerous Enemies

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. McDONOUGH. Mr. Speaker, the danger of foreign agents within our land is one of the most serious threats to our national security. These traitors boring from within must be ferreted out and dealt with as criminals and enemies of the United States before they have an opportunity to further damage our security.

The arrest of Dr. Karl Fuchs revealed the shocking extent to which foreign espionage agents have succeeded in stealing information from our most secret and confidential files.

Certainly it is now evident that there can be no further delay in the enactment of needed legislation to enable the Federal Bureau of Investigation to move against these foreign agents and protect our national security effectively.

An editorial in the Hollywood Citizen News of February 4 adequately summed up the situation, and I am including that editorial here now for the serious consideration of the Members of Congress:

DANGEROUS ENEMIES

J. Edgar Hoover, FBI chief, is reported to have told Senators yesterday that Dr. Karl Fuchs, British scientist, has confessed giving Russia vital information on the assembly of the atomic bomb and some data on the super-secret hydrogen bomb.

Dr. Fuchs was arrested in England yesterday by Scotland Yard agents on information supplied by the American FBI. He was charged with giving "unknown" persons information on the atomic bomb on which he had worked in the United States as a member of a British group.

From Dr. Fuchs is believed to have gone to Russia the information that enabled that country to surprise the United States by developing the atomic bomb a year or two ahead of schedule.

The leaks through Dr. Fuchs are presumed to have been far more dangerous to the security of this country than has been the information given by Canadian and American spies.

The distressing information should cause all loyal Americans to do a little thinking and self-questioning.

Are we going to join with Communists who are enemies of this country in opposition to the Mundt-Nixon bill to require that all Communists in this country register as agents of a foreign country?

Are we going to join with Communists in condemning the FBI for obtaining information on treasonable activities through the tapping of telephone lines?

Are we going to work for the Communists in opposing loyalty tests and in opposing the strengthening of our defenses so that we can meet the attacks of the most powerful, the most vicious, the most dishonorable, and the most treacherous dictatorship in the world's history?

Hasn't the time arrived when we should stop being tolerant of Communists who seek to destroy our liberties?

If a war arises between the Stalin dictatorship and the United States we are going to expect the FBI to have such definite information on all Communists in this country that they can quickly be put behind barbed wire before their sabotage does great damage.

Yet the FBI cannot compile accurate lists without resort to every technique of spying.

If Communists are compelled to register, only those will be put on record who openly admit their membership in the Communist Party. This will be worth while but the FBI needs to know every traitor though he does not join the Communist Party.

Surely the time has come for the Eleanor Roosevelts and the Dean Achesons to stop defending the Alger Hisses after they have been convicted of being traitors to this country.

Americans have a priceless liberty to defend. The kind of life the Russian slaves live is less desirable than death to Americans.

Only death awaits one in Russia who dares whisper that he doesn't like the way the dictators runs his country.

In this country we give everyone a fair trial. Communists on trial cost the country millions of dollars annually. Their funds to employ attorneys to take the time of our courts seem inexhaustible. None would change our conception of fair trials. But we should insist that traitors be treated as criminals.

We should insist that the work of the congressional and legislative committees on un-American activities be pushed. We should insist that all the Government support called for by the FBI be granted.

We don't want war. Let none of the Communist shouters for peace deceive us. But if to do our best to defend our liberties we have to take on war we must accept it. The chances are that if we are constantly alert to safeguard our liberties we shall be able to avoid war.

Certainly we cannot avoid war by refusing to recognize the fifth column that is among us.

Live and Let Live

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. SABATH. Mr. Speaker, under unanimous consent, I insert a worthy article in the RECORD as it appeared in the Chicago Sun-Times under date of February 27, 1950.

As President Truman stated in his Washington's Birthday speech on foreign policy, "free nations must be prepared to defend themselves, but they know that another great war could destroy victor and vanquished alike."

I suggest that the entire membership read this editorial on a most timely subject, and heed the contents thereof.

The editorial follows:

IS DISARMAMENT POSSIBLE?

In his Washington's Birthday speech on foreign policy President Truman struck a moderate note, evidently intended to cool off public opinion excited by the hydrogen bomb.

Free nations must be prepared to defend themselves, Mr. Truman said, but they know that another great war could destroy victor and vanquished alike.

"Consequently we in the United States are doing and will continue to do all that lies within our power to prevent the horror of another war. We are working for the reduction of armaments and the control of weapons of mass destruction."

Applying this thought to the problems of atomic disarmament, Mr. Truman steered clear of dogmatic insistence upon the Baruch plan. "We ask only for a plan that provides an effective, workable system" of control, he said.

When it comes to methods of "working for the reduction of armaments," the President apparently is not thinking of a direct approach to Russia looking toward negotiation that might make disarmament possible. The State Department this week reiterated its determination not to seek such negotiation, on the ground that if it failed, public opinion might be led to think of "a more desperate alternative."

The assumption that negotiation would inevitably fail may perhaps be worth reexamination.

Some people regard the structure and ideology of the Soviet Union as inherently opposed to the kind of international inspection that is needed to make a disarmament pact workable.

The Soviet Union, however, has the same government today which it had in the twenties and thirties. It is worth remembering that, prior to the rise of Hitler, the two leading advocates of effective disarmament were the United States and the Soviet Union.

For about 10 years between the two wars, serious efforts were made, inside and outside the League of Nations, to bring about general disarmament. Hitler, not Russia, torpedoed these efforts in the end. One American participant in those efforts was Allen W. Dulles, brother of the Republican leader, John Foster Dulles. Allen Dulles wrote, in Foreign Affairs for January 1947:

"On every possible occasion, from the Genoa conference in 1922 to the Geneva conference in 1932–34, the Soviet Union energetically pressed for total disarmament; and when she found that no states were prepared to follow her in such a radical step, she advocated a proportionate reduction of armaments."

Russia's proposal, Dulles reminds us, included provision for an international commission of control which would be "entitled to carry out investigations on the spot in the event of reasonable suspicion of a breach of the present convention."

Russia wanted the disarmament commission to be represented by local subcommissions stationed in every signatory state. Decisions were to be reached by majority vote (i. e., no veto), and were to be binding on all signatories.

These proposals, says Dulles, "were among the most far reaching in respect of the limitation of sovereign authority that any country has ever suggested."

It does not follow, of course, that what Russia was willing to do in 1932 she would be ready to do today. Her expansionist record since 1945 and her breach of numerous agreements have created fear and distrust which the mere signing of a pact would not of itself dispel.

But the full record of Soviet policy since 1917 suggests that there is nothing inherent in the ideology or structure of the Soviet state which makes impossible a disarmament pact that could be checked and supervised by effective international inspection.

The Communist ideology holds that there is something inherent in the ideology and structure of capitalist states which makes disarmament impossible. This is nonsense. It also may be nonsense to assume that the Soviet state is indissolubly wedded to military power and nationalist secrecy.

If both systems can arrive at the basic decision that they had better live and let live—just for the sake of mankind's survival on this planet—then atomic disarmament and general disarmament may become possible.

An effort of true statesmanship in this direction would surely be preferable to the prospect of prolonged cold war constantly moving toward hot war.

How Can We Win Against Communism in Asia When England Gives American-Owned Air Fleet to Chinese Reds?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of February 24, 1950:

HOW CAN WE WIN?

Now that the United States and Britain have recognized the French-sponsored Bao Dai regime in Indochina, French military circles are asking for a common western policy in the Far East, as well as immediate military aid.

A list of the equipment wanted, including light tanks, jeeps, reconnaissance cars, and small-arms ammunition, has been given to our Government, with an additional request for a $100,000,000 economic-rehabilitation loan.

Since we are here being asked to buy into a war, it will be well to get all the facts on the table. We ought to know what we're getting into, and just what chance, if any, we have to win. From this distance, the chance looks dim.

The French, having had an army of 160,000 men in the field for 3 years, have inflicted no serious injury to Ho Chi-minh's Communist forces. Now, according to a Paris report to the New York Times, "an effective blockade of Communist China" is regarded as one of the essentials if victory is to be achieved.

The idea of a blockade of Communist China can be discarded, now that the British court in Hong Kong has awarded the Red government at Peiping 70 transport and passenger planes which Major General Chennault had purchased from the Chinese Nationalists. That decision probably spells the doom of Formosa, as well as killing any prospect of saving Indochina from the Reds.

Some heads should be examined in the State Department and the British foreign office. Britain recognized the Chinese Reds, and now has given them the planes they need to continue their campaign of aggression. The United States has recognized the Bao Dai forces in Indochina, and now is asked to put up the money and the arms to defeat the forces of Ho Chin-minh, which are said to have the active support of the Chinese Reds. Russia, of course, is backing both Red forces.

How can the West hope to win under this kind of leadership?

More Gold Diggers

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. LEMKE. Mr. Speaker, few people realize the extent to which the American people are taxed for gifts to foreign nations. We are again about to appropriate several billions for foreign sponging nations under the Marshall plan. This in order to further deplete our natural resources at the expense of the American taxpayer.

Great Britain has become the most persistent gold digger, and our poor old Uncle Sam will have his leg pulled for billions more under the European recovery camouflage. The fact is we have made bums out of some European people and debauched their nations through our stupid foreign policy.

The time has come that we look after our own Nation—not foreign nations. Let us get rid of the foreign ideologies in

the executive branch of our Government. Let us give Dean Acheson and Paul Hoffman a permanent passport to the European nations that they are more interested in than their own.

Take the profits out of the Marshall plan, and there would be no Marshall plan, and there would be no Bill Claytons, no Rockefellers, and no Harrimans for the Marshall plan.

As part of my remarks, I enclose herewith a letter I have received from Mr. James M. Witherow, a resident of Moorhead, Minn.:

MOORHEAD, MINN., *February 13, 1950.*

Hon. WILLIAM LEMKE,
House Office Building,
Washington, D. C.

DEAR MR. LEMKE: We in the Northwest appreciate the efforts of you and some of your associates to keep the expenses of the Federal Government within the taxpaying ability of the people as a whole.

But when we consider the unreasonable number of individuals with which the different departments are staffed, and the extravagant practices in buying with percentages paid to the friends of the administration, we are very much hurt.

This is particularly true with reference to foreign aids to European countries, whose representatives spend a great deal of money and time entertaining friendly Congressmen and Senators, who then vote recklessly for the money requested under the Marshall plan, without paying the slightest attention to the reports of observers sent to Europe for that purpose. From these reporters, we learn that the officeholders of France have been doubled at greatly advanced salaries, with large sums paid out in entertainments and dissipation, while the American Government is asked to spend the money for the military defenses of France, with Belgium, Austria, Poland, and Italy it is the same story. In England, the people have gone wild with drinking and gambling on dogs and ponies. H. J. Taylor reports these gambling expenditures as being from two and a half to four billion dollars per year, and about three hundred Englishmen spend their time as touts selling gambling tickets on the streets of the cities, yet not a single Congressman who went over to Europe to investigate was able to report a single instance although no one in England has denied the allegation. Even Sir Stafford Cripps admits it in bringing in a 25-cent tax on the winnings. Just why the interests of the taxpayers of the United States are neglected in this important matter is something which no one yet has endeavored to explain.

There are many honest industrious Englishman who are entitled to friendly assistance, but the present policy of sending the money of the taxpayers of the United States to be dissipated by the vicious is imposing a greater financial burden upon them and their posterity than the results of the war, because it is undermining their moral habits and depriving them of many of the necessities of daily life.

This is one of the issues which the American people feel justified in placing before the people regardless of party affiliations: Just who are these Congressmen really representing, the taxpayers of the United States or the drunkards and gamblers of Europe? Kindly see how many of them can truly answer this serious question, the correctness of which we must ultimately determine from the votes which they cast when the appropriations were before the House on roll call.

Very truly yours,

JAMES M. WITHEROW.

American Bankers Association To Fight Increase in United States Lending Power

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. LeFEVRE. Mr. Speaker, under unanimous consent, I include in the RECORD an article from yesterday's New York Herald Tribune.

Mr. Speaker, I think the president of the American Bankers Association has done a great service to the people by bringing to their attention the dangers in the centralization of credit in the hands of Federal Government. The examples of this type of financing which we find in Europe should be a sufficient lesson to us who talk of preserving private enterprise. Certainly, Mr. Peterson, the president of American Bankers Association, was very fair in his criticism in that he likewise takes a crack at the banks in their willingness to evade their full share of the risks taken by becoming involved in Government guaranteed loans. Bankers should take the same full share of risks which the businessman must take.

Certainly the tendency to extend Government financing is increasing. I do not believe the average person realizes to what a degree the new housing bill for middle-income families will seriously injure our private loaning institutions. This legislation, if passed, provides for direct Federal loans to a special class—cooperative and nonprofit companies. The cooperative feature is merely a cloak to cover the primary purpose which is the formation of giant nonprofit corporations featuring nonowner occupancy of housing at the expense of all the taxpayers and especially those who own their own homes. To my way of thinking, the $2,000,000,000 involved is simply putting us $2,000,000,000 nearer socialization. This legislation is a severe blow to the veterans and all other Americans who have already invested in housing. The veterans have received over 1,600,000 guaranteed loans under the GI bill and at least that number of loans under the FHA-insured mortgage plan. They are paying interest at the rate of 4 percent or 4½ percent depending upon the type of mortgage. The proposed bill lowers the interest rate to 3 percent. This is unfair to the veterans and home owners and will only promote further confusion.

The article follows:

AMERICAN BANKERS ASSOCIATION TO FIGHT INCREASE IN UNITED STATES LENDING POWER—PETERSON ASSAILS DRIFT TO NATIONALIZATION OF CREDIT

Asserting that a host of legislation providing for more Government loans and credit guaranties is now before Congress, F. Raymond Peterson, chairman of the board of First National Bank & Trust Co., of Paterson, N. J., announced last night that the American Bankers Association, of which he is president, would "oppose these unwarranted uses of taxpayers' money and credit."

In an address at the annual dinner meeting of the Hudson County chapter of the American Institute of Banking in the Plaza Hotel, Jersey City, Mr. Peterson declared: "We are treading perhaps unwittingly on dangerous social and economic ground if the administration of credit is centralized in the hands of the Federal Government.

"Centralization of credit administration in the hands of any government is one of the trappings of the socialism and communism abroad, against which we in this country are spending billions of dollars for defense."

The banker asserted that in recent years the Nation has been confronted with an ever increasing trend toward nationalization of credit.

He pointed out that loans, loan guaranties, and credit commitments of more than 20 Government lending agencies now exceed $26,000,000,000.

"I think no one will dispute the point that loans made directly to borrowers by agencies of the Federal Government are in effect socialized credit," Mr. Peterson said.

"Many of them are uneconomic loans. There is little chance of their ever being repaid. Some of them have been outstanding on the books of some Government agencies for more than 15 years and are still unpaid. Loans by Government agencies to sustain insolvent, dying business are a dissipation of public funds."

Mr. Peterson stated, however, that far more subtle than direct socialization of credit was the influence of Government guaranty of loans made by private lending institutions.

"The fundamental purpose of banking is to take credit risks," the ABA head maintained. "It is not to evade the risk or to attempt to share it with the Government. Government-guaranteed loans are loans in which the lender seeks to divest himself of the risk. Banking alone must either accept or reject that risk. It ought not to be shared with the taxpayers."

Winthrop's Brotherhood Observance

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address I delivered at Winthrop, Mass., at the National Brotherhood Observance on Thursday, February 23, 1950:

I wish that I could extend my personal greetings to each one of the 65 organizations participating in Winthrop Brotherhood Week.

Sixty-five cooperating agencies in one township is eloquent proof that your community means what it says, in its dedication to the goal of human fellowship.

In the larger cities of the United States there are racial and religious ghettos into which people withdraw after their day's work is done. Wherever people congregate to earn their daily bread, however, whether in stores, factories, or on the farms, they learn to respect and to depend upon one another in the teamwork necessary to carry out a common assignment.

This was clearly revealed to us during the recent war. Men and women of different

backgrounds and different beliefs learned to serve together, and that was an illuminating experience for all. In time of common peril, there is no place for affectations of superiority. People need each other as never before and the hair-splitting differences of dogma and ritual melt away as they face danger and suffering and death together.

The cherished memory of any person who went through the ordeal of war is the human comradeship he found with men of all races and creeds. The pity of it is that so many people experience the fellowship of humanity only under the pressure of stern emergencies. And then they withdrew into the ghettos where all are of the same race or go to the same church.' This social and spiritual inbreeding limits a person's outlook. It builds up invisible walls, made up of ignorance and fear and misunderstanding, which are nothing but the ghostly creations of neurotic minds.

Democracy had its beginnings in the small towns of the United States where it is possible for most people to come together at town meeting. Just as we assemble here tonight in a larger sense to affirm our belief in racial and religious tolerance. Democracy and religion are basic to the American faith. Our society contradicts itself when it exalts one and rejects the other. For both teach and must practice the brotherhood of man under the Fatherhood of God. It is not enough for a man to be devout in prayer at church services or in works of charity if he discriminates against others at his work or when he exercises his franchise of the vote, because they choose to worship God in a different manner. Likewise, our democracy is failing itself when it denies political or social equality to any man because of his racial origin.

In our century we have seen clever but unscrupulous men try to turn the clock back to the days of ignorance and savagery. They have used the great communication facilities to preach fear and hate, to set people against each other in order to further their own power-mad ambitions.

After the First World War, a few Americans, concerned by this dangerous trend, organized a movement to offset this destructive program of hate by one of constructive understanding and good will. They created the National Conference of Christians and Jews. Its purpose is to dispel the fog of prejudice with the sunlight of truth. Their task is one of heroic proportions, but their success might well be the one factor which can save the world. For today the problem is not how to overcome the forces of nature, but how to overcome the weaknesses in man himself.

One of the organization's chief weapons is the trio teams of minister-priest-rabbi, or of laymen of the three faiths who appear before audiences from coast to coast. The first pilgrimage tour was made in 1933 by Father John Ross, Rabbi Morris Lazaron, and Dr. Everett Clinchy who was president of the council at that time. Advocating justice, amity, and understanding among Protestants, Catholics, and Jews, this team was on the road for 6 weeks, traveling 9,000 miles. Three years later, 25 such traveling teams covered a total of 33,000 miles. Today, the NCCJ is operating from hundreds of American communities and its work is becoming increasingly effective.

During Brotherhood Week, which is observed each year at this time, we see visible evidence of the progress that has been made, and we are reminded of the part each one of us can play in removing bigotry and intolerance from that greater society of which we are all fellow members.

Happily, this week embraces the birthday of George Washington, the Father of our Country, who did so much by his example to show us that we must live for others as well as for ourselves.

Neighborliness was the one factor which enabled the first settlers to survive and make progress as they faced the harsh wilderness of the New World. Even before governments were instituted it was the friendly and cooperative help extended from neighbor to neighbor that served as a support and protection for one another.

As the pioneers moved westward, mutual dependence was imperative. At barn raisings and quilting bees people pitched in to help. The greatest virtue of that period was that a man was judged by his acts and not by his race or his creed.

The Declaration of Independence and the Constitution of the United States are documents unique in human history. They not only set forth the aspirations and the forms of government, they express the rich and rewarding experience of humble men and women who were creating a society born of mutual effort and mutual confidence. The oppressed of all lands came here to make a new beginning, not at the sacrifice of their particular faith or culture but in a heart-warming recognition that there is a place for all. And so our conception of liberty has come to mean freedom of expression as long as it does not take freedom from others.

There is no state religion in our country, favored over all others. There is no special race or class. And there never will be if we expose at every turn those who spread false stories about our neighbors.

It all begins in a harmless way, with a choice bit of gossip, perhaps. And the person to whom it is told cannot resist the temptation to add something to it to make it more interesting before he passes it on to another. Before the false rumor has completed its devious course grave harm is done to the character of a person, a race, or a creed.

And then, when confronted with the wrong they have helped to propagate, people try to pretend that they did not assist in the slander. Or they try to excuse themselves by saying that they meant no harm. But injustice has been done beyond correction.

This is all the more amazing when one considers that millions of our people have had the advantage of a college education which deals in facts and teaches them to separate the true from the false. But how many spike a rumor at the beginning by demanding to know the basis of any allegation?

I am reminded of the unfortunate beating of a young Jewish boy recently, the orphaned son of a man who gave his life for his country in World War II. He was assaulted by some of his young non-Jewish neighbors, which compounds the tragedy. For it reflects the poisonous atmosphere in the homes from which they come. Children are innocent. It is not in their nature to be cruel to their playmates because of differences in race or creed. When they develop unsocial attitudes the blame can be placed squarely on their delinquent parents. This should be a caution to all of us. Youngsters are impressionable, they absorb unthinkingly. Even words spoken lightly between father and mother in the presence of a child concerning a religion or a race may distort that child's viewpoint.

As it did in the case of the youngsters who beat the little Jewish boy. With a tender understanding of the victim's plight and the effect this injustice might have on him as he grew up, Oscar J. Toye, Massachusetts Department Commander of the Jewish War Veterans wrote him an exceptional letter which should be taken to heart by all of us because it is a major contribution to the goal of tolerance in our confused and wayward times. Mr. Toye wrote in part, and I quote: "Your job and mine is to see to it that the few people who do not understand America, do not get hold of it and spoil it. I am very much afraid that because of these boys who beat you and called you 'Jew' you might be led to believe that you were assaulted by Christians. I want you to say to yourself that these boys were not Christians. Christians do not hate others or beat them. The Christian religion, like the Jewish religion, teaches love for one another. I do not care of what parentage these boys are, or to what church they go. When they did what they did to you, they took themselves out of the Christian faith and out of any other religion, and they have no further right to call themselves Christian."

These are plain and humble words, spoken with the simplicity that is truth itself. They strike home to conscience. If, in the secret recesses of our hearts we confess to ourselves that we, too, at some time or another, have been guilty of prejudice, let us pledge this day forth to clean ourselves of such corruption. For the harm we do to others may also be done unto ourselves in payment of the evil we set in motion.

Catholics and Protestants, and people from the multitude of races which compose our Nation, have, in their turn, suffered from intolerance.

It is not my purpose to dwell on these negative aspects, except that they should warn us to control those careless remarks which do injury to others.

Tonight we are paying homage to the ideal of brotherhood. This is a positive and uplifting thought not simply one that refrains from intolerance but one that inspires us to build a confident fellowship in its place.

For the unity of our own Nation, and as an example to others who look to us for hope and guidance, I like to think of that sublime example among many, that took place during World War II.

It was on the United States transport *Dorchester,* sinking fast after suffering a mortal wound. The ship was crowded and there were not enough life preservers to go around. The loaded lifeboats were pulling away from the ship but four men still remained on the sloping deck. They were chaplains—two Protestant, one Catholic, and one Jew. They had given away their own life belts so that others might be saved. And these four chaplains stood on the deck, serene and unafraid as they joined in prayer before they went down to a watery grave together.

The prayers that they said were different in wording, but they were directed to the one God of all. Not for the four clergymen who were going to their deaths, but for the men in the boats who might be saved. There was no time on that slanting deck for smallness of mind or spirit.

The United States is the Nation most representative of humanity in the whole of recorded history. We have opened our arms to the oppressed from all over the world. Wherever you travel in this broad land of ours stop in the main square and look at the names of those who gave up their young lives to preserve and extend the belief that we have in one another. Men of all religions and men of no religion, men whose ancestors emigrated from every nation to find freedom of conscience here.

They offered up their lives not only to win a war but to win the opportunity for us, the living, to build a better world, beginning in our own homes and our own communities.

We cannot repay their sacrifices by cultivating the rank weeds of discrimination for that is the poor husbandry that leads to moral bankruptcy.

That is the way the Communists in Moscow hope we follow to our own undoing. But they do not rely on this alone. Their agents in this country are actively engaged in promoting dissension at every opportunity. They plant lies and rumors about religions and racial groups, trusting that we will pick them up and spread them about others, not knowing that some are directed against ourselves. This is the technique that is calculated to splinter American faith and unity, and make us the unwitting instruments of our own destruction.

Unfortunately, there are some people who bite at the bait. Our job is to enlighten them with the knowledge that they are only playing into the hands of communism.

Maybe this will teach them to hold their tongues and not be the carriers of every vicious rumor.

If not, you and I and the overwhelming majority of fair-minded Americans must make it our business to nail every lie at its source.

We are a moral people. I think most of us try to observe the Golden Rule. And we are the only nation capable of rallying the decent elements in this world to resist and overcome the spreading vice of communism. Already the cynics of the Kremlin wield great power. By alternating falsehoods with force, they first enslave their own people. And they have practiced this divide-and-conquer method in every country they have taken over. Do not underestimate these peddlers of hate. Even more than the Nazis, they have perfected the black art of propaganda, both in the open and undercover. They are constantly at work undermining the intelligence and character of people by feeding the fires of passion and prejudice.

We may expect that this subversive campaign will be stepped up within our own country. How are we prepared to offset it?

Not by shifting the burden of individual responsibility to others. Democracy is not built that way. Totalitarianism is. The high resolve to which we pledge ourselves this night will mean nothing if it is not translated into effective action 365 days a year.

There is a cold war going on in the world of today, and the first objective of the aggressors is to win control of the minds of men. If they succeed, all else will fall in line easily and completely.

The Communist high command is using every psychological trick to deceive and ensnare us. If we are not alert to this danger and are not prepared to stop unfounded rumors in their tracks then we shall be taken in.

At the same time we cannot afford to put ourselves into the strait-jacket of totalitarianism at home in order to mobilize against the encroachment of aggression from abroad, for that would be self-defeating.

The only answer to communism is a dynamic democracy. That is a value not manufactured by our Government. It is made up of the actions and attitudes of tens of millions of Americans, not only preached but practiced in their daily lives.

The Government must depend on you to show respect and understanding of your fellow citizens before it can hope to carry the Voice of America to other peoples. Our one great hope is to reach the people who are quarantined from truth behind the iron curtain and convince them that we want brotherhood among nations. But first we must prove to them that we have achieved it here—in the United States.

Unity at home does not require uniformity. We want a diversity of religious and cultural expression, for out of this richness and variety have come our inspiring development as a Nation.

We are free because we are tolerant.

And because we know that all races are members of the one human family who will someday meet in eternal brotherhood before the Creator of all.

Never before have we felt the need for one another as in this age. Scientific progress has taken the lead over man's ability to achieve that harmony in human relationships which must govern the terrifying instruments of material power.

The race is on.

Which will win?

Unbridled power in the hands of evil men or power employed for the benefit of all?

The choice lies with us the people of the world. As each individual contributes to the cause of human understanding, he adds a part of his spirit to the voice of mankind calling for an end to war and cruelty and exploitation. This is the vital force which can dissolve any injustice.

Strangely enough, intolerance is found more often in large cities than in small communities. Where people are crowded together they seem to know less of each other. Take a big apartment house where people may live next door to each other, but only meet in the elevator or pass by in the hall. They may do this for years without any spirit of neighborliness developing. There is no lonelier feeling than that of a stranger in a big city.

President Truman has stated that only a moral and spiritual awakening can save the world from disaster. In his words, and I quote: "The Protestant church, the Catholic church, and the Jewish synagogue, bound together in the American unity of brotherhood, must provide the shock forces to accomplish this moral and spiritual awakening. No other agency can do it. Unless it is done we are headed for the disaster we deserve."

The paradox of modern society is that it possesses more materials and tools and technical know-how than any other age in history. It has the things with which to produce a better life for all men, free from poverty and the worries which attend it.

What then is holding us back from stepping over the threshold to a new era of peace and prosperity?

There are willful men who make a practice of sowing the seeds of discontent but they alone could not prevail if we, the people, put our hearts and souls to work, for a change, instead of limiting them to a 1-hour exercise on Sunday with those of our own kind.

It is not enough to accept the principle of brotherhood during 1 week of the year. Only as we put it into action at home, in the office, in industrial contacts, in social and political life, in national and international relations, can it become a movement that will cleanse the world of its tensions and its fears.

I do not share the hysterical opinion that all Russians, for instance, are bent on destroying us. They, in turn, have a distorted outlook on the rest of the world because they are not allowed to communicate with other people. When the day comes that their leaders can no longer isolate them, we and they will discover that we have very much in common as fellow human beings.

To hasten that day you and I must make the beginning by lifting the iron curtain of intolerance from our own hearts.

This night marks that beginning for some.

Toward the goal of personal happiness in the society of others and a world at peace.

Counting for the Census

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. WEICHEL. Mr. Speaker, the taking of the great American census is about to begin and the Bureau of the Census has a vast organization throughout the United States. There is included herewith an editorial from Spencer Canary, editor of the Daily Sentinel-Tribune, of Bowling Green, Ohio, covering the manner of taking the census. Surely a city of 8,000 permanent residents should not be set up as a city with a population of 13,000 because of the fact that there are some 5,000 students temporarily in the community. Such a system would be counting the students in the colleges and universities twice in the American census. It has been the understanding of Congress that the effort is to get the actual population and not an inflated one. I believe that the Bureau of the Census should make known to Congress the method by which it is taking the census for if this double counting is part of the pattern, of what actual good is such a census for any purpose? This census authorized by Congress should be of sufficient importance that the Secretary of Commerce, the Bureau of the Census, and everyone concerned should do it on a common-sense basis and not be a process of counting people as domiciled in two communities at the same time where it is actually known that they are temporarily there as students.

MISCOUNTING OUR POPULATION

Speaking before the Rotary Club here Thursday night, William H. Williams, district supervisor in charge of the census taking in this Thirteenth Congressional District, stated that all the students at Bowling Green State University would be counted as residents of our city.

This method, which the Bureau of the Census has decreed, will not give a real census of Bowling Green's population. Instead of probably being over 8,000, it will make it about 13,000, as those students whose homes are elsewhere will be included as permanent residents. Of course, many have no other home than this and should be counted.

This method of counting the city's population will be not only inaccurate, but is liable to be unfair to it. For one thing, when these students graduate and move away, a business survey later might show a seemingly less population despite the fact that the city was really increasing in actual residents. That would give a black eye to the town. Various State laws and population polls for business might adversely affect it.

This inexact method of counting, of course, is to be Nation-wide; and communities would illegitimately lose or gain population. For instance, Ann Arbor, through its big University of Michigan, and New York, through its great Columbia University, would gain population which should be accredited to other States.

We hope Congressman ALVIN F. WEICHEL and other Congressmen will call on the Bureau of Census to change this erroneous method. Charles Sawyer, as a businessman of Cincinnati and now Secretary of Commerce, under which is the Census Bureau, will recognize that the proposed method is bad.

Our Unsound, Dishonest, Inequitable Social Security Set-Up

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. MASON. Mr. Speaker, under leave granted to extend my remarks in

the RECORD, I include the following statement made by me to the Senate Finance Committee on the bill H. R. 6000:

Mr. Chairman and members of the Senate Finance Committee, I am one of the three members of the Ways and Means Committee that voted against H. R. 6000 when it was approved in committee. I was also one of the 14 Members in the House that voted "No" when the bill was up for final passage in the House. I feel, therefore, that it is my duty and responsibility to make a statement before the distinguished members of this committee giving very briefly my reasons for opposing the bill.

In my opinion the weight of the testimony during the 3½ months of open hearings before the Ways and Means Committee on our present social-security set-up was to the effect that it was unsound and dishonest, a Ponzi-type shell game that has been sold to the American taxpayer as a plan to provide security in his old age. It is a program which if practiced by a private insurance company would land every director and every officer of that company in jail for misappropriation and misuse of trust funds. The program is characterized by the Brookings Institute report on our present social-security set-up as a plan whereby "We (the present generation) do the promising; you (all future generations) do the paying."

The future burden of H. R. 6000 is described on pages 168 and 169 of that same report as an enlarged old-age insurance system that would ease the cash position of the Federal Government today, because the excess of revenues collected today through the social-security tax goes to meet the ordinary expense of the Government, and that means that a substantial part of future social-security costs will have to be met out of future tax revenues. The report estimates that the cost of H. R. 6000 plus the veterans' program will be between $19,000,000,000 and $25,000,000,000 by the year 1970.

Gentlemen, can our economy carry this tremendous additional burden?

Perhaps at this point a concrete illustration to demonstrate how unsound and dishonest our present social-security program is would be in order, therefore I offer the following hypothetical case:

John Smith decides to establish his own social-security program, so he meticulously deducts a certain percent of each pay check he receives and places the cash regularly in his safety deposit box. After doing this for several years and having thus set aside, say $5,000, to insure security in his old age, John Smith starts to spend each month more than he earns—as Uncle Sam does now. Then John Smith hits upon the plan of taking so much cash out of his lockbox to spend each month and placing in the box, in lieu of the cash extracted, promissory notes to himself. If John Smith keeps this up, when he retires he will have only promissory notes to himself to live on—which he has no way of changing into cash for groceries.

That, gentlemen, is exactly what Uncle Sam is doing with the social-security receipts—the only difference being that Uncle Sam has the taxing power to invoke in order to change his I O U's into cash to meet his future social-security obligations. But that involves new taxes, additional taxes, to meet obligations that are supposed to have been paid for already by the beneficiaries. I wonder if that scheme of taxing again the children and grandchildren of the social-security beneficiary for something he and his employer are supposed to have paid for—but Uncle Sam has spent the receipts from the social-security tax for other things—can be called anything but dishonest and immoral, a Ponzi-type shell game that has been sold to the American taxpayer as a plan to provide security in his old age.

On page 176 of the Brookings Institution report the authors recommend that the present social-security set-up be abandoned entirely and a genuine pay-as-you-go system be established in its place. This would do away with all need for reserves, all need for level premiums, all need for costly and elaborate bookkeeping systems, etc. This would mean, as the authors of the report point out, "Our generation would care for its own and trust future generations to do likewise." A very sensible, practical, and wise conclusion for them to reach, it seems to me.

In discussing this social-security problem on the floor of the House, I said:

"Mr. Speaker, the action of the House on H. R. 6000, the social-security bill, has impelled me to do something that I have steadfastly refused to do for over 12 years; namely, to sign the Townsend plan petition now at the Speaker's desk. I signed that petition because when I compare the two programs for social security—the one contained in H. R. 6000 and the one contained in the Townsend plan—I am convinced that the Townsend plan is to be preferred to H. R. 6000.

"In my opinion, after careful consideration, the Townsend plan is more equitable, more practical, more just, much easier and cheaper to administer, and less costly in the long run.

"The social-security plan contained in H. R. 6000 when fully matured will require the payment of something like $1,000,000,000 per year in interest alone, in addition to the hundreds of millions of dollars each year for administrative costs. The Townsend plan will do away with both the interest on the social-security fund and the heavy administrative costs.

"The social-security plan contained in H. R. 6000 proposes that the Federal Government shall collect up to 8 or 10 billions of dollars per year and spend the same for current Government expenses. The Townsend plan proposes that the Federal Government shall collect 6 or 8 billions of dollars per year and hand it out immediately on a monthly basis to the old people of the Nation for them to spend for the necessities of life. I ask, which is the better plan? Which will bring more happiness to more people? Which can spend the money to a better advantage, the Federal Government or our worthy old people?

"In my opinion the social-security program as set up and amended in H. R. 6000 is both unsound and dishonest. I shall do what I can hereafter to substitute the Townsend plan, or some modification of it, for the administration's social-security program."

Which Political Party Is for the Common People?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1950

Mr. REED of New York. Mr. Speaker, I feel that it is important that the membership of the House should have the record of the New Deal Administration and its domination by the large financial interests both here and abroad. We hear much about the New Deal or Democrat Party being the champion of small business and the underprivileged people of this country. I am inserting in the RECORD, under leave heretofore granted, a particular record of the New Deal with reference to the influence of foreign financiers as well as our own in forcing this country to spend itself into insolvency. The record referred to appeared in the Washington Times-Herald, Sunday, February 26, 1950:

NEW DEAL OUT BUT WALL STREET REMAINS IN—FINANCIERS LINGER ON IN TRUMAN REGIME

(By Walter Trohan)

The New Deal is gone but the power of Wall Street still lingers on in the Truman administration. In 1933 the New Deal was launched by a small band of men who raised the Blue Eagle of the national recovery administration, killed millions of little pigs, transplanted families, inaugurated leaf raking, promoted boondoggling and plowed under crops.

Almost 2 years ago the last of the original band, Benjamin V. Cohen, left the Government. He was counselor of the State Department. His departure marked the passing of an era, but long before his going the Wall Streeters were edging out New Dealers in Washington influence.

TIES WITH LONDON

The most important programs in the Government came into the hands of men who came from the Nation's financial center and had social and blood ties with London counting houses and British nobility. New Dealers had been losing influence for 10 years before Cohen left. Today, although a few of them remain in the Government, they have less influence than the Wall Streeters. And President Truman is changing the very name New Deal to Fair Deal.

For many years Franklin D. Roosevelt was regarded as the fountainhead of American policy. Since his death the so-called American bipartisan foreign policy has continued uninterrupted. The long arm of Wall Street has been seen as molding the internationalist policy, and fusing varied groups and varied interests.

At one time Wall Streeters hobnobbed with Communists of Union Square as well as Park Avenue social circles, to bring profits from internationalist spending. In this period Wall Streeters were invited into the New Deal and took it over.

WALL STREETERS SUMMONED

In the earliest days of the New Deal, Wall Streeters were reputedly on the outs with the administration. President Roosevelt had called for driving the money changers out of the temple. However, J. P. Morgan himself was invited to the White House for at least one secret conference. He was discovered leaving the White House late one night.

In 1937, when the New Deal found itself face to face with a depression, President Roosevelt began summoning Wall Streeters to the White House for secret meetings. It was at this time the late Thomas Lamont, who succeeded Morgan as head of J. P. Morgan & Co., began to be a White House visitor.

Morgan was surprised leaving the White House with Myron Taylor, then head of United States Steel, which the Morgan interests controlled. The two smilingly acknowledged a 45-minute visit, which the White House had not announced. When asked about the visit the White House said it was purely social.

"You know I cannot tell you what I talked about with the President in his home," Morgan said.

THE NOBLES ARRIVE

At this time Roosevelt shifted his attention from domestic to international affairs. He was persuaded domestic recovery would come through international stabilization.

British financial interests exerted heavy influence on their American brethren. The doors of Britain's best homes were thrown open to American financiers. Britain knighted leading financiers so that whenever she encountered financial difficulties she could send over the magic of titles to help get desired aid.

For years Viscount Walter Runciman, Sir Josiah Stamp, Lord John Maynard Keynes, and Sir Arthur Salter raced to this country every time British finances became shaky. They were able to return home with relief.

The British showered decorations on American military figures and civilians. Hundreds of decorations went to persons for supporting the British cause in Bundles for Britain and in getting America into the war. Winthrop Aldrich, chairman of the Chase National Bank and leading supporter of British causes, was given the only King's medal ever to be conferred on an American.

General Eisenhower is the only American to receive the British Order of Merit, which is limited to 24 regular members and foreign honorary members. Eisenhower, like General Marshall, wartime Chief of Staff and former State Secretary, holds British decorations which would be knighthoods for Britishers. Both hold honorary degrees from British universities.

KNIGHT OF THE BATH

Alan G. Kirk, ambassador to the Soviet Union, is Knight Commander of the Bath, knighthood organization. Lieutenant General Smith, protege of Marshall, has a similar decoration. American ambassadors to Britain receive British university degrees. The Wall Streeters are able to have internationalist-minded American universities confer honorary degrees on friends and supporters.

Titles were employed in other fields of activity. King George and Queen Elizabeth came to Canada to tie the dominion to the mother country and to woo the United States. Lord Mountbatten, the Duke of Kent, the Duke of Windsor, the Earl of Athlone and a host of lesser British figures came to this country to curry good will.

In 1938 and 1939 Wall Streeters were crowding into the Capital. By 1940 Wall Street, which had opposed the New Deal in 1932 and 1936, was working for the third term. Roosevelt and Wall Street have been widely credited with the strategy which won the Republican nomination for Wendell Willkie, a former Socialist and a former Tammany Hall Democrat, who also was a Wall Street lawyer. Willkie was known to Wall Street secretly as an interventionist although he campaigned as an isolationinst. After his defeat Willkie told a Senate committee his isolationist speeches were just so much campaign oratory. He joined with F. D. R. in pumping for war.

While the Republicans were gathering in Philadelphia for the 1940 nomination, President Roosevelt named Henry L. Stimson, Wall Street lawyer and former Republican Secretary of State, to the post of Secretary of War, and the late Frank Knox, Chicago publisher and 1936 GOP candidate for Vice President, Secretary of the Navy. Both advocated American entry into the war.

Robert P. Patterson, Republican Federal judge and a former Wall Street lawyer, was made Under-Secretary of War. Patterson was a leading interventionist.

James V. Forrestal, head of Dillon, Reed & Co., Wall Street investment house, was named Under-Secretary of Navy. Forrestal came into the New Deal a little before Knox and Stimson, as a White House executive assistant.

Forrestal succeeded Knox on the latter's death and became the first Defense Secretary under President Truman. He leaped to his death a year ago a few weeks after he was eased out of the Cabinet by Mr. Truman for Louis Johnson, Truman campaign fund collector.

MANY SUDDEN DEATHS

Forrestal's death was one of many sudden deaths marking the late days of the New Deal and early days of the Fair Deal. Knox did not survive the war. Roosevelt died suddenly at Warm Springs. Edward R. Stettinius, son of a former Wall Street partner, who joined the New Deal at the time of Wall Street influx, died at the age of 49 last October 31.

Stettinius became Secretary of State in the critical Soviet appeasement days of Yalta and Potsdam, which conferences turned over large sections of Europe and Asia to Russian influence. He represented the United States at the UN founding conference, which spread Soviet influence further, and was American UN representative.

John G. Winant, American Ambassador to Britain, who negotiated the agreement which left the United States without a corridor to Berlin, died by his own hand late in 1948. O. Max Gardner, named to succeed Winant, died before he could take over the post.

A pattern of mysterious deaths surrounded the Alger Hiss spy case. Laurence Duggan, former State Department adviser, died in a still unexplained plunge from the window of his New York office. Insurance investigation ruled out suicide, which strengthened suspicion of murder. Duggan was believed to have knowledge of the inside workings of the pro-Soviet bloc in the State Department.

Harry Dexter White, former Assistant Secretary of the Treasury, who helped draft the Morgenthau harsh peace plan for Germany, died reportedly of an overdose of digitalis after he had been questioned by a House committee on Communist affiliations. Whittaker Chambers, chief witness against Hiss, identified White as a Red spy.

D'gitalis is not often employed as a poison. It is prescribed for some heart ailments. Doctors say that an overdose would have to be taken deliberately.

WALL STREETERS RUN WAR

Walter Marvin Smith, Department of Justice attorney, who fell or plunged five stories down a stairwell in the Justice Department on October 28, 1948, and was killed, had notarized the transfer of a 1939 Ford automobile from Hiss to William Rosen, alleged Communist organizer. Sumner Welles, who had examined the stolen Hiss documents and recommended some be suppressed as still of vital import, collapsed of a heart attack during a midnight walk on his Maryland estate. His hands and feet were severely frostbitten. Welles was Undersecretary of State when Hiss and Duggan were in the Department.

Hiss has a Wall Street lawyer handling his appeal from the perjury conviction. He is Robert M. Benjamin. In his first trial, which ended in disagreement, Hiss was defended by Lloyd Paul Stryker, another Wall Street lawyer.

With the third term election Wall Streeters began pouring into the administration by the thousands. Other top posts went to the Street's brokers, lawyers and clients. Lesser street figures poured into legal and administrative posts, many of which kept the holders bomb and battle proof throughout the war.

Wall Streeters ran the war and foreign policy. In the latter effort they had the powerful support of five internationalist organizations. More than 100 directors of the organizations are woven into an interlocking mesh of Wall Street lawyers and Wall Street bankers, insurance and industrial directors.

The five groups are the Carnegie Endowment for International Peace, the Foreign Policy Association, the Rockefeller Foundation, the English Speaking Union and the Council on Foreign Relations. The convicted perjurer-spy, Hiss was named president of the Carnegie Foundation through an alliance of Wall Street and the New Deal.

Gen. Eisenhower, wartime allied supreme commander in Western Europe, was made president of Columbia University, through the influence of directors of this group. Political observers believe members of the group are seeking to capture the 1952 G. O. P. nomination for Eisenhower in the interests of promoting internationalism.

About half the directors worked for the Government at one time or another, largely in the State Department. They have common cultural backgrounds, chiefly at Harvard and Columbia. All have been working to promote the bipartisan program which is collapsing in Europe and around the world.

When the Marshall plan was proposed, a Wall Street group raised a propaganda fund. Stimson was national chairman. Contributions came from men who expected to share in the dollars given to Europe.

"RICHEST BABY IN THE WORLD"

One of the heaviest sharers in the Marshall plan funds is Will Clayton, former State Under Secretary for Economic Affairs. Clayton is the former head of Anderson, Clayton Co., world's largest cotton brokers. He has close ties with New York banks. In the State Department he promoted the British 3.75 billion dollar gift-loan and the Marshall plan. ECA records show that in one month his company handled 28 million dollars of cotton under the plan. He and his family own 40 percent of the stock of the company. Reports of the company show that the family's share of the profits runs into tens of millions annually.

Papers and publishers who supported the Marshall plan were rewarded with subsidies which are at the 3 million dollar mark. Sharers include the New York Times, New York Herald Tribune, Time, Inc., Readers Digest, Curtis Publishing Co., Crowell-Collier and more than a dozen others.

Of the thousands of Wall Streeters formerly with the New Deal the most prominent are:

Robert Lovett, Wall Street banker, who was Assistant War Secretary and former Under Secretary of State. He returned to Brown Brothers Harriman & Co., of which he is a partner.

John Nicholas Brown, president of Counting House Corp., Assistant Navy Secretary. Brown was once known as "the richest baby in the world."

William H. Draper, former vice president of Dillon, Read & Co., Under Secretary of the Army.

Philips Hawkins, son-in-law of Draper, Chief of the Property Division of the American Government in Germany.

Arthur M. Hill, president of the Atlantic Greyhound Corp., head of the Army and Navy Munitions Board.

Ferdinand Eberstadt, head of the Wall Street firm bearing his name, served as a member of the Army-Navy Munitions Board.

Bernard M. Baruch, capitalist, served as adviser without portfolio and on the United Nations Atomic Commission.

Herman Baruch, brother of the capitalist, served as Ambassador to the Netherlands.

BANKERS AND LAWYERS

Charles E. Salzman, former vice president of the New York Stock Exchange, Assistant Secretary of State.

Lewis Strauss, partner in the New York banking firm of Kuhn, Loeb & Co., a member until recently of the Atomic Energy Commission.

H. Struve Hensel, Wall Street lawyer, Assistant Secretary of the Navy.

A. L. M. Wiggins, former president of the American Bankers Association and now an Assistant to the Secretary of the Treasury.

Howard C. Peterson, Wall Street lawyer, Assistant War Secretary.

James Paul Warburg, Wall Street banker, Office of War Information.

Nelson Rockefeller, grandson of John D. Rockefeller, Coordinator of Inter-American Affairs and Assistant Secretary of State. Although of military age he came to the Government in 1940 and remained throughout the war.

Myron Taylor, former head U. S. Steel Corp., special envoy to Vatican.

Paul Felix Warburg, member of the banking family, special assistant at London embassy.

Thomas J. Hargrave, president of Eastman Kodak Corp. and Chairman of the Munitions Board.

In 1944 the Wall Streeters worked to get a second nomination for the me-too candidate Willkie. When Willkie came a cropper in the Wisconsin primary, they switched to Gov. Thomas E. Dewey in New York, a former nationalist who switched to the internationalist tinge considered proper by Wall Street. In 1948 the same group won a second nomination for Dewey.

VANDENBERG SWITCHES

In the Dewey campaigns, John Foster Dulles, Wall Street lawyer and former attorney for America First, turned up as an internationalist. He was built up as a great foreign affairs expert. The New Deal gave him a UN post and Dewey named him to the Senate. Dulles succeeded in placing Hiss in the Carnegie post. He and Hiss were associated at the UN founding conference. Dulles was defeated last spring in a race for the Senate vacancy to which he had been appointed, losing to former Gov. HERBERT LEHMAN.

Internationalists and the New Deal took over Senator VANDENBERG, former nationalist who became an internationalist in 1943. VANDENBERG was rewarded by an appointment to the UN founding conference, having an unknown named to oppose him for the Senate, having his nephew, Lt. Gen. Hoyt Vandenberg named commander of the Air Force, and having his son Arthur, Jr., get a high salaried post with Nelson Rockefeller interests in South America. The senator is hoping to maneuver poltically so that his son will succeed him in the Senate in 1953.

During the Presidential campaign Mr. Truman belabored Wall Street. He railed against "Wall Street gluttons of privilege." He took the offensive as the best defense against a charge of Wall Streetism which he expected would be made against his Administration.

STILL IN ADMINISTRATION

The attack was made, but it came from Henry Wallace, darling of the Reds, and failed to influence voters. Wallace charged that of 125 men appointed to key civilian posts by Mr. Truman 97 were big money or big brass.

The administration still has a heavy sprinkling of Wall Streeters, although the majority have returned to the financial center to reap foreign aid dollars.

Those still in the administration include:

State Secretary Dean Acheson, Wall Street lawyer. Acheson's father was born in England and ordained an Episcopal minister in that country. His mother was Canadian born. The father became an Episcopal bishop in Connecticut.

John J. McCloy, Wall Street attorney, now high commissioner to Germany.

Benjamin J. Buttenwieser, of the banking house of Kuhn, Loeb & Co., assistant high commissioner to Germany.

Lewis Douglas, insurance executive, Ambassador to Britain.

W. Averell Harriman, Wall Street banker, roving ECA ambassador.

Cornelius V. Whitney, president Whitney industries, Under Secretary of Commerce.

Paul H. Nitze, vice president Dillon Read & Co., State Department.

Willard L. Thorp, former director and chairman of the board, General Utilities Corp., Assistant Secretary of State.

David K. E. Bruce, member of Maryland family associated with Wall Street interests, Ambassador to France.

Charles U. Ray, Wall Street broker, Ambassador to Norway.

Laurence Steinhardt, corporation lawyer, Ambassador to Canada.

William McChesney Martin, former president of New York Stock Exchange, Assistant Secretary of the Treasury.

Wayne Chatfield Taylor, Chicago investment banker with New York ties, ECA Administration.

Sumner Pike, Wall Street mining and oil firm, Atomic Energy Commission.

Eugene R. Black, New York banker, president of World Bank.

Paul Hoffman, head of Studebaker Corp., which was reorganized by Wall Street, head of ECA.

William C. Foster, New York industrialist, deputy ECA director.

C. Tyler Wood, investment banker, ECA.

Edward T. Dickinson, formerly with United States Steel, ECA.

Hundreds of lesser Wall Streeters, still hold Government posts.

Facts You Should Know

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. REED of New York. Mr. Speaker, the information which I am inserting as a part of my remarks under leave to extend, heretofore granted, came from a pamphlet entitled "Coal Crisis":

CHRONOLOGY OF EVENTS LEADING TO CURRENT COAL CRISIS

1949

March 14–28: Memorial period called by Lewis; 2 weeks lost production.

May 25: Southern wage conference convened at Bluefield, W. Va.

June 13–20: Stabilization period of mine suspension called by Lewis. One week of lost production.

June 22: Northern and western wage conference convened at White Sulphur Springs.

June 30: Termination date of 1948 wage contracts.

July 5: Lewis' order effective, limiting mines to 3-day week.

September 19: Complete suspension of mining on order of Lewis.

October 3: Western and anthracite mines resume operation at Lewis' order.

October 8: Cyrus Ching asks mine workers and operators to continue negotiations.

October 21: Committee terminates negotiations at White Sulphur Springs.

November 2: Southern conferences suspended when union spokesman fails to appear.

November 9: National committee meets with Cyrus Ching.

November 10: Lewis fails to show up at conference called by Ching.

November 10: Mines resume full operation until November 30 at Lewis' order.

November 26: Southern group requests renewal of negotiations; no reply.

December 5: Three-day week again imposed by Lewis.

December 6: Mine workers announce signing small mines on new contract.

December 28: Southern Coal Producers Association files unfair labor practice charges.

December 30: Similar charges filed by northern and western groups.

1950

January 9: Wildcat strikes begin in Ohio, western Pennsylvania, and northern West Virginia.

January 13: Lewis suggests strikers in Ohio, Pennsylvania, and West Virginia return to work.

January 19: Mine workers in these districts vote not to return to work.

January 25: Dr. James S. Boyd advised President of seriousness of coal supply.

January 26: Northern and western committee invites Lewis to resume negotiations.

January 31: President offers Lewis, Love, Moody, and Moses fact finding.

February 1–2: Northern and western committee meets mine workers in fruitless conference.

February 2–4: All operator groups accept and Lewis rejects President's offer of fact finding.

February 6: Mine workers on complete strike at all mines of these groups.

February 8–9: Public hearing by Presidential Coal Board, Cole presiding.

February 8: Negotiations of all groups with mine workers under Presidential Coal Board supervision.

February 10: Judge R. B. Keech enjoined UMWA from making illegal demands.

February 11: Judge R. B. Keech issues Taft-Hartley restraining order, requiring miners to return to work, mines to be kept in operation, and negotiations to proceed.

February 11: Lewis states he is ordering men back to work.

February 13: No miners working, complete suspension continuous thereafter.

February 15: Wage conferences between UMWA and all groups convened.

February 17: Lewis again orders miners to return, without result.

February 24: Miners have not yet returned to work.

Address by Hon. Leverett Saltonstall, of Massachusetts, at the National Brotherhood Week Observance

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. O'CONOR. Mr. President, everyone will agree that among the problems which challenge our best efforts is that of a better understanding between and among our citizens of different religions and races. Great strides have been made toward the desired goal which culminated in the designation of National Brotherhood Week. In Baltimore this important observance was held on Washington's Birthday, February 22, and the distinguished senior Senator from Massachusetts [Mr. SALTONSTALL] was selected to deliver the principal address.

The able Senator from Massachusetts, highly respected for his breadth of vision, his broad understanding of human relations, and his devotion to the welfare of all sects and creeds, made a profound

impression upon our citizens by his timely message.

Realizing the benefits which would be derived from a wide reading of the splendid address of the Senator from Massachusetts, I ask unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As we start the second half of the twentieth century and the emotions of fear of the future, dread of the H-bomb and the atom, are only too common emotions, it is wise for us to meet together to think for a few minutes of the great opportunities that are ours. I am proud to be one of those asked to speak to you during this, our National Brotherhood Week. I am happy to have the chance to tell you of my deep, abiding faith in the great need for a better understanding of one another at home, of our friends abroad, and of the common cause that is our United States.

On such an occasion as this, it seems fitting for us to keep in mind a statement by the author of the Declaration of Independence. Thomas Jefferson, who was a devoted Christian, wrote that "our civil rights have no dependence on our religious opinions." We may add that even if they did, the ethics of a Protestant, a Roman Catholic, a Jew, or a Buddhist have more similarities than differences, and certainly enough to make it possible for them to live together in peace and good will. How appropriate that thought is this week.

In 1940 at the annual dinner of the National Conference of Christians and Jews in Boston, I said, and I repeat now what I said then because it is still my strong and abiding feeling: "All of us—Catholic, Protestant, and Jew; Irishman, Latin, or Anglo-Saxon—came to this country and to this Commonwealth for the same reason—because America spelled religious liberty, equal opportunity for all, respect for the dignity of man, and the right of the pursuit of happiness. Today, as these rights are being threatened in many lands, we in America must take every step to preserve our heritage, our decency, our belief in the sanctity of man and of his right to worship his God in his own way. The National Conference of Christians and Jews does this very thing, does it with splendid dignity and high purpose."

If anything, the need for our rededication to these principles is even more imperative today when we see the dignity of man and his religion under such constant attack in different sections of the world. As Archbishop Cushing of Boston so well put it just a few days ago, the age of reverence for God and deference to religion has undergone a radical change "within the last few decades since the atheists of the Kremlin started their murderous march to the west." I have been greatly concerned in recent weeks with the increasing number of letters I have received pressing for intolerant action against this or that group among us, on religious or racial grounds. The purpose of such efforts is to open up the cracks of our misunderstandings and to pour salt into the wounds of our religious differences.

It will require the vigilance of all of us to resist them, but they can and will be resisted and defeated, if there is understanding among the rest of us and a clear view of what they are trying to do. Let me register here my life-long conviction that progress for America and peace for the world are never spelled in letters of hatred nor in words or acts of contempt for other religious and racial groups. America is a land of many colors and creeds. No color—especially communistic Red—and no creed based upon hatred can ever be good for America.

I know that we can live together in unity. We are doing so today. Consider my own State of Massachusetts. We have, I believe, perhaps a greater diversity of population in Massachusetts than in any other State of the Union. The last census showed that we had just over 4,300,000 people. Of those 2,400,000 were born in another country or are the sons and daughters of parents born in another country. Yet our racial problems have been few. They are few. They are few because basically the people want to live together and to understand each other.

In 1938 I was the chairman of our Greater Boston Community Fund. It had just been established. The biggest problem was to get all our citizens to understand what the fund meant to them. In that year we had approximately 10,000 workers and contributions from over 150,000 people. Now there are over 15,000 workers and contributions from over 300,000 people. That means as a practical matter that we are closer together, more cooperative, more understanding of each other in our common cause.

Think of my feelings, therefore, when I was in the governor's office several years later and read a New York newspaper which had printed some stories about racial discrimination and unrest in the city of Boston—stories of blows being struck because of differences in racial and religious feeling. It made me madder than any one other event in the 6 years that I was in that office. But I quickly realized when I quieted down that if there was any cause for social unrest I should find out what was causing it and how it could be eliminated.

I asked the police to investigate and at the same time I called upon a group of very distinguished citizens—three Protestants, three Jews, and three Catholics—to serve as a committee. It made me very happy that everyone whom I asked accepted. They did study the situation. They made a very thorough and complete report. Summed up, that report pointed out clearly that while there had been some youthful destruction of property, there was certainly no organized effort to discredit any segment of our society.

But what pleases me most is that two governors who are Democrats and one Republican governor have continued that committee. Its purpose is a continuing job. Its goal represents an ideal toward which we must continually be striving. I have always felt that the establishment of that committee was one act of which I will ever be proud because it went to the very heart of what we are and want to be in the United States. That committee stresses, as it has from the beginning, that education must be the principal weapon in any struggle for greater understanding in the fight against intolerance. We can pass legislation that may affect our civil rights, but unless we couple with those laws the understanding that comes with education such laws will prove to be mere words and signify little.

That education in brotherhood must begin in the home and in the grammar schools. It must be a part of the everyday routine of our boys and girls. It must reach into the family where the parents discuss the daily doings at the supper table. It must be very constant and continuing because always, we know, there are forces at work to magnify to the greatest possible proportions even the slightest forms of intolerance. It is a part of their plan to divide and conquer. Even if there is no evidence, or such slight evidence as in the case to which I have just referred, it can be manufactured and built into a mountain of trouble.

If we are to settle these formidable questions of 1950 in the best interests of all our people, then all of us, through ever-improved education, must understand them as clearly as we possibly can. We want improved health for all. We need proper education for all. Are we giving the best possible consideration to these two basic desires of every American? Are we building as best we can, in body and mind, our children of today that they may be the intelligent men and women of tomorrow? These men and women of tomorrow will be responsible for the country we are building today. Are we telling them—clearly, often and eloquently—of the great blessings of liberty and freedom? Are we telling them in our schools, on our playgrounds, in our churches, and, above all, in our homes? In all of these places people meet—young and old. They have things to talk about. They want one another's point of view. Much good can come from well-informed conversation at the breakfast table, over the lunch box, and during dinner at home.

Are we telling our people, young and old, that there are still many places in the world where people cannot meet freely, cannot freely discuss what they wish—are being told, in fact, what they must do and say and even think? In those countries they cannot do what they want to do. They do only what their government tells them to do. They are denied free speech; they are denied a free press; they are even denied their dreams.

Are we explaining to our children in school that the United States is an amazingly big country, that in large sections of it we have the farms that provide us with food and fibers and in other places we have wonderful natural resources, the rivers and the mountains, that provide us with abundant power, with fuel, with all those basic materials from which our great industries are built and which make good jobs possible?

We are now in the second month of a new half-century. Think back over the last 50 years since 1900, and many of us can easily do just that. Would you have considered building a garage in 1900, a hangar, or a radio tower, or an airfield? Who would then have known how to construct a concrete road or build a boat of plastic or put shatterproof glass in a windshield? Yet today the building of a garage, a radio tower, an airfield, a concrete road, and the use of shatterproof glass and plastic is just too common for even a news item. It is just too common because we have made conveniences out of the inventions which came from the minds of free men of science, of imagination, of courage, and of willingness to work. We have built up the present-day comforts in our homes through the ingenuity, the imagination, and the hard work of our womenfolk. Who in 1900 would have believed that this country would have to fight and win two disastrous world wars? We have won two world wars because of the same spirit of inventiveness, independence, and the fighting qualities of our young men. These are facts of our national life of which we are proud. These are now part of our heritage.

Do we make it clearly known to our young people that it takes all types of people with these qualities to make up this country of ours and even to make up the social and business community in which each of us lives? Are we telling them, every day and with all our hearts, that all these things are but part of a common cause and a common goal, the better living and greater opportunity for 150,000,000 Americans?

How true it is that we are only young once. Our children only grow up once. Can we ever neglect for a moment that one opportunity to give them as good an education as we can? The boy who grows up today on the tenant farm may become the industrial leader and even the political leader in the city where we work and live 1,500 miles away. If he is to become a good leader, or even if he is to have an opportunity to get ahead in the city where we live, we want him to be as well educated and to have as great an understanding of our problems as it is possible to have If he has he will be a

Howard C. Peterson, Wall Street lawyer, Assistant War Secretary.

James Paul Warburg, Wall Street banker, Office of War Information.

Nelson Rockefeller, grandson of John D. Rockefeller, Coordinator of Inter-American Affairs and Assistant Secretary of State. Although of military age he came to the Government in 1940 and remained throughout the war.

Myron Taylor, former head U. S. Steel Corp., special envoy to Vatican.

Paul Felix Warburg, member of the banking family, special assistant at London embassy.

Thomas J. Hargrave, president of Eastman Kodak Corp. and Chairman of the Munitions Board.

In 1944 the Wall Streeters worked to get a second nomination for the me-too candidate Willkie. When Willkie came a cropper in the Wisconsin primary, they switched to Gov. Thomas E. Dewey in New York, a former nationalist who switched to the internationalist tinge considered proper by Wall Street. In 1948 the same group won a second nomination for Dewey.

VANDENBERG SWITCHES

In the Dewey campaigns, John Foster Dulles, Wall Street lawyer and former attorney for America First, turned up as an internationalist. He was built up as a great foreign affairs expert. The New Deal gave him a UN post and Dewey named him to the Senate. Dulles succeeded in placing Hiss in the Carnegie post. He and Hiss were associated at the UN founding conference. Dulles was defeated last spring in a race for the Senate vacancy to which he had been appointed, losing to former Gov. HERBERT LEHMAN.

Internationalists and the New Deal took over Senator VANDENBERG, former nationalist who became an internationalist in 1943. VANDENBERG was rewarded by an appointment to the UN founding conference, having an unknown named to oppose him for the Senate, having his nephew, Lt. Gen. Hoyt Vandenberg named commander of the Air Force, and having his son Arthur, Jr., get a high salaried post with Nelson Rockefeller interests in South America. The senator is hoping to maneuver poltically so that his son will succeed him in the Senate in 1953.

During the Presidential campaign Mr. Truman belabored Wall Street. He railed against "Wall Street gluttons of privilege." He took the offensive as the best defense against a charge of Wall Streetism which he expected would be made against his Administration.

STILL IN ADMINISTRATION

The attack was made, but it came from Henry Wallace, darling of the Reds, and failed to influence voters. Wallace charged that of 125 men appointed to key civilian posts by Mr. Truman 97 were big money or big brass.

The administration still has a heavy sprinkling of Wall Streeters, although the majority have returned to the financial center to reap foreign aid dollars.

Those still in the administration include:

State Secretary Dean Acheson, Wall Street lawyer. Acheson's father was born in England and ordained an Episcopal minister in that country. His mother was Canadian born. The father became an Episcopal bishop in Connecticut.

John J. McCloy, Wall Street attorney, now high commissioner to Germany.

Benjamin J. Buttenwieser, of the banking house of Kuhn, Loeb & Co., assistant high commissioner to Germany.

Lewis Douglas, insurance executive, Ambassador to Britain.

W. Averell Harriman, Wall Street banker, roving ECA ambassador.

Cornelius V. Whitney, president Whitney Industries, Under Secretary of Commerce.

Paul H. Nitze, vice president Dillon Read & Co., State Department.

Willard L. Thorp, former director and chairman of the board, General Utilities Corp., Assistant Secretary of State.

David K. E. Bruce, member of Maryland family associated with Wall Street interests, Ambassador to France.

Charles U. Ray, Wall Street broker, Ambassador to Norway.

Laurence Steinhardt, corporation lawyer, Ambassador to Canada.

William McChesney Martin, former president of New York Stock Exchange, Assistant Secretary of the Treasury.

Wayne Chatfield Taylor, Chicago investment banker with New York ties, ECA Administration.

Sumner Pike, Wall Street mining and oil firm, Atomic Energy Commission.

Eugene R. Black, New York banker, president of World Bank.

Paul Hoffman, head of Studebaker Corp., which was reorganized by Wall Street, head of ECA.

William C. Foster, New York industrialist, deputy ECA director.

C. Tyler Wood, investment banker, ECA.

Edward T. Dickinson, formerly with United States Steel, ECA.

Hundreds of lesser Wall Streeters, still hold Government posts.

Facts You Should Know

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1950

Mr. REED of New York. Mr. Speaker, the information which I am inserting as a part of my remarks under leave to extend, heretofore granted, came from a pamphlet entitled "Coal Crisis":

CHRONOLOGY OF EVENTS LEADING TO CURRENT COAL CRISIS

1949

March 14–28: Memorial period called by Lewis; 2 weeks lost production.

May 25: Southern wage conference convened at Bluefield, W. Va.

June 13–20: Stabilization period of mine suspension called by Lewis. One week of lost production.

June 22: Northern and western wage conference convened at White Sulphur Springs.

June 30: Termination date of 1948 wage contracts.

July 5: Lewis' order effective, limiting mines to 3-day week.

September 19: Complete suspension of mining on order of Lewis.

October 3: Western and anthracite mines resume operation at Lewis' order.

October 8: Cyrus Ching asks mine workers and operators to continue negotiations.

October 21: Committee terminates negotiations at White Sulphur Springs.

November 2: Southern conferences suspended when union spokesman fails to appear.

November 9: National committee meets with Cyrus Ching.

November 10: Lewis fails to show up at conference called by Ching.

November 10: Mines resume full operation until November 30 at Lewis' order.

November 26: Southern group requests renewal of negotiations; no reply.

December 5: Three-day week again imposed by Lewis.

December 6: Mine workers announce signing small mines on new contract.

December 28: Southern Coal Producers Association files unfair labor practice charges.

December 30: Similar charges filed by northern and western groups.

1950

January 9: Wildcat strikes begin in Ohio, western Pennsylvania, and northern West Virginia.

January 13: Lewis suggests strikers in Ohio, Pennsylvania, and West Virginia return to work.

January 19: Mine workers in these districts vote not to return to work.

January 25: Dr. James S. Boyd advised President of seriousness of coal supply.

January 26: Northern and western committee invites Lewis to resume negotiations.

January 31: President offers Lewis, Love, Moody, and Moses fact finding.

February 1–2: Northern and western committee meets mine workers in fruitless conference.

February 2–4: All operator groups accept and Lewis rejects President's offer of fact finding.

February 6: Mine workers on complete strike at all mines of these groups.

February 8–9: Public hearing by Presidential Coal Board, Cole presiding.

February 8: Negotiations of all groups with mine workers under Presidential Coal Board supervision.

February 10: Judge R. B. Keech enjoined UMWA from making illegal demands.

February 11: Judge R. B. Keech issues Taft-Hartley restraining order, requiring miners to return to work, mines to be kept in operation, and negotiations to proceed.

February 11: Lewis states he is ordering men back to work.

February 13: No miners working, complete suspension continuous thereafter.

February 15: Wage conferences between UMWA and all groups convened.

February 17: Lewis again orders miners to return, without result.

February 24: Miners have not yet returned to work.

Address by Hon. Leverett Saltonstall, of Massachusetts, at the National Brotherhood Week Observance

---

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, February 28 (legislative day of Wednesday, February 22), 1950

Mr. O'CONOR. Mr. President, everyone will agree that among the problems which challenge our best efforts is that of a better understanding between and among our citizens of different religions and races. Great strides have been made toward the desired goal which culminated in the designation of National Brotherhood Week. In Baltimore this important observance was held on Washington's Birthday, February 22, and the distinguished senior Senator from Massachusetts [Mr. SALTONSTALL] was selected to deliver the principal address.

The able Senator from Massachusetts, highly respected for his breadth of vision, his broad understanding of human relations, and his devotion to the welfare of all sects and creeds, made a profound

impression upon our citizens by his timely message.

Realizing the benefits which would be derived from a wide reading of the splendid address of the Senator from Massachusetts, I ask unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As we start the second half of the twentieth century and the emotions of fear of the future, dread of the H-bomb and the atom, are only too common emotions, it is wise for us to meet together to think for a few minutes of the great opportunities that are ours. I am proud to be one of those asked to speak to you during this, our National Brotherhood Week. I am happy to have the chance to tell you of my deep, abiding faith in the great need for a better understanding of one another at home, of our friends abroad, and of the common cause that is our United States.

On such an occasion as this, it seems fitting for us to keep in mind a statement by the author of the Declaration of Independence. Thomas Jefferson, who was a devoted Christian, wrote that "our civil rights have no dependence on our religious opinions." We may add that even if they did, the ethics of a Protestant, a Roman Catholic, a Jew, or a Buddhist have more similarities than differences, and certainly enough to make it possible for them to live together in peace and good will. How appropriate that thought is this week.

In 1940 at the annual dinner of the National Conference of Christians and Jews in Boston, I said, and I repeat now what I said then because it is still my strong and abiding feeling: "All of us—Catholic, Protestant, and Jew; Irishman, Latin, or Anglo-Saxon—came to this country and to this Commonwealth for the same reason—because America spelled religious liberty, equal opportunity for all, respect for the dignity of man, and the right of the pursuit of happiness. Today, as these rights are being threatened in many lands, we in America must take every step to preserve our heritage, our decency, our belief in the sanctity of man and of his right to worship his God in his own way. The National Conference of Christians and Jews does this very thing, does it with splendid dignity and high purpose."

If anything, the need for our rededication to these principles is even more imperative today when we see the dignity of man and his religion under such constant attack in different sections of the world. As Archbishop Cushing of Boston so well put it just a few days ago, the age of reverence for God and deference to religion has undergone a radical change "within the last few decades since the atheists of the Kremlin started their murderous march to the west." I have been greatly concerned in recent weeks with the increasing number of letters I have received pressing for intolerant action against this or that group among us, on religious or racial grounds. The purpose of such efforts is to open up the cracks of our misunderstandings and to pour salt into the wounds of our religious differences.

It will require the vigilance of all of us to resist them, but they can and will be resisted and defeated, if there is understanding among the rest of us and a clear view of what they are trying to do. Let me register here my life-long conviction that progress for America and peace for the world are never spelled in letters of hatred nor in words or acts of contempt for other religious and racial groups. America is a land of many colors and creeds. No color—especially communistic Red—and no creed based upon hatred can ever be good for America.

I know that we can live together in unity. We are doing so today. Consider my own State of Massachusetts. We have, I believe, perhaps a greater diversity of population in Massachusetts than in any other State of the Union. The last census showed that we had just over 4,300,000 people. Of those 2,400,000 were born in another country or are the sons and daughters of parents born in another country. Yet our racial problems have been few. They are few. They are few because basically the people want to live together and to understand each other.

In 1938 I was the chairman of our Greater Boston Community Fund. It had just been established. The biggest problem was to get all our citizens to understand what the fund meant to them. In that year we had approximately 10,000 workers and contributions from over 150,000 people. Now there are over 15,000 workers and contributions from over 300,000 people. That means as a practical matter that we are closer together, more cooperative, more understanding of each other in our common cause.

Think of my feelings, therefore, when I was in the governor's office several years later and read a New York newspaper which had printed some stories about racial discrimination and unrest in the city of Boston—stories of blows being struck because of differences in racial and religious feeling. It made me madder than any one other event in the 6 years that I was in that office. But I quickly realized when I quieted down that if there was any cause for social unrest I should find out what was causing it and how it could be eliminated.

I asked the police to investigate and at the same time I called upon a group of very distinguished citizens—three Protestants, three Jews, and three Catholics—to serve as a committee. It made me very happy that everyone whom I asked accepted. They did study the situation. They made a very thorough and complete report. Summed up, that report pointed out clearly that while there had been some youthful destruction of property, there was certainly no organized effort to discredit any segment of our society.

But what pleases me most is that two governors who are Democrats and one Republican governor have continued that committee. Its purpose is a continuing job. Its goal represents an ideal toward which we must continually be striving. I have always felt that the establishment of that committee was one act of which I will ever be proud because it went to the very heart of what we are and want to be in the United States. That committee stresses, as it has from the beginning, that education must be the principal weapon in any struggle for greater understanding in the fight against intolerance. We can pass legislation that may affect our civil rights, but unless we couple with those laws the understanding that comes with education such laws will prove to be mere words and signify little.

That education in brotherhood must begin in the home and in the grammar schools. It must be a part of the everyday routine of our boys and girls. It must reach into the family where the parents discuss the daily doings at the supper table. It must be very constant and continuing because always, we know, there are forces at work to magnify to the greatest possible proportions even the slightest forms of intolerance. It is a part of their plan to divide and conquer. Even if there is no evidence, or such slight evidence as in the case to which I have just referred, it can be manufactured and built into a mountain of trouble.

If we are to settle these formidable questions of 1950 in the best interests of all our people, then all of us, through ever-improved education, must understand them as clearly as we possibly can. We want improved health for all. We need proper education for all. Are we giving the best possible consideration to these two basic desires of every American? Are we building as best we can, in body and mind, our children of today that they may be the intelligent men and women of tomorrow? These men and women of tomorrow will be responsible for the country we are building today. Are we telling them—clearly, often and eloquently—of the great blessings of liberty and freedom? Are we telling them in our schools, on our playgrounds, in our churches, and, above all, in our homes? In all of these places people meet—young and old. They have things to talk about. They want one another's point of view. Much good can come from well-informed conversation at the breakfast table, over the lunch box, and during dinner at home.

Are we telling our people, young and old, that there are still many places in the world where people cannot meet freely, cannot freely discuss what they wish—are being told, in fact, what they must do and say and even think? In those countries they cannot do what they want to do. They do only what their government tells them to do. They are denied free speech; they are denied a free press; they are even denied their dreams.

Are we explaining to our children in school that the United States is an amazingly big country, that in large sections of it we have the farms that provide us with food and fibers and in other places we have wonderful natural resources, the rivers and the mountains, that provide us with abundant power, with fuel, with all those basic materials from which our great industries are built and which make good jobs possible?

We are now in the second month of a new half-century. Think back over the last 50 years since 1900, and many of us can easily do just that. Would you have considered building a garage in 1900, a hangar, or a radio tower, or an airfield? Who would then have known how to construct a concrete road or build a boat of plastic or put shatterproof glass in a windshield? Yet today the building of a garage, a radio tower, an airfield, a concrete road, and the use of shatterproof glass and plastic is just too common for even a news item. It is just too common because we have made conveniences out of the inventions which came from the minds of free men of science, of imagination, of courage, and of willingness to work. We have built up the present-day comforts in our homes through the ingenuity, the imagination, and the hard work of our womenfolk. Who in 1900 would have believed that this country would have to fight and win two disastrous world wars? We have won two world wars because of the same spirit of inventiveness, independence, and the fighting qualities of our young men. These are facts of our national life of which we are proud. These are now part of our heritage.

Do we make it clearly known to our young people that it takes all types of people with these qualities to make up this country of ours and even to make up the social and business community in which each of us lives? Are we telling them, every day and with all our hearts, that all these things are but part of a common cause and a common goal, the better living and greater opportunity for 150,000,000 Americans?

How true it is that we are only young once. Our children only grow up once. Can we ever neglect for a moment that one opportunity to give them as good an education as we can? The boy who grows up today on the tenant farm may become the industrial leader and even the political leader in the city where we work and live 1,500 miles away. If he is to become a good leader, or even if he is to have an opportunity to get ahead in the city where we live, we want him to be as well educated and to have as great an understanding of our problems as it is possible to have If he has he will be a

better and more understanding leader in our community. His children will have a better understanding of our children because their father and mother understand us.

In the past 6 years, my experiences as a United States Senator have educated me way beyond the realization I had when I came to Washington. I had no understanding of how little I really knew about our country. I had lived all my life in Massachusetts. I had worked in the legislature and in the Governor's office in my home State. I felt I knew its problems. When a question arose, I had had long enough experience to be able to have a reasonable understanding of what the proper answer should be.

But, since I came to Washington, the scene has been much enlarged. During the past 5 years I have been to Bikini Lagoon, New Zealand and Australia in the far Pacific, and twice to Europe across the Atlantic. I have made four trips around this great country of ours to speak to Lincoln Day gatherings.

On one of these occasions, I spoke in Denver, Colo. There I addressed men and women who earned their livelihood from wool and others who earned their livelihood from mining silver. As a Massachusetts Senator I had tried to get lower prices for raw wool so that our mills at home might continue to be occupied—so that our workers would have jobs—and so that our consumers might have lower-priced clothing. I had worked for lower prices for bar silver, because we in Massachusetts have silver industries.

Yet here we were in Denver, citizens of the same country, diametrically opposed in our thoughts on these two subjects, so important to the welfare of each group. Yet our common goal was the same: greater opportunity for all in the United States. Those people in Colorado were just as good citizens of the United States as those whom I represented at home. It helped me to discuss their problems with them in their homes and at their meetings.

So, in National Brotherhood Week, we must think not only in terms of religion, in terms of national origin, race, creed, and color—we must try equally to overcome misunderstandings of any kind between sections of this country. We in Maryland or in Massachusetts want to know—we must know—what our fellow citizens in New Mexico, North Dakota or Mississippi are thinking.

We meet here in Baltimore, Md., as the century reaches its turning point. We are working this minute, in this meeting, for a better understanding of each other. But if we leave tonight without also thinking of how we may best do our part for a better understanding among peoples of the world, we are falling far short of our goal.

It is only through peace that we can realize the ultimate security. Only if the world is at peace can there be any freedom and opportunity. Now as the months roll by we are learning that this security and peace do not come easily and are not alone the result of victory in war. The science and the skill that won our victory have produced in doing so a bomb of terrible destructive power. It is clear that men's hearts must hold the answer to peace, if these are the products of men's minds.

If we reflect for a moment, we remember that it took 13 years from the signing of the Declaration of Independence to establish a working government under Constitution and its Bill of Rights. So I say to you tonight that no matter how bitter our disappointments may be, we must never give up the principle upon which we have established the United Nations. To give up that principle means defeat and disaster.

I want the United Nations to work. So do you. And it is working. If, however, it is to be the success we pray for, we ourselves must work with it and for it even harder. The will to peace is the vital element in any peace effort, such a will to peace represents itself in resolutions such as were submitted last week in Washington for extension of the structure of the United Nations and in proposals just a few days ago for consideration of disarmament, of international inspection, and of direct peace talks. Whether or not we agree with details of such proposals is not important. They represent essentially that will to peace that is not so clearly apparent among all world leaders but which must exist if we are to live with each other in this world of ours. Likewise the will to peace may require us to be as strongly armed as we may be, firm in the positions we take, and resolute in our determination; still that will to peace must be ever clear.

In order, then, for you and me to give this will to peace real strength, we must try to open every door to better understanding among the peoples of all nations. This is our fundamental task. Whatever may be the tendencies of some around us, you and I must dedicate ourselves continually to the policy of the open mind and the open door of good will to those citizens of all nations who really want peace.

Former Secretary of State Marshall, in a speech before the General Assembly of the United Nations several years ago, stated: "Systematic and deliberate denials of basic human rights lie at the root of most of our troubles and threaten the work of the United Nations. It is not only fundamentally wrong that millions of men and women live in daily terror of secret police, subject to seizure, imprisonment, or forced labor without just cause and without fair trial, but these wrongs have repercussions in the community of nations. Governments which systematically disregard the rights of their own people are not likely to respect the rights of other nations and other people and are likely to seek their objectives by coercion and force in the international field."

What General Marshall stated so well is the unexpressed thought in the minds of us all. That is why we are here tonight. That is why in these few moments we want to rededicate our thoughts to the principles which underlie our Declaration of Independence, our Constitution, and its peerless Bill of Rights.

We must all be ever vigilant to expose dangers which threaten our American unity. We who believe in the American ideal must endeavor to unhold this form of government that makes that ideal live. For this is the government and the land of equal liberties, equal freedom in religion, in the press and in assembly. Cooperation of Jews, of Catholics, and of Protestants in the defense of American democracy, when it is active in our homes, in our schools, in our churches, and in every part of our land, is the living basis of good will and understanding.

Five years ago this week, a handful of American boys raised our flag on Mount Surabachi on Iwo Jima. I have talked with some of those boys. The six men who participated in that heroic deed were Pfc Ira H. Hayes, of Arizona, a full-blooded Pima Indian; Pfc Rene A. Gagnon, of New Hampshire; Navy Ph. M. John H. Bradley, of Wisconsin; Pfc Franklin R. Sousley, of Kentucky; Sgt. Michel Strank, of Pennsylvania; and Sgt. Henry O. Hansen, of Massachusetts. You all know that picture. We all know in our hearts what it represents.

That incident will always remain the symbol of American courage and hardihood, the symbol of what is possible when we work together with a common understanding in a common cause. It is the symbol of our constant fight to maintain liberty and freedom. It is the symbol which we must foster and hold before us in our fight for a greater unity and a better understanding among young and old Americans throughout this country. Then, and only then, can we bring to its finest flower this common cause that is our United States.
